VOLUME III of IV

FINAL ENVIRONMENTAL IMPACT STATEMENT

PUBLIC SCOPING MEETINGS COMMENTS AND REPONSES and MEETING TRANSCRIPTS (2005, 2006, 2008)

Advanced Technology Solar Telescope Haleakalā, Maui, Hawaiʻi

JULY 2009

VOLUME III

PUBLIC SCOPING MEETINGS COMMENTS AND REPONSES and MEETING TRANSCRIPTS (2005, 2006, 2008)

Volume III contains public comments and responses that were produced during the scoping process and meeting transcripts from Public Scoping Meetings, Section 106 Formal Consultation Meetings, and the DEIS Public Comment Meetings. Meeting Transcripts were requested by the public at various meetings and from comments received during the EIS process.

The Appendices in Volume III are as follows:

- Appendix A: Public Scoping Meetings Comments and Responses
- *Appendix B:* Transcripts Public Scoping Meetings:
 - (1) Cameron Center, July 12, 2005
 - (2) Kula Community Center, July 13, 2005
 - (3) Mayor Hannibal Tavares Community Center, July 14, 2005

Appendix C: Transcripts – Section 106 Consultation Meetings:

- (1) Mayor Hannibal Tavares Community Center, March 28, 2006
- (2) Paukūkalo Community Center, May 1, 2006,
- (3) University of Hawai'i Institute for Astronomy, Maikalani Facility, June 16, 2008
- (4) University of Hawai'i Institute for Astronomy, Maikalani Facility, June 17, 2008
- (5) University of Hawai'i Institute for Astronomy, Maikalani Facility, August 27, 2008, Afternoon session
- (6) University of Hawai'i Institute for Astronomy, Maikalani Facility, August 27, 2008, Evening session

Appendix D: Transcripts – DEIS Public Comment Meetings:

- (1) Cameron Center, September 27, 2006
- (2) Mayor Hannibal Tavares Community Center, September 28, 2006
- (3) Kula Community Center, September 29, 2006

APPENDIX A

Pre-DEIS PUBLIC COMMENTS

- The comments in this Appendix were received prior to publication of the DEIS, which was published in September 2006. All comments were carefully evaluated during the preparation of the Draft EIS and, where feasible, they were incorporated into the analysis of the affected environment, analysis of potential impacts that could result from the Proposed Action, and mitigations to those potential impacts. Full consideration was given to the concerns, suggestions, information, and documentation provided by the commenting individuals, groups, and agencies.
- Comments are listed in order of date received and grouped by commenter name or organization.
- Comments and responses to the DEIS and SDEIS will be included in the Final EIS.

Comment - Royal Order of Kamehameha I, June 29, 2005

Royal Order of Ramehameha I

Office of the Ku'auhau Nui PO Box 1072 Wailuku, Maui, HI 96793

June 29, 2005

Dr. Charlie Fein Vice-President KC Environmental, Inc PO Box 1208 Makawao, HI 96768

Dear Dr. Fein:

Thank you very much for your letter concerning the upcoming hearing on the solar telescope. I have notified our members on Maui as to the place, time, and date of said hearing and will again make mention of it at the Maui Chapter's meeting on July 10th.

As a matter of information no one is authorized to speak on behalf of the Royal Order of Kamehameha I with out the permission of our Ali'i Nui. I mention this because there has been and continues to be individuals who are not members claiming to be representatives of the Order.

We have what is called within the Order the Aha Kahu Po'o which is the Council of Trustees. The Kahu Po'o consists of the Kahu Po'o Nui, Kahu Po'o Iki, and Kahu Po'o, three members in all. These three members are charged with speaking for the Order concerning the solar telescope. Fortunately, the Kahu Po'o Iki resides on Maui and I am sure will be in attendance.

The members of the Aha Kahu Po'o are Mr. William Souza (Kahu Po'o Nui) of O'ahu, Mr Clarence Solomon (Kahu Po'o Iki) of Maui, and Mr. David Lovell (Kahu Po'o) of Hilo, Hawai'i. These are the only members authorized to conduct business on behalf of the Royal Order of Kamehameha I.

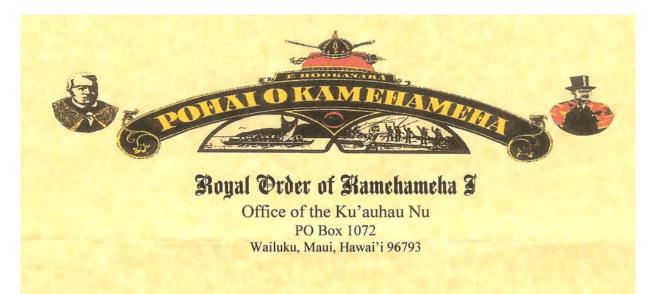

Again, thank you for the letter.

O a'u me ka ha'a ha'a Ali'i Sir William E Garcia Jr

i Sir William E Garcia Jr. C Ku'auhau Nui

Comment - Royal Order of Kamehameha I, March 14, 2006

March 14, 2006

Dr. Charlie Fien, Vice-President KC Environmental, Inc. PO Box 1208 Makawao, HI 96768

Dear Dr. Fien,

Thank you very much for mailing the final report of the Cultural Resource Evaluation and Traditional Practices of the Proposed Advanced Technology Solar Telescope (ATST) at Haleakala High Altitude Observatories, which I read with much interest.

I must, however, decline your invitation to submit written comment on this issue because as the Ku'auhau Nui, anything that I say may be misconstrued as having the official approval of the Royal Order of Kamehameha I. I do not want to interfere or become a distraction to the Office of the Aha Kahu Po'o who is entrusted with this issue.

Time permitting, I plan to attend the consultation on 28 March 2006 to listen to what is being said. Ali'i Clarence Solomon, who is a members of the Aha Kahu Po'o will also be there with one other member of the Royal Order of Kamehameha I.

Sincerely,

William E

Ku'auhau Nui

Response - Royal Order of Kamehameha I, April 3, 2006

Ali'i William Garcia, Jr., KCK Royal Order of Kamehameha I Office of the Ku'auhau Nu

RE: Comments to Advanced Technology Solar Telescope (ATST) Cultural Report

Dear Ali'i Garcia,

Thank you for your letter regarding the Cultural Resource Evaluation and Traditional Practices Report for the ATST project. We understand that Haleakalā has significant cultural resources for the Native Hawaiian community. The comprehensive Environmental Impact Statement (EIS) is being prepared and will evaluate the potential impacts of the proposed project on the associated Hawaiian culture and spiritual resources, as well as other environmental conditions to Haleakalā.

We appreciate the participation of all members of the Royal Order of Kamehameha I. Your letter will become part of the EIS and the Administrative Record.

If you have not done so already, we invite you to visit the web site at: <u>http://atst.nso.edu/</u> and <u>http://atst.nso.edu/library/EIS.shtml</u>, which specifically addresses the Section 106 process of the National Historic Preservation Act (NHPA). Thank you for your participation.

Sincerely,

Dr. Charlie Fein Vice President

Comment - Royal Order of Kamehameha I, June 17, 2006

Royal Order of Kamehameha 1 Heiau 'O Kahekili 4

Hale Nanea, Kahului, Maui

June 17, 2006

Dr. Charlie Fein, Vice President KC Environmental, Inc. P.O. Box 1208 Makawao, Maui, Hawai'i 96768

Subject: Haleakala Cultural Resource Plan

To Whom It May Concern,

This letter is to inform you that I have been designated to communicate with you and your organization on behalf of the Royal Order of Kamehameha I, Heiau 'O Kahekili IV so that we will have a formal request for information about Haleakala and inquire if we could have a copy of this information in writing.

The information that we as an organization are requesting is a copy of the <u>Haleakala</u> <u>Cultural Resource Plan</u>. We would like to have this plan so that we can be better informed as what has been recommended and what has been done to amend this plan (if any). We would like to know from you what obstacles your organization encountered, in regards to the Haleakala Cultural Resource Plan, since the Telescope project came about and what have been noted to follow the plan. We are requesting all of this information in writing to help us better review the matters before us.

Should you have any questions please feel free to contact me at the following phone number: Cell (808) 357-7759, also there is an e-mail address of <u>Kahckili@wisperhawaii.com</u> Thank you very much for your time and consideration in this matter.

Ali'i George Kaho'ohanohano Ku'auhau Royal Order of Kamehameha I Heiau 'O Kahekili IV

Certified Mail: 700402510 0005 3733 5393

Address for the Ku'auhau for Heiau 'O Kahekili 4 Ali'i George Kaho'ohanohano 2723 Kamelani Loop, Pukalani, Maui, Hawaii 96768-8744

Response - Royal Order of Kamehameha I, June 27, 2006

(808) 573-1903 fax: (808) 573-7837 charlie@kcenv.com

June 27, 2006

Ali'i George Kaho'ohanohano Ku'auhau Royal Order of Kamehameha I Heiau 'O Kahekili IV

Dear George:

Thank you for your inquiry and interest in the proposed Advanced Technology Solar Telescope (ATST) project. While there is no overall Haleakalā Cultural Resource Plan, which would have to include all of the many properties on the mountain, I believe that you may be referring to either:

- a) the Cultural Resource Evaluation (*Kū I Ka Mauna, 2003*) prepared for the University of Hawai'i Institute for Astronomy Long Range Development Plan (LRDP, 2004); or,
- b) the Cultural Resource Evaluation and Traditional Practices Assessment for the Proposed Advanced Technology Solar Telescope (ATST), *E Mālama Mau Ka La'a*: Preserve the Sacredness at Haleakalā High Altitude Observatories; which was prepared in 2005 by Cultural Specialist's Charles Kauluwehi Maxwell and Adrian K. Kamali'i.

We have enclosed these documents and a CD. Both documents contain recommendations for preservation of the cultural resources and practice of spiritual protocols at Haleakalā High Altitude Observatory (HO), the 18.1-acre property managed by the University of Hawai'i Institute for Astronomy that occupies most of Pu'u Kolekole. The Institute for Astronomy has adopted the recommendations in these two documents and all those who work at HO must adhere to the cultural protocols described in them.

With respect to the proposed ATST project, the Draft Environmental Impact Statement (DEIS) will be released shortly. The Royal Order of Kamehameha I is included on the DEIS distribution list. This DEIS will discuss in detail potential impacts of the proposed ATST project on cultural and historic resources in the summit area. These potential impacts have already resulted in a declaration of "Adverse Effect" by the agency proposing the project (the National Science Foundation) and, as you know, public meetings to discuss Native Hawaiian interests arising from these potential impacts have already occurred on Maui.

The National Historic Preservation Act (NHPA) requires that agencies consider the impacts of proposed actions on historic and cultural resources. After assessing these potential impacts on the resources that had been identified through studies funded by UH and NSF, the NSF has published notification in Maui newspapers requesting resolution proposals to help mitigate any potential cultural or historic impacts that may result from the construction and operation of ATST at the 18.1-acre University of Hawai'i site on Haleakalā. Proposals have been received and more are anticipated as the process continues during the coming months. The ultimate objective is to develop a Memorandum of Agreement (MOA) between the NSF and cooperating groups and individuals in the Maui community to minimize and resolve any cultural impacts that may result from the proposed ATST project.

Response - Royal Order of Kamehameha I, June 27, 2006 (cont.)

Additional information regarding the NHPA process for this project can be found on the Internet at: <u>http://atst.nso.edu/library/EIS.shtml</u>. The LRDP can also be found on the Internet at: <u>http://www.ifa.hawaii.edu/haleakala/LRDP/</u>.

We hope your organization will choose to participate in the process. If there is any additional information you need or questions you have, please do not hesitate to write or call me. If you have any questions that you would like to address to the National Science Foundation regarding this matter, please do not hesitate to contact either of the following:

Subject: Haleakala Cultural Resource Plan

Dear Dr. Fein,

This letter is being sent out to you to follow up on the response that was sent to this organization regarding the statement that there is no Haleakala Cultural Resource Management Plan at this time for Mount Haleakala. It is some what confusing when we read your letter stating that there are several different properties on the Mountain top and it would be difficult to have several different cultural plans for this area. There are several issues that we would like to review with you,

- A) Does the federal rules (under 106) mandate that Cultural Resource Management plans must be followed?
- B) Why would there be several different cultural Management plans for one Sacred Mountain? From your letter we find it very difficult to understand that there would be several different cultural plans for the Sacred Mount Haleakala. Where is this coming from? Is there a change in 106 that we have not been informed about?
- C) The plans that was submitted by you to this organization is not a cultural management plan for the Sacred Mountain, where is the plan that is mandated by the Federal Government?
- D) From what we have been informed about the lack of a Cultural Management Plan for Haleakala, does the Federal rules (under 106) mandate that a cultural plan be done and followed before any project can be started?
- E) The palapala (Paper work) that was supplied to this organization by your company is not a cultural management plan for Haleakala; these are consultation plans for proposed projects and do not qualify to be used in place of a Cultural Management Plan.
- F) With the lack of information from your company or from any other entity about a Cultural Management Resource Plan (that is in effect at this time) for Haleakala, this organization feels that your company are not following section 106 of the Federal Rules.
- G) If we are in error please show us where in the Federal rules, because of a lack of a cultural management plan, rule 106 can be disregarded. From the meetings that I have attended

Comment - Royal Order of Kamehameha I, July 17, 2006 (cont.)

Royal Order of Kamehameha 1 Heiau 'O Kahekili 4 Hale Panea, Kahului, Maui

your organization has been enforcing the fact that you must follow Section 106 and yet there is no compliance in the area of a Cultural Resource management plan.

We would like to have these questions addressed in order to secure, protect, perpetuate and preserve our Hawaiian Culture, natural and Cultural recourses and traditional practices for Haleakala. We believe that it is needed to make sound, long term decisions in matters of such great importance.

Should you have any questions please feel free to contact me at the following phone number: Cell (808) 357-7759. Also there is an e-mail address of <u>Kahekili@wisperhawaii.com</u>, we would like to have a response to this letter no later than ten (10) working days and if more time is needed please feel free to contact us. Thank you very much for your time and consideration in this matter.

Ali'i George Kaho'ohanohano, Ku'auhau Royal Order of Kamehameha I Heiau 'O Kahekili IV

Dear George:

Thank you for your additional request for information. Your questions suggest that perhaps there is some misunderstanding about the ATST project and about the University of Hawaii's Haleakalā High Altitude Observatory in general. Please allow me to further clarify.

The only property for which the University of Hawai'i has any responsibility is for the 18.1 acres of land that is managed by the University of Hawai'i Institute for Astronomy. At this time, that property does have a Protection of Historic and Cultural Resources plan that was referenced in our first letter, which may be found in the Long Range Development Plan (LRDP) <u>http://www.ifa.hawaii.edu/haleakala/LRDP/</u>. The plan may be found beginning on page 62 of the LRDP, Section 9.3.2-Protection of Historic and Cultural Resources. As far as we are aware, only the Institute for Astronomy out of all the agencies on Haleakalā operates under a Protection of Historic and Cultural Resources plan at this time.

It is accurate to state that the Section 106 process operates in parallel and somewhat independent from such existing cultural plans, although there may be considerable overlap in cultural resource protection measures. Under Section 106 for this proposed project, the parties are to consult on ways to avoid, minimize, or mitigate the adverse effects of ATST. If, following consultations, the State Historic Preservation Division and the agency can reach agreement as to how best to resolve the adverse effects, they will enter into a Memorandum of Agreement, which must be followed by the signatories. Native Hawaiian organizations such as the Royal Order of Kamehameha I would be invited to also sign as a concurring party to the Agreement.

Under Section 106, there would not be several plans or Memorandum of Agreements — only one. Therefore, if the "Cultural Resources Management Plan" to which you refer in your last letter is actually what Section 106 refers to as the "Memorandum of Agreement, you would be correct to say that no such Agreement exists as of this date.

The Section 106 process must be followed before the project is approved. However, that process may or may not result in a Memorandum of Agreement, although we are very hopeful we will come to such an Agreement. If the agency and State Historic Preservation Division cannot agree on how to resolve the adverse effects after consultations with each other and other concurring parties, Section 106 still allows a project to proceed following consultations, as long as certain other procedures are followed, such as affording the Advisory Council for Historic Preservation the opportunity to comment on the parties' consultative process. Again, we are hopeful that we can resolve the adverse effects of ATST by reaching an agreeable Memorandum of Agreement. In that regard, the National Science Foundation, which is the agency proposing the ATST project, invites the Royal Order of Kamehameha to submit proposals that would help resolve the adverse cultural effects of building ATST on Haleakalā. If NSF receives such a proposal from the Royal Order of Kamehameha, a one-on-one meeting with NSF would be welcome to further discuss such a proposal when the ATST Project Team comes to Maui for further consultations and public comment.

Sincerely

Dr. Charlie Fein Vice President

Comment - Kyle Kajihiro, July 7, 2005

Subject: solar telescope

Dear Mr. Wagner

I am writing regarding the upcoming public meetings on the Solar Telescope on Maui.

Please send me all of the relevant information about the proposed project so that I can formulate questions and comments.

Also, I urge you to hold meetings on other islands besides Maui. This project affects all the islands in Hawai'i. You would deny public participation for large numbers of people by only holding hearing on Maui.

Thank you.

Kyle Kajihiro

Dear Mr. Kajihiro:

Thank you for your interest in the Advanced Technology Solar Telescope (ATST) project. We invite you to visit our web site at: http://atst.nso.edu/ for more information. Please feel free to contact me with comments or to ask questions about the project as information is added to the web site.

With respect to meetings on other islands, we have consulted with our cultural specialist, who clearly indicated there is a strong "home rule" aspect to this project for the Native Hawaiians and the local community on Maui. Through past experience with other state or federal Maui-based projects, the indication was that the community is concerned about once again having only a minority voice when it comes to their own land-use cultural and environmental priorities. Therefore, we have focused public participation on Maui.

Best regards, Jeremy Wagner

Comment and Response - John Oliver, July 7, 2005

Date: Fri, 8 Jul 2005 10:33:15 -0700 X-Mailer: Microsoft Office Outlook, Build 11.0.6353 Thread-Index: AcWD4x8IjAz6RygJRXiAPW+5mDyvaA==

Charlie,

I received a voice mail message on my office telephone last night (Thursday, July 7, 2005 at 8:58 pm MST). The message ran as follows:

Hey Jerry Wagner. Just calling to let you know what the laws are here in the alleged state of Hawaii. You guys can not put a telescope up. UH does not have title over the land on Haleakala. They've never had title. And the state courts have already said they have no jurisdiction over title. The "Ava Nava Aah" [sp?] is a legitimate court. You're going to have to answer to them. You might as well answer to them now. Give me a call, my name is John Oliver Thanks.

Subject: contact by John Oliver Date: Fri, 8 Jul 2005 13:20:14 -0700 X-Mailer: Microsoft Office Outlook, Build 11.0.6353 Thread-Index: AcWD9gjIhg8a/oOITDCaqrBoyRK2mg==

Charlie,

I called Mr. John Oliver back at 12:30pm MST today, Friday, July 8, 2005. I stated that the issue of land title should be referred to the University of Hawaii and that therefore I had already forwarded his comments to the UofH. Mr. Oliver thanked me for this. Mr. Oliver stated that the UofH does not have title to the land on Haleakala. I suggested that Mr. Oliver consider submitting his thoughts in writing to the EIS process. I asked if he had the contact information. Mr. Oliver indicated that he had the contact information from the recent newspaper article. Mr. Olsen then asked if the NSO was part of NASA. I said that the NSO was not part of NASA and that we were working through the EIS process for the National Science Foundation. Mr. Oliver thanked me for calling and for the information. The conversation lasted approximately 33 minutes and was very cordial in nature.

Jeremy

July 25, 2005

Mr. Edmund James Orszula

Dear Mr. Orszula:

Thank you for attending the Advanced Technology Solar Telescope (ATST) public scoping meeting held at the Mayor Hannibal Tavares Community Center on Thursday, 14 July, 2005.

In response to your question, the traffic on the roads leading to the observatory will be studied as a part of the Environmental Impact Statement preparation. This study will include assessment of the current use of the roads by park visitors, bicycle riders, observatory personnel, and others, as well as the anticipated increase in traffic that would result from constructing and operating the ATST at Haleakala. Any mitigations to be implemented during ATST construction and/or operation in order to assure continued safe traffic volumes and minimum potential for dangerous situations will be included as part of the final EIS.

Again, thank you for your interest in the ATST project. We invite you to visit our web site at: http://atst.nso.edu/ for more information. Please feel free to contact me with comments or to ask questions about the project as information is added to the web site.

Best regards,

Re: Advanced Technology Solar Telescope

ATST atop Haleakala, Island of Maui, Hawaii

Aloha Mr. Wagner,

I am writing because of great concern and in protest against the ATST Project.

Let me first say that I am a Native Hawaiian. I stand solidly upon my heritage while being fully educated by Western standards and live a balanced life with minimal forfeit of one for the other. History has demonstrated and confirmed that much wrongdoing has been committed against us. Yet I and many others stand as proof that although a race decimated we are increasing, although a people oppressed we are rising, although a culture disregarded we are growing in esteem, and although our values are subjugated we defiantly hold strong to our spirituality. Our sense of connectivity to the land is at the very fiber of our spirituality. We are a proficient people Sir. Our knowledge, skills, and resources are being stripped because although we share with Aloha, you of the Western culture are parasitic in nature and do not understand reciprocity nor do you have a symbionic relationship to the land.

You and your constituents have taken it upon yourselves to do years of research and development on this very worthy project. However, you have spent little time or effort to research and develop any kind of cultural sensitivity to the host culture and people of these islands. You forget that this is our Motherland. You show how your comparisons to other locations demonstrate that Hawaii provides YOU with the most optimum opportunity to further YOUR research.

Comment - Kanoe Cazimero, July 15, 2005 (cont.)

And just who are you? Your collaborators and partners are all very impressive ? Cal Institute of Technology, Cal State U, Colorado Research, Lockheed, and Michigan State. So why are they not stepping forward to have the ATST in their state? We the people of Hawaii concur with Mr. Lindsey. WE WOULD rather see the telescope in ??Colorado, Montana, New Mexico, California? or some other state.? http://www.mauinews.com/print_version.asp. Your approach is to convince the people of Hawaii through a small part of our community that the project is good for us. But have you truly considered US, the collective people of Hawaii.

Mr. Jeff Kuhn, Associate Director of the University of Hawaii Institute for Astronomy spoke to only a small portion of our community. You geographically failed to recognize that our State is comprised of 120 islands where 7 of them are inhabited and make up the vast greater community. Any invasive construction of this magnitude upon a sacred site is a direct attack on our intelligence, our culture and our land.

Mr. Kuhn said that the ASTA would be used for research, yet he states that ?the reason the \$161 million telescope should be built is ?for our children.?? http://www.mauinews.com/print_version.asp. For who?s children specifically are Mr. Kuhn and your constituents speaking? If you wish to speak about the needs of the children of Hawaii, then consider the needed dollars to help raise the standards of the local educational system, school conditions, transportation, teacher support, programs, supplies, materials, nutrition ? for starters.

I am appreciative of Mr. Edgar?s article in the Maui News for those like I who live on another island would not be aware of the project. However he uses a lot of ink to cover the persuasive points of UH Director Mr. Kuhn and seems to nonchalantly state that ?Although worries were expressed about the impact on Hawaiian dark-rumped petrels that nest nearby and about the fact that the site is on ceded - described by Lindsey as "stolen" - land, the most common objection was to the color of the 10-story building.? http://www.mauinews.com/print_Version.asp.

No Mr. Edgar, and no Mr. Wagner, it is not just a worry about impact, or about nesting petrels, let alone the color of the 10-story building. It is indeed a concern when people who are not able to eloquently express themselves are not asked to clarify what was simply stated. Your 10-story building, were it painted to blend into the landscape of Haleakala would still be unacceptable. It is a defacement of pristine and sacred ground that for our Hawaiian Culture holds historic value. Our history was being defined long before our shores were touched by Western explorers ? not at the

point of Western contact.

Put your technological wonder somewhere else Mr. Wagner. And Mr. Kuhn, you and your fellow Directors at the University of Hawaii need to put your energies into providing opportunities that will support and advance our youth, for they are the future of Hawaii. Provide more scholarship, more appropriate housing, on-the-job internship for credit to ensure that our graduating students become the future workforce we need.

"We are hoping for an invitation from the Hawaiian community to come into Haleakala to open a new window onto the sun," Kuhn said. <u>http://www.mauinews.com/print_version.asp</u>. And I say to you Mr. Kuhn and Mr. Wagner, were this true, then you would have invited the Hawaiian community, not the collaborators to come to the table from the onset of this project. The development on Haleakala is spreading like a cancer, much like the development on Mauna Kea. It needs to stop.

Kanoe Cazimero (Ms.)

Response - Kanoe Cazimero, July 15, 2005

Dear Ms. Cazimero:

Thank you for your comments and interest in the Advanced Technology Solar Telescope (ATST) project. We invite you to visit our web site at: http://atst.nso.edu/ for more information. Please feel free to contact me with comments or to ask questions about the project as information is added to the web site.

Mr. Jeremy Wagner, ATST Project Manager National Solar Observatory 950 North Cherry Ave. Tucson, AZ 85726 fax: (520) 318-8500

Dear Mr. Wagner,

The Board of the Friends of Haleakala National Park, at our August 9th meeting, formulated and passed the following statement to be entered as a comment for the EIS on the ATST. We intend this email to take the place of a postal-mailed ATST PROJECT COMMENTS FORM. I will also fax this statement to you to make sure that you receive it by your deadline of 4:30 pm MST August 14.

Mele Stokesberry, Recording Secretary, Friends of Halekala National Park

X Yes, we would like to receive copies of future environmental planning documents on the proposed ATST project (including the Record of Decision) that NSF and NSO distribute to the public.

COMMENT OF FRIENDS OF HALEAKALA NATIONAL PARK

The Friends of Haleakala National Park strongly oppose locating the Advanced Technology Solar Telescope Project on Haleakala.

The entire mountain of Haleakala is a visual, cultural, biological and geological resource that must continue to be recognized as being of great significance and vital to our visitors, to our local residents and to our economy.

One of the missions of the Friends of Haleakala National Park is to preserve Haleakala's unique ecosystems, scenic character and associated Hawaiian culture and spiritual resources.

This project is so huge and intrusive it will adversely change Haleakala forever, causing irrevocable loss of natural resources.

P.01

Mr. Jeremy Wagner, ATST Project Manager National Solar Observatory 950 North Cherry Ave. Tucson, AZ 85726 fax: (520) 318-8500 email: jwagner@nso.edu

Dear Mr. Wagner,

This is a correction to the ATST comment sheet sent to you by both email and fax on Aug. 10, pm, from the Friends of Haleakala National Park.

Please remove our paragraph beginning with the words "COMMENT OF FRIENDS OF HALEAKALA NATIONAL PARK for the Final Environmental Impact Statement.." above our official statement. There was confusion on my part as to what document these comments were intended for. The Friends of Haleakala National Park wish to retain the right to amend and/or add to our statement when the final EIS is published.

Our official statement, turned in as comments to you on Aug. 10, remains as sent:

"The Friends of Halcakala National Park strongly oppose locating the Advanced Technology Solar Telescope Project on Haleakala.

The entire mountain of Haleakala is a visual, cultural, biological and geological resource that must continue to be recognized as being of great significance and vital to our visitors, to our local residents and to our economy.

One of the missions of the Friends of Haleakala National Park is to preserve Haleakala's unique ecosystems, scenic character and associated Hawaiian culture and spiritual resources.

This project is so huge and intrusive it will adversely change Haleakala forever, causing irrevocable loss of natural resources."

Thank you.

Mele Stokesberry, Recording Secretary, Friends of Halekala National Park

Response - Mele Stokesberry, Friends of Haleakalā, August 17, 2005

August 17, 2005

Ms. Mele Stokesberry Friends of Haleakalā National Park P.O. Box 322 Makawao, HI 96768

Dear Ms. Stokesberry,

Thank you for the submission of comments on behalf of Friends of Haleakalā National Park. We agree that Haleakalā has significant visual, cultural, biological, and geological resources for visitors, local residents, and the Maui economy. As we explained in our presentation to the Friends Board in July, the ATST project is proposed for the 18.166 acres of conservation land that was specifically set aside on the mountain for scientific purposes by Executive Order by the Governor of Hawai'i.

Therefore, a comprehensive Environmental Impact Statement is being prepared to evaluate potential impacts of the proposed project on the ecosystems, scenic character, associated Hawaiian culture and spiritual resources, and other environmental conditions on those 18.166 acres, as well as any potential impacts to the surrounding Haleakalā environment that may be of concern to your organization.

The EIS process involves identifying environmental concerns (such as those your organization has expressed), obtaining the relevant data on environmental conditions through necessary studies and surveys, receiving public and agency input, evaluating alternatives, and proposing measures for avoiding, minimizing, rectifying or reducing adverse impacts. At various times that will be widely announced, there will be opportunities for your organization to provide input, additional data, comments, recommendations, etc., in keeping with the intent of the EIS process to fully and publicly evaluate a proposed action. We welcome your participation and look forward to further interaction with Friends of Haleakalā National Park.

If you have not done so already, we invite you to visit our web site at: <u>http://atst.nso.edu/</u>. Thank you for your participation and feedback.

Best regards,

Jeremy Wagder Project Manager

Operated by the Association of Universities for Research in Astronomy, Inc. under a cooperative agreement to the National Science Foundation

Comment - Mary Evanson, August 10, 2005

ADVANCED TECHNOLOGY SOLAR TELESCOPE PROJECT COMMENTS FORM

The National Science Foundation (NSF) and the National Solar Observatory (NSO) welcomes and encourages written public comments on environmental impacts and concerns — including historical, archaeological, and traditional cultural issues — and proposed mitigation associated with the proposed Advanced Technology Solar Telescope (ATST) project.

Your comments will be reproduced in the Final Environmental Impact Statement (EIS) for the ATST project. If you prefer that your name not be published with your comments, please express that desire in the comments section below. The NSF and NSO will not publish your address in the Final EIS.

Your comments may be written on this form or additional pages and returned to the registration desk; or, you may send your comments to:

Mr. Jeremy Wagner, ATST Project Manager

Ms. Mary Evanson

Dear Ms. Evanson,

Thank you for your comments regarding the Advanced Technology Solar Telescope (ATST) Project following the Public Scoping Meetings.

The EIS will fully assess and document potential visual impacts from the proposed project, in order to evaluate whether the project will in fact constitute a significant impact to the summit of Haleakalā. We look forward to having you examine our studies and documentation, and we encourage you to provide your comment during the EIS process.

If you have not done so already, we invite you to visit our web site at: <u>http://atst.nso.edu/</u>. Thank you for your participation and feedback.

Best regards,

Jeremy Wagner Project Manager

Operated by the Association of Universities for Research in Astronomy, Inc. under a cooperative agreement to the National Science Foundation

Comment– Mary Evanson, March 20, 2006

CULTURAL RESOURCE EVALUATION AND TRADITIONAL PROCTICES OF THE PROPOSED ADVANCED TECHNOLOGY SOLAR TELESCOPE AT HALEAKALA HIGH ALTITUDE OBSERVATORIES

I have read this document and call attention to the following: Page i: Footnote: There is no Kaupo District. See attached maps. Page 1: Outline

> Throughout this document the author uses names of quadrangles in place of ahupua'a and districts. Kolekole is entirely within the ahupua'a of Papa'anui, Makawao District.

C. The tangent areas of research are all quadrangles and not ahupua'a.

Page 3: Last paragraph: the author writes that according to "Place Names of Hawai'i" Kolękole is located in Makena ahupua'a. This and the next sentence are erroneus. Neither Pukui or USGS use "ahupua'a as land designations. There is no Makena ahupua'a.

> Footnote 3: Again the author confuses Districts and Quadrangles. Haleakala peak is in the Kaupo quadrangle not Kaupo district. Haleakala peak is 8201' not 10,023 - Pu'u Ula'ula (Red Hill), the summit of Haleakala is 10,023'.

Page 4. Kilohana ahupua'a and in footnote, Kilohana District, neither is correct. Kilohana is a quadrangle.

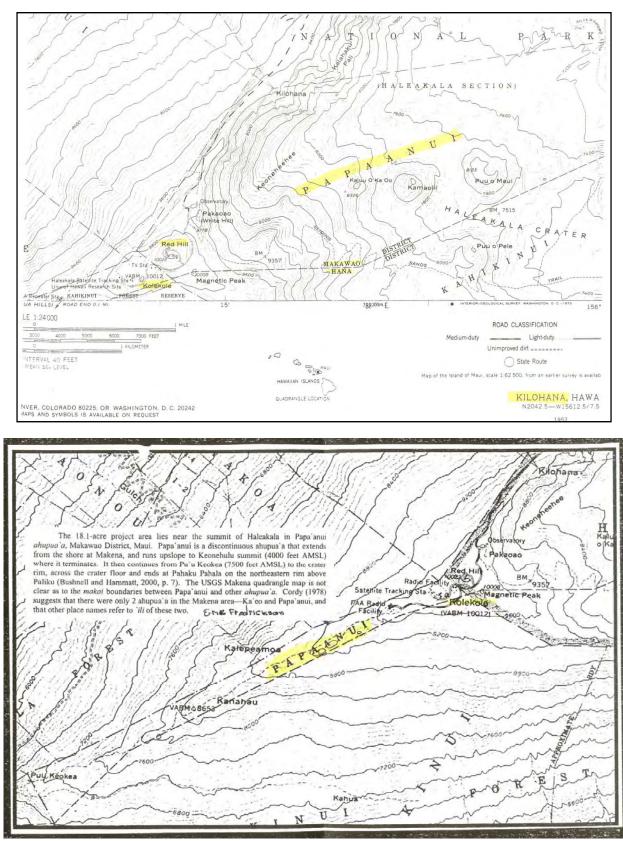

Page 5: All Tangent Areas of Research are quads not ahupua'a as stated.

- Page 19:Last paragraph. The variety of Sandalwood found near Park Headquarters and Hosmer Grove is Santalum haleakalae. The lanaiense named in this report is found in the Auwahi area of south Maui a long distance from Kolekole.
- Page 20:Ka'ape'ape or Ape'ape is not found in the Kolekole area or in ahupua'a of Papa'anui. It only grows in very wet areas miles away from the dry alpine area of Kolekole or Papa'anui.

It is unfortunate that these errors were not caught and corrected before being printed as fact and being posted on the Internet. Be accurate and true to the Hawaiian culture. These errors are so obvious they do raise doubts about the accuracy of other documents relating to this project. Respectfully submitted, March 13, 2006

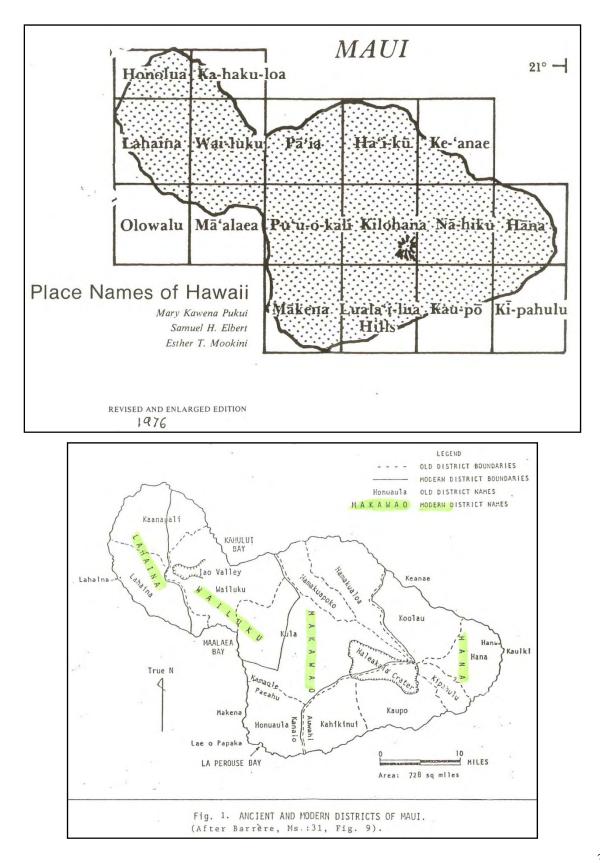

Mary M. Evanson

RE: Comments to Advanced Technology Solar Telescope (ATST) Cultural Report

Dear Mary,

Thank you for your comments to the Cultural Resource Evaluation and Traditional Practices Report for the ATST project. We understand that Haleakalā has significant cultural resources for visitors, local residents, and the Maui community. The comprehensive Environmental Impact Statement (EIS) is being prepared and will evaluate the potential impacts of the proposed project on the associated Hawaiian culture and spiritual resources, as well as other environmental conditions to Haleakalā.

We appreciate your comments and concerns and will ensure they are addressed as part of the EIS process. Your comments will become part of the EIS and the Administrative Record.

If you have not done so already, we invite you to visit the web site at: <u>http://atst.nso.edu/</u>. Thank you for your participation and feedback.

Sincerely,

Oprale

Dr. Charlie Fein Vice President

Comment - Marv Evanson, March 20, 2006

5.8.3 SCHOOLS

The closest school is located in the Kula community (Haleakalā Waldorf School) and is approximately 27 miles from the summit of Haleakalā.

Potential Impacts and Mitigative Measures

Due to its proposed location, impacts to schools from the proposed ATST project are not anticipated to be significant.

5.8.4 RECREATIONAL FACILITIES

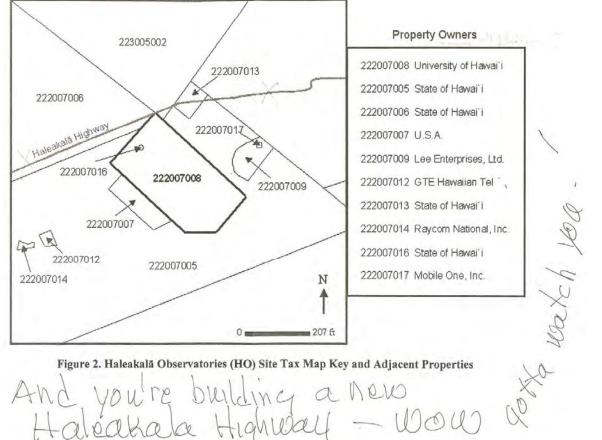

The Haleakalā Visitor Center of Haleakalā National Park is located approximately 0.5 miles east of HO and is one of the main points of attraction for visitors of the mountain. Besides boasting a magnificent view of the crater, the Visitor Center also details the geology, archaeology, and ecology of the area as well as the wilderness protection programs in exhibits posted throughout the area. Overlooks with orientation panels and descriptive displays are located at Leleiwi, Kalahaku, and Pu'u Ula'ula (Red Hill) along the park road between park headquarters and the summit. The rare silversword plant that can be seen at Kalahaku draws many nature enthusiasts.

Many visitors are attracted to the summit and crater area, because of the excellent walking and hiking opportunities available. Hikes can range from short self-guiding walks to rigorous backpacking for several days. Camping is permitted at designated areas inside the crater floor. Camp and picnic sites are available in the Park, while public cabins are available for campers in the crater. In addition, concessionaires sponsor their own trips through the crater on a one-day or overnight basis. Hikers have also been known to traverse the trails found near the <u>proposed site at Kalepeamoa</u>. The Skyline Trail begins at the 9,750-foot elevation at the lowest point of the paved access road near the Saddle Area and continues for about 6.5 miles, ending at the Polipoli Spring State Recreation Area. Trails through the area are open to the public for hiking and related recreational activities except during times of extreme fire danger.

Potential Impacts and Mitigative Measures

The proposed ATST project is not expected to have any impact on recreational facilities at Haleakalā. While visitors to the Visitor Center would be able to see ATST among the other HO facilities from the parking area of the visitor center and from the Pu'u Ula'ula overlook, the proposed project will not interfere with the view of the crater or other vistas in the summit area. The facility would not be visible from the crater, due to terrain between the proposed facility and the crater wall. The few vehicles traveling to the proposed ATST each day will not add significantly to the hundreds of vehicles entering Haleakalā National Park daily. Construction activities that may involve slow vehicular traffic will be described in the EIS, along with mitigation measures for potential interference with visitor and emergency véhicle traffic.

3-20-06 Recd From Mary Evanson 40

March 21, 2006

Ms. Mary Evanson

Dear Mary,

Thank you for your comments on the ATST EIS Preparation Notice. In response to your handwritten comment in the margins of page 40, the sentence you underscored should have read, "Hikers have also been known to traverse the trails found near the proposed site, to Kalapeamoa and points beyond on the Skyline Trail, which begins at the 9,750-foot elevation..." The ATST project is not planning to do anything with Kalepeamoa.

In response to your handwritten comment on Figure 2, Haleakalā Observatories (HO) Site Tax Map Key and Adjacent Properties (page 3), we have shown the TMK information as it is on the Maui County Web Site for that graphic. Haleakalā Highway is shown on their map as traversing the area. The ATST project is not planning to build any roads.

Sincerely,

alu

Dr. Charlie Fein Vice President

March 27.2006

Re: ADVANCED TECHNOLOGY SOLAR TELESCOPE

The Friends of Haleakala National Park is a non-profit organization that was formed ten years ago, in 1996, to assist Haleakala National Park in various ways such as offering volunteer assistance, raising money for the Park's Endangered Species Parogram and to monitor actions that might impact the Park and its ecosystems.

In 1997 the University of Hawai'i/Institute for Astronomy published a draft Environmental Assessment for a Coordinated Broadcast Facility to be located about a mile down the southwest rift zone from the summit of Haleakala. The project was good but the location was bad. The public said no and the project did not materialize.

Last August the Friends of Haleakala National Park voted to strongly oppose locating the Advanced Technology Solar Telescope project on Haleakala. The project may be good but the location is bad.

The Friends of Haleakala National Park strongly oppose locating the Advanced Technology Solar Telescope Project on Haleakala

The entire mountain of Haleakala is a visual, cultural, biological and geological resource that must continue to be recognized as being of great significance and vital to our visitors, to our local residents and to our economy.

One of the missions of the Friends of Haleakala National Park is to preserve Haleakala's unique ecosystems, scenic character and associated Hawaiian culture and spiritual resources.

This project is so huge and intrusive it will adversely change Haleakala forever, causing irrevocable loss of natural, cultural and scenic resources.

This project may be worthwhile but the location is unacceptable. Haleakala may be the best spot in the whole wide world for this telescope but it can not be built on Haleakala. Go back to your maps and find another location. PLEASE!

Submitted by: Munto wer

August 17, 2005

Mr. Isaac Hall

Dear Mr. Hall,

Thank you for your comments regarding the Advanced Technology Solar Telescope (ATST) Project following the Public Scoping Meetings.

As we indicated in our public meetings and in the forthcoming EIS Preparation Notice, we anticipate that the ATST will be visible at the summit from some locations on Maui under clear weather conditions. In the EIS, we fully intend to assess and document any potential for visible impact from the proposed project, in order to evaluate whether the project will be so "huge and intrusive" as to constitute a significant impact to the summit of Haleakalā. We look forward to having you examine our documentation as it becomes public.

If you have not done so already, we invite you to visit our web site at: <u>http://atst.nso.edu/</u>. Thank you for your participation and feedback.

Best regards,

Jeremy Wagner

Dr. Craig B. Foltz, Program Officer National Science Foundation Division of Astronomical Sciences 4201 Wilson Blvd., Room 1045 Washington, DC 22230

Re: Advanced Technology Solar Telescope (ATST) Project

Aloha:

I am writing about my interest in a notice of intent to prepare an Environmental Impact Statement (EIS) for the Advanced Technology Solar Telescope (ATST) at the Haleakala High Altitude Observatory (HO) Site on Haleakala, Maui, Hawai`i and request that you include my name and address among the interested parties receiving material about the project. Unfortunately, I was unable to attend any of the scoping meetings, and so copies of any previously published materials would also be appreciated.

My interests include these potential impacts that should be analyzed in the EIS: (1) visual impacts upon the natural image of Haleakala both in the summit area and all locations on the Island of Maui where the summit is visible; (2) continuation of existing abuse of a remarkably unique natural area for purposes that are incompatible with the spiritual and esthetic nature of the place; (3) disrespect for the importance of keeping such unique places in their natural condition, to benefit future generations (as a result of scientists being primarily motivated by near term professional and economic interests in the project); (4) deterioration of the spiritual and cultural environment of Maui as a result of excessive development of all types – including this project as a cumulative impact – displacing unique natural, spiritual and cultural resources; (5) risk of further alien spices introduction with adverse impacts on the summit, Haleakala and Maui in general; (6) a malaise of bad karma (*i.e.*, adverse repercussions in the fate of those involved) from all of the above specified impacts – and resulting continued confusion in the appropriate balance that should be maintained between occupational technology and nature.

Thank you for considering these comments.

Aloha,

BillSmith

The vision of the Kula Community Association is to preserve open space, support agriculture, maintain a rural residential atmosphere, and to work together as a community. The specific purpose of this association is to improve the quality of life for the residents of Kula, to promote civic welfare, and generally to benefit the community of Kula.

RE: Request to be a consulted party for the Haleakala ATST - FEA, DEIS & FEIS

Aloha,

This is a formal request by the Board of the Kula Community Association to be a consulted party in the ATST FEA, DEIS & FEIS permitting process.

Since the ATST is within our community, we obviously have a genuine interest in the ATST's impact on the Kula community. Among our interests are the impact on the roads, the visual impact, the effect on auto and bike traffic through our community, and other physical and cultural issues that may arise or not be addressed during the preparation of the FEA, DEIS & EIS.

You should send correspondance to BOTH of the following addresses:

Kula Community Association P.O. Box 417 Kula, Maui HI 96790 and Dick Mayer, KCA Vice-President

Sincerely yours, Dick Mayer Vice-President, Kula Community Association

September 27, 2005

Mr. Dick Mayer, KCA Vice-President

Kula Community Association P.O. Box 417 Kula, HI 96790

Dear Mr. Mayer and the Kula Community Association Members,

Thank you for your comments regarding the Advanced Technology Solar Telescope (ATST) Project. We understand that Haleakalā has significant visual, cultural, biological, and geological resources for visitors, local residents, and the Maui economy. We are in the process of preparing a comprehensive Environmental Impact Statement in order to evaluate the potential impacts of the proposed project on the ecosystems, scenic character, associated Hawaiian culture and spiritual resources, and other environmental conditions to Haleakalā.

The EIS process involves identifying environmental concerns, obtaining the relevant data on environmental conditions through necessary studies and surveys, receiving public and agency input, evaluating alternatives, and proposing measures for avoiding, minimizing, rectifying or reducing adverse impacts.

In accordance with your request to be consulted on the ATST Project, your comments will be addressed in the EIS. Specifically, the EIS will address potential impact to the roads, visual impact, any potential effects on auto and bike traffic in the Kula community, and other physical and cultural issues that have already been identified elsewhere in the community.

We appreciate your comments and concerns and we will ensure they are addressed as a part of the EIS process. If requested by the KCA membership, we are more than willing to give a presentation to KCA at a future date to more fully inform the members about the ATST Project and to further consult with KCA members.

If you have not done so already, we invite you to visit our web site at: <u>http://atst.nso.edu/</u>. Thank you for your participation and feedback.

Best regards, 10

Dear Dr. Fein:

Subject: The Advanced Technology Solar Telescope (ATST) Environmental Impact Statement Preparation Notice (EISPN), Haleakala Summit, County of Maui

Thank you for the opportunity to review the EISPN for the Environmental Impact Statement (EIS) which will accompany the Conservation District Use Application (CDUA) for the development of the ATST within the 18.166-acre University of Hawaii Institute for Astronomy site at the summit of Haleakala.

The proposed ATST project would be located within the 18.166-acre Haleakala High Altitude Observatories (HO) site on approximately 0.60 acres (25,800 square feet) of undeveloped land east of the existing Mees Solar Observatory Facility or at an alternative site within HO at Reber Circle.

The Draft EIS should discuss the master plan and planning process for the summit of Haleakala and summarize past, existing and future projects for the area. The environmental impacts and mitigation measures for the proposed ATST should be documented relative to the cumulative impacts of the existing development at the summit.

Thank you for the opportunity to comment.

Sincerely,

Laura H. Thielen Director

Response - Laura Thielen, Director, Dept. of Business, Economic Development & Tourism, September 22, 2005

UNIVERSITY OF HAWAI'I AT MĀNOA

Institute for Astronomy

September 22, 2005

Ms. Laura H. Thielen Director Department of Business, Economy Development & Tourism 235 Beretania Street, 6th Floor Honolulu, Hawaii 96804

SUBJECT: The Advanced Technology Solar Telescope (ATST) Environmental Impact Statement Preparation Notice (EISPN), Haleakala Summit, County of Maui

Dear Ms. Thielen,

The sites identified in the EISPN as being considered for the ATST are within the University of Hawaii (UH), Institute for Astronomy's (IfA) Haleakalā High Altitude Observatory Site (HO), which was set aside under Executive Order (EO) No. 1987 and placed under the control and management of the UH Board of Regents.

In your response to the above referenced EISPN, you state:

"The Draft EIS should discuss the master plan and planning process for the summit of Haleakalā and summarize past, existing and future projects for the area."

The Maui County Makawao-Pukalani-Kula Community Plan under: <u>Environment</u> Objectives and Policies

states:

4. Encourage Federal, State and County cooperation in the preparation of a comprehensive Haleakalā summit master plan to promote orderly and sensitive development, which is compatible with the natural and native Hawaiian cultural environment of Haleakalā National Park.

The "Haleakalā summit" actually includes HO, land EO-ed to the Federal Aviation Administration & Department of Energy, DLNR land leased to various broadcast entities including the County of Maui, Hawaiian Homelands, Haleakalā National Park as well as various private landowners.

Response - Laura Thielen, Director, Dept. of Business, Economic Development & Tourism, September 22, 2005

In January of 2005, the IfA published the Haleakalā High Altitude Observatory Site Long Range Development Plan (LRDP), which is available on the web at <<u>http://www.ifa.hawaii.edu/Haleakalā/LRDP/</u>>. The LRDP is a master plan for our 18-acre HO area and will serve as our contribution to any comprehensive Haleakalā summit master plan that may someday be developed.

Sections 6-9 of the LRDP detail the historical, cultural, and educational & research use of HO as well as physical and management planning. The ATST is identified as a potential new facility at HO under Section 8.2.2 of the IfA's LRDP.

Should you have any questions, please do not hesitate to contact me.

Sincerely

Mike Maberry Assistant Director

LINDA LINGLE GOVERNOR OF HAWAIL

STATE OF HAWAII DEPARTMENT OF LAND AND NATURAL RESOURCES

OFFICE OF CONSERVATION AND COASTAL LANDS POST OFFICE BOX 621 HONOLULU, HAWAII 96809

REF.:OCCL:TM

Dr. Charlie Fein, Vice President KC Environmental, Inc. P.O. Box 1208 Makawao, Hawaii 96768

Dear Dr. Fein,

SUBJECT: Environmental Impact Statement Preparation Notice (EISPN) for the Proposed Advance Technology Solar Telescope (ATST) Located at the Haleakala High Altitude Observatories, Papaanui, Island of Maui, TMK: (2) 2-2-7:008

The Office of Conservation and Coastal Lands (OCCL) is in receipt of your correspondence requesting review of the EISPN for the Environmental Impact Statement for the development of the National Science Foundation's ATST proposal within the ≈ 18 acre University of Hawaii site.

According to your information, the proposed \$175,000,000 project is to be constructed on $\approx 25,800$ square feet of undeveloped land located either east of the existing Mees facility or at Reber Circle. The project is to build the next generation ground-based solar telescope that would be an indispensable tool for exploring and understanding physical processes on the Sun that ultimately affect Earth.

The OCCL notes the Haleakala High Altitude Observatory site was established in 1961 by Governor's Executive Order 1987. Departmental records indicate that the proposed project area lies within the General subzone of the Conservation District. The OCCL notes that the proposed project is an identified land use within the General subzone under the Hawaii Administrative Rules (HAR) §13-5-22, R-3 ASTRONOMY FACILITIES. As noted by you, the proposed action will require the filing of a Conservation District Use Application (CDUA) and a Management Plan. The CDUA will require a Public Hearing and a Board permit. Please include a copy of the Long Range Development Plan (LRDP) with your CDUA submittal.

The Draft EIS should include discussion of the LRDP, past monitoring strategies and an evaluation of past mitigative measures for the natural and cultural resources along with the cumulative impacts of development at the subject area. The OCCL looks forward to your future EIS and Conservation District Use Application. Should you have any questions, please feel free to contact Tiger Mills of our Office of Conservation and Coastal Lands at 587-0382.

Mr. Brian R. Jenkins, President Friends of Polipoli P.O. Box 431 Wailuku, HI 96793

Dear Mr. Jenkins,

Thank you for your letter regarding the Advanced Technology Solar Telescope (ATST) Project.

In accordance with your request to be consulted on the ATST Project, we will ensure any comments submitted by Friends of Polipoli are addressed in the EIS. If requested by the Friends of Polipoli membership, we are more than willing to give a presentation at a future date to more fully inform the members about the ATST Project and to further consult with the Friends of Polipoli membership.

If you have not done so already, we invite you to visit our web site at: <u>http://atst.nso.edu/</u>. Thank you for your participation and feedback.

Best regards,

Jereny Wagner Project Manager

Operated by the Association of Universities for Research in Astronomy, Inc. under a cooperative agreement to the National Science Foundation

APPENDIX A: Pre-DEIS PUBLIC COMMENTS

Comment – Brian Jenkins, Friends of Polipoli, April 27, 2006

FRIENDS OF POLIPOLI P.O. Box 431 Wailuku, Hawai'i 96793

April 27, 2006

KC ENVIRONMENTAL INC. Att'n. Dr. Charlie Fein, Vice President P.O. Box 1208 Makawao, Hawai'i 96768

Dr. Craig B. Foltz NSF ATST Program Director 4201 Wilson Blvd., Room 1045 Arlington, VA 22230

Re: Proposed Advanced Technology Solar Telescope on Haleakala Summit

Dear Doctors Fein and Foltz:

This letter is to advise you that the Friends of Polipoli, a Hawaii nonprofit corporation opposes the proposed "Advanced Technology Solar Telescope" on the following grounds:

1. The size of the proposed structure, at approximately 143 feet above ground level, is wholly inappropriate for the summit. It will be clearly visible from most of the Polipoli area especially from the Skyline Drive area. This towering structure will greatly detract from the experience of the last readily accessible wilderness area on Maui.

2. The color of the proposed structure will be a highly reflective bright white (to minimize cooling expenses). The blindingly reflective coating coupled with the gargantuan size of the building will create a glowing beacon that will detract from the wilderness experience enjoyed by hunters and hikers in the Polipoli area. When the public finally becomes aware that this glowing beacon will be taller than a twelve story building, I believe that any local support or disinterest will be quickly replaced with active opposition. The proposed 143 foot tall glowing tower has been described as being more fit for a memorial to the Chernobyl disaster of 1986 than a housing for a telescope on the summit of Haleakala.

3. The Final Report, dated January of 2006, on pages 49-54, contained deliberately deceptive and distorted pictures of how the proposed structure would appear from Pukalani and other sites on Maui. These "depictions" suggest that the tower would be barely visible from various points throughout the island. As the current small structures are clearly visible, how is it possibly that a twelve story glowing tower will be barely

Comment – Brian Jenkins, Friends of Polipoli, April 27, 2006 (cont.)

Dr. Charlie Fein Dr. Craig B. Foltz April 27, 2006 Page Two

visible? The use of this dishonest presentation has made it clear that the rest of the analysis in the Environmental Assessment cannot be trusted by decision makers.

4. The further development of the "Science City" area is adversely impacting the public's right of access to the top of the Skyline Drive trailhead from the national park. Already, there are posted signs declaring that people seeking access to the top of Skyline Drive from the National Park risk being prosecuted under federal law. There is currently a new gate being constructed that appears to be designed to allow the easy blockage of public access to this trailhead. The further development of "sensitive" projects like the proposed "Advanced Technology Solar Telescope" provides justification, for security purposes, to block this important access to the Polipoli trail system from the national park.

The Friends of Polipoli was incorporated on April 1, 2004 and its purpose is the preservation and restoration of natural areas including, particularly, Polipoli Spring State Recreation Area on the Island of Maui and educational activities with regard thereto. The proposed "Advanced Technology Solar Telescope" will clearly have an adverse impact on the Polipoli area. The Directors of The Friends of Polipoli have resolved to oppose this project. Thank you.

Sincerely, Friends of Polipoli

12 M. 1

By: Brian R. Jenkins Its: President

Comment – Brian Jenkins, Maui News Letters to the Editor, May 8, 2006

Letters

Solar telescope report used drawings disguised as photos

As a resident of Kula and someone who has hiked and hunted in the Polipoli area since the 1960s, I am opposed to the proposed Advanced Technology Solar Telescope that the National Science Foundation wants to build on the Haleakala Summit.

Rising 143 feet above ground level with a coating of highly reflective bright white - to minimize cooling expenses - will create a glowing beacon that will detract from the wilderness experience enjoyed by hunters and hikers in the Polipoli area.

The January 2006 Final Report on the project released by KC Environmental contained deliberately deceptive and distorted "pictures" of how the proposed observatory would appear from Pukalani and other sites on Maui. These renditions, designed to resemble photographs, depict the gargantuan building as being barely visible from the central valley when even the very small currently existing observatories are clearly visible.

When the proponents of a project use deliberately deceptive material in their public reports, then the remainder of the presented information, declaring that the impact of the structure would be minimal, should also be viewed with skepticism.

Further development of "Science City" is adversely impacting the public's right to access the top of the Skyline Drive trailhead. Already, there are posted signs declaring members of the public at risk of being prosecuted under federal law. A new gate has recently been constructed that appears to be designed to allow the easy blockage of public access to this trailhead.

Response – Maui News, Letters to the Editor, May 14, 2006

C2 - Sunday, May 14, 2006 - THE MAUI NEWS

Telescope report only a preliminary EIS statement

I would like to clarify the inaccurate information in a May 8 letter. First, the "final report" referred to is actually the Environmental Impact Statement Preparation Notice, which describes the project, identifies the known issues, and notifies the public that a full federal and state environmental impact statement is forthcoming.

Second, there is no intent to deceive anyone about the appearance of the proposed Advanced Technology Solar Telescope. The visual materials used in the document were high-resolution digital photographs taken from various locations around Maui, with highly accurate computer renderings of the proposed project superimposed on the photographs.

The computer renderings were developed from architectural plans, actual on-site measurements and visual observations, topographic maps, and careful correlation between the proposed building dimensions and those of the existing facilities.

Third, under clear atmospheric conditions, the proposed ATST would be visible from various locations on Maui. However, its proposed primary siting is on ground that is lower and behind most of the other existing facilities. More of these renderings are in preparation for the EIS to show how the proposed project may appear at different times of the year.

Finally, The new gate/animal guard at the head of Skyline Drive leading to Skyline Trail only restricts vehicular traffic and is under the control of the state Department of Land and Natural Resources. It is neither on nor has anything to do with the property for which the University of Hawaii is the steward.

Mike Maberry, Assistant Director UH Institute for Astronomy Kula

Response - Brian Jenkins, President, Friends of Polipoli, May 10, 2006

UNIVERSITY OF HAWAI'I AT MĀNOA

Institute for Astronomy

May 10, 2006

Mr. Brian Jenkins P. O. Box 431 Wailuku, HI 96793

Dear Mr. Jenkins,

I would like to clarify the inaccurate information in your Maui News Letter to the Editor (May 8) and your letter (April 27, 2006) to Dr. Charlie Fein of KC Environmental, Inc., and Dr. Craig Foltz of the National Science Foundation.

First, the "Final Report" you refer to is actually the Environmental Impact Statement Preparation Notice (EISPN), which describes the project, identifies the known issues, and notifies the public that a full Federal and State EIS is forthcoming.

Secondly, it is completely false to state that the project team used "deliberately deceptive material" in the EISPN to depict the proposed ATST as it would appear on Haleakalā. There is no intent to deceive anyone. The visual materials used in the document were not drawings. They were high-resolution digital photographs taken from various locations around Maui, with highly accurate computer renderings of the proposed project superimposed on the photographs. The computer renderings were developed from architectural plans, actual on-site measurements and visual observations, topographic maps, and careful correlation between the proposed building dimensions and those of the existing facilities.

Third, it is misleading to imply that since even the "very small currently existing observatories are clearly visible", a "gargantuan" ATST must be much more visible. Under clear atmospheric conditions, the proposed ATST would be visible from various locations on Maui; however at its proposed primary siting on ground that is lower and behind most of the other existing facilities, it would enjoy considerable shielding from the terrain and from those existing facilities. Given the relative positions of the existing facilities, the proposed ATST and the topography, the computer renderings in the EISPN accurately displayed both the current facilities and the proposed ATST at various locations around Maui. In truth, it would be barely visible in some locations and more visible in others—there's nothing deceptive about that. More of these renderings are in preparation for the EIS to show how the proposed project may appear at different times of the year.

Finally, contrary to the accusation that "Science City" is adversely affecting the public's right of access to Skyline Drive, it should be noted that the new gate/animal guard at the head of Skyline Drive leading to Skyline Trail only restricts vehicular traffic and is under the control of the Department of Land and Natural Resources. It is neither on, nor has anything to do with the property for which the University of Hawai'i is the steward.

Dr. Charlie Fein, Vice-President KC Environmental Inc. P. O. Box 1208 Makawao, Hawaii 96768

Dear Dr. Fein:

SUBJECT: Environmental Impact Statement Preparation Notice (EISPN) for the Advanced Technology Solar Telescope (ATST) on Haleakala, Waiakoa, Papaanui, Makawao, Maui, Hawaii. TMK: (2) 2-2-07:008

Thank you for allowing us to review and comment on the subject document. The document was routed to the various branches of the Environmental Health Administration. We have the following Wastewater Branch and Environmental Planning Office comments.

Wastewater Branch

We have reviewed the subject document which proposes the Advanced Technology Solar Telescope (ATST) project which would be the largest and most capable solar telescope in the world with its unprecedented 4-meter aperture, integrated adaptive optics, low scattered light, infrared coverage and state-of the-art post-focus instrumentation.

Plans for a treatment individual wastewater system (IWS) such as a septic tank and seepage pit serving the proposed facility were submitted to our office on November 10, 1997. The IWS was constructed and approved for use on April 29, 1999. Thus, we have no objections to the proposed project as domestic wastewater generation, treatment and disposal were previously addressed. However, we request that the project's consultant evaluate wastewater flows from the new facilities and insure that domestic wastewater generation can be handled by the current system. If wastewater flows are significantly increased with the new project, we would require that the wastewater system be modified or expanded.

All wastewater plans must conform to applicable provisions of the Department of Health's Administrative Rules, Chapter 11-62, "Wastewater System." We do reserve the right to review the detailed wastewater plans for conformance to applicable rules. Should you have any questions, please contact the Planning & Design Section of the Wastewater Branch at telephone 586-4294.

Comment - Dept. of Health, Environmental Planning Office, October 3, 2005 (cont.)

Dr. Fein October 3, 2005 Page 2

Environmental Planning Office

To facilitate TMDL development and implementation, and to assist with our assessment of the potential impact of proposed actions upon water quality, pollutant loading, and biological resources in receiving waters, we suggest that environmental review documents, permit applications, and related submittals include the following standard information and analyses. Please note that these comments are also listed on our website:

www.state.hi.us/hcalth/environmental/env-planning/landuse/landuse.html. We suggest that you may review other Standard Comments on this website.

Waterbody type and class

1. Identify the waterbody type and class, as defined in Hawaii Administrative Rules Chapter 11-54 (http://www.state.hi.us/health/about/rules/11-54.pdf), of all potentially affected water bodies. Potentially affected water bodies means those in which proposed project activity would take place and any others that could receive water discharged by the proposed project activity or water flowing down from the proposed site. These waterbodies can be presented as a chain of receiving waters whose top link is the project site upslope and whose bottom link is in Pacific Ocean "oceanic waters," with all receiving waters named according to conventions established by Chapter 11-54 and the *List of Impaired Waters in Hawaii Prepared under Clean Water Act § 303(d)*. For example, a recent project proposed for Nuhelewai Stream, Oahu (a tributary of Kapalama Canal) might potentially affect Nuhelewai Stream, Kapalama Canal, Honolulu Harbor and Shore Areas, and the Pacific Ocean.

Existing water quality management actions

- 2. Identify any existing National Pollutant Discharge Elimination System (NPDES) permits and related connection permits (issued by permittees) that will govern the management of water that runs off or is discharged from the proposed project site or facility. Please include NPDES and other permit numbers; names of permittees, permitted facilities, and receiving waters (including waterbody type and class as in 1. above); diagrams showing drainage/discharge pathways and outfall locations; and note any permit conditions that may specifically apply to the proposed project.
- 3. Identify any planning documents, groups, and projects that include specific prescriptions for water quality management at the proposed project site and in the potentially affected waterbodies. Please note those prescriptions that may specifically apply to the proposed project.

Comment - Dept. of Health, Environmental Planning Office, October 3, 2005 (cont.)

Dr. Fein October 3, 2005 Page 3

Pending water quality management actions

- 4. Identify all potentially affected water bodies that appear on the current List of Impaired Waters in Hawaii Prepared under Clean Water Act §303(d) including the listed waterbody, geographic scope of listing, and pollutant(s) (See Table 5 at http://www.hawaii.gov/hcalth/environmental/env-planning/wqm/303dpcfinal.pdf).
- 5. If the proposed project involves potentially affected water bodies that appear on the current *List of Impaired Waters in Hawaii Prepared under Clean Water Act §303(d)*, identify and quantify expected changes in the following site and watershed conditions and characteristics
 - surface permeability
 - hydrologic response of surface (timing, magnitude, and pathways)
 - receiving water hydrology
 - runoff and discharge constituents
 - pollutant concentrations and loads in receiving waters
 - aquatic habitat quality and the integrity of aquatic biota

Where TMDLs are already established they include pollutant load allocations for the surrounding lands and point source discharges. In these cases, we suggest that the submittal specify how the proposed project would contribute to achieving the applicable load reductions.

Where TMDLs are yet to be established and implemented, a first step in achieving TMDL objectives is to prevent any project-related increases in pollutant loads. This is generally accomplished through the proper application of suitable best management practices in all phases of the project and adherence to any applicable ordinances, standards, and permit conditions. In these cases we suggest that the submittal specify how the proposed project would contribute to reducing the polluted discharge and runoff entering the receiving waters, including plans for additional pollutant load reduction practices in future management of the surrounding lands and drainage/discharge systems.

Proposed Action and Alternatives Considered

We suggest that each submittal identify and analyze potential project impacts at a watershed scale by considering the potential contribution of the proposed project to cumulative, multi-project watershed effects on hydrology, water quality, and aquatic and riparian ecosystems.

We also suggest that each submittal broadly evaluate project alternatives by identifying more than one engineering solution for proposed projects. In particular, we suggest the consideration of "alternative," "soft," and "green" engineering solutions for channel modifications that would

Comment - Dept. of Health, Environmental Planning Office, October 3, 2005 (cont.)

Dr. Fein October 3, 2005 Page 4

provide a more environmentally friendly and aesthetically pleasing channel environment and minimize the destruction of natural landscapes.

If there are any questions about these comments please contact Jiacai Liu with the Environmental Planning Office at 586-4346.

Sincerely,

HAROLD LAO, ACTING MANAGER Environmental Planning Office

COUNTY OF MAUL DEPARTMENT OF PLANNING

October 5, 2005

Dr. Charlie Fein KC Environmental, Inc. P. O. Box 1208 Makawao, Hawaii 96768

Dear Mr. Fein:

RE: Environmental Impact Statement Preparation Notice for the Advanced Technology Solar Telescope, Located at TMK 2-2-007:008, Summit of Haleakala, Island of Maui, Hawaii (LTR 2005/2444)

The Maui Planning Department (Department) is in receipt of the Environmental Impact Statement Preparation Notice dated August 2005, requesting comments on the above referenced project.

The Department provides the following comments:

- 1. The Makawao-Pukulani-Kula Community Plan includes a policy that states: "Encourage Federal, State and County cooperation in the preparation of a comprehensive Haleakala summit master plan to promote orderly and sensitive development which is compatible with the natural and native Hawaiian cultural environment of Haleakala National Park." Discuss how the proposal is consistent with this policy.
- 2. Provide an analysis of the proposal's impact on view planes of Haleakala from common viewing points on Maui, including Haleakala summit and population centers, using computer generated images.
- 3. Elaborate on the six potential candidate sites and the feasibility of their use as alternative sites.
- 4. Explain why other alterative sites do not meet the necessary criteria, including sites:
 - a. Within the Haleakala Observatory (HO) area.

250 SOUTH HIGH STREET. WAILUKU, MAUI, HAWAII 96793 PLANNING DIVISION (808) 270-7735; ZONING DIVISION (808) 270-7253; FACSIMILE (808) 270-7634

Comment - Dept. of Planning, County of Maui, October 5, 2005 (cont.)

Dr. Charlie Fein October 5, 2005 Page 2

- b. On land that is adjacent to the HO area that could be leased or exchanged.
- c. On Mauna Kea, on the Big Island, Hawai'i.
- d. Already containing telescopes on the mainland.
- e. In space, i.e. the Hubble space telescope.
- 5. Discuss the use of technological solutions that could allow measures which would mitigate the visibility of the building, including:
 - a. Reducing the height of the building.
 - b. Using earth-tone colors for the building.
 - c. Sinking the building into the ground.
- Discuss traffic volumes that will be generated from construction and from operation of the telescope, and measures that will mitigate the impacts.
- Discuss on-site staff support facilities that will be generated by the proposal for use during operational and non-operational periods, including offices, laboratories, conference rooms, beds, kitchens, bathrooms, parking, etc.
- Specify construction mitigation measures regarding air and water quality and soil conservation.
- 9. Discuss in terminology that the public can understand, how the information that will be generated from the operation of the telescope will be used, and the importance of its use.
- 10. Discuss the economic impact of the telescope including:
 - a. The total number of jobs that will be generated by the construction and operation of the telescope.
 - b. The resultant amount of money that will be infused into the local economy.
- 11. Discuss the non-economic advantages of having the largest solar telescope and the attractions and benefits it will bring to Maui and the State.
- Although the site is outside of the Special Management Area, it is within the Coastal Zone Management Area (CZMA). Discuss compliance with the regulations of the CZMA.

Comment - Dept. of Planning, County of Maui, October 5, 2005 (cont.)

Dr. Charlie Fein October 5, 2005 Page 3

> 13. The Department recommends consultation with the Department of Land and Natural Resources regarding impacts to environmental resources and with the Department of Hawaiian Homelands, Office of Hawaiian Affairs, and Na Kapuna O Maui, regarding cultural and archaeological concerns.

Thank you for the opportunity to comment. Please include the Department on the distribution list for the Draft EIS. Should you require further clarification, please contact Mr. Jeff Hunt, AICP, Staff Pianner, at 270-6271.

APPENDIX A: Pre-DEIS PUBLIC COMMENTS

Mikahala Helm

March 20, 2006

Aloha kākou,

The following is my written comment on the Cultural Resource Evaluation and addresses my concerns as a Native Hawaiian. I was born and raised here on Maui. I am opposed to the proposed Advanced Technology Solar Telescope (ATST) Project. It negates the needs of the Hawaiian culture for the needs of everyone else. Once again, the needs of science are seen as more important than the needs of the Hawaiian people.

Haleakalā is important because it has continually been an important feature maintained in story and mele from pre-contact Hawai'i till today. Since Haleakalā was prominent in many of the stories and mele, it shows us that Haleakalā was important to our kupuna. This aloha, appreciation, awe and reverence for Haleakalā comes from all of my experiences in going to Haleakalā. Our cultural practitioners to this very day continue to use Haleakalā as a way to communicate with the greater beings in ceremonies and rituals.

I believe that we should not have any more telescopes on Haleakalā because they will continue to damage physically and spiritually the specialness of our majestic Haleakalā.

Sincerely,

MekahalaHelm

RE: Comments to Advanced Technology Solar Telescope (ATST) Cultural Report

Dear Mikahala,

Thank you for your comments to the Cultural Resource Evaluation and Traditional Practices Report for the ATST project. We understand that Haleakalā has significant cultural resources for the Native Hawaiian community. The comprehensive Environmental Impact Statement (EIS) is being prepared and will evaluate the potential impacts of the proposed project on the associated Hawaiian culture and spiritual resources, as well as other environmental conditions to Haleakalā.

We appreciate your comments and concerns and will ensure they are addressed as part of the EIS and Section 106 process. Your comments will become part of the EIS and the Administrative Record.

If you have not done so already, we invite you to visit the web site at: <u>http://atst.nso.edu/</u> and <u>http://atst.nso.edu/library/EIS.shtml</u>, which specifically addresses the Section 106 process of the National Historic Preservation Act (NHPA). Thank you for your participation.

Sincerely,

Ohnli

RE: Environmental Impact Statement Preparation Notice (EISPN) for the proposed Advanced Technology Solar Telescope (ATST), Haleakalā, Maui; TMK: 2-2-007:008

Dear Dr. Charlie Fein,

The Office of Hawaiian Affairs (OHA) is in receipt of your August 22, 2005, request for comments on the above project, which would include construction of at the 18.166-acre University of Hawai'i Institute of Astronomy, Haleakalä High Altitude Observatories site. OHA apologizes for the delayed response.

We request that you also consult, if you have not already, with our Maui Community Resource Coordinator (address below), the Maui Island Burial Council, Na Kapuna O Maui, the Central Maui Hawaiian Civic Club, and the Royal Order of Kamehameha (William Roback). Haleakalā is a sacred site that holds strong cultural, traditional and religious significance to the Hawaiian people, and the Hawaiian people should therefore be consulted and their feelings for the land should be respected. Until all of the above organizations have been fully consulted, and we have had a chance to review the cultural resource evaluation and traditional practices assessment that will be provided for the Long Range Development Plan (EISPN, p. 29, § 5.1.3), we cannot concur with the statement on page 29 of the EISPN that "The proposed ATST project is not expected to have an impact on cultural resources at Kolekole."

Please note that while the University of Hawai'i may be listed as the fee owner of the parcel in question (EISPN, p. 7, § 1.3), these are ceded lands, and should be afforded the respect that deserves. Ceded lands are public lands, held in trust, and OHA has a fiduciary duty to our beneficiaries – all Hawaiians, to assure that these lands are used and treated properly.

Page 2 Dr. Charlie Fein October 17, 2005

Ceded lands, and the State's responsibilities for and to them, are defined in the Hawai'i Admission Act (Act of March 18, 1959, Pub. L. 86-3, 73 Stat. 4), and further explained in the State Constitution and statutes. The State has a Constitutional responsibility to "conserve and protect Hawaii's natural beauty and all natural resources, including land, water, air, minerals and energy sources . . . All public natural resources are held in trust by the State for the benefit of the people." (Hawai'i State Constitution, Art. XI, Section 1). The State also has a Constitutional responsibility to "protect all rights, customarily and traditionally exercised for subsistence, cultural and religious purposes" possessed by Hawaiians. (Hawai'i State Constitution, Art. XII, Section 2).

The subject lands are Section 5(b) lands of the Hawaii Admission Act (Act of March 18, 1959, Pub. L. 86-3, 73 Stat. 4). As such, these are ceded lands, and, per §5(f) of the Admission Act, the public trust lands of §5(b), and the income derived therefrom, "shall be managed and disposed of for one or more" of the five listed purposes. The Act lists the five purposes as:

for the support of the public schools and other public educational institutions, for the betterment of the conditions of native Hawaiians, . . . for the development of farm and home ownership on as widespread a basis as possible, for the making of public improvements, and for the provision of lands for public use.

The Admission Act explains that §5(b) lands "shall be managed and disposed of for one or more of the foregoing purposes in such manner as the constitution and laws of said State may provide, and their use for any other object shall constitute a breach of trust...." The Hawai'i State Constitution, Art. XII, Sec. 4, explains: "The lands granted to the State of Hawaii by Section 5(b) of the Admission Act and pursuant to Article XVI, Section 7, of the State Constitution, excluding therefrom lands defined as 'available' lands by Section 203 of the Hawaiian Homes Commission Act, 1920, as amended, shall be held by the State as a public trust for native Hawaiians and the general public."

Thus, these Public Trust lands may be used for educational purposes and for the betterment of Hawaiians. OHA therefore requests that should the proposed project go forward, part of the project include a guarantee of training and education for Hawaiians, perhaps through the Maui Community College/University of Hawai'i Institute of Astronomy, to allow them the opportunity to gain jobs at the Haleakalā High Altitude Observatories site.

We look forward to the opportunity to review, and comment upon, the forthcoming Draft Environmental Assessment, and the supplemental traditional practices assessment and cultural resource evaluation.

Comment - Office of Hawaiian Affairs, October 17, 2005 (cont.)

Mr. Clyde W. Nāmu'o Administrator State of Hawai'i Office of Hawaiian Affairs 711 Kapi'olani Blvd., Suite 500 Honolulu, HI 96813

Dear Mr. Nāmu'o:

Thank you for your comments in response to the proposed Advanced Technology Solar Telescope (ATST) project. As local Maui environmental consultants, we understand that Haleakalā is considered by Native Hawaiians to be a sacred site, with strong cultural, traditional, and religious significance. We fully intend to consult with and respect the feelings of all individuals within the native Hawaiian community and those groups that you have specifically suggested. We have already begun the process of completely addressing all cultural, traditional, and religious concerns in our comprehensive Environmental Impact Statement (EIS).

We will include you on our distribution list for the EIS. If you have not done so already, we invite you to visit the ATST web site at <u>http://atst.nso.edu/</u>. Thank you for your participation and feedback.

Sincerely,

Dr. Charlie Fein Vice-President

Comment and Response - Richard Mealey, March 11, 2006

Comment – Kiope Raymond, June 28, 2006

-----Original Message-----From: Kiope Raymond [email address] Sent: Wednesday, June 28, 2006 4:14 PM To: Gilanshah, Bijan Cc: Lui K Hokoana; Mikahala Helm; Kaleikoa Subject: ATST Haleakala

Aloha Bijan Gilanshah,

I just heard from Charisse Carney-Nunes that you will be the new assistant general counsel for the proposed advanced technology solar telescope.

Here is what I sent Charisse this morning. Though I know you may need to get up to speed with this project, I hope you can answer the questions as soon as possible.

"Aloha Charisse,

I hope this finds you well. I left a voice-mail for you, but a response from you via e-mail would be great. I hope you can help me with some questions I have regarding the proposed ATST.

When will you be coming back to Maui?

Who will you be meeting with?

Am I correct that the Section 106 proposals from native Hawaiians are not the same as public comments in response to the Draft EIS?

When do the proposals have to be received?

How complete should the proposals be; and is there a template one follows?

Are the three areas for the proposals still Mitigation, Minimization, and Avoidance? Can Hawaiians still respond to the Draft EIS even though they have submitted a proposal?

Has the start date for construction been pushed back to 2009, as Mr.

Keil indicates in the issue 86 NOAO/NSO newsletter for June 2006?

http://www.nso.edu/press/newsletter/86news.pdf

If so, why does the EIS have to be completed - as I understand it now is - by the end of this year, 2006?

Mahalo,

Ki'ope Raymond"

Response – Kiope Raymond, June 28, 2006 (page 1)

----- Original Message -----From: "Gilanshah, Bijan" <email address> To: "Kiope Raymond" < <u>email address</u> > Cc: "Lui K Hokoana" < <u>email address</u> >; "Mikahala Helm" < <u>email address</u> >; "Kaleikoa" < <u>email address</u> > Sent: Monday, July 10, 2006 11:09 AM Subject: RE: ATST Haleakala

Dear Mr. Raymond:

Thank you very much for your patience and interest in ATST. Following please find responses to your questions.

Thanks,

Bijan Gilanshah

When will you be coming back to Maui?

After publication of the Draft EIS (DEIS), a notice will be widely circulated inviting interested persons to a number of public meetings where comments to the DEIS will be received. You are on our distribution list and will certainly receive that notice and invitation. Currently, the expectation is to hold these public meetings at different venues on Maui sometime this summer, following issuance of the DEIS.

Who will you be meeting with?

We anticipate three general public meetings for all interested persons to attend and give comments on the DEIS. Those comments can also include section 106 proposals or other comments on cultural, historic and environmental issues. While on Maui, we also plan to have pre-scheduled meetings with interested persons and groups who submit National Historical Preservation Act Section 106 resolution proposals.

Am I correct that the Section 106 proposals from native Hawaiians are not the same as public comments in response to the Draft EIS?

The National Environmental Policy Act and Section 106 of the National Historic Preservation Act prescribe parallel consultative processes; however, they are designed to work together to achieve the goal of consultation and public participation. For instance, comments to the

DEIS can include Section 106 resolution proposals from native Hawaiians (or the general public for that matter). Section 106 meetings are more narrow, however, since the focus in those meetings is how to avoid, minimize or mitigate adverse effects to historic or cultural properties.

Native Hawaiians may comment in response to the DEIS and also may provide Section 106 resolution proposals. The public may also submit Section 106 resolution proposals along with responses to the DEIS.

Response – Kiope Raymond, June 28, 2006 (page 2)

When do the proposals have to be received?

We will widely publish a final deadline by which Section 106 proposals will have to be submitted. We do not yet know the deadline. Currently, as the consultative process remains ongoing, proposals can be submitted at any time.

How complete should the proposals be; and is there a template one follows?

As much feedback as possible as to ways in which the adverse effects can be avoided, minimized or mitigated is most helpful to the consultations. However, we would encourage any proposals, however complete or incomplete. There is no set template to follow. The proposal would be

used as the basis for further discussion. As a concrete example, one resolution proposal that we have received was approximately two pages of free text that laid out the outline of a possible educational program.

<u>Are the three areas for the proposals still Mitigation, Minimization, and Avoidance?</u> While all resolution proposals will be considered in the public meetings concerning the Draft EIS, the smaller Section 106 pre-scheduled meetings will only involve those resolution proposals from interested groups and individuals who seek to minimize or mitigate adverse affects by virtue of a Memorandum of Agreement as contemplated by the National Historic Preservation Act. Note that proposals seeking complete avoidance of the project (as already articulated by some at the first two consultative meetings) may still be submitted to KC Environmental, Inc. per the June 5, 2006 correspondence.

Can Hawaiians still respond to the Draft EIS even though they have submitted a proposal? Absolutely, yes.

Has the start date for construction been pushed back to 2009, as Mr. Keil indicates in the issue 86 NOAO/NSO newsletter for June 2006?

The NSF has not yet approved construction funds for the ATST. There are several steps remaining in the process which culminates in decisions by the NSF Director and the US Congress to include the funds in a future budget. Given the remaining steps and the complex nature of the Federal budget process, the earliest start date for the proposed construction would be fiscal year 2009, which begins on October 1, 2008.

If so, why does the EIS have to be completed - as I understand it now is - by the end of this year, 2006?

The National Environmental Policy Act requires consideration of environmental impact issues at the earliest possible time "to insure that planning and decisions reflect environmental values."

March 20, 2006

Dr. Charlie Fein, Vice President KC Environmental, Inc. P. O. Box 1208 Makawao, HI 96768

Dear Dr. Fein:

Thank you for asking me to comment on Cultural Resource Evaluation and Traditional Practices Report, January, the Proposed Advanced Technology Solar Telescope (ATST) at Haleakalā High Altitude Observatories, January 2006. The following opinions are my own and not expressed on behalf of any organization.

I have reviewed subject document and am left feeling highly unsatisfied with the authors' attempt to explain and document the cultural significance of the proposed Advanced Technology Solar Telescope site at Kolekole, on Haleakalā. Although I don't claim to be competent to evaluate Hawaiian cultural values, it seems to me the report doesn't clearly answer two important questions:

--What is the cultural significance of the Kolekole area to Hawaiian Kanaka Maoli?

--Is the area's Hawaiian cultural significance diminished by the presence of astronomical observatories and why?

The authors state that Haleakalā is considered one of the most sacred sites on Maui to Kanaka Maoli, and endeavor to substantiate this through a disjointed collection of references, Hawaiian chants and interviews with selected informants. Little if any evidence is presented indicating the area's cultural significance is compatible with observatories. Yet in the conclusion, the authors seemingly ignore their own arguments and sanction more observatories providing that developers follow certain modest protocols before and during construction. Limits for location, size, purpose, etc. are not addressed.

I would be very surprised if the conclusion presented represents the majority opinion of native Hawaiian Kanaka Maoli. I believe a diverse and independent group of Hawaiian scholars and practitioners, not under contract with the observatory proponents, would conclude that new astronomical observatories atop Haleakalā are culturally not supportable, with or without the proposed protocols.

Also, I note that an Archaeological Report by Eric Frederickson of Xamanek Researchers is cited on page 22, but this report is not referred to in the bibliography. Where can a copy be obtained?

Sincerely,

Donald W. Reeser

April 21, 2006

Charlie Fein KC Environmental PO Box 1208 Makawao, HI 96768

Aloha, Mr. Fein,

There are so many reasons not to build the 143 foot high telescope on top of Haleakala that I hardly know where to begin. Appropriately named the "house of the Sun," as stewards we are responsible for protecting everything in its shadow. I don't buy the arguments that the telescope will provide jobs for our people or encourage students to pursue careers in science. We set a much better example by respecting the land and providing for its people. How can we seriously consider studying the Sun while devastating this planet?

Haleakala is one of those special places too holy to desecrate. The visual impact alone will be obscene, but the thought of stakes driven 40 feet into the summit is vile beyond comprehension. Please, as Mary Evanson writes, find another place for this telescope. Symbolically, if built, it will be a testament to man's greed rather than honor.

I had the pleasure of hearing Barry Flanagan, Nathan Aweau, and Charles Ka'upu sing the patriotic oli "Kaulana Na Pua and "Mo'i O Lili'u" to the tune of Bob Marley's "Redemption Song" recently at the MACC. Heartfelt words revitalized. Show respect for the Native Hawaiians and their sacred places. Sing out for Haleakala's freedom so that it will continue to bless and keep us safe.

Your help to do the right thing is appreciated.

Mahalo and alo

Nance thearmon

Comment – Warren Shibuya, March 27, 2006

Testimony on Advance Technology Solar Telescope proposed to be housed on UH Institute of Astromony, Haleakala High Altitude Observatories, Haleakala, Maui.

Good evening members of this panel and audience. I am Warren Shibuya. I am a returning Maui resident after retiring from the Space & Missile Systems Center in El Segundo, California. Mahalo for allowing me to present my testimony.

I support basic and applied research and proposed housing of Advanced Technology Solar Telescope (ATST) systems, a project within the 18.166-acre University of Hawaii Institute for Astronomy (IfA), Haleakala High Altitude Observatories (HO) site at the summit of Mt. Haleakala, Maui, Hawaii.

I ask you and all project members to behave respectfully and malama mau ka lá a, preserve the sacredness of Haleakala, specifically the summit area. Proper cultural respect should be demonstrated by ATST project and other projects housed at Haleakala High Altitude Observatories site, especially while sharing very sacred summit grounds.

As you well know, Haleakala is home to all 40,000 Hawaiian gods and goddesses. Haleakala is spiritual power and home of inspired Hawaiian beliefs, besides being physically inspiring. Haleakala's summit, or Kolekole, is near wao akua, a level of earth stratosphere where gods and goddesses are believed to reside and culturally guide everyday living. Ala Hea Ka La, "the path to calling the sun," presents basic rhythms of night and day and establishes the sun being source of life for Kanaka Maoli, Hawaiians, and citizens of Maui and Hawaii.

In ancient days, Kolekole was site where Kahuna Pó o, High Priests, consulted with gods and goddesses to answer difficult questions and delve tough issues. Astronomy, aerospace and solar study efforts at Kolekole should be respectful of wao akua, sacred area above the summit and lava, the essence of Goddess Pele, despite her current home at Kilauea caldera. Special care should be exercised in digging, saving lava and restoring earlier pù u, hills and wahi pana, and minimizing invading airspace, all Sacred places.

To demonstrate proper respect, let us all do it right, as kapó e kahiko, or ancient people respected and admired Kolekole. Recommend Institute for Astronomy immediately remove intrusive, unused or excess facilities, poles, antenna, lines, signs and roads; immediately begin respectfully restoring Kolekole to it's ancient topology and it's historic

 $\ \ ATST-HI/3/27/2006//$ Page 1 of 2.

Comment – Warren Shibuya, March 27, 2006 (cont.)

Testimony on Advance Technology Solar Telescope proposed to be housed on UH Institute of Astromony, Haleakala High Altitude Observatories, Haleakala, Maui.

and highly sacred configuration. Further, rename summit roadways to more appropriate kapó e kahiko names, thus demonstrating sacred wahi pana, respect of Kolekole.

Today, ATST nobly seeks to observe and carefully study turbulent forces of our Sun, which affects life on Earth from a sacred site. As mentioned, Kolekole wahi pana was used by Kahuna Pó o, High Priests, who consulted with gods and goddesses to answer difficult questions, delve and resolve tough issues. Today, inaddition to consulting gods and goddesses and accommodating visitors, the scientific community is permitted to seek answers to heavenly questions through use of high technology telescopes and systems, computerized instruments, all housed in large structures. As Kahuna Pó o shared gained insights with Maui residents, I ask ATST technology and other Haleakala IfA investigations and gained knowledge be regularly shared with host Maui and Hawaii State's people, to include keiki, kapuna, Kamaaina and malama aina groups.

Shared knowledge and expressions of appreciation be given to Mauians, such as support for Hawaiian education, culture, arts, soveign rights and law, language programs and scholarships to pursue learning at higher institutes, centers and universities. Of course, Mauians should be employed with all projects on Haleakala.

I remind you and other agencies operating in sacred wahi pana of Demi God Maui and other gods and goddesses, that your viewing or looking through Wao Akua, where gods reside, is invasive and not polite etiquette or behavior of a guest. Peeping through a neighbor's home is privacy-invasive and by our laws could be a misdemeanor crime.

Western culture dictates, "It is most proper for a guest visiting a home, to express appreciation to the host with fists filled with gifts." In no case should guests visit with closed fists, especially when visiting the sacred "House of the Sun." I am embarrassed to remind you of proper etiquette. I truly trust you know and will do the right things to demonstrate your most honored respect of the host's customs and beliefs. Maui kanaka maoli and kamaaina should not need to tell terms to you more succinctly and emphatically.

I am no expert on Hawaii's culture, but simple analogies mentioned should be more than adequate for respectful understanding and behavior of Hawaiian and visiting non-Hawaiian members. Hawaiian culture is founded on love and respect for each other,

RE: Comments to Advanced Technology Solar Telescope (ATST)

Dear Warren,

Thank you for your comments to the Advanced Technology Solar Telescope (ATST) project. We understand that Haleakalā has significant resources for visitors, local residents, and the Native Hawaiian community. The comprehensive Environmental Impact Statement (EIS) is being prepared and will evaluate the potential impacts of the proposed project on the associated Hawaiian culture and spiritual resources, as well as other environmental conditions to Haleakalā.

We appreciate your comments and concerns and will ensure they are addressed as part of the EIS and Section 106 process. Your comments will become part of the EIS and the Administrative Record.

If you have not done so already, we invite you to visit the web site at: <u>http://atst.nso.edu/</u> and <u>http://atst.nso.edu/library/EIS.shtml</u>, which specifically addresses the Section 106 process of the National Historic Preservation Act (NHPA). Thank you for your participation.

Sincerely,

Dr. Charlie Fein Vice President

Hālau 'Imi 'Ike Hōkū

Center for Traditional Hawaiian Navigation and Astronomy

Proposal for creation:

Hālau 'Imi 'Ike Hōkū: Center for Traditional Hawaiian Navigation and Astronomy will be a collaboration of community and cultural resources to provide a venue to, e '*imi* '*ike no nā hōkū* or to search or gather knowledge about the bright stars above. The Center's purposes will be to:

- 1. To create, produce, collaborate and administer curriculum for students from Kindergarten through Secondary and post secondary collaborations, which focus on traditional and modern astronomy and traditional Hawaiian navigation. This product would be for public and private school uses.
- 2. Promote edification of traditional Hawaiian techniques in astronomy and navigation and to integrate these concepts with scientific knowledge and produce traditional interpretations of the universe and the understanding of the native Hawaiian relationship to the surrounding areas and World.
- 3. Prepare students of all ages with traditional knowledge and modern scientific techniques that would cause future interest in astronomy and establish native Hawaiian expertise in the subject.
- 4. Create and manage a scholarship fund for individuals seeking a post high education on the island of Maui.
- 5. Create a planetarium with celestial bodies of the solar system that duplicate "traditional methods" used by Hawaiians to travel thousands of miles throughout the Pacific in double hulled canoes, using the knowledge of their natural elements and the traditional and native instincts as their guide.

6. Finally, this center for Traditional Hawaiian Navigation and Astronomy should be built at the time funding is approved for ATST by Congrass. Ideas like this tend to get "lost" in the shuffle of progress. The completion date could be worked on by the parties involved at that time.

In presenting this idea to Master Navigator Nainoa Thompson of the Polynesian voyaging canoe Hōkūle'a, who sailed thousands of miles throughout the pacific using traditional navigational methods, he felt that this method is the missing component in teaching the youth of Hawai'i about the brilliance and resilience of their ancestors and the enormous feats they accomplished thousands of years ago. He has committed his support and that of the Polynesian Voyaging Society to make this happen.

Resolution Proposal – Kahu Charles Maxwell, March 28, 2006 (cont.)

The potential outreach of this Center could be enormous, but the more compelling reason is because it is right. A center of this magnitude possibly will produce world class Hawai'i/Maui-based scientists in this subject matter. Because of the training in these two worlds (Polynesian discovery and modern science), these future scientists and astronomers could bridge the past to the present and beyond. E 'imi 'ike hōkū!

Re: Section 106 Consultation for proposed ATST

My have is Kathy Kachu. I'm a Native Hawaiian and a resident of Maui. I write today to express my strong disappointment and Opposition TO using Maui's sacred Haleakala to site the Advanced Technology Solar Telescope (ATST).

Hawai'i continues to be bombarded with western Influence and every day we as Hawaiians loose more and more of our precious cultural heritoge, that include our special places.

Ehough is enough already! No MORE TELESCOPES ATOP

That mountain represents many aspects of our culture -Spiritual and religious. It's rich in our stories of many many hundreds of years.

Take your solar studies to one of the other 70 or So a Hernative sites, that don't corry the same significance that Haleakala holds, Please,

We as native Hawaiians already hold dear our cultural celestial studies, we should be embracing that from the outside, rather than having q group of Screentists impose this big money research project on our island, our culture and our people. Again — 70 other optional Sites to look at _____ Don't be a continued, part of the desecration of our historical cultural sites. Haleakala is was akua - where our Gods dwell - This proposal is an insult 1

Comment – Kathy Kaohu, March 28, 2006 (cont.)

There is no benefit that will justify this desecration - plain and simple. This is Hawai's beloved 'aina, it's beloved mountain, please take the project elsewhere _ That's my mitigation Priposal: go to site selection 2, 5, 7, or 170 but not Hateakala! That's the win-win solution. Mahalo for allowing me to submit my manalo. Plense keep me notified of any Subsequent Meetings regarding this matter, Kathy Kachu

RE: Comments to Advanced Technology Solar Telescope (ATST)

Dear Kathy,

Thank you for your comments to the Cultural Resource Evaluation and Traditional Practices Report for the ATST project. We understand that Haleakalā has significant cultural resources for the Native Hawaiian community. The comprehensive Environmental Impact Statement (EIS) is being prepared and will evaluate the potential impacts of the proposed project on the associated Hawaiian culture and spiritual resources, as well as other environmental conditions to Haleakalā.

We appreciate your comments and concerns and will ensure they are addressed as part of the EIS and Section 106 process. Your comments will become part of the EIS and the Administrative Record.

If you have not done so already, we invite you to visit the web site at: <u>http://atst.nso.edu/</u> and <u>http://atst.nso.edu/library/EIS.shtml</u>, which specifically addresses the Section 106 process of the National Historic Preservation Act (NHPA). Thank you for your participation.

Sincerely,

apuli

Dr. Charlie Fein Vice President

THE MAUI NEWS - Wednesday, April 5, 2006 - A11

Color of proposed telescope housing a major objection

Why does the proposed new telescope for Haleakala have to be bright white? Why not make it shades of brown, black, and red, to blend in with the natural rock, camouflage style, so it is a lot less of an eyesore when viewed from afar? Chauncey Watsuss

Haiku

Response – Chauncey Watsuss, Maui News, April 11, 2006

Heat determined color of the proposed housing of telescope

The reddish-brown cinder and lava on Haleakala absorbs significant heat from the sun. The proposed Advanced Technology Solar Telescope would be painted in a low-reflective white color (not "gleaming white," Letters, April 5) to ensure that the telescope will be able to perform the very clear imaging for which it was designed.

Thermal modeling was conducted to test the effects of using different colors for ATST and unfortunately, painting the enclosure to match the natural volcanic rock would result in the telescope enclosure (dome) absorbing about four times as much heat from sunlight on its surface. That layer of turbulent heated air would rise up into the path of the telescope and ruin the imaging.

Jeremy Wagner, Project Manager Advanced Technology Solar Telescope Tucson, Ariz.

April 6, 2006

Fein at KC Environmental Inc. P.O. Box 1208 Makawao, HI 96768

To Whom It May Concern:

The purpose of this letter is to protest in the strongest terms the proposed new observatory at the summit of Haleakala.

The construction of this observatory would serve to add insult to injury at the summit of this sacred Hawaiian site. Even if it were to be less obtrusive it would be an affront to continue the desceration that already exists at the summit. To construct a fourteen story building is obscene! Even for a visitor it would despoil the beauty of this summit. Imagine, looking up at the summit from sea level and instead of seeing the unspoiled summit of a dormant volcano we would be treated to the highest building on Maui sticking up from the top. Maybe you could put a big, blinking, neon sign on top to dress it up at night.

If the summit of Haleakala is your first choice for the observatory I urge you to try for the second, or third choice.

Go away! Leave the Hawaiian culture and people alone. Build your observatory

Subject: Testimony and Comments on proposed telescope at Haleakala - please forward to the appropriate parties

To: charlie@kcenv.com

Aloha, I am a member of the Mayor's West Maui Advisory Committee but I am writing this as an individual. Please forward these comments to the appropriate parties.

I am opposed to this proposal for another telescope at Haleakala. This is a sacred place and another telescope will only add to the desceration.

Mr. Folts stated that "...positive impacts of the knowledge gained from the telescope would grow in the future..." This completely ignores the Native Hawaiian's who have honored their culture in this sacred place and it destroys any opportunity for future generations of Hawaiian's to learn by engaging in their own cultural practices as their ancestors have .

In addition, Mr Foltz said "...think of the possibilities of what mysteries the telescope might eventually unlock..." This implies that the mysteries of science are somehow more valuable that the spiritual and cultural aspects of this place whose sacredness is of great importance to all Native Hawaiians-past, present, and future and whose "mysteries" will be destroyed forever.

There are 70 other possible sites for this telescope...there is only one sacred Haleakala... there can be no compromise...this site is sacred to the Native people of Hawaii - it must be preserved.

Do not dismiss what you cannot see or feel...Do not destroy what you do not understand...Do not put your "mysteries of science" above the sacredness and the natural spiritual mysteries of this revered place. You do not have the right to destroy this hallowed ground.

Yours truly, Vicki McCarty Lahaina Maui

----- Original Message ----- **From:** Foltz, Craig B. **To:** Vmcarty@ (via email) **Sent:** Friday, April 28, 2006 2:04 AM **Subject:** Re: Testimony and Comments on proposed telescope at Haleakala - please forward to the appropriate parties

Ms. Vicki McCartyLahaina, Maui

Dear Ms. McCarty:

Thank you for your opinions regarding the construction of the Advanced Technology Solar Telescope on Maui. I want to address several of your points.

With respect to the selection of Haleakala as the site for the telescope, I note that, indeed, over 70 *possible* sites were identified worldwide. From this extensive list, six sites were identified as candidates for further study. The atmospheric conditions at the sites on this list were then studied intensively for many months and Haleakala was found to be the only site that would support the scientific goals of the project. While I understand that this may not mitigate your concerns, I want to stress that the site selection was not arbitrary.

You ask that we "do not dismiss what we cannot see or feel." I assure you that most of modern science and astrophysics in particular deals with phenomena that we cannot observe with our unaided senses. We build instruments to help us understand some of the things that we cannot see or feel. This in no way implies that we dismiss the spiritual; we accept that there are things that we cannot study. There is never the intention that scientific endeavors should supplant spiritual mysteries. It is my opinion that many, if not most, scientists, including those of Native Hawaiian heritage, have deeply-held spiritual feelings and do not feel that they are mutually exclusive from the pursuit of scientific knowledge.

The process that we are undertaking on Maui at this time is being done with every effort to allow the spiritual and the scientific to co-exist on Haleakala. With respect and best wishes, Craig Foltz

Craig B. Foltz, Ph.D. Program Manager NOAO/NSO Division of Astronomical Sciences National Science Foundation, Room 1045 4201 Wilson Blvd, Arlington, VA, 22230 Office: 703-292-4909 Fax: 703-292-9034 Email: cfoltz@nsf.gov

Comment – Vicki McCarty, April 28, 2006

From: vmcarty – via email

To: Foltz, Craig B.
Cc: Vmcarty (via email)
Subject: Re: Testimony and Comments on proposed telescope at Haleakala - please forward to the appropriate parties

Dear Mr. Foltz, Thank you for taking the time to email me. I truly appreciate that you have read my testimony and have given me your thoughts on it. Please forward this to any other appropriate parties.

I am hopeful that by listening to all of the thoughts and opinions of those who are concerned about this issue that it will result in your choosing an alternate site.

Before my testimony, I was, in fact, aware that there were other sites that were under consideration and that the site selection was not arbitrary. You have indicated in your email to me that "Haleakala was found to be the only site that would support the scientific goals of the project." I would like to respectfully ask you to consider that Native Hawaiians also believe that this is the only site that would support specific cultural practices that have been observed by their ancestors...for centuries. These practices have already been interfered with by the presence of the equipment that is there. There should be no further desecration so Native Hawaiians and their future generations can continue their cultural practices.

"We build instruments to help us understand some of the things that we cannot see or feel." ... Sacred sites are preserved and respected by honoring what they are and caring for them - not by cluttering them with foreign objects or by expecting that the spiritual and the scientific must co-exist.

The sacredness of this place should not have to "co-exist". It should instead be respected and honored. It should not be sacrificed.

Please choose another site.

Yours very truly, Vicki McCarty Lahaina Maui HI

Comment – Dan Judson, April 13, 2006

April 13, 2006

KC Environmental, Inc. PO Box 1208 Makawao, HI 96768

Dear Reader;

The following are suggestions to mitigate the impact on the summit of Haleakala National Park by the proposed solar telescope.

- Place the telescope below the ridge line out of view of central and south Maui.
- Colorize the outside a neutral brown-tan color so that it will blend in more with the adjoining natural landscape.
- Bury the majority of the telescope below ground.
- Leave only the necessary observation part exposed above the surface.
- The foundation is 40 feet below the grade line, so just dig deeper.
- Place all non-observatory parts of the structure below the grade level.

I believe that this telescope will be a good addition to our scientific research community on Maui, and it will further an important study of the sun. The legend of Maui said that the sun slowed its passage across the sky. By studying the sun, we honor the Hawaiian legend of Maui, and are perpetuating it in a scientific way.

Thank you for considering these suggestions.

Aloha,

Dan Judson

Response – Dan Judson, April 19, 2006

April 19, 2006

Dan Judson

Dear Mr. Judson,

Thank you for your interest in the Advanced Technology Solar Telescope. The issues addressed in your letter placement, height, and color of the observatory structures, were thoughtful and deserve a direct response. The facility design has dictated where we would place the telescope, how high it would be, and what color it would have to be painted. Much investigation of these issues was done and I would like to briefly share with you some information about the range of solutions. Taking them one-by-one:

- Placing the telescope at a lower elevation, below the ridge line, would adversely impact the telescope's
 delivered image quality. The steady laminar flow of wind over the summit is one of the unique beneficial
 conditions that make Haleakalā the best site for ATST.
- The color of the telescope enclosure (dome), the tallest and most visible part of the observatory, has been
 explored in depth. Being aware of a preference within the community to make the dome blend in with the
 mountain, we investigated the possibility of painting it to match the brown color of the native volcanic rock.
 This was shown in thermal modeling to result in roughly four times as much absorbed heat as a white
 enclosure under the same conditions. That heat would rise into the telescope path and degrade the image
 quality significantly.
- Your last four points all address the possibility of placing significant portions of the observatory below ground. The height of 28m (~92 ft.) to the center of the telescope (primary mirror) was established to place it above the thermal turbulence near the ground during the daytime. The telescope enclosure height (~143 ft.) is in turn set by providing minimum clearance and working space around the telescope. The height of the main instrument platform and the adjacent control room, about 60 ft. below the telescope (32 ft. above ground) is set by the focal lengths of the optics required to achieve the necessary imaging at the instruments. None of these elements could be located closer to the ground (or underground) without destroying the scientific capabilities of the telescope. The observatory, primarily service and utility spaces, as currently designed, are already low enough to not be visible from valley or upcountry communities. Also, if we required additional excavation, it would be undesirable both culturally and biologically, as it would entail the displacement of more native soil and would increase the potential disruption to nearby petrel burrows.

Thank you again for your interest and for the supportive comments in your letter. We certainly hope, as you say, to honor and perpetuate in a scientific way what has been an enduring Hawaiian tradition of venerating the Sun.

If you have not done so already, we invite you to visit our web site at: <u>http://atst.nso.edu/</u>. Thank you for your participation and feedback.

Best regards,

Fereny Wagner

Comment – Art Medeiros, Maui News, April 22, 2006

Seeker of knowledge suggests moving solar telescope

Maui News, April 22, 2006

I cannot help but respond to Mal Johnson's April 16 letter concerning the value of knowledge and in favor of the Haleakala proposed astronomy facility.

I am one who has spent all of my adult life in the beautiful quest for that which is yet unknown and agree that this pursuit borders on the sacred. I am also painfully aware of the trend of conversion of the once rounded and most assuredly sacred pu'u of uppermost Haleakala into a jumble of white blocky buildings.

The rocky summit of Haleakala, one of the highest mountains in Oceania, may seem like a lifeless land of stone, but is actually alive with unique Hawaiian plants and animals.

The proposed Advanced Technology Solar Telescope would easily be the largest of its type. I am told the facility would be over 140 feet tall, taller than the county building in Wailuku. The mark this monolith would make on Maui would be significant and irrevocable.

Though Haleakala was the preferred site for this facility, other sites were identified as acceptable. I suggest that these options be pursued.

The quest for knowledge is beautiful but its demands must be weighed against the other sacred and beautiful things of the limited area of Maui, aspects of our Hawaiian culture,

the lives of unique native plants and animals and the grace of the clean lines of Haleakala's ethereal high Pacific mountain viewscapes.

Art Medeiros

Makawao

Haleakala is the only place for advanced solar study

We agree with Art Medeiros (Letters, April 22) that the rocky summit of Haleakala is alive with unique Hawaiian plants and animals. However, the 18acre "Science City" site represents only about 1 percent of similar habitat on or near the summit of Haleakala.

To seriously undertake a quest for knowledge, we must often find the very best place to undertake research in order to maximize the potential for success.

For the Advanced Technology Solar Telescope, a group of scientists was given the task of finding the very best site in the world for studying the sun and its corona. The group also developed instrumentation that would be used to measure daytime solar seeing, sky brightness, clear time fraction, dust levels, and water vapor content at the most promising sites.

An evaluation of more than 72 sites around the world yielded six potential locations. After the first phase of testing, the list of six sites was reduced to three. After two years of the most extensive daytime site testing ever conducted, the site group produced its final report in October 2004.

Two of the sites tested in the final phase did not provide the excellent seeing conditions and/or had a much brighter sky in the daytime when compared to Haleakala.

Only Haleakala fully meets all three of the most critical criteria to meet the science objectives of the proposed ATST. Haleakala is truly the best site in the world from which to undertake a quest for knowledge of the sun.

> Jeremy Wagner ATST project manager National Solar Observatory Tucson, Ariz.

4/22/06 Dr Craig S foltz Aloha. It is an obsolutely unspeakable sin to consider a 14 Story, whatever color, "astronomica !" observatory on top of our sacred and precious centerpiece of Maai Have you ever walked the Incredibly difficult west Rift trail whereby 414 (breadfruit) was brought from Hana to what is now kikei past the undisturbed buriar cairns of those died during their journey? This would be a crime to ancestors, descendents get to come a deservations to out Isiland and it's archeological historic and religions sites - not to mention The a'aina- the land Sincerely, Silkie Mannes P.S. Re: Haleakala Solar Telescope

Dear Sir or Madam:

We are residents of Maui, and we respectfully request that you choose another location for the new telescope facility you are planning for Haleakala. Although this is a worthy project, it would be much more appropriate in one of the other 70 locations you have considered. Most of those locations welcome the telescope, and that way you could have the facility, as well as the good will of the community.

As we are sure you are aware, Haleakala is a sacred site for Native Hawaiian people, and, as such, should not be desecrated. You stated that "the acquired science would probably result in 'very little' measurable impact on Maui folks or even on 'civilization at large,' but that the positive impacts of the knowledge gained from the telescope would grow in the future." What you did not address, is that this facility will have a very real negative impact on Maui immediately. You cannot show Haleakala "proper cultural respect" (which you claim you are addressing) by building a 140 foot white tower on her summit. This is not possible, because the two terms (proper cultural respect and building the tower on her summit) cannot co-exist. It is actually that simple.

"Proper cultural respect" for Haleakala would prohibit placing any structure on the peak of a mountain considered hallowed ground by Native Hawaiians. The structures that are already there have desecrated the 'aina already – placing this monstrous white facility which will forever alter the splendor of this most sacred site is not necessary. It's not like there is no where else it can be built. Maui and the rest of Hawaii have been pillaged and prostituted for economic gain – please do continue this

unnecessary practice for the sake of this project. Please allow Maui, and the Hawaiians who live on her, to keep one the few remaining sacred sites left. The lives of Mauians will not be improved by this facility, and science could benefit just as well at another site. In fact it is my understanding that there are other sites that would actually be more effective scientifically.

Respectfully,

Kathleen S. McDuff Richard M. Lucas Michael A. Lucas

April 23, 2006

KC Environmental P.O. Box 1208 Makawao HI. 96768

RE: Solar Telescope

To Whom it May Concern:

And this does concern each and every one of us who live on this gorgeous Island! One cannot look at this mountain, Haleakala, where heaven meets earth in an unobstructed sky and not wonder about the majesty of the universe. For thousands of years, Hawaiians have taken care of this sacred place and we malihini are privileged to have the opportunity to experience an unspoiled wilderness area where only the sounds of nature can be heard beneath the blackness and solitude of the night sky. We have the same obligation to preserve this special place for generations to come.

I am writing this letter for my grandchildren because I want them to experience that same sense of awe. The telescope can probably provide much information about outer space to the military planning to build it, but I for one am opposed to this site. Science is only one way to know things. It cannot measure soul or peace or respect. All of these things can be found right here on earth, on this mountain. Please reconsider this location.

Respectfully.

Judy Mancini

Comment – Martha Martin, April 24, 2006

Date: Mon, 24 Apr 2006 17:18:52 -0900 To: <u>charlie@kcenv.com</u> From: "Martha E. Martin" (via email) Subject: No to ATST on Haleakala

KC Environmental Inc. P.O.Box 1208, Makawao, HI 96768

I oppose building a massive Advanced Technology Solar Telescope on Haleakala. The mountain is part of a small island, formed only after thousands of years. It cannot be replaced in Hawaii within the next thousands of years. The loss of it cannot be put into dollars, or traded for current purposes.

Hawaiian people don't need a high-tech telescope. They do need to protect their fragile lands and preserve their limited natural wonders. The known, and unknown plants and animals living on the summit will be seriously threatened by the ATST.

The ATST will intrude visibly and audibly on this wildeness treasure. Noise from construction, traffic, the use of air conditioners, generators, and the disruptions caused by building maintenance are things which should be excluded from wilderness environs.

The operation of the ATST will probably produce poisonous wastes. The public has not been informed about the details of materials and of their waste disposal.

For instance, will ATST use transformers, coolants, insulators and hydoraulic fluids which use PCB's? PCBS are toxic compounds which can evaporate, drift off, and poison the earth. The large amount of electricity needed for the ATST ought to have been produced by its own solar design, not planned to draw from Maui power.

Many of the operations of the ATST many contribute to global warming. Global warming seems to be threatening to change the weather on earth and bring higher ocean levels, more hurricanes and tornadoes, and both droughts and floods.All of these effects are infinitely more life-threatening to Mauians than the study of solar flares.

Maui does need to encourage scientific advances in learning about our environment, and find ways to make life on earth better. But building the ATST is not good for Maui, and it is certainly not the only way to inspire minds.

In conclusion, I ask that the ATST not be located on Haleakala, because it is not an overall benefit to Maui. Perhaps in 50 years science will find a way to study the sun without needing such a huge telescope at all.

Comment – Association of Hawaiian Civic Clubs, May 1, 2006 (cont.)

ASSOCIATION OF HAWAIIAN CIVIC CLUBS

P.O. Box 1135 Honolulu, Hawaii 96807

TESTIMONY OF ANTOINETTE L. LEE, PRESIDENT ASSOCIATION OF HAWAIIAN CIVIC CLUBS TO THE NATIONAL HISTORIC PRESERVATION ACT 106 CONSULTATION MEETING AT PAUKŪKALO COMMUNITY CENTER

May 1, 2006

Aloha:

The Association of Hawaiian Civic Clubs firmly opposes the development of an Advanced Technology Solar Telescope project on Haleakalā.

The Association of Hawaiian Civic Clubs is a confederation of fifty-one Hawaiian Civic Clubs located throughout Hawai'i and across the United States. We are the oldest communitybased grassroots Hawaiian organization in the state and we work to support initiatives that benefit the native Hawaiian community. One important issue we support is the preservation of sacred and culturally significant sites. On Saturday, April 29, 2006, our board voted unanimously to support our Maui District Council and its member clubs to oppose this project.

Haleakalā, visible from almost every part of Maui, is a sacred cultural site and the beauty of its unblemished slopes has been recorded for centuries in Hawaiian legends, chants and songs. Native Hawaiians revere this site as a place of great mana (spiritual power). The construction of a telescope the size of a 14-story building will destroy this pristine landscape of our sacred site. This project is not only unwelcome, but will set a very dangerous precedent.

On the Big Island, where similar observatory and telescope structures line the mountain range, it is impossible to appreciate natural beauty when unnatural structures obscure the view. These slopes, too, were once described in chant and song as beautiful, awe-inspiring, and brilliant, but future generations of will never be able to fully appreciate this beauty. We must ensure that Haleakalā and the people of Maui do not share this fate.

Also, please consider the potential negative impacts to the Maui and state economies. In a survey conducted by the Hawai'i Tourism Authority, 58% of Maui residents sighted "loss of Nature and open space" as a big problem. The Haleakalā National Park, one of the most popular tourist destinations on Maui, has adopted policies to control the overcrowding of visitors at the summit during the sunrise. There may be no crowds to control if this telescope facility is errected.

"Haleakalā the beautiful Mountain it stands all alone so Peacefully". Please preserve Haleakalā.

Mr. David Keala, President Native Hawaiian Educational Council 240 Elilani Street Pukalani, HI 96768-8332

Dear Mr. Keala:

On behalf of the National Science Foundation, I would like to thank you for your letter regarding the proposed Advanced Technology Solar Telescope (ATST). I am the NSF Program Officer for the project. Since the project, if it is funded, will be a Federal undertaking, the NSF is the lead Federal agency and, therefore, has the responsibility for compliance with the applicable environmental and cultural preservation statutes.

I understand that our environmental consultant, Dr. Charlie Fein of KC Environmental, has been in touch with you in regard to the NHPA Section 106 consultation. The purpose of this letter is to respond to the specific concerns enumerated in your letter of June 4, 2006. Many of the details of the project will be thoroughly described in the Draft Environmental Impact Statement (DEIS) that is nearly complete. However, in anticipation of the release of that document, my understanding of the issues you raised follows:

- A. Color of the Structure The color of the solar telescope enclosure and support building would be white. Unfortunately, if they were to be painted to blend in with the mountain, they would absorb about four times more heat from sunlight during the day. The heated air rising from the building surfaces would pass through the observing path of the telescope and unacceptably blur the images.
- B. Visibility of the Building As described in the DEIS, the height of the ATST building would be as much as 143 feet. This height is required to place the telescope above the turbulence in the atmosphere directly above the ground level at the site. Since it would be quite high, the visibility of the structure has been a major concern expressed in our public meetings to date. As part of the environmental impact analysis process, detailed model simulations and renderings of the view planes have been prepared for many locations in low lying areas, including upcountry, Kahului, Wailuku, Kihei, and other locations. While these show that the building would be clearly visible from the visitors overlook in the National Park, the visibility from low-lying areas of Maui would be variable, depending upon which of the two potential sites at Haleakala High Altitude Observatory (HO) is considered and the exact location of the viewer. In many cases, the ATST will be hardly visible or not visible at all; its view being blocked by other buildings at HO or the terrain of the summit area. A detailed discussion and the view plane renderings will be included in the DEIS.
- C. Cultural Significance of the Building's Design At the present time, the design of the building, as described in the DEIS, is purely utilitarian. The basic structure must enclose and

Response – David Keala – June , 2006 (cont.)

protect the delicate equipment that it houses and there are some constraints on the design, for example, the color and the details of the rotating dome, that are imposed by solar heating, the need to control dust, etc. However, there is still opportunity for discussion of the incorporation of design features that would have cultural significance. This could be a subject for future discussion.

- D. Education/Workforce Development Programs The National Science Foundation Act of 1950 (Public Law 81-507) established the NSF and authorized and directed it to initiate and support (among other things) "science and engineering education programs at all levels and in all the various fields of science and engineering." Therefore, there is a clear mandate to all NSFsupported facilities to develop and run programs to promote science, technology, engineering, and mathematics education at all levels from K-12 through college and universities as well as through informal science education for the broader public. Programs that are supported at the National Solar Observatory and the National Optical Astronomy Observatory (to name just two of our major facilities) include direct educational outreach, educator support programs such as teacher training and curriculum development. For more information on ongoing programs, see http://eo.nso.edu and the education and public outreach links at http://www.noao.edu. The ATST team understands that it bears the responsibility to develop education, outreach and workforce development programs specific to the needs of the Maui community. The team has already met with MCC President, Clyde Sakamoto, Maui Economic Development Board, and officials from Kamehameha Schools to discuss potential partnerships. In addition, the team has already received a proposal from Mr. Charles K. Maxwell describing his vision for a long term, comprehensive educational program that integrates modern astronomy with traditional Hawaiian astronomy. The spectrum of possibilities is very broad and we hope that we can work with NHEC in crystallizing the education and outreach efforts.
- E. Tours More than a million visitors visit the Haleakala National Park each year, which is adjacent to the Haleakala High Altitude Observatory, where the proposed two potential sites for the ATST are located. Due in part to the limited space for parking and for vehicular turnaround within the Observatory as well as the limited number of employees working at the summit, the facilities are not open to the general public. However, all astronomical facilities within the observatory will accommodate tours by educational and civic groups by appointment. It has been my experience that NSF-supported facilities take the mandate of communicating science to a broad audience very seriously and all requests for tours are honored within the constraints imposed by unusual activity in the building (construction, delicate operational procedures, etc.).

I look forward to consulting further with you on your concerns. Thank you for your participation and please do not hesitate to call me if you have any further questions. My phone number is (703) 292-4909 and my email is cfoltz@nsf.gov.

Sincerely,

Craig B. Foltz Program Manager, Division of Astronomical Sciences

June 25, 2006/Keddea

Dear mike,

Thank you so much for the TOUR, which was way beyond my expectations! In a very important way, the TOUR <u>awakened</u> a part of me that laid dormant in dreams, hopes and wishes.

I sumle someone has to write textbooks for the home - schooled students, and their teacherparents. Today, there are more alternative. education schools, like Charter Schools, Montessori Schools, and "Home - 5 chools". These schools are more accepting of what's true and real, so there's a market for text books for ages 12 to 12, actually. and not just text books, but BOOKS ... picture books, etc. 9+'s the only way to counteract the "dumbing-down" of america. I want to start. Joday, J bought the CIG (complete Idiots' quide) to Physics, opering: Oan idiot - proof in troduction to high school and first-year college - level pluprices, @ Down to Earth explanations of complex concepts, 3 Simple solutions to algebra - based problems. It's twilling! I can see myself taking a child from blocks and cups of water, to learning the systems of measurement used to measure physical quantities; to learning the units of measurement in each of the CGS, MKS, and FPS supstems; to learning the fun damental quantities of physics (being mars, space, and Time). 9 can do this with candies 3

gum, miniature candies, etc., along with scales, etc. Inditaking them from 1 - 10, to original numbers written in Scientific Notation (250,000 mi,= 2.5 × 10 mi). They'll have fin with all mose zeros, and the shorthand method as well. measurements and writing of lellers and numbers ... are forst grade curriculum any way; well just step it up in first grade Physics; and have number rods etc. to express quantities, for example. anyway, three-year-olds would get this, no I would sait want to limit anything in learning accelerated learning can be the most naturally understood if there is excitement, freedom & dignity present. San you repeat two things you mentioned on the tour? The bene fits for racial groups, The distance -learning" university study (correspondence (?). Jovernor Lingle and I used to write. When I wrote to her about the biology of transcendance and how it relaters to teaching children on a higher level of understanding, she asked me to start a Charter school. Unfortunately, she answered six months after 9 wrote, and 9 was already molved in another project. But, 9 tuinle 9'd like to teach the very young again ... accelerated comprehension

is a reality. The human brain is not completely developed intit 3 years after birth, and then grows. Zers to three Thanks you for my whole awaleening about the time. importance of physics for the very young, AND the pointle interoduction of solar technology for all grades. Parents HAVE to be in on it somehow, they can't be left in the dark.

APPENDIX A: Pre-DEIS PUBLIC COMMENTS

(3)I wonder if I can experience the telescope when the operator is there? Can we have another four and cover the parts we missed ? when everything comes together in an easy and comfortable way for you ... even if its a few, months down the road (or the mountain). actually, I'm just aching to do a first grade interoduction to a study of the sur! I had to wait until I was To to learn that the sun had gravity, and rotated from Reft To right? Preposterous! where can I get information on the study of the sun in detail ? I want to set Hawaiian's on fire with new knowledge of the sun, and consequently, why we need the Solar Telescope. New careers will come from the Solar Telescope's location here. 9, personally, and grateful that a small group of people made something incredible happen, when people were too far in the past to think of something real that was beyond their inaquation : and plans made w/you, after a little more research, and with some real visuals and knock-out information, 9'll be ready to meet with Hawaiian groups on manie, with Power Yourt presentations, hands - on models, printouts, etc. If there are no models of the sun, I could make one from the poster you have (3x the sine): [Hum, a good starting point !] my first project, a 3-P model (with accurate of the sun (with accuracy). aloha, Vern

Ms. Verna Nahulu

Dear Verna,

Mike Maberry has given us your letter dated June 25, 2006 for inclusion into the Environmental Impact Statement for the Advanced Technology Solar Telescope (ATST). We have also forwarded your letter to the National Science Foundation.

Enclosed please find a few copies of booklets, tri-folds, and Fact Sheets regarding the proposed ATST project. Thank you for your continued interest in this project.

Singerely, hali fin

Comment – Verna Nahulu - July 11, 2006

Copy: To wike Waberry

July 11, 2006 Keokea, man

Dear Dr. Fein,

Thank you so much for a very appreciated letter, and "extremely-timely" printed information that I received just yesterday. Joday, the Kula Board met at 5:30 PM, and 9 had 11 Fact Sheets, 11 ATST Pamphlets and 3 beautifully covered booklets. Ten KCA members were present, and everyone went home your Fact sheets and pamphets. I was delighted that you were on the agenda for discussion. I give an impromtu presentation for ATST, reading aloud the section subtitled, "education and public ontreach; I spoke about the tour that mike Maberry hosted, and what I experienced to be a boon for education in Marie; I asked, " did you know that the sun rotates in 27 day completions, and the sun has a powerful gravitational pull ?" (No one knew). all of your information was in front of the numbers just before my presentation. I revealed to them that the down uspired me to create books and educational materials, and andio books to teach Physics to The Very Young (1- 6 years). I will follow that with Physics text books for grades one to six, based on the introductory foundation of information learned from one to six years ded. I'm planning to create a model of the sun with internal mechanisms to replicate a 27 day rotation.

The Kula Board members present at the meeting tought were: President Karolyn Mossman, Kalama School feacher,

Comment – Verna Nahulu - July 11, 2006 (cont.)

" gina Hammer, Secretary and Home maker; John Welson, Treasurer and retired businessman; Buzz Stluka, CED and President of Haleakala Ranch; Mitch Silver, Business man, Photographer, ex - Peace Corps (India); Elliott Krash, retired teacher; Faul Kochler, monstanto Exec.; alan Kaufman, Veterinarian (Kula), and myself, Verna, former becretary (4 yrs), retired elementary school teacher, writer, artist, and native Hawaiian Kahuna, quite an averag of Kula people, who now hold the information you sent me. I suggested they go on the town before writing any resolutions or finalizing decisions about the ATST. The Kula Board decided to invite mike Maberry and two or three ATST associates, after the EIS is ont, to speak to the members and make a presentation. 9 am committed to the ATST project, and would like to work with and assist your team in any capacity recessary to accomplish your goal. my goal is to substantially counter- act the dumbing-down of america" in schools , video games, etc. by presenting the real world to the very young, starting with our number system and moving into algebra, geometry and physics by six years ded. (I hope to have my Vector and Scalar "talking - swifboard dolls" ready before Christmas). Pleases send more info, I'm out. Joodinght and good luck, cc mike maberry Potential KCA member Jim aarona (Kula

Verna K. Nahulu

Dear Verna:

Thank you so much for your letter of July 11th. I will pass on your comments to the National Science Foundation (NSF), which is the agency responsible for the proposed ATST project

I understand your commitment to the ATST project and as a former UH faculty member, I appreciate your goal to counter-act the "dumbing down of America". However, please keep in mind that KC Environmental, Inc. is the environmental consultant for this project and as such we have no authority concerning the decision whether to proceed with this project or whether it will or will not be funded for construction. We have transmitted your comments and action requests to NSF, and as we are authorized to act on their behalf, enclosed are a few more materials to distribute in the community.

You have my warmest Aloha,

Chalin feir

 Re: ATST section 106

Mark:

Thank you for your inquiry. Those individuals and groups submitting proposals for Section 106 will be invited to meet with NSF representatives during the same week that meetings are held for public comment on the Draft EIS. As of this date, we anticipate that the EIS public comment meetings will be held during the last week of September. That said, the NSF would like to have all Section 106 related proposals in hand as soon as possible, in order to initiate contact with the proposers before meeting with them on Maui. These proposals may indeed be submitted to us at KC Environmental at any time.

>

>Dear Dr. Fein,

>I am the program coordinator for the electronics and computer engineering technology AS degree program at Maui Community College. You and I have spoken briefly at an ATST community meeting and at the Panstarrs dedication.

>I am working with a team or educators that would like to submit a Section 106 proposal for the proposed Advanced Technology Solar Telescope (ATST). Our understanding is that this proposal should be submitted to K.C. Environmental.

>We would like to know what the deadline for submission is. Thank you for your consideration.

>Sincerely,

>Mark Hoffman

Date: 24 MAY ,2006 Dr. Craig B. Foltz National Science Foundation 4201 Wilson Boulevard, Room 1045 Arlington, VA 22230 RE: Advanced Technology Solar Telescope on Haleakala", Maui Dear Dr. Foltz: I SUPPORT the proposed construction of the ATST on Haleakala. I believe the proposed project will result in major advances in solar research toward understanding space weather and how it affects life on Earth. It will be beneficial for educational outreach and will be a source of continued employment in the hi-tech field already on Maui. In summary, ATST is a worthy project for Maui. PTANLEY E. TRUIT Print Name: Sincerely, huit ŀ (Signature)

- (3) Pukalani Community Center, Pukalani, HI, July 14, 2005

Appendix B(1): Transcripts, Public Scoping Meeting, Cameron Center, July 12, 2005

			1	TRANSCRIPT OF PROCEEDINGS
	1	ADVANCED TECHNOLOGY SOLAR TELESCOPE (ATST)	2	* * *
	2	PUBLIC SCOPE MEETINGS	3	MS. WAHL: Aloha. Good evening and welcome. My
1	3		4	name is Claudia Wahl. I, along with David Brass, will be
1-	4		5	the host moderators this evening. We're representatives of
	5		6	Mediations Services of Maui, and we're here as neutrals.
	6		7	Meaning, that we have no vested interest in the outcome of
	8		8	tonight's meeting or in the proposed project. Our role is
	9		9	to make sure that everyone has an opportunity to contribute
	10		10	to the meeting by providing information to the public and to
	11		10	invite public comment about the proposed project.
	12	PROCEEDINGS	12	Before we get started this evening, I would like
	13	Held at the Cameron Center conference room, 95 Mahalani	13	
	15	Street, Wailuku, Maui, Hawaii, commencing at 7:00 p.m. on		to introduce Leslie Kuloloio. He will offer the pule this
	16	Tuesday, July 12, 2005.	14	evening.
	17		15	MR. KULOLOIO: (Hawaiian language was spoken)
	18		16	Leslie Kuloloio. I just kind of feel hewa. I don't why I
	19 20		17	would give pule for this project when my spirit is not
	21		18	(Hawaiian language was spoken) with this meeting, especially
	22	REPORTED BY: GLORIA T. BEDIAMOL, CSR/RMR #262	19	(Hawaiian language was spoken) Haleakala. (Hawaiian
	23		20	language was spoken). So let somebody else pule, because my
	24		21	spirit is not in harmony. Thank you.
	25		22	MR. MAXWELL: I was supposed to pule originally
			23	because I did the first archeological and cultural study of
			24	Haleakala. And my role is to protect it culturally and
-			25	spiritually. (Hawaiian prayer) Heavenly father, as we sit
~			2	4
			1	in this room, we ask and pray that you look down upon us so
	1	ATTENDANCE	2	we can exchange and get all our answers answered in a good
	2	MEETING FACILITATORS:	3	way; that we can relate to the people that is here, so that
	3	Claudia Wahl and David Brass from Mediation	4	they might continuously protect and know that Haleakala is a
	4	Services of Maui	5	sacred place. We ask in your name (Hawaiian language
	5	HAWAIIAN LANGUAGE TRANSLATOR: Kiope Raymond	6	spoken).
	7		7	MS. WAHL: Mahalo, Charles K. Maxwell. Tonight is
	8	PANEL MEMBERS PRESENT: Jeff Kuhn - Associate Director of the University	8	the first of three public scoping meetings sponsored by the
	9	of Hawaii, Institute for Astronomy (Oahu)	9	National Science Foundation. The meetings are part of the
	10	Craig Foltz - Program Officer with the National Science Foundation, Washington D.C.	10	environmental planning process for the Advanced Technology
	11	Dr. Charlie Fein - KC Environmental (Maui)	11	Solar Telescope, or ATST, proposed for the Haleakala high
	13	Jeremy Wagner - ATST Project Manager with National Solar Observatory, Tucson, Arizona	12	altitude observatory site. This meeting will be recorded so
	14	Jeff Barr - ATST Project Architect	13	that your contributions will become a part of the
	15	Mike Maberry - Assistant Director, University of Hawaii, Institute for Astronomy (Maui)	14	administrative record and will be used as a part of the
	16	inducti, inscredes for inscrement (induc)	15	scoping process for the environmental impact statement.
	17		16	If you would prefer not to get up and speak this
	18		17	evening but would like to submit written questions or
	20		18	comments, there are comment sheets available outside at the
	21		10	
	22		1	sign-in table with information where you can send them. The
ļ	23		20	deadline for submission is August 14th.
	24 25		21	If you would like David or I to read your
	25		22	comments, please give one of us your sheet. If you would
			23	prefer not to have your sheet read, please place them in the
			24	box provided on the sign-in table. Also at the sign-in
L			25	table, you'll find brochures and information describing the

Page 5 to 8 of 71

	TECHNOLOGY SOLAR TELESCOPE (ATST) PUBLIC SCO 9		TUESDAY, JULY 12, 2005 7:00 P 11
1	scale the size of the earth is about this big on that	1	the record in western literature goes back to the 1600s with
2	image.	2	Galileo. The record in the Chinese literature goes back
3	As we look out into space, what we see from that	3	2000 years, before there were even telescopes.
4	burst of energy, if we could block the sun, and this is the	4	The numbers that I show here are from the western
5	magic of what the ATST will do, it will block the sun and	5	record. And what they show is there are periods of time
6	allow us to see the region further out into space. And I	6	when the sun spots went away. And then there were periods
7		7	of time when there were lots of sun spots.
8	The picture I want to show you is this picture of	8	We think, if we extended this record back 2000
9	energy being ejected out into space. We call that a coronal	9	years, there was a period of time, around the 1300s or
10	mass ejection. It's billions of tons of mass and energy	10	1400s, when there were lots of sun spots. We know that from
11	that travels out to space. If it's directed towards us,	11	the Chinese record, not from the western records.
12		12	What we're beginning to understand, and we only
13	display of the aurora that we seldom see in Hawaii; but it	13	know this recently, is that the sun gets brighter this
14		14	is another graph but these peaks in this graph show the
15		15	brightness of the sun. The sun is hotter when there are
		16	more of these dark spots every 11 years. We don't
16	computer. And what it shows is the earth and the		
17	interaction of that energy as it streams by the earth. It's	17	understand why. If you put dark spots on the sun, you'd
18		18	think the sun would be cooler; we have less energy. It's
19	energy channels into the earth, and here's a picture of what	19	not the case. The sun has more energy. The sun is
20	that energy looks like. It's like the fluorescent lights in	20	brighter.
21	this room. The atmosphere lights up.	21	As far as we can tell, this change in the
22		22	brightness of the sun affects the climate of the earth. And
23		23	there are very pervasive hints that the effect of the sun,
24	communications satellites. There was a power grid in Sweden	24	not just this 11-year cycle of effect but the larger cycle
25	that was brought down because of that interaction, that	25	where the sun spots went away, or where there were lots of
-	10		12
1	energy. Planes in the northern polar regions were rerouted	1	sun spots like there were going from the late 1800s to the
2	because of interruptions of radio communications. And	2	present.
3		3	We know there's an economic influence. If you go
4	altitude, we're protected by the earth's atmosphere on	4	back and look at the cost of wheat adjusted for inflation,
5	average.	5	go back all the way to 1200 to 1900, there's an economic
6	The picture that we have of the sun is that it	6	impact of what the sun was doing, which was measurable in
7	produces energy. We're protected by this shield around the	7	the cost of wheat. When there weren't any sun spots here
8	earth. We call it the magnetic field. It's the same shield	8	and in this period, the cost of wheat was higher. We think
9	that makes your compass work. That shield is variable. And	9	it was an effect on the climate. The same kind of effect
10	the variability of that shield sometimes lets that energy	10	that we can see from satellites that says that when there
11	into the earth and into the surface of the earth. And	11	are lots of sun spots, the sun is bright. But there's
12	that's one of the problems that we're trying to understand,	12	probably more than just that simple economic effect.
13	is the connection between the sun's energy and the sun's	13	If you go back in time, the sun affects that
14	magnetic field and the earth and the protections that the	14	magnetic bottle that shields us from energy from those
15	earth gives us to that energy.	15	coronal mass objections, and it's almost certainly true that
16	-	16	the temperature of the surface of the earth has fluctuated
17	time from the sun which are more profound, we think, than	17	by much more than what we call global warming over the las
18	the short-term effects, which admittedly are mostly to	18	fifty to a hundred years. We know that from the record of
19	technology. Those storms that I showed you affects cell	. 19	carbon 14 in the atmosphere, and we know that's connected
20	phone communication, radio communication. For us lying on	20	what the sun is doing.
	the beach over here on Maui, the direct effect is not	21	It's a complicated connection, and it's not
		22	important right here, except to notice that there was a
21	significant except through our technology		in persone right nere, encept to notes that the tract a
21 22	significant except through our technology.	23	period of time, back around 1300 AD, when the temperature
21 22 23	On a longer time scale, what we know happens when	23	period of time, back around 1300 AD, when the temperature
21 22	On a longer time scale, what we know happens when the sun shows the cycle of these dark spots is that every 11	23 24 25	period of time, back around 1300 AD, when the temperature the surface of the earth was almost certainly warmer than it is now. That's a time when there were lots of sun spots on

		TECHNOLOGY SOLAR TELESCOPE (ATST) PUBLIC SCC 13	PE MEETINS	TUESDAY, JULY 12, 2005 7:00 P
	1	the sun. More sun spots, a brighter sun. There was a	1	the world: La Palma, a lake up in Montana, the coast of
	2	period of time around 1600, 1700 AD, when there were few sun	2	California region. We put towers at each of these sites,
	3	spots on the sun. That's a time when the surface of the	3	and we measured the weather, we measured the clarity of the
	4	earth was cooler.	4	atmosphere, how much the twinkling of the atmosphere would
	5	Why is that important? It's important because	5	distort the ability to see fine detail and the brightness of
	6	those changes are larger than any of the changes that we	6	the atmosphere. How well we can see the outer layers of the
	7	measure now, when scientists tell you there's global	7	sun, the corona, that part of the sun that connects to the
	8	warming. The changes in the sun that I'm talking about,	8	earth.
	9	this warm period of time, corresponds to the time when	9	The sites that we ended up with the study, the
	10		10	ones that came out of the 70 were Big Bear, Haleakala, La
	11	native people in North America were in decline in the 1300s.	11	
		They were vanishing, the Hohokam, the Anasazi, the Mogollon,		Palma, Panguitch Lake which is in Montana, Sac Peak which is
	12	and the four corners of the region vanished at the time the	12	in New Mexico, and San Pedro which is a site in Mexico. At
	13	temperature of the earth was rising.	13	each one of these sites, we collected data for at least a
	14	Similarly, during this time when the temperature	14	year; in some cases almost two years.
	15	was cooling, the cultures from Sweden and Norway, the	15	What we got out of that was the ability to what
	16	Vikings, the Vikings had settled I remember from my	16	we were after was the ability our prime goal was to be
	17	elementary school classes they had settled on the eastern	17	able to see this is a sun spot like you'd never seen before
	18	coast of Greenland at a time when it was very warm, this	18	and like scientists have never seen before, because we never
	19	time. And as the surface of the earth got cooler,	19	had sufficient detail. That's a dark region blown up like
	20	agriculture was suppressed; they could not live.	20	you would see it from a microscope. And this movie is now
	21	The decline of these cultures in Greenland almost	21	several hours long. But what we learned from this is that a
	22	certainly coincides with the cooling period. That was the	22	sun spot evolves in time. Material flows in and material
	23	change due to the sun. Those changes in the sun there's	23	flows out. Somehow the evolution, the birth and death of
	24	no reason to believe that this should not happen again. We	24	the sun spot, is connected to that whole cycle of how the
	25	can't predict whether the next solar cycle in 11 years will	25	sun changes over 11 years and in longer time frames.
_		14		16
	1	be a tenth, two-tenths, one percent brighter or cooler than	1	The ATST is designed its essential feature is
	2	the current solar cycle is. That's the primary aim of the	2	to get above the earth's atmosphere that prevents us from
	3	ATST: to understand the science and the connection between	3	seeing this kind of detail. This is what it's after: to
	4	what the sun does and what the earth is doing.	4	see the fine detail that you see in that picture.
	5	So in our lifetime, the probability of a major	5	In order to see that fine detail, on these towers
	6	solar storm or a brightness change affecting commerce with	6	we measured how much the atmosphere degraded or blurred t
	7	billions of dollars of impact is a virtual certainty,	7	image.
	8	because it's already happened. We've lost satellites that	8	I apologize, it's another graph, but it shows an
	9	are worth a billion dollars.	9	important feature, and it will be a question that comes
	10	Over the next thousand years, the probability of a	10	later. Why is the ATST designed to be above the ground?
	11	climate change, larger than the climate change that we're	11	This is a graph that shows all of those sites, and it shows
	12	seeing now, due to greenhouse gases, is almost a certainty.	12	as a function of how high you are above the ground, how
	13	It's at least 50 percent, if you look back at the current	13	little the blurring is. The bigger the line up, the smaller
	14	record that goes back a thousand years.	14	the blurring.
	15	We would be silly not to spend some money to try	15	And guess which of these lines corresponds to
	16		16	Haleakala? It's the red line. The red line surpasses all
		to understand what is coming and trying to understand what	17	of the other sites, as we get above the ground and if we
	17	is coming and how the sun is changing is what this telescope	18	
	18	is all about.		reach this level of 10 meters in particular. The closest
	19	Why Haleakala? We started over two years ago	19	site that reaches that is this black line, which is from a
	20	looking at 70 different places in the world to put a	20	site in California in the middle of a lake. But it doesn't
	21	telescope like this. We started with a spread sheet that had	21	compete at all if we get above here. That was one of the
	22	all kinds of data like the weather, like the number of	22	criteria for why Haleakala and why above the ground.
	23	airplanes that passed over head, the likely climate at the	23	It's a terrible table, you can't read it; but in
		the and have meaningless dave we should get. That was	24	this table were some of the other data that we used that
	24 25	site and how many clear days we should get. That was	25	shows that Haleakala is the best place to be able to observe

	TECHNOLOGY SOLAR TELESCOPE (ATST)	PUBLIC SCOPE N 17		TUESDAY, JULY 12, 2005 7:00 F 19
1	the sun. And the numbers here that are import	ant are how	1	education for the entire nation. And we do this by an
2	bright the sky is. You know, if you have been to	Haleakala,	2	interesting process, which is somewhat different than the
3	that it's one of the few places where you can ho	ld your	3	way other agencies work. I should say that the NSF supports
4	thumb up to the sun and the sky is dark all the	way to the	4	all types of sciences. We support biological sciences,
5	edge of your thumb. It's absolutely it's almo		5	earth sciences, oceanography, atmospheric science, physics,
6	being on the moon because there's no dust in th		6	math, chemistry, materials research, all sorts of things,
7	sky brightness is darker, we think, than even Ma		7	and astronomy.
8	because Maunakea has more dust and ash.		8	So astronomy within the NSF is a relatively small
9	The sky brightness at Haleakala was 5.	8 compared	9	piece of the agency. In fact, the agency has about an
10	to 96 to 500 for the other two leading sites and		10	annual budget of about 5.2 billion dollars, most of which we
11	That smaller number here is good. The smaller		11	give away. That's our job. And of that 5.2 billion
12	very low sky brightness. That means we can se		12	dollars, astronomy has about two hundred million. As you
13	the sun that connects with the earth, the corona		13	can see, we are a relatively small part of the agency.
14	numbers right here, this is the number of hours		14	How does the NSF work? NSF is interesting in the
15	use that dark sky condition, a thousand hours of		15	sense that the way the NSF works is by a process that is two
16	between 2 and 196 or 384 to 861. Again, Halea		16	part: unsolicited proposals and peer reviews.
17			17	
	surpasses any of the other places where you could			What does that mean? It means that we don't tell
18	the sun.	71	18	the scientists what to do. We don't tell them what is
19	Finally, the amount of dust in the area.		19	important. We don't tell them how they should do their job.
20	amount of dust in the area is ten to a hundred t		20	We don't go to the scientific community and say we want
21	Less dust in the air than Haleakala, which is why	the other	21	proposals for, for example, a satellite that will go in
22	numbers are so good.		22	space and measure x-rays.
23	So Haleakala, is as far we can tell, is by		23	What we do is allow the scientific community
24	best place in the world to be able to observe the		24	across the country, and in fact internationally in some
25	what we're after is the ability to understand this	solar	25	cases, to come together and decide what are the important
- A.		18		20
1	connection of these magnetic fields and their co		1	problems to attack, how do you attack them, and what
2	the earth. That's the science we're after. It's no	-	2	resources do you need to do that.
3	for us, but it's for the long-term picture of how t		3	So in that sense it is an unsolicited proposal.
4	connected to the earth and how it's affecting clin		_	We don't ask them for a proposal. A proposal comes to us,
5	Frankly, what we're here for today, we	hope, is	5	and then we don't evaluate that proposal ourselves. We go
6	for an invitation from the Hawaiian community t	o bring this	6	out again to the scientific community and assemble panels of
7	new window onto the sun, onto the summit of H	aleakala. And	7	experts, and they may be experts in science, they may be
8	this picture that I've given you is what the scien	tists are	8	experts in management any many things, and those proposa
9	trying to achieve with that telescope. That's all	I have.	9	are reviewed.
10	MR. FOLTZ: I don't have any slides, an	d I will be	10	So if a proposal, after great scrutiny a
11	brief.		11	proposal like this gets enormous scrutiny. We look at it
12	My name is Craig Foltz, and I'm an astr	onomer.	12	over and over again because this is a sizeable project. If
13	I'm not a solar astronomer. I work on objects t	nat are only	13	it is well reviewed, if the funds are available, then
14	observed at night; but in my current job, I am a	program	14	perhaps we will be able to provide funding to support the
15	manager for the National Science Foundation. I	live and	15	research. And I should say that we never have enough mon
16	work in Arlington, Virginia, which is across the r	ver from	16	On average across the agency, only about one quarter of the
17	Washington D.C.		17	proposals that come to us are funded. So that's the way it
	What I'd like to do tonight is briefly tall	about	18	works.
18	what the NCC is what it does and how it relate	s to this	19	How did it work in this case? And I wanted to
18 19	what the NSF is, what it does, and how it relates		20	give you that preface because I wanted to point out that
	project. Because one hears the Natural Science	Foundation		
19	project. Because one hears the Natural Science		21	this project, although the NSF is the so-called lead agency,
19 20 21				this project, although the NSF is the so-called lead agency, this is not the NSF's project. This is the solar physics,
19 20 21 22	project. Because one hears the Natural Science and you think federal agency. I want to explain of a federal agency we are.	what sort	21	this is not the NSF's project. This is the solar physics,
19 20 21	project. Because one hears the Natural Science and you think federal agency. I want to explain	what sort	21 22	

		FECHNOLOGY SOLAR TELESCOPE (ATST) PUBLIC SCO 21	PE MEETINS	TUESDAY, JULY 12, 2005 7:00 P 23
	1	about 12 million dollars in order that these designs that	1	this process to move forward with great respect. And so
	2	you see here, and you'll hear more about it, can be carried	2	with that, I'm going to turn it over to my next presenter
	3	out.	3	who will talk about the process.
	4	We have now received we've received, actually	4	MR. FEIN: Thank you, Craig.
	5	over a year ago, a proposal to us to fund the construction	5	Aloha, my name is Charlie Fein. I'm the
	6	of this telescope. That proposal is still being reviewed.	6	environmental consultant for this project. I am locally
	7	It has been looked at by panel after panel. We've	7	based here on Maui, and I am doing what needs to be done
	8	scrutinized the cost, we've scrutinized the project	8	comply with federal and state regulations concerning a
	9	management, we've looked very hard at the science case. We	9	project of this size.
	10	have looked at other options. Are there ways that we can	10	But as a resident of Maui, as somebody who lives
	11	make this telescope less expensive?	11	here and has lived here for many years, I'm also concerned
	12	So I'm not going to talk much about that because,	12	about preserving, protecting, and paying attention to the
	13	in fact, until the reviews are done, that is somewhat	13	necessary protocols for building anything on this island.
			14	
	14	confidential. But we're here today, and that should imply		The process itself, the EIS process, is laid out in this
	15	to you perhaps that we are continuing the process of coming	15	slide. It will be a joint federal and state environmental
	16	to a decision as to whether this project should be funded.	16	impact statement. The impact statement itself comes later
	17	I want to reiterate this project is not yet funded.	17	in the process. We will not be preparing the draft
	18	So what does the NSF need? What security, what	18	environmental impact statement for some time yet.
	19	comfort level does the NSF need to have in order to fund a	19	If you look at this slide, you see that the first
	20	project like this? Well, this project is more expensive.	20	part of the process involves public comment. The scoping
	21	The cost of this project is comparable to the division of	21	process for this project is the phase that we're in now.
	22	astronomical sciences, astronomy annual budget.	22	We're soliciting your comments, your input, what it is that
	23	So, basically, the funding for a project like	23	you would like to see as part of the environmental impact
	24	this, which is not the biggest project that the NSF has ever	24	assessment process.
_	25	done, but it's certainly not the smallest one, it comes from	25	Once we complete these informational meetings an
- And		22		24
	1	a different pot of money. And in order to get that pot of	1	prepare our final scoping document, we'll begin to do the
	2	money, in order to get that money, we need to have congress	2	impact assessment surveys and consultations.
	3	say, Yes, this is a good project.	3	Some of you are familiar with the long-range
	4	In order for congress to consider it, it has to be	4	development plan that the University of Hawaii, Institute
	5	ready for construction. And in order to be ready for	5	for Astronomy prepared last year. It was prepared in draft
	6	construction, we need to understand how it will be built and	6	and put on the internet. It was also widely publicized in
	7	where it will be built. Because where it will be built will	7	the media. We received many comments. The final version
	8	determine how it is built. If you are building on granite,	8	of the long-range development plan was published in Januar
	9	then you build a foundation that's different than if you	9	of this year.
	10	were building on cinders or if you were building on lava.	10	The long-range development plan includes the
	11	So this EIS, this environmental impact study and	11	potential for the Advanced Technology Solar Telescope. The
	12	cultural study, is necessary for us to come to the point	12	potential for building that facility on the primary
	13	where we can make the decision as to whether this proposal	13	alternative sites that were selected, the discussion of
	14	will be funded.	14	those sites was rather complete in the long-range
	15	So I want to reiterate that this is a project that	15	development plan.
	16	grew out of the grass roots, the scientific grass roots.	16	We will do the surveys and consultations all over
	17	There are many institutions that are represented here, 22 or	17	again for those sites. We will look at the archeological
	18	so, they range all over the country. Astronomy is one of	18	resources, we will look at the biological arthropod
	19	the major players, the National Solar Observatory is the	. 19	resources, we will look at the following floral resources
	20	lead player in this. That is the way these projects grow.	20	very carefully and particularly paying attention to
		They do not grow from the NSF saying we want a proposal for	21	endangered species such as the petrel, the Hawaiian bat,
	21	they do not grow nom the Nor saying we want a proposal for	22	which occasionally flies through the site and so on.
	21	comebody to build a big telescope. I just wanted you to		
	22	somebody to build a big telescope. I just wanted you to		
		somebody to build a big telescope. I just wanted you to understand that distinction. I also wanted to make it clear to you, from the	23	Once we receive those reports, we'll prepare the draft environmental impact statement. Again, the public

	TECHNOLOGY SOLAR TELESCOPE (ATST) PUBLIC SCO 25		TUESDAY, JULY 12, 2005 7:00 27
1	environmental impact statement, and we will hold public	1	works through the review process, that would be about the
2	hearings in various venues to solicit comments about that	2	earliest.
3	document.	3	When I wrote this slide, I assumed that would be
4	Once we receive the comments and corrections,	4	in early 2007, but it may be late 2007. That's where we are
5	whatever needs to be done, we will then prepare the final	5	now. So you can slide construction over a little bit, move
6	document and issue that document with a record of decision	6	this part out.
7	as to whether this is an appropriate site to build on or	7	So what we want to do is work through the EIS
8	not; that is the Haleakala High Altitude Observatory site.	8	process, work through our design effort, work through the
9	Simultaneously, we'll be preparing a conservation	9	review with the NSF, understand whether construction is
10	district use application. The Haleakala High Altitude	10	going to be funded, and then that's more or less when it
11	Observatory, the 18 acres of the University of Hawaii, is in	11	would occur.
12	a conservation district. Therefore, conservation district	12	So the major work up on Haleakala, if it were to
13	use application must be prepared and a permit issued by the	13	occur, the major construction you would think of as major
14	Department of Land and Natural Resources in order to	14	construction work, would occur right in here, essentially,
15	legitimately use that site, conservation land for this	15	these first two years.
16		16	After that period, we're inside the building and
17	purpose. So we'll be preparing that as well. That will	17	the exterior, the large construction, is completed. We wor
18	also involve public hearings. And those public hearings	18	then to assemble the optics, test systems, bring on the
19		19	instrumentation, first light then occurs out here, the first
20	will take place sometime during the 180-day process that the	20	time we get sunlight into the telescope. And after we have
	conservation district use application is in progress. So	20	worked through proving that the telescope can deliver the
21	there will be a number of opportunities for the public to	21	
22	comment on this project and to provide input. We strongly	and the second	kind of performance that we're after, that we're trying to
23	encourage you to do so. We encourage you to provide your	23	reach, then we would begin the initial operations.
24	comments. We would like to know what it is that you want to	24	I'll introduce Jeff Barr who is the project
25	see protected, what you want to see preserved, and how you	25	architect. Jeff will walk you through what the facility
1 .	26	1	28
1	would like to see this project unfold.	1	looks like and a little bit about why it looks that way.
2	We certainly can't make promises about individual	2	MR. BARR: Hello. As Jeremy said, I'm the project
3	requests for some modifications to the building or something	3	architect. I work on a design team based in Tucson, Arizo
4	like that. But there are principles and significant	4	that he leads. We are two years, or something like that,
5	criteria that we'll adhere to. And if there is some	5	down the road in the development of this observatory. An
6	significant impact that we're overlooking or have not	6	my part of it, as an architect, is sort of the outside part
7	considered, we will do so.	7	that you see. That is sort of why I am here representing
8	With that, I would like to turn this over to the	8	the design team.
9	next speaker, Jeremy Wagner, who will talk about the overall	9	Essentially, what I'm going to look at is where
10	schedule of the project.	10	Jeff Kuhn talked about why Haleakala is important, but I'll
11	MR. WAGNER: My name is Jeremy Wagner. I'm a	11	be talking about where specifically on Haleakala we're
12	project manager for the ATST project based in Tucson,	12	proposing to put it, how big it will be, what it will look
13	Arizona. I'm with the with the National Solar Observatory.	13	like, why does it look like that.
14	What I would like to do is give you a quick	14	The pictures on the left-hand side there are the
15	overview of the project schedule, answer a couple of	15	two sites that are identified the way they look right now.
16	questions that you might have. Like, where are we in the	16	The top one is the primary proposed site, and this is the
17	project design effort? When might construction start? When	17	ATST, the test tower that's there right now, and has been
40	could the operations begin?	18	for some number of years taking data, that Jeff Kuhn
18	This is a high level overview of the project	19	referred to.
18 19		20	The other site is in this one he referred to
	schedule. We are currently in the design effort, in the	21	generally as the Mees site. Next to the existing Mees
19	preliminary design phase. We're starting the environmental	21	J
19 20		21	facility some of you are familiar with. The other site, the
19 20 21	preliminary design phase. We're starting the environmental		
19 20 21 22	preliminary design phase. We're starting the environmental impact statement process, so we're right about here.	22	facility some of you are familiar with. The other site, the

07/24/2005 08:06:19 PM

	TECHNOLOGY SOLAR TELESCOPE (ATST) PUBLIC SCC 29	DPE MEETINS	TUESDAY, JULY 12, 2005 7:00 P 31
1	as the Reber Circle site. These two sites were identified	1	structure out here and other remote buildings that also
2	in the Haleakala High Altitude Observatory long-range	2	serve to provide space for equipment and other kinds of
3	development plan. There's a leak there. You can look at	3	needs that have to do with maintaining the telescope.
4	that. I think it's a useful document. It's been useful to	4	It's important to note that all of this really, I
5	us. It's a great starting point for understanding what some	5	won't go through the list here because we'll talk about it
6	of the issues are here. These issues this is a short	6	anyway, but all of these buildings, the idea is to keep them
7	list that represents some of the things that we think we	7	no bigger than necessary and minimize any impact on the
8	need to understand and the things that went into identifying	8	environment and any impact on the observing conditions for
9	within that plan that these were two likely and feasible	9	the telescope.
10	sites for a project as big as ATST.	10	With that, we're going to get into what it looks
11	Both of these sites are big enough without a lot	11	like, how big it is, and why it is as big as it is and the
12	more leveling or major earthwork for a building the size of	12	dimensions that it has.
13	one that you see here. I know you've seen these pictures,	13	Again, to get you oriented, this would be the
14	and I know you've seen some in the papers. So we're going	14	enclosure, which I'm sure you are getting familiar with at
		15	this point, the support building which looks like that
15	to talk about why it does look that way. It's a large	16	rendering over there, and this is the Mees building and a
16	facility, and it takes a large site. There are only two	17	remote facility building for ATST.
17	locations on Haleakala where it can really go. Both of	18	, ,
18	those sites have been tested, and they have good observing		The first thing, in terms of dimensions on the
19	conditions.	19	telescope, is the height. And that's something that Jeff
20	Looking down from the top of these sites, this is	20	Kuhn referred to, this 92-foot height was determined, and
21	a topographical map, just to get you oriented. This is how	21	you saw it in his graph, that would be something like
22	big things are. That's one hundred feet, two hundred feet,	22	halfway across, and it gets the line high enough that the
23	so it gives you an idea. This is the overall boundary of	23	seeing is as good as they need to have. Honestly, it's what
24	the observatory. There's a topographical map where the	24	we can afford.
25	lines get closer together, it gets very steep, and so the	25	There's a limitation. As you go higher, obviously
1	30		32
1	part in the middle here, where there's more space between	1	there's extra costs involved. So in a sense it was a
2	these wiggly lines in the middle, that's where the flat	2	compromise, but it was the height we found was acceptal
3	places are. These are the sites. This is the primary site.	3	in terms of meeting the scientific goals of the project. So
4	This is Mees here that you saw in the picture. And,	4	that's where you start.
5	essentially, we're planning to locate or proposing to locate	5	This structure in here, I should probably also
6	ATST next to the existing Mees facility.	6	mention, this is the telescope itself, this framework
7	The alternate site is up here, and this is where	7	structure. This is the primary mirror, and it swings inside
8	that Reber Circle area is that I referred to. Again, to get	8	of this dome, requires space for maintenance and space for
9	you oriented, the road in from the park is here. So the Air	9	crane to remove parts and others the kinds of things that
10	Force facility is up here, the Faulkes telescope down here,	10	you need to be able to do around it. So that dictates the
	and then welve also identified preliminarily come of the	11	overall circumference or overall size of the circular
11	and then we've also identified preliminarily some of the		
11 12	restrictions that we know that these sites would have. The	12	feature at the top of the dome.
		12 13	Beyond that, the pier down here also has to be big
12	restrictions that we know that these sites would have. The		Beyond that, the pier down here also has to be big

12 13 14 15 16 17 18	restrictions that we know that these sites would have. The archeological in blue here, the Petrel burrows. The building requirements, as an architect for an observatory, I have a short leash as far as design is concerned. You work around in the second line here, what it takes to support, protect, operate and maintain the telescope. You design buildings around that, and you make	13 14 15 16 17 18	Beyond that, the pier down here also has to be big enough to be stable and provide a very vibration-free moun for the telescope. And it also has to be big enough for this rotating platform on the inside, which is where most of the instrumentation that will do the science will be located.
12 13 14 15 16 17 18 19	restrictions that we know that these sites would have. The archeological in blue here, the Petrel burrows. The building requirements, as an architect for an observatory, I have a short leash as far as design is concerned. You work around in the second line here, what it takes to support, protect, operate and maintain the telescope. You design buildings around that, and you make sure that those buildings do as little harm to the observing	13 14 15 16 17 18 19	Beyond that, the pier down here also has to be big enough to be stable and provide a very vibration-free moun for the telescope. And it also has to be big enough for this rotating platform on the inside, which is where most of the instrumentation that will do the science will be located. So that pretty well dictates to me, as an architect, how big this building has to be. As you can see,
12 13 14 15 16 17 18 19 20	restrictions that we know that these sites would have. The archeological in blue here, the Petrel burrows. The building requirements, as an architect for an observatory, I have a short leash as far as design is concerned. You work around in the second line here, what it takes to support, protect, operate and maintain the telescope. You design buildings around that, and you make sure that those buildings do as little harm to the observing conditions and to the environment as possible.	13 14 15 16 17 18 19 20	Beyond that, the pier down here also has to be big enough to be stable and provide a very vibration-free mount for the telescope. And it also has to be big enough for this rotating platform on the inside, which is where most of the instrumentation that will do the science will be located. So that pretty well dictates to me, as an
12 13 14 15 16 17 18 19 20 21	restrictions that we know that these sites would have. The archeological in blue here, the Petrel burrows. The building requirements, as an architect for an observatory, I have a short leash as far as design is concerned. You work around in the second line here, what it takes to support, protect, operate and maintain the telescope. You design buildings around that, and you make sure that those buildings do as little harm to the observing conditions and to the environment as possible. The kind of buildings that we have designed, and	13 14 15 16 17 18 19 20 21	Beyond that, the pier down here also has to be big enough to be stable and provide a very vibration-free mount for the telescope. And it also has to be big enough for this rotating platform on the inside, which is where most of the instrumentation that will do the science will be located. So that pretty well dictates to me, as an architect, how big this building has to be. As you can see, it's not much bigger than the telescope and the pier and the
12 13 14 15 16 17 18 19 20 21 22	restrictions that we know that these sites would have. The archeological in blue here, the Petrel burrows. The building requirements, as an architect for an observatory, I have a short leash as far as design is concerned. You work around in the second line here, what it takes to support, protect, operate and maintain the telescope. You design buildings around that, and you make sure that those buildings do as little harm to the observing conditions and to the environment as possible. The kind of buildings that we have designed, and what you are seeing in these pictures, are two different	13 14 15 16 17 18 19 20 21 22	Beyond that, the pier down here also has to be big enough to be stable and provide a very vibration-free mount for the telescope. And it also has to be big enough for this rotating platform on the inside, which is where most of the instrumentation that will do the science will be located. So that pretty well dictates to me, as an architect, how big this building has to be. As you can see, it's not much bigger than the telescope and the pier and the equipment inside. The support building is dictated by a

ANCED	TECHNOLOGY SOLAR TELESCOPE (ATST)	PUBLIC SCOPE ME	EETINS	TUESDAY, JULY 12, 2005 7:0
		33		35
1	instrument prep area here, there's a space do	wn inside of	1	looked at other alternatives, sky blue or other kinds of
2	this area that's big enough for a coding facility	to recoat	2	colors, and it's a dramatic difference in the amount of heat
3	the mirror on a periodic basis.		3	that comes off of the building surface. So that's the first
4	And then the higher features here, th	ere's a lift	4	thing to understand that everything that's close to the
5	in the center that allows you to get the mirror	and other	5	telescope will be white.
6	big instruments off and down where you need	them to go. And	6	And then the areas that you see up in here that
7	so that is essentially what I've gone through h	ere. Those	7	looks odd with the line work, that's a kind of metal panel
8	are the things that are dictated, these dimens	ons which are	8	that is liquid cooled. So even though the surfaces are
9	outlined here, and the overall size of the build	ng.	9	white, they still heat up some, and you still have to
10	Let me go back for a second. If you	ut through	10	extract that heat away. That's why it has an irregular look
11	at this level, all the way through these three b	uildings	11	to the top part here.
12	here, that gives you a base level floor plan or	building	12	The rest of the building here will be a fairly
13	plan of what we propose on this site.		13	normal kind of commercial building that you would be
14	Again, this is shown at the Mees site.	This is	14	familiar with, metal panels and steel structure and pretty
15	the existing Mees building which we proposed	to leave for	15	normal kinds of things. There's also, and I did not point
16	several reasons, one of which it's an IFA build	ng. It's	16	it out on some of the other plans, but there's also what
17	not an NSF facility. They have useful space the	ere that they	17	we're calling an apron around especially on the east sid
18	are using to support other projects on Haleaka	la. And so in	18	of the telescope, east and south side, to prevent the area
19	taking that space, if we were to take that space	e, we'd have	19	around the telescope because the volcanic cinders also ha
20	to make a larger footprint and a larger building	g here new	20	tendency, because of the dark color, to heat up. So that
21	building to compensate for what we'll be takin	g away.	21	protects that that's a heat shield in a sense that keeps
22	Also, we see it as a way to reduce so	me of our own	22	that area from contributing to bad observing conditions.
23	needs and bring down the dimension of this bu	uilding by	23	This, again, is the remote utility building which
24	taking advantage of the things like the shop the	nat's	24	is far enough away that we can get back to the idea of
25	incorporated. It's in there, an existing shop the	at we can	25	making the building blend in with the mountain a little
)		34		36
1	use and expand and continue. So it's a good	unctional	1	more. It also has equipment we know that will have to be
2	building that we can get good utility out of and	l help	2	sound insulated to keep the sense of the Haleakala
3	minimize how much we have to build new.		3	environment disturbed as little as possible.
4	This other building here, that's a rem	ote utility	4	That's essentially it. I'm not going to go
5	had area that will have big pieces of equipmer	t in it that	5	through this. This is a summary of everything I just said.
6	needs to be separated for reasons of vibration	and heat from	6	But I will go on to these are pictures that you have seen
7	the telescope itself. The size of this building is	s, again,	7	now and are on either side here. This one, in case you
8	you can see this is the mirror coating area tha	t I talked	8	haven't had a chance to look at the posters a little closer,
9	about, these big spaces are just big enough re	ally to	9	this is at the Mees site and looking out to the south. So
10	accommodate all of those activities, and then	there's a	10	from the road or from a little farther back from the road,
11	smaller equipment area here.		11	that's what you would see. The Mees facility is off on the
12	Again, the main observatory roof con	ning in here,	12	ride there.
13	the north you get a picture of how much	this area in	13	This is at the alternate site at the Reber Circle
14	between where the truck is coming in with the	mirror, this	14	site. This is looking at it from the south side looking
15	would be about a 40 to 50-foot long flatbed tr		15	north back at it. And those in the foreground are other
16	area in here would be a paved service yard th		16	telescopes that are currently there.
17	it's really already paved here, so we would		17	So that's the this one, again, there's a poster
18	extend the area that much farther, and you ca		18	of this one up here, but this is the one you've probably
19	order to bring a big truck into the new building		19	seen in the other literature. That's what we have, and I
20	To talk a little bit about what it looks		20	think at this point, since I'm the last speaker, that we can
21	why it looks that way. The first thing is that it		21	open it up for comments. And that's what we're here for,
22	to have to be white. For reasons of heat. The		22	to get as much information from you about what the issue
dies dies	to contribute no more to the thermal disturba		23	are here that we can.
23	to solidibate no more to the thermal disturba			
23 24	heat in the area around the building than nece		24	MS. WAHL: Thank you. We'll open the floor now
23 24 25	heat in the area around the building than nece the only way to do that is to make the building	essary. And	24 25	MS. WAHL: Thank you. We'll open the floor now questions and comments. I just want to remind you to pl

	TECHNOLOGY SOLAR TELESCOPE (ATST) PUBLIC SCC 37		39
1	state your name for the record and also keep your comments	1	we're going to make sure
2	and questions brief. We have just a little over an hour for	2	MR. BARR: some further study. We're not done
3	those comments and questions.	3	studying the cooling of the
4	MR. KULOLOIO: I have a question on the follow-up	4	MR. KULOLOIO: If we can put men on the moon a
5	question. Number one, will this finished building be	5	brought them back, it's going to cost, nothing is free. So
6	visible from here, if we look up from the central Maui area?	6	being that the cost has not yet been determined, why not g
7	If you do right now, we can look to see building up there	7	for it. If you can have an alternate, okay, fall-back plan
8	right now?	8	B, paint it white, cost less. That's when I'm trying to
9	MR. BARR: Yes. I understand the question. The	9	figure. If you can take the extra step to consider that.
10	answer is, there will be some visibility from the	10	MR. BARR: Okay. Thank you.
11	communities around Maui. And we are in the process of	11	MR. KULOLOIO: If you use the Reber Circle site,
12	identifying that. That's part of what the EIS will	12	what happens to the Reber Circle? Does that get preserved
13	identify. There will be some visibility of that building	13	MR. KUHN: I missed what you said at the end.
14	from some of the communities. How much of that is yet to be	14	MR. KULOLOIO: If you used the Reber Circle site,
15	determined.	15	what happens to the Reber Circle? Does that get preserved
16	MR. KULOLOIO: I think it was 143 feet from the	16	MR. KUHN: That's an interesting question. The
17	top of the building. So from wherever you site it, there	17	telescope footprint is probably too large, so that that
18	will be some visibility?	18	little concrete ring, which might have some historical
19	MR. BARR: That's right.	19	significance, is probably still there but it's underneath
20	MR. KULOLOIO: The second question is or comment	20	another building would be my guess. I don't think that you
21	is, I notice on your presentation the building will be	21	could go ahead and preserve that it may have only mino
22	painted white.	22	historical difference. I would point out parts of it have
23	MR. BARR: Yes.	23	been obliterated already by some of the other one of the
24	MR. KULOLOIO: Right now we're looking up at the	24	observatories that's up there. So I think the answer is, it
25	building, they are all painted white. I always ask myself	25	would probably be gone if that site were to become the
1	38		40
1	how come they did not make the building brown or blend it	1	primary site.
2	in? I say that because I retired from Maui Electric Company	2	MR. KULOLOIO: If you put this telescope on the
3	Maalaea power plant, and when we had the plant, we had to	3	Mees location where it shows us right there, will it still
4	paint it green. The people in the Maalaea Community	4	be seen from down here?
5	Association wanted it that way. Why can't you do the same?	5	
6			MR. BARR: Will it still be visible from where?
~	I know that you want to minimize the heat. Have you	6	MR. BARR: Will it still be visible from where? MR. KULOLOIO: From down our way.
7	I know that you want to minimize the heat. Have you conducted studies to say, Well, we have to paint it white?	6	
			MR. KULOLOIO: From down our way.
7	conducted studies to say, Well, we have to paint it white?	7	MR. KULOLOIO: From down our way. MR. BARR: From some areas on the coastal areas
7 8	conducted studies to say, Well, we have to paint it white? MR. BARR: Yes. We actually have done modeling in	7 8	MR. KULOLOIO: From down our way. MR. BARR: From some areas on the coastal areas and in the communities around Maui, some areas it will be
7 8 9 10	conducted studies to say, Well, we have to paint it white? MR. BARR: Yes. We actually have done modeling in the most careful ways that we can do with the different potential colors and finishes that the buildings could have.	7 8 9	MR. KULOLOIO: From down our way. MR. BARR: From some areas on the coastal areas and in the communities around Maui, some areas it will be visible.
7 8 9 10 11	conducted studies to say, Well, we have to paint it white? MR. BARR: Yes. We actually have done modeling in the most careful ways that we can do with the different potential colors and finishes that the buildings could have. And that was the very reason why. We knew this was an	7 8 9 10	MR. KULOLOIO: From down our way. MR. BARR: From some areas on the coastal areas and in the communities around Maui, some areas it will be visible. MR. 	TECHNOLOGY SOLAR TELESCOPE (ATST) PUBLIC SCO 41	PE MEETINS	TUESDAY, JULY 12, 2005 7:00 43
1	Mees site. It would not be visible from Kihei, for example,	1	MR. KULOLOIO: Who is the partnership of the
2	but it would be potentially visible from Pukalani and	2	acreage where these facilities are on in combination of UH,
3	perhaps Kahului. A piece of it. A piece of the white upper	3	Air Force? Is it State, private, or is it the Department of
4	structure. If it were built at Reber Circle, more of it	4	Interior, instead of joint use or the military just hides
5	would be visible from those communities, perhaps another 20	5	itself
6	or 30 feet of the upper part of the structure.	6	MR. MABERRY: Mike Maberry, assistant director for
7	Here at the Mees site, where we did our studies	7	the Institute for Astronomy. There was a better shot
8	for the long-range development plan, there's a great deal of	8	earlier. About 18 acres within Kolekolepuu (phonetic), that
9	terrain blocking here from the valley, and the other	9	is the Haleakala High Altitude Observatory site, there is 18
10	facilities also block the view. So that if it were built	10	acres that is in under the stewardship of the University of
11	back here at Mees, it would not be visible from certain	11	Hawaii.
12	locations in the valley at all.	12	MR. KULOLOIO: Wait. Wait. Stewardship?
13	MR. KULOLOIO: I just have two questions, and I'm	13	Stewardship is one thing.
14	done. How deep does it go? Can that go deeper so it would	14	MR. MABERRY: Yes, sir.
15	not be seen from downtown? And isn't it true that whatever	15	MR. KULOLOIO: Who gives the exemption under t
16	would that site would probably be the last site that	16	federal guidelines?
17	ever would be built in Haleakala? Excuse me, that's the	17	MR. MABERRY: It is seeded land, and the
18	only available site, that two sites right?	18	University of Hawaii has the stewardship of the land under
19	MR. BARR: Those are the two sites that were	19	executive order.
20		20	MR. KULOLOIO: Okay. Let me ask the question.
20	identified in the long-range plan that's large enough for	20	this is the stewardship of a state entity, which is the
22	the ATST to be built on. And in our own kind of study following that, they do appear to be the only two viable	22	University of Hawaii, and could you point where the UH is o
23		23	that facility, the UH facility?
	areas there within the observatory boundaries that would	23	MR. MABERRY: Yes, sir. There's a UH facility
24	allow for, as you saw on the topographical map, it falls off	24	right here, solar observatory, the Mees solar observatory,
25	very fast in most other directions. There's a lot of slope.	20	44
1	42 MR. KULOLOIO: My question is, if you could answer	1	we have a couple of small observatories down here, this is
2	it, can that I mean, are you going down underground,	2	the Faulkes observatory which you may remember was the
3	which I think you are? Can you go deeper so it would not	3	observatory.
4	have a visual impact from down in the valley?	4	MR. KULOLOIO: It's still under UH?
5	MR. BARR: Well, the idea of the height is how	5	MR. MABERRY: We're a partnership.
6	high above the ground. There will be some foundations under	6	MR. KULOLOIO: Yeah, I'm getting the picture.
7	the ground, but the telescope itself, the critical	7	MR. MABERRY: There's four and a half acres here
8	dimensions is how high it is above the ground. So pushing	8	that is with the Army Corps. of Engineers that is leased to
		9	the Army Corps. of Engineers.
9	it down into the ground doesn't give you any height really	10	MR. KULOLOIO: The Army Corps. of Engineers lea
10	that matters to the observing conditions. In other words,	11	it, but actually the Air Force facility uses it?
11	pushing the enclosure down into the ground would serve no	12	MR. MABERRY: Yes, sir.
12	benefit to the telescope itself, other than making it less	13	MR. KULOLOIO: In other words, the Air Force is
13	visible.		
14	MR. KULOLOIO: I have a number of questions, but	14	the stewardship under the Army Corps. of Engineers? MR. MABERRY: They are still responsible to the
15	I'll probably ask more in the next nights when you go	16	University of Hawaii.
16	upcountry. I think one of the questions is about paint and	17	MR. KULOLOIO: So the Air Force is in connection
47	color was one of the most interesting and cultural I	18	
17	would say cultural concern about color. And that white	10	with the University of Hawaii?
18	color to an interacting color that has never been colord	19	MR. MABERRY: The University of Hawaii acts as a
18 19	color is an interesting color that has never been asked	20	
18 19 20	before. But I think one other question to add to the limits	20	landlord capacity to insure the stewardship of the land.
18 19 20 21	before. But I think one other question to add to the limits and the technology of modern science, especially in the	21	MR. KULOLOIO: So this facility, don't mind me I
18 19 20 21 22	before. But I think one other question to add to the limits and the technology of modern science, especially in the military, I wanted to ask the question, these facilities	21 22	MR. KULOLOIO: So this facility, don't mind me I want to ask the bottomline questions so that the grass root
18 19 20 21 22 23	before. But I think one other question to add to the limits and the technology of modern science, especially in the military, I wanted to ask the question, these facilities they are placed on the are they owned by the Department	21 22 23	MR. KULOLOIO: So this facility, don't mind me I want to ask the bottomline questions so that the grass roo can see where is where. So these acreage is the long-range
18 19 20 21 22	before. But I think one other question to add to the limits and the technology of modern science, especially in the military, I wanted to ask the question, these facilities	21 22	

ADVAN	VCED	TECHNOLOGY SOLAR TELESCOPE (ATST) PUBLIC SCC	PE MEETINS	TUESDAY, JULY 12, 2005 7:00 P.M
		45		47
	1	next hundred years it won't, whoever has the federal	1	what I'm asking.
	2	exemption would ask for more acreage to increase more white	2	MR. FEIN: I understand your question.
	3	stuff up there.	3	MR. KULOLOIO: It could be an impact already as
Į.	4	MR. MABERRY: I think I understand your question,	4	you're planning your design.
-	5	but there is something I should point out. The University	5	MR. FEIN: Yes.
	6	of Hawaii is not the only entity within Kolekolepuu. There	6	MR. KULOLOIO: It's just like blinding the eyes of
	7	is another little piece right here that I want you to know	7	our Maui nature. It's just like taking away the visibility
	8	that is originally under the Department of Energy and is now	8	and the site of birds that get confused during the day or
	9	under the control of the FAA.	9	the night. The night birds and day birds that fly in from
	10	MR. KULOLOIO: Okay. Okay.	10	the ocean. These kinds of stuff is a hopeless part of your
	11	MR. MABERRY: That's not us.	11	EIS.
	12	MR. KULOLOIO: No. Yeah, but it looks like they	12	And I mention that there's a boo-boo already from
	13	are all in the same funding district. So we have the	13	day one, that you folks did not put height. Because you
	14	Department of Energy, the Air Force is the Department of	14	could have come in with five hundred feet eye observation,
	15	Defense, the University is the institution educational, and	15	and that's why I asked my question. Why you folks did not
	16	now we have this A	16	cover that? Was there any reason? I think your reason is
	17	MR. MABERRY: ATST.	17	not sufficient or adequate enough, and it's not about cost.
	18	MR. KULOLOIO: ATST. Which you say the funding	18	If you say this is the best white dome telescope
	19	will happen or not.	19	that's going to be picked on Maui, and to be the best in the
	20	MR. MABERRY: NSF.	20	world, then cost is not the problem because this is already
	21	MR. KULOLOIO: Guarantee it's been approved by the	21	saying going to be the best site in the world.
	22	top echelons. I just wanted to ask, how come nothing was	22	So, anyway, I another question is I got
	23	planned or discussed about height limits? I mean, you know,	23	plenty, but I just wanted to ask I was asking in this
	24	we get county rules on Maui, and we have rules that say in	24	joint venture, this partnership, the University of Hawaii
	25	certain districts there is height limits. Waikiki is	25	has been studying the sun with that you know that laser,
		46		48
-	1	Waikiki. But how come height limits wasn't mentioned in	1	that go koo, koo, koo (sic) like that, the laser that shoots
	2	your long-range plan with the University of Hawaii? It's	2	up into the sky and how it affected the air path of the
	3	not the shoving or hiding the buildings or bringing them	3	airplanes passing over Maui and there was an impact. Is
	4	down. I'm against that. Height is height. Yeah. So why	4	this proposed is this proposed project or site, is it
	5	wasn't any height limits mentioned in your plan, Charlie,	5	eventually going to be used by the Department of Energy or
	6	when you did the environmental studies long-range or	6	defense in partnership, yes or no?
	7	short-range? Could you answer that?	7	MR. FOLTZ: Sir, to the best of my knowledge, the
	8	MR. MABERRY: Uncle Leslie	8	answer to your question is no.
	9	MR. KULOLOIO: I'm talking to Charlie, he's the	9	MR. KULOLOIO: Turn on your mic.
	10	EPA.	10	MR. FOLTZ: The answer to your question is no.
	11	MR. FEIN: Yes, the long-range development plan	11	This is a National Science Foundation facility. We are a
	12	did not discuss height limits for facilities for two	12	distinct organization from DOE or from DOD. It's not to say
	13	reasons: First of all, it was not it's not been an	13	that on occasion we do not collaborate with them if our
	14	issue at the site; but more importantly, there's a	14	interests are common. But I can assure you that in this
	15	self-limiting factor there. You cannot build telescope	15	case there are no plans to use this as a laser projector.
	16	facilities that are 30 stories high. That's cost	16	This is purely a benign activity.
	17	ineffective to do that. So unlike facilities elsewhere on	17	MR. KULOLOIO: One of the question I ask then,
	18	this island, which are that high, you simply cannot do that	18	sir, I don't know if it's my last one, but you have a
	19	with this technology on the mountain. So we did not address	- 19	projection of 2014 when this project will be somewhat almost
	20	it.	20	completed. When 2014 comes around, would there be an
	21	MR. KULOLOIO: But you understand the critical	21	opportunity for public input again to see any changes or
	22	question?	22	the question I'm asking is here we have a shell, and your
me	23	MR. FEIN: Yes, I understand.	23	brochure is so clear. It talks about dimension shells, but
	23 24	MR. KULOLOIO: It's a cultural question too.	23	it doesn't specify the kind of equipment.
	24 25	Paint and height is a cultural resource question. That's	25	MR. FOLTZ: That's inside

	4	49		51
	1	MR. KULOLOIO: Yeah. The equipment is the one I	1	MR. BARR: I just want to make one comment beca
	2	am interested in. The topnotch equipment for national	2	you brought up the subject of the petrel burrows and the
	3	defense or what you call that kind stuff what is the	3	protection of those is certainly going to be part of the
	4	Iraqi war talking about, you know, when Bush went over where	4	construction practices and how that affects them during
	5	they could not find	5	their nesting season and what work we're allowed to do. All
	6	MR. FOLTZ: The tapes.	6	of that is addressed.
	7	MR. KULOLOIO: There you go. I don't have enough	7	MR. KULOLOIO: Finally I forgot my last
	8	information yet of what is going inside the buildings. You	8	question because already mentioned this is seeded lands,
	9	folks got dimensions but not the kind of technology that is	9	it kind of strikes me how come as native Hawaiians we have
	10	going to be open to native Hawaiians to ask questions.	10	to struggle every day seeking representation from the state
	11	MR. FOLTZ: I appreciate that. That's a very good	11	and federal government, and we have billions and billions of
	12	question.	12	bucks from that mountain. Just a small acre. And talk
	13	MR. KULOLOIO: That's another cultural resource.	13	about economics. This is where we should get our money
	14	MR. FOLTZ: I appreciate your concern. What I can	14	from.
	15	say is that certainly there is a lot of information that is	15	So the seeded lands issue is another culturally
	16	available, publicly available, as to what the inside of the	16	wow, I did not know that. Perhaps there should be some ki
	17	structure looks like, what the telescope looks like. I can	17	of facility with the governor, Inouye, Akaka, President Bush
	18	also say, as an NSF officer, I'm not at the highest level of	18	time for all of them to start focusing on this project. If
	19	NSF management, but it is my understanding, and I'm trying	19	not, we can write to them come to visit this means of
	20	to do this in my head as I talk to you, but certainly of the	20	revenues to support our Hawaiian community.
	21	astronomical facilities that we run, and that includes	21	Finally, I tell you why, you know in the back you
	22	telescopes in Chile, telescopes in Arizona, if you as a	22	said Hawaiian community? How come you folks targeted th
	23	private citizen came in and said, I'm concerned about what's	23	Hawaiian community? Why not the public? You know the o
	24	going on inside that facility, it would be open to you. It	24	site one of you was showing, you wanted to do the outreach
	25	could be toured. You could go in, you could ask questions,	25	for the Hawaiian community. Why wasn't this targeted for the
~		50		52
	1	and this is paid for with taxpayer money. We understand	1	general public? That's the question I'm asking. Somebody
	2	that's	2	was afraid of the Hawaiian community? You got it on your
	3	MR. KULOLOIO: I'm clear about international law.	3	visual, but why you folks use the Hawaiian community? Us
	4	People of Chile and United States is run by different laws.	4	Hawaiians every time we're used like that.
	5	Okay. So I'm not worried about Chile. I'm worried about	5	MR. BARR: I understand. I think the reason we
	6	native laws in Hawaii. What I wanted to ask finally is	6	made reference to the Hawaiian community, and \ensuremath{I} can only
	7	this: The paint, height, and those birds for now, the	7	speak for myself, is because we consider you to be very
	8	birds.	8	prominent, interested stakeholders in what we do here.
	9	I have a hard time trying to put something right	9	MR. KULOLOIO: Stakeholders.
	10	next to where those birds are nesting. If it was my choice,	10	MR. BARR: Certainly.
	11	already that's another cultural resource that I would really	11	MR. KULOLOIO: Thank you. We need a lot to talk
	12	fight hard to have the natural nesting of our birds of	12	about. Thank you.
	13	Haleakala have priority before anything else. Because the	13	MR. LINDSEY: Ed Lindsey. This question is for
	14	bird is a symbolic figure culturally. That represents old	14	Jeff the scientist. I appreciate your passion and your
	15	Hawaii. And I feel so bad about having them disturbed. You	15	delivery for the importance of the study of the sunspots, as
	16	see over there? I don't care what expertise you bring down,	16	far as the scientific community is concerned. And for Jeff
	4 -	that's a concern.	17	the architect, how many stories is your building?
	17		18	MR. BARR: If you identify it, you refer to it as
	17 18	MR. BARR: We understand that it is a concern.	40	something like a 10-story building.
		MR. BARR: we understand that it is a concern. MR. KULOLOIO: That's all I got.	- 19	-
	18		20	MR. LINDSEY: In other words, the building will be
	18 19	MR. KULOLOIO: That's all I got.	1	
	18 19 20	MR. KULOLOIO: That's all I got. MR. BARR: We have talked a little bit about the height certainly and the color. I'm not sure we have a lot	20	
	18 19 20 21 22	MR. KULOLOIO: That's all I got. MR. BARR: We have talked a little bit about the height certainly and the color. I'm not sure we have a lot more to say about that.	20 21	MR. LINDSEY: In other words, the building will be higher than the county building up on Haleakala, and that's going to be pointed white; is that correct? MR. BARR: Correct.
	18 19 20 21	MR. KULOLOIO: That's all I got. MR. BARR: We have talked a little bit about the height certainly and the color. I'm not sure we have a lot	20 21 22	higher than the county building up on Haleakala, and that's going to be pointed white; is that correct?

2 I would rather have this project built in Colorado, Montan, New Mexico, or California, rather than have on Naul. That's one of the problems that we have have nealing the best place for everything. 2 MR_FEN: The first thing we neal to do arit the survey studies and inventories for those sites. Miligations for possible impacts might be: We don't have that that the possible impacts might be: We don't have that information protection and protect school in a pickt, in the being approximation to accurate a protect school in the federal government supporting the neads of the the federal government supporting the neads the form the fight the support the follows the follows the name of private ownership rights. MR_FEN: No. The environment intigation that needs the consultants the give to the support. The fully consent the mutigations that project. The follow the fight the follow the project the follows the fight the support the neads of the follows the support the support the neads of the support the max support the project the support the neads of the support the support the pr			53			55	
 New Mexico, or California, rather than here on Maul. That's on of the problems that we have here on Maul. Being the best being abort or complexed methanism. So right now we find our local people in a pickla, not being abort on we find our local people in a pickla. And so we have homeless Hawaiians here, and we have the fideral government supporting a project such as this. And is we have homeless havaiians here, and we have the fideral government for supporting the needs of the lawaiian people and including the rest of the community over the federal government for supporting the needs of the lawaiian people and including the rest of the community over the record. The impact on traffic is going to continue, the default government for supporting the needs of the lawaiis more contractions is going to continue, the default contrast is said being and private ownership inghts. In other words, another word for seeded lands is is the correct? The need forvice ownership inghts. In other words, another word for seeded lands is is the correct? Mumber one for Charlie is, what is the carrying capacity records or groosase also acts on the Hawaiian people. And is the lawaiian people. And is the lowaed capaciton in both the Hawaiian people. And is the corrying capacity records or groosase also acts on the totage and privat. Mumber one for Charlie is, what is the carrying capacity records or groosase also acts on the proper. The solution in the public form the quality is a served with the quality is available continue, the laware and spreeding with. Mumber one for Charlie is, what is the carrying capacity records or groosase at far as wellable for the proper. The solution is the public form the serve and so on, to urit the public form the serve and so on, to urit the indication the cultural inspect. It is available for the propers. The solutis and much sonality to the serve and so on, to urit the indi		1	coop asking the chickens when they want to be eaten, be	cause	1	proposed for these archeological stabilizations?	
4 one of the problems that we have here on Maul being the best for potential impact come after we know what it is that the possible impacts might be we have have that information 6 So fight now we find our local people in a pickle, for potential impact come after we know what it is that the possible impacts might be we have have that information 7 And so we have home ones that we have how the for potential impact come after we know what it is that the possible impacts might be at the we not incess the support ing the problem, and so son. I can the ly our well foroms 10 as worthy as it may be, there's a completed diregard from in the impact or construction is going to continue, the degradation of our cultural sites will continue. Just returned from a finger torg in the construction is going to continue, the degradation in of the public bave an opportunity over somethis rights. 11 The impact of transfilled diregard from a finger torg in an integration is only to construction. Just returned from a finger torg in another word, another word for seeded lands is stot correct? MR. FEIN: The home word for seeded lands is stop or returned in the public direct we have and aprenibility to exceed the mitigations to the proponent, to the folks or a continuus degradation in both the favailan students, our Hawaiian culture, our Hawaiian edders, and the savailable on the exact we have subaled on the word in the savailable on the exact we have the second or you have the intigation, the upublic being during with. 26 for for mitigation direct were strain were of the savailable on the exact yhe were port the the wave portange. The popole, the the yo		2	I would rather have this project built in Colorado, Montan	a,	2	MR. FEIN: The first thing we need to do are the	
5 place for everything. 5 possible impacts might be. We don't have that information 6 So right now we find our local people in a pickle, in to being able to ever get thousing, leave along the lands. And so we have home we find our local people in a pickle, in and so we have home home yet. 8 And so we have homeless Hawalians here, and we have the federal governments a project such as this. And as worthy as it may be, there's a complete diverse is a complete diverse is a complete diverse is a complete diverse is a complete diverse in the federal government for supporting the needs of the inducting the rest of the community over the prodex. The public to have an apportunity to say whether those in this diverse in the federal government is going to continue. If yet returned from a hearing where more cultural sites are being diverse of our cultural sites will continue. If yet returned from a hearing where more cultural sites are being diverse of our cultural sites will continue. If yet returned from a hearing where more cultural sites are being diverse more cultural sites are being diverse more cultural sites are being diverse of the second struction is going to continue. If yet returned from a site and the optice in this for our needs to be completed in this for our cultural sites, and to continue is yet and the expectation in both the Hamalian states are being more more cultural sites will continue. The hearing more more diverse and provide will be accommutify diverse for function is both the Hamalian states. 7 In other words, another word for seeded lands is tote for four second lands. and the diverse and the expection with the public second mitigation, changes to the second returne. The analytic hear shease andithe for this project. The cultural returned or what exac		3	New Mexico, or California, rather than here on Maui. Tha	t's	3	survey studies and inventories for those sites. Mitigations	
6 So right now we find our local people in a pickle, not being able to even get housing, leave alone the lands. And so were there houses have how the federal government for supporting a project such as this. And as worthy as it may be, there's a complete disregard from the federal government for supporting the needed of the there on Naul. 6 yet, because the survey studies and inventories have not the federal government for supporting the needed of the there on Naul. 1 The impact on traffic is going to continue, the impact of construction is going to continue. Just etterunt. 1 The impact on traffic is going to continue, the impact of construction is going to continue. Just etterunt of ma the energy where more cultural sites will contrue. The degradation of law, its blac correct? 1 MR. FEIN: No. The environmental consultants 20 the name of private ownership and private ownership rights. Now whe have seeded lands, and the ideas, and the students, our Heaviain culture, our Heaviain durine, our Heaviain culture, our Heaviain the training the being fully states event Heavies and the event meeting fully durine, with a protein this carrying capacity? You said there was a plan set out for by the going to be keeping up with all these assaults on us. So it would be good at your next enting you have there solution, but it's already been done, it's already been done, it's already been done are the ony one soft it'm avers of for the next decade, and this and a much smaller potential on are the ony one soft it'm avers of for the		4	one of the problems that we have here on Maui being the	best	4	for potential impact come after we know what it is that the	
7 not being able to even get housing, leave alone the lands. 7 been done yet. 8 And so we have homeless Hawalians here, and we have the federal government supporting paryots toxib to his. Mile as worthy as it may be, there's a complete disregard from the public forum. 1 1 The impact on traffic is going to continue, the impact of construction is going to continue, the degradation of our cultural sites will continue. It just returned from a hearing where more cultural sites are being distroyed under in hearing where more cultural sites are being distroyed under in the anne of private ownership and private ownership rights, is that correct? Mile the name of private ownership inghts, is that correct? 1 In other words, and the being explex. Mile the same distribution is boil the Hawalian explex. 2 In other words, and the being explex. Mile the same adjust is the correct? 2 In other words, and the being explex. Mile the same adjust is approximate to the follow is store of the site arrying is experimental or subtrates. 3 Number one for Charlie Is, what is the carrying capacity? You said there was a plan set out for by the university that was available online and yadah,		5	place for everything.		5	possible impacts might be. We don't have that information	
 And so we have homeless Hawailans here, and we have the federal government supporting a project such as this. And as werthy as it may be, there's a complete disregand from the federal government for supporting the needs of the Hawailan people and including the rest of the community over here and mail. The impact on traffic is going to continue, the degradation of our cultural stass will continue. I just returned from a finge of private overshifting that the returnes and the lenged to the supershifting to express the problem. I just returned from a finge of private overshifting that correct? Now we have seeded lands, and I believe they are SF lands; is that correct? In other word for saceded lands is that correct? Now we have seeded lands, and I believe they are SF lands; is that correct? Now we have seeded lands, and I believe they are SF lands; is that correct? In other word for saceded lands is dong and believe, our Hawailan cultural state will be of the project. It is their 22 approval. The public her approxibility to evertise the mitigations, and the lenged ation in both the Hawailan test, our Hawailan culture, our Hawailan cultural, year and agreeing with it. Mumber one for Charlie is, what is the carrying capacity? You said there was a plan set out for by the university fubut of our Hawailan elders, and the engrade over the project of the mitigation, shanges to the 24 site, or anything like that without the public being fully a varare and agreeing with it. Mumber one for Charlie is, what is the carrying capacity? You said there was a plan set out for by the university that was available contine university of that a the mitigation set on any the programe development plan. Mumber one for Charlie is, what is the carrying capacity? You said there was a plan set out for by the value of the mitigation changes to the advelopment plan. Mumber one for Charlie is, what is the carrying capacity? You said there was a pl		6	So right now we find our local people in a pickle,		6	yet, because the survey studies and inventories have not	
 federal government supporting a project such as this. And a sworthy as it may be, there's a complete disregard from the federal government for supporting the needes of the Hawaiian people and including the rest of the community over 13 here on Nau. The impact of construction is going to continue, the degradation of our cultural sites are being destroyed under the need of the hawaiian sites are being destroyed under the needed lands, and the being hights. Now we have more cultural sites are being destroyed under the needed lands, and the being hights. Now we have more cultural sites are being destroyed under the needed lands, and the being hights. Now we have seeded lands, and the belay there words, another word for seeded lands is disting hads, and the being hights. Now we have seeded lands, and the belay there words. Another word for seeded lands is disting hads, and the being hights. Now we have seeded lands, and the belay the proposent, to the folks singly recommend mitigations with the public dosuments of the fave is a continuous degradation in both the Hawaiian students, our Hawaiian culture, our Hawaiian elders, and the lands is disting half to eldes a cartain mitigation sto the proposent, to the folks singly recommend mitigations the public being fully 25 avare and agreeing with it. Mumber one for Charle is, what is the carrying capacity You cald there was a plans est out for by the university that was available online and yadah, yadah yadah (sic). Do you have copies of them multip. MR. FEIN: The long-range development plan - MR. FEIN: We cond core, so if you have interested it protect. The cultural resource evaluation, but it's already been done. It's available to be aver and the mitigations. The's already been done. It's available to be aver and the mitigation. The's already been done. It's available to be aver and the mitigation. The's already been done. It's available to be aver and the proteculture? Correct mell Tri ava		7	not being able to even get housing, leave alone the lands		7	been done yet.	
10 as worthy as it may be, there's a complete disregard from 11 the federal government for supporting the needs of the 12 the federal government for supporting the needs of the 13 the re on Mau. 14 The impact on traffic is going to continue, the 15 impact of construction is going to continue, the 16 of our cultural ates will continue, the degradation 17 hearing where more cultural sites are being destroyed under 16 the name of private evenership and private ownership influst. 17 how we have seeded lands, and I believe they are SF lands; 18 students, our Hawalian culture, our Hawalian elders, and the 21 In other words, another word for seeded lands is 22 students, our Hawalian elders, and the 23 students, our Hawalian elders, and the 24 students, our Hawalian elders, and the 25 back community word in Maulianness. 26 14 14 Number one for Charlle is, what is the carrying 26 16 26 Number one for Charlle is, what is the carrying 26 apact hy the set of the ong-range development plan		8	And so we have homeless Hawaiians here, and we have t	he	8	When they are completed, we will propose

APPENDIX B(1): TRANSCRIPTS - PUBLIC SCOPING MEETING, CAMERON CENTER, JULY 12, 2005

	57		59
1	MR. LINDSEY: What other culture. If you don't	1	A VOICE: 1960.
2	know, that's okay.	2	MR. MAXWELL: In 1960, sorry. From 1960 up until
3	MR. FEIN: Polynesians	3	when this I don't want to cal it what I have been calling
4	MR. LINDSEY: Maoris. Anytime the Maori people	4	it because I promised everybody that AEOS, I fought that
5	come here, they come to Maui, and they go to Haleakala to	5	AEOS they took out 150 tons of rock. It came out in the
6	visit the effects that Maui has had on the au te aroa	6	paper. Myself, Dana Hall, and I think Leslie Kuloloio
7	(phonetic). Au te aroa (phonetic) was also brought up by	7	MR. KULOLOIO: No was me.
8	the demi God Maui. So when we talk about building something	8	MR. MAXWELL: Wasn't you, Leslie. Was me and Da
9	on Haleakala, we're not just talking about something that's	9	had to fight for them to return the 150 tons. Come along
10	a dead entity. It is a spiritual entity that crisscrosses	10	the Faulkes observatory, nobody fought for it. The county
11	and has deep spiritual meaning to cultures not only here,	11	council approved it. They don't like me in England because
12	it's not only here in Hawaii but throughout the and you	12	I walked out on Prince Albert. When they were going to sign
13	are right, throughout Polynesia, specifically the Maoris.	13	away.
14	Would it be appropriate in your vision to build	14	I did the cultural study before this came up.
15	something like this in on a sacred place.	15	There's burials, possible burials, there's archeological
16	MR. FEIN: My personal feeling about that?	16	sites on that 18.6 acres, there's shelter sites, there's a
17	MR. LINDSEY: Yes.	17	cultural practice that occurred up in Haleakala, and we did
18	MR. FEIN: Is that with the appropriate protocol,	18	that. This was a very sacred place. And from way back,
19	protections, and respect, it can be done. That's my	19	where were the people that should have grumbled about
20		20	building on this site? Only the kahuna po'o (phonetic) used
20	personal opinion.	20	
	MR. LINDSEY: You can't build it in a church or	21	to go up there. Nobody else. Papakealakea (phonetic)
22	some other places like that as a traditional religious		called this place not Haleakala. What is her name?
23	practitioner and that would be okay; is that correct?	23	Kealaheiakala (phonetic) the calling of the sun.
24	MR. FEIN: That is an issue, yes. If those who	24	I'm going to contact everybody that's talking
25	consider Haleakala to be a church, I understandably am not	25	against this because I'm doing the cultural study for this
1	58		60
1	willing to see other structures that are not spiritual in		new observatory here. And if you are against the height,
2	nature.	2	this is when to do it. Not only talk at the meetings but
3	MR. LINDSEY: Excuse me for my tone because we	3	let me put it down in my cultural study that you wanted no
4	have been assaulted many, many times in every way possible	4	I don't give a darn if height makes the difference.
5	because we, being the best in the world, all of a sudden		It's what is acceptable. I don't want to see it
-		5	
6	everybody wants a piece of us. If you were the best person	5

BRASS: Is there anyone here who has not have chance to speak who would like to speak. MR. BAILEY: Aloha, my name is Tim Bailey, and I
6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	in the world, everybody wants to come in and park on your body, I don't think you would appreciate it. And this is the position that we are coming from. One last thing. This is for Jeff the scientist. When you talked about the sunspots and its economic impact, how is it going to impact us over here on Maui? MR. KUHN: I don't think it is. It's not going to affect the price of the land that you have to live in or the cost directly of what you pay for milk. What it impacts is future generations. It affects fact your children and my children. MR. LINDSEY: Thank you. Any of the Hawaiian people asked to have this place built up there? Thank you. MR. BRASS: If you have written comments you would like read into the record, give them to Claudia or me by a quarter of.	6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	from downtown, from down the rest of Maui. It's going to be in my report. I got to tell you, if they want a different color, we're in modern technology now. Find a different color to change that, where it's not such an insult on our cultural site. This is going to be in my report. This is going to be my recommendation. Go on the internet, look in the IFA site, and I did, the cultural practices and the religious practices of Haleakala. So we did. We did care all these years, and we have to come together. Let's fight for it. Let them know what we want up there. Don't just come to meetings and sit down and no say nothing. Let's all do it together. MR. BRASS: Is there anyone here who has not had chance to speak who would like to speak. MR. BAILEY: Aloha, my name is Tim Bailey, and I just have a few questions. I understand the process of all

	TECHNOLOGY SOLAR TELESCOPE (ATST) PUBLIC SCO 61		63
1	So a couple of questions I had was, any time we do	1	A VOICE: I understand. I'm just curious if that
2	this type of planning, you have your alternatives, and I see	2	was not a consideration, because I don't see that in the
3	alternatives sites and primary sites. But to back up a	3	planning for the public.
4	step, the alternatives that we usually work with are	4	MR. BARR: When you refer to the mirrored
5	obviously no telescope as one, your third alternative is new	5	building, you are talking about the Air Force building, the
6	telescope, and the second alternative is. Have you guys	6	one that's shiny?
7	ever considered just upgrading an existing site that's up	7	A VOICE: The mirrored one that's not supposed to
8	there with technology, like say, that big mirror building?	8	be visible.
9	It's just a question I had. Was that ever in the output?	9	MR. KUHN: The deal with the Mees building and wh
10	Is there an existing observatory that could be used instead	10	we don't just put this on top of the Mees building is that
11	of erecting a brand new one?	11	right now NASA and the NSF paid us, I don't know, a few
12	The second question is more on the information	12	hundred thousand dollars a year to support the science that
13	there on the petrel burrows. I think when you guys do your	13	we do there.
14	funding speeches to benefit a lot of people that are not	14	So we have 10 years of data that we have on the
15	aware of the Hawaiian bat, the 'ope'ape'a; the petrel, the	15	sun. That's how we have this record that goes back. This
16	'ua'u. You need to explain more of the bird or find	16	record that goes back is what we now use to understand how
17	somebody that knows some people know, and I know about	17	the sun changes over 10 years. If you make us take the Mee
18	these birds and the bat but I want to know where that	. 18	building and put this on top of the Mees building, then for
19	information on those plots who gave you guys the	19	about 10 years we do nothing. There's no data, we have nor
20	information about where those petrel burrows are?	20	of this record, and so we can't make the linkage between the
21	MR. FEIN: I can answer that, Tim. The	21	new place and the old place.
22	information about the petrel burrows that's shown on this	22	So the compromise that the architect that Jeff
23	map was provided by the Haleakala National Park resource	23	described was to use the space in the old building as we
24	biologist Kathleen Bailey. She monitors those burrows on a	24	could to shrink the extra space we needed for the ATST. So
25	regular annual basis. She files the report with U.S. Fish	25	we thought that was the best way to go from the old to the
20	62		64
1	and Wildlife every year. She has a team monitoring the	1	new but still have something that we can run for the 10
2	burrows right now. That's where that comes from. That map	2	years it takes to make this other telescope work. That was
3	gets upgraded every year, depending on whether they find new	3	the idea.
4	burrows, whether the old burrows were ever used or not. The	4	MR. BRASS: If we could check make sure there
5	burrows are frequently numbered and her staff goes in and	5	are other people who have not had a chance to talk.
6	checks on the fledglings on a weekly basis, during the	6	MR. KULOLOIO: I have last question for you. Who
7	fledgling season; so that's where that came from.	7	is the lead agency? Who is going to be the signees or the
8	MR. BAILEY: When was that map do you know when	8	sign-offs? Is it going to be a partnership when this is
		9	complete? Is UH standing by themselves? Are you going to
9 10	was the last what is the date of that update?	10	be signing for everything else in regards to damage control?
	MR. FEIN: That's a good question. That map was	11	Who is going to be responsible for this in case there's
11	done at the end of the last fledgling season 2004. So this	12	feedback?
12	map will be upgraded at the end of this year when Kathleen	13	MR. FOLTZ: The principal investigator on the
13	publishes her next report.	14	proposal is the director of the National Solar Observatory.
14	MR. BRASS: The other question was, have other	15	The National Solar Observatory, along with the National
15	sites been considered for upgrading rather than building	16	Optical Astronomy Observatory, comprise a federally funded
16	something new?	17	research and development center which is funded by NSF. W
17	MR. KUHN: Yes, basically the alternatives, site	18	
18	alternatives. You mean alternatives not on Haleakala?		provide the money to them to run the facilities to make the
19	A VOICE: No, upgrading of other existing	19	data and the facilities available to the public. The
20	MR. KUHN: So you are talking about the Mees	20	scientific public and the general public.
21	observatory site, have we thought about that?	21	In the end, that responsibility for the funding
22	A VOICE: Yeah, the amount of money to erect the	22	for the maintaining of the operation falls on the NSF, but
23	new building and then you have the one there already.	23	it will be administered through the federally funded
24	MR. KUHN: Remember the picture what the Mees	24	research and development center.
25	building looks like compared to the ATST?	25	MR. KULOLOIO: Here on Maui, right?

07/24/2005 08:06:19 PM

1 ATTENDANCE 2 3 MEETING FACILITATORS: 4 David Brass and Kim Lompoc, Mediation Services of Maui 5 6 HAWAIIAN LANGUAGE TRANSLATOR: 7 Kiope Raymond 8 PANEL MEMBERS PRESENT: 9 Dr. Jeff Kuhn - Associate Director of the University of Hawaii, Institute for Astronomy (Oahu) 10 Dr. Craig Foltz - Program Officer with the National 11 Science Foundation, Washington, D.C. Dr. Charlie Fein - KC Environmental (Maui) 12 13 Jeremy Wagner - ATST Project Manager with National Solar Observatory, Tucson, Arizona 14 Jeff Barr - ATST Project Architect 15 Mike Maberry - Assistant Director, University 16 of Hawaii, Institute for Astronomy (Maui) 17 18 19 20 21 22 23 24 25

1 PROCEEDINGS * 2 * 3 MS. COMPOC: Good evening. Aloha. 4 AUDIENCE: Aloha. 5 MS. COMPOC: Thank you for being here. My name is б Kim Compoc. I'm with Mediation Services of Maui. 7 MR. BRASS: And I'm David Brass from Mediation Services. 8 9 MS. COMPOC: And we're a community organization 10 that was founded in 1982 to find creative and appropriate ways of resolving disputes. We've been here for 23 years. 11 12 David and I are here tonight to help with this process 13 tonight and make sure that everyone has a chance to speak 14 that would like to make a comment about the proposal. Before we get into all of that, I'm going to introduce 15 Dr. Charlie Fein, and he's going to start the pule and then 16 17 introduce the presenters and then we'll talk more about the 18 evening and the agenda. Thank you. MR. FEIN: Thank you, Kim. My name is Dr. Charlie 19 20 Fein. I am the environmental planner for KC Environmental, Incorporated, which is the company that is doing the 21 22 Environmental Impact Statement and Conservation District Use 23 permit for this project, for the Advanced Technology Solar 24 Telescope. Before I begin, I would like to briefly 25 introduce our environmental team, and then I'm going to ask

1 Kahu Maxwell to offer the pule.

2 Our team consists of those individuals here, 3 Leslie Garlinghouse, who is with Tetra Tech, Incorporated. 4 They are providing us with logistic and environmental survey 5 support. My project manager, Sharon Loando-Monro, who is -б who will be handling the day-to-day operations for this 7 environmental impact assessment and our cultural specialist Kahu Charles K. Maxwell. So before we begin, I would like 8 to ask Kahu Maxwell for the pule. 9 10 KAHU MAXWELL: Could you stand, please? 11 (Hawaiian language spoken.) 12 Our heavenly father with your precious child, we 13 ask and pray that you bring forth knowledge about our sacred

place of Haleakala and bring the wisdom of all of us gathered here together so we might continue as we keep our place sacred even though there's buildings and all, but the aina is the most sacred thing for the Hawaiian people. We ask this in your name.

19 (Hawaiian language spoken.)

20 MR. FEIN: Mahalo, and aloha to everyone this 21 evening. Thank you for coming. I know there are a lot of 22 other things you could be doing on a Wednesday evening and 23 we appreciate you coming out this evening to hear about this 24 project. Before I bring the folks from Mediation Services 25 back up here to lay out the ground rules for the evening, I would like to introduce the individuals who are going to briefly present information about this project to you. But I want to say at this point that the prime purpose for us being here is to receive your comments and to get your ideas up front about this project. This is a scoping meeting. We don't have all the answers, and we won't have all the answers. We probably may never have all the answers.

8 This meeting is principally designed to get your input so we can develop a scoping document to know what to 9 10 include in the Environmental Impact Statement and the 11 Conservation District Use permit. So this evening I would 12 like to introduce the people who are going to present the 13 information to you so that you'll have an opportunity to 14 comment and ask a few questions. First of all, from the University of Hawai`i, Dr. Jeff Kuhn, Associate Director of 15 the University of Hawai`i Institute for Astronomy. He's 16 17 going to present the science behind the need for this 18 project. Dr. Craig Foltz is program officer with the National Science Foundation in Washington, D.C., and Craig 19 20 is going to discuss the role as a proponent in sponsoring the ATST. I'll be speaking about the environmental process 21 22 a little bit later on and what it is that we're going to do 23 in terms of public and internal steps.

Jeremy Wagner, ATST project manager with the
National Solar Observatory in Tucson, Arizona, is going to

1 offer a brief overview of the project schedule. Mr. Jeff 2 Barr is the ATST project architect. He's going to talk 3 about the facility design and the features of the ATST with various figures. Also tonight I would like to acknowledge 4 5 our court reporter Rachelle Primeaux, who will be the б recording stenographer. And if anyone chooses to speak in 7 Hawaiian, we have Kiope Raymond available for Hawaiian interpretation if necessary. 8

9 So once again, I'll bring back our meeting
10 facilitator Kim Compoc to lay out the ground rules for this
11 evening. Kim.

12 MS. COMPOC: So we want to make sure that 13 everybody has a chance to say what they would like to say. 14 This is actually the second of three scoping meetings that's been funded by the National Science Foundation. Last night 15 16 we were in Wailuku at the Cameron Center. Tonight we're 17 here in Kula, and tomorrow will be Pukalani Community 18 Center. And as Dr. Charles Fein was talking just now, these are scoping meetings, and the idea really is the public 19 20 comment. So we'll be in charge of that portion making sure everybody gets a chance at the mic. I'm wondering if all 21 22 these empty chairs are going to get filled because it seems 23 like we're probably going to have an easy time of that, but I just wanted to make it clear that there's a feedback 24 25 problem. So if anybody tries to take the mic, wants to come

б

1 up to the mic, please line up on the end one there so there's not "eek, eek" kind of sound. We don't want to have 2 3 that. The other thing that's important is come right up to 4 the mic like that, say your name so that Rachelle can have 5 it for the official record because that's really important. б We want to make sure that nobody's remarks get 7 lost. And David, tell us a couple of other ground rules, please. 8

9 MR. BRASS: We have a few ground rules that we 10 would like to ask that you observe so that everyone gets an 11 opportunity to voice their concerns and ask their questions. 12 First we would like to ask that until the presenters finish 13 that you hold your questions. You could jot down any 14 questions that you have. There will be ample opportunity to ask those questions of the presenters. Then we're changing 15 16 this a little bit with the different mics tonight. If you 17 have a comment or a question, if you could line up behind 18 the microphone in the center aisle here. When you get to 19 the mic, if you could state your name, then make your 20 comment or ask your question. In order to ensure that everyone gets a chance to speak and in the event that there 21 22 are more people arriving later, if you could keep your remarks to about five minutes, that would be helpful. 23 24 And then after everyone has had a chance to voice 25 their concerns, if you have more to ask, you would be

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

1 welcome to go back up to the mic. There are comment sheets 2 on the back table and on the sign-in table. If you would 3 prefer not to speak at the microphone, you can put your 4 questions on a comment sheet, give them to Kim or I, and we 5 will read them at the end of the meeting so that they are б responded to and they become part of the record of this 7 meeting. You can also fill out a comment sheet and put it in the box for it to be incorporated into the scoping 8 9 process, or you can mail those comment sheets and they need 10 to be mailed in by August 14th if you do that.

11 We ask that you not interrupt or make comments 12 while someone else is speaking just out of respect for all 13 of the people who are present. And just a reminder that the 14 whole meeting process is being recorded by the court reporter. She can only record one person at a time. So we 15 16 ask that you not talk while somebody else is talking because 17 it will not be -- end up being part of the record if you do 18 that. So those are the guidelines that we would like to request that you follow. And we will be the ones that will 19 20 kind of remind you if you veer off.

MS. COMPOC: So just a little logistical thing as well. The restroom, if anyone hasn't been here, is through these doors and outside that part there. Are there any questions before we get to the panel? Okay. Without further adieu, Dr. Charles Fein.

1 MR. FEIN: Thank you again, Kim. Okay. Our first 2 presenter is Dr. Jeff Kuhn from the University of Hawai`i 3 and Jeff is going to present the science behind the need for 4 the Advanced Technology Solar Telescope. I invite you to 5 watch his slides. He has great slides.

б MR. KUHN: My name is Jeff Kuhn, and I'm a 7 scientist. I'm one of the people that will use this hopefully if I'm not dead by the time it finally gets built 8 9 somewhere. My background is in physics and solar physics, 10 and I've got to tell you this project has a long history in the past. We started talking about telescopes like this. I 11 12 got involved in it about 12 years ago when we were talking 13 about the telescopes of a similar design. I think my job 14 for you and what the organizers have asked me to do is try to give a flavor of the science, the answer to the question 15 why do we need the ATST, so I'll try to go fast. There's a 16 17 lot of stuff there, and if you have a quick question, I 18 invite you to raise your hand and I'll answer it real quickly if it's not something that bears directly on a lot 19 20 of the logistics. I think it helps to keep material flowing if we do it in tempo. 21

And finally, the other question is why Haleakala from a perspective of the science, not from a prospective of some of the other issues. The sun itself is an object that we usually see as a big orange ball, but the truth is it

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

1 changes. And it changes a lot. About a year and eight 2 months ago right around Halloween, the sun did something 3 that we haven't ever seen it do before. And what you're 4 looking at is a picture of the sun, and you're seeing the 5 rotation. And there's been a month of time or a few weeks б of time compressed into this movie. And the really amazing 7 thing in this picture is if you watch right around here, you'll see the appearance of a -- there it is -- in a matter 8 of a few hours, a region grew on the sun. It's size was 9 10 about three times the diameter of the earth. And it's what 11 we call a sun spot.

12 And when that region got to the edge of the sun, 13 something really remarkable happened. It produced a burst 14 of energy that we call a coronal mass ejection, which lucky for us was a projection off to the side and not directly to 15 16 the earth. These are images that were taken from space. 17 They're images not in light like the previous one, but 18 they're images taken in x-rays. And again, the size of the 19 earth would be a ball about like that. Energy you can see 20 is projected out into space. It's connected to the earth. And if you were to step back from the sun and look at an 21 22 image like this, again, this is from space, so the sun is 23 underneath that white circle.

This is now further out into space. You can see a comet that goes through the picture. It actually doesn't

survive against the sun. This burst of energy and light I think -- there it goes. It goes out into space is that coronal mass ejection, and it connects with the earth. That energy, it's energy and particles, interacts with our environment.

б For the most part, it interacts with the 7 technology of our environment, so you may remember two Halloweens ago, there was -- there were news reports of 8 planes that were rerouted because of the threat of radiation 9 10 in the Polar regions, also because of communication. 11 Communication was interrupted. In fact, what happened is 12 planes were rerouted. We lost a couple of satellites, 13 Japanese communication satellites because of this energy up 14 above the earth's atmosphere. There was a power grid shut down in Sweden again up in the northern environment. There 15 were cell phone interruptions and communication 16 17 interruptions. There were some GPS problems. So most of 18 the effect on the sun on this sort of scale has to do with 19 our technology.

20 We're largely protected. Here is a picture of the 21 earth. This structure around it is a computer estimate of 22 what we call the magnetosphere of the earth. That's just a 23 fancy word for a shield, a magnetic shield that protects us 24 from the radiation from the sun. That radiation is -- or 25 that shield is a variable thing. And, in fact, from that

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

movie that I just showed you, it blows like the wind. And it's part of this problem that we're now beginning to appreciate, which we call space weather, the environment between the sun and the earth that effects the earth. And it's related in large measure to things like that magnetic field right there around the earth.

7 Sort of an idealized picture of that is here is the sun. The sun produces energy, and the magnetic field of 8 9 the earth and the sun are connected in ways that affect how 10 that energy makes its way into the earth's atmosphere. In fact, that's not the only manifestation of the sun's 11 12 interaction with the earth. The other is probably more 13 profound. And that's an interaction that we're only 14 beginning to understand based on current records and historical records. If you look at the sun, that sun spot 15 that we saw in that first movie, sun spots vary and they 16 17 fluctuate. Here is a record that goes back to the 1600's, 18 goes back to the time of Galileo. It shows that sun spots 19 come and go, and the theme here is the sun is variable and 20 the sun changes.

21 Roughly every 11 years, there's a bunch of sun 22 spots. Only very recently since we've had satellite 23 measurements in space that we've noticed the brightness of 24 the sun is also changing, okay. This plot up here at the 25 top shows the brightness of the sun measured from satellites

and where there's a peak in the brightness, it turns out
 there's a large number of sun spots on the sun. Lots of sun
 spots make for a brighter sun. Paradoxical.

4 Nobody really knows why it is when we put dark 5 spots on the sun, the sun actually produces more energy, but б it's true. The other feature of this historical record is 7 that sun spots are not a regular phenomena. It's not a cycle like the lunar cycle or the tide cycle. Sometimes it 8 9 completely vanishes. In the late 1600's, it was gone. 10 Sometimes it's diminished. Right around the 1800's, it was very weak. And then in the 1900's, we've been in a phase of 11 12 growing solar activity. Why is that interesting? Well, 13 it's interesting because we have records, economic records 14 that extend back to this period of time. And it's pretty clear that there were climate effects, which were, for 15 16 example, affected agriculture.

17 This is a graph that shows from 1200 to 1900 the 18 cost of wheat in Dutch guilders per 100 kilograms adjusted for inflation. What it shows that the peak in the cost of 19 20 wheat went up right here. This is the period of the Maunder 21 Minimum, and right here, this is a period of where there 22 were hardly any sun spots. We expect when there weren't 23 very many sun spots, the sun was what? UNIDENTIFIED SPEAKER: Dim. 24

25 MR. KUHN: Dimmer, right. The weather was colder

1 somehow on average and probably the growing season was 2 shorter and the cost of wheat was higher. So there's 3 indirect evidence of climate variability. In fact, there's 4 even direct evidence back here. This period of time was 5 known in Europe to be a very cold period of time. The River б Thames froze in the winter and growth patterns were --7 agricultural cycles were certainly disrupted. So there's no question that there's some influence, some connection on the 8 climate of the earth and what the sun is doing. 9

10 In fact, we think that there's a connection 11 between in some cases the evolution of civilizations. If we 12 go back a little bit further in this case to 1000 A.D. and 13 we look at those climate records, by looking at records of 14 what the sun is doing, it certainly looks like according to the solar record, there should have been a warming phase 15 starting around 1000 A.D. reaching a peak in perhaps 1300 16 17 and then a cold phase culminating in the Ice Age, that 1700 18 period right down here, that dip.

Well, this warm rise in the early part of this Millenia corresponds to the decline of southwestern cultures, the Mogollon, the Hohokam, the Anasazi. It's almost certainly true that a warming trend in a climate in North America was responsible for the decline in those early civilizations. Similarly the cooling phase right here in towards the Maunder Minimum corresponds to what we know

1 about what happened to the Greenland cultures. The 2 Greenland colonization that started back here in 1100 A.D. 3 was gone by 1500 A.D. And their records that show that 4 the -- for example, the food that the Viking colonizers of 5 this eastern coast of Greenland changed dramatically because б they couldn't grow the cops. The cooling phase right here, 7 which is in synchrony with the sun corresponds with the decline of that colonization. 8

9 So it seems clear that the sun is important not 10 just to -- to our technology, but also to what happens to 11 cultures over time scales that are much longer than human 12 time scales. How bad is it? Well, over our lifetime, the 13 probability of a major solar storm or brightness change 14 affecting commerce with the multibillion-dollar impact is a virtual certainty, because it's already happened. We've 15 lost satellites, communication satellites that are of value, 16 billions of dollars. The effect on agriculture is something 17 18 we can't yet gauge, but it's almost certainly on the same 19 scale and probably much more important.

20 Over the next 1,000 years, the probability of 21 major climate affecting agriculture or global commerce is 22 probably also likely. And again, the evidence for that is 23 go back 1,000 years and look at what's happened. So the 24 truth is that an investment of some millions of dollars is a 25 very valid and important investment, and we need it. We

1 need it to understand in the future what's going on with the 2 sun, because right now we can't tell you as physicists 3 whether or not the next solar cycle will be a few tenths of 4 a percent warmer. If it will be, that has dramatic 5 consequences on things as simple as the sea level, the sea б level heat, which is important to us here. So why 7 Haleakala? We need the ATST. Haleakala is important from a scientific perspective because we started -- a bunch of 8 scientists started with over 70 different sites we looked 9 10 at. We looked at things as diverse as the number of 11 airplane contrails flying overhead.

12 We looked at the weather patterns. We looked at 13 the growth patterns. We took that spread sheet and we narrowed the possible sites down to six sites, and the six 14 sites were Big Bear Lake in California, Haleakala, LaPalma 15 off the coast of Spain -- off the coast of Africa, 16 17 Panguitch, which is a lake in Utah, Sacramento Peak, which 18 is an observatory site in New Mexico, San Pedro, which is a site off Baja in Mexico. We built a tower on each one of 19 20 these sites and measured the atmospheric characteristics and the weather characteristics. 21

And one of the most dramatic things we learned, and it was a surprise to some of us, it wasn't a surprise to those of us that know the mountain, but I think the rest of the scientific community, they did not realize how unique

Haleakala was. This is a plot which is a little
 complicated, but what it shows is a function of height, so
 as you go to the right here in the scale, you're looking
 higher up in the atmosphere.

5 Up on this scale shows how clear -- not how clear, б how pristine the atmosphere is. You know, the atmosphere 7 blurs our images. We're after the ability to see the small detail of those spots like that spot you saw on that first 8 9 movie. In order to see that detail, we want a number which 10 is high on that scale. Which of these curves do you think corresponds to Haleakala? It's the red one, of course. 11 12 What this shows is how fine the detail is we can see through 13 the atmosphere versus how high we are above the ground.

14 The black curve which doesn't vary very much is Big Bear in California. This curve right here is Haleakala. 15 16 The green curve, the next closest competitor for this 17 performance measure is LaPalma in the Canary Islands. So 18 what's happening here is the ground produces turbulence, and 19 as you get a little bit above that turbulence, the clarity 20 in which you can see fine objects in the sky improves enormously. And the best place in the world we think for 21 22 these observations at this height is from Haleakala. Yes. 23 MR. WILSON: Southern hemisphere, no sites? 24 MR. KUHN: In the southern hemisphere, we did not 25 survey any of the sites in part because many of the

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

performance measures we needed to get started we didn't really have. And also we didn't feel that we could ever afford to go to the southern hemisphere with this facility. We had some initially, but it didn't look like it produced at least from the initial data anything that was unique or added to the performance.

7 This is daytime. Nighttime performance is different. And part of the reason why this curve is 8 increasing as you go upwards has to do with how the ground 9 10 is heating and the effect the turbulence versus height and 11 solar heating, and of course, at night, you don't have solar 12 heating. Finally, the other characteristics have to do with 13 what the sky looks like in Haleakala. And if you've been to 14 the summit and you take your thumb and you hold it over the sun, it's a remarkable thing. Hold your thumb over the sun 15 and the sky is a dark blue, almost a black all the way up to 16 17 the edge of your thumb. And you don't know the sun is under 18 your thumb because that sky is so dark. There isn't any 19 other place we looked at that the dark sky, which is what we 20 need to see those energy events propagate out into space. A big part of what the ATST does that no other instrument does 21 22 is measure the environment between the sun and the earth. 23 So these numbers don't necessarily mean much to 24 anybody but scientists, but the sky brightness was 5.8 on a 25 scale where it was between 100 and 800 at the second best

sites. It's just there's no comparison. The amount of dust
 in the sky, which is related to how bright the sky is, is
 down by a factor of 10 to 100 compared to the other sites.

4 So the conclusion to the scientists was that 5 before we were to understand the solar magnetic fields which б causes all these changes in the sun, we need a site like 7 Haleakala with a telescope like the ATST. It's the world's best location for a solar observatory, and it sure seemed to 8 us that we couldn't get what we could get out of this 9 10 facility anywhere else. And why are we here? We're here 11 really because we're hoping for an invitation from your 12 community to bring this new window onto the sun onto the 13 summit of Haleakala. That's all I had.

14 MR. FOLTZ: Thank you, Jeff. My name is Craig 15 Foltz. I'm an astronomer and physicist by training. I'm a nighttime astronomer. I study extragalactic astronomy and 16 17 observational cosmology, which is pretty far afield from the 18 study of the sun. In my current job, I'm the program manager for the National Science Foundation. I live inside 19 20 the Beltway. I work and live in Arlington, Virginia. I'm going to say a few words about what the NSF, how it works 21 22 and how it relates to this project and what the status of 23 this project from the point of view of the NSF. The 24 National Science Foundation was founded about 55 years ago 25 to provide support, and when I say support, I mean money, to

provide funding to support basic research and applied research in science, engineering, and also very importantly, to support science education and the public knowledge of science. We fund almost all fields of science, biology, math, physics, atmospheric science, oceanography, astronomy. We don't spend too much money in support of life sciences. The National Institutes of Health does that.

8 And we don't spend too much of our money in 9 support of space science because NASA does that. We are a 10 federal agency, and I think most people have a feeling about 11 federal agencies that federal agencies are powerful and move 12 forward at their own pace in an autonomous way. And this 13 may apply to many federal agencies. It does not apply to 14 the NSF. The NSF is interesting because it's not proactive. That is we don't decide what science should do. We respond 15 to scientists. We expect the scientists to tell us what's 16 17 important, what problems they need to solve, how they would 18 solve them, how much money they would need to solve them. And then, if possible if the project is judged to be good 19 20 enough and if we have sufficient funding, then we provide funding. 21

22 So, in fact, we take direction from the people 23 that we serve, which makes us -- I mean not a unique federal 24 agency, but a somewhat unusual federal agency. And actually 25 it's an agency that I like to work for, and there are many

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

agencies I wouldn't like to work for. Just if you get a chance later, you can look at basically how this is laid out. This is a very small part of the NSF's organization chart, and basically this box is me right here. And I'll talk about how that -- how the funding and the support flows down to the project, which is down here.

7 Now, as I said, our ideas come from the community. And as Jeff said, and Jeff was instrumental in this project, 8 over a decade ago, planning started which did not involve 9 10 us. It involved astronomers, solar physicists and 11 astronomers from around the country, including international 12 scientists, who got together to build the science case for a 13 new telescope because there was nothing that we had on the 14 ground and there was nothing we had in space and nothing that we were planning that could actually -- would be 15 capable of making the observations that are necessary to 16 17 answer the questions that Jeff laid out. And so they built 18 a science case for a large and very capable solar telescope 19 and they got the community support and they came to us with 20 a proposal, which we funded.

And over the last five years, we've spent about \$12 million in support of the design of this telescope. About a year and a half ago, the project had proceeded to the point where it felt that it was ready to request money for construction. And a proposal was submitted to us, which

1 involved a number of institutions who were in collaboration and the lead agency on that was the National Solar 2 3 Observatory of which these two gentlemen are employees, and 4 they asked us for money to construct it. We have been 5 scrutinizing, scrubbing, evaluating over and over again the б proposal, the management structure, the budget, the schedule 7 and in trying to come to a decision as to whether this project will be funded. This is a big project. It's a big 8 project by NSF's standards. It's not the biggest one that 9 10 the NSF has ever done, but it's certainly not the smallest. 11 It is a small project, very small project compared to 12 telescopes that go into space, I'm talking about in terms of 13 cost, and so we treat it very carefully.

14 And, in fact, in the end, whether this project is funded or not, or actually let me put it a different way. 15 The funding for this project must be specifically approved 16 17 by Congress. So when you have to go to Congress to ask for 18 money, you have to be careful. You have to make sure all your ducks are in a line. And, in fact, you need to make 19 20 sure that the project, that these guys have done their job and they have a design that is construction ready, and it 21 22 cannot be construction ready until you know where you're 23 going to put it. Because you don't know how to build it. 24 If you build it on cinders, it's different than if you build 25 it on granite, which is different than if you build it on

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

1 lava.

2 So, in fact, a very important part of the planning 3 for this telescope, which its planning needs to be done 4 before we can actually make the decision to fund or not is 5 the evaluation of the environment on cultural impact. So б that's why we're here today, and I want to stress we have 7 not funded the construction of this telescope. There are people in the room, including myself, who hope that decision 8 is positive, but that decision has not yet been made. And I 9 10 want to say secondly that this is not premature. It is the 11 right time to do this.

12 We should not have started this process two years 13 ago. We should not start it a year from now. So we're 14 right on time, and with that, I'm going to turn this over to Jeremy who is going to talk briefly about the schedule, 15 except to say that I'm -- you know, we will be -- we are 16 very concerned about your questions, and we will take your 17 18 comments and questions very seriously. Charlie. Back to 19 Charlie.

20 MR. FEIN: Thank you, Craig. Once again, I'm 21 Dr. Charlie Fein, and I am the environmental planner for KC 22 Environmental. Our job is to prepare the environmental 23 impact assessment documentation for this project. As Craig 24 said, this is the time to do it. In order to reach a 25 decision about this project with respect to the

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

1 environmental efficacy, the environmental correctness of 2 this project, we need to go through a rather lengthy 3 process, and we're going through a lengthy process right 4 now. I see it on the screen, okay. 5 And once again, now this process will end with -б okay, shall I sing for a while? 7 (Laughter.) Stand by. We are experiencing technical 8 difficulties. Ah, it's a chart. This time line shows the 9 10 Environmental Impact Statement and Conservation District Use 11 permitting extent or scope beginning the process last year. 12 We are at the point now of obtaining public comments for our 13 final scoping. So we're in the informational phase, 14 community information meetings and final scoping. We are here to attain your comments. We are here to determine 15 those things which need to go into the final scoping for 16 17 this document. What we're planning to do is to complete the 18 final scoping this summer and begin the impact assessment 19 surveys and consultations at both our primary and 20 alternative sites on the mountain. I'm not going to get into detail in that. Jeff 21 22 Barr, the architect, is going to talk about the primary and 23 alternate sites. There are two sites, primary and alternate 24 site. We're going to examine those very carefully. Now, 25 some of you are aware of the fact that in 2004 we prepared a

1 very complete long-range development plan for the University 2 of Hawai`i Institute for Astronomy High Altitude Observatory 3 site. The 18.16-acre site was studied very closely and in 4 great detail to look at various environmental parameters, 5 archeological, biological, avifaunal parameters. We looked б at all the environmental resources, the archeological 7 resources. We looked at the cultural resources and the traditional practices that were conducted at the site 8 historically and back in prehistory, and that is the basis 9 10 for our planning for this facility for the ATST.

The ATST was one of a few facilities, potential 11 12 facilities at Haleakala observatories. It is first to --13 actually, it's not the first, it's the second to come under 14 our review. Our Environmental Impact Statement will be a joint federal and state document, so we'll be following both 15 NEPA and Chapter 343 requirements of the State of Hawai`i. 16 17 When we complete the impact assessments, we will prepare a 18 draft Environmental Impact Statement. Once again, the 19 public will have an opportunity to comment on the draft 20 Environmental Impact Statement. We will hold public hearings as well. And we will, according to law, be 21 22 responsible for responding to those community and agency 23 comments. We'll hopefully distribute a Final Environmental 24 Impact Statement in late 2006 and obtain a record decision 25 on this project. Simultaneously, we'll be doing a

Conservation District Use application, going through that
 application process. The 180-day process also involves
 public hearings. So there are several steps along the way
 here that involve public input. And we welcome that public
 input, and we are hoping to receive the thoughts and
 feelings of the community.

7 When the process is completed in late 2006 and a recorded decision has been published and by law this project 8 9 is then permissible, we then will reach the point of being 10 construction ready. And then the process after that, 11 funding and so on is the next phase. The overall time line 12 then is much longer, and I would like to bring up Jeremy 13 Wagner, the ATST project manager, to talk momentarily about 14 that.

MR. WAGNER: Thanks, Charlie. Okay, I'm Jeremy 15 Wagner. I'm the project manager for the ATST project. I'm 16 17 based in Tucson, Arizona. I work for the National Solar 18 Observatory. What I want to do is give you a quick overview of the project schedule, where we are currently in the 19 20 schedule for the design phase, when construction could start, the earliest possible start and then when operations 21 22 might start. Another chart here. We're currently in the 23 design phase right in the middle of 2005. We're working 24 through our design of the telescope and the facility. 25 We've gone through a number of reviews, as Craig

1 indicated. We're starting the site EIS process. Tonight's 2 meeting is part of that. We're looking at many more design 3 reviews coming up. And if the proposal is approved at the 4 NSF, if the site EIS process were approved, the earliest 5 that site construction then could begin, the earliest that б the construction could be funded would be essentially in 7 early 2007. However, I understand now that that's likely not to happen, that the earliest date would probably be late 8 2007, so this chart is already a little bit out of date. So 9 10 just move this over slightly, but the site construction 11 would last about four years. The major construction, you 12 think of digging foundations and things like that, erecting 13 the structures, would consist of the first two years. At 14 the end of that, we would essentially be inside the 15 buildings working on assembling the telescopes, bringing the optics in, putting things together. 16

17 Once we get that done, then we have to test them. 18 We have to see that they work, understand that they're 19 delivering the kind of performance that we're after. We 20 bring along the instrumentation, integrate the optics, the control systems, put the telescope facility together and 21 22 start using it as a telescope looking at the sun and then we 23 begin operations out here. Once we understand that things 24 are working the way we expect, then we would begin to 25 observe the sun, produce the data that folks like Jeff Kuhn

are after. So that gives you an idea of the time line that
 we're talking about. And since the NSF is still considering
 the proposal, we're working through the site EIS process.
 We're working through our design effort. It's likely that
 the earliest start possible if everything came together
 would be in late 2007.

Okay, now, I'll turn the mic over to Jeff Barr.
He's our project architect, and he'll walk through a
description of the facility and why it looks the way it
looks now.

11 MR. BARR: Thanks. I am, as Jeremy said, the 12 project architect, and I'm working as part of a design team 13 in Tucson, Arizona, that's larger than myself and has put 14 together the proposed design that we're presenting here 15 tonight. Most of you have had a chance to see the posters around the room here and probably pictures in the paper and 16 17 so a lot of what I'm going to talk about is sort of 18 explaining why it looks the way it does. And as Charlie 19 promised, I'm going to talk about the site and where 20 specifically -- where specifically on Haleakala it will be. The pictures on the right here are of the two 21 22 proposed sites on Haleakala, the way they look right now. 23 This is the primary site and just in terms of the 24 terminology, we refer to this as the Mees site. It's right 25 next to, east and a little bit north of the existing Mees

1 building, which is over here. This is the tower that Jeff 2 Kuhn referred to was on six sites around the world. This is 3 the one that's on Haleakala, and that is, as I say, our 4 primary proposed site. An alternate site, we're calling it 5 the Reber Circle site. There was an experiment done on a б different -- I have a plan following this so you'll be able 7 to get these a little better oriented, but there was an experiment done in a different area on the observatory 8 compound there, a radio experiment, and the person's name 9 10 was Reber. And there's a big concrete circle here, so this 11 is by nomenclature the Reber Circle site.

12 Both of these sites were identified as potential 13 locations for ATST specifically. In the Haleakala High Altitude Observatory long-range development plan, this 14 15 Web site link here gives you the full plan, so you can take a look at it for yourself and see what it says about that 16 issue and a lot of other issues. The issues or some of the 17 18 concerns that were taken into account in identifying those 19 sites and then the other planning aspects for the 20 observatory were some of these. The biological obviously, the endangered species were a major issue. Cultural 21 22 resources and traditional practices. Kahu Maxwell served as 23 a cultural consultant on that and is serving as our cultural 24 consultant for the continuing EIS or more or less to Charlie 25 Fein in that capacity. And we're very pleased to have his

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

1 input on that

2 And very much in line with that also, the 3 archeological inventory was of concern and was taken into 4 account. Clear line of sight, in this case, that's not 5 talking about the line of sight of the telescope. That's б talking about the line of sight you see the telescope from 7 areas around Maui. Taking that and a lot of other things into consideration, design and construction guidelines were 8 put together for any project in the future that's to be 9 10 built on Haleakala.

Both of these sites were identified as being big 11 12 enough for ATST and both were tested and have excellent 13 seeing conditions. The potential sites, this is looking 14 down from the top. Just to get you oriented, the road in from the park is over on this side. North is up. Things 15 are about this big, 100 feet, 200 feet. The Air Force 16 17 facility is here to the north of us, or this just by way of 18 immediate identification is up. Showing the telescope at both sites. Obviously one, it won't be two telescopes. It 19 20 will be at one or the other of those sites. The Faulkes telescope, if you're familiar, and again, the Mees telescope 21 22 is down here, this being our primary site and being east 23 essentially and a little bit north of the existing Mees facility. This smaller kind of orangeish-brown structure is 24 25 a remote utility building would be built for the ATST. And

1 the same, essentially the same composition of buildings 2 would be necessary at the Reber Circle site, which is this 3 one here a little farther to the north. This one, again, 4 this is a topographical map, so as you look down at it where 5 the lines get close together, that means that the terrain б gets very steep. So the area that's really buildable is up 7 here on the top within the observatory boundaries, which is this red line here. And so you can see that a site like 8 this is constricted by some things, not least of which is 9 10 the slope around it that we are limited in space. And the 11 same thing can be said up here.

12 But that's not the only thing. We also have the 13 existence of the petrel burrows, which have been identified as part of the long-range plan and will be relocated and 14 identified. And there's a continuing program, as I 15 understand it, to maintain the location accurately of those. 16 And also there are known archeological sites. These blue 17 18 circles around here, that also restricts us, and we know in 19 any planning we have to do to put the buildings there, we have to respect those things and more. Go ahead. 20

The building requirements essentially, as the architect for this project or any observatory project, really it's a pretty straightforward mission. You support, you provide structures to support, protect, operate and maintain the telescope period. And those buildings have to

1 -- I'll just cut to the chase here. There's essentially two kinds of those buildings, the enclosure, what you think of 2 3 as a dome. It's right around the telescope and protects it 4 directly, provides immediate maintenance space and support 5 building, which can be attached to the telescope or the б enclosure and sometimes are a little bit more remote. But 7 the main thing about, the cardinal rule for all of those buildings is that they shall have minimal impact on the 8 seeing, which is the way the astronomers describe the 9 10 clearness of the observing conditions and the environment as 11 well.

12 So those are essentially the driving influences on 13 what will -- how the building is designed. Dimensionally 14 speaking, how big this facility is is dictated by those very things. This structure that you see on the inside of this, 15 the framework structure, this is the telescope that we're 16 all talking about. The primary, the largest mirror about 14 17 18 feet across is right here. And you can see that to swing that telescope inside of the dome and have a little bit of 19 20 room for maintaining and equipment around it and clearance for safety reasons, it requires a dome about this big, which 21 22 gets to be about 86 feet across and the other dimensions you 23 can read for yourself on here.

The one thing that, as Jeff showed you on his graph of the seeing height is a critical factor. And about

halfway across where it gets to be to the level they need for the scientific objectives, that's right at about 92 feet, so the telescope has to start out about this high. It has to have about this much space, so you end up with a building about that high and about that large.

б The pier to support that is -- also has to have certain size requirements. It has to be large enough to be 7 stable to provide a very good vibration-free mount for the 8 telescope, and it has to be big enough inside here. On the 9 10 bottom here is a large observing platform that rotates with 11 the telescope and is where most of the instrumentation that 12 -- where most of the science is really done is there. The 13 support building out here is exactly that. It supports that 14 operation. It provides a place for the operation console for the telescope. It also provides an instrument lab for 15 direct use with the instrument lab that's in active rotating 16 17 with the telescope. And then it has space down below for 18 bigger things, notably a coating chamber for recoating the mirror and other large mechanical equipment that has to be 19 20 close to the telescope.

One other thing here that's maybe notable in this picture here is this shaft way up in the middle, which is necessary because we have to be able to take the mirror off from the telescope and down for the recoating process and also large instruments have to be brought up onto this

1 platform.

2 So essentially, that's what this building is, and 3 that's why it has the dimensions it does. The other things 4 that you can see in this are the existing Mees Observatory, 5 so you can see that we are on the scale larger than that. б And it -- the plan is to even use the Mees building and then 7 the utility building, the remote utility building, which you can see is a much smaller structure off to the side here. 8 I'm going to move sort of fast through this. If I went into 9 a lot of technical detail, I'm sort of technically oriented, 10 11 it probably wouldn't be what you would be interested in 12 anyway.

13 So in the interest of getting to your questions 14 quickly, I'm going to move through stuff, and we can come back to this if there's anything special you see that 15 concerns you. Again, the enclosure, the support building, 16 the things inside it that require it to be the size that it 17 18 is. This is probably the best indication of scale. This is a big 40-foot flatbed truck that gives you an idea of how 19 20 big the whole thing is. There's a service yard in between the service building and the remote utility building that's 21 22 associated with the operation here. And then it's worth 23 mentioning here this is the existing Mees Observatory, and 24 one thing that has come up already and may come up again is 25 why don't we get rid of the Mees building and put our new

1 ATST facility where that is. And there are good reasons for 2 that which are worth mentioning. The Mees building, it's 3 not an NSF building, and it's not directly associated with 4 ATST. It has missions. IfA, as Jeff Kuhn may know, they 5 use it for their support for programs on the mountain. And б so, in essence, if we were to remove that, we would have to 7 incorporate more space in here to compensate for it because there's legitimate uses for that space. 8

9 So in other words, our building would become a 10 little larger if we did that. Also, the operation of the 11 telescope, in order to get a correlation between the 12 observing that's going on now and the new observing that 13 would be done with ATST, the observing has to be more or 14 less continuous, so the telescope dome for Mees, which is right here, will be in operation until ATST is up and 15 16 operational, so there's kind of a continuum that's necessary 17 there. Also -- sorry, Jennifer wants me to move ahead here. 18 The Mees building is in an area that, as you saw in that first plan, is kind of close to the edge of where it begins 19 20 to fall off and there's petrel nests and other concerns over 21 there.

It's unlikely that if we were to remove the Mees building that we would be able to put the kind of foundations and kind of building structure we would need for ATST on that spot anyway, so there would be, in essence,

1 more disturbed footprint of building area.

2 Okay, go ahead. As to what it looks like, the 3 first thing to mention is that anything close to the 4 telescope because it's a solar telescope and is observing 5 during the day when the sun is beating down on not just the б telescope, but everything around it, including the soil and 7 the buildings and everything, has to be white. Everything that's close to the telescope and exposed to the sun really 8 has to be white. We've looked at that, and again, I'm going 9 10 to go into a little bit of technical detail here.

Our thermal modeling shows that if we -- the main 11 12 object and the main thing, the closest thing to the 13 telescope is this area right here I guess you call the dome. If we paint it -- if we have it be something other than 14 white and even a special kind of white, the -- if we did, 15 16 for instance, sky blue kind of like in the color of the 17 background here so it blended in a little better, 18 immediately the heating we have to remove from that so as not to degrade the observing conditions that comes down 19 20 through this aperture tube right here. The amount of heat we have to remove goes up to a factor of four even with sort 21 22 of a light blue color. If we go to something like a darker color, it would be probably, you know, as I say, I don't 23 24 remember all the exact thermal modeling, but it would 25 probably double beyond that. And it's also worth mentioning

1 from a technical standpoint that all of the electricity that 2 this entire new facility is going to utilize, half of that, 3 a full half of it is going to be dedicated to only just 4 cooling this dome. So if you take that half of our entire 5 power budget and multiply it times four or eight or some б other number, it really does become economically unviable to 7 operate this telescope for the period of time that we anticipate. And the capital expenditure to put that much 8 more cooling into it is also a huge factor. 9

10 And so for that reason I've gone into a little 11 detail here to kind of explain to you why it really does 12 have to be white and the obvious feature being it makes it 13 more visible from distant locations, so it really kind of 14 does have to be white. Also on the dome here, the areas even though it's white still heats up some, so the line you 15 see in here, some of this other stuff is material called 16 plate coil that has kind of a liquid cooling that goes 17 18 between two sheets of metal and extracts away heat, so this is a very active and a very heavily thought out issue here. 19 20 And we have really looked into it in some depth.

The other thing that is probably worth mentioning here is there's a white apron. You can actually see it better if you've had a chance to look at this poster over here. Outside on the east and to the south of the telescope, there's something like 30 feet wide white

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

concrete apron that would go around the building and shield the telescope from heat that would be generated otherwise by the volcanic cinders that are out there. The utility building is out here, and it's painted brown. It's far enough away, and in any way that we can, we do intend to minimize the visibility of our structures. I think that's getting close to the end here.

8 I've got kind of a review slide here. We have two potential sites. Both of them have good seeing and enough 9 10 area for ATST. The dome is the primary visual element that 11 we have to deal with and you'll have to deal with, and it's 12 high enough to allow for good seeing. It's high because it 13 has to allow for good seeing for the telescope at that 14 height. It's large because the telescope has to rotate inside. And it's white because of the heat. The support 15 and operations building is a little simpler kind of 16 17 structure, and we do intend to minimize that in any way we 18 can. And part of that strategy is to keep the existing Mees 19 building. That was the support building. The utility 20 building is even less of an issue. It's just a way of 21 getting the heat and vibration away from the telescope, and 22 it will be sound insulated because we understand that's an 23 issue as well and will be painted brown. I've got a couple 24 of pictures here, which are really the posters. This is 25 looking, as it says, at the -- with the telescope at the

Mees site looking at it from the north, and it gives you an idea of the rendering of what that would look like in its eventual construction. This one is at the Reber Circle site and looking at it from the opposite direction, looking from the south to the north, and these are other telescope in the foreground here, so again, you can sort of see for yourselves the scale of it. And that's it.

8 I think as I'm the last speaker, I'm not sure if 9 we need any formal introduction to the process of asking 10 questions, but that's it for the presentations.

11 MS. COMPOC: I just want to acknowledge that they 12 were exactly on time, 45 minutes, which is better than what 13 happened last night. Thank you all for that presentation. 14 See we're at 8:05. We have an hour. But do people need a quick bathroom break before we begin the second portion? 15 16 Would that be helpful? Keep going, okay. So a reminder, 17 please use the mic. Introduce yourself. Speak right into 18 it so Rachelle can capture it all. If you're not comfortable with that, we have comment cards. If you're not 19 20 comfortable with that, take it home and mail it back by August 14th. 21

22 MR. BRASS: One thing to add. Go ahead, make your 23 comments, ask your questions, and then whomever among the 24 presenters is appropriate to respond to it will come forward 25 to this mic and respond to your question.

1 MR. RIZZO: My name is Frank Rizzo, and I've got a 2 couple of questions. There's a dome, the AEOS facility is 3 coated in silver. Is there a reason why you couldn't use 4 silver as opposed to the white?

5 MR. BARR: We did look at silver as a possible б color. In the first place, we thought you weren't going to 7 be crazy about that anyway. The experience with the AEOS telescope, in my understanding of it, was that it's bright 8 in the sort of the specular reflection, that sort of diamond 9 10 that you see in mornings and afternoons is not a good thing 11 either, so we understood that going in from an environmental 12 standpoint, it wasn't necessarily preferable. But we looked 13 at it anyway because we wanted to know what the best coating 14 for us would be. It's not as good. As I think Jeff mentioned, this is a daytime telescope, not a nighttime 15 telescope. Essentially, you can think of anything that's 16 17 dark. And a silver surface, in essence, is darker. It's 18 darker because it's absorbing some of that light. It's also absorbing some heat, so it will absorb heat in virtually 19 20 direct proportion to how light or how dark the color is. MR. RIZZO: So white will reflect more than the 21 22 silver? 23 MR. BARR: White reflects more heat than silver. 24 MR. RIZZO: And I know there have been issues with 25 the silver dome up there, like you said, in the morning and

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

1 the evening when the sun is at a low angle. But it's been 2 my experience during the daytime hours, it does sort of 3 blend in. It reflects the sky. 4 MR. BARR: Yeah, it would. It reflects the sky 5 color. It's a different problem, in essence. б MR. RIZZO: Thank you. Do you know, are you 7 planning on using any solar panels, solar panels to supplement your power and cooling up there? 8 9 MR. BARR: We're just in the early stages of 10 figuring out how to economize, and that's certainly a 11 possibility. We haven't actually incorporated that. We've 12 been in touch with MECO to find out what the power up there 13 is, and we're looking at some of our -- as I'm sure you're 14 all well aware, power is expensive here. We're finding that 15 out. 16 MR. RIZZO: Take advantage of the sun. 17 MR. BARR: Something like 18 cents a kilowatt hour 18 or more than that. So we are going to have to find ways to minimize our power consumption. We're looking at, again I 19 20 don't want to go into a lot of technical detail, but one of the things we're looking at is ice storage, which you 21 22 generate power cooling that you need during the night so you can use it during the day, and that way you're using power 23 24 at a time when it's cheaper. And the grid isn't maximized 25 anyway. Solar panels are possible as well.

APPENDIX B(2): TRANSCRIPTS – PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

1 MR. RIZZO: And then just the height, that's a 2 pretty enormous building that's going to go up there. Do 3 you know how that -- I'm not familiar with the sites on the 4 Big Island but how does that compare height-wise to the Keck 5 and the other observatories? б MR. BARR: It's on the order of the same type. 7 MR. RIZZO: Over 100 feet? 8 MR. BARR: Over 100 feet, yeah. Those buildings are over 100 feet. 9 10 MR. RIZZO: It's ribbed on the top. Are there 11 catwalks on the exterior? 12 MR. BARR: There was a catwalk. No, they're 13 awnings essentially that you see there. This is a -- these are because I guess I kind of blitzed over this, because we 14 15 have ventilation openings in the dome. And because we have 16 openings, we have to shield those openings so the sun 17 doesn't come directly in and heat up the surface including 18 the telescope inside. So these are awnings. That really is 19 the only description for them, and they're made out of that 20 same plate coil material I talked about before. This is a catwalk, and that is necessary and it does effect the 21 22 overall profile of the building. It's worth mentioning its 23 justification. In order to maintain the wheels that the 24 dome rolls on, essentially from here on up, this thing 25 turns, and from here on down, it doesn't turn. And there

are big wheels in there. To maintain those, we have to have
 the catwalk, which is the widest element in terms of the
 circular plan of the building.

4 MR. RIZZO: And just one last comment. They've 5 been sending satellites, SOHO and such, to study the sun. 6 Why would this be better than using satellites that could 7 actually get closer to the sun?

8 MR. FOLTZ: Certainly if you get to the point where you get out of the atmosphere, you lose the 9 10 turbulence. There's a couple of problems going into space. 11 The first one is it's hard to have and very, very, very 12 expensive to have a long-lived space mission. You know, 13 Hubble is running up costs of 4-plus, 6-plus billion dollars 14 for the total cost of the mission. But the real issue here is that in order to see the detail that we need to see, Jeff 15 needs to see, you need to have a mirror of a certain 16 17 diameter. Because, in fact, the detail you can observe with 18 any optic depends on its diameter. So you need 150 inches 19 of diameter. Hubble is 90 inches, so in order to get the 20 detail that you need, whether you're on the ground or in 21 space, you need that diameter, and launching that will be 22 factors of much more expensive than that. 23 MR. RIZZO: Thank you very much, and good luck.

24 MR. WILSON: Good evening, I'm John Wilson. And 25 I'm here as a member of the Kula Community Association and

1 also an interested citizen of Kula. I have several comments 2 you might want to consider as you go forward with the 3 process. One has to do with the mirror coating shop that's 4 being considered for the Air Force facility, and that may 5 cause you to redesign that shop if you don't need that. б Now, I noticed in their EA, they talk about on Mauna Kea, 7 they have three of those shops because that was an alternative for locating the shop here. So one of the 8 9 things you need to consider is would that shop be large 10 enough that they're planning for the Air Force facility?

The second thing is power line requirements. I 11 12 believe they use one single power line going up Haleakala 13 now for serving the power at the summit. I'm not sure your 14 power requirements would require a much larger transmission facility or not. And Maui Electric is also currently 15 16 working on what they call their integrative resource 17 planning process and part of that is to reduce demand as 18 well as to look at supply requirements. And so they're 19 looking at various alternative ways customers could reduce 20 their power.

But there may be a way of working with Maui Electric that might be technically feasible so you can maybe put things of an artist at the top rather than just ATST, something to do with recovering the power. So that was just a comment one of the concerns we have is visual impact of a

much larger transmission facility, if that was ever required. Another thing is the -- in their planning, the long-range planning, they talk about the possible replacement of the Mees Observatory, so I guess from a university standpoint, once this is in place, would you be able to not need the Mees Observatory and that be removed from there?

8 MR. KUHN: Do you want me to respond to that?
9 MR. BARR: Yeah, why don't you do that.

10 MR. WILSON: And my last comment, these are just 11 comments for you to think about. The last comment is in 12 your planning process for looking at the mountain, I think 13 this has already been mentioned by one of the staff members 14 here, is that the visual site plans -- I live down the slope here at 2,000 foot elevation. I can see this observatory at 15 16 sunlight reflected, and I can see the two other smaller 17 domes there. Probably I could see this. And in addition to 18 that, as you go further down the slope of the mountain, 19 there is the transmission tower from Hawaiian Telcom that's 20 also visible. So you might want to consider how your visual sight lines will be presented and from where they will be 21 22 presented.

The EA for the mirror coating shop shows a picture from the entrance road there, but if you had pictures from several other locations further down the mountain where

people live and would be able to see what the impact would be, that might be a consideration also in your -- those are my comments. You can respond any way you want to.

4 MR. KUHN: That's a lot of questions. I think 5 from the prospective of the Mees Observatory, we are very б aware that 18 acres up there is very precious. We're never 7 going to expand beyond that for doing astronomy, so the Mees facility is valuable and has been valuable for studying the 8 sun, because as we know, the sun changes. So the record 9 10 that is of interest to us is the time record. We have ten 11 years of data. We want to have that data in place when the 12 observatory comes on line, so the idea that we could stop 13 operations now and begin doing the observatory would put us 14 out of business for probably --

15 MR. WILSON: That wasn't the comment.

MR. KUHN: I understand. The answer I think to 16 17 your statement is that we more than anyone are sensitive to 18 the notion that space is at a real premium up there, and 19 once ATST comes on line, I think it's a virtual certainty 20 that the Mees will have to morph into something else, and it may become a site where instruments are tested. It may 21 22 become an auxiliary to make the ATST to work more 23 efficiently, but it certainly isn't going to work in the 24 mode that it is. And if you look at the picture, under the 25 picture of Mees compared to the ATST, that space right there

is so small in comparison to the observatory that it doesn't really have a large influence on the overall space that is required for the ATST telescope. So the answer is yes the Mees will change. What it changes into is going to be some very efficient use of a very small amount of space because we know we're not heading outside of that 18 acres.

7 MR. BARR: Okay. I'll talk to the other issues that you brought up, and they're all very good, valid 8 9 points. The -- I can't read my own writing. Oh, the mirror 10 coating facility. It is -- we are working with the Air 11 Force, and we hope that we will be able to coat our mirror 12 in their building. And if we do, there's a very good chance 13 that we can shrink down this floor plan and the amount of 14 coverage and the amount of building that we have to do. This entire wing of our structure up to something like 20 15 16 feet is dedicated to just that with the exception of we 17 probably definitely would have to still have to have some 18 kind of receiving area to bring things in off of the lift, 19 most notably the mirror itself, and other instruments and 20 things coming in. But the amount of space that we may be able to reduce here is definitely a factor of whether or not 21 22 we can work it out with the Air Force to have them coat our 23 mirror.

You referred to a shop, and essentially, this isthe shop for doing that mirror coating. The mirror comes

down. It goes onto a wash rack. The existing coating is
 stripped off, goes into a tank, comes back and goes back
 onto the telescope. So it all sort of happens in here.

4 They have a facility of order a little bigger than 5 this because it's the Air Force, but they have a little bit б more space than this for coating their 3.5 meter telescope 7 mirror and they are intending at this point to make that large enough to coat our 4.2, 14-foot mirror, so there's a 8 good chance, but we can't make that assumption. And we're 9 10 in the early stages with them, so we have to incorporate 11 this. And in terms of the EIS process, we really in good 12 faith have to show what we consider to be the maximum size 13 of the facility and not, you know, kind of bet on any 14 optimistic assumptions. So that's on the mirror coating 15 facility.

16 The power capacity coming up the mountain, from 17 our initial contacts with MECO and from talking with Mike 18 Maberry, the site representative for IfA who deals with them 19 directly regularly, the power capacity coming up there is --20 has been made big enough to accommodate something like 1,000 kilowatts more of capacity. That's right around what we 21 22 expect to need. So we're kind of on the edge, and we 23 realize that upgrading the transmission capacities up to the 24 mountain would be a big deal, and we can do things. Again, 25 I mean it comes back to the heat again. If we had to paint

the dome brown, I can't see how we could possibly stay within that power budget, but there's a really good chance if we can economize it, we can do sort of a sensible, modest approach, that we can stay within the capacity and we certainly will work to do that.

б Also, their substation up there is of that 7 capacity. We understand that it has that much overage with the express intent that something like this might come 8 along, so when they put in that transmission capacity, they 9 10 made that available. The sight lines you talked about, and 11 honestly, I don't have a lot to say about that other than 12 what is in the long-range development plan. There is a 13 table that's appended to that that analyzed the sight lines 14 from both of these sites by name, the Mees site and the Reber Circle site, and it talks about -- and you all know 15 the communities better than I do -- so where your house is 16 17 and where it would be critical to you, it would be evident 18 looking at that table.

But it gives you a height aboveground that you would be able to see things from that location, and the math from there is pretty easy. We're at about 140 feet high, so if it's a 90-foot high sight and then above that you see something, then you see 50 feet of our building. If it's 120 feet, you see 30 feet of it. If it's 200 feet, you don't see our building at all. And it's not absolutely

1 clear. When that was done, the specific location on those sites wasn't identified, so we need to do that work again. 2 3 That analysis will be redone for the purposes of EIS. 4 MS. BRAGG: I think it would be nice to see the 5 renderings like from Kihei. б MS. COMPOC: Can you come to the microphone and 7 introduce yourself? 8 MS. BRAGG: Lori Bragg. I was just going to say it would be nice to see and I think the community would want 9 10 to see down the road what they see from Kihei or what they 11 see driving from Lahaina. 12 MS. COMPOC: Could you introduce yourself on the 13 mic? 14 MS. BRAGG: Lori Bragg. MR. FEIN: I could respond to that. Part of the 15 EIS process will be rendering from Kula, Pukalani, Kahului, 16 even Lahaina, and the individual who did these beautiful 17 18 renderings is already working on renderings from those various locations using -- yeah, we'll give him credit. Tom 19 20 Kekona will be doing those for us, and the community will get to see posters that size showing visual, potential 21 22 visual impacts. 23 MR. RIZZO: Frank Rizzo again. The sight line, 24 your first choice is the Mees location as opposed to Reber's 25 Circle, so I'm assuming from down in the central valley if

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

1 you're -- if the building is located in the Mees site, it 2 would be less visible? 3 MR. FEIN: That is correct, Frank, the Mees site 4 affords less visibility from Kahului-Wailuku than the 5 Reber's Circle site. б MR. RIZZO: And what is going to determine which site is chosen? 7 8 MR. FEIN: The environmental impact assessment process and potential significant impacts and mitigation and 9 10 so on. We will arrive at a final recommendation for that. 11 MR. RIZZO: Thank you. 12 MR. WILSON: John Wilson again. I just had a 13 thought. Could you coat that thing in polyoptic instruments and create your own electricity to cool the building? I 14 mean it's way out, but that's a scientific question. 15 16 MR. FOLTZ: Thanks. Correct me if I'm wrong, the 17 solar constant is one kilowatt per square meter, so if you 18 could -- so basically if you had a perfectly efficient photovoltaic -- I love photovoltaic -- but if you had a 19 20 perfectly efficient photovoltaic, you're going to get one kilowatt per square meter of solar constant. So doing the 21 22 math, if you were going to run at 500 KVA, you would need 23 roughly 500 square meters, which would be a substantial --24 cover a substantial part of the site. I think it's not out 25 of the question, I think as Frank said, too, to consider

economizing and doing everything you can, and as Jeff said,
 try to use the power during low power usage in order to both
 save money and also save capacity. But certainly these
 things can be considered.

5 MR. BARR: Right, it's also worth mentioning that 6 the heat generated or the heating of that surface would 7 still occur, and we still would have to cool that somehow. 8 And as you say, that may be how you generate your power to 9 cool it, but again, most photovoltaics are a dark color, so 10 we would start out at a disadvantage in terms of cooling the 11 dome.

12 MR. KUHN: But it's a good idea.

13 MR. BARR: It's a good idea.

MS. BRAGG: Since it's quiet, Lori Bragg again. I have a quick question. How many employees are you looking at or it hasn't really been talked about how many people would be working at the facility.

18 MR. WAGNER: We're currently studying that. We have operational scenarios. The estimate right now and that 19 20 was in the proposal for the NSF was essentially of a staff of around 35 to 40 individuals, and that's the whole staff 21 22 for the entire supported facility. That would include administrative staff. That would include the scientific 23 24 staff. That would be include engineering. That would 25 include the facilities. All of those folks wouldn't be up

1 at the telescope. They wouldn't be traveling to the 2 telescope each day, but you can imagine that you would have 3 a couple of telescope operators, that you would have 4 scientists there. Initially you would have a few engineers, 5 that sort of size staff to get things going. Now, that's 6 assuming that the construction end its completed.

7 MR. WILSON: Would some of that staff be located 8 with the Astronomy Institute?

MR. WAGNER: We're still studying that. We're 9 10 trying to understand that exactly what opportunities we have 11 for synergy with the Institute for Astronomy and how it 12 might work and whether scientists would be based some here 13 on Maui, some in Oahu, whether there would actually be a 14 headquarters facility associated with some university in the U.S, but all of that is part of the planning and discussions 15 that are going on associated with the design of it right 16 17 now.

18 MR. FOLTZ: May I?

19 MR. WAGNER: Sure.

20 MR. FOLTZ: I just wanted to add one comment on 21 that. The National Solar Observatory now currently is 22 headquartered both in Tucson, Arizona, and near Alamogordo, 23 New Mexico, and they have facilities in both places. This 24 telescope, if it is built, will render many of those 25 facilities redundant, and so the National Solar Observatory will have an opportunity to look at its future in terms of relocating, finding a new home, consolidating and reducing its operations costs by closing existing facilities. None of this is certain, but there are opportunities for -- for a reorganization of the observatory.

б MR. KUHN: Can I respond to that? So the NSO has asked to bring the telescope to Haleakala of which their 7 scientific collaborative involves the University of Hawai`i. 8 We haven't convinced them yet that they need to bring their 9 10 entire scientific operation to Hawai`i, to Maui, but we're trying. And I think that it's the plan of the university 11 12 and most of the scientists that are involved in any -- in 13 many aspects of the this to convince the National 14 Observatory that they should not only locate what Jeremy has already explained, that there's an operations staff, but 15 then there is the full research staff of the National Solar 16 Observatory, which we think should naturally be located 17 18 here, potentially half in Maui and half in Oahu. But they 19 should be here. But that part of the discussion hasn't 20 progressed very far. MR. WILSON: Do you need help? 21 22 MR. KUHN: Yes, I think we do. 23 MR. FOLTZ: But I'm going to close my ears. MR. TRUITT: I'm Stan Truitt, T R U I T T. And 24 25 most of my other questions have already been answered except

1 for a specific number. Has there been a power budget 2 determined for the whole facility? As I recall, that the 3 Air Force Observatory was around a megawatt of maximum load, 4 and that was at night. Of course, they won't be operating 5 at probably those same power levels during the day. But has б the study been done, and has the time dependence of the 7 power been determined?

8 MR. BARR: The time dependence is a little trickier. We do have a preliminary power budget. We don't 9 10 have a full building design engineering team on board at 11 this point. It really would be expensive and preliminary to 12 getting through this and understanding whether or not the 13 site is viable and what the circumstances are. But we have, 14 and you say a megawatt, I say 1,000 kilowatts, it's the same number. We're approximately the same as the Air Force power 15 budget. 16

17 MR. TRUITT: So it would be practically doubling 18 it?

19

MR. BARR: Essentially that's our guess. 20 MR. TRUITT: Okay, thanks. My second --MR. BARR: It's worth mentioning, and Craig 21 22 reminded me, that's a peak load. That's the maximum at any point we would probably -- and I'm not sure what that 23 24 megawatt is in terms of the Air Force. That may be their 25 normal operating budget.

1 MR. TRUITT: Okay. So in terms of the petrel 2 diagram, it's perfect because it's right there, are all 3 those petrel burrows from active nesting birds, or is that 4 just things that have been found around that are possibly 5 not in use or being used fractionally?

б MR. FEIN: That's a good question, and what you 7 see on the screen are active burrows. Those are the ones that were there at the end of 2004 by the National Park 8 staff. Those birds were active in 2004. Now, at the end of 9 10 this year, the active burrow configuration might change. All together I think all over the summit area, it's 11 12 something like 430 active burrows around the summit area of 13 which there are a fair number as you see on the south side 14 of that site. Those burrows are monitored constantly. They're being monitored right now by the National Park 15 staff. They are looking at them every week and will update 16 17 them at the end of this year. So we use this map from the 18 previous nesting season.

19 MR. TRUITT: Thanks, Charlie.

20 MR. FEIN: You're welcome.

21 MR. KAIMIOLA: Aloha, my name is George Manulani 22 Kaimiola, and I'm sure Uncle Charlie Maxwell has discussed a 23 lot of the archeological, historical, cultural significance 24 of the place. I like your plans. I think it's all great, 25 but I have a hard time really, honestly with what you folks

1 are doing up there. I'm just sitting here listening to 2 everybody speak, and it reminded me of a time when my 3 grandmother was in a care home and the caregivers and my 4 uncle and my cousin was talking about her as if she wasn't 5 even there. And I'm sitting here listening to everybody б talk megawatts and looking at the sun and all this other 7 stuff and everything, and I'm like, wow, did anybody even ask the mountain if she wanted that stuff on top of her? 8 You know, I mean that's the thing that really needs to be 9 10 considered. I don't know. It's just something that really, 11 really needs to be thought about.

12 You know, I'm thinking that, you know, one of my 13 first questions I jokingly asked how does that benefit the 14 Native Hawaiians, yeah? Why do you need it? You had a beautiful slide up there of Haleakala with no structures on 15 it. I thought that was the most beautiful slide you had all 16 17 evening. You know, so I -- you know, I really appreciate 18 you folks trying, but I think you folks really, really need 19 to look a lot deeper and really try and, you know, figure 20 out if it is really necessary or are we just curious about what's going on up there. And do we just -- you know, are 21 22 these answers really significant? Do we really need these 23 answers, you know, to these questions that we have? Yeah, 24 or are we just niele? Are we just curious and want to find 25 things out? Or do we just want to write a grant so we can

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

1 go ahead and just have a job and really look at the stars 2 and the sun and spots and all these other things? And even, 3 the, you know, the EIS is an economic impact. You know, how 4 many people are you bringing from the outside to do a lot of 5 the work? You know, how many people are you going to be б bringing here? How much money is even going to get down to 7 the community itself and those sorts of things, yeah? So it's great. Personally one part of me would really like to 8 see it, but I have a hard -- another part of me just really 9 10 has a hard time with what you folks are doing. Just 11 something to think about. Mahalo. Thank you.

12 KAHU MAXWELL: Kahu Charles Kauluwehe Maxwell. 13 It's interesting, George, what you say. Buildings started to go up on this mountain way back in the '40s. Finally in 14 1962 by executive order they took this 18-point-so-many 15 acres. I was one of them that fought against the AEOS, and 16 I had a pet name that I called it, which I won't refer to it 17 18 now, but they hired me as a cultural consultant. And they 19 spoke with forked tongues because they promised me that they 20 wouldn't touch, you know, the cinders. They would control the dust, and they wouldn't take nothing off the mountain. 21 22 And yet they took 150 tons of rock, sacred soil that 23 belonged to Pele, took it off the rock and went down to 24 Puunene and crushed it in big mounds. It was such a 25 cultural insult. And I had the Air Force people come,

1 papa kalakea, myself, my mo'opuna, and we went and pule and 2 asked forgiveness. And I personally followed. Once the 3 rock was taken out of Haleakala, you couldn't put it back 4 because of environmental concerns, so we -- I followed the 5 150 tons crushed rock back to the National Park and gave it б for them to cover trails within the crater, not put concrete 7 over it, but cover the trails. I was one of the only people to fight against the Faulkes Observatory that you see up 8 9 there now.

10 I even stood up in a -- I invited myself with Prince Andrew or Albert, one of them -- Andrew. And I 11 12 invited myself, my sister and my grandchildren to the press 13 conference they had. And when Governor Cayetano and the 14 Prince of England was going to sign the contract, and I stood up, I said, "If you're going to do anything in 15 Haleakala, on Haleakala, you make sure you include the 16 Native Hawaiians." And slowly, I tell you slowly we got 17 18 them, because of the studies that you see on the desk there, 19 the cultural practices and what they have to follow all the 20 cultural rules about how if any soil is lifted, if any hole is made, they've got to pray before they do anything. And I 21 22 was so proud of that. And after ten years of fighting for 23 restoration of two ahu, we finally completed one right by 24 AEOS, yeah, Charlie, by AEOS. Because this site in ancient 25 times was used by the kahuna po'o, the teaching kahuna. It

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

1 was so sacred, that site, that nobody could even go up there 2 So for the Native Hawaiians to look at things that 3 are being built there, it's really an insult. It's really 4 an insult, but we're in modern times. We've got to make 5 them follow protocol. They've got to learn. They've got to б follow protocol. We have to be included in every aspect of 7 the work that is being done, and it is happening. We have monitors that will be up there. One of my grandsons has 8 been working up there for three years now, two and a half 9 10 years monitoring everything that everybody does. And even 11 the Air Force, we're trying to make them culturally 12 compliant.

13 So I've been hired to do this Environmental Impact 14 Statement to again show all the cultural, prior cultural 15 uses, present and in the future, and that's what I plan to 16 do.

17 MR. RIKOWSKI: My name is Rod Rikowski, and in our 18 recent deep impact event that we had, the kids from Kamehameha School in conjunction with the Faulkes telescope 19 20 did some observing. Will there be any possibility of the kids maybe being interactive with this telescope? 21 22 MR. FOLTZ: Let me comment on that. It is a very, very high priority of the National Science Foundation that 23 24 research at the highest level and education at all levels 25 public and private be integrated. And, in fact, we -- I

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

oversee the funding for the National Solar Observatory. I also oversee the funding for the National Optical Astronomy Observatory, which is in Arizona and in Chile. And they have significant public outreach programs and education programs from kindergarten through 12 through postgraduate through postdoctoral, but an enormous -- and family science outreach at NSO in Tucson.

8 And I know in Tucson we go to local Native American communities as well as education in the Tucson 9 10 schools. In Sacramento, at Sac Peak, they reach out to the 11 Alamogordo schools and around and concentrate on some school 12 systems that are traditionally largely Hispanic. So there 13 is lots and lots of opportunities. We being the NSF make 14 them do it. They do it well. They do it happily, but we 15 also -- I would also note that there are programs already in place on Maui that are a part of the Center for Adaptive 16 17 Optics, which is actually in some way linked to this 18 project. That's at the University of Santa Cruz, and there 19 was an internship program going on for a few years on Maui 20 to get Native Hawaiian students involved in high tech enterprises here on Maui and to develop a work force. 21 22 Because if we develop a technologically adept work force here that can stay here, we help ourselves, and we help the 23 24 communities. And so, you know, I'm preaching. This is 25 very, very important to me.

APPENDIX B(2): TRANSCRIPTS - PUBLIC SCOPING MEETING, KULA COMMUNITY CENTER, JULY 13, 2005

1 MR. FEIN: I wanted to make one other comment 2 about that. It's not well-known in some parts of the 3 communities that 32 percent of the individuals who work on 4 the mountain are Hawaiian born individuals, and that 5 includes management and supervisory personnel as well. Many б of these people were brought back from the mainland to work 7 in these high technology jobs, and so I think that's part of the overall objective and goal of all of these projects on 8 9 the mountain.

10 MR. PELAZAR: Good evening. My name is Sergeant 11 Mitch Pelazar with the Maui Police Department. I'm here 12 basically on a different, I guess on a different plane from 13 what everybody else has been talking about. But my thing is 14 mostly concerning I guess pedestrian and traffic safety 15 coming in and out of Haleakala during the construction phase. Some points I wanted to bring up, as far as the 16 17 trucks that are going to be used going up and down the hill 18 transporting the construction supplies, how many of them are you guys going to have per day, per week, per month, per 19 20 year, how much? You know, just consider that. I guess the road wear being generated because of the trucks. If there's 21 22 any kind of additional safety, traffic safety as far as 23 trucks that can and sometimes lose their brakes as they're 24 coming down the hill, if you guys are going to plan for 25 anything like that with National Parks or with the State

1 Department of Transportation.

2 I know there was a slide earlier with like a time 3 element for the construction phase for the building. During 4 this construction phase, how or what is you guys' estimate 5 or maybe you guys should consider how during this б construction phase is it going to affect the multiple 7 downhill bike tours, the regular tourist traffic going up and down the hill as well as the bus tours as well and what 8 kind of anticipated delays their construction traffic is 9 10 going to generate during this construction phase.

MR. BARR: Well, let me just say a word or two about the --

MR. PELAZAR: Let me just finish one more point. MR. PELAZAR: Let me just finish one more point. The last point now since 9/11 is, of course, the security thing with any kind of terrorist attack. And you know, now with the site being proposed on Haleakala, what might be I guess the chances or the percentage of Haleakala now being targeted as a possible site?

MR. BARR: That one is hard. Let me talk about the construction phase because that's a little easier. All of your points are very valid and need to be looked at as part of this EIS process. That's the purpose of this meeting is to get this kind of thing out, so it's very well taken. As far as the construction traffic, if I was a general contractor, I could tell you better. I'm an architect, and in my experience, it is a significant volume
 of truck traffic, and safety is an issue and timing that
 certainly with the bike tours and the rest of that will
 definitely be an issue.

5 We know we're going to have concrete trucks and 6 trucks with steel, something probably like averaging a truck 7 a day, a large truck a day coming up the mountain and down 8 at least during the heavy part of the construction schedule. 9 I don't know, did you want to talk at all about the vehicle 10 miles as part of the EIS?

MR. FEIN: Yeah, those are really good questions. 11 12 Traffic and traffic safety is a part of the environmental 13 impact study. It's a whole section in the study. And what 14 we do is start with the baseline traffic that we are aware of right now. We had a baseline survey done in the 15 long-range development program, so we know how much traffic 16 17 is going in and out of the site right now through the 18 National Park on a daily basis. And so we will have to incorporate additional traffic in our survey. 19

20 One thing I would like to say that is in the 21 construction of the AEOS telescope in 1994 and '95 produced 22 a lot of lessons learned about traffic, traffic safety, road 23 wear, rules and procedures driving through the park, 24 National Park and state road as well, and we'll apply those 25 rules. Some of those lessons were hard learned with

construction traffic, some road damage and that sort of 1 2 thing, so we're aware of that. We will put that into the 3 EIS, so I really appreciate those questions. 4 MS. COMPOC: We're in the last 15 minutes here. 5 There is still a couple of people who haven't spoken. I б just wanted to encourage you if you had any other questions 7 or comments. 8 MR. RIZZO: What do we do to get rid of those 9 bicycle tours? 10 (Laughter.) MS. COMPOC: That's a different study all 11 12 together. So if there are no other questions or comments, 13 then I think that that concludes our time here today. August 14 is the final deadline if you're writing your 14 comments out. Please feel free to do that and take the 15 literature and the information. If you would like to invite 16 17 someone for tomorrow night, it's going to be Pukalani 18 Community Center at 6:30. Thank you all for being here. 19 Mahalo. 20 (The meeting ended at 8:45 p.m.) 21 22 23 24 25

1 ATTENDANCE 2 3 MEETING FACILITATORS: 4 David Brass and Kim Lompoc, Mediation Services of Maui 5 6 HAWAIIAN LANGUAGE TRANSLATOR: 7 Kiope Raymond 8 PANEL MEMBERS PRESENT: 9 Dr. Jeff Kuhn - Associate Director of the University Of Hawaii, Institute for Astronomy (Oahu) 10 Dr. Craig Foltz - Program Officer with the National 11 Science Foundation, Washington, D.C. Dr. Charlie Fein - KC Environmental (Maui) 12 13 Jeremy Wagner - ATST Project Manager with National Solar Observatory, Tucson, Arizona 14 Jeff Barr - ATST Project Architect 15 Mike Maberry - Assistant Director, University 16 of Hawaii, Institute for Astronomy (Maui) 17 18 19 20 21 22 23 24 25

1 PROCEEDINGS 2 * * 3 MS. COMPOC: Aloha, welcome. 4 AUDIENCE: Aloha. 5 MS. COMPOC: We're about to begin. Thank you all б for being here. My name is Kim Compoc. I'm with Mediation 7 Services of Maui. 8 MR. BRASS: My name is David Brass. I'm also with 9 Mediation Services of Maui. MS. COMPOC: MSM was founded in 1982 to find 10 creative and appropriate ways of resolving disputes. David 11 12 and I will be acting as facilitators tonight, which means 13 that we are neutrals. We have no vested interest in the outcome of this meeting. Our whole focus is making sure 14 that you as the public have a chance to get all the 15 16 questions and comments you have about the proposed Advanced 17 Technology Solar Telescope, get asked and answered tonight 18 as orderly and fast as possible and we stick to the agenda. 19 Before we get into the ground rules and the rest 20 of the evening, I want to turn the mic over to Dr. Charlie Fein, who will introduce the panel. Charlie. 21 22 MR. FEIN: Thank you, Kim. Good evening and aloha. My name is Charlie Fein, and milk, butter, eggs. 23 24 That's the wrong --25 (Laughter.)

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 I'm here to introduce the panel to you this 2 evening to begin the process. First of all, we have 3 Dr. Jeff Kuhn, Associate Director of the University of 4 Hawai`i, Institute for Astronomy, who is going to present 5 the science behind the need for this project. We also have б Dr. Craig Foltz, who is the Program Officer with the 7 National Science Foundation in Washington, D.C. He's going to discuss briefly the role of the NSF proponent in 8 9 sponsoring this project. We have Jeremy Wagner, the ATST 10 project manager with the National Solar Observatory in Tucson, Arizona, who is going to offer a project schedule. 11 12 Mr. Jeff Barr, he's the ATST project architect. 13 He's going to talk about the facility design and features of the proposed ATST. I would also like to introduce our court 14 reporter Rachelle Primeaux. She'll be the recording 15 16 stenographer. This is all part of the administrative record 17 for this scoping meeting. And for Hawaiian interpretation, 18 Kiope Raymond is here and available for interpretation if 19 needed. Again, our meeting facilitators Kim Compoc and 20 David Brass are the neutral parties who will be handling the logistics for this meeting. 21 22 Let me tell you that this is an Environmental

22 Impact Statement scoping meeting. The purpose of this
24 meeting is to inform the public about the proposed project
25 and allow time for you to offer your comments, questions and

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 so on. Bear in mind that we are in the process, just in the 2 beginning process of the environmental impact analysis, and 3 therefore, we may not have answers to your questions, but we 4 want to hear your questions and we want to hear your 5 comments. Before we begin, I would like to introduce our б cultural specialist for this project Kahu Charles K. 7 Maxwell, and I've asked him to do the pule. 8 KAHU MAXWELL: I know it's very appropriate before we do anything pertaining to Haleakala because it's a 9 10 wahi pana, a sacred place, that we pule, do a prayer to it. 11 (Hawaiian language spoken.) 12 Our father in heaven, we ask and pray that as we 13 gather this evening and we exchange ideas and comments that 14 might protect and preserve this beautiful land of Haleakala, Kolekole, let's make sure the comments that you hear here 15 and the ones that are exchanged that we do it in good 16 feeling and we always keep the respect that is for this 17 18 beautiful wahi pana, the sacred place. We ask this in your 19 name. 20 (Hawaiian language spoken.) MR. BRASS: As Kim said, the first thing that 21 22 we're going to do is kind of go over the guidelines for this 23 process so that everyone understands the best, most 24 effective way to do it. As Dr. Fein said, we have a court 25 reporter here who is recording the proceedings so that there

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 will be a record of your questions and concerns. It's 2 really important, for one thing, that people talk one at a 3 time during this meeting because the court reporter cannot 4 record more than one voice at the same time. So we're going 5 to ask that you use the mics so that she can hear you when б you ask a question and take turns talking so that everything 7 can be recorded and we get the fullest report of this meeting. We ask that you hold your questions until the 8 presenters are finished. They may answer your question. 9 10 You might want to jot down the question as you think of it 11 so that you remember to ask it.

12 Please, as I said, stand at the microphone to make 13 your comments and questions. There's a microphone back here 14 for the audience to use, and the presenters whoever is appropriate to respond will come to this mic up here and 15 16 respond to your comment or question. There are comment 17 sheets over on the table. I think that Kim has some as 18 well. If you would prefer not to speak in front of the 19 group, you can write your comments or questions down, give 20 them to Kim or I before quarter to 9, and we will read them into the record so that they become a part of the record. 21 22 You also have the option of submitting those after the fact. 23 You can submit them in the box over here tonight or mail them no later than August 14th to become part of the record. 24 25 When you go to the microphone to speak, please

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

б

1 begin by stating your name and then go ahead and make your 2 comment. That's so the court reporter can identify who has 3 spoken. Especially since we have a pretty good turnout 4 tonight, we ask that you keep your comments brief, and we do 5 have a time keeper. She even has a stop watch. And she б will be timing the comments, and if you're getting up close 7 to five minutes, she will just show you the amount of time that you've used so that you get a little feedback that it's 8 9 time to wrap it up. So we also ask that you not interrupt 10 or comment during someone else's comments. Part of the reason is so that everything gets recorded, also out of 11 12 respect for everyone who is here.

13 And then just to reiterate, the court reporter can 14 only record one person at a time, so it's really important that we adhere to that. Any questions about the guidelines? 15 16 MS. COMPOC: And bathrooms are this way in case 17 anybody hasn't been here before, and I would like to just 18 pass out the comment sheets right now. The presentation 19 that you're going to hear is about 45 minutes, and there's a 20 lot of slides and a lot of information, so if you would like to take a piece of paper and pen right now, I have that and 21 22 that might help keep you folks' comments brief. Without further adieu --23

24 MR. BRASS: One other housekeeping piece that we 25 just found out tonight, at the end of the presentation, the

court reporter needs to take a quick break so that she's
 able to -- this is a pretty intense process, typing
 everything up, so there's going to be a five-minute break
 for the court reporter at the end of the presentation, and
 then we'll get right into the comments.

6 MR. FEIN: Thank you, David. So without any 7 further adieu, I'm going to present Dr. Jeffery Kuhn from 8 the University of Hawai`i Institute for Astronomy who is 9 going to talk about the need for ATST and why it needs to be 10 on Haleakala. Jeff.

MR. KUHN: My name is Jeff Kuhn. I'm a scientist. 11 12 I'm one of the people that will likely use this telescope 13 when it's built, if it's built in our lifetime. This is a 14 project that for some of us has gone on for many, many years. My first introduction to this project was about 12 15 years ago when we organized in New Mexico. It's had its 16 17 roots in the scientific community for a long time, and it's 18 only over the fairly recent past it's appeared publicly in 19 the form that you see it now. Two questions that I think 20 the organizers have asked me to try to address from a science perspective is why do we need the ATST? What value 21 22 does it have for science and perhaps for us in a broader 23 sense. And why is it that we come to ask to put it on Haleakala? What is it about Haleakala that makes it so 24 25 important for science? So those are the questions I'm going

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 to address in the next few minutes.

2 The main theme to what I'm trying to tell you is 3 that the sun as we see it when we go out and we look outside 4 is much different from the sun as we see it through the 5 instruments and through our telescopes. So about a year and б a half ago, the sun, if you were to look at it from a 7 telescope, looked something like this. This is an image taken in regular light. It shows that the sun is something 8 that changes. You see here in this image, the sun is 9 10 rotating, and this time span is a couple of weeks. The 11 really remarkable thing about this period of time, a couple 12 of Halloweens ago, is a development right there of that 13 enormous group of sunspots, which happened more rapidly than 14 we've seen before, that group of sun spots, the dark region on the sun, which in size is roughly three times the size of 15 the earth. And when that region as it appeared rotated to 16 the edge of the sun, it did some pretty dramatic things. In 17 18 a matter of just a few seconds, it released an enormous 19 amount of energy into space.

20 So this is an image that was taken from space. We 21 can now only see images like this from space, and we happen 22 to have a satellite called SOHO that's able to do this. The 23 size of the earth is like that. This burst of energy 24 traveled out into space, and if we could step back from the 25 sun, we would see something that looked kind of like this

1 where this was the sun and that burst of energy that you see 2 flying outwards to the right was what we call a coronal mass 3 ejection. It's millions of tons of matter, lots and lots of 4 energy, and it travels out into space at hundreds of 5 kilometers per second. For us, luckily that burst of energy б was directed off to the side. The earth is in this 7 direction, so most of that energy was lost to us. But the net effect of that energy in general can be enormous. 8 During that flare event that look place a couple of 9 10 Halloweens ago, we knocked out some satellites, Japanese 11 communication satellites. The Swedish power grid, a region 12 in the far north was knocked out. Communication to 13 airplanes was disrupted so that airplanes were rerouted that 14 were flying over the north, the north polar regions. GPS in some cases was interrupted, and cell phones were disturbed 15 by that. So most of the effect of what I just described to 16 you, the interaction of the sun with the earth is through 17 18 our technology and effects on our technology. And we have 19 no way of predicting these events.

20 We see sun spots. In fact, it's auspicious that 21 today, in fact, late last night, we saw the largest flare 22 we've seen in about a year. Here is a plot. We do have a 23 satellite that monitors these events in real time. The 24 National Weather Service maintains this, and this is a graph 25 of x-rays, and this is July 14th. It's universal time. And

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 this was late last night our time. This big bump right here 2 is where the amount of x-rays out in space increased by 3 about a factor of 100. So all of the sudden, there were 100 4 times more x-rays than there were normally. This is an 5 example of what's called an X class flare. That event that б I showed you in the previous slide was over ten times 7 larger. In fact, it was so large that our instruments weren't able to measure its strength because they were 8 saturated by the strength of the x-ray production in that 9 10 event.

11 So these events are going on all the time, and one 12 of the mysteries for us is that the sun, which is now in a 13 state of decline, goes through a cycle and it's in a state 14 of decline, not very much activity at all, should show such a rapid event like this event from last night. What we 15 16 really want to think about is that the sun is connected to 17 the earth by these lines here that are symbolic of what we 18 call the magnetic field. And the ATST is designed to 19 measure those magnetic fields. That's what we're after. 20 The magnetic fields is what make your compass needle work. It points to the north and the magnetic field in the outer 21 22 reaches of the solar atmosphere is about the same strength 23 as that field that makes your compass needle work. But we can't measure it. It's invisible, yet it channels and 24 25 directs all the energy that you saw coming off, for example,

that coronal mass ejection out into space. And one of the
 primary goals of the ATST is to make these invisible lines
 visible to us. They're now invisible. We can't see them.

4 The other effect of the sun is perhaps more 5 profound. We've learned only over the last decade or two б that the sun, it's brightness changes. So here is a graph 7 that shows time. This is about 20-some years. The brightness is going up and down, and it turns out that the 8 9 brightness is going up and down harmonic with the change --10 here is a graph that goes back to the time of Galileo, so this is the western record of sun spots, the number of sun 11 12 spots on the sun, those dark regions I showed you. And they 13 have a cycle to them. About every 11 years, there's a lot 14 of them. But it's not a very regular cycle, and the rhythm of those sun spots is a complicated song, which, in fact, 15 16 even has a period of silence back in the late 1600's.

17 It seems quite likely these bumps, these 11-year 18 bumps are affecting climate and weather, and we know that 19 because of this graph up here, it turns out that the sun is 20 brighter when we have more sun spots. It turns out when we have more sun spots, when there are more of these dark 21 22 features on the sun, somehow it's brighter, it produces more 23 energy that makes the earth slightly hotter, so you might 24 imagine that when there's no sun spots, the sun gets colder, 25 and maybe there's an effect on climate. And well, in fact,

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

from the records that we know, the historical records -this is a fun graph. This is a graph from 1200 to 1900, it
shows the price of wheat in Dutch guilders adjusted for
inflation going back to 1200. And this bump right here and
this bump right here correspond to these periods of time
when there weren't very many sun spots. We think this is
evidence of climate change.

8 So there's an economic impact associated with the 9 change in climate, which is clearly reproduced in the 10 agriculture records that we can come up with. Historical records show that back in the -- we call this the Maunder 11 12 Minimum -- it's quite clear that Europe was much colder than 13 it is now, so over historical times, the climate is being 14 changed by the sun in ways we don't understand. It's not just an economic impact though. If you go back 1,000 years, 15 16 we think we know what the sun is doing from this graph. And 17 it shows -- it's complicated -- it shows the amount of 18 Carbon 14. The amount of Carbon 14 in the atmosphere is 19 related to what the sun is doing, the sun's activity and its 20 magnetic field. We can turn that into a temperature. And it turns out there must have been a warm 21

period back here in the early part of this Millennium and then a cold period in the 17, 1800's around the time of the Maunder Minimum. Well, it turns out that the disappearance in the southwest of the Mogollon, Hohokam and Anasazi native

1 peoples coincides almost exactly with the rising warm period 2 associated with what the sun was doing here. And then 3 towards the Maunder Minimum, you may remember from your old 4 history books that the Vikings in the Nordic cultures had 5 settled the eastern coast of Greenland. Those settlements б vanished as the earth got colder. And we even have records 7 of what happened to the -- what foods were being eaten, and it turns out that agriculture was in decline. 8

9 The extinction, the transition of these cultures 10 was almost certainly tied to what the sun was doing. So I 11 think we can say, and many scientists agree, that within our 12 lifetime, the probability of a major solar storm with 13 brightness change affecting commerce with billions of 14 dollars of impact is virtually 100 percent. It's already happened. We've lost satellites that are worth that much. 15 Over the next 1,000 years, it's also virtually certain that 16 17 there will be some event, some change in the sun which 18 affects society in some fundamental way, and that's probably 19 likely. And we have evidence of it happening over the last 20 1,000 years.

21 Why is it we think these important questions 22 should be studied from Haleakala? We started with a site 23 study a few years ago that started with over 70 sites all 24 over the world. We looked at the weather patterns. We 25 looked at the contrails, the amount of airplane traffic over

1 the site. We narrowed that list down to six sites 2 worldwide, and those six sites were Big Bear in California, 3 Haleakala, LaPalma, Panguitch Lake. LaPalma is in the 4 Canary Islands. Panguitch Lake is in Utah. Sac Peak is in 5 New Mexico. San Pedro is in Mexico. These were sites where б we erected a tower, and from that tower we studied several 7 different characteristics of the atmosphere, how clear it was, how bright the sky was, how much blurring the sky 8 produced, if it would wash out the fine detail that we need 9 10 to see what's happening in these magnetic regions of the 11 sun, the sun spots.

12 This is a plot that shows how much clarity, how 13 little blurring there is in the sky depending on how high you are above the ground, okay. And there's one of these 14 curves for each of those six sites that were be selected to 15 study out of this list of 70. And a big number here means 16 17 that there's not very much blurring, and you have the 18 capability with the right instrument of seeing very fine detail in the objects that you look at through that 19 20 atmosphere. So which of these do you think is Haleakala? It's the red curve. Haleakala surpassed all other sites for 21 22 the ability to see very fine detail if we can build an 23 instrument, which is this is ten meters above the ground. So this shows the effect of hot rising air that's 24 25 heated by the sun that blurs these images, and because of

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 the wind and because of the position of the ocean around 2 Haleakala and Maui, the best, the best conditions occur in 3 this site on this island for seeing and clarity. I added 4 another curve to show what happens during the daytime. This 5 is that same number. A big number here means the sky is б very clear and you can see fine detail, but this is a plot 7 from Haleakala that shows what happens if you don't go above that layer, that ten meters layer. This is a plot that 8 shows sky clarity versus time of day, and so this is the 9 10 local time of day. This is midnight. This is 5 in the morning. This is 10. And what does it show? It shows if 11 12 you can't be above the ground, then the effects of that 13 ground heating cause your ability to see fine detail to go almost to zero on this scale. So that distance scale is 14 very important to understanding and seeing fine detail in 15 the sky. It turns out that Haleakala was far superior to 16 other sites because the sky was dark and because there 17 18 wasn't very much dust in the sky.

For all those reasons, we think that any other location but Haleakala will prevent the ATST from doing the job that we have for it, which is to see these magnetic fields on the sun and to be able to see out into the space, to see the fields that channel the energy from the sun to the earth. That understanding is surely worth an expense of some money. Being able to predict and understand what

happens in the next 11 years, whether the sun is a few percent brighter, is something we can't do now. The importance of being able to do that I think is obvious. So we're here hoping for an invitation from this community to bring what we think is a new window onto the sun onto the summit of Haleakala. That's what I have.

7 MR. FOLTZ: You can turn the lights up. I don't have any slides. My name is Craig Foltz. I'm an 8 9 astronomer. I'm not a solar astronomer. I spent my career 10 studying very distant objects in the realm of observational 11 cosmology, but I'm now an employee of the National Science 12 Foundation. I live and work inside the Beltway in 13 Arlington, Virginia, just across the Potomac from 14 Washington, D.C. And I want to talk a little bit about what the NSF is, how it works and what it's relationship is to 15 16 the project today because you've heard the NSF is the lead 17 agency in this environmental impact study process.

18 So the NSF is an independent federal agency. It's about 55 years old. It has an annual budget of about \$5 19 20 billion, and it's charge is simple. It's to give that money away, which is kind of nice. And it is charged to support 21 22 science engineering, science education and public understanding of science. And we do that by providing funds 23 24 to scientists, to engineers, to science educators and so on. 25 And we are different from many federal agencies. And I want

you to understand this, because it's important. The NSF
 does not direct science. It does not tell scientists what's
 important. It doesn't tell them how to do the science and
 so on.

5 We operate in a process that allows the scientists б to propose to us what they think is important, so this is a 7 process of unsolicited proposals. A proposal comes to us for a new idea. This is different, for example, than some 8 agencies that launch -- for example, the agency that 9 10 launches things into space, they can say to their constituency, "We want a proposal for a satellite that will 11 12 measure the cosmic microwave background." They direct that 13 community. We don't do that. We take our direction from 14 the community that we serve. And I want -- wanted to make that clear. So what is our relation to this project? Well, 15 as Jeff said, more than ten years ago, the solar astronomy 16 17 communities realized that they needed a new facility that 18 had a very large aperture, a very large mirror, 14 feet in 19 diameter.

The reason for that we can explain if you're interested. But they got together and built what's called a science case. They tried to understand what the telescope should do, how it should do it, and they came to us with a proposal to begin the development of the design for the ATST. That was funded. It's been funded over the last five

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

years for a total of about \$12 million. We did not fund it at \$12 million a year. It's been a total of about \$12 million. And the result of that design is actually a very advanced conceptual, beyond conceptual design for the telescope, the instrumentation and the building that you see here.

7 As a result of the success of that, the fact that these scientists demonstrated that this could be built with 8 technology that was in hand or we were confident could be 9 10 developed, about a year and a half ago, a proposal was 11 submitted to us to provide the funds for construction for 12 this telescope. And that proposal is then examined by us in 13 detail. It's not only examined by us, it's examined by the 14 peers of the scientists who have submitted it. So we engage large parts of the community to look at that proposal. 15 That proposal is still under review. And so we -- I want to say 16 17 right now we have not committed funds to the construction of 18 this project yet.

And, in fact, whether we do do that is, number one, it's a decision made by Congress, not NSF, although we have to recommend it to Congress. And number two, it's a decision that is reliant on the design of this telescope being ready for construction. But what does it mean to be ready for construction? It means we know how to build it. We know we have a place to put it, and we know what the

1 conditions of that place are. So we know, for example, are 2 we building this on cinders, are we building it on lava, are 3 we building it on granite. And so as part of the actual 4 design, which is a prerequisite to us making a decision to 5 fund it, we need to know where it can go. And as a result б of that need, the environmental impact process has begun. 7 And so we look forward to your comments. We look forward to trying to address your concerns. We may not address them 8 tonight, but we will -- they will be addressed in the 9 10 Environmental Impact Statement. And I thank you very much 11 for coming and thank you for allowing me to speak. Charlie, 12 you're up.

13 MR. FEIN: Thank you, Craig. So you heard a 14 little bit about the science and the need for the project and why Haleakala and the role of the NSF. And my purpose 15 here this evening is to briefly tell you what the 16 17 Environmental Impact Statement process is for the project. 18 I better come on this side. We have begun the process back 19 in May, and we have filed for a joint federal and state 20 Environmental Impact Statement. And we are at the point now of soliciting public comments, public input so that we can 21 22 prepare our final scoping document, which then becomes part 23 of the Environmental Impact Statement preparation notice or 24 initial EA, and we go on to prepare a full draft 25 Environmental Impact Statement.

1 Once we've finished the final scoping in the next 2 30 days or so and we receive all of your comments by August 3 14th, we're going to prepare the impact assessment surveys 4 and consultations, so we'll be doing inventories, surveys 5 and studies at the site. We have prepared the long-range б development plan in 2004. That was published as a draft in 7 mid 2004. It was on line open for public comments. We did receive quite a few comments, and the final version of the 8 9 long-range development plan for the Institute for Astronomy 10 High Altitude Observatories includes the ATST as one 11 potential new facility.

12 At the same time that the long-range development 13 plan was being prepared, we committed to numerous studies 14 and surveys of the 18.16 acres that constitute observatory property. Those studies included archeological inventories, 15 cultural resource evaluations, traditional practice 16 17 evaluations, arthropods, botanical resources, avifaunal 18 resources, endangered species. We tried to do everything 19 possible to characterize the 18-acre site. We are going to 20 go back and do it all over again for the two sites within the 18 acres that are potentially construction sites for 21 22 ATST. The two sites that were selected, the primary and 23 alternate sites, were two sites that had no cultural 24 resources right within their confines, no botanical 25 resources of any endangered type or anything else that would

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

potentially be impacted in a significant way. Nevertheless, even though we don't see potential significant impact to those resources, we are going to do an Environmental Impact Statement anyway. And we're going to do that with the presumption that there may be potential significant impacts that we have to address and mitigate.

7 Once the draft EIS is published, there will be a public comment period again. We'll hold public hearings on 8 9 the draft. We will go ahead and respond to the community 10 and agency comments and ultimately distribute a final 11 Environmental Impact Statement. We'll also be preparing a 12 Conservation District Use application because it is 13 conservation land. And part of that process will get public 14 hearing as well after the application is accepted, so there 15 are various opportunities for the public to get involved in this. We welcome that involvement. We want to hear what 16 17 those comments are. If there are potential significant 18 impacts that we're not aware of or that are of public 19 concern, we need to address those, okay. 20 For example, last evening a police Sergeant

21 mentioned some concern about traffic safety during 22 construction. We need to address that in the Environmental 23 Impact Statement. Those sorts of things are important so 24 that we don't overlook anything that potentially may impact 25 the environment. Anyway, we're hoping to complete the

process in late 2006 or early 2007. Then we will be construction ready as far as the NSF is concerned. With that, I would like to turn the microphone over to Jeremy Wagner, who will discuss the overall project schedule from beginning to final operations.

б MR. WAGNER: Thanks, Charlie. My name is Jeremy 7 Wagner. I'm the project manager for the ATST project. I work for the National Solar Observatory. I'm based in 8 Tucson, Arizona. What I would like to do is give you an 9 10 overview of the project schedule, maybe answer a couple of 11 questions here that you might have, where are we in the 12 current design schedule, when could construction start, how 13 long would it last, when might operations begin.

14 We're currently working through the design of the facility that you see here. We've gone through a number of 15 design reviews. As we mentioned, we went through the site 16 17 survey, identified Haleakala. We're beginning the site EIS 18 process. There are many more reviews that we will go 19 through before we become construction ready. Site 20 construction would start when the NSF approves the project after their review process. The earliest it could start, 21 22 and I understand actually I think this slide is slightly out 23 of date. I understand from this week that the earliest that could occur would be late 2007, so you might slip these 24 25 dates slightly. The major site construction as you would

1 think of it where you're digging foundations, erecting large 2 structures, would occur in the first two years. After that 3 point, we would be inside the buildings. The buildings 4 would be up. We would be assembling the telescope, putting 5 the control systems together. Towards the end of that, we б would bring the large optics in, assemble those systems, 7 start doing the integration and commissioning, which is where we begin to test the systems and understand that they 8 are meeting our requirements, that they're performing at the 9 10 level that we require. And that would -- that would occur 11 for quite a while.

Once we understand that those systems are performing at the level that we expect, that we require, we would begin initial operations then and start taking the data that folks like Jeff Kuhn require to do their science. Okay. I'll turn the mic over now to our project architect Jeff Barr, who will give you an idea of what the facility is and why it looks the way it looks. Jeff.

MR. BARR: Yeah, as you've heard, I'm Jeff Barr. And I am the architect working on the project with the design team based in Tucson, Arizona. And essentially, you've had a chance to see the pictures we have of it and maybe in the paper and looked at the brochures and other things. And I'm here to talk about more or less the exterior features of the ATST, why it looks the way it does.

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

And there are, we understand from the last couple of nights and certainly came in understanding, legitimate concerns about the size and visibility and those kinds of things, so I'll get to that, also where specifically on Haleakala this is. As Charlie said, we have two sites, so I'll be showing you those.

7 There they are. What we're calling the primary -what is our primary proposed site is next to the existing 8 Mees Observatory and this is the tower that Jeff Kuhn 9 10 referred to that was erected on six different sites. This 11 is the one on Haleakala. As you can see, the road goes 12 right by there, and this is essentially the site right here. 13 The other one, the alternate site also on Haleakala and 14 within the boundaries of the observatory is a site where a radio experiment was conducted some years ago by a person 15 named Reber. And this circle of concrete is a remnant of 16 17 that, and we call it the Reber Circle site for obvious 18 reasons. The high altitude observatory long-range plan, development plan that Charlie Fein went into some detail 19 20 about I don't need to go over again, but that was the document that we started with that identifies the two sites 21 22 on Haleakala that we looked into. And we pretty much 23 confirmed for our own purposes as well that those really are 24 the sites that would support a project the size and scope of 25 this. Both of them, as I say, are big enough, and both of

them were tested and found to have the excellent observing
 conditions that Jeff Kuhn referred to.

3 This is a plan, so essentially you're up above 4 looking down at this point, and this is a topographical map, 5 so where the lines are sort of farther apart in the central б area, it's flatter land. And then where it falls off, you 7 can see the lines -- the picture gets darker and the lines get closer, so that kind of defines not only the physical 8 boundaries, the legal boundaries of the observatory area, 9 10 but also kind of the buildable area that's also there. 11 Again, the primary site, this is the Mees Observatory that 12 you saw in the picture a moment ago. This would be the 13 telescope enclosure, the support building, and then there's a small out-building, a remote service building associated 14 with it and essentially the same composition of buildings 15 shown up here on a different site, both of them on the same 16 map, although obviously, we're not building it in two 17 18 locations. Either/or is what you can imagine there.

And then the restrictions that again Charlie referred to in some detail we've looked -- they looked at as part of the long-range development plan and identified the locations of the petrel burrows and the archeological features that you see here in blue. And so those are restrictions that we know we have to respect, and those aren't the only ones, but those are the ones that we knew

1 about going into this process, so you can see sort of how 2 those sites were shaped out there based on that. 3 MR. MAYER: Where is the observatory at the top in 4 relation to that? 5 MR. BARR: Which one? б MR. MAYER: The visitor's center. Where in 7 relation to this map is the present --8 MR. BARR: Oh, okay, the visitor's center. This road coming in -- I probably should have oriented you before 9 10 I jumped into it. The park is over here. It's off the map 11 in this area over here, and this would be the road coming in 12 from the east that gets you in from the park. So you come 13 in here and then as you come in that main observatory road, 14 these two sites are off to the left and right-hand side of the road. Is that the question? 15 16 MR. MAYER: Yes. 17 MR. BARR: I really should have made that a little 18 clearer. Okay. Those are the sites, and then what we build on there and the size and breadth of it is the first thing 19 20 we do is figure out how much of a building we need. And really it's pretty simple from the standpoint of an 21 22 observatory architect. What you do is get just enough 23 buildings to support, protect, operate and maintain the telescope, period. That's really -- and less is more 24 25 really. The astronomers and the public as well, the size of

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 the building impacts both seeing and environmental issues, 2 so really there's never -- observatories tend to be sort of 3 just enough. The kinds of buildings that we're looking at 4 and I'll be showing you here and you can see in the 5 rendering are really the enclosure, which you think of as a б dome, which serves these purposes here, and the support 7 buildings which are other kinds of spaces that you need as well. And you can see over here in the spaces next to it 8 that aren't directly associated with the enclosure would be 9 10 kind of this big cylinder with a dome on top of it, and then 11 everything else would be the support buildings. All of 12 those, as I say, are kept minimum in size in order to keep 13 the seeing conditions or the clarity of the seeing good and 14 also for environmental reasons.

15 This is kind of the diagram that I've put together to show why it is the size it is. The -- you could see 16 17 the -- to start with the height that again Jeff Kuhn 18 referred to here, this is 28 meters, so about halfway across 19 that chart up and gets them to where they need to be in 20 terms of height above ground to get away from that blurriness that he was referring to that they could meet the 21 22 scientific objectives of the project, so this 92 feet is a 23 canonical number that we came up with as the right height 24 for it on Haleakala, and that was what we started with. 25 This is the telescope, this framework structure in

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

the middle here, and this is the 14-foot wide mirror, the main optic of the telescope. So when you put that telescope at that height and swing an arc with it, you get a dome size really with a little bit of room for clearance and safety, and so that's the site, the size and height of really the most dominant visual element associated with this whole observatory.

8 Underneath of that supporting the telescope is the pier, and the reasons for its size and shape have to do with 9 10 stability. First off, wide enough to sit on the cinders and 11 get a good enough vibration-free mount for the telescope 12 that it doesn't damage the seeing conditions again and then 13 also big enough that inside of it there's room for an 14 observing platform that where most of that rotates with the telescope inside of the pier and where most of the 15 instruments that would take the scientific data are located. 16 And then out beyond that, as I showed you over here, this is 17 18 the support building and inside of that is a relatively 19 small control room for the telescope, an instrument lab and 20 a few things that just need to be close for reasons of functionality. Down below that are some big pieces 21 22 equipment that also need to be close to the telescope. And 23 in the middle of all that is a big elevator shaft that you 24 use to bring the 14-foot mirror down when it needs to be 25 recoated and to put big instruments onto this platform.

1 Beyond that, you're seeing the existing Mees 2 Observatory here in the foreground. And on the other side 3 of that is the small remote utility building. So these 4 dimensions, and again, this 92 feet is the number you saw if 5 you read the paper this morning. And it really is the б height of the telescope, not really so much the height of 7 the entire structure. 8 MR. MAYER: It's 137 feet? 9 MR. BARR: 137 feet to the top of the dome, that's 10 right. If you cut through that last picture I had there at 11 the very ground level, cut through those three buildings, 12 this is what you would see in our proposed plan. This 13 again, the enclosure, the support building here, the service 14 yard in between and then the remote utility building over here and the existing Mees facility here. Just to kind of 15 16 walk through it quickly, this is the equipment, the coating 17 facility that we have as a baseline requirement, that would 18 be incorporated in, the platform lift or elevator in the

19 middle and enough space for the big equipment that needs to 20 be near the telescope. These gray rings are the pier that 21 you saw there in the section before.

It's worth talking a little bit about the existing Mees building. We do intend that -- our proposal has it staying there and not being replaced, so to speak, by the ATST and for good reasons. First and foremost, it's an IfA

1 building, and the IfA has uses for it. They -- it's their 2 base of operations for not just Mees but other things that 3 they do on the mountain, and so for that reason, we really 4 can't get rid of that space without then incorporating some 5 compensating space into our building. In other words, we б would have to build a bigger building to replace some of the 7 functionality of the spaces that are already there. Secondarily or maybe primarily, the telescope there won't be 8 replaced until ATST is built, so in that something like, as 9 10 Jeremy showed you, the time span is significant before that 11 happens.

12 It's important to have a continuum of observing so 13 that there's a way to correlate the data and also give the 14 space to do the experimentation programs they have now. So this will continue to be a working observatory until then 15 and then will be ostensibly replaced by the ATST capacity. 16 17 Also, it's not in the location where we would be likely to 18 locate ATST anyway. It's closer to the edge, which is more 19 difficult for the foundations. It's also closer to the 20 petrel burrows, and so chances are that that footprint wouldn't be covered up by the new footprint anyway. I guess 21 22 that's probably good enough for the floor plan.

The look of it is something that is a bit of an issue, and understandably so. It needs to be white, and the reason for that is simple; one word, heat. It's a solar

1 observatory, and while it's in operation, it's being heated 2 up by the sun, the surface of the dome especially because 3 that's very close to the telescope. But even these other 4 buildings that are in the same vicinity of the telescope, 5 the amount of heating that they experience from being б exposed to the sun is enough that it heats the air around 7 them, and then that creates that blurriness that we're trying to avoid and really has to be avoided if the 8 telescope is to meet the scientific objectives that are set 9 10 out for it. So then -- and even with white, it still has to 11 be cool because this line you see on there is a series of 12 panels. That would be double-skin metal panels through 13 which liquid cooling flows to extract even that slight 14 amount of heat, which would still be plenty to ruin the seeing, so even so, we need a mechanical cooling system to 15 cool the parts that are really close to the telescope. 16

17 And it's worth going into a little bit more detail 18 on that. The issue of whether or not this telescope could be something like maybe blue to blend with the sky, silver 19 20 to reflect the color of the sky or even brown to match the color of the cinders is a bit of an issue. And we've looked 21 22 at -- we have computer programs that predict accurately what 23 would happen and how fast it would heat up and how much it 24 would heat up with different coatings and different color 25 material, and it's pretty dramatic.

1 Even if you go to kind of this -- pretty much this 2 sky blue color here, the amount of heating is literally four times as much than if it's a good quality and the right kind 3 4 of white coating. And what that means, and another 5 statistic that's worth of kind of bringing in this on sort б of a technical level, is that the entire electrical budget 7 for the observatory is about a megawatt at peak. And that sounds like a lot of power, and it is a lot of power. And 8 9 about half of that is consumed only in cooling the dome even if it's white. 10

And so if you take that half and multiply it times 11 12 four, you can see that pretty quickly we get into pretty 13 staggering amounts of power that are required, and we 14 immediately get past what's right there on the mountain now in terms of the transmission lines of the substation on the 15 mountain. So it literally makes the project unfeasible 16 17 economically to make it something other than white in the 18 way that we imagine doing the cooling. And we've looked at 19 enough schemes to know that we've tried with as much 20 cleverness as we could. We understood it was an issue, the visibility of the telescope, so we looked pretty carefully 21 22 at that. And it's, as I say, a pretty dramatic difference. 23 And certainly if we go to brown, it's even worse than the 24 blue, and that was kind of the baseline in the long-range 25 development plan for any new building that didn't have to be

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 white for particular reasons, specifically solar telescopes 2 would be painted the same color as the cinders in order to 3 make them less visible. That's pretty much it. Just as a 4 kind of a quick recap, we have the two potential sites and 5 both of them have enough area and have been tested, have б good seeing. The dome is the most dominant visual element 7 of the whole thing, and it has to be that way. It has to be high enough to get above the blurry seeing. It has to be 8 9 large enough to allow the telescope to be maintained and 10 rotate inside it. And it has to be white because of heat.

11 The other buildings are of less import and much 12 less visibility. They're much lower. The support and 13 operations building is near the telescope, and it also has 14 to be white. It really is just large enough for the functions that are directly related to activities of the 15 telescope. And we do intend to continue to use to some 16 17 extent the existing Mees structure and to use that in 18 whatever way we can to minimize our footprint on the mountain. The utility building is less an issue for us. 19 20 It's a little farther away to remotely exhaust the heat that we're taking off in the form of air flow and also to get the 21 22 sound and the vibration away from the telescope, but that building still would have to be sound insulated because we 23 24 understand certainly that the serenity of the environment on 25 the mountain is also important and would be painted brown

because it's far enough away that it doesn't matter too
much.

3 So that's what I had. There's a couple of 4 pictures here with sort of larger views of those nice 5 renderings that you see there. This is the -- looking from б the north at the site, the primary site, and this is a 7 little bit better artist's conception of what that facility would actually look like. One thing I hadn't mentioned in 8 some of the other things, and you see it better here than 9 10 elsewhere, is this white apron on here is the same reason as 11 -- it's a piece of concrete that wraps around the east and 12 south side of the building. And it provides, allows that 13 the -- the heating on the cinders here would be considerably 14 -- it's like a 40 percent increase on the lower enclosure cooling, so that also is for the reasons of reflecting the 15 heat and not allowing it to heat up. 16

17 This is looking at the alternate site in this case 18 from the south, and these are other telescopes, existing telescopes in the foreground. And again, you see kind of a 19 20 nice realistic view of what that would look like, the support building and the enclosure. And this is an aerial 21 22 view from the east looking back and then this is the primary site again, Mees just beyond, and the Reber Circle site is 23 up here. That's what I have, and I quess our hard working 24 25 court reporter gets a break. And after that, we'll be happy

1 to hear your questions.

2 MS. COMPOC: So we'll take a five-minute break 3 then. How many people think that they do want to make a 4 question or comment after the break? One. Oh, we might end 5 early. 8:00 we'll come back. Thank you.

6 (Recess taken.)

7 MS. COMPOC: We're ready to begin now. So let's just go over the rules real quick. Please remember Rachelle 8 9 is only a human being. She can only type as fast as what, a 10 Super Hero? So as you come up to the mic, say your name, 11 speak slowly and please remember the five-minute rule, okay? 12 Be as concise as you can so everyone gets a chance to speak. 13 And scientists, also be as concise as you can so everyone 14 gets a chance to speak. Any questions before we start? Does anybody have any papers, by the way, that David and I 15 16 can collect and we can read on your behalf if you're not 17 comfortable on the mic? Okay, whoever would like to start. 18 MR. BRASS: Just go ahead and if you would like to make comments or questions, line up at the mic over on this 19

20 side.

MS. SUZUKI: Carol Suzuki. My question is what's the economic benefit to the people of Maui? And a couple of things that we've talked about in our neighborhood is the jobs and education for our children and also the general public. And then one other question is why is it okay for 1 the existing domes to be silver and not the new -- I think
2 it's the type of research.

3 MR. BARR: Maybe we'll start with the second one 4 first. The existing dome on Haleakala that's silver, of 5 course, is the Air Force dome here. And in the first place, б it's a nighttime telescope. That's one thing, and the 7 heating isn't as critical in that case. And we did look at silver as an alternate here as I mentioned before, and it --8 because silver is, in essence, darker than white, it not 9 10 only absorbs more light, it also absorbs, yeah, absorbs more 11 heat. And there's other domes, too, and all of the ones 12 that you'll see that are silver are nighttime telescopes. 13 White is a common color. And for reasons of environmental sensitivity, the brown, you know, the base of this building 14 15 can be brown because, again, it's not a solar telescope. And within the context of a long-range development plan, 16 17 solar observatories are specifically excluded from that for 18 that reason. I don't know of a solar observatory that's 19 anything other than white, so that's --

20 MR. WAGNER: When it comes to economic impact, 21 what we're currently working through is trying to understand 22 how best to support this, the operations of this facility. 23 You could imagine a staff of approximately 35 to 40. That 24 would include the whole range of skills, so administrative, 25 scientific, engineering, facility support. All of those 1 folks wouldn't be based up on the mountain, of course, or 2 working up on the mountain. Also in consideration is where 3 the National Solar Observatory ends up, and so we've been 4 discussing with our partners, the universities around the 5 Country where would you put the National Solar Observatory б in an era that includes the ATST, and the Institute for 7 Astronomy at U of H is very interested in that and would like us to come out here. And I'm putting words in Jeff's 8 9 mouth.

10 MR. KUHN: It's not very hard.

11 (Laughter.)

12 MR. WAGNER: Yeah, it's not very hard. When it 13 comes to education, I think Craig Foltz can talk to that, 14 but I can tell you the National Solar Observatory, it's part of its mission. And it's something the NSF tells us to do. 15 It's something that we want to do. It's something we 16 happily do. We have programs for public and educational 17 18 outreach with students, with teachers. We hold workshops. We bring the students in. We want folks to see what we're 19 20 doing. We want them to understand what we're doing. It's to our benefit. We live in the communities where we work as 21 22 well. And the interesting thing about this telescope is 23 that it's a solar telescope. It's in operation during the 24 daytime, so people can actually understand that the work is 25 going on right then. It's not at nighttime. You're seeing

1 it right when it's happening. Craig.

2 MR. FOLTZ: I just want to just add an exclamation 3 point to what Jeremy just said. At the NSF, there are 4 really two priorities that we judge a proposal by. One is 5 the intellectual merit. That's science, right. The other б is the broader impact to society, and that is often 7 construed and typically it contains a large component of the integration of research at the highest level with education 8 at all levels, K-12, universities, graduate students and so 9 10 on.

So all of our facilities, and the NSO, the 11 12 National Solar Observatory, is a facility that we support 13 the operations of, must have, they must, it's part of their 14 charge, public outreach and education components. And NSO 15 and OAO, the National Optical Astronomy Observatory, which 16 is joined at the hip, have exquisite programs for teachers 17 and for outreach in New Mexico to both Native American and 18 to Hispanic communities. And the same in Tucson. So that -- those opportunities will be there. I think I can 19 20 say that without any worry of being proven wrong for both public and private education and for the public at large. 21 22 MR. WAGNER: I should also mention the 23 construction because this is a project which would be funded 24 at the level of \$175 million. There's a lot of work to do. 25 We will do much of it here on the islands, and so there's a

1 benefit there as well to the economy.

2 MR. MAYER: My name is Dick Mayer. Since you've 3 given professional background, Professor Emeritus of 4 university and also the vice-president of the Kula Community 5 Association and also I was vice-chair of the community -- of б the group that put together the citizen's advisory group 7 that put together the community plan for this whole upcountry region, which includes the top of the mountain, 8 just to give you some background. 9

10 Several comments, not all of them are questions. 11 I am a bit disturbed that the pictures that were utilized 12 may be deceptive to all of us in the audience, that they're 13 aerial photos that make the building look much shorter than 14 it actually would be. And what I'm asking is that a proper way would be to have the building there next to the other 15 buildings, the ones we see in the distance there to the 16 17 summit observatory to this building. The pictures you have 18 of the buildings themselves show the building, but there's 19 no way to get a scale by looking at those buildings, so I 20 think for the public, it would be very helpful to have a portrayal that would accurately portray it really. Number 21 22 two, the angle at which it's shown -- it's showing here at 23 the summit. I think in the publicity that goes out to the 24 public as well as certainly in the EIS, the preparation 25 notice, et cetera, there should always be viewplanes from

the observatory on top of the mountain as well as from the
 bottom of the valley as well as from Kula where the
 residential area is and from the inside of the crater.

4 Being further away from the edge there, it's 5 actually sitting very much above the crater itself. And one б of the most beautiful things we have on Maui is that crater 7 and the hike through the crater, which is a major tourist activity here on the island. And to have that sitting there 8 at the top of the viewplane as you look up at that very 9 10 natural view is something that should be done, and there 11 should be a real look at it. I happened to be last night 12 down in Maalaea, knowing this meeting was taking place 13 tonight, and looked up, and I was surprised at what a 14 sizeable profile the existing telescope had in the sunlight 15 at sunset time.

16 This building stands -- it looks like, appears here to be dozens -- and again, I can't tell from this 17 18 view -- dozens of feet higher at its base than the other ones in the distance there in that picture. And its overall 19 20 elevation is considerably higher, and it would be useful for 21 us to see from a place like Maalaea, Wailuku, Kahului how 22 much of an interruption on the profile of Haleakala these 23 facilities would be, because this is very deceptive. And 24 even the picture that was in the paper this morning, also an 25 aerial view, looks down at the thing and makes everything

1 look relatively flat by comparison, so that's very critical. 2 Also what bothered me in the presentation, several 3 times the number of 92 feet was mentioned. It was mentioned 4 in the Maui News today, and yet if you sat tonight in the 5 front row, you saw the elevation of the building is 137 б feet, not 92. And that's the height people will see. No 7 one outside the building will know what level the telescope is. That's an irrelevant number. The relevant number for 8 the public, because we will be outside the building, not 9 10 inside the building, is the 137 feet of height, which is taller than any other building on the island of Maui by law, 11 12 taller than any hotel on the island, and people should be 13 aware of that. The elevation shouldn't be perceived as 92 14 feet, which would be about two-thirds of the height. 15 There's a community plan that's been prepared and

now a community plan for the summit of Haleakala. And in 16 17 that community plan, it says the maximum height of any 18 facility, any building in this community plan district should be 35 feet. This facility is about four times the 19 20 height of what the community plan calls for. This project has to follow the community plan. Another statement that I 21 22 need to point out to you that should be in your final 23 documents in the EIS is the statement on Page 25 of the 24 upcountry community plan, which reads as follows: 25 "Encourage federal, state and county cooperation in the

preparation of a comprehensive Haleakala summit master plan to promote orderly and sensitive development which is compatible with the natural and native Hawaiian cultural environment of Haleakala National Park."

5 This has not been done. We've asked UH to prepare б a master plan, and we also have asked them to do that in 7 conjunction with the National Park at the summit of the mountain. So far UH has taken a look only at the 18-acre 8 site and has not done that in conjunction with the other 9 10 users at the top of the mountain. I'm going to ask if this 11 \$160 million could not help us on Maui fund a proper plan 12 for the summit of the mountain in conjunction with the Air 13 Force, federal government facility, the National Park, NSF, 14 UH. They're the ones who should be working together. And I don't know whether it would cost \$50,000, \$100,000, 15 16 \$200,000, but I would ask that with the EIS process, that you help us prepare a master plan for the summit of 17 18 Haleakala. And that would allow us then to see the relationship of all these facilities to each other. The 19 20 presentation today concentrated, as you probably correctly did, on the telescope that you're building. Five minutes? 21 22 Do you want me to sit down? Does anybody else want to speak? Okay, I'll sit down and come back. 23 24 MS. WYLIE: Are you going to answer him first? 25 MR. BARR: Yeah, I just want to make one

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 clarification. And as you correctly stated, a lot of what 2 you have are comments and points well taken, but the one 3 point you made about the height and it said 92 feet in the 4 paper this morning, I intentionally intended to clarify 5 that. And we didn't put out anything, I don't think б anything deceptive, on Tuesday night when that reporter made 7 that, so really the dimensions were there and the dimensions are in the brochure. So that was just one thing. Also, the 8 deceptive angle, you're right, there's really no way to take 9 10 an aerial or any other kind of angle and make an apt 11 comparison necessarily.

But the combination of angles was the intent, and also I just wanted to mention that as part of the EIS process, we will be doing those viewplane analyses with actual views from the other critical communities and areas around, so I just wanted to clarify.

17 MR. MABERRY: Hi, I'm Mike Maberry, Assistant 18 Director for the Institute for Astronomy. Relative to the 19 planning issue is that the National Park does have a general plan that was studied and reviewed in the progress -- in the 20 process of developing our long-range development plan. We 21 22 specifically did not call or plan for the 18 acres that we 23 are stewards for a master plan because of the request of the 24 community to have a master plan for the summit area. 25 Unfortunately, we found out very quickly in the process of

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 putting and starting the process to do the long-range 2 development plan that there are numerous federal, state and 3 private land holders surrounding the area. And there wasn't 4 any trigger or any way that we could force them to 5 participate in the process, so we concentrated on the area б that we are stewards for and did a very thorough, the most 7 thorough plan that has ever been done for an 18-acre area probably on the island. And that will be our contribution 8 to a master planning process should there ever be one that 9 10 is undertaken.

MR. TRUITT: Hello, my name is Stan Truitt, and I 11 12 would like to comment with regards to the deceptiveness of 13 such a photo. And that is that from the point of view of 14 the camera that took this picture, that the angles that each one of those structures makes with a local vertical is about 15 the same angle, and therefore, each of the structures is 16 17 reduced in proportion as a function of that angle. And so 18 when you do everything in one photo like this when it's not absolutely vertical, it does give you a very good measure, 19 20 so it's not deceptive when it comes to the balance between 21 the size as viewed in each photograph of each observatory, 22 each structure with regard to the proposed, which is 23 rendered in this one. 24 MS. WYLIE: Okay, my name is Prentise Wylie. I'm

25 an interested citizen. And regarding the first speaker in

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 the yellow shirt, I thought your information was really 2 interesting, but you haven't convinced me of what is the 3 usefulness of predicting what's happening with the sun. 4 Like if we know the volcano is going to erupt, we can get 5 out of the way, but our houses are still going to be б destroyed. And if we know a hurricane is coming, it's still 7 going to come, so perhaps you would like to say a little more about that. 8

9 MR. KUHN: I think the pursuit of science is to 10 understand the future. That's what we do as scientists. 11 Science is about predicting the future, and what we as 12 humans do and civilizations do is up to us. If I were to 13 know that the climate would be one percent cooler 11 years 14 from now, I think there's quite a bit we would do as 15 civilization to try to placate the effects of that on humanity. I can't argue from the basis of science what you 16 17 can do with that information, but I can argue that I feel 18 that life would be better off knowing rather than not knowing, and that's what this is about. 19

20 MR. ORSZULA: Good evening, my name is Ed Orszula. 21 I'm a Chicago transplant. I retired out here in 1998, so 22 I'm happy to be in an area like this. My concerns are that, 23 just as the people that preceded me, is that what is the 24 impact of me moving out here versus other people coming 25 after me? And in that respect, how many people do you

1 expect to run this observatory and where do you expect to
2 find the homes when the homes are so difficult to find in
3 the first place?

4 MR. WAGNER: As I said, I would expect the staff 5 to be at the level of about 35 to -- I would expect the б staff to be at the level of about 35 to 40. I mean we're 7 studying this to understand what it takes to support the facility, but I think that's a reasonable estimate at this 8 9 point. And it would cover administrative, scientific, 10 engineering and facility staff. You would require a support team for the operation of the facility that would travel up 11 12 to the mountain, and then you would have staff in town below 13 the summit. Also, you would expect that some of the 14 scientists would likely be back and forth to Oahu, that sort 15 of thing.

16 You could imagine that some of the folks would come to the island. Some of the folks would be hired on the 17 18 island. My experience with some of the other observatory 19 operations in the Hawaiian Islands is that you end up with a 20 staff of local folks. And you're talking about administrative. You're talking about engineering. You're 21 22 talking about facilities. Some of the folks are going to come over and stay. Some of them will come over and they 23 won't stay and they'll leave. But you'll end up with a 24 25 staff of mainly local folks is my understanding of how it's

worked out. As far as housing and all of that, you're talking about those numbers of people. The time frame involved, I think -- I can't predict what the housing market or the availability would be. It's something that we look at.

6 MR. ORSZULA: Thank you.

7 MR. FOLTZ: I just want to make one statement that bears on that, and I think it's something that will be 8 9 included. And the statement is that this is a facility for 10 everybody. The facilities that the NSO runs and the 11 facilities that the National Optical Observatory runs are 12 for everyone, for all scientists. This is not for a small 13 number of scientists, so in addition to the staff here, 14 there will be visitors. There's good sides and bad sides to that, but there will be economic impact. There will be 15 people who will travel to use this facility, and that should 16 17 be estimated in the EIS.

MS. HAN: My name is Keala Han. And to the previous speaker who is concerned about people moving here, if we -- there's no way you can stop people from coming here. Because if we tried, 99 percent of us in here wouldn't be here today, so there's no way we're going to stop people from moving to Hawai`i. MR. PACHECO: Good evening, I'm Walter Pacheco

25 with the Maui Police Department. I'm their communications

coordinator, and my responsibility is running the
communications systems for the police department. We are
one of the users on the hill. We have a facility at the end
of the road, which is right next to the FAA's receiver trans
site. We partner with the State of Hawai`i, which is in the
left corner along with the now Hawaiian Telcom, and we're
the users of the lower road.

8 One of our concerns is the work that happens at the high site does have impact on the lower site, 9 10 specifically the January storms that we had, work done there caused runoff to obstruct the road with a cinder pile 3 feet 11 12 high. It required the National Park service to come up, 13 clear the roadway with their Bobcat before we could get into 14 our key communication facilities. Additionally, at that site that I deal with, there's a lot of emissions. That 15 place, there's transmitters, all kinds of things up there, 16 17 and we're working through most of that. A concern I would 18 have of a facility like this is what types of emissions, probably minimal, would be generated as well as what kind of 19 20 issues would you folks have with the existing RFI and other emissions that are on site. 21

And my third question is relating to the power delivery to the top of the hill. There is limited resources coming up, and you folks are talking about significant uses of power. This will eventually limit any other work

potentially being done at the site, so we're kind of concerned about buffers. What kind of cushion would be left behind for the rest of the facility up there? Thank you. MR. MABERRY: Thank you very much. I'll take a shot at this. The road that you're referring to is this for road?

7 MR. PACHECO: Correct.

MR. MABERRY: Your site is out here and this road 8 runs around. It is on part Department of Land and Natural 9 10 Resources land and part Hawaiian Homelands. It was originally a four-wheel drive road. The FAA paved it at one 11 12 point in time and have not maintained it. The way the road 13 was cut in was just rough cut. It was not a planned, you 14 know, designed road. It was rough cut with a Cat, a Caterpillar. The runoff area that you're talking about, we 15 16 had an unusually wet winter that year, and the runoff came 17 from actually not even from property near ours. We are 18 responsible, as you saw from the other one, for an area sort 19 of like this. There's another piece of land in this area 20 right here that is under the control of the FAA just like the part out here at the end. 21

And when you study this area, the blockage of the road you're talking about is right here. And some have suggested that the amount of pavement in the area is significant and contributed to the runoff, but I think you

1 can see just by looking there, there's not a lot of 2 pavement. Now, we have commissioned a hydrology study and 3 an erosion study, and we should have results from that 4 within about a month, and then we'll actually be able to 5 prove quantitatively what the situation really is. The next б that you mentioned was I believe was power. We have our own 7 substation for the Haleakala High Altitude Observatory site. There's another set of lines that come down this way over to 8 your site. They were recently upgraded, and Maui Electric 9 10 contacted us and checked to see what kind of plans we might 11 have for the future, and the substation was increased in its 12 size in order to handle the capacity necessary for a 13 facility such as ATST.

Third issue was radiofrequency interference, and 14 15 this has been a problem that several people in this room who are even now retired started working on back in the '80s. 16 17 When the facilities were first up here, most of the data was 18 taken with streaming tape or photographic plates, but with 19 the advent of the charge-coupled device, the CCD's that many 20 of you probably have in your cell phones for taking photographs in here, became sort of the standard for really 21 22 getting deeper imaging. It allowed us to greatly increase 23 our ability to capture the photons, the particles of light, 24 amplify them and to be able to see more of the sky. It just 25 multiplied the efficiency of the telescopes that we use.

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 So radiofrequency interference began to become a 2 problem for us, and you can see right here there's a piece 3 of property that is on a month-to-month revocable permit 4 from the Department of Land and Natural Resources that is 5 commonly referred to as the Lee Enterprise Broadcast site. б You can see that they are extremely close to us, whereas 7 most of the other antennas are not. The National Astronomical Union has done a study and determined that the 8 acceptable level for radiofrequency interference measured 9 10 outside an observatory during optical or infrared 11 observations is two microwatts her square meter. People in 12 this room have measured right here at this site just to give 13 you a direct example over 184,000 microwatts per square 14 meter, so it is significant the amount of RFI. 15 There has been a process over many years. I think there have been three different draft environmental 16 17 assessments to look at helping these broadcasters locate to 18 a permanent site. In fact, I think it's even been part of 19 the community's plan to recommend having a consolidated 20 broadcast site for commercial broadcasting. And just this 21 week the process has begun on a new draft environmental 22 assessment to start to look at a site where the broadcasters

24 without interference with each other and without

at this site will be -- will be able to operate together

23

25 interference to the observatory site, so that will be

probably a future meeting that others will be -- that the community will be invited to participate. Did you have a followup question?

4 MR. PACHECO: Actually, the information I got 5 regarding the flow came from the FAA, their technician. I б realize the Department of Energy and the FAA site below this 7 is in that area. So that's where I got that information from. But the question comes back to your operations, how, 8 you know, the RFI that is on site and potentially may 9 increase. There's K-5 Broadcast down in the saddle just 10 beyond the state site. That's all there. 11

MR. MABERRY: That's all there. At this point in time, there is no plan to relocate these facilities right here because there were extensive studies done before their permits were granted to show that they would not break the threshold of the 2 microwatts per square meter.

17 MR. PACHECO: All these things combined is the 18 issue. And we have mixing of frequencies at various places. MR. MABERRY: Right, I think I see where you're 19 20 coming from. This facility will not be generating any RFI period. Typically -- there was a situation where we did 21 22 have a very brief period of time that I think you're 23 referring to with regards to the FAA. We had an instrument 24 that went bad and that was giving off a signal and the FAA 25 contacted us and we made the correction. But under normal

1 circumstances when everything is operating correctly, I'm 2 sure as a -- in your line of work, you're familiar with the 3 fact that getting a good ground at this site is very 4 difficult because there's cinder and very little moisture, 5 and so things can accidentally become transmitters. But by 6 design, we do not transmit RFI intentionally. 7 MR. PACHECO: And in your statement regarding your substation, that substation actually also impacted us on the 8 road at the same time they were trying to change out a 9 10 transformer. Earlier they were actually shutting power off to the site up the hill, so we do get power to the same 11 12 lines which transition through there. 13 MR. MABERRY: So the lines come from here and go

14 back around? I thought I saw a separate set of lines.
15 MR. PACHECO: No, as I understand it from the MECO

16 people, when they were actually replacing a transformer at 17 the site, it affected everybody.

18 MR. MABERRY: I'll look into that.

19 MR. PACHECO: Just that question.

20 MR. MABERRY: Thank you. We'll consider that in 21 the process of development.

22 MR. BRASS: Just I want to interject a reminder 23 here that if you would prefer to have Kim or I read your 24 comments or questions, get them to us by quarter of so we 25 have time to get them in before 9:00.

1 MR. MAYER: One thing that was mentioned was that 2 you would have some people working off site down below, 3 et cetera. And certainly it would be useful for the 4 community to know what other facilities, buildings you would 5 be building as part of this project and what kind of б transportation up and down the mountain there might be 7 between that. That would certainly be useful. And also are there any connections via fiberoptics and those kinds of 8 things? With all the data you're collecting, will that all 9 10 be processed internally, or do you send it down to the 11 computer in Kihei, and et cetera? So the connections to 12 other areas I think would be of use to the community. 13 Also you mentioned the conservation use permit that you would need there. As I said, this facility and 14 these facilities are not part of the community plan. 15

these facilities are not part of the community plan. The upcountry community plan does not have any recognition of these activities, and I would recommend that you look into the possibility of going through various county approvals to see whether these things are consistent with the county general plan and the county community plans and not just the conservation use permit. Thank you very much.

22 Oh, one last question. You mentioned 175 million. 23 I think it would be useful for us to see -- because a lot of 24 the money would be going for very expensive optics and other 25 things which would be processed off island out of maybe the

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 mainland somewhere, and how much actually is the 2 construction figure and the actual generation of economic 3 benefits to the community in terms of jobs? That's 4 something I think we need rather than just the gross figure 5 for the whole project. A lot of that money goes for design, б for architects, for many of you folks who are a far distance 7 from here and don't benefit the local community. Thank you very much. 8

9 MR. MABERRY: Just to address a couple of those 10 issues. Some of you may be aware that just up the road up 11 here at Kulamalu, the University is in the process of 12 building a new facility to provide sort of base station 13 facilities, research, the opportunity to work on our 14 equipment before taking it up to the summit, and we have made arrangements to provide space for base operations for a 15 small number of partners. We would probably not house all 16 17 of the people that would be involved in this project, but it 18 would definitely serve their needs for many years, for 19 several years during the construction process and into early 20 operations.

As far as connectivity, there is currently fiber. And for those of you, there's the Internet pretty much is connected through fibers under most circumstances. In this case, there are fibers that are buried in the ground and there is what is called lit fiber or fiber that's actually

1 operating and dark fiber that is there that is not being 2 used that can be lit, so to speak, or can be. And there's 3 plenty of dark fiber available for this project, so we 4 wouldn't be needing to add anymore fiber to the summit. 5 MR. MAYER: Thank you. 6 MR. MABERRY: Somebody want to cover the --7 MR. MAYER: The approval process. The approval process. Community plan, general plan, consistency. 8 9 MR. BARR: Let me just talk a little bit about 10 that. Maybe we'll bring Mike back because he knows more 11 about this than I do. Our understanding was that this is 12 university owned land and that we are, for better or worse, 13 we're exempt from the planning process, the county planning 14 process, and so we don't have to -- obviously, there's 15 reasons why you would want in some cases to abide by the same rules, but my understanding was that we weren't and we 16 17 haven't incorporated that into our planning. And certainly 18 that 35-foot height limit would preclude anything like a 19 telescope. 20 MR. TRUITT: What about the ones that are already there? 21 22 MR. MABERRY: What he's referring to is that we 23 have been granted stewardship of this land under an 24 executive order that specifically specifies for observatory 25 purposes and education, and it is under the state. And the

state is exempt, although we do everything we can to comply and to be good neighbors within the community. Obviously from a scientific standpoint, that 35 feet would be a little difficult for us to adhere to, but in all other ways, we strive very hard to work within the community. But we'll definitely include your comment in the EIS, and we'll address it.

8 MS. COMPOC: I just wanted to say that there are some people who haven't spoken yet tonight, and I just 9 10 wanted to say the obvious, which is you don't have to have a 11 Ph.D. to talk on the mic. These are public comment 12 meetings, so if anyone is feeling any shyness or hesitancy, 13 this is really -- the whole purpose of our meeting tonight 14 is to collect public comment. And if you haven't had your chance, you made the effort to come down here tonight. And 15 if you have something that you want to say, a question or a 16 17 comment, that's what the panel is here for. That's what the 18 environmental impact survey is all about. Take your chance. 19 MS. SING-LEDESMA: Good evening, my name is Karen 20 Hue Sing-Ledesma, and I'm a resident here on Maui. And 21 first I would like to say congratulations on your discovery, 22 Mr. Kuhn, on the sun spots. That's very awesome. I know 23 why you especially and the science community would like to 24 have this observatory here on Haleakala, and I'm here just 25 to simply say I would rather you not be here on the island

1 of Maui. I come here as a kanaka maoli. And I've seen this is millions and millions of dollars that would be invested 2 3 here on the island, and I see the simpler side of life such 4 as many of my brothers and sisters being homeless here --5 here on this island. And so this is where I come from б asking that we keep Haleakala sacred and that you keep the 7 mana of Hawai`i and that you really believe in sustainable living. And I ask that you take your incredible telescope 8 to the other part of the United States. Thank you. 9

10 KAHU MAXWELL: Kahu Charles Kauluwehe Maxwell. Several years ago I did a study, cultural study, but I've 11 12 got to go back and relate as to what happened many, many 13 years ago, and I spoke about this in Kula, but in the '40s, 14 they were using this place for communications. And in the '60s, they acquired this 18. acres and they started to build 15 the observatories. Nobody said much; however, when they 16 built the AEOS, I got involved from day one. I was promised 17 18 all kinds of things that that entire building would be like a mirror, that if you look from downtown, it would reflect 19 20 the lava around it and the sky above. They were actually wanting to fly me to New Mexico to show me the observatory 21 22 there.

However, as the work progressed, we had met and talked about the sacredness of Haleakala, how the dust, the soil, the cinders are sacred to Pele and, of course, the

1 lava is what Pele is all about. About eight months into the 2 project, I got ill about five weeks. And on the sixth week, which I went up from the 8,000 foot level, there was a huge 3 4 truck that had turned over and one boulder weighing about 5 three tons was lying on the side. And this Hawaiian truck б driver came run up to me with tears in his eyes and told me, 7 "Uncle Charlie, this is the last load. They took everything down the mountain." 8

When I went up to the site, I was so shocked that 9 10 they had dug this huge massive hole without me saying one blessing, saying nothing. It was really, really hurtful. I 11 12 had a press conference and the Air Force, one of the top Air 13 Force people came here to Maui. I met with them and I made 14 them go down to the crusher in Puunene. They crushed 150 tons of rock from Haleakala. Myself, papa kalakea and my 15 grandson here, we prayed and asked forgiveness and I 16 17 followed the 150 tons of rock. I made them bring it back to 18 Haleakala, but they couldn't take it up to the top because 19 once you take out material from the top there, you cannot take it back. So I made them give it to the National Park 20 to pave -- to use in the crater with no asphalt or anything 21 22 but to fill up all the crevices in the trails, and that's 23 what they did with the 150 tons.

You know, we're talking here. We don't want this,but how come when we look at the pictures like this, where

1 was everybody when all that facilities was built? You know, 2 Mary Everson, myself, we fought. We fought the big AEOS. 3 We fought against the Faulkes. I even stood up and I 4 invited myself, my sister, my grandson and my other grandson 5 to a press conference they had with the Prince of England б here at the space center in Kihei. And I disrupted the 7 hearing when the Prince was going to sign with Governor Cayetano. And I stood up and I left. And security -- I 8 didn't know that he had the Secret Service following him, 9 10 and I sat on the sidewalk outside. And as he passed by, I said to the Prince, I says, "Make sure that you are aware 11 12 that whatever planning happens at Haleakala that you include 13 the Native Hawaiians." So two years ago, thanks to Mike, after all my -- at one time, I didn't like Mike Maberry or 14 even Charlie Fein because I couldn't trust them. I don't 15 16 know if I trust them now, but anyway.

17 (Laughter.)

18 He gave me the opportunity the draw -- to do the cultural assessment and I brought forth cultural things that 19 20 they have to follow. If anything is touched, even if they move soil up there, they have to have prayers. It has to be 21 22 culturally correct. If workers work up there, they got to 23 do mele komo, an entry chant and an exit chant asking 24 permission to come on that property and work the land. And 25 when they leave, they apologize for they disturbed anything.

1 And so that's what have been going on this last year.

2 My grandson is one of the monitors up there. And 3 he goes up. He prays with the people. Even Japanese, some 4 Japanese came from Japan about eight months ago and they all 5 went through our classes with interpreters to find out -б they saw the movie called "Haleakala" with myself, a friend 7 Charlie Kaupu, Kaeo, and it covered everything. So that, you know, if we all not going want this up on Haleakala, 8 9 fine. But for us as Native Hawaiian people, it's a 10 wahi pana. It's a place, a sacred place. And even I said a 11 couple days ago at a meeting with the new Lieutenant 12 Colonel, I says, "I wish there as nothing up there." That's 13 what I wish. That's a sacred place. It was sacred before. 14 How come it's not sacred now? So I'm doing the Environmental Impact Statement, and they might not want what 15 I'm going to recommend. But I will recommend strong 16 17 cultural observance when they're using the site and when 18 they're building, if it ever happens. So I had to do some 19 clarification. Thank you.

20 MR. MABERRY: If I may very briefly just add to 21 what Kahu said. There is a process that was outlined in the 22 long-range development plan, and many of you attended, I 23 recognize seeing you there, the showing that we had of the 24 "Sense of Place" video of Haleakala down at the MACC just a 25 few months ago. It's a wonderful piece and it does a very

good job of letting those who aren't kanaka maoli get a
sense, get a feel of how important the aina is to the kanaka
maoli. And all of the people on this project that you see
here today have -- even before most of them, before they
even came out here have seen the video. They have
communicated with Kahu and others. We've worked very
closely, as Kahu said, with Dane at the summit.

8 And we are very sensitive and appreciative of being able to be at the holy site. It is very important to 9 10 us. It has -- you know, religion is very individual, right. 11 Some people have a sense that is not -- that others may find 12 similar to religion that is not really religion, but that 13 sense of awe, of being at Haleakala anyone who goes up there 14 whether you consider yourself religious or not can feel. 15 And we feel that and we appreciate the opportunity to be able to work in such a place. 16

17 I have had the opportunity to work at Haleakala 18 for 21 years, and that's where my spirit will always be. I 19 just want you to understand that we do appreciate it. MR. MAYER: I have just one question. Can someone 20 21 tell me the elevation of your prime site at the ground 22 level? What elevation is that? MR. BARR: That's about right, the elevation of 23 the mountain is at 10,000, and it was at 9,960, something 24 25 like that. I can't tell you the exact elevation, but it's

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

1 in that range. 2 MR. MAYER: 9,960, the base of the thing? MR. MABERRY: Yeah. 3 4 MR. BARR: That's right. On the floor plan, I 5 think --6 MR. TRUITT: The elevation plan. 7 MR. BARR: And these are based on the topographical map you saw earlier. It's actually not that 8 9 one. I think the floor plan has it. Yeah, 9,983 actually. 10 And again, that's based on the topographical map, which was this first one and taken off of -- and that's somewhat 11 12 imperfect. There's a little bit of work to be done to 13 verify that, but that would be at the primary site, and then this site is the base level of the building would be 14 approximately 10 to 20 feet higher. That's to be 15 16 determined, too. 17 MR. MAYER: In other words, the 137 feet added to that would actually make the top of this building somewhere 18 19 around 50 to 100 feet higher than the summit of Haleakala, 20 is that correct, 137 feet added? 21 MR. MABERRY: On the top of Kolekole Puu. 22 MR. MAYER: The highest point of Haleakala. 23 MR. MABERRY: No, the highest point of Haleakala is red hill, which is 10,023. 24 MR. MAYER: Okay, it is higher. Some of this 25

APPENDIX B(3): TRANSCRIPTS – PUBLIC SCOPING MEETING, PUKALANI COMMUNITY CENTER, JULY 14, 2005

building then, the top of this building would be somewhere in the order of 50 to 80 feet higher than the highest single point of Haleakala, and I think that's something the public should be aware of. And that was the profile I was trying to describe.

6 MR. BRASS: There are still a few people who 7 haven't had a chance to speak. We have about ten minutes 8 left.

9 MR. MABERRY: Something that he addressed earlier 10 that we didn't respond to was viewplane.

11 MR. FEIN: Part of the environmental impact 12 statements and part of many environmental impact statements 13 now is something called view corridor analysis. There's 14 really specialized software now that allows you to perceive on contour maps exactly where you would see a facility and 15 where you wouldn't. In addition to that, the Environmental 16 17 Impact Statement will also contain renderings from Pukalani, 18 Kula, Kihei, even Lahaina showing what the facility will look like from those communities, how much of it you will 19 20 see or not see from each of those communities.

The long-range development plan actually did some of that modeling work. We looked at those two sites last year and we went up step by step to see where visibility would occur in the different communities. Above something like 60 feet or 70 feet at the Mees site, the facility would

1	be visible, for example, in Pukalani, but not in Kihei. So
2	it depends on the community that you're in. It depends on
3	the height that you're talking about, but we will render
4	close to very close to as close to reality as we can
5	so the public will have an opportunity to see how much of
6	the building will be visible from your community. I think
7	that's important. It's come up again and again. It
8	certainly was important with the AEOS facility, which
9	sparkles out there in places as distant as Lahaina.
10	And we will make sure that we do that visibility
11	study so that everybody can see what it would look like.
12	MR. MAYER: Thank you.
13	MR. BARROS: How wide is it?
14	MR. BARR: How wide is it?
15	MR. BARROS: Yeah.
16	MR. BARR: At the widest
17	MR. MABERRY: The dome.
18	MR. BARR: Right, this and I probably should
19	I was a little remiss in not going through these dimensions
20	for those that can't read from all the rows. Essentially
21	the dome diameter as dictated, as I said before by the
22	telescope, is 86 feet from side to side. And I kind of
23	showed an extension here because the widest profile of that
24	cylindrical shape would be where the catwalk extends out
25	another six feet beyond that on all sides. Was that the

1 question?

2 MR. MABERRY: Yes.

3 MS. MARTIN: May I speak?

4 MR. MABERRY: Please.

5 MS. MARTIN: My name is Martha Martin, and I have б lived most of my life in Hawai`i. I am now 72 and I have 7 lived on Maui for over 40 years. And the reason I came to have chosen to live on Maui is because to me it is a special 8 place that has evolved from geology for many years, and it 9 10 is unique. And I consider Haleakala something like a great masterpiece that man had made, Chartres Cathedral or 11 12 whatever it is that you admire. Haleakala is a special 13 thing.

Now, I respect science a great deal. My father 14 was a scientist, and I know that people who devote their 15 16 lives to science do it not to get rich but because in their 17 hearts, they feel they can contribute to mankind by 18 following the science which calls to them. But I know why you want to come to Haleakala and knowing that you don't 19 20 have to ask us in order to do it, you are now asking us to tell you how we feel. And so what I feel is that I wish you 21 22 would build it somewhere else and not on Haleakala, and I 23 know that astronomers have studied the sun for thousands of 24 years and have learned a great deal and I think you can 25 still do it without building the observatory you are

1 planning here but do it some other way. Thank you.

2 MR. BRASS: Any last comments? We have a few more 3 minutes. Last call. We would like to thank you all for 4 coming and for giving your input, and if you -- I would 5 encourage you to take a comment sheet. There is still an б opportunity up until August 14th to submit comments, so if 7 you should think about this tomorrow and think of something else you're concerned about, go ahead and submit your 8 9 comments. That's the purpose of this process. So thank you 10 all for coming.

MS. COMPOC: There's also lots of literature here 11 12 if you think other people in the community would benefit 13 from what you learned here tonight and would make a comment 14 based on literature, that's a possibility as well. And if any of you have a meeting that you would like David and me 15 to come and facilitate, take a brochure of Mediation 16 17 Services of Maui, which is on that table. Mahalo for 18 coming. 19 (The meeting ended at 8:55 p.m.) 20 21 22 23 24

25

	1	1	NATIONAL SCIENCE FOUNDATION FORMAL MEETING
			FOR THE ADVANCED TECHNOLOGY SOLAR TELESCOPE
1	NATIONAL SCIENCE FOUNDATION SECTION 106 FORMAL MEETING	2	TRANSCRIPT OF PROCEEDINGS
3	FOR THE ADVANCED TECHNOLOGY SOLAR TELESCOPE	3	
4	TUESDAY, MARCH 28, 2006		
5		4	DR. FEIN: Aloha. Good evening, everyone. My
6		5	name is Dr. Charlie Fein. I am the environmental consultant
7		6	for a proposed project which is called the Advanced
8		7	Technology Solar Telescope. This evening we have called for
9		8	a meeting concerning the National Historic Preservation Act,
11		9	and we will explain more about that in a few moments.
12		10	I've asked Kahu Charles K. Maxwell to conduct a
13	Pukalani, Maui, Hawaii, commencing at 6:15 p.m. on Tuesday,	11	brief pule. This is not an endorsement of the project, nor
14	March 28, 2006.	12	in any way to be construed as anything other than a
15		13	pule. Kahu?
16		14	MR. CHARLES MAXWELL: Would you rise, please?
17		15	(Blessing given in the Hawaiian language)
18		16	DR. CHARLIE FEIN: We thank you, Kahu. The
20		17	Advanced Technology Solar Telescope project is in the
21		18	process of undergoing environmental impact analysis leading
22	REPORTED BY: JEANNETTE W. IWADO, RPR/CSR #135	19	to an Environmental Impact Statement. Part of that process
23		20	is a federal requirement to adhere to and to deal with the
24		21	National Historic Preservation Act, and that's why we're
25		22	here tonight.
		23	I'm going to tell you briefly about the agenda and
		24	how this is planned to go, and then I will turn the meeting
		25	over to Charisse Carney-Nunes in a moment.
1	2 ATTENDANCE		4
2	National Science Foundation Formal Meeting	1	By the way, anyone who feels like giving testimony
3 4	March 28, 2006	2	this evening and does not wish to be tele-recorded on video,
5		3	please let us know and I will ask that that be turned off.
6	Dr. Charlie Fein, Vice President KC Environmental, Inc.	4	That is not part of our process. We have a court
7	P.O. Box 1208	5	stenographer to record testimony.
8	Makawao, Hawaii 96768	6	We are in the process of preparing the
0		7	Environmental Impact Statement. We've identified historic
9	Dr. Craig Foltz, Program Officer	8	properties potentially affected by the proposed Advanced
10	National Science Foundation 4201 Wilson Boulevard, Room 1045	9	Technology Solar Telescope, or ATST. In order to assess its
	Arlington, Virginia 22230	10	affects and seek ways to avoid, to minimize and mitigate any
11		11	adverse effects on these historic properties, we have
12	Jeremy Wagner, Project Director		
13	National Solar Observatory	12	initiated consultation with knowledgeable individuals and
	Wayne Van Citters, National Science Foundation	13	groups.
14	Jean McGovern, National Science Foundation Tony Gibson, National Science Foundation	14	Tonight we are going to be requesting to hear from
15		15	those individuals and/or groups concerning potential
16	Charisse Carney-Nunes, Assistant General Counsel	16	impacts, perhaps mitigations, or any other comments that the
	4	17	community wishes to make. This is not the only meeting for
17		18	this purpose, there will be further meetings, which will be
18		19	discussed in a few minutes.
19		20	The evening is planned to go as follows. After
19			
×		21	Charisse Nunes gives us or lays the ground rules for this
20		21 22	Charisse Nunes gives us or lays the ground rules for this evening and by the way, Charisse is a general counsel for
21 22			
21 22 23		22	evening and by the way, Charisse is a general counsel for
21 22		22 23	evening and by the way, Charisse is a general counsel for the National Science Foundation, which is the proponent for

APPENDIX C(1): TRANSCRIPTS - SECTION 106 MEETING, PUKALANI COMMUNITY CENTER, MARCH 28, 2006

SLOTIO	N 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNO		TELESCOPE MARCH 28, 2
1	5 prior meetings, and so we will provide a brief overview of	1	7 do many things. But two of the things that have to be done,
		2	two of the processes that we have to go through are one, as
2	the project, just a few minutes, so that you have an idea	3	Charlie said, we have to conduct an environmental analysis.
3	about what it is that we're talking about. And then we will	4	We have to prepare a document that's called an Environment
4	open the floor up for any comments, testimony, and so on.	5	
5	Charisse, would you give us the ground rules?		Impact Statement. And then the second thing that we have
6	MS. CHARISSE CARNEY-NUNES: Sure. Aloha. I don't		do is why we're here tonight. We have to consider the
7	like to think of what I'm doing as setting the ground rules	7	impact that this decision that we're going to make might
8	really, but I do want to make sure that everybody	8	have on historic properties.
9	understands what this Section 106 process is, what that		Now, we're still relatively early in both of those
10	means, so that we know how we are going to proceed tonight.	10	processes, we're still pretty early on. We started the
11	So first of all, again, my name is Charisse	11	first step, the environmental analysis, last summer, and
12	Carney-Nunes, and I am an assistant general counsel at the	12	that was when we had public scoping meetings. And many o
13	National Science Foundation. I bring you greetings and I	13	you were here for that and some of you were not, and that
14	thank you for welcoming us to your island.	14	process will continue. The next stages in that process are
15	I wanted to introduce not only myself from NSF,	15	you can ask questions about what those next steps are,
16	but also Craig Foltz. He is the program officer for the	16	but that's really a separate process to this one. So that
17	proposed ATST project. And we also have Wayne Van Citters	17	will continue in the coming months.
18	from NSF, and he is the division director for our astronomy	18	The next thing, we will have an Environmental
19	division at NSF. We also have Jean McGovern here from NSF,	19	Impact Statement, a draft of that that everyone will be able
20	and she works to help us plan large facilities projects.	20	to comment on, okay. So that's the first process. But
21	And finally, we have Tony Gibson from NSF, and he works in	21	we're here tonight because of the second step, and that is
22	our office of legislative and public affairs.	22	the step that concerns historic properties.
23	So we thought it would be a good idea before the	23	So that brings the obvious question of what is the
24	meeting actually gets started that I explain to everyone a	24	historic property. Well, obviously to each of you here
25	little bit about the process. So this is a process that's	25	tonight, you know that it's Haleakala, your beloved
1		1	o mountain. But the federal regulations actually put the
	called the 106 process. It is our first formal Section 106	2	burden on the federal agency to determine whether or not a
2	consultation meeting for the ATST project.	3	property is historic, okay. So under the federal law it
3	Section 106 refers to Section 106 of the National		requires that the agency do that.
4	Historic Preservation Act. That is a federal law that is	4	1 5 1
5	concerned with conserving or enhancing the productive use of	5	Well, of course how would we know this? I mean w
6	the nation's historic properties. So sometimes we call it	6	don't know your stories, we don't know the legends, and so
7	the NHPA, but it's the National Historic Preservation Act.	7	the only way that we can do this is to consult with you all.
8	And Section 106 is a special part of that act that is pretty	8	And so what we did was we hired an expert, we hired a
9	simple. It requires federal agencies like NSF to consider	9	cultural expert, Kahu Maxwell, and Kahu Maxwell submitted
10	the effects of our actions on historic properties.	10	report to NSF. It's also been available to the public, and
11	So basically Section 106 is designed to give the	11	there have been some public comments on it. But the purp
12	public, all of you all here tonight, a voice in the federal	12	of the report was to educate us as a federal agency about
13	decisions that are being made that could have an impact on	13	the sacredness of Haleakala and why Haleakala should be
	historic properties.	14	preserved.
14		15	The report was not in favor of the project. We
15	So, you know, last night it seemed like some	40	
15 16	people were like, "Section 106, what are they talking	16	
15 16 17	people were like, "Section 106, what are they talking about?" So I just really wanted everyone to understand that	17	and the report did just that. So what is the result of the
15 16 17 18	people were like, "Section 106, what are they talking about?" So I just really wanted everyone to understand that this is about historic and cultural properties, and	17 18	and the report did just that. So what is the result of the report? Well, I'd say there are three things that are
15 16 17 18 19	people were like, "Section 106, what are they talking about?" So I just really wanted everyone to understand that this is about historic and cultural properties, and decisions that the federal government is thinking about	17 18 19	and the report did just that. So what is the result of the report? Well, I'd say there are three things that are important. First and foremost, after receiving the report,
15 16 17 18 19 20	people were like, "Section 106, what are they talking about?" So I just really wanted everyone to understand that this is about historic and cultural properties, and decisions that the federal government is thinking about making that could have an effect on that.	17 18 19 20	and the report did just that. So what is the result of the report? Well, I'd say there are three things that are important. First and foremost, after receiving the report, NSF made a determination that Haleakala is indeed sacred to
15 16 17 18 19 20 21	people were like, "Section 106, what are they talking about?" So I just really wanted everyone to understand that this is about historic and cultural properties, and decisions that the federal government is thinking about making that could have an effect on that. So we're here because NSF is currently considering	17 18 19 20 21	and the report did just that. So what is the result of the report? Well, I'd say there are three things that are important. First and foremost, after receiving the report, NSF made a determination that Haleakala is indeed sacred to the Native Hawaiian community. We did receive, like I said,
15 16 17 18 19 20 21 22	people were like, "Section 106, what are they talking about?" So I just really wanted everyone to understand that this is about historic and cultural properties, and decisions that the federal government is thinking about making that could have an effect on that.	17 18 19 20	and the report did just that. So what is the result of the report? Well, I'd say there are three things that are important. First and foremost, after receiving the report, NSF made a determination that Haleakala is indeed sacred to the Native Hawaiian community. We did receive, like I said, some comments about some details and about the accuracy
15 16 17 18 19 20 21 22 23	people were like, "Section 106, what are they talking about?" So I just really wanted everyone to understand that this is about historic and cultural properties, and decisions that the federal government is thinking about making that could have an effect on that. So we're here because NSF is currently considering a proposal to fund the construction and the operation of a solar telescope that would be sited on top of Haleakala.	17 18 19 20 21 22 23	and the report did just that. So what is the result of the report? Well, I'd say there are three things that are important. First and foremost, after receiving the report, NSF made a determination that Haleakala is indeed sacred to the Native Hawaiian community. We did receive, like I said,
15 16 17 18 19 20 21 22	people were like, "Section 106, what are they talking about?" So we're here because NSF is currently considering a proposal to fund the construction and the operation of a	17 18 19 20 21 22	report? Well, I'd say there are three things that are important. First and foremost, after receiving the report, NSF made a determination that Haleakala is indeed sacred to the Native Hawaiian community. We did receive, like I said, some comments about some details and about the accuracy

2 of 36 sheets

²⁵ not been made yet. Before we make the decision we have to 25 sacredness of Haleakala to the Native Hawaiian community is

	N 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNOL 9		R TELESCOPE MARCH 28, 2 11
1	indisputable.	1	significance and the majesty and the cultural importance of
2	Now, the legal word for this that the regulations	2	Haleakala to the entire public as well.
3	use, as we call it, it's a traditional cultural property.	3	The only thing that I would ask is that remember
4	So in this process you might hear the words traditional	4	that this process, the 106 process, is about the historic
5	cultural property, or TCP, but that just refers to an	5	and cultural significance of Haleakala and not about
6	acknowledgment that Haleakala is a sacred place to the	6	environmental matters generally, okay. Those matters are
7	Native Hawaiian community. So that's the first thing.	7	going to be dealt with in the Environmental Impact Stateme
8	The second thing is that NSF also recognizes the	8	process. But this process here is to talk about the
9	historic significance of Haleakala to the public here in	9	historic and cultural significance of Haleakala with a
10	Maui and beyond. So we recognize the cultural importance	10	special emphasis being placed on the Native Hawaiian
11	and the historic importance of Haleakala to the entire	11	community.
12	community.	12	And with that said, we ask you again to help us
13	And finally, I would say that the third most	13	give the Native Hawaiian community the proper respect and
14	important outcome of Kahu Maxwell's report is that NSF is	14	deference. And on behalf of NSF, we just want to thank yo
15	recognizing that if we go forward with our decision to fund	15	Kahu, for the blessing that you gave to this process,
16	the ATST project, then that decision would have an adverse	16	because it's truly our hope that this discussion here this
17	effect on Haleakala, and that adverse effect would have to	17	evening will be undertaken with a spirit of mutual respect,
18	be resolved or mitigated. So that brings us to why we're	18	productive consultation, education, and enlightenment for
19	here tonight.	19	all of us in the process.
20	There's just a few things that I am going to end	20	If you have any questions about the process,
21	with for you all to keep in mind about why we're here	21	please let me know. I have cards I'll give to anyone. So
22	tonight, and things that are important about the	22	that's it.
23	regulations, okay. Now I talked about resolving the impact.	23	DR. CHARLIE FEIN: Thank you, Charisse. As I
24	The regulations talk about resolving the impact in terms of	24	mentioned when we first began, there are individuals here
25	avoiding the impact as one thing, minimizing the impact, and	25	who have not seen or been exposed to this proposed project
	10		12
1	mitigating the impact. So that's what the regulations talk	1	and so we will spend a few minutes at your indulgence in
2	about.	2	going through a brief overview of the scientific objectives
3	The other thing to keep in mind is that the	3	and the facility designed for this project, proposed design.
4	National Historic Preservation Act was amended in 1992.	4	I'd like to begin that process by asking Craig
5	It's a really old law. I think it was passed like in the	5	Foltz, who is the program officer for the National Science
6	late '60's, but it was amended in 1992 so that it would	6	Foundation, to speak briefly about the project.
7	place a special emphasis on Native American and Native	7	DR. CRAIG FOLTZ: Aloha. I will try to be brief.
8	Hawaiian organizations. So the law was specifically amended	8	And I want to add my thanks to Charisse, because I love m
9	to let federal agencies know that when they conduct these	9	job. Working in a place like the NSF you never stop
10	Section 106 consultations they have to place a major	10	learning. But I have to say that that which I have learned
11	emphasis on Native Hawaiian organizations.	11	in this process has been very not only extensive, but very
12	Okay, so based on this, NSF must consult with	12	meaningful, and I hope that that continues.
13	Native Hawaiian organizations if we're considering an action	13	I want to change the subject a little bit from the
14	that might impact a resource. Here it's Haleakala that the	14	talks that most of you I think have heard me talk about
14	Native Hawaiian community attaches cultural or religious	15	before, because as I think about this project I realize that
16	significance to.	16	what is second nature to us when we say acronyms like NS
17	So we're being as open and as up-front about this	17	NSO are not familiar to you. And it is difficult I think
17	process as we can, but we do need your help in identifying	18	for you to jump in with both feet and understand what is th
18	the right organizations to bring into this process, and to	19	role of the NSF, what is the NSF, and specifically what is
18 19	the right organizations to bring into this process, and to	20	the relationship between the NSF and this project. But I
19	make sure that NSE fulfills its obligation to place a major		the relationship between the rule this project. Dut I
19 20	make sure that NSF fulfills its obligation to place a major		would just like to talk for maybe 10 minutes at the most
19 20 21	emphasis on hearing from Native Hawaiians and the Native	21	would just like to talk for maybe 10 minutes at the most.
19 20 21 22	emphasis on hearing from Native Hawaiians and the Native Hawaiian community.	21 22	The NSF, the National Science Foundation, is a
19 20 21	emphasis on hearing from Native Hawaiians and the Native	21

SECTIO	N 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNOL	UGT SOLAP	TELESCOPE MARCH 28, : 15
1	which is simply put, "Enabling the nation's future through	1	sun we wouldn't be able to worry about what the other stars
2	discovery, learning and innovation."	2	were, because we wouldn't be here. But if we did not have
3	Well, those are grand words, but what does it	3	the sun as a model we would not understand what we do
4	mean? At the heart of the NSF is the fact that the NSF is a	4	understand about the way stars form and live and age.
5	responsive agency, it's not a proactive agency. It is	5	And finally, the sun is a laboratory for physics,
		6	because the conditions that exist in the solar atmosphere,
6	different in many ways from many other federal agencies,	7	that is, ionized material in a turbulent state that's linked
7	such as the Department of Defense, NASA, the Department of	8	
8	Energy and so on, and it's different in the following way.	9	to strong magnetic fields have analogies throughout the
9	The Department of Defense or NASA can decide		universe and actually in laboratory situations. So we can
10	unilaterally to do projects. They have a budget, they can	10	study things on the sun that would apply to other objects of
11	make their plans, they can establish their own priorities,	11	astrophysical importance. Not necessarily importance to us
12	and they can do the project. NSF doesn't work like that.	12	on earth, but this is a subject that drives our curiosity,
13	NSF's priorities for that which it will do, for that which	13	and we pursue.
14	it will fund, basically we are a funding agency. We provide	14	These questions are important enough that the
15	money. We provide money to organizations, to individual	15	development of a new large solar telescope was a
16	investigators, to universities, to laboratories and so on to	16	recommendation of the entire solar physics and solar
17	carry out science, technology, engineering, mathematical	17	astronomy community. It was a recommendation to the
18	research, and education.	18	community. The community then responded to that
19	And the priorities that we adopt are not set by	19	recommendation by writing a proposal to us. Actually, a
20	the NSF, and that's very important. We are scientists.	20	series of proposals. These are big documents and they're
21	Wayne is an astronomer, I am an astronomer. We would not be	21	very rigorous and very difficult to write, and they lay out
22	so presumptuous as to say we know best what the nation	22	the science case. They try to convince us that such a thing
23	wants, we know best what the astronomers need. In fact,	23	can be built. They ask us for money to design it, and
24	what we do, rather than unilaterally designing,	24	eventually they would ask us for money to construct it.
25	constructing, and operating particle accelerators or	25	And we evaluate those projects not by the five of
-	14		16
1	observatories or laboratories, we respond to requests from	1	us sitting down and saying, "Hey, this one looks good." We
2	the broad scientific community, and those requests are based	2	send these out for peer review to other scientists
3	on curiosity. At the heart of science is curiosity.	3	disconnected from the project. We also ask engineers, we
4	And so we talk about the science drivers for a	4	ask project managers and so on to evaluate them, and we lo
5	project or for a new facility, and that's basically what is	5	at their importance with respect to other fields. We have
6	it that we're curious about, that we need to know about, and	6	lots of criteria. And we may fund them if we have enough
7	how can we design a facility to get at those problems.	7	money and if they meet a rigorous set of standards.
8	In the case of this project, the Advanced	8	What I want to point out, and this should be
9	Technology Solar Telescope, as you can probably tell from	9	stressed and you may see this as a fine line, a fine
10	its name, it is a telescope that will study the sun. The	10	distinction, but honestly it's not. The ATST is not a NSF
11	principle things that we are curious about, some of them are	11	project, it's a project of the whole community of solar
		12	physicists led by the National Solar Observatory.
12	actually fairly obvious. What is the connection between the		
	actually fairly obvious. What is the connection between the activity on the sun, the magnetic fields in the atmosphere	13	We are here today because we have funded its
12			We are here today because we have funded its development. We have not established its design. We funde
12 13	activity on the sun, the magnetic fields in the atmosphere	13	· · · · · · · · · · · · · · · · · · ·
12 13 14 15	activity on the sun, the magnetic fields in the atmosphere of the sun, and the earth's climate. What is the interface or what are the mechanisms that cause the sun to drive what	13 14	development. We have not established its design. We funde
12 13 14 15 16	activity on the sun, the magnetic fields in the atmosphere of the sun, and the earth's climate. What is the interface or what are the mechanisms that cause the sun to drive what we call space weather.	13 14 15	development. We have not established its design. We funder its development and we would fund or will fund its construction, a large part of its construction, perhaps not
12 13 14 15 16 17	activity on the sun, the magnetic fields in the atmosphere of the sun, and the earth's climate. What is the interface or what are the mechanisms that cause the sun to drive what we call space weather. Space weather is the interaction of material that	13 14 15 16	development. We have not established its design. We funde its development and we would fund or will fund its
12 13 14 15 16 17 18	activity on the sun, the magnetic fields in the atmosphere of the sun, and the earth's climate. What is the interface or what are the mechanisms that cause the sun to drive what we call space weather. Space weather is the interaction of material that flows off of the sun throughout the solar system and impacts	13 14 15 16 17	development. We have not established its design. We funder its development and we would fund or will fund its construction, a large part of its construction, perhaps not all of its construction, if this process that we're going through, the review process, the evaluation of the site, the
12 13 14 15 16 17 18 19	activity on the sun, the magnetic fields in the atmosphere of the sun, and the earth's climate. What is the interface or what are the mechanisms that cause the sun to drive what we call space weather. Space weather is the interaction of material that flows off of the sun throughout the solar system and impacts the earth. It actually has an impact on our lives because	13 14 15 16 17 18 19	development. We have not established its design. We funder its development and we would fund or will fund its construction, a large part of its construction, perhaps not all of its construction, if this process that we're going through, the review process, the evaluation of the site, the impact and so on, if it is successful.
12 13 14 15 16 17 18 19 20	activity on the sun, the magnetic fields in the atmosphere of the sun, and the earth's climate. What is the interface or what are the mechanisms that cause the sun to drive what we call space weather. Space weather is the interaction of material that flows off of the sun throughout the solar system and impacts the earth. It actually has an impact on our lives because it can shake the earth's magnetic field. It can pose a	13 14 15 16 17 18 19 20	development. We have not established its design. We funder its development and we would fund or will fund its construction, a large part of its construction, perhaps not all of its construction, if this process that we're going through, the review process, the evaluation of the site, the impact and so on, if it is successful. So keep it in mind, this is not an NSF project,
12 13 14 15 16 17 18 19 20 21	activity on the sun, the magnetic fields in the atmosphere of the sun, and the earth's climate. What is the interface or what are the mechanisms that cause the sun to drive what we call space weather. Space weather is the interaction of material that flows off of the sun throughout the solar system and impacts the earth. It actually has an impact on our lives because it can shake the earth's magnetic field. It can pose a hazard to people in space or high elevations and so on.	13 14 15 16 17 18 19 20 21	development. We have not established its design. We funde its development and we would fund or will fund its construction, a large part of its construction, perhaps not all of its construction, if this process that we're going through, the review process, the evaluation of the site, the impact and so on, if it is successful. So keep it in mind, this is not an NSF project, this is a project that is led out of the community. I am
12 13 14 15 16 17 18 19 20 21 22	activity on the sun, the magnetic fields in the atmosphere of the sun, and the earth's climate. What is the interface or what are the mechanisms that cause the sun to drive what we call space weather. Space weather is the interaction of material that flows off of the sun throughout the solar system and impacts the earth. It actually has an impact on our lives because it can shake the earth's magnetic field. It can pose a hazard to people in space or high elevations and so on. Thirdly, the sun is a star, it's the nearest star,	13 14 15 16 17 18 19 20 21 22	development. We have not established its design. We funde its development and we would fund or will fund its construction, a large part of its construction, perhaps not all of its construction, if this process that we're going through, the review process, the evaluation of the site, the impact and so on, if it is successful. So keep it in mind, this is not an NSF project, this is a project that is led out of the community. I am not going to go into this, but this is the recommendation
12 13 14 15 16 17 18 19 20 21 22 23	activity on the sun, the magnetic fields in the atmosphere of the sun, and the earth's climate. What is the interface or what are the mechanisms that cause the sun to drive what we call space weather. Space weather is the interaction of material that flows off of the sun throughout the solar system and impacts the earth. It actually has an impact on our lives because it can shake the earth's magnetic field. It can pose a hazard to people in space or high elevations and so on. Thirdly, the sun is a star, it's the nearest star, and as such it's a model for our understanding of other	13 14 15 16 17 18 19 20 21 22 23	development. We have not established its design. We funder its development and we would fund or will fund its construction, a large part of its construction, perhaps not all of its construction, if this process that we're going through, the review process, the evaluation of the site, the impact and so on, if it is successful. So keep it in mind, this is not an NSF project, this is a project that is led out of the community. I am not going to go into this, but this is the recommendation which comes from a survey that astronomers do every ten
12 13 14 15 16 17 18 19 20 21 22	activity on the sun, the magnetic fields in the atmosphere of the sun, and the earth's climate. What is the interface or what are the mechanisms that cause the sun to drive what we call space weather. Space weather is the interaction of material that flows off of the sun throughout the solar system and impacts the earth. It actually has an impact on our lives because it can shake the earth's magnetic field. It can pose a hazard to people in space or high elevations and so on. Thirdly, the sun is a star, it's the nearest star,	13 14 15 16 17 18 19 20 21 22	development. We have not established its design. We funde its development and we would fund or will fund its construction, a large part of its construction, perhaps not all of its construction, if this process that we're going through, the review process, the evaluation of the site, the impact and so on, if it is successful. So keep it in mind, this is not an NSF project, this is a project that is led out of the community. I am not going to go into this, but this is the recommendation

SECTIO	IN 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNOL	OGY SOLAR	TELESCOPE MARCH 28,
1	What is the best way for us to spend our money?" And in	1	poster over there lists them. So it's a very broad-based,
2	fact, this is the endorsement.	2	ambitious project.
3	And as I said, I won't read it, but if anybody is	3	And I want you to keep the following points in
4	interested I can certainly provide it. The ATST will study	4	mind. This is a very expensive project. The estimates of
	solar activity. I am not going to talk about this in any	5	the cost for the total construction right now are running on
5	detail. I talked about it last night.	6	the order of \$175 million. We have not made the decision
6	It should suffice to say that the outer surface of	7	fund or not to fund the project. That will only be made
7		8	after the project undergoes yet more review. The project
8	the sun is not a simple smooth surface. It's not like a cue	9	has been reviewed extensively. Jeremy is very tired; I'm
9	ball. It's in fact a boiling, turbulent, very hot, 10,000		tired. We review for science return, we review for the
10	degrees Fahrenheit or so medium, which has magnetic fields	10	
11	entwined in it, which occasionally come together and form	11	management, the capability of the team, the breadth of the
12	sun spots.	12	science, the impact on society, the impact on other fields,
13	The sun spots underlie active regions, regions of	13	and so on.
14	extremely energetic activity, which sometimes throw off	14	We also evaluate on the impacts on the site. And
15	prominences and spicules. Occasionally they flare into	15	I have to say here we have spent more time with you in the
16	enormous explosions, enormous explosions. You know, you	16	broadest sense and I have enjoyed almost every minute
17	don't measure these things in kilotons or megatons, these	17	it than we have in a typical review of the science
18	are tremendous explosions which throw material out, and this	18	capability of this instrument. We are not taking the impac
19	material can impact the earth or other objects in the solar	19	of this telescope on the site lightly, and I mean that from
20	system. The ATST will also study the outer envelope, the	20	my heart.
21	outer atmosphere of the sun, the corona. It's a very	21	However, the telescope is well-advanced in the
22	general purpose, a competent design.	22	decision process. It has received extremely favorable
23	This is what it looks like in brief. Jeremy	23	reviews. If it had not, as much as I have enjoyed my time
24	Wagner, the project manager, will talk a little bit, but I	24	with you, I wouldn't be here, the decision would have bee
25	just want to point out a few salient features. If this	25	made. So the project is moving forward. It has not yet
	18		20
1	project is funded and constructed once again, we have not	1	reached a decision point, but the reviews have been good.
2	made that decision, and I want to reinforce that the ATST	2	Finally, the selection of the Haleakala site and
3	will replace all major solar facilities of its kind. There	3	the precise locations for the possible construction really
4	is nothing else like it planned right now worldwide. It	4	followed an exhaustive process. A selection from 72
5	would be the flagship facility for ground-based solar	5	potential sites. The site selection was not done
6	physics. It will do science that cannot be done from	6	capriciously. We did not say, "Hey, those guys in Hawaii
7	spacecraft.	7	have a nice looking site on Maui and it's got a road and
8	Now, there's science that can be done by	8	it's got a sewer. Let's put it over there." We didn't do
9	spacecraft that won't be done by this telescope, but for	9	that. The site selection was done on the basis of objective
10	observing the sun in exquisite detail there is nothing that	10	criteria that were applied to 72 sites, down selected to
11	would compete with this instrument. And in fact, we have to	11	six, down selected to three. An enormous amount of mor
12	observe the sun in exquisite detail. It has tremendous	12	was spent, an enormous amount of time was spent, down
13	impacts, it might address issues of climate change, it might	13	selected to one.
14	address astronaut safety, space weather, of course	14	So the site selection was not done haphazardly.
15	educational programs. And it provides flexibility and	15	And I give you my word, nor will the assessment. Thank
16	upgrade paths to give it a reasonably long lifetime, and it	16	DR. CHARLIE FEIN: Thank you, Craig. I am goir
17	would be the cornerstone for the next generation of solar	17	to ask Jeremy Wagner, who is the ATST project manager,
18	physicists.	18	briefly talk about the facility itself for those of you that
19	The project team is broad. It's lead by	19	have no information about the proposed project, and what
20	astronomers from the National Solar Observatory, which is an	20	might look like.
21	observatory in New Mexico, the high attitude observatory in	21	MR. JEREMY WAGNER: Hi. I'm Jeremy Wagner,
22	Boulder, Colorado, the University of Hawaii Institute for	22	the project manager for ATST. Craig says I'm tired. I
23	Astronomy, the University of Chicago, and the New Jersey	23	don't feel tired. But I can give you a quick overview of
20		24	some of the details that went into the design and some of
	Institute of Technology, and there are roughly 22 other		
24 25	Institute of Technology, and there are roughly 22 other institutions. There are also international partners. The	25	the details about how it will appear if it were to go to

NSF SECTION 106 CONSULTATION FORMAL	MEETING FOR THE ADVANCED TECHNOLOGY SOLAR TELESCOPE
-------------------------------------	---

MARCH 28, 2006

	21		23
1	Haleakala.	1	example. There is another station up here which is
2	This is just a quick rendering of what ATST is.	2	primarily focused at the corona. Craig talked about this
3	Its support buildings, an enclosure, a pier to hold the	3	tenuous outer atmosphere. So we have a station up here that
4	telescope, with the telescope and its optics right there in	4	has very few mirrors between it and the sun, and that
5	the middle. An idea of what ATST does, you can take a	5	reduces the scattered light enough so that we can look at
6	region on the sun, start moving in to look at it closer and	6	this very faint corona around the sun. And so we've built
7	closer and closer. And what we want to do with ATST is get	7	those two requirements into this.
8	down here to the fundamental size of the structures on the	8	And Haleakala, there were a couple of reasons that
9	sun that actually affect the physics of the magnetic fields.	9	it really came to the top of the list of sites that we
10	And so in some respects it's almost a microscope. I	10	looked at. It has very dark skies during the day. I mean
11	mean we're looking at very small features on the order of 20	11	if you hold your thumb over the sun when you are up there on
12	miles, 30 miles, to understand what drives the sun.	12	a good day the sky is uniformly dark. It's uniformly the
13	So let me tell you a little bit about ATST and	13	same color blue as you move in towards the sun and ride up
14	what it might look like, where it is up on the telescope	14	to where the sun is, because there's very little dust in
15	up on the mountain, excuse me. This is an overall site plan	15	that air up there.
16	of the Haleakala Observatory site. This is the primary	16	So we did the site survey, understood what the
17	proposed site for ATST. It's just east of the existing Mees	17	characteristics of the various sites were. The height of
18	telescope here.	18	the telescope right here above the ground was established
19	The alternate site is referred to as the Reber	19	from that data. This is to allow the telescope optics to
20	Circle site. It's slightly higher than Mees, slightly	20	get above the disturbed air that's created by the sun
21	closer to the Air Force facility. You can see the petrel	21	heating the volcanic rock.
22	burrows here where the birds are. There are archeological	22	So I don't know if you have driven on a road and
23	sites indicated, so all the restrictions are there. So that	23	you see the shimmering on the road. We have to get up above
24	gives you an idea of where it is.	24	that. So that actually establishes the height of the
25	Here's a couple of images of the two proposed	25	facility. So you place the mirror there, then the enclosure
_	22		24
1	sites. The Mees site, existing Mees telescope, this is our	1	goes around it to protect it from rain and ice and wind and
2	site survey test tower, one of the six that we set up on the	2	that sort of thing. The support facilities then are really
3	sites that we tested in detail. And then the Reber Circle	3	kept to a minimum, but they contain a control center,
4	site. Both sites were in the long-range development plan	4	computers, a facility for servicing the aluminum coatings on
5	that Haleakala Observatory put together and finalized a	5	the different mirrors, that sort of thing.
6	little over a year ago.	6	Here is the existing Mees facility for scale,
7	And so we started our Environmental Impact	7	because we don't want to hide how big this thing is. I've
8	Statement process building on that process. Many of the	8	put the dimensions up here. It's 143 feet, so 92 feet up to
9	studies that were done during that process we can then pick	9	the primary mirror, 137 feet up to the top of the enclosure,
10	up and update and apply to our process as well. And the	10	an additional six feet up to the top of the entrance
11	public has seen the long-range development plan and has had	11	aperture, which has to have a cover to keep snow and such
12	a chance then to come up to speed on some of these issues in	12	out. So 143 feet tall. So it's not a short structure,
13	our process.	13	okay.
14	Here is a cut-away view of the ATST to give you	14	And there is a utility facility over here which is
15	some idea of what it's about. As I said, the telescope	15	far enough away from the main buildings and the enclosure
16	optical support structure is here, the large four meter	16	that we can actually paint it the same color as the lava
17	aperture mirror is here. So the light from the sun as we	17	rock. Unfortunately, with a solar telescope in the sense
18	track it would come through the entrance aperture of the	18	that you have heat light energy from the object you are
19	enclosure, strike the primary mirror, and then start to form	19	observing impinging on the structures itself, it's not like
20	a focus down at the different instrument stations where the	20	nighttime where you don't really have that.
21	astronomers would actually obtain the data that they would	21	So when we raise the telescope to get it up away
22	then use to try to study these features on the sun.	22	from these hot lava rocks we have to keep the sun from
23	So there's a laboratory space which will allow a	23	heating the structures around the telescope, because that
	number of instruments to observe the sun simultaneously in	24	would do the same thing, it would create a boundary layer up
24			a contraction of the second of
24 25	different wave lengths. Different colors of light, for	25	around the telescope and destroy the beautiful image quality

04/11/2006 02:31:13 PM

SECTIO	N 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNO	LOGY SOLA	
	25	4	27
1	that we can obtain from the site that the site provides. So	1	be the most dominant visible element. It is high enough to
2	the structures are painted white and the enclosures, for	2	allow good seeing for the telescope, large enough to allow
3	example, are cool.	3	the telescope to exist inside of it, white to minimize the
4	This is a plan view looking down. This is	4	solar heating. The support operations building is close to
5	actually the primary proposed site just east of Mees. So	6	the telescope, so its also white, and just large enough for
6	you have the existing Mees facility here, the pier for	7	the telescope-related activities. Its interesting to me the astronomers and the
7	supporting the telescope, the optical support structure, the	8	public agree on this, they want the telescope structures and
8 9	mirrors, the drives, the mounts, the foundation for the enclosure, the building, the utility building, parking lot,	9	the buildings to be as small as possible because they don't
10	access for getting mirrors in and out, large pieces. And a	10	want to disturb the image quality that's provided by the
11	similar design for the Reber Circle site, the alternate	11	site, any more than the public wants to see the facilities.
12	site.	12	The existing structure is utilized for Mees so that we don't
13	Okay, the materials and appearance. I talked a	13	have to build something else.
14	little bit about the heating and why it's white. But there	14	The utility building is remote, far enough away
15	are cooling panels here that have liquid that would carry	15	that it doesn't disturb the scene. It can be painted brown.
16	the heat away from the energy that the sun is putting on the	16	It's sound insulated because there will be pumps and such
17	structure. And so we can control then the temperature so	17	inside up there. So we want to maintain that quiet up on
18	that we don't disturb the image quality that's delivered	18	the mountain as well.
19	from the site.	19	A quick overview of the schedule, just to make
20	We also have vents in the enclosure. This is the	20	sure that you have a good understanding of this. The orang
21	rotating part. As you track the sun, the enclosure then	21	line indicates where we are today. We've gone through a
22	would rotate with that to allow you to observe the sun. But	22	number of reviews. The NSF has been looking at this
23	we have vents so that we can allow the air that moves across		closely, as Craig said. We are finishing up our designs.
24	the top of the mountain to flow through the facility so that	24	The site EIS process is underway. The NSF has a number of
25	heat, for example, doesn't build up inside the enclosure.	25	steps that it has to take before it could make a decision on
	26		28
1	So we can maintain the quality of that image all the way	1	this. The site construction would take about this period of
2	across as we track the sun.	2	time.
3	Let's see, what else can I say? The utility	3	The heavy excavation would be done right up front
4	building is painted brown. This is where pumps and	4	then you go into the erection of the structures, get the
5	generators and that sort of thing would be. It's a little	5	enclosure together, bring in the mounts for the optics, test
6	bit further away from the buildings so that it doesn't	6	those in this period, bring in the optics then, put the
7	produce anything that would disturb the air here as well.	7	telescope together, put light into the facility, make sure
8	There are solar panels on the lower enclosure that would	8	that all of your control systems, that the performance of
9	allow us to gently draw the air through that as well,	9	the system is meeting the science requirements, bring in the
10	because in the morning on Haleakala that's when the scene is	10	scientific instrumentation, the camera systems, the data
11	the best. The sun rises, and very quickly the scene is just	11	handling systems, and then move into first light out in this
12	excellent up there. So the sun will be hitting this whole	12	period, operations then in 2014. This is the earliest
13	structure in the morning coming from the east, so we have to	13	possible start for construction if the NSF were to approve
14	cool these areas as well.	14	the project.
	Here is a rendering of what the ATST might look	15	And actually, NSF doesn't necessarily even approve
15	There is a remaching of the the the the stage of	16	the project, they propose it to the National Science Board.
15 16	like at the Mees site. The existing telescope is here.	10	
		17	The National Science Board, if they're satisfied with the
16	like at the Mees site. The existing telescope is here.

	ON 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNOL 29	1001 00LA	R TELESCOPE MARCH 28, 20 31
1	like to begin the testimony.	1	with Native Hawaiian interests to express testimony, make
2	This is the Environmental Impact Statement	2	comments, and so on. And Kahu Maxwell has asked to go
3	process. This is where we are now. We anticipate releasing	3	first. I know he's not feeling 100 percent tonight, but I'd
4	a Draft Environmental Impact Statement sometime in May,	4	like to give him the opportunity to do that.
	perhaps late May. That document will be a public document,	5	MR. CHARLES MAXWELL: Aloha, everybody. First of
5		6	all, before I begin, let me tell you that I was hired to do
6	it will be available for public review, it will be in all		And the second sec
7	the libraries. Individuals who signed up for notification	7	the cultural and the traditional studies of Haleakala, but
8	will receive notification. We will assist anybody who can't	8	that doesn't make me in favor of ATST. I am not in favor of
9	get to a library, we'll make sure that anybody who wants to	9	this. Let me explain, first of all, though, the history in
10	read that document will have an opportunity to read it.	10	the back of this.
11	I will not go into the various surveys, studies,	11	I was born in Lahaina, raised in Kula, and when I
12	potential impacts this evening. What I wanted to do	12	was about 13 years old it was the first time that I went
13	quickly, for those of you who have not been in one of these	13	into Haleakala Crater hunting with my neighbors. And over
14	before, is to give you a brief look at what it potentially	14	the years I had the honor to hike in there and hunt, and I
15	might look like from various places around the island.	15	got to know the crater like the back of my hand.
16	So we've looked at various places and produced	16	So finally in about 1965, 1968, Hugo Huntzinger
17	renderings on the various weather conditions. This is what	17	came to the national park and he told me, you know, if I
18	the facility would look like if, for example, it were built	18	knew where the burials were in Haleakala National Park. I
19	at Reber Circle. This would be the most visible. The	19	said yes, some of the trails that goes down in the crater
20	alternative site would be the most visible from that	20	goes right next to some burial caves. So we spent, oh,
21	location. Okay, this is again what it would look like from	21	about a year and a half relocating all the trails within
22	Ma'alaea Harbor. It would be visible. You see it up there.	22	Haleakala so that it wouldn't impact burial caves. And
23	That wasn't a particularly clear day, but it was a more	23	there is a lot, there is burial caves.
24	typical tradewind day.	24	And so in the late forties and the early fifties
25	This is what the facility would look like in the	25	activity started to happen up in Haleakala with antennas.
-	30		32
1	Mees position from North Kihei, Mokulele Highway, Piilani	1	First it was just antennas. I was a young boy, I couldn't
2	Highway. You would see it right there, so it would be	2	do nothing. But you have got to remember at the time whe
3	visible from that location. Again, from Lipoa this is what	3	these things were happening Hawaiians had no say. They o
4	it would look like. It would be visible from South Maui if	4	anything that they wanted to the land. They had no say.
5	you had really good binoculars.	5	They could build anything on anywhere. They had no say.
6	Okay, this is Keonekai. This was on an	6	So finally, after getting very discouraged with
7	exceptionally clear day, which we don't get very often, low	7	what's happening in Haleakala Crater itself, where the
8	humidity, and it would be visible here. This facility is	8	trails that the horses used to go through was only four feet
9	the Air Force Electro Optical System. This is I'm sorry,	9	wide, now it's 14 feet wide. And if you go up in a
10	this is the Air Force Electro Optical System. So you can	10	helicopter you see trails all on the sacred pu'u that never
11	see how it would look compared to those.	11	had before. And apparently it's not being taken care of.
12	This is how it would look in the proposed Reber	12	So I have a lot of hope in this new superintendent that carr
13	Circle site. From the same location even more visible. The	13	here.
14	alternative site is more visible in most places than the	14	Okay, about twelve years ago, nine years ago they
15	primary site, as you can see. And this is how it would look	15	asked me questions about building this what I call the
16	from the Red Hill overlook in the national park. This is in	16	blight up in Haleakala, the EOS, the Air Force observatory.
17	the Mees location. I didn't bring the Reber Circle, but	17	And it was amazing, these people from Washington and
18	simply move the building over to here (indicating). The	18	everywhere else laid maps and they said, you know, it will
19	alternative location is right there at Reber Circle.	19	have a reflective finish. You could not see it from down
20	This is the University of Hawaii facilities, the	20	here, it would reflect the lava. And they showed me
21	magnet facility, and back in here other University of Hawaii	21	pictures of New Mexico, and it looked nice. Stupid me, I
22	facilities. So this is how the new facility would look at	22	never tell them. They wanted to take me to New Mexico.
	that leastion from Dod Hill	23	never want to go. I said, "No, no, it's cool."
23	that location from Red Hill.		
23 24	Okay, that's all I wanted to do this evening,	24	So they hired me as a consultant and I set

8 of 36 sheets

SF SECTIC	N 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNOL	LOGY SOLAF	R TELESCOPE MARCH 28, 200 35
4	33 was not for ATST, it was for EOS. And I told them, you know	1	35 because they're not even from here.
1		2	So when this project came along I asked these
2	what, Hawaiians in the past used to go up there and pay	3	people so many questions, "Is it bullshit what you are
3	tribute. They used to teach, the kahuna poepoe, everything.		
4	And my knowledge came from Papa Kaalakea. In fact, the real	4	telling me?" "Is the Air Force going to take over this some
5	name of Haleakala is Alahelekala, The Calling of the Sun,	5	day?" "Is this part of the space thing where, you know,
6	according to Papa Kaalakea.	6	we're the number third target in the State of Hawaii?" And
7	Okay, I got sick on a five-week period. At the	7	they promised me over and over that it was not.
8	end of five weeks I'm up in the 8,000 foot level going to	8	So I talked to some people. One of them is in the
9	make an inspection. And in fact, before that I asked them,	9	room here. And incidentally, after EOS became the Faulkes
10	"How come, you know, it looks aluminum, the thing." "Oh,	10	Observatory they wanted to hire me. And it's on my website,
11	no, the final thing going be all mirror."	11	they dug down. In fact, poor Charlie Fein, his picture is
12	So about the 8,000 foot level I see this huge	12	on my website still yet. But Ben Cayetano and all these
13	truck turned over on its side, and a 3 ton boulder rolled	13	state officials had a press conference in the Kihei
14	out of the truck. And this Hawaiian truck driver ran to me	14	Technology Park, and the only one here that was with me was
15	and he said, "Uncle Charlie" and with tears in his eyes he	15	my sister right there and my grandson Kamalii, and Prince
16	said, "This is the last load of 150 tons of rock that we	16	Albert. He came from England.
17	took out from EOS." I went berserk, I went crazy. And I	17	And in the middle of the press conference I stood
18	called Dana, I called the newspapers. And they didn't want	18	up before they were going to sign the paper. I said, "Hey,
19	to tell me where the rock was until I insisted where it was.	19	how can you do this without even consulting Hawaiians? It
20	And they had taken it down to Puunene and crushed the 150	20	is our sacred mountain. What the hell are you doing?" And
21	tons of rock.	21	I never know had Secret Service. They went stand up. I
22	Papa Kaalakea, who I was blessing places with, I	22	never know that. Me, my sister, my grandson, we walked ou
23	was really upset, I was crying, I told him, "Papa, they have	23	But nobody else came out because they were all told to stay
24	no respect. This is the lava. This is Pele. This is the	24	in the room.
25	essence of Pele, and they have no respect." He said, "Boy,	25	So I sat on the sidewalk out there by that what
-	34		36
1	you know what we have got to do? We have got to go pule."	1	is that, DEBD, the meeting room. I sat on the sidewalk.
2	So I called whoever. They came from New Mexico, I	2	And here Prince Albert and Cayetano, Mazie Hirano, they all
3	don't know who else was here, I don't know if Charlie Fein,	3	came out. I said, "Remember, Prince Albert, what I told
4	you was probably there. I didn't like Charlie Fein, I hated	4	you. This is a sacred mountain." So he came up to me, and
5	his guts at that time. I tell you the truth, I couldn't	5	his security was trying to push him in the limo. I says,
6	trust him. And anyway, you know, I'm sorry, but my emotions	6	"Ben can tell you this is a sacred mountain." He told me,
7	coming out, Charlie.	7	"Who is Ben?" I said, "The governor right here next to you.
8	Okay. So Papa, myself and my grandson Uluwehi, we	8	He can tell you." And Ben with his laugh, his smile, you
9	went down to the pile of rocks. We had all the workers	9	know, he left it out. For Faulkes, for EOS, we have nothing
10	stop. I told them, "You know what, we are going to take	10	as Hawaiians. They used our land, but we have nothing.
11	this back to Haleakala. I want every piece of rock taken	11	They didn't give us any cultural impact, nothing, nothing at
12	back to Haleakala."	12	all.
13	I found out that once it left the top you cannot	13	This time it's different, much different. This
14	put back because it's crushed and it has invasive species.	14	time and this is the right place, I never gave this out.
15	So what I did was I donated to the national park for them to	15	This is for you, if they're going to build this. And, you
16	cover the cracks in the crater of the trail, but don't put	16	know, we have got to be practical, because even Dan Inouye
17	no asphalt,on it or concrete. So I followed nine or ten	17	called me with EOS. He told me, "Charlie, what's the fuss?
18	truckloads up to Haleakala. I followed personally one after	18	I want you come out and bless the place." I said, "Hell,
19	another and returned that 150 tons of rock up there. And I	19	no, I'm not." But they got Akone Akana and his dancers to
20	was completely blown away. I quit.	20	go up there to bless the place, okay.
20	But see, just like this project, when they asked	21	This time I told him no way. It's going to be
	me if I wanted it, I had experience. If they don't find	22	different. If Congress and it depends on Congress, you
22	somebody who will take it, they will find somebody. Even	23	heard him say that right here. Put up your hand. You said
23		23	it depends on Congress. Congress is the deciding factor.
24 25	from Honolulu they had found someone to do a cultural impact statement about Haleakala, and I protested against it	24	Who the hell are we if Congress says yes, it's going to
	STALEDONT ADOUT MAREAKAIA ADD I DIDIESTED ADAIDST IT		WHO THE HELDE WE ILLUHUESS SOVS VES, ILS UULIU LU

1	happen? And if it's going to happen, this is my proposal.	1	we lost.
2	To create Halau Ehime Na Nahoku, Center For Traditional	2	Even Kamehameha Schools, everybody says "Ah,
3	Hawaiian Navigation and Astronomy.	3	that's for Hawaiians." But 165 years ago what happened to
4	Proposal for creation: Halau Ehimi Na Nahoku,	4	our people and why did Princess Pauahi create Kamehameha
5	Center For Traditional Hawaiian Navigation and Astronomy	5	Schools was because the conditions then is the same if not
	will be a collaboration of community and cultural resources	6	worse with our people now.
6		7	Okay, to create a planetarium. I'm saying that
7	to provide a venue to Ehime Na Nahoku, or to search or	8	
8	gather knowledge about the bright stars above us.		right? To create a planetarium with celestial bodies of the
9	The center's purposes will be two. One, to create	9	solar system that duplicate traditional methods used by
10	and produce, collaborate and administer curriculum for	10	Hawaiians to travel thousands of miles throughout the
11	students from kindergarten through secondary and	11	Pacific in double-hulled canoes using the knowledge of their
12	post-secondary collaboration which focus on traditional and	12	natural elements and the traditional and native instincts as
13	modern astronomy and traditional Hawaiian navigation. This	13	their guides.
14	product would be for public and private schools. I was	14	In 1492 Columbus sailed the ocean blue. Hawaiian
15	thinking I wanted for Kamehameha School only, because it's	15	were sailing thousands of years before that. They knew the
16	right here. But there's a lot of Hawaiians who are not in	16	world was round. In fact, in a Hawaiian concept, the canoe
17	Kamehameha School, they should have the right to go through	17	stays in one place, the world turns, and that is how the
18	this.	18	concept is. That was explained to me by Mau Fialot
19	Number two is to promote edification of	19	(phonetic) and by Nainoa Thompson.
20	traditional Hawaiian techniques in astronomy and navigation,	20	Finally, this Center For Traditional Hawaiian
21	and to integrate these concepts with scientific knowledge,	21	Navigation and Astronomy should be built at the same time
22	and produce traditional interpretations of the universe, and	22	funding is approved for ATST by Congress. Ideas like this
23	the understanding of the Native Hawaiian relationship to the	23	tend to get lost in the shuffle of progress. The completion
24	surrounding areas and the world. You know, unlock the	24	date could be worked on by the parties involved at that
25	methods that the Hawaiians used to come here.	25	time.
-	38		40
1	We as Native Hawaiians have only six senses, but	1	In presenting this idea to master navigator Nainoa
2	our ancestors had six, seven and eight senses that we do not	2	Thompson of the Polynesian Voyaging Canoe Hokulea, who
3	possess today. Where is it? You know, they said they could	3	sailed thousands of miles throughout the Pacific using
4	levitate, they could move rocks by praying, they could plant	4	traditional navigational methods, he felt that this method
5	bananas. In five minutes it would grow and give fruit,	5	is the missing component in teaching the youth of Hawaii
6	flower and give fruit. This is what our kahunas used to do.	6	about the brilliance and resilience of their ancestors, and
7	Where is this knowledge? If we can tap just a little bit,	7	the enormous feat they accomplished thousands of years ag
8	just a little bit from the skies and share it with our	8	He has committed his support and that of the
9	people, it would be all right.	9	Polynesian Voyaging Society to make this happen. He told
10	To prepare students of all ages with traditional	10	me, "Uncle Charlie, can you imagine, yeah, a scientist
11	knowledge and modern scientific techniques that would cause	11	that's working up Haleakala can navigate the Hokulea at the
12	future interest in astronomy and establish Native Hawaiian	12	same time because he's kanaka. Can you imagine that?"
13	expertise in this subject.	13	That's what he told me.
14	See, all of these guys from the mainland don't	14	The potential outreach of this session could be
15	understand that we live on an island. We're an island with	15	enormous, but the more compelling reason is because it is
	water surrounding us. This is the difference with the	16	right. A center of this magnitude possibly will produce
16 17		17	world class Hawaii Maui-based scientists in this subject
	continent. You have to have a different mentality, and this	18	
18	is what we want to find out.	10	matter. Because of the training in these two worlds,
19	To create and manage a scholarship fund for		Polynesian discovery and modern science, these future
20	individuals seeking a post-high education on the island of	20	scientists and astronomers could bridge the past to the
21	Maui. And statistics show, and I see some teachers in here,	21	present and beyond. Thank you. (Applause).
22	Kiope, and they will show that our people are on the bottom	22	DR. CHARLIE FEIN: Mahalo to Kahu Maxwell. At
	of the learning curve in everything, welfare, all the social	23	this time I would like to invite anyone else who has
23			
23 24 25	ills Hawaiians make up. And that's where and that's why we should need something like this to help us to regain what	24 25	prepared testimony, has comments, or would like to discuss any other matters relating to the Native Hawaiian concerns

	N 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNO 41		R TELESCOPE MARCH 28 43
1	based on this proposed project.	1	official meetings.
2	MR. KIOPE RAYMOND: I do.	2	Now, it's me trying to understand. Now, I'm
3	DR. CHARLIE FEIN: Kiope Raymond.	3	coming from my cultural paradigm. I'm trying to respect
4	MR. KIOPE RAYMOND: Good evening. My name is	4	certified letter I got from Lawrence Rudolph. It's an
		5	interesting paradigm. It's not my paradigm. So we can
5	Kiope Raymond. I am here accepting the invitation to	6	
6	participate in a formal Section 106 consultation meeting.	7	dispense with that.
7	The letters I received from Mr. Lawrence Rudolph, General		You know, this little tie pin right here is my
8	Counsel for the National Science Foundation, and Dr. Charlie	8	father's, and it's the coat of arms of the State of Hawaii.
9	Fein, the NSF's authorized representative personally	9	The State of Hawaii. But, you know, ironically the state
10	inviting me are appreciated and respected. I thank	10	motto is, "The Life of the Land is Perpetuated in
11	Mr. Charlie Fein for allowing my request for a 30-day	11	Righteousness, Ua Mau ke Ea o ka Aina i ka Pono." It
12	extension to turn in written comments or questions regarding	12	implies consciousness in the land itself. And how does it
13	the cultural resource evaluation and traditional practices	13	stay alive? Well, interestingly, "ea" is also the word for
14	report. Charlie, you will have them on or before April 20,	14	sovereignty. How is this land's life perpetuated? By doin
15	2006.	15	the right thing, but being pono. Thanks, Dad, it reminds
16	My comments, observations and questions this	16	me.
17	evening will hopefully be brief. I am a Hawaiian who does	17	Can't stand it, the monkey suit. Don't be
18	attach religious and cultural significance to Haleakala. I	18	offended, because I have got a T-shirt on underneath. I'
19	will be negatively affected and offended by the proposed	19	just having fun trying to make a point that when I enter
20	undertaking of the Advanced Technology Solar Telescope.	20	cultural paradigm in Washington, DC I try to enter that
21	I want to talk about cultural paradigm differences	21	cultural paradigm. Now I'm offended. And I like your ale
22	though for a minute. The definition of formal for this	22	shirts, they're real nice, but why isn't the process the
23	evening means following the guidelines set forth by the	23	same everywhere? If you go to Washington, DC you wea
24	Advisory Counsel on Historic Preservation. As has been	24	coat and tie. Put on your coat and tie, you're going to
25	clearly explained, the National Historic Preservation Act	25	talk to the feds.
	42		44
1	includes provisions that specifically address federal	1	I'm more comfortable now. This is who I am, it's
2	agency's responsibilities when their activities involve	2	my cultural paradigm. And I think we're all just trying to
3	national historic landmark properties. We heard that.	3	understand each other. But I don't know who put it in
4	Section 106 and its implementing regulations,	4	everybody's heads that when you come to a federal mee
5	protection of historic properties, federal agency	5	aloha shirts are okay. I was always under the impression
6	responsibilities when an undertaking will affect properties	6	for all my life, you do something like this you be
		7	respectful of the government, you be respectful of the
7	eligible to be listed on the National Register of Historic	8	
	Places. So that's one formal aspect.		agencies. You show them that respect by wearing and
8			autorian their culturel perediens

NSF SE	ECTION	N 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNO	LOGY SOLAI	R TELESCOPE MARCH 28, 20
		45		47
	1	didn't see any other site that said sacred. La Palma did	1	It's to fund the science and the construction. And I would
	2	not say sacred. Big Bear, not sacred. Haleakala, sacred.	2	again need to research, but there is nothing that NSF is
	3	In the next sentence Jeff says, "The presence of	3	held to in helping the community, Hawaiian or otherwise.
	4	observatories on the summit is considered a desecration by	4	That may be a subsequent grant. They can look for it in
	5	some, and ATST would undoubtedly encounter some public	5	some other way, but not in the money that's on the table or
	6	comment to that effect." We've known since 2003 some are	6	to be on the table. So I thank you for the idea. We have
	7	going to consider this desecration of the sacred, but be	7	got to ask that question.
	8	ready for it.	8	As I understand also, and I thank you for the
	9	In his Risk of Denial section in the site	9	opportunity tonight, I'm 51, I was born in Lahaina, like
	10	feasibility report, Jeff says, "The potential for a negative	10	Uncle. And being in Lahaina 51 years ago, you know, you
	11	result from the EIS and CDUP process, that is, i.e.,	11	don't come to this side of the island, much less the top of
	12	precluding the construction of ATST on Haleakala, is	12	the mountain, very often. But I do have a memory, and I wa
	13	difficult to assess in advance." Mahalo, Jeff, for that.	13	told I was about five or six years old, of snow on the top
	14	The fact that the Air Force and Falk's telescope projects	14	of the mountain, and mom and dad got to take a drive. It's
	15	have both been recently successful probably bodes well for a	15	the first time it had snowed since I was born, apparently,
	16	positive outcome. We've known for a long time.	16	so everybody had to take a drive.
	17	But there are a couple of other interesting one	17	So I have had an intimate relationship with this
	18	other actually interesting thing that Jeff says in his site	18	mountain for 45 years. I've loved this mountain for 45
	19	feasibility report. And as I stated earlier or read	19	years. And it took people like Uncle Charlie to bring it to
	20	earlier, I'll be putting this in, I alluded to it last	20	my attention, people like Mary Evanson, people who genuine
	21	night. Jeff says, "The fact that there are already several	21	care about this mountain.
	22	other large observatory buildings on Haleakala may actually	22	How much do I love this mountain? This is going
	23	weigh against ATST in consideration of the cumulative effect	23	to mean nothing to the people from Washington, DC, but this
	24	of all the development on the mountain." Mahalo, Jeff.	24	particular group has had some recognition in the Hawaiian
	25	You're darn right, there's too many buildings up there. One	25	islands. The group's name is Hapa. And on their CD I wrote
	1	46		48
	1	more 14-story structure is just heartbreaking.	1	a song, and it says, Haleakala stands glorious; Haleakala Ho
	2	So you know what has bothered me in finding out	2	Hanohano. And the Hawaiian says Oh, that's another
	3	and in talking to Jeremy and Mike last night, you know, I	3	little side bar, but I'll get to it.
	4	thought about it. I'm just someone who wants to get	4	Let me read the English. Broad is the mountain to
	5	educated about the process. In finding out that the NSF	5	gaze upon. Haleakala stands glorious, shrouded in billowy
	6	and Craig, you are absolutely right, I understand that	6	clouds, as if garlanded. Creeping mist that adorns the
	7	process.	7	uplands. A cool, gentle breeze brings the fragrance of
	8	You know, we've known, the NSF has known,	8	Maui's flower. It's mine to cherish the lush mountain
	9	therefore probably NSO has known, therefore NSF has known	9	sharing my delight. I behold the best in the beauty that
	10	since 2003. Well, it's just unconscionable to me when in	10	surrounds me, and I'm sheltered by the peace within.
	11	2004 when there was over \$4 million in NSF's budget, that in	11	I tell the story of Haleakala standing glorious.
	12	2005 when there was over \$2 million in the budget, and in	12	So I'm honored. I get some pennies in royalties. That's
	13	2006 when there's two more million in the budget, that	13	how I love the mountain. So over the course of my life.
	14	nothing was thought about to handle the sacred. And as	14	And then I think the most recent thing that made
	15	Craig so eloquently said earlier this evening, it's a	15	me remember how much I love the mountain was I was
	16	vetting process. I think it means it goes through layers	16	graciously led by Charlie Fein to an awa. I've never seen
	17	and layers, and everybody has got to have a say in it. And	17	it before, it's the second awa built. And I involuntarily
	18	then what we find is that a Hawaiian cultural expert has	18	started crying when I got there. And it's the kane side,
	19	been asked. But they knew it's been sacred the whole time.	19	it's the side that faces east. We went over to the west
	20	I just don't understand that. It saddens me. I'm offended	20	side and I couldn't stay, I don't know why, but Miki stayed,
	21	by that. Could I have done anything? I don't know.	21	another person who was with me. That's the women's side,
	22	Just like I think what your ideas this is a	22	anyway. So Section 106, yeah, I don't want that structure
	23	little side bar, Uncle Charlie absolutely beautiful.	23	on the top of my sacred mountain.
	24	But, you know, in the research I've done, NSF is not held to	24	But back to the Hawaiian, you know, it was
			1	interesting when they did the public scoping, in July was

	N 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNO 49		R TELESCOPE MARCH 28, 2 51
1	it, I was hired to sit right about where you're sitting in	1	could make it as part of our Memorandum of Agreement. And
2	case somebody wanted to testify in Hawaiian. Is there	2	as part of when the federal agency makes a decision to
3	somebody hired for tonight? No? So I could testify right	3	go forward, particularly in the light of a recognized
4	now in Hawaiian, but I wouldn't be recorded. That's nothing	4	adverse effect, which is what we are doing here, we are
5	to do with Charlie, that has nothing to do with Charlie.	5	recognizing that there's an impact that needs to be
6	This is the legal one, this is the formal.	6	addressed, needs to be resolved, and hopefully needs to be
7	For all intents and purposes, although we would	7	mitigated.
8	like to bring the two together, this is a big misstep. In	8	So when we make that decision we would issue a
9	essence fundamentally I'm precluded as a Native Hawaiian	9	decision. It's called a Record of Decision ultimately, but
10	from testifying and having my testimony right there in	10	the Record of Decision would lay out what all the agency's
11	perpetuity, although somebody would translate it and help	11	findings are. It's like an administrative law thing, which
12	that person out. I've got nothing.	12	is a little complicated. But basically that document would
13	Thank you for giving me the time. I sure wish I	13	be the NSF's decision to go forward and fund the project.
14	could have testified in Hawaiian. That was a mistake.	14	And the only way we would reach that decision would be if we
15		15	could come out with some way that we could resolve the
	(Unintelligible question from audience).	16	adverse effect.
16	DR. CHARLIE FEIN: His question was, and correct	17	And so what we could do in the context of a
17	me if I am wrong about the question, NSF has no obligation	18	Memorandum of Agreement is we could agree in our Record
18	and there is nothing in any law that requires that they	19	of Decision document ultimately we would recommend going
19	fulfill the plan or proposal that Uncle Charlie presented,	20	forward only if we can resolve the adverse effect through a
20	or any proposal.	20	
21	MR. WAYNE VAN CITTERS: I guess it's a complex	22	mitigation, recommending the mitigation to be funding for a
22	question, of course, because as Craig said, we have not	22	proposal like what you have put forth.
23	committed in any way to go forward with this project on the	23	MR. CHARLES MAXWELL: If mine or whoever's
24	top of the mountain. There has to be, if I understand the		proposal is made, I would like to see some language that
25	process, a Memorandum of Agreement which would be formulated	25	accompanies the ATST proposal to Congress. It's
-	50		52
1	to take into account the cultural values on the top of the	1	hand-in-hand. Because if Congress says no, then it's no.
2	mountain, and a plan, perhaps the one that Charlie has put		But if they say yes to ATST, it's going to happen anyway,
3	forward, to I may get emotional because I spent a	3	then they've got to fund this, whatever proposal is
4	sabbatical year, it's not much time, but I spent a	5	presented.
5	sabbatical year here in the islands. My son rowed for Hui		MS. CHARISSE CARNEY-NUNES: I hate to put you or
6	Nalu. He subsequently turned that experience into rowing	6	the spot, Tony, but we have someone from our Legislative
7	for Dartmouth and so on. Our roots are nowhere near as deep	7	Affairs Office here. It's hard to place. There are really
8	as yours, I understand, but I do have roots on this island.	8	no guarantees, obviously. We're talking about federal
9	I do have the Hapa CD.	9	funding.
10	But if we could reach a Memorandum of Agreement	10	MR. CHARLES MAXWELL: I understand. We are used
11	that would say in return and in respect for the site it	11	to not being guaranteed and being discouraged later.
12	would be given to ATST, we would undertake a program like	12	MS. CHARISSE CARNEY-NUNES: Right. But what I a
13	the one that Uncle Charlie has proposed, or perhaps an	13	saying, and correct me if I am wrong, is that we could
14	expanded one, that would be part of our decision to go	14	okay, the first step would be to reach a Memorandum of
15	forward. It would be part of the program we present to our	15	Agreement with members of the community, and specifically
16	National Science Board, that's our ruling body, and that we	16	with Native Hawaiian organizations. That would be the first
17	would then present to Congress. And at the time that	17	step, and that would sort of conclude the Section 106
18	Congress made the decision to appropriate the money, they	18	process, right. We could agree in that document that if and
19	would also appropriate the money for programs like Uncle	19	when NSF finishes its processes and finishes vetting the
20	Charlie has put forward.	20	proposal to fund, if and when we finish that, if we
21	MR. CHARLES MAXWELL: So maybe I can have a legal	21	recommend to our National Science Board and ultimately to
	response. Would that caveat be attached to the ATST	22	Congress that we should fund this project, we can agree with
22		23	you now or at the end of this process that we will carry
22 23	proposal in Congress? Would that caveat be attached?		
22	proposal in Congress? Would that caveat be attached? MS. CHARISSE CARNEY-NUNES: It could be, right,	24 25	forward, within the context of that recommendation, a recommendation that we would be required to mitigate a

SECTIO	N 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNOL	UGT SULAR	R TELESCOPE MARCH 28, 2 55
4	53	1	
1	recognized adverse effect, okay. So we could present it as		bounds of your agreement, this is appropriate." If the ATST
2	part of our recommendation.	2	is built, the NSF will pay probably the majority of its
3	MR. CHARLES MAXWELL: See, I don't know how Kiope	3	operations cost. And as a federally-funded research and
4	feels, but to me, this is not a it cannot be a carte	4	development center which operates under the NSF's rules, it
5	blanch, you know, because of this. It's very difficult.	5	will be expected to provide education and public outreach
6	Like I said, I'm not in favor of this, but I feel that if	6	programs.
7	Congress says yes it's going to happen, it's going to	7	So in addition to adding my you have no reason
8	happen. So I don't know, I'm just looking for guarantees,	8	to trust me, okay, you don't, but you can hear me. You
9	and Kiope brought that up.	9	don't have to believe me when I say you can trust what Way
10	MR. WAYNE VAN CITTERS: Wayne Van Citters. Could	10	has said. In addition, you can look at the budgets and you
11	I add some words, and they are the following. The general	11	can see that our money is spent in part in education and
12	goals that you put forward in your proposal are directly	12	public outreach, because if you look at the mission
13	aligned with the type of the kinds of education and	13	statement of the NSF it says that our job is education.
14	growth of a knowledgeable and diverse workforce, the goals	14	Broadly defined. That's all I wanted to say.
15	of the foundation itself. So there is no question in my	15	MS. CHARISSE CARNEY-NUNES: And that's exactly
16	mind as a division director that that kind of program would	16	what what Craig just said is something I wanted to point
17	be an acceptable program. Craig?	17	out. Particularly, for you Kiope, because you talked about
18	DR. CRAIG FOLTZ: Are you finished? I just wanted	18	what may or may not be in line with NSF's goals and mission
19	to add.	19	and suggesting that the kind of program that Kahu was
20	MR. WAYNE VAN CITTERS: Well, the only thing I was	20	proposing would not be in line. But in actuality, NSF
21	going to do was take on a and I think I can do this I	21	really is different from other federal agencies in that we
22	will take on a personal promise to this community, and that	22	truly have as our mission not only supporting science and
23	is that if ATST goes forward and if the foundation and the	23	research, but education.
24	Hawaiian community here on Maui have agreed on a program	24	And personally I've been at the NSF for, I don't
25	like this as being a reasonable tribute to the top of the	25	know, since 1997, and I love the mission of the agency
-	54		56
1	mountain in exchange for the site, I will not go forward	1	personally because it's so dedicated to education and to
2	with that project unless that money is included.	2	programs that promote diversity in education. We call it
3	DR. CRAIG FOLTZ: It's hard to follow that. And I	3	broadening participation.
4	won't express my personal feelings about this man, but I	4	MR. KIOPE RAYMOND: I think you can stop there.
5	would take that to the bank. Now, I also in my job oversee	5	And actually, that's one of the meetings that I have gone
6	the funding and essentially the management of large	6	to, is the Broadening Participation for Information
7	observatories, the National Solar Observatory, the National	7	Technology, and a number of others. I think you may have
8	Optical and Astronomy Observatory. We also have the Radio	8	misheard me, and what we'd have to do is go back to the
9	Astronomy Observatory, the National Atmospheric and	9	stenographer to confirm.
10	Ionospheric Center, and the Gemini Observatory.	10	And if I, in fact, said what you think you heard
11	Every one of those observatories has as a part of	11	me say, I retract. What I was intending is that as far as
12	its cooperative agreement, as a part of its work breakdown	12	any research I had done up to now, it would seem that the
13	structure, as a part of its annual project plan, education	13	current money on the table, if you will, for the operations,
14	and public outreach, education in an informal sense,	14	160 million has nothing to do with community helping. Yes,
15	education in a formal sense, and these encompass large	15	it has education, but it has nothing to do with it. I'm not
16	numbers of programs.	16	finished. And there will always be clarification.
10	They don't do this because it's nice, they're	17	All I'm saying is it will be clarification for
47	devoted to it. They do it because they have to do it. They	18	everyone. And for me, that when I was reading this it was
17	nevnet to the they up the level ave to up the they	10	my understanding, and that's why I was just opening it up -
18		1	that's what I'm understanding tonight is about, the
18 19	do it because we tell them to do it. So a part of the		that's what I in understanding tonight is about, the
18 19 20	do it because we tell them to do it. So a part of the operations budget that we pay to every one of our	20	
18 19 20 21	do it because we tell them to do it. So a part of the operations budget that we pay to every one of our observatories goes into educational programs, public	21	opportunity for me to either voice my objections or raise

APPENDIX C(1): TRANSCRIPTS - SECTION 106 MEETING, PUKALANI COMMUNITY CENTER, MARCH 28, 2006

SECTIO	IN 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNOLC	DGY SOLAF	R TELESCOPE MARCH 28, 5 59
4		1	binding a Memorandum of Agreement is.
1	there is a clarification, that would be great. But there	2	MS. CHARISSE CARNEY-NUNES: Well, in order for th
2	didn't seem to be a link anywhere in the research that I was	3	Memorandum of Agreement, if we do reach one, to be binding
3	able to do that would show clearly that the money that will	4	or to be enforced, you would need to be a signatory actually
4	be for the construction and the money that would be I am		
5	not talking about the operations, the construction, that	5	to it. We will, if we get that far in this process, we will
6	those kinds of deals that Uncle Charlie was looking for	6	certainly invite Native Hawaiian organizations and other
7	could not be made right now.	7	organizations, community organizations as well, we will
8	That's why we jumped, as I understand it, into	8	certainly invite you to be a signatory to the Memorandum of
9	discussions of possible Memorandums of Agreement, because we	9	Agreement.
10	do not have something right now. But it is possible.	10	If you are a signatory as a concurring party, and
11	MS. CHARISSE CARNEY-NUNES: Got it. That's right.	11	actually I was looking at the Memorandum of Agreement for
12	DR. CRAIG FOLTZ: Kiope, may I ask you a question.	12	Mauna Kea for the Outrigger telescopes, and there was
13	MR. KIOPE RAYMOND: Sure.	13	actually some organizations that concurred with caveat.
14	DR. CRAIG FOLTZ: In your research when you were	14	So if you are a signatory as a concurring party,
15	trying to understand how the funding could be used, do you	15	however, you would have the right, if NSF did not live up to
16	recall whether that was a discussion of a funding line that	16	the terms of the Memorandum of Agreement, you would have
17	was called the major research equipment facilities	17	right to challenge that. You would have the right to notify
18	construction funding, or MREFC.	18	the State Historic Preservation Division. You would have
19	MR. KIOPE RAYMOND: I don't recall. That's the	19	the right to notify and to ask for the Advisory Council on
20	new imposition for NSF for anything this big.	20	Historic Preservation to step in.
21	DR. CRAIG FOLTZ: If indeed that was the case,	21	So it is enforceable, but you do need to be
22	then what you say has merit. The MREFC construction line,	22	brought in as part of the process so that you have the right
23	which is what we would use, we would ask, request for money	23	to make sure that the document is enforced.
24	for, is outside of the astronomy department's annual budget.	24	DR. CHARLIE FEIN: Okay, before we continue, I
25	It's a separate line within the NSF which is used for large	25	wanted to clarify one other thing. While there is not a
	58		60
1	projects.	1	translator in the room, we are recording everything on tape.
2	MR. KIOPE RAYMOND: I appreciate the confirmation.	2	And if someone wishes to present testimony in Hawailan, we
3	That's how I read it.	3	will have it translated and distributed to anyone who
4	DR. CRAIG FOLTZ: That money has constraints as	4	requests the testimony, or we will make it public on the
5	defined by the appropriations language which appropriates	5	Internet. So I did not mean to constrain you in any way.
6	that fund.	6	MR. KIOPE RAYMOND: Good. Then I will testify in
		7	Hawailan.
7	MR. KIOPE RAYMOND: In fact, if we're just in a	8	DR. CHARLIE FEIN: Great. Did you have yes,
8	little repartee, I love it. What I also read is that you		
9	folks are trying to solve the problem. You folks are nice	9	please.
10	enough to have the portable file documents on line for	10	MS. MIKAHALA HELM: Aloha kakou. Aloha, Uncle
11	everybody to see that you folks have. You, NSF, or the team	11	Charlie, and thank you. You know I respect you for all of
12	has tried to communicate that, that it's now gotten	12	your work. This evening I would like to share my written
13	cumbersome, it's now become very constrained and confining,	13	comment on the cultural resource evaluation, and address my
14	and it's different.	14	concerns as a Native Hawaiian. I have also added in some
15	DR. CRAIG FOLTZ: I would not make a comment on	15	other comments after I mailed this to Charlie.
16	the public record, and I think you understand my point. But	16	And I was born and raised here on Maui. I am
17	my point is this. In fact, the constraints on the MREFC	17	opposed to the proposed Advanced Technology Solar Telescop
	funding line do not allow them to be used for education.	18	ATST project. It negates the needs of the Hawaiian culture
18	What Wayne is saying is, and what I am saying, is that there	19	for the needs of everyone else. Once again, the needs of
18 19	what wayne is saying is, and what I am saying is and there	20	science are seen as more important than the needs of the
	are other funding sources. What I discussed specifically	20	
19		21	Hawaiian people.
19 20	are other funding sources. What I discussed specifically		Hawaiian people. Haleakala is important because it has continually

19 20 21 22	are other funding sources. What I discussed specifically was, and I believe that this is the way that we would fund this, we would fund a program like this out of the operating	21 22	

	IN 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNOL 61		R TELESCOPE MARCH 28, 2 63
1	Haleakala was important to our kupuna.	1	schedule over the next few months for additional meetings.
2	This aloha appreciation, awe, and reverence for	2	We will be contacting more people as we learn who is
3	Haleakala comes from all of my experiences in going to	3	available and who is out there. There will be additional
4	Haleakala. I have studied hula since I was five years old,	4	meetings. I will let Charisse speak to the specifics of
5	and first learned of Haleakala, the appreciation for	5	that when the testimony is done.
6	Haleakala through the singing of my family. I have studied	6	But in response to that extension, of course this
7	it further through halau, and have a deep appreciation for	7	process is by no means over, it's only beginning. So we're
8	the value of Haleakala to our people and to our culture.	8	looking for more input, okay.
9	Our cultural practitioners to this very day	9	MS. CHARISSE CARNEY-NUNES: I just want to
10	continue to use Haleakala as a way to communicate with the	10	specifically answer one of your concerns, which was getting
11	greater beings in ceremonies and rituals. The cultural	11	an extension. And I just want to say this to you and to
12	resource evaluation on page 62 states, "In conclusion, the	12	everyone, that the purpose of the 30-day deadline that you
13		13	read about was it's prescribed in the federal regulations,
	fact remains that any building or structure built on this	14	
14	site is an intrusion on the sacredness and spirituality of		but it is not meant to cut off any opportunity for you to be
15	this mountain revered by the Hawaiian people past and	15	heard.
16	present."	16	In actuality, as it pertains to this meeting. We
17	It goes on further. And I understand, Uncle	17	want people to submit their comments in advance so that we
18	Charlie, that you have fought for this for years, and your	18	could have a robust discussion, so that everyone will have
19	trust has been tested because in this conclusion it says	19	read the cultural resources report for the benefit of this
20	that the next sentence says, "One must find the balance	20	meeting here. But by no means was it meant to cut off any
21	of building on this site, and at the same time protect at	21	opportunity for anyone to be heard.
22	the best the cultural impact and methods used to mitigate	22	And of course, you can have an extension. And of
23	these impacts."	23	course, you can submit a comment about the historic and
24	In my opinion, we don't carry on to that second	24	cultural significance of the mountain at any time, at any
25	sentence. The essence is carried in the first sentence. I	25	time. And as Charlie explained, this is only the first
1	62		64
1	do not believe that there is mitigation or a way to make the	1	formal meeting, and there will be follow-up meetings as
2	development of the proposed ATST less severe or intense.	2	well. But you don't have to wait for a meeting to formally
3	I would like to ask for more time, an extreme	3	testify, you can submit your comments.
4	extension of time, because there are other Hawaiians who	4	It's best if you can do it in writing, because
5	want to testify, who want to present how they feel about	5	that way we can make it a part of our administrative record
6	Haleakala. And how important it is to us Native Hawaiians	6	that we will be looking at when we ultimately do make these
7	not only here on Maui, but to the Native Hawaiians	7	decisions. And you can submit it by email, by regular mail,
8	throughout the state and those who are living in many other	8	or you can come to a public meeting and say it and have it
9	places.	9	recorded.
10	So I would like to get that information, Charlie,	10	DR. CHARLIE FEIN: Okay, Charisse. Are there
11	to find out how other people can testify, and if I may	11	other individuals who would like to testify? Warren.
12	provide additional information in the future.	12	MR. WARREN SHIBUYA: Good evening members of t
	And in closing, I believe that we should not have	13	panel and audience. I am Warren Shibuya. I am a returning

1	kamaaina kept sacred sites barren. It is not a privileged	1	First of all, the number of kanaka maoli over here that this
2	right for westerners to occupy these unused and barren	2	is supposed to be representing, if you look around you, a
3	locations, no matter for noble-intended purposes.	3	lot of familiar faces and they are absent. Just a few of us
4	Note two. Drilling and driving 40-foot	4	are here to hold up the fort. They are absent.
5	pre-stressed concrete pilings into lava substrate may offend	5	So this cannot be labeled as input by the kanaka
6	sacred Kolekole wahi pana. Instead, suggest employing	6	maoli. This can only be shown as how hurtful that this
7	circular, concentric rings of concrete footings with	7	telescope and this project is to our Hawaiian people. Toda
8	overlaid patterns of pre-stressed concrete pilings to	8	I called ten Hawaiian people that was close to me, and not
9	support telescope, domed, and support structures. Avoiding	9	one of them stated that they think it's a good idea. Not
10	driving piles minimizes disturbing Ua u, the Hawaiian dark	10	one. They all stated, "Are you crazy? What are they doin
11	rumped Petrel, a federally listed species whose burrows are	11	Why are they destroying our mountain?"
12	within a guarter mile of the proposed construction site.	12	And as far as the trade-offs, as I have said
13	In addition, using a construction method of	13	previously, I oppose this project. I respect gaining
14	driving piles into sacred ground is similar to driving	14	scientific knowledge, I respect what can come out of it, bu
15	spears into revered native grounds, and making a western	15	not up at Haleakala. I refuse to have Haleakala prostitute
16	cultural statement.	16	for the sake of this project. You cannot take advantage of
17	Before you tell us what you want, I remind you	17	Haleakala and throw ideas out to what is sacred.
18	again, you start by doing it right. You show respect and	18	We have laws against digging up burials. But
19	care for Hawaii's people and aina. Thank you. (Applause).	19	funny, we don't have laws about the desecration of sacred
20	DR. CHARLIE FEIN: Thank you, Mr. Shibuya.	20	areas that belong to indigenous peoples. Does this mean
21	Craig, did you want to say something?	21	that indigenous peoples are being marginalized? The
22	DR. CRAIG FOLTZ: I have one thing, one	22	entitlements, if you talk about the federal government, ou
23		23	Hawaiian entitlements are constantly under attack. Wheth
24	clarification. First of all, thank you for a lovely	24	it's the Hawaiian Homelands, whether it's gathering rights
	testimony, concrete actions that can be taken, and the	24	
25	general spirit of good manners. 70	25	whether it's trying to get our country or our kingdom back
1	With respect to that budget item that refers,	1	The federal government has always been an obstacle to do
2	again, to the issue that I discussed with Kiope. That	2	what is correct. Even within the Pledge of Allegiance,
3	budget refers to that which would be asked for from a fund	3	justice for all.
4	that would construct the telescope, and we are not allowed	4	So this goes back quite deep into, as we Hawaiiar
5	to take education and public outreach out of that fund.	5	people say, into the na'ao. If you lose somebody special t
6	Education and public outreach would be paid for out of	6	you and when you cry and you weep the pain is in here
7	what's called our research and related activities money, our	7	(indicating), and this is what is happening with this
	normal annual budget.	8	project. We can do all kinds of mental gymnastics, but th
8		9	point is it's hurtful. How can we trust a government, a
9 10	So marking that as a zero is true in the sense that it would not go into the request for the construction	10	Congress that has led us astray and taken and marginalize
	funds. It does not mean that we would not fund it. But I	11	I use the word again, marginalized our Hawaiian people
11 12	do agree with you it did not present the right impression.	12	I prefer to stay at the spiritual side and the
12	So thank you.	12	cultural side of things, instead of getting into a
13		13	discussion on the upper cortical level of things, because
	MR. WAYNE VAN CITTERS: May I respond just a	14	this is where our strength is.
15	little bit? I wrote the budget, and I was instructed by NSF	16	
16	that we weren't allowed to include that. I actually called	16	I asked some of the people in here if they were
17	it out and put it at zero to make that statement, that it		going to testify. They said no, they're scared or they
18	was not included, and to draw attention to that. So we	18	shame or they feel unprepared. And I asked them, Just g
19	didn't just leave it out of the proposal. We put it in	19	there and say, "I no like 'em." Simple. I talked to my
20	there and said zero, because I understood that the NSF would	20	children. They don't want it. As far as connection to all
21	not accept that for the astronomy division, and it was	21	that, Haleakala is connected to all of us. It's the piko of
22	purposely done to draw attention to it.	22	our land divisions, it's the piko. Piko is right in here,
00	DR. CHARLIE FEIN: Thank you. Other testimony.	23	the belly button. This is where all land divisions come
23		0.4	
23 24 25	MR. EDWARD LINDSEY: Aloha. I am here as a Native Hawaiian under your Section 106 preservation act.	24 25	out. I talked about last night about the goddess that's

SECTION	ON 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNOLOG	T SULA	R TELESCOPE MARCH 28, 2 75
4	73	1	So we would like those to be submitted to KC
1			Environmental by April 24th, and that would allow us time to
2		2	
3		3	go through them and to prepare for a second follow-up
4		4	meeting with you all, and anyone else who you would like to
5		5	bring with you. And we are thinking that that meeting would
6		6	happen around May 1st. It's a Monday evening. None of us
7	Aloha. (Applause).	7	have really checked our travel schedules or our availability
8	DR. CHARLIE FEIN: Thank you, Ed. Anybody else	8	to come back here for sure, but it's looking like that may
9	who wishes to share testimony or anything at this time?	9	be a good time.
10	Yes, sir?	10	And so what we wanted to do was to give you a
11	MR. KEAHI BUSTAMENTE: I just wanted to say, my	11	tentative date, but to make sure that you are on the sign-in
12	name is Keahi Bustamente, and I'm a Native Hawaiian, and I	12	list so that we have your contact information, so that we
13	don't want it. (Applause).	13	can let you know for sure what the actual date is going to
14	DR. CHARLIE FEIN: Anybody else that would like to	14	be for the next meeting.
15	testify? Okay. I would like to ask Charisse to tell us	15	At that next meeting, which is going to be about
16	what the next step or the next steps are here.	16	May 1st, we will present to you all the proposals that we
17	MS. CHARISSE CARNEY-NUNES: Okay, hopefully	17	have received, and we will continue our discussion on the
18	everybody got a copy of this sheet. We just wanted to give	18	resolution of the adverse effects. And then we are
19	this to you all when you left so that you would know what	19	surmising, at this point anyway, that we would likely need a
20	the next steps in the process are going to be.	20	third meeting, probably maybe the next month, but that would
21	Again, this was tonight the first Section 106	21	be that's dependent upon what happens at the next
22		22	meeting.
23		23	So I'll just leave that out as a possible date of
24		24	June 12th. And the purpose of that meeting would be, or the
25	tonight, from the Native Hawaiian community, and from the	25	agenda for that meeting would be determined probably at our
_	74		76
1	community in general, and I hope we achieved that purpose as	1	next meeting. So does anybody have any questions for me
2		2	about the process or about the schedule?
3		3	MR. KEAHI BUSTAMENTE: I want to know between n
4	5	4	and May 1st or 2nd, whatever date it's going to be, what are
5		5	you guys going to do to inform the community? Because as
6		6	you gays going to do to inform the community in because as you can see, it's not the community here.
		7	
7			DR. CHARLIE FEIN: I can respond to that. First
8	24th, and the contact information as to where we'd like the	8	of all, we will again publish notification in the
9		9	newspapers, letting people know of the meeting. We will
10	to Charlie's company, KC Environmental. The proposals would	10	send out invitation letters to everyone on our list. And
11	be proposals to mitigate the adverse effect.	11	our list got a lot longer today as well. We received a good
12		12	deal more information from the Office of Hawaiian Affairs.
13	not disputing the spirituality, the majesty of Haleakala at	13	There are quite a few more small groups and individuals that
14	all, so that's indisputable. And we are also not disputing	14	we will be contacting. We hope there will be more people
15	that if the proposal if the proposal to fund were to go	15	here at the next meeting.
16	forward it would have an impact on the traditional cultural	16	We will also put an announcement on the radio as
17	property of Haleakala.	17	well the week before. We will do everything we can to let
18	So what we need is information as to how that	18	people know there will be a meeting, and we hope there will
19	impact might be resolved, okay. And the way in which the	19	be as many people as possible here.
20	regulations describe it, resolution proposals can include	20	MR. KEAHI BUSTAMENTE: Maybe like, I don't know,
21	avoidance, the resolution proposals could include ways in	21	suggestion, maybe like at the Hawaiian Homes Community
22	which we can minimize the impact, and the resolution	22	Center, not Hannibal Tavares Community Center.
		22	DB CHARLIE FEIN: Our pout mosting will be at a
23	proposals can include mitigation. The proposals don't have	23	DR. CHARLIE FEIN: Our next meeting will be at a
	proposals can include mitigation. The proposals don't have to be as extensive as Uncle Charlie's, but the more the	23 24	larger venue. We expect more people.

	IN 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNOLO		TELESCOPE MARCH 28, 2 79
1	that's where Hawaijans live.	1	2003 there was an enormous solar storm that caused a power
2	DR. CRAIG FOLTZ: He's recommending the community	2	outage that shut down cellular communications, that disabled
3	center down in Hawaiian Homes.	3	satellites. If we were to voyage to Mars and a large
4	DR. CHARLIE FEIN: Got it. Thank you for that	4	coronal mass ejection, which is a manifestation of solar
5	recommendation. That's a good suggestion. We will	5	activity, were to blow out and we had astronauts in space,
6	immediately look and see if that's available on that date.	6	their lives would be put in danger. I am not going to
7	Thank you. Anything else? Yes, sir.	7	oversell it, but a large solar flare when astronauts are
8	MR. CLARENCE SOLOMON: I had a question. Clarence	8	flying would be very dangerous. It is dangerous to people
9	Solomon. Throughout the presentation I didn't hear any	9	in airplanes.
10	reason for the purpose of this observatory or this site that	10	So this is I mean to me, and I am not a solar
11	you are putting up on the mountain. What's the purpose?	11	physicist, I am not a solar astronomer, this is a remarkable
12	How will it benefit mankind, the world, what's the purpose?	12	thing, because in my professional life I have never done
13	If you are going to desecrate that mountain, I need to know	13	anything that has any practical application. But solar
14	why.	14	astronomy does bear on life on earth.
15	DR. CHARLIE FEIN: That's a good question. Craig	15	Now, you might say it bears on technological life
16	did address that, but go ahead.	16	on earth. And I will agree with you that if you are off the
17	DR. CRAIG FOLTZ: This telescope is specifically	17	grid, if you have no power, if you have no cell phone, if
18	designed to study the sun in detail. It turns out there's a	18	you don't rely on communications, and if you don't rely on
19	lot about the sun that we do not understand. We understand	19	the Internet, then what is happening on the sun and you
20	why it burns, we understand it's been around for four and a	20	never go to the top of Mount Everest then what is
21	half billion years, we understand it will be around for	21	happening on the sun really doesn't have any impact on you
22	another four and a half billion years. But the details of	22	in terms of this activity. Yet we do live in a
23	the energy transport, how the energy gets out of the center	23	technological world.
24	of the sun, and how the gas motions interact with the	24	The last thing I will say is it is very obvious
25	magnetic in fact, make the magnetic field of the sun, is	25	that the sun has an impact on the climate. We don't
1	78		80
1	not understood in detail.	1	understand the fundamental radiance changes, the fundamer
2	Now, why do you study that? Well, you study it	2	variations in the brightness of the sun. We have
3	because it's academically interesting. Why did I study	3	circumstantial evidence that shows that the lack of solar
4	quasars? Because I love them, because they were a	4	activity, the lack of solar activity there's a long
5	curiosity. I was curious, and that is valid.	5	period in the 17th century when there were no sun spots, and
6	In the case of the sun, you study it because you	6	during that time that was a period that was extremely cold.
7	need to understand it, because you have some desire to	7	Now, you might say, "Well, that's cool, because we
8	understand it, curiosity about it. But in the case of the	8	have got global warming and it's going in the other
9	sun you also study it because it is the closest analog to	9	direction," but we don't understand why that's true. And
40	the star, it is a star. It's our only example that's nearby	10	you can say, "Well, can you do anything about it?" Well,
10			
10	that we can actually see the surface of. This is all	11	probably not, but you might prepare.
	that we can actually see the surface of. This is all academic. So by studying the properties of the sun we can	11 12	probably not, but you might prepare. So in any event, the connection between the sun,
11			
11 12	academic. So by studying the properties of the sun we can	12	So in any event, the connection between the sun,
11 12 13	academic. So by studying the properties of the sun we can learn about the properties of distance stars.	12 13	So in any event, the connection between the sun, the variation of the sun and the climate is a valid thing to
11 12 13 14	academic. So by studying the properties of the sun we can learn about the properties of distance stars. If this were just normal nighttime astronomy,	12 13 14	So in any event, the connection between the sun, the variation of the sun and the climate is a valid thing to study. It has an impact on agriculture, where you are going
11 12 13 14 15	academic. So by studying the properties of the sun we can learn about the properties of distance stars. If this were just normal nighttime astronomy, that's about where I would stop. In the case of the sun,	12 13 14 15	So in any event, the connection between the sun, the variation of the sun and the climate is a valid thing to study. It has an impact on agriculture, where you are going to cultivate. What impact does it have on you on Maui?
11 12 13 14 15 16	academic. So by studying the properties of the sun we can learn about the properties of distance stars. If this were just normal nighttime astronomy, that's about where I would stop. In the case of the sun, however, because of the interactions of the magnetic field	12 13 14 15 16	So in any event, the connection between the sun, the variation of the sun and the climate is a valid thing to study. It has an impact on agriculture, where you are going to cultivate. What impact does it have on you on Maui? Probably very little. What impact does it have on
11 12 13 14 15 16 17	academic. So by studying the properties of the sun we can learn about the properties of distance stars. If this were just normal nighttime astronomy, that's about where I would stop. In the case of the sun, however, because of the interactions of the magnetic field and the gas, the sun becomes active and the activity varies	12 13 14 15 16 17	So in any event, the connection between the sun, the variation of the sun and the climate is a valid thing to study. It has an impact on agriculture, where you are going to cultivate. What impact does it have on you on Maui? Probably very little. What impact does it have on civilization at large? A measurable impact. I won't
11 12 13 14 15 16 17 18	academic. So by studying the properties of the sun we can learn about the properties of distance stars. If this were just normal nighttime astronomy, that's about where I would stop. In the case of the sun, however, because of the interactions of the magnetic field and the gas, the sun becomes active and the activity varies on eleven-year cycles. Right now we're going into a period	12 13 14 15 16 17 18	So in any event, the connection between the sun, the variation of the sun and the climate is a valid thing to study. It has an impact on agriculture, where you are going to cultivate. What impact does it have on you on Maui? Probably very little. What impact does it have on civilization at large? A measurable impact. I won't oversell it, I won't say it's going to change our lives.
11 12 13 14 15 16 17 18 19	academic. So by studying the properties of the sun we can learn about the properties of distance stars. If this were just normal nighttime astronomy, that's about where I would stop. In the case of the sun, however, because of the interactions of the magnetic field and the gas, the sun becomes active and the activity varies on eleven-year cycles. Right now we're going into a period where the sun is relatively quiet. Eleven years from now it	12 13 14 15 16 17 18 19	So in any event, the connection between the sun, the variation of the sun and the climate is a valid thing to study. It has an impact on agriculture, where you are going to cultivate. What impact does it have on you on Maui? Probably very little. What impact does it have on civilization at large? A measurable impact. I won't oversell it, I won't say it's going to change our lives. But as we move into a more and more
11 12 13 14 15 16 17 18 19 20	academic. So by studying the properties of the sun we can learn about the properties of distance stars. If this were just normal nighttime astronomy, that's about where I would stop. In the case of the sun, however, because of the interactions of the magnetic field and the gas, the sun becomes active and the activity varies on eleven-year cycles. Right now we're going into a period where the sun is relatively quiet. Eleven years from now it will be relatively active. And as a manifestation of that	12 13 14 15 16 17 18 19 20	So in any event, the connection between the sun, the variation of the sun and the climate is a valid thing to study. It has an impact on agriculture, where you are going to cultivate. What impact does it have on you on Maui? Probably very little. What impact does it have on civilization at large? A measurable impact. I won't oversell it, I won't say it's going to change our lives. But as we move into a more and more technologically-dependent civilization, the impact in my
11 12 13 14 15 16 17 18 19 20 21	academic. So by studying the properties of the sun we can learn about the properties of distance stars. A measurable impact. I won't oversell it, I won't say it's going to change our lives. But as we move into a more and more technologically-dependent civilization, the impact in my mind rose at least to a measurable level. I hope that gives you an answer.

SF SECTIC	ON 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNOL	OGY SOLAR	R TELESCOPE MARCH 28, 20
1	81 DR. CRAIG FOLTZ: Do you want me to answer that	1	identify students in junior college and university level, to
2	from my heart?	2	put them in internships on the Big Island, here, at
3	MR. KEAHI BUSTAMENTE: You will probably give some	3	observatories, at high tech companies.
4	money, I don't know, reimbursement, if you can call it that.	4	We may not turn a single one into an astronomer,
5	But I don't care about your money.	5	but there are a lot of people that work in observatories who
6		6	aren't astronomers. They're programmers, they're mechanica
7	DR. CRAIG FOLTZ: Do you have career plans.	7	engineers, they're electronic engineers. And what this
	MR. KEAHI BUSTAMENTE: Yes, I do.	8	program is developed to do, what this program is designed to
8	DR. CRAIG FOLTZ: What do you think you are going	9	
9 10	to do?	10	do is to show students that there is a career path that can lead to a reasonable salary job where they live.
	MR. KEAHI BUSTAMENTE: Something to do with	11	
11	Hawaiian studies.	12	This year there will be 15 students in the program
12	DR. CRAIG FOLTZ: Do you have any friends who want		on Maui, and I think you know these numbers, and five of
13	to stay and work in the Maui economy and live here?	13	them are Native Hawaiians. Now it's a target, it's a
14	MR. KEAHI BUSTAMENTE: Sure.	14	program. We cannot say that non-Native Hawaiians may not
15	DR. CRAIG FOLTZ: Would it be of value to you or	15	apply. My understanding, and I'll ask my counsel friend,
16	to them to become better trained in higher tech activities?	16 17	but to my understanding, that would be prohibited by the
17	MR. KEAHI BUSTAMENTE: Sure.		14th Amendment, and it would be wrong for a federally-funde
18	DR. CRAIG FOLTZ: If there were programs that were	18	program. But one can recruit and target.
19	set up that developed, that were specifically targeted to	19	MS. CHARISSE CARNEY-NUNES: Yes.
20	develop the Hawaiian workforce such that it was possible to	20	DR. CRAIG FOLTZ: That is entirely consistent with
21	work in high tech Maui, to bloom where you are planted,	21	an affirmative action program. So this is the kind of thing
22	would that be something that would be appreciated?	22	that we need to think about. I love your suggestions, I
23	MR. KEAHI BUSTAMENTE: Sure. But how many	23	think there are other things. I love Warren's suggestions
24	Hawaiians work up there now?	24	about simple manners that show good manners. You know,
25	DR. CRAIG FOLTZ: You don't have to say up there,	25	simple things that one can do. Think about renaming the
	82		84
1	there's high tech down here too now. I haven't got the	1	roads. My good friend and colleague said, "Oh, geez, don't
2	number, we heard it the other day. What was the number? If	2	ask me to do that."
3	you include Lockheed and Ocean Net and et cetera, several	3	But let's get those things, make a list that says,
4	hundreds.	4	you know, clean up the stuff that isn't being used, take out
5	MR. KEAHI BUSTAMENTE: Hawaiians?	5	the paths or roads that aren't being used. These are the
6	DR. CRAIG FOLTZ: If your economic development	6	kinds of things that if we can get a punch list, give us
7	board is trying to develop Maui as a place that is high	7	your proposal, build a workforce proposal. There's lots of
8	tech, and if high tech salaries make it possible for you to	8	things that we can do. Now, we don't have infinite money,
9	live in what is now the most expensive place in the United	9	but some of these things that show a willingness to express
10	States to live, does it make sense for us to make an	10	our appreciation to be allowed to use that site.
11	investment that might help not only you know, we have to	11	I understand this young man. I absolutely
12	be careful in terms of Native Hawaiians and, you know,	12	understand your position. And please don't get me wrong,
13	Hawaiian can help Maui residents to	13	this is an emotional thing. And we all have places that we
14	MR. KEAHI BUSTAMENTE: At what cost to Hawaiians?	14	hold sacred, and I have places that I hold sacred, and I
15	DR. CRAIG FOLTZ: Talk to me about the 14th	15	understand and I appreciate it and hold onto that. But we
16	Amendment. There are programs that happen on, there's a	16	need to, you know, if we can do this, if we can come up and
17	program that's on do any of you know about the Akamai	17	if we can make this win-win, so much the better. If we
18	Internship Program, have you ever heard of it? We fund it.	18	can't do it, we can't do it. Yes, please.
19	And this year it's about 15 students, community college and	19	MS. MIKAHALA HELM: I appreciate what you're
20	university students.	20	saying, and ${\rm I}$ am aware of projects that NSF has funded that
21	And Uncle Charlie, you know about this. We fund	21	have been very helpful for our students. In this case $\ensuremath{\mathrm{I}}$
00	that, we pay for that. And we don't do it as a mitigation	22	understood that this was a Section 106 meeting, and we came
22			
23	measure, we fund it because it's the right thing to do.	23	here to give testimony about what the evaluation document
	measure, we fund it because it's the right thing to do. What we have to do is broaden participation and develop the	23 24	here to give testimony about what the evaluation document was about.

	N 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNO	LUGT SOLA	
4	85		87
1	choices is avoidance. And if it is, then we don't have to	1	feelings I had when EOS and when Faulkes was built on there,
2	come here and give suggestions or proposals as to what you	2	but it is built. Whether we liked it or not, it is built.
3	can do, and suggestions that would make it a little	3	I don't want to see this happen again, and that's the reason
4	mitigated, or whatever terms we can use, to say that it's	4	why I put that in my report.
5	all right to build a telescope.	5	If you had years of fighting these people and then
6	Some of us strongly feel that it is our	6	winding up with nothing you would feel the same way that I
7	responsibility to have a legacy for our children and the	7	do. I am looking for the future. If they're going to build
8	children's children's children, all the generations to come.	8	it, then the future children is going to prosper from it.
9	And we feel it so deeply, that it is not our role to come	9	Not me, not you maybe, but the future. That's what it is.
10	here and give you proposals on what we can do to mitigate.	10	MR. JAKE BARROWS: In my view, it's sad to see
11	But it is our role to strengthen what it is we want to do to	11	that Charlie's program or his proposal is being utilized per
12	avoid it being built here at all.	12	se as a resolvement to have an adverse effect, when in your
13	And I'm sorry I get emotional, but I know we both	13	mission statement his program could be submitted for actual,
14	get emotional, but the point is that I feel that's what this	14	right?
15	meeting was about. And I feel that that's what I'd like to	15	DR. CRAIG FOLTZ: Would you state your name?
16	see strengthened is why when I heard you say at the other	16	MR. JAKE BARROWS: My name is Jake Barrows, Jak
17	meeting that NSF has not decided on funding this. And I am	17	Barrows.
18	believing you, I am believing you. And that's why, you	18	DR. CRAIG FOLTZ: First of all, let me reiterate a
19	know, don't be offended if we are not coming to your	19	point that I made. We fund programs in work force
20	proposal and what we can do to mitigate.	20	development here, and we fund it out of our budget. Okay,
21	DR. CRAIG FOLTZ: We are both right. You are	21	we do that. And it was in response to a proposal written by
22	absolutely right, avoidance is an option. You expressed	22	a woman who lives in Santa Cruz, California. It would be
23	your opinion very eloquently, and I respect your opinion.	23	possible for you to get together and write a proposal to us
24	And you should express that opinion, and that's now part of	24	and ask for funding to do what Uncle Charlie has outlined.
25	the administrative record. But as you said, you called them	25	It would be possible. The decision as to whether that were
	86	20	88
1	options.	1	funded or not would not be tied to any project. That is a
2	MS. MIKAHALA HELM: I was merely stating what she	2	possibility.
3	said.		
4	5010.	3	
	DB CRAIC FOLTZ: They are options so one cannot	3	I am going to turn to my boss and say if you want
	DR. CRAIG FOLTZ: They are options so one cannot	4	to add any other comments to what I have just said?
5	close off. Because you feel strongly, you cannot stop	4 5	to add any other comments to what I have just said? MR. WAYNE VAN CITTERS: No.
5 6	close off. Because you feel strongly, you cannot stop discussion that would, for example, consider a mitigation	4 5 6	to add any other comments to what I have just said? MR. WAYNE VAN CITTERS: No. MR. JAKE BARROWS: It's also possible to make it
5 6 7	close off. Because you feel strongly, you cannot stop discussion that would, for example, consider a mitigation package. So the purpose of this meeting is not simply to	4 5 6 7	to add any other comments to what I have just said? MR. WAYNE VAN CITTERS: No. MR. JAKE BARROWS: It's also possible to make it further along the way for approval if it was attached to
5 6 7 8	close off. Because you feel strongly, you cannot stop discussion that would, for example, consider a mitigation package. So the purpose of this meeting is not simply to address one of those options. As much as we respect your	4 5 6 7 8	to add any other comments to what I have just said? MR. WAYNE VAN CITTERS: No. MR. JAKE BARROWS: It's also possible to make it further along the way for approval if it was attached to ATST, correct?
5 6 7 8 9	close off. Because you feel strongly, you cannot stop discussion that would, for example, consider a mitigation package. So the purpose of this meeting is not simply to address one of those options. As much as we respect your opinion, it is now part of the administrative record, okay.	4 5 7 8 9	to add any other comments to what I have just said? MR. WAYNE VAN CITTERS: No. MR. JAKE BARROWS: It's also possible to make it further along the way for approval if it was attached to ATST, correct? MR. WAYNE VAN CITTERS: Well, actually I'm not
5 6 7 8 9 10	close off. Because you feel strongly, you cannot stop discussion that would, for example, consider a mitigation package. So the purpose of this meeting is not simply to address one of those options. As much as we respect your opinion, it is now part of the administrative record, okay. And I say this please, I get emotional about this, and I	4 5 7 8 9 10	to add any other comments to what I have just said? MR. WAYNE VAN CITTERS: No. MR. JAKE BARROWS: It's also possible to make it further along the way for approval if it was attached to ATST, correct? MR. WAYNE VAN CITTERS: Well, actually I'm not sure I would agree with that statement, because that
5 6 7 8 9 10 11	close off. Because you feel strongly, you cannot stop discussion that would, for example, consider a mitigation package. So the purpose of this meeting is not simply to address one of those options. As much as we respect your opinion, it is now part of the administrative record, okay. And I say this please, I get emotional about this, and I understand you. And really, we come here we really come	4 5 7 8 9 10 11	to add any other comments to what I have just said? MR. WAYNE VAN CITTERS: No. MR. JAKE BARROWS: It's also possible to make it further along the way for approval if it was attached to ATST, correct? MR. WAYNE VAN CITTERS: Well, actually I'm not sure I would agree with that statement, because that
5 6 7 8 9 10 11 12	close off. Because you feel strongly, you cannot stop discussion that would, for example, consider a mitigation package. So the purpose of this meeting is not simply to address one of those options. As much as we respect your opinion, it is now part of the administrative record, okay. And I say this please, I get emotional about this, and I understand you. And really, we come here we really come here with respect. What happens in the end, whatever	4 5 7 8 9 10 11 12	to add any other comments to what I have just said? MR. WAYNE VAN CITTERS: No. MR. JAKE BARROWS: It's also possible to make it further along the way for approval if it was attached to ATST, correct? MR. WAYNE VAN CITTERS: Well, actually I'm not sure I would agree with that statement, because that assumes, that statement assumes then that somehow ATST, there has been a positive decision on ATST already. So no,
5 6 7 8 9 10 11	close off. Because you feel strongly, you cannot stop discussion that would, for example, consider a mitigation package. So the purpose of this meeting is not simply to address one of those options. As much as we respect your opinion, it is now part of the administrative record, okay. And I say this please, I get emotional about this, and I understand you. And really, we come here we really come	4 5 7 8 9 10 11 12 13	to add any other comments to what I have just said? MR. WAYNE VAN CITTERS: No. MR. JAKE BARROWS: It's also possible to make it further along the way for approval if it was attached to ATST, correct? MR. WAYNE VAN CITTERS: Well, actually I'm not sure I would agree with that statement, because that assumes, that statement assumes then that somehow ATST, t
5 6 7 8 9 10 11 12 13 14	close off. Because you feel strongly, you cannot stop discussion that would, for example, consider a mitigation package. So the purpose of this meeting is not simply to address one of those options. As much as we respect your opinion, it is now part of the administrative record, okay. And I say this please, I get emotional about this, and I understand you. And really, we come here we really come here with respect. What happens in the end, whatever	4 5 6 7 8 9 10 11 12 13 14	to add any other comments to what I have just said? MR. WAYNE VAN CITTERS: No. MR. JAKE BARROWS: It's also possible to make it further along the way for approval if it was attached to ATST, correct? MR. WAYNE VAN CITTERS: Well, actually I'm not sure I would agree with that statement, because that assumes, that statement assumes then that somehow ATST, there has been a positive decision on ATST already. So no,
5 6 7 8 9 10 11 12 13	close off. Because you feel strongly, you cannot stop discussion that would, for example, consider a mitigation package. So the purpose of this meeting is not simply to address one of those options. As much as we respect your opinion, it is now part of the administrative record, okay. And I say this please, I get emotional about this, and I understand you. And really, we come here we really come here with respect. What happens in the end, whatever happens in the end should not be construed as a lack of	4 5 7 8 9 10 11 12 13	to add any other comments to what I have just said? MR. WAYNE VAN CITTERS: No. MR. JAKE BARROWS: It's also possible to make it further along the way for approval if it was attached to ATST, correct? MR. WAYNE VAN CITTERS: Well, actually I'm not sure I would agree with that statement, because that assumes, that statement assumes then that somehow ATST, there has been a positive decision on ATST already. So no, I wouldn't say that.
5 6 7 8 9 10 11 12 13 14	close off. Because you feel strongly, you cannot stop discussion that would, for example, consider a mitigation package. So the purpose of this meeting is not simply to address one of those options. As much as we respect your opinion, it is now part of the administrative record, okay. And I say this please, I get emotional about this, and I understand you. And really, we come here we really come here with respect. What happens in the end, whatever happens in the end should not be construed as a lack of respect for you personally.	4 5 6 7 8 9 10 11 12 13 14 15 16	to add any other comments to what I have just said? MR. WAYNE VAN CITTERS: No. MR. JAKE BARROWS: It's also possible to make it further along the way for approval if it was attached to ATST, correct? MR. WAYNE VAN CITTERS: Well, actually I'm not sure I would agree with that statement, because that assumes, that statement assumes then that somehow ATST, there has been a positive decision on ATST already. So no, I wouldn't say that. MR. JAKE BARROWS: That would more than likely happen if there was an approval that would come out of operating funds to fund that program. DR. CRAIG FOLTZ: Let me try. If ATST was not built, the National Solar Observatory will spend none of its operations funds on Maui. It has no reason to. It has no feet on Maui. If ATST were constructed, the NSO would spend operations funds on Maui. The operations funds would
5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	close off. Because you feel strongly, you cannot stop discussion that would, for example, consider a mitigation package. So the purpose of this meeting is not simply to address one of those options. As much as we respect your opinion, it is now part of the administrative record, okay. And I say this please, I get emotional about this, and I understand you. And really, we come here we really come here with respect. What happens in the end, whatever happens in the end should not be construed as a lack of respect for you personally. MR. EDWARD LINDSEY: All the thing that you talked about, all the things with NSF, you can do it without the telescope DR. CRAIG FOLTZ: You can write us a proposal, Ed. Go write us a proposal. We do it without the telescope, we do it right now. You want us to do more of it? Would you like us to do more of it?	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	to add any other comments to what I have just said? MR. WAYNE VAN CITTERS: No. MR. JAKE BARROWS: It's also possible to make it further along the way for approval if it was attached to ATST, correct? MR. WAYNE VAN CITTERS: Well, actually I'm not sure I would agree with that statement, because that assumes, that statement assumes then that somehow ATST, there has been a positive decision on ATST already. So no, I wouldn't say that. MR. JAKE BARROWS: That would more than likely happen if there was an approval that would come out of operating funds to fund that program. DR. CRAIG FOLTZ: Let me try. If ATST was not built, the National Solar Observatory will spend none of its operations funds on Maui. It has no reason to. It has no feet on Maui. If ATST were constructed, the NSO would spend operations funds on Maui. The operations funds would include a component of education.

NSF SECTION 106 CONSULTATION FORMAL MEETING FOR THE ADVANCED TECHNOLOGY SOLAR TELESCOPE

MARCH 28, 2006

	89		91
1	is built or not. So that having been said, you basically	1	competition from a list of acceptable vendors provided by
2	asked the question, could these programs be developed	2	the State of Hawaii. He is listed as a qualified cultural
3	without the telescope being built. And my response to that	3	specialist. And he, along with other individuals, submitted
4	is yes, someone could write a proposal, an unsolicited	4	quotes. And Kahu Maxwell was selected on the basis of prior
5	proposal to do exactly what Uncle Charlie has laid out, or	5	experience and best value for the position. Yes?
6	some variation of that, and submit it to the NSF. It would	6	MS. KEALA HAN: I just have a few comments. My
7	be reviewed and it might be funded. It might be funded.	7	name is Keala Han, and not because he's my brother, but you
8	Because in general, the success rate for NSF proposals, the	8	made a good choice, because I have seen him walk the walk.
9	success rate for proposals to the astronomy division this	9	I haven't seen many of you here walking the walk, and he has
10	year will be about one in four are funded. And overall the	10	been doing that for years, years.
11	agency tries to get a one in three, but it's rarely 50/50.	11	He started with the Faulkes telescope. He was the
12	So you might, you know, you can take those comments however	12	only one that tried to disrupt the meeting. I was there
13	you want, but that's the basic truth.	13	just to support him, but he disrupted the meeting and the
14	MR. KEAHI BUSTAMENTE: Sorry, just one more	14	Air Force. So, you know, for years he's been doing that,
15	question. I wanted the NSF to clarify that. You said you	15	and he has walked the walk. And like I say, not because
16	acknowledge Uncle Charlie's report calling you	16	he's my brother, but I think they made a good choice.
17	acknowledge Haleakala as being sacred.	17	And to even bring up those proposals, he has known
18	MS. CHARISSE CARNEY-NUNES: Yes.	18	for years our Hawaiians had nothing, our Hawaiians didn't
19	MR. KEAHI BUSTAMENTE: Now, will it fall under the	19	stand up for themselves. They let them build and build and
20	National Historic Preservation Act, is that under the	20	build, and there was no education attached. But I thought
21	guidelines? I mean, are you acknowledging that it could	21	it was a good proposal, and I want to thank you folks for
22	fall under these guidelines, or are you just saying yeah,	22	all that respect shown to our Native Hawaiians.
23	it's sacred?	23	DR. CHARLIE FEIN: Any other comments before we
24	MS. CHARISSE CARNEY-NUNES: We acknowledge that it	24	conclude the evening? Okay, I want to thank you all very
25	falls under the guidelines of the National Historic	25	much for coming. I know it was a relatively small group.

1 ATTENDANCE 2 National Science Foundation Formal Meeting 3 May 1, 2006 4 Dr. Charlie Fein, Vice President 5 KC Environmental, Inc. 6 P.O. Box 1208 Makawao, Hawaii 96768 7 Dr. Craig Foltz, Program Officer 8 National Science Foundation 4201 Wilson Boulevard, Room 1045 9 Arlington, Virginia 22230 Jeremy Wagner, Project Director, National Solar Observatory 10 Tony Gibson, National Science Foundation 11 12 Charisse Carney-Nunes, Assistant General Counsel Jeff Bar, ATST Project Architect, National Solar Observatory 13 14 Mike Maberry, Assistant Director, University of Hawaii, Institute For Astronomy 15 16 17 18 19 20 21 22 23 24 25

1 PROCEEDINGS: 2 MR. FEIN: Aloha, ladies and gentlemen. 3 4 Could I ask you to please be seated. 5 Again, aloha and welcome. This is the second б formal National Historic Preservation Act Consultation 7 Meeting for the proposed Advanced Technology Solar Telescope. 8 My name is Charlie Fein. I'm the environmental consultant 9 for this project. And tonight we are going to go through a 10 series of steps and, ultimately, anyone who wishes to step forward and comment may do so. 11 12 Again tonight we are recording everything 13 that is being said officially with a stenographer. If 14 somebody wishes to testify in Hawaiian, it will be recorded, 15 turned into a wav file, and it will be translated and posted on the Advanced Technology Solar Telescope website as soon as 16 17 it is translated. Before we go any further, I would like to ask 18 19 Kahu Charles K. Maxwell to offer a blessing to this evening. 20 This, by the way, is not an endorsement of the project. It 21 is simply a blessing to go on with the proceeding. 22 Kahu. 23 MR. MAXWELL: (Hawaiian.) Would you please 24 rise. 25 (Hawaiian.) Our Father in heaven, we ask and IWADO COURT REPORTERS, INC. (808) 244-9300

3

1 pray that you look down upon us here at Paukukalo that we 2 might get the wisdom of what is happening up at Haleakala and we might share our input to protect this very sacred place. 3 4 We ask this in your name. (Hawaiian.) Amen. 5 AUDIENCE: Amen. 6 MR. FEIN: Mahalo. 7 So this evening we are going -- There are a lot of people in the room tonight that have not been in any 8 9 of the public meetings or in the previous National Historic Preservation Act meetings. And all together I believe there 10 have been I think six meetings all together, but each time 11 there are individuals who have not seen or heard much about 12 13 the project except maybe what they have read in the paper or 14 what they have heard from other people. 15 And so tonight we have with us individuals from the National Science Foundation, the National Solar 16 17 Observatory, who are prepared to give us brief descriptions 18 of the project, the role of the National Science Foundation 19 and so on. 20 Before we begin those, I would like to ask 21 the assistant general counsel for the National Science 22 Foundation, Charisse Carney-Nunes, to tell us specifically 23 who this meeting is for and what it is about. 24 Charisse. 25 MS. CARNEY-NUNES: Aloha.

AUDIENCE: Aloha.

1

2 MS. CARNEY-NUNES: One more thing I want to add as a housekeeping matter, there is someone who may be 3 videotaping in the back. And she is waving to us. Hi. She 4 5 is not associated with the National Science Foundation or the б project, but it's a public meeting and so she's welcome to videotape it. If anyone feels uncomfortable and not wanting 7 something to be videotaped, then just let us know and she 8 9 said that she'll turn it off. Okay? So just another 10 housekeeping matter. Okay. So I bring you greetings on behalf of 11 the National Science Foundation. To the Native Hawaiian 12 13 community and to all the people of Maui, mahalo for welcoming 14 us this evening. 15 Again, my name is Charisse Carney-Nunes, and I am an assistant general counsel at the National Science 16 17 Foundation. I have with me this evening Craig Foltz, who is 18 the program officer for the ATST project at the National 19 Science Foundation, and we also have Tony Gibson, who is from 20 our Office of Legislative and Public Affairs. 21 When we last met in March I gave you all an 22 overview of the process of why we're here this evening, and 23 that's called the Section 106 process. This time we thought 24 it would be a little bit more interesting to give you a very 25 detailed, more in-depth understanding of the process. And so

1 I'm just going to say a couple of words up here now, but I'm 2 going to actually come back, I have a slide presentation so 3 that I want everyone to really understand the kind of input that we're seeking from the Native Hawaiian community 4 5 specifically and from the entire community here on Maui. б So for now I'm just giving you a guick 7 overview of why we're here. Again, it's our second formal meeting of the Section 106 consultation process. Section 106 8 9 refers to Section 106 of the National Historic Preservation 10 Act. What does that mean? It's a federal law that is 11 concerned with preserving and enhancing the productive use of 12 our nation's resources, historic resources particularly. 13 It's pretty simple. It requires federal 14 agencies like NSF to consider the effects of their 15 decision-making on historic or cultural properties. Another important thing about Section 106 is that it is specifically 16 17 designed to give the public a voice in that decision-making, 18 and particularly Native Hawaiians and Native Americans are to 19 have a voice in federal decisions that impact historic 20 properties. So that's why we're here. NSF is considering 21 22 a proposal to fund the construction and operation of a solar 23 telescope that would be sited on Haleakala. NSF's decision 24 as to whether or not to fund the telescope has not been made 25 as of yet. Before we make the decision we have to do two

things, one of which is the Environmental Impact Statement.
 It's an environmental analysis. That process is separate
 from the process that we are here tonight to go through,
 which concerns historic properties.

5 The Environmental Impact Statement process б actually started -- When was it? -- last summer. And it's moving forward parallel to this process. And, in fact, we're 7 hopeful that very soon, within about a month or so, we will 8 9 have -- we will be able to release a draft Environmental 10 Impact Statement for the community to comment on. But that 11 concerns environmental impacts of the project. This process 12 that we're here tonight for is specifically for the Section 13 106 process that concerns historic properties. We call them 14 cultural resources, resources that are important to the 15 Native Hawaiian community, Haleakala specifically.

So that's the historic property we're talking 16 17 about, the mountain, Haleakala. And first and foremost the 18 thing that we want you to know at NSF is that we have already 19 made the decision that Haleakala is, in fact, a -- it's 20 called -- the legal word for it is called a traditional 21 cultural property. We refer to it as a TCP for short. But 22 the point is is that the way the law is set up, it's set up 23 so that the federal agency is actually the one that's making 24 the decision as to whether or not a property is historic. 25 And the law is set up so that we have to go

1 to the community to find this information out. We did that 2 already. We utilized the services of Kahu Maxwell, who 3 educated us about your stories and about your legends, and, therefore, we have already made the determination that, yes, 4 5 Haleakala is a traditional cultural property or a TCP under б the law. So that means that to move forward in the Section 7 106 process, we have to talk about how to resolve the adverse impact that building ATST on top of the traditional cultural 8 9 property might have.

10 Because the traditional cultural property is just that, a cultural resource of Native Hawaiians, the law 11 12 does require that we place a special emphasis on Native 13 Hawaiian organizations, and so that's what we're here to do. 14 But that's not to negate the fact that Haleakala is, of 15 course, a majestic mountain to all of the citizens of Maui and beyond, and so we recognize that as well and want to hear 16 17 from the entire community.

So with all of that being said, on behalf of NSF I say mahalo to Kahu Maxwell for his blessing of this process. As I said in March, for those of who were here, it is our deepest belief that these discussions can be undertaken with a spirit of mutual respect, productive consultation, and education and enlightenment for all parties involved.

So with that, I would like to introduce Craig

IWADO COURT REPORTERS, INC. (808) 244-9300

8

25

1 Foltz. He is, again, the program director for the ATST 2 project at the National Science Foundation. And he is going to talk to you a little bit about NSF and also about the 3 science of, you know, why -- for us nonscientists sort of, 4 5 you know, why do we even want to do so this. 6 MR. FOLTZ: Thank you, Charisse. 7 I add my thanks to Charisse's. Thank you all 8 for coming. 9 My name is Craig Foltz. I work at the 10 National Science Foundation. I am an astronomer. I am also a federal employee. And I wanted to talk tonight a little 11 12 bit about the project very briefly and about how the NSF 13 works, how the National Science Foundation works, what it does and how it does it. 14 We at the National Science Foundation are a 15 federal agency that is in the executive branch. That means 16 17 that our boss eventually is the President of the United 18 States. Our job at the NSF is to provide funding for 19 20 endeavors in science, technology, engineering, mathematics, 21 and education in the so-called STEM field: Science, 22 technology, engineering and mathematics. And we do this, as 23 I said, by giving grants, by providing funding. 24 What the NSF is not -- Ah, good. Thanks. 25 First of all, what is the NSF? We are a

1 responsive agency. What do I mean by that? I mean that we 2 are not like the Department of Defense. We're not like NASA. 3 We're not like the Department of Energy and so on. We are not an organization that makes a decision unilaterally; that 4 5 is, we don't get together as federal scientists and say, We б think that what really the science and the education of this 7 nation needs is a new particle collider that will live 8 somewhere in Illinois. We don't work that way.

9 What we do is we establish priorities that 10 are set by the community at large; the science, technology, 11 engineering and mathematical communities at large. We don't 12 do this of our own will. We respond to what the community 13 wants.

14 So if you were a chemist and you have a 15 wonderful idea and you have a collaboration of chemists, then you can come to us and say, We need support to study the 16 17 following problem. Okay? That proposal that is written 18 would then be considered by peers, by other chemists and 19 other scientists, as to its intellectual merit and as to its 20 broader impact; in fact, the society impact of education and 21 so on. If it is judged appropriately -- of appropriate 22 status, then we will fund it.

What we're going to talk about tonight very,
very briefly is a very familiar object, and that's the sun.
The study of the sun is, of course, an important part of

1 solar astronomy and of solar physics. And our picture of the 2 sun -- I think most of our pictures of the sun are quite 3 simple. If I asked my young daughter to draw a picture of the sun, this is probably what she would draw: A big yellow 4 5 disk that is, in fact, an image of the sun that was taken in б March. It's an image of what we call a quiet sun. It's a 7 white light picture. The sun is a huge ball of gas. It's about -- You could fit a million earths inside of it. It has 8 9 a surface temperature of about 10,000 degrees. And it's a 10 very, very important object.

We understand or we think we understand a lot 11 about the sun. We -- Within the context of our scientific 12 13 beliefs, we believe that the sun formed about 4.5 billion 14 years ago. We believe that it will burn as we see it for about 4 billion years, at which point it will swell up and 15 envelope the earth. So we have lots of time, so we don't 16 17 need to worry about that. Now, that's the sun in broad 18 brush.

19 If you asked about what we don't understand 20 about the sun, it turns out that there are a lot of 21 phenomenon that we do not understand. And these are 22 important phenomenon. The sun is actually a place of 23 enormous activity. Most of this activity is tied to magnetic 24 fields that are generated in the sun, that sometimes protrude 25 out of the surface of the sun and occasionally give rise to

very, very explosive events that can blow enormous amounts of material out away from the sun and, in fact, that can impact the earth. When the -- these impact the earth, they can have actually fairly profound effect on life on earth.

5 But beyond the effects of the variable sun it б is worth pointing out that with the exception of some nuclear 7 energy sources and geothermal power, that all of the energy that we use on the earth is derived ultimately from the sun. 8 9 Fossil fuels, coal came from plants which were allowed to 10 grow by the sun. Solar power, wind power -- I know that's not a good word around here so I won't say it too loudly, but 11 12 the --

Well, we have -- I can talk to you about it later, Keoki, but we have these wind generators behind us and Is I know that they generate opinions.

In any event, all of that is driven by the 16 17 sun. Our climate is driven by the sun. Our weather is 18 driven by the sun. So I think it's not even arguable that 19 the sun has a profound impact on our life. It impacts our 20 climate, which then, therefore, impacts our economy. It 21 impacts our technology and it impacts life in space. If you 22 were out in space or if you were at high altitude, activity 23 on the sun can certainly have an impact on you directly. And 24 it is absolutely -- Well, I would be happy to argue this, but 25 it is absolutely my most firmly held opinion that without the

1 sun life on earth would be impossible.

2 So the sun is important. And there are a lot 3 of unanswered questions about the sun. And the major questions that we want to try to understand are the 4 5 relationships between the sun and climate, how variations in б the solar output affect things like global warming or global cooling. We have good evidence that in the past there has 7 been a direct connection between the amount of solar activity 8 9 and the mean temperature of the earth, which is important if 10 you're involved in agricultural or virtually anything else. We want to understand the sun's drive of 11 12 space weather. Space weather is a phenomenon of material 13 being ejected from the sun that impacts the earth. 14 We want to understand the sun as a star because we're curious. We want to understand how stars work. 15 16 We understand a lot about stars, but there are many things 17 that we don't understand. The sun is the closest one. It's 18 the only one we can see the surface of. 19 And we also want to understand the sun as a 20 physics laboratory, because there are phenomena that happen 21 on the sun that cannot be reproduced in the laboratory. So 22 understanding the basic issues of how plasmas work, how 23 ionized gas interacting with magnetic fields work are often 24 best studied in nearest astrophysical laboratory, which is 25 the sun.

IWADO COURT REPORTERS, INC. (808) 244-9300

1 These questions were considered important 2 enough that the development of a new large solar telescope 3 was a recommendation of the solar physics and solar astronomy community. It was not the NSF's decision. As I said, we 4 5 didn't sit down and say, Damn, the newest solar telescope we 6 have is 40 years old. We really want to build a new one. 7 Our job, then, is to evaluate proposals such as this via peer review, rank their importance across fields, 8 9 and if appropriate provide funding for them if they meet a 10 rigorous set of standards. Now, I want to point out here, I 11 want to stress that the ATST is not an NSF project alone. It 12 is a project of the entire solar physics and space physics 13 community that, if successful, would be funded by us. 14 Very quickly -- and I won't go through all of 15 this -- the ATST, if constructed, would replace a number of major solar telescopes that are currently in place around the 16 17 world. There is no project of this magnitude being planned 18 internationally. This would become the world's flagship 19 facility. Its design is based on broad interests from the 20 solar physics and solar astronomy. It will address current 21 and future challenges. It will provide flexibility to adapt 22 to new scientific challenges. 23 It cannot be done from space. The science cannot be done from space for any rational thoughts. And it 24

25 has tremendous broader impacts; that is it -- that which we

IWADO COURT REPORTERS, INC. (808) 244-9300

learn with this telescope will help us to understand issues
 like climate change, astronaut safety, space weather, and the
 relation between what is happening on the sun and what is
 happening on the earth.

5 Finally, I just want to make a few points 6 here so we have a context. The ATST, if it is built, will 7 cost at least \$175 million. That even by federal standards 8 and particularly by -- particularly in the context of federal 9 support for science makes it a very expensive project.

10 The decision to fund it or not has not been made. This is to fund the construction. We have funded the 11 12 design of the telescope, but the design is separately from 13 the construction. So we have not made this decision and it will only be made after even the project goes through even 14 15 more reviews. And those reviews will consider potential science return, the cost, how well the project is managed, 16 17 what impacts it will have on the field, what impacts it will 18 have on society, and what impacts it will have on the site. 19 Having said that, I will point out that the 20 ATST is well advanced in the decision process, but the 21 decision to fund ultimately relies on the highest level of 22 management of the NSF, several steps above me, the National 23 Science Board and the US Congress, which makes the ultimate 24 decision as to whether to fund this or not.

25 I also want to point out that the selection

1 of the Haleakala site was not done capriciously. No one 2 said, Hey, this is a really wonderful island -- It is a wonderful island -- and we really would love to put a 3 telescope there so we can go there and use it and then enjoy 4 5 the rest of the island. It was not done that way. б The selection of the site and the precise 7 location for the telescope on the site followed a really 8 exhaustive process. So the site selection was not 9 capricious, nor is the assessment of the impact. 10 So I want to thank you all for coming. I want to thank you for your input. 11 12 And at this point I'm going to turn it over 13 to Charlie Fein. 14 Pardon me. Jeremy. Jeremy Wagner, who is 15 the project manager for the ATST project. 16 MR. WAGNER: Okay. Hello. My name is Jeremy 17 Wagner. I'm the project manager for ATST. I'm going to try 18 and answer a few of the questions here fairly quickly: A 19 quick overview of where on Haleakala ATST would be, what it 20 looks like, why it looks like that, what the schedule might 21 be. 22 AUDIENCE SPEAKER: Can you move? Thank you. 23 MR. WAGNER: Excuse me. 24 First, I'd just like to say a student before 25 the meeting asked me how I became involved in science and in

1 technology. And to answer the question, I had to go back a 2 long way. My mother actually gave me a telescope on my 3 eighth birthday and I remember the day, and I was hooked ever 4 since. Last month I celebrated my 26th year with the 5 National Observatory, I actually celebrated my 26th wedding б anniversary as well, but that moment with the telescope when 7 I was a kid really was pretty inspiring to me. And I've had 8 a chance to be involved in science ever since.

9 And we talk about structures and why they are 10 the way they are, but there's a lot of people involved as 11 well and a lot of good experiences over the course of the 12 time that I have been involved.

13 This layout gives you an idea of where the 14 proposed sites are. This is the existing Mees site on 15 Haleakala. This is the air force facility. The primary proposed site is just east of Mees here. And we have drawn 16 17 in a sketch of what ATST would look like. This is looking 18 down at the site. The alternate site or the secondary site 19 is up at Reber Circle, which is just a bit uphill from there. 20 Okay?

Here are images of those two sites. These were both in the Haleakala Long-Range Development Plan that was prepared by the Institute for Astronomy. This is the alternate site, the Reber Circle site, which was the site of a radio telescope experiment back in the 1950s.

And then this is the site just east of Mees.
 This is the existing Mees telescope and ATST on the primary
 site would sit here.

4 To give you an idea of what it looks like and 5 why it is so big, 137 feet from the ground to the top of the б enclosure, another 6 feet up to the top of the entrance 7 aperture to the telescope facility, so 143 feet tall. Okay? 8 Now, one of the reasons it's set at that 9 height is from the data that we took during the site survey 10 we set the height of the main mirror, which is sitting here -- This is in cross-section -- at that height so that 11 12 the telescope optics are above the turbulent layer that's 13 produced by the sun's energy hitting the dark rock and 14 heating up the air around it. So in order to preserve the 15 excellent seeing that the site provides, you have to get the optics up above that disturbed layer, and that's why this was 16 17 sit at the 92-foot level. Okay?

Now, the enclosure then which is surrounding the optics and the telescope mount is set so that it can provide clearance for the telescope to track the sun as it moves and to protect it from wind, ice, rain, elements. Okay?

There is a support building next to it which is as small as we can make it. The astronomers actually want the facilities to be as small as possible, too, because they

1 don't want the support building to affect the seeing as well. 2 The facilities near the telescope and the 3 telescope enclosure are painted white because if the ground heats up, the dark lava rock heats up and you build the 4 5 structure up above it, if you take a dark color like that and bring it up with the facility, it acts in just the same way, б 7 so you have defeated the purpose. The idea, then, is to keep 8 these surfaces at ambient temperature essentially the same as 9 the air temperature so that they don't destroy the seeing 10 that's provided by the site. And so that gives you an idea of why it's at that height and why it's white. 11 Now, we did a lot of studies of different 12 13 colors, and the heat loading on these structures goes up by a 14 factor of four. The utility electricity that's required to 15 drive a cooling system for a dark structure would be at least four times what it takes to do this. And it actually exceeds 16 17 the Maui Electric capacity up there. 18 So that's why it's white. That's why it's 19 that high. I think in the community there's been discussion 20 about that, and I just want to make that clear. 21 So if there are any questions, I'm happy to 22 talk about that. 23 The existing Mees facility --24 AUDIENCE SPEAKER: Question. 25 MR. WAGNER: Sure.

IWADO COURT REPORTERS, INC. (808) 244-9300

1 AUDIENCE SPEAKER: The first meeting you held 2 in the Cameron Center last year I asked somebody about the --3 MR. WAGNER: Sorry. 4 MS. CARNEY-NUNES: We actually can't record 5 your question or even -- If you can say it in here and if you б could say your name. Sorry about that. 7 AUDIENCE SPEAKER: Thank you. 8 The first meeting you held in the Cameron 9 Center last year I asked the question about the heat 10 exchanger that you have for this building and I had wondered 11 if they could not increase the size of the heat exchangers in 12 order to cool the building more or more efficiently. That 13 way could have a color other than white paint. I don't know 14 who I asked, one of the gentleman here. I didn't follow up 15 on it later, so I'm just asking again. If you can improve on the present heat exchange system which would, in turn, lead 16 17 you to painting the structure a color other than white. 18 MR. BAR: My name is Jeff Bar. I'm the 19 project architect. And I wasn't directly responsible for 20 designing the cooling system, but I'm well aware of it and 21 what's involved in it. And it's a pretty simple system, 22 really. There. On the -- some of the other pictures you've 23 seen there's a kind of series of panels on the dome itself, 24 and in the -- three of those panels there are like two sheets 25 of metal and between them you flow coolant, which is just a

IWADO COURT REPORTERS, INC. (808) 244-9300

1 water with something in it to keep it from freezing. And 2 it's a pretty simple system and it's about the most direct 3 and efficient means of removing the heat from -- that builds 4 up on the dome.

5 We actually looked at other systems, б potentially using air flowing between two skins of the dome or something like that, and all of that stuff uses even more 7 power. This was the most energy-efficient means we could 8 9 come up with. And, believe me, we would have -- if there's 10 something else there, I think we would have sort of beaten it out of the bushes within the kind of search that we did. So 11 12 it really is kind of minimum.

13 And when Jeremy talks about the four times, 14 it's like -- you know, for those of you who think in terms of 15 power units, it's about a megawatt of heat that builds up on 16 the dome, which is a thousand kilowatts of heat that builds 17 up on the dome if you have -- if you paint it brown. And if 18 you paint it white, it's about 250 kilowatts. So it's about, 19 as he said, one-fourth the amount of heat. And to remove 20 that much heat from a dark-colored dome no matter what kind 21 of efficiency you can come up with the cooling system was 22 completely impractical.

23 So that's why, you know, that -- And we did 24 explore other colors, too -- silver, which I know isn't 25 popular, either, but other kinds of possibilities, and

1 nothing even compares with the white finishes.

2 AUDIENCE SPEAKER: So, in effect, you could 3 paint it another color, you're just saying from a practical point of view you can't do it or you won't do it because --4 5 it's not engineering or technologically impossible to do -б MR. BAR: It's not impossible. 7 AUDIENCE SPEAKER: According to what you say, 8 it's simple to do. Can we paint it something other than 9 white? MR. BAR: Okay. Well, again, you're right. 10 It's not impossible. Anything is possible. But it's not 11 12 within the realm of feasibility on this mountain with the 13 heating require -- the cooling requirements that we have. 14 AUDIENCE SPEAKER: The amount of control required on a surface like that we just can't do in order to 15 maintain the kind of image quality that we need. 16 17 AUDIENCE SPEAKER: Let me back this up, just 18 one little follow-up on this. You have not asked for 19 funding; is that correct? You have not approached congress 20 or the gentleman that spoke first for funding, so we have 21 wiggle room in there; right? You can go in there and ask --22 go whole hog and ask for everything. Is that correct, you 23 haven't asked for funding. 24 MR. WAGNER: Yes, we actually did propose for 25 the level of fund.

IWADO COURT REPORTERS, INC. (808) 244-9300

AUDIENCE SPEAKER: You did ask for -- Did you
 put forth a figure?

3 MR. WAGNER: Yes, we did. Actually, several4 years ago.

5 AUDIENCE SPEAKER: Can you not revise that 6 figure while we're in this talking process? Can you get two 7 figures; the one that you have here and one with an improved 8 heat exchange system that allows you to change the paint of 9 that building from white to something else?

10 MR. WAGNER: My understanding is that we're 11 not in a position to request additional funding in that 12 sense. And I don't see -- As Jeff said, I'm not sure what 13 kind of system we could possibly come up with that would meet 14 the kind of requirements that we have. I mean, we've worked 15 this problem very hard.

Let me go on so we can get to the Section 17 106. Okay. So we talked about the surfaces. Let me get to 18 the schedule because I think there's been some discussion as 19 well in the community about that.

The DND phase is ongoing now. The site EIS process is underway. We've been working through our design reviews and several of these have been focused on that thermal control system itself. The NSF has been reviewing our construction proposal that we submitted which had a figure in it. They will then in October hold a preliminary

1 design review, which is essentially a baseline review of the 2 project. They're going to look at the management, the technical, the cost, the risk, all of that. 3 4 If that's successful, they will then have an 5 EMR, Exit Readiness Review. And if that's successful, they 6 will submit a recommendation to the director of the NSF to 7 consider submitting this to the National Science Board for 8 consideration. Now, the EIS is all part of this. It's part 9 of the criteria that they use to make these kinds of 10 decisions. And so they are timing all of this to understand whether the environmental impact can be successfully 11 12 completed or whether it can't. 13 Okay? So as Craig said, it's not funded. 14 MS. CARNEY-NUNES: We actually need questions 15 to go to the mike. 16 MS. DIZON: Aloha. My name is Toni Dizon. 17 I'm actually from Lahaina. I'm born and raised on Maui. I'm against this project totally. You guys don't belong there at 18 19 all. 20 (Applause.) 21 MS. DIZON: You got \$170 million to offer 22 these gentlemen to do scientific things, then do it off the 23 water that they polluted, do it off the land that they 24 polluted. We need that agricultural major at Maui Community 25 College. Okay?

1 I know what you guys are trying to do and 2 stuff, that's great, but what the hell doing up there when 3 you guys already forecasted what the sun is going to do, what it's going to do in the future. Let's do it on the land, do 4 5 it on the ocean. Purify what we've got down here instead of б futtin' around up there. I'm serious. And then all kinds 7 monies you guys can give these guys, give it to the ag. 8 department at Maui Community College.

9

(Applause.)

10 MS. DIZON: The hell with these guys. Give us the money so I can get my bachelor's degree, my master's, 11 12 and the future of the land and the water. These guys don't 13 belong up there and they damn well don't belong on Haleakala. 14 That's sacrilegious to Peli itself as much as Maui. Because 15 looking -- When you go outside and you look up, Welcome to beautiful Maui, you see a fricking (inaudible) that's up on 16 17 Ma'alaea. That's a pain in the butt. Now we're going to have an eyesore of 14 towers. That's exactly what this 18 19 kupuna told me it's going to look like on the mountain. Look 20 at the mountain, that's what's going to be sticking up. 21 (Gesturing.) Exactly.

But as a -- as an agriculture major, I'm pretty sure none of this should not be financed at all. Give it back to the people. You say it's for the community. Give us the money to bought our taro, give us back our taro. Give

us the money to buy -- for us to finish our science degrees
 in agriculture and also for marine biology so we can clean
 our water besides our land.

4 They don't belong with this stuff. This 5 stuff is going to be ridiculous. It's not worth it at all. 6 Don't give them the money. Don't give them 175. They don't deserve it. And they rightly should not be up there. That's 7 cultural. Besides me being Hawaiian -- I'm proud to be 8 9 Hawaiian. And as far as my kupuna and then my future, 10 they're going to take that away from me and they don't deserve it at all. 11

- 12 (Applause.)
- MR. WAGNER: Thank you for your words.MS. DIZON: Oh, you're welcome.

MR. WAGNER: The site construction would 15 occur in this kind of time frame given a late 2008 start, 16 17 which is fiscal year 2009 for the NSF. The excavation and erection of the site -- of the structures would occur in the 18 19 first couple years. Most of the work done in the last few 20 years would be inside the structures. The optics then 21 arrive, the primary mirror and the other optics. They get 22 integrated within the structures, and then we have to go 23 through a series of tests and adjustments to make sure that 24 we can succeed in meeting the science requirements that we 25 set for the facility.

1 Out in these later years then there would be 2 a transition to initial operations. We would get what's called first flight when we first point at the sun and you 3 fly through the system. More adjustments, more tests, and 4 5 then operations would begin out here, 2014, 2015, on this б type of schedule. 7 AUDIENCE SPEAKER: Question about the 8 schedule. Is that a schedule of where the site -- final site 9 is selected, or is that the schedule presuming the site will be Haleakala? 10 MR. WAGNER: This is the schedule for either 11 the Reber Circle site or Mees site on Haleakala, is the 12 13 answer. Just so that when you consider this, you understand 14 the kind of schedule that's being proposed. AUDIENCE SPEAKER: Thank you. 15 MR. WAGNER: Okay? 16 17 Yes. 18 AUDIENCE SPEAKER: I assume, and this 19 (inaudible.) 20 THE REPORTER: I can't hear. MR. MABERRY: Use the mike. Sorry. That way 21 22 everybody can hear you. 23 MR. DUKELOW: Am I -- Is this loud enough? 24 (Laughter.) 25 AUDIENCE SPEAKER: Where's your mike?

1 MR. DUKELOW: I am Oliver Dukelow. I was 2 born here on Maui. I've lived here all my life. I assume in listening to what you're saying, going through your rigmarole 3 of this project that you had to do up on Haleakala, I assume 4 5 that you have ownership to the land. 6 AUDIENCE SPEAKER: Nope. 7 MR. DUKELOW: Before we can discuss anything, 8 I would like to see your title to that land. 9 AUDIENCE SPEAKER: They don't got title. MR. DUKELOW: We need to look at the title to 10 this land. You people come here with your agendas, you come 11 12 here with your agendas and you disrespect our culture, our 13 land. 14 (Applause.) MR. DUKELOW: We need to see the title to 15 that land. Before you can discuss any more of this you need 16 17 to show me and the rest of our people here the clear title to this land. I think that's valid. I think that's a valid 18 19 request. 20 MR. WAGNER: I would defer to Mike Maberry 21 with the Institute for Astronomy for answering that question. 22 MR. MABERRY: Hi. I'm Mike Maberry. I'm 23 with the University of Hawaii, Institute for Astronomy. 24 The land at Haleakala is ceded land. There 25 was an executive order from Governor Quinn that set aside --

1 I recognize this -- that set aside an 18-acre portion of 2 Kolekole for observatory purposes. And if this project goes forward, then the National Solar Observatories would enter 3 into a lease at that point in time with the University of 4 5 Hawaii that would have to be approved by the Board of б Regents. 7 AUDIENCE SPEAKER: That's not the answer. 8 MR. MABERRY: I recognize that. 9 AUDIENCE SPEAKER: In 1855 the land was 10 adjudicated. Never changed. There's no such thing as ceded land. There's no such thing as ceded land. Legally no such 11 12 thing as ceded land. So you need to readdress that. That 13 needs to be an issue. 14 AUDIENCE SPEAKER: Just hang on. So for this 15 executive order, talking about title here, how does this Governor Quinn in 1961 gain title to exactly this land? 16 17 Talking about exactly title. Could you answer that question? MR. MABERRY: No sir. This is an issue that, 18 19 of course you're aware that, that OHA as well as the 20 legislature are dealing with at this time, so I --21 AUDIENCE SPEAKER: So the question of title 22 is not confirmed, if they're still dealing with it? 23 MR. MABERRY: Correct. 24 AUDIENCE SPEAKER: They don't have title to 25 that mountain up there.

1 MR. WAGNER: Let me give the mike back to 2 Charlie Fein.

3 MR. FEIN: Okay. There's a parallel process that both Charisse and Jeremy mentioned, and that's the 4 5 Environmental Impact Statement process, that is not б exclusively part of the National Historic Preservation 7 process, but includes that. And the question in the community is: Where is the Environmental Impact Statement? 8 9 The Environmental Impact Statement is in preparation at this 10 time.

11 It's a document that involves surveys, 12 studies, inventories, public testimony. It involves a great 13 deal of research. It involves graphics. It is a two-volume 14 work that will ultimately be over 300 pages. And so it's not 15 something that we turn out overnight and drop in all of the libraries for everybody to look at and comment on. It has to 16 17 be carefully researched and include discussion of issues that 18 have been brought up by the public even as recently as today. 19 Okay? We received comments. We received letters. We are 20 attempting to address everything that comes in up to a point. 21 Of course, at some point we do have to publish the document. 22 However, the Environmental Impact Statement 23 addresses a number of issues that have already been mentioned 24 here. I saw the finger -- the finger in the sky. Part of 25 our job is to do the view plain analysis, the visual analysis

IWADO COURT REPORTERS, INC. (808) 244-9300

1 for it. And I have brought these slides before. We keep 2 taking photographs from various locations and we use sophisticated computer rendering techniques to insert this 3 4 new facility so that you have an idea of what it would look 5 like from various locations close up in Haleakala National б Park, down in the valley, all aspects of the valley; where it 7 is visible, where it's not visible and so on. 8 I'm just going to show a few of those again 9 tonight to see once again whether we can at least agree that 10 at least in some situations it's more visible than others and so on. So --11 12 Let's see. Where did he go? Jeremy, put up 13 the view plains. 14 I'll go through these real quick. We have 15 been taking these photographs -- we have taken some of them as recently as last week. 16 17 Okay. Now, some of these -- or all of these 18 have magnification because when you're, for example, standing 19 in the parking lot at Foodland Upcountry and you look up even 20 on clear days, it's difficult to discern what you're looking 21 at. So in magnification in this location the proposed 22 building would be where the arrow is and it would be somewhat 23 hidden by other facilities. However, if it was at the 24 alternative site at Reber Circle, it would be quite visible 25 as you can see from that location.

Here's what it would look like from near the Kamehameha Schools campus. That photograph was taken just a few days ago and rendered in. Here's what it would look like from the Holy Ghost Church Upcountry. It's almost completely hidden at that location. Here's what it would look like from Piiholo Road in Olinda. It is visible there. The air force facility is in front of it -- I mean to the right of it. Here's what it would look like from High Street on a relatively clear day. It would be visible from there. Here's what it would look like at the Reber Circle site if it were looking -- being viewed from High Street. Here's what it looks like from the harbor. That is the longest distance away and difficult to get an extremely clear line of sight from there, there's so much moisture in the air. Here's what it looks like from the juncture Mokulele and Piilani Highways. It would be visible from there. Lipoa, that's -- We're still looking for a better shot.

Here's Keonekai, Kihei. It would be visible at the arrow there. You would see the white domes from the other facilities as well. Here's what it would look like at

1 the proposed Reber Circle site; a lot more visible.

2 Here's what it looks -- would look like from Red Hill, the Red Hill overlook in place. 3 4 This photograph was given to me by Keoki 5 Raymond at our last meeting and he asked me to do a rendering 6 from that position. And this is the way -- This was a snow 7 photo taken by Frank Riso some years ago. This is what the facility would look like at the primary location. And this 8 9 is what it would look like at the alternate location, Reber 10 Circle. These renderings will appear in the EIS along 11 12 with computer models of where it would be visible from 13 various places on the island and so on. 14 At this point I'm not going to go into the 15 other issues in the EIS, the endangered species, all of the issues that one has to deal with in EIS because this is 16 17 primarily a National Historic Preservation Act meeting. And 18 so at this point I would like to turn the meeting over to 19 Charisse again, who will go through the 106 process in some 20 detail. 21 AUDIENCE SPEAKER: Quickly, those purple 22 diamonds, what are they? What do those represent? Do you 23 know what those are? 24 MS. CARNEY-NUNES: Jeremy, you want to 25 comment on -- The question was what do the purple diamonds

1 mean?

2 AUDIENCE SPEAKER: In the schedule. MR. WAGNER: We have conducted a series of 3 4 system design reviews of the facility looking at the optical 5 design, the mechanical design, the control systems, the 6 thermal systems. We've done a series of those. We will 7 continue to do those as we move and progress the designs. 8 And that's to ensure that we can meet the science 9 requirements within the design that we are progressing. 10 And so we will continue that all the way up into construction. We will probably continue that into early 11 construction. And that is to ensure that if the project were 12 13 approved by the NSF, funded by congress, built on a site like 14 Haleakala that we wouldn't waste the money, that we would 15 actually achieve the science goals that the project is set up 16 to achieve so that we can support the science community. 17 And that's what those purple diamonds are. 18 I'm sorry that -- The green diamonds were system design 19 reviews that were completed. The purple diamonds are design 20 reviews that we will do as we move the design forward toward 21 potential construction. 22 AUDIENCE SPEAKER: Okay. 23 MR. MAXWELL: Charisse, can I make some 24 comments? 25 MS. CARNEY-NUNES: Sure. Of course.

1 MR. MAXWELL: Because you guys are from 2 Washington, you don't seem to get the idea. What you're experiencing here is hundreds of years of oppression of our 3 4 people. When Captain Cook came in 1778, the missionaries 5 came in 1820, the land put into sugar and pineapple; б Hawaiians' culture were turned around. The trust lands, 7 there's no such thing, and that's correct. 8 There's no such thing as trust land. It's 9 the land that was taken away in 1893 and was controlled by 10 Leleo Kalani. They made it into trust lands, then they had also government lands, but nobody has clear title of this 11 12 land. You guys got to realize this. 13 So when you talk about Governor Whoever took the 18 acres, for Hawaiians it don't make sense because the 14 15 lands were always supposedly in our control. But they did 16 everything to the lands. United States came in here, they 17 made us into a state without even checking the Native 18 Hawaiian people. So what you hearing is the pain and 19 suffering of a hundred years and more that's coming out every 20 time something wants to be built on a sacred land. That's 21 what you hearing. 22 So I needed to make that point because 23 everybody is going to be frustrated. 'Til today there's 24 groups that does not recognized the deed from everybody, even 25 Hawaiian Homelands. And then more so they should not

IWADO COURT REPORTERS, INC. (808) 244-9300

1 recognize because there's a question as to who owned -- the 2 real owners are of the land. And it's Hawaiian people, but nobody seems to care. But if we ever come together as one, 3 4 everybody will hear our voices. 5 (Applause.) 6 MS. CARNEY-NUNES: Kahu, thank you for that. 7 I just want to say to you personally and also 8 to you that I do understand. I understand the passion. I 9 understand the anger. I understand the frustration. I do 10 understand that. I understand the things that this government has done in the past and has not atoned for. I 11 understand that. 12 13 AUDIENCE SPEAKER: Well, it's about time 14 then, yeah. 15 MS. CARNEY-NUNES: I understand that. We, though, are here -- and me personally, I have to say I'm here 16 17 because I -- we want to do what we can with what we have from the position where we find ourselves. I don't have the power 18 19 to do anything about that. There's a lot of things that this 20 government has done that I don't have the power to do 21 anything about, but I do have the power to make sure that NSF 22 follows the law. And that has not even been done in the past 23 by other agencies. So I just offer that in response with all 24 due respect.

IWADO COURT REPORTERS, INC. (808) 244-9300

(Applause.)

1 MS. CARNEY-NUNES: And I'm actually going to 2 sit because I want to stay out of your way. I know that was 3 an issue before.

4 And in following along, we thought that it 5 would be helpful that -- to explain the process and explain б why it is that we're here. We are here to engage in 7 consultation under Section 106 of the National Historic Preservation Act. So we start off with the question: What 8 9 is 106? Well, 106 refers to Section 106 of the National 10 Historic Preservation Act. The overall purpose of the act, we call it the NHPA, is to preserve and enhance the 11 12 productive use of our nation's resources.

13 Section 106 requires that federal agencies like NSF consider the effects of their decisions on historic 14 15 properties. Section 106 was designed to give you a voice. So what is this all about? What is it that you have a voice 16 17 about? A voice about your cultural resources and 18 specifically in this case as you're Native Hawaiians and 19 there's a traditional cultural property at issue. So that's 20 what this is all about. That's why we're here.

Now, the next slide is to tell you a little bit about who participates in the Section 106 process. Well, first the federal agency has to participate; that's us, the National Science Foundation. We call it a consultation process because the -- it's the job of the federal government

1 to consult with what we call consulting parties. Consulting 2 parties are -- an example of consulting parties, Jeremy works for the National Solar Observatory. I have NSO here. They 3 are a consulting party because they would like NSF to give 4 5 them money to fund the telescope, so they are a consulting 6 party in this. The University of Hawaii is a consulting 7 party in this. They have stewardship for the land. Okay? 8 And we know how we all feel about that. But that's where we 9 are and they are a consulting party. Native Hawaiian organizations, consulting parties. All of you are consulting 10 parties, the public. 11 12 AUDIENCE SPEAKER: Which Native Hawaiian 13 organizations have been consulted? MS. CARNEY-NUNES: Well, perhaps we can --14 15 Can somebody give specifics? Because, I mean -- There is an 16 extensive --17 AUDIENCE SPEAKER: That specifically support 18 the construction. 19 MS. CARNEY-NUNES: No, no, no. What I'm 20 trying to explain is that we are going through this process 21 now. And so what we're doing now is consulting native 22 organizations. Not that Native Hawaiian organizations have 23 been consulted and have agreed that this is a fabulous 24 project as of yet. Okay? 25 The other party that participates in Section

IWADO COURT REPORTERS, INC. (808) 244-9300

1 106 consultation is a federal agency. This agency is called 2 the Advisory Council on Historic Preservation. They are a 3 federal agency that is charged with making sure that our 4 history is preserved in our nation, but they only participate 5 sometimes. б So the main parties here are NSF, the Hawaii 7 State Historic Preservation Division, Native Hawaiian organizations, and the public, people like you. Okay? Those 8 9 are the main parties to the consultation process. Okay. So the NHPA, the law and the 10 regulations, were --11 12 AUDIENCE SPEAKER: Ma'am, can you come to the 13 Mike, please, so everybody can hear. 14 MS. BURNS: I just have a question. MS. CARNEY-NUNES: Sure. 15 MS. BURNS: I'm Suzanne Burns. I go to MCC. 16 17 I'm learning about technology. I'm also Native Hawaiian. 18 I'm learning about culture. I'm not knowledgeable about, you 19 know, why this is not good, so I hope you all will teach me a 20 little bit about why this is not good. 21 My question is: The advisory council on your 22 last slide on historic preservation, you said they don't 23 participate always. Are they participating in this? 24 MS. CARNEY-NUNES: You know, that's a really 25 excellent question. Any time a federal agency finds that

IWADO COURT REPORTERS, INC. (808) 244-9300

1 a -- something that we're going to do would have an adverse 2 effect, a potentially negative impact on a resource that is 3 important, a TCP I called it, a traditional cultural 4 property; we are required to notify the Advisory Council on 5 Historic Preservation. They -- At that point when they get 6 the notification, they can decide whether or not they would 7 like to participate.

8 Another thing that can happen is one of the 9 consulting parties can write to them and ask them to please 10 participate in the process. But as of right now, they are 11 not participating in the process, but that doesn't mean that 12 that will not be involved as of yet.

MS. BURNS: Where can I find out why they decided not to participate?

15 MS. CARNEY-NUNES: They -- I want to make sure that I'm clear. They didn't decide not to participate. 16 17 We're actually still rather early on in the process. We have 18 made a decision, like I referred to earlier, that if the 19 project were to go forward, it would have an adverse impact, 20 we call it, on a traditional cultural property. We are 21 actually as we speak in the process of writing a letter to 22 them to advise them of this. And then when they receive that 23 letter, they'll make a decision. But they have a website and 24 I'll -- talk to me afterwards, I'll give you my card, I'll 25 write down the website for you.

IWADO COURT REPORTERS, INC. (808) 244-9300

1 Okay. So Native Hawaiians and Indian 2 tribes -- The thing to remember about Section 106 and the NHPA law is that in the 1990s it was amended, and the purpose 3 of the amendments were to place a special emphasis on Native 4 5 Hawaiians and Native Americans. The purpose of the revisions б to the law was to make sure that federal agencies took the 7 time to consult with native peoples about resource -- about decisions that would have impacts on their resources in 8 9 acknowledgment that this had not -- that that had not been 10 done always in the past. So that was the purpose of that 11 amendment.

So because of that, like I said, you know, I'm from the General Counsel's office at NSF, I'm here to make sure that we follow the process, we follow the law. And the law says that agencies must consult with -- under Section lo6 with any Indian tribe or Native Hawaiian organization that attaches religious and cultural significance to an affected historic property. Okay?

AUDIENCE SPEAKER: Question. You know, you keep on referring to Indian tribes or Native Hawaiians. You're talking about the wrong people. We're not Native --You folks have categorized us. Aboriginal, native, indigenous; these are terminologies that you people have put on us, labeled us. We're Kanaka Maoli Hawaii. We're not Native Hawaiian.

1 You folks are belligerently occupying here 2 right now. You don't own it. And here we are just going on with your agenda and giving your spiel here without being 3 4 respectful of us. How can we be respectful of you when 5 you're not respectful of us? б Uncle Charlie got up and explained this to you, Kalikoa explained it to you, and still you don't get it. 7 8 Still you're going on and on. You need to clarify this 9 title; otherwise what business do you have here? It's as 10 simple as that. There's no point in going on. Who cares about how far you can see, what you can see? 11 12 You know what's up there, gang? Does anybody 13 here know what's really up there right now? Very scary. 14 Very scary. And the target is -- We're the target. You guys need to understand that. They did that to us. You people 15

16 need to understand that. We're the target right now. Can 17 anybody deny that?

So let's get down to business now. I'm fed up with this. And that's only my manao. But I know where I come from and I know where I stand.

MS. CARNEY-NUNES: Well, I cannot comment on labels. I understand the frustration. Labels are what they are. But we know who we're talking about. We're talking about the people of this island who attach religious, cultural significance to this important, majestic, spiritual

IWADO COURT REPORTERS, INC. (808) 244-9300

1 resource; Haleakala. That's who we are talking about.

2 Now, I can only use the language that the law 3 gives me. I'm sorry, I'm a lawyer, you know, shoot me, but I am. And the way that the law that is written, of course, by 4 5 the United States government, the way it refers to the people б who are -- who we are required to consult with is as Native 7 Hawaiians. So please do accept my apologies if that is not the proper way in which to refer to you. Honestly, please. 8 9 AUDIENCE SPEAKER: You're belligerently 10 occupying this place. Your law does not apply here. The 11 superior law of the land is the domestic law that applies here, the kumukanawai. The kumukanawai, what's going on up 12 13 there is not supposed to happen. So what I'm saying is that 14 what are you doing here? What are you doing here? 15 MS. CARNEY-NUNES: Okay. Well, okay. So what the law -- what Section 106 law says 16 17 is that, again, we have to make sure that we consult with the 18 Native Hawaiian community and Native Hawaiian organizations. 19 Okay? So looking at it from your perspective, there are some 20 things to remember about what the law requires, what you as 21 Native Hawaiians can hold us to as the federal government. 22 The first thing to remember is that Native 23 Hawaiians must be consulted when they attach religious and 24 cultural significance to historic properties. 25 The second thing -- And this goes to your

IWADO COURT REPORTERS, INC. (808) 244-9300

1 point earlier in the back about which Native Hawaiian

2 organizations are -- have been consulted with. The second 3 thing to remember is that the agency must make a reasonable 4 and good-faith effort to identify relevant groups. So we 5 need your help in doing that. If you know of a Native 6 Hawaiian organization that we have not consulted with, then 7 we are asking you to let us know. Okay? So those are the two things that I thought were important to point out for you 8 9 all to remember.

However, there is another thing to remember, and this has really come through this evening, is that the law does not require that we get everybody to agree. It's called concurrence. Okay? Concurrence is not required. And it is important to remember that because the law -- you know, the law does require that we consult, but the law does not require concurrence. Okay?

17 AUDIENCE SPEAKER: What's the point then? MS. CARNEY-NUNES: Well, that's a good 18 19 question, what -- The question was: What's the point then? 20 And I completely understand that question, but I will say 21 that in the past consultation wasn't even undertaken. So the 22 point is giving a voice. The point is developing a 23 relationship and an agreement and getting NSF to agree that 24 we're going to do certain things. That's what the point is. 25 Those conversations in the past have not even taken place.

1 And so, no, it's not -- it's not like it's a 2 vehicle that has these tremendous teeth that you can say, 3 Okay, we're not going to agree and the project won't go forward. No, I want to be very honest with you that's not 4 5 what the law says. But what the law does say and what we at б NSF are honestly trying to make sure happens in this case, 7 which hasn't happened in many other cases, is that we engage the community like we are supposed to do and we listen to the 8 9 community like we are supposed to do and that we consider 10 your opinions when we make our decisions. MR. WAGNER: Charisse, there's a lady back 11 12 here. 13 MS. LEHUANANI: Aloha to everyone. 14 AUDIENCE: Aloha. 15 MS. LEHUANANI: My name is Princess Lehuanani. I am from the village of Mokula, born and raised, 16 17 and a true native of this island, the kingdom of Maui Nui. 18 I just wanted to bring up concerning the law, 19 as far as I was taught, the State and the County is just 20 contractors on this land. And the law that was brought up on our land is from outside. It was nothing to do with our 21 22 people getting together and making the law for us here on our 23 own aina. 24 Years back somebody said that they had a 25 telescope when he was eight years old. When I was a seven

IWADO COURT REPORTERS, INC. (808) 244-9300

1 you know what I heard? I heard bombing. And my whole house 2 was shaking from bombs that was on the other island of Kahoolawe. Today we are the ones that have to clean this 3 island. If you build this big, gigantic thing and it doesn't 4 5 turn out, guess what? It will be left for us to clean again. б Please, I ask for all of those who come to our islands, 7 especially the kingdom of Maui Nui because it's so special. 8 I looked in your papers. I see nothing of 9 our island. The picture of the island of Maui is nowhere 10 found in your paper. If you look at the island of Maui, in the middle you will find the naau. Haleakala is right in the 11 middle of our island. Please, that is the heart of our 12 13 people and of our land. 14 I ask all of you: (Hawaiian.) Please grant 15 us, this what it means, to grant us the respect and the honor to our ancestors and our kupuna, to our people and to our 16 17 land. Please, that's all I ask from all of you. Mahalo nui. 18 AUDIENCE SPEAKER: I have a specific question 19 for the Section 106 that you're asking. You're talking about 20 traditional cultural practices, sacred sites, and so my 21 question is very simple: When is a site considered too 22 sacred to be built upon? Obviously there has to be something 23 in the language that describes when it's all right to, when 24 it's not all right to. And so I ask this question, you know: 25 Would you construct this on Machu Picchu, Stone Henge,

1 Pasapa, Mt. Fuji, Mt. Everest, Mt. Sion? Are those -- Would 2 those be out of the purview of NSF funding? Or they're not. And if so, why not? And if so, why not, why is Haleakala 3 4 even considered? Because I guess that's my point. Would you 5 guys even consider building a telescope on Mt. Sion or 6 Pasapa? Is that even in the realm of NSF? And so when you look at Section 106, that's 7 8 why -- you're right, there is no teeth in there. So when you 9 were the consulting -- I've been consulting for many years. 10 I know the game. We come, we show, we say a few words, and they say "thank you very much" and they do what they do any 11 12 way. 13 AUDIENCE SPEAKER: Yeah. 14 (Applause.) 15 AUDIENCE SPEAKER: That's consulting to me. So if this is all this is, be truthful. Tell us the truth, 16 17 that's what it is. It's just consulting. Because if you're 18 going to do on to us what you have been doing all this time, 19 say it straight, say it true. Thank you. 20 (Applause.) MS. CARNEY-NUNES: Well, the honest answer to 21 22 your question about whether -- what would happen if a science 23 project was proposed on one of those other sites is that if 24 the site was in the United States, we would be going through 25 the exact same process of consulting the community.

IWADO COURT REPORTERS, INC. (808) 244-9300

1 AUDIENCE SPEAKER: So it would be considered? 2 MS. CARNEY-NUNES: It would be considered 3 as -- This is really not actually -- I'm probably not the best person to answer. It's kind of embedded, if you will, 4 5 in what Craig Foltz said in that the NSF responds to the б community. And so --7 AUDIENCE SPEAKER: Not the community. 8 MS. CARNEY-NUNES: Well, there are different 9 communities. There are different communities. There is this 10 community. There is the science and education community. There is the solar physics community. 11 12 AUDIENCE SPEAKER: Which is where, the 13 community? We want to be clear when you talk about the 14 community. 15 MS. CARNEY-NUNES: I understand. But the legal answer to your question is very clear, and that is what 16 17 would happen. If NSF were to receive a proposal like that 18 for anyplace, we would go through the same kind of a process 19 what we're going through right now. 20 The other place I think that the question was 21 addressed a bit was in Jeremy's presentation when he talked 22 about the number of sites that have been considered for this 23 project. And that's really the best that I can do, to be 24 honest with you. I mean --25 AUDIENCE SPEAKER: I understand.

IWADO COURT REPORTERS, INC. (808) 244-9300

49

1 MS. CARNEY-NUNES: What -- You're using my 2 words back at me, so you know I'm being honest with you. 3 Okay? 4 AUDIENCE SPEAKER: So the short answer is 5 that it has to be within the territory of what's called the б United States? MS. CARNEY-NUNES: Oh, well --7 8 (Laughter.) 9 MS. CARNEY-NUNES: You're saying does --AUDIENCE SPEAKER: NSF cannot do something 10 outside of United States? 11 MS. CARNEY-NUNES: Well, no. What I said is 12 13 that a process like this under this law Section 106 would 14 occur if the project were proposed within the territorial 15 United States. But if we were to go and try to build in a foreign country, then we -- it would depend. It would 16 17 depend, because, quite frankly -- Quite frankly, this process 18 is a lot more than what NSF would be required to do if it 19 were to want to go and to support a project in another 20 country. We could decide that we would want to consult the community and, quite frankly, if we're being stewards of 21 22 history and culture wherever we build, we would consult the 23 community in a similar way that we're doing here. 24 But the question, as I understood it, was 25 just what would be required, and (pause) --

1 Now, I know we talked about no teeth, I know 2 we talked about no teeth, but the bottom line is that we are 3 here and we are talking to you and the -- What this really means to you and what it means to us, too -- It's not easy 4 5 for -- for anyone, really, in this room. It's uncomfortable. б And that's okay because things like this are not necessarily intended to be comfortable for everybody. Sometimes it's 7 okay to make people uncomfortable. But the bottom line is 8 9 that what this means is that this process will work best if 10 we can make -- collectively make consultation work. AUDIENCE SPEAKER: I'm very comfortable. I'm 11 not uncomfortable at all. And I'm comfortable because of my 12 13 beliefs in my culture. So, you know, I'm not uncomfortable. 14 You're uncomfortable because you're coming into our house and 15 you're telling us, yeah, you're telling us what we need to do by consulting us. We know what we want. We want you to 16 17 leave us alone, that's what we want. 18 MS. CARNEY-NUNES: I get that, but --19 AUDIENCE SPEAKER: You know, I'm just being 20 sincere. 21 AUDIENCE SPEAKER: Okay. I got one question. 22 I just want you to come out and tell us again if you feel 23 that a meeting like this is important for everybody and if 24 this project were to go through anyway and it doesn't matter 25 what we say, how we feel or how much it's going to hurt us --

1 now you as a lawyer come and tell me if this means that we 2 can stop it because we don't want it to happen, or you tell 3 me right now that the government doesn't give a damn and it's going to be built anyway. It's just going to be ransacked up 4 5 there and it doesn't matter what we say here. Because if б not, I believe the meeting is over. Okay? Because you guys 7 are going to tell us that whatever we say here is going to mean something. Because if it's not going to mean nothing, 8 9 we may as well leave already.

MS. CARNEY-NUNES: Actually, if I can proceed with my presentation, I will try to answer that question. I cannot -- I can't say that the meeting means nothing. No, I can't say that, because we're here and we're listening. And as I said before, that is a lot more than has happened in the past. So I cannot say that it means nothing.

16 I have been very truthful and honest and 17 deferential in that I'm saying honestly, as I said before, 18 I'm going to back up, concurrence is not required. That is 19 true. But just because concurrence is not required does not 20 make this process insignificant. It does not make this 21 process meaningless. The reason why is because if you are a 22 concurring party, if you are a consulted organization, then 23 you will have the opportunity to enter into an agreement with 24 NSF. And if we don't do -- If the project goes forward and 25 if you do enter into that agreement with NSF and we don't do

1 what it is we say we're going to do, then you have the

2 ability to hold us accountable for that. So I don't say that the process is meaningless and that if -- we might as well go 3 4 home simply because concurrence is not required. 5 AUDIENCE SPEAKER: Can you move on to some б examples? Pardon me for a second. She's almost to a 7 point -- We're going to run out of time here, is what I'm worried about, before we actually get to the main point of 8 9 having this discussion. Well, I mean, the main opportunity, 10 I should say. AUDIENCE SPEAKER: (Inaudible.) 11 THE REPORTER: I can't hear. 12 13 AUDIENCE SPEAKER: (Inaudible.) MS. CARNEY-NUNES: One housekeeping thing. 14 15 The stenographer is actually having a hard time recording everything. And we do -- Because NSF wants to consider all 16 17 of the comments that we hear tonight -- We're going to go 18 back over the transcript just like we did at the last meeting 19 in March, and so it's very important for all of you to have 20 your views expressed and properly recorded. So it's really 21 important that we talk one at a time. And as we said in the 22 beginning and we remember the words of Kahu Maxwell, we are 23 able to do this with mutual respect. And so I just ask that 24 we all speak one at a time and have respect for one another. 25 AUDIENCE SPEAKER: Hi. I'm Maile. And I'm

1 also an MCC student. Many of my kupuna are sitting here. 2 And I just want to say some things. 3 Jerry, your mother might have given you a 4 telescope. Our kupuna gave us that mauka. 5 (Applause.) 6 AUDIENCE SPEAKER: And according to the 7 Section 106 process, preserving and enhancing productive use of historical and cultural properties. It's productive. 8 9 It's fine the way it is. And how is a 14-story telescope 10 going to enhance it at all? The EIS was brought up, but the only thing 11 12 about the EIS that was brought up today was the esthetic view 13 of the mountain or was the visibility of the telescope. 14 Nothing was -- Nothing else covered. And there is more than 15 just the visibility of the telescope that is important to us, 16 and that needs to be understood. So if you're going to bring 17 anything here, bring it, all of it. Don't just bring the 18 visibility. 19 The other thing, too, is Haleakala legally is 20 a TCP, traditional cultural property, federally recognized as 21 a TCP. Well, we already recognize that. And as -- According 22 to the federal recognition of anything, it kind of like is a 23 fallacy. 24 So the consultation process, like Kalekua was 25 saying, it's a process, yeah, you're here, but like how

1 everybody feels as it being meaningless because this is not 2 consultation. On our half it's a determination. And the thing is is that if this like we're just going through the 3 movements right now and it's not helping us, well, at least 4 5 we're heard. Thank you. 6 (Applause.) 7 AUDIENCE SPEAKER: Normally I'd say aloha, 8 but I think it died tonight with everybody. 9 I've got a couple questions mainly on the 10 site survey that was done. I know all about consultation. I know all about the -- everything here that's been talked 11 12 about. I've been following this very closely as a Native 13 Hawaiian and also a worker up there at Haleakala National 14 Park. I take care of a lot of the resources that give us our 15 culture, that's the reason why I do it. 16 My big question was in these site surveys 17 there were six other sites that I have never really gotten 18 any information. The fact that there's one in Big Bear Lake, 19 California; one in La Palma, Canary Islands, Spain; Utah; New 20 Mexico; also Baja, California. These are other sites that 21 they can deal with this problem. 22 When I looked at the general daytime 23 characteristics of the sites that you guys selected -- And I 24 hope we can get an answer because this is kind of the missing 25 link how the -- how you say, deboning that was done in this

IWADO COURT REPORTERS, INC. (808) 244-9300

whole EIS. They say that frequently clear skies. I can understand that. Excellent seeing. I don't know where you can get low humidity. I'm also a wild land firefighter. When I go to California, you guys get relative humanities in the 4 -- 3 percent. I have never seen us have that type of low humidity.

7 Also some of the things that were selected 8 was like few aircrafts' contrails. Now, I don't know what 9 that means, if it's just over the site itself or if it's in a 10 mile radius of our island. Because we live on an island, almost everybody comes here by airplane. So I'm not sure 11 12 what you guys mean by that in the site selection. And also 13 dust levels. I mean, everybody knows up to Haleakala there's 14 a lot of dust abatement. I also work with the helicopter as a national instructor and that's a big thing is dust 15 abatement when you work around a helicopter. And we don't 16 17 fly up there because of that.

18 So my question is: What about these other 19 sites? Why isn't there any consideration on that? Because I 20 can look at the three things that was mentioned here that we 21 just don't have up here at this site. So that's my question. 22 MR. WAGNER: We actually -- we started with a 23 list of about 72 sites all over and looked at all of the 24 existing data for those sites. 25 AUDIENCE SPEAKER: Question. Which data?

1 Your paper showed 72 sites and there was a discussion about 2 what sites to choose. They were going to set up test sites of those 72, but there was a lack of funding so I don't 3 4 believe they did the test on all 72 sites. 5 MR. WAGNER: No. We -- I mean, there's an 6 infinite number of sites that one can consider for almost any 7 project. 8 AUDIENCE SPEAKER: Right. 72 sites --9 MR. WAGNER: We looked at 72 sites. We know 10 from experience through solar astronomy, solar physics over the last century --11 12 AUDIENCE SPEAKER: By discussion? 13 MR. WAGNER: No. We know from actual 14 experience, hands-on experience the characteristics of sites 15 which provide good seeing, a stable atmosphere during the daytime. There's been a lot of work for nighttime astronomy 16 17 as well, but for solar astronomy it's different. The sun puts out a lot of energy. And so there are specific 18 characteristics of those sites --19 20 AUDIENCE SPEAKER: Was the NSF supposed to do 21 a test on all those sites? 22 MR. WAGNER: No. 23 AUDIENCE SPEAKER: No? 24 MR. WAGNER: No. And there wouldn't be any 25 point because if you go through the existing data -- And

1 there is a lot of -- You'd be surprised at the weather data 2 and such, the topography data for sites out there. There is 3 a lot of data out there on many --4 AUDIENCE SPEAKER: Not the data you needed to 5 meet your requirements; correct? 6 MR. WAGNER: Quite a bit of data which was 7 applicable to those requirements, yes. Absolutely, yes. 8 Now, we selected six sites -- down selected 9 to six sites out of that for a full-blown test. All right? We tested those and it was clear that three of the sites were 10 better than the lower section of three sites. And those 11 three sites were down selected and we had three remaining 12 13 sites that was Big Bear, La Palma, Haleakala. All right? 14 AUDIENCE SPEAKER: Canary Islands? 15 MR. WAGNER: Excuse me? AUDIENCE SPEAKER: Canary Islands was --16 17 MR. WAGNER: La Palma is in the Canary 18 Islands off the coast of Africa and the Sahara Desert. 19 We did a phase 2 on those sites, tested them 20 again extensively, and compared the data from those sites. 21 It was clear that Big Bear would not support the kind of 22 high-resolution solar physics that we want to do with this 23 telescope. That site was taken off the list. Haleakala and 24 La Palma were looked at extensively. And this was all in the 25 same review, the same data set.

1 La Palma has a real problem. You get wind 2 storms coming off the Sahara. And in the draft EIS this will be described, but these dust storms, some of these dust 3 storms that come through actually reach the Caribbean. They 4 5 come across the Atlantic. Huge amounts of dust that come out б and cover the Canary Islands and the sky brightness during 7 the day from the sunlight scattered off of the dust in that air will not allow us to observe the atmosphere at that site. 8 9 It will not let us do it. It contaminates the light that 10 comes to the telescope. AUDIENCE SPEAKER: How were the cultural uses 11 and resources assessed in your determination for selection of 12 13 the six sites? 14 MR. WAGNER: That was considered in the site evaluation studies. 15 AUDIENCE SPEAKER: Where did Haleakala rank 16 17 in regards to --MR. WAGNER: We didn't rank the sites in that 18 19 sense. We indicated what the environment was, what concerns 20 there were, whether or not there were cultural significance 21 associated with the site. I think Keoki Raymond actually 22 read from that report at the last meeting. We did not rank 23 the sites, though, in that sense. We tried to establish what 24 the cost would be, what the infrastructure that existed might 25 be, what didn't exist, the access, all of this.

1 AUDIENCE SPEAKER: That's the cultural
2 resource and --

3 MR. WAGNER: Yes. We described that in those4 reports.

5 AUDIENCE SPEAKER: It was seen that Haleakala 6 was a better choice over those other five sites that would 7 impact on the --

8 MR. WAGNER: Not in that report, no. We did 9 not rank those sites based on that. We provided -- The 10 project provided that analysis, that data, that assessment in parallel with the site survey so that could be considered 11 12 when -- When the site survey working group wrote its report, 13 its final report on the site survey, that report assessed the site, the feasibility of the site. It was submitted in 14 15 parallel. So the decision-makers had all of that 16 information.

AUDIENCE SPEAKER: My question is the same way as they look at the scientific -- the part about the value of the science, it seems like you did not place that kind of emphasis in the evaluation of the cultural resources and how important those sites were to the people of those areas. That's my concern.

23 MR. WAGNER: Yes, I understand it. It was 24 discussed extensively and it was noted in the report. It 25 was. And, Keoki, you did read from that.

AUDIENCE SPEAKER: I did.

1

2 MR. WAGNER: And, actually, Jeff Bar prepared 3 the report.

4 AUDIENCE SPEAKER: Yes. I'm sorry you 5 weren't here on the 28th. Jeff, it's nice to see you again. 6 It was good to see you in the top floor of the library at the 7 community college, was the last time we saw each other. As I 8 understand, you are the project architect, the site engineer, 9 and that when you had done the 2003 Site Feasibility Report, 10 not only in the Executive Summary, but back in 2003 you came to a conclusion that the presence and visibility of a new 11 12 large telescope on a spiritually significant mountain would 13 likely be an issue during the public review and comment. So 14 you were telling NSO and the NSF this would happen tonight. 15 MR. BAR: Yes. MR. WAGNER: That is correct. 16 17 AUDIENCE SPEAKER: And that under specific 18 environmental concerns that Jeff had written, the entire Haleakala mountain is rich in traditional and spiritual 19 20 significance to the indigenous Hawaiian culture. So everyone 21 has known since 2003. 22 MR. WAGNER: That's correct. 23 AUDIENCE SPEAKER: And that you also wrote, 24 "The presence of observatories on the summit is considered a 25 desecration by some." So that was already known since 2003.

IWADO COURT REPORTERS, INC. (808) 244-9300

1 Of the other six I think I had also already 2 testified that notwithstanding that they may have had --3 certainly all could have had spiritual significance, 4 sacredness to -- for peoples of the earth, indigenous people, 5 only one of the six -- to help clarify your question, only 6 one of the six was ascertained to have significance, and that 7 was Haleakala.

8 And I think I'm hearing Kalekua say or ask if 9 you knew back in 2003, which is really wording it just 10 another way that I worded it on the 28th, if everyone has 11 known since 2003 that of the six that went down to three that 12 went down to one, Haleakala, was sacred, why was there no 13 concerted effort made?

14 And, in fact, it would seem to speak to Section 106, which from what I can read seems to say respond 15 in a timely manner. So from 2003, just for clarification, it 16 17 seemed to have taken until the fall of 2005 to initiate the 18 process under the environmental project and then the actual 19 first 106 was in January of this year. That seems to be 20 something that's a major question for a lot of people. MR. WAGNER: Keoki, can I respond just to 21 22 clarify? 23 AUDIENCE SPEAKER: Sure. 24 MR. WAGNER: The preparation of that report 25 was done early on. The site selection for the proposed

sites, the down selecting, the final down selecting was not done until the end of 2004. So January of 2005 is when we could say, okay, this is what the decision-makers have put forward. We have to proceed then to set up the environmental impact statement process, get these other processes going, bring the NSF in and get this moving.

7 AUDIENCE SPEAKER: It's helpful to have that 8 clarification. And I guess from your perspective from 9 January 2005 to the fall of 2005 in the big picture of things 10 really wouldn't take -- isn't that long a time.

11 MR. WAGNER: What I -- I'm sorry. What I've 12 found is that things are taking longer than I would have 13 imagined.

14 AUDIENCE SPEAKER: Another thing, Jeff, that 15 you wrote is that, "The fact that there are already several other large observatory buildings on Haleakala may actually 16 17 weigh against ATST in consideration of the cumulative effect 18 on all of the development on the mountain." So that's 19 something that we have all known, that the mountain on the --20 We want the highest and best use -- or "we," I'm speaking 21 from the voice of -- and Mike Maberry is right here. From 22 the perspective of the Institute For Astronomy, you would 23 want highest and best use. You're allowed to do scientific 24 studies on the 18.1 acres, you're going to try and do the 25 most you can.

1 But we're talking about 106. Now, I was 2 very, very humbled to be able to have gone along with Uncle Charlie to take myself, Kahala Helm, some other people to 3 4 Paia Kuai Kamoku, the ahu that has been built, the one that 5 faces the Big Island. The one that also is the closest to the proposed project. If I go -- and I understand I can go 6 7 to spiritually commune and anyone who feels the need can go 8 to these ahu, when you -- How much noise is there going to 9 be?

10 We were also taken to the other ahu, Hina, and the chillers that were going for the AOS project were 11 12 very disturbing. And so I'm wondering about the peace and 13 serenity of the mountain itself that's going to be disturbed 14 by the person at this particular designated ahu to the 15 Institute for Astronomy for working it out and creating these two ahu. Has there been any sound, ambient sound --16 17 MR. WAGNER: Yes. AUDIENCE SPEAKER: -- sound decibels. 18 19 MR. WAGNER: Let me clarify one statement. 20 When I said that things took longer than I thought, it was 21 setting up, getting a contractor for the EIS, getting a 22 process going. I had imagined that that could be done 23 quickly. 24 AUDIENCE SPEAKER: Oh, I understand. 25 MR. WAGNER: Okay. As far as studying the

IWADO COURT REPORTERS, INC. (808) 244-9300

1 sound, we have done extensive work on that. And I can't talk 2 about AOS, but the ATST at the Mees site -- and Jeff correct me if I misstate this, but the sound level at the ahu will be 3 at a sound level which is consistent with what you would 4 5 expect inside a cathedral, for example, a place of worship. б And we've looked at what we have to do in the facility, what 7 we have to do in the utility buildings, how we can manage that sound, and we can reduce it to the level that you would 8 9 expect to see -- to hear in a cathedral.

AUDIENCE SPEAKER: A clarification on that, Jeff, would really be appreciated, because I'm wondering if a person is there, say it's me, say it's someone else, and the dome is shifting and the gears -- the sound of the gears to make it move would seem intrusive.

15 MR. BAR: You're right. And we have looked at that. And the first thing I'll just say is that the air 16 17 force chillers that you're talking about are outside. And 18 I've been down to the ahu, too, and you can hear them from down there. Our chillers will be inside. And we understood 19 20 that the ahu were special places and especially tranquil 21 conditions there were going to be important. And so we took 22 that into consideration, made sure that we located all of our 23 equipment; the generator, the chillers, compressors, all 24 those kinds of things inside of the building where we can 25 actually contain the noise.

IWADO COURT REPORTERS, INC. (808) 244-9300

1 The sound inside that building would be 2 deafening. Outside the building, because we're going to take special measures -- And we have to ventilate to some extent 3 so it can't be -- A completely closed building, you know, 4 5 concrete block and a concrete roof or something like that 6 would be the most effective way possible. We have to 7 ventilate it, but we have looked into what the methods are necessary to reduce that level, as Jeremy says, to a level 8 9 that's consistent with the ambient sound level inside of a 10 church. And that seemed like an appropriate standard to apply in terms of the sound. And it is something we're very 11 12 concerned about.

13 And your second point about the dome 14 rotation, you're right, there is some noise any time a big, 15 mechanical, metal structure like that moves. One of the 16 things that we intended was that we would begin -- especially 17 because that the ahu is closest to the primary site is an 18 east-facing ahu and the mornings would be the most critical 19 time, and, of course, we'll be starting up observing then if 20 the project goes ahead at that time, and so the intent is to 21 have the dome pointed in that direction so that we don't have 22 to move it any great distance, and then we really will be 23 tracking the sun in relatively small movements. It's 24 definitely will be something that you hear, though, so we are 25 concerned about that and we're looking into what -- how much

IWADO COURT REPORTERS, INC. (808) 244-9300

1 noise that's going to produce.

2 MR. FOLTZ: My project friends may not agree with this, but I simply point out that the purpose of this 3 4 meeting is to try to arrive at essential mitigation 5 strategies and mitigation activities. And were this to б become an issue, I could imagine that one such strategy which 7 they might not agree with, but this is what consultation is 8 about, is to quiet the building when the ahu is in use. And 9 that's something that certainly could be discussed. I 10 understand that it may not be to everyone's wish that it be known that they are using the ahu, but, you know, this is 11 12 give-and-take. And if that is important and we can schedule 13 in advance or we can figure some way to work that, we can 14 quiet the building. 15 AUDIENCE SPEAKER: I just want to comment to my brother Keoki and to my other brother behind here, he said 16 17 there's no aloha. Well, to my brothers, my sisters, my 18 kupunas in the house, aloha kaua. 19 AUDIENCE: Aloha. 20 AUDIENCE SPEAKER: Remember that word now, 21 aloha, a two-fold word. To the lawyer, you used the word 22 "concurrence." Big word, strong word. To me, I define that 23 as suppression. Yeah? Because you say (Hawaiian), talk to 24 them, but your own timeline of your schedule -- which is 25 good, but do you have a timeline of all the Hawaiian

IWADO COURT REPORTERS, INC. (808) 244-9300

1 organizations that you're going to talk to? Do you even know 2 who they are? If we gave you a list, do you choose and pick the list, or do you talk to all of them? I think you need to 3 4 address all of them because they all have concerns. 5 I'm a salesman by trade. You're trying to б sell us a monstrosity. Yeah? That's the bottom line. 7 You're trying to sell the community this monstrosity. You're trying to turn a negative into a positive. You can feel the 8 9 energy. I mean, you can really feel the energy. It's not 10 positive. But the word "concurrence," I mean, that's --11 I'm actually afraid of that word because whether you do it or 12 13 not, you're still within your guidelines of the law. 14 Correct? You said it. It came from your mouth. 15 So if we came up with a list of all the Hawaiian organizations not only on our island, because if I 16 17 stand on Haleakala and at times our ocean is very calm and I 18 throw one pohaku, one stone inside the water, it creates a 19 ripple. The ripple effect goes through all the islands, not 20 only through all the islands, but it also touches your land 21 where you come from. Guess what get over there? Get 22 Hawaiians over there, too. You think they're not concerned 23 about what's happening over here? I believe they are. I 24 really do. 25 Concurrence. And Uncle Charlie said, you

1 know, how the Hawaiian people were suppressed. You said you 2 understand the word "suppression." Yeah? But if the 3 concurrence that we're in concurrence -- Big word to us, \$5 word there. Only use to the \$.25 kind word. Concurrence is 4 5 a big word. By law you're not liable -- You said before you б quys don't even -- we don't even have to talk to you quys. You only bring that up because that was then, this is now. 7 That was yesterday because that shows. Up the mountain what 8 9 there is now, that shows what you said. You don't have to 10 consult to us. You guys still going to build them up there. 11 Now you're accountable to us because of that Section 106. 12 But my question is: After all the dust 13 clear, all is said and the law settles, who has the final 14 stroke of the pen? Who has the final stroke of the pen? 15 Because all this is just (Hawaiian), just talk. But what gives the ability of what is said here? You know, you have 16 17 to understand -- And this is my own manao. Yeah? I only represent myself when I talk. You have to understand that 18 19 these people here, the ones that voiced their opinion, that 20 wasn't the words that was coming from their mouth, that was 21 coming from the heart, from the naau, and you have to feel 22 that. You have to feel that. 23 You cannot -- You know, I mean, I observe, I

24 watch. Everybody's trying to share, and yet you keep -- you 25 guys keep trying to go back to the agenda. You're worried

1 about time here, that you're not going to have enough time. 2 Well, you have plenty of time. 2000 what, 15? You got 3 plenty of time to talk about this. That's why all -- every 4 native organization has to be heard and get their input, 5 because the things that we say here is different from the 6 things they say there. 7 So aloha. I go back to the word aloha. 8 Two-fold: It says hello and it also means good-bye. Mahalo. 9 (Applause.) 10 AUDIENCE SPEAKER: Aloha, everybody. AUDIENCE: Aloha. 11 12 AUDIENCE SPEAKER: My name is Melia. And I'm 13 going to try to keep this melia as my outfit. 14 (Laughter.) 15 AUDIENCE SPEAKER: So if it doesn't come out Melia -- But you know my ohana in the back over here is 16 17 missing two members, but you know their spirit is still with 18 us, you know. But our ohana used to go up to Haleakala every 19 single year, maybe sometimes every month. But, you know, I 20 was so disturbed when park ranger said that our ohana cannot 21 go on -- beyond the restricted lines or whatever, you know. 22 I am disturbed by that ever since that year when -- that was 23 when I was 14. Right now I'm 18. You know, it was like four 24 years ago, 2001. And the park ranger said that we cannot 25 pass the lines and that we have to stop of what we are doing.

1 And, you know, we used to go up there to that mountain,

2	Haleakala, and we used to greet our ancestors, our kupuna and
3	also the sun, you know. A ala ai, a ala ai.
4	How do I know or how do Kanaka Maoli know,
5	you know, people of Hawaii know that we not going to get
6	kicked out of that aina again? It's not our fault that you
7	guys decide we can't go up there, you know. So, please,
8	don't build that up there. We don't need any more
9	restrictions. We like go up to that mountain and say a ala
10	ai to our kupuna, you know. That's all I have to say.
11	(Applause.)
12	MR. MAXWELL: You know, I have to tell you
13	guys, look what is up at Haleakala. Look what we have up
14	there already. How you think that was built; the AOS, the
15	Faulk Observatory? They never promised us in a 106
16	consultation, but close. I had all kind promises from the
17	air force, and that never worked. They took out 150 tons of
18	rock when they built AOS and they brought it down here and
19	crushed it and try to hid it from me. That's pain. And not
20	too many of us was involved in trying to stop that.
21	But Jeremy had something on his presentation,
22	I don't want let you find it, but the word said the "US
23	Congress." Didn't it say that, Jeremy?
24	MR. WAGNER: That's correct.
25	MR. MAXWELL: So a lot of what these people
	TWADO COUDT DEDODTEDS INC

1 are going through, they're not going to get the final say. 2 And I know through experience, through AOS and through Faulk, 3 if Dan Inouye and Congress wants that in place, it will 4 happen. This, we all going through the motions. We all 5 going through the motions. It's in my report about this. 6 Dan Inouye, before AOS was built, he come, Hey, Uncle Charlie, how come you fighting that? I said, Danny, it don't 7 8 belong there. So who you think they got to bless? Somebody 9 else.

10 Recently, AOS, they doing a little job over there, they went get Kalani Wong from Kamehameha School go up 11 12 there go bless. When I found out, I said, You know what you 13 going to do? He said, Oh, no, they just going to ask me to 14 do a blessing. You got to be maka ala. We've got to be 15 mindful. I mean, everybody is in pain over here, but the pain started when we became a state. We had no say when they 16 17 took over Poliahu.

18 So we have to ask them -- if they going to 19 build that, ask them for something in return. I submitted my 20 proposal for an educational component just in case by chance 21 if I fall asleep and die tomorrow and this thing will be 22 built, at least they're going to give back something to our 23 keiki from young all the way to the high school and in 24 college so they can become scientists. But it doesn't mean 25 that I am for the project. I said no. It doesn't belong on

IWADO COURT REPORTERS, INC. (808) 244-9300

the sacred mountain. But it just might be the third time
 that I have said this and it will happen.

3 AUDIENCE SPEAKER: It won't happen. 4 MS. CARNEY-NUNES: You know what, what I 5 would really like to do is not just to blindly go back to the б agenda, but, honestly, what I really would like to do is to 7 offer you all a little bit of -- a little bit more context, 8 which is what my job was to do here, was to give you the 9 context as to why it is that we're here. And it really plays 10 on what Uncle Charlie just said about making sure that if you are part of the process that -- if the project were to go 11 12 forward, to make sure that the community will be a part of it 13 and the community would get something back from the project. 14 And whatever --

15 MR. MAXWELL: Excuse me. What you got, though, is the cart before the horse. You cannot even talk 16 17 about that. I mean, actually, you know. Sorry, but --18 MS. CARNEY-NUNES: No, no. I want to --19 AUDIENCE SPEAKER: You know, we have hundreds 20 of -- We have people over here who want to give their manao 21 and give their thoughts. You're getting there to the 22 Hawaiian Homelands and we have Hawaiian people here sitting 23 down and waiting until all this blah, blah, blah thing is 24 over. If you want to hear the thoughts of the people, let's 25 start listening to the people and quit fooling around.

1 AUDIENCE SPEAKER: Yeah. 2 AUDIENCE SPEAKER: People came out here --People are leaving now. What's your purpose here? To listen 3 4 or no listen or listen to yourself talk? You should know 5 already what the feeling is. Let's get on with the program. б Listen to the people. Keep your mouth shut and just listen. 7 (Applause.) 8 MS. CARNEY-NUNES: And we have been taking 9 questions the entire time all through the presentations and 10 we will continue. But what I want to do is to make sure that when you do offer your comments, that you -- you fully 11 12 understand the context and the -- you know, there's been a 13 lot of questions about, Well, what's the process and what 14 does this mean? And I want you all to understand the way in 15 which you can -- the process would allow you to hold NSF 16 accountable to do some of the things, to implement the 17 proposal, if you will, that Uncle Charlie and that others 18 have put forward. And to seek those -- that type of input 19 from you all. So I just want to make sure that we have the 20 right framework around it. But it is not to silence anybody. We're listening to everyone. We have been and we will 21 22 continue to. 23 MS. LINDSAY: I am Puunene Lindsay. I'm 24 sorry some of our people left without being able to testify

25 here.

IWADO COURT REPORTERS, INC. (808) 244-9300

1 Two things on your side: Number one, you're 2 doing the community process, giving us a chance to speak. 3 Number two, okay, EIS is on your side. I am not for this project at all. I'll just say it out right now. Perhaps a 4 5 superferry didn't do this, but at least you're going through б that process. And they have their reasons for not doing it. 7 If you started in 2003 it seems to me at this point you have -- you should with all the people, all the 8 9 things that you have worked to put out to us, you would have 10 had the list of Hawaiian agencies, Hawaiian groups on our islands. I don't feel we should give the list. You pay 11 12 these people to do the research for you. And we have the 13 offices right here on Maui and you should send your people 14 there and get that information. This is 2003. 15 And for you -- MCC to testify this has in a federally recognized sacred site. How much more sacred is 16 17 sacred? Then you're going to -- Uncle Charlie mentioned 150 18 tons of rock. This thing is a huge project going down 19 deeper. 150 tons is nothing. And that's -- It's so sacred. 20 I don't think you people who come here really understand what 21 it means to our people. There are no more words to express. 22 And this advisory historic preservation 23 group, they should be in here. Federally recognized, 24 Haleakala, and they have not been consulted yet. I don't 25 understand that. They should have been here tonight like the

IWADO COURT REPORTERS, INC. (808) 244-9300

1 rest of you, from the get-go.

2 So, again, I'm against the project. I could say a lot more, but other people have come and have testified 3 4 before and I know others will come after me. It's a good 5 project in the wrong place. б One last thing: I walk Olinda Road in the 7 early morning hours and I can count the number of 8 observatories up there. And when I think -- When I walk and 9 I think of this white thing sticking up in the middle there, 10 I've heard people use different words, use finger signs, it's true. This is going to be terrible. And this -- Is this 11 12 what you call respect to our Hawaiian people? I don't think 13 so. 14 AUDIENCE SPEAKER: It will be our tomb stone. 15 MS. LINDSAY: More than a tomb stone. I don't want to put all my eggs in one basket and say, Yes, I 16 17 want something out of it. No, I don't want anything out of it. I don't even want it there. That's the bottom line. We 18 don't need it here on Maui. Go to site No. 2. 19 20 (Applause.) MR. FEIN: Before we continue, I would like 21 22 to comment on the number of agencies and groups that have 23 been consulted. To this point more than 50. We are going to 24 post those on the website for everybody to look at. Okay. 25 More than 50 at this point.

1 And, Ed, you have never signed up to receive 2 anything. You have to actually sign up to --3 AUDIENCE SPEAKER: I already signed up. 4 MR. FEIN: No. We don't have your address. 5 AUDIENCE SPEAKER: Explain your contact -б how you found about the agencies that you have contacted. 7 MR. FEIN: Yeah. The agencies that we have 8 contacted were given to us by various individuals and groups. 9 OHA. We've --10 AUDIENCE SPEAKER: I saw somebody blowing smoke outside and we don't need more other kinds of smoke 11 12 coming over here. The only thing that's left is bend down 13 and grab our ankles. There's no more smoke around here. 14 MR. FEIN: Okay. Well, in any case, the 15 agencies and groups will be posted on the final website. 16 MR. HOKOANA: Aloha. My name is Lui Hokoana 17 and I am the president of the Central Maui Hawaiian Civic 18 Club. The civic club is a grass roots organization comprised 19 of about 60 members. In addition this evening I am 20 representing the Maui District Council of the Association of 21 Hawaiian Civic Clubs. The council is compromised of members 22 from the Central Maui Hawaiian Civic Club, the Lahaina 23 Hawaiian Civic Club, and the Hoolehua Hawaiian Civic Club of 24 Molokai. Collectively the council has 150 members, primarily 25 of Native Hawaiian ancestry.

IWADO COURT REPORTERS, INC. (808) 244-9300

1 On Saturday at the Association of Hawaiian 2 Civic Club board meeting the board voted unanimously to support the position of its local civic club and council. 3 4 The association represents 51 clubs from throughout Hawaii 5 and in the states of Alaska, California, Colorado, Nevada, б Utah, Virginia and Illinois. It has a membership of about 7 3,000 members, and they are primarily comprised of Native 8 Hawaiians.

9 I am here this evening to strongly urge that 10 this telescope not be built at Haleakala. We believe that 11 the telescope will interfere with the natural beauty of the 12 mountain, has the potential to impact on our economy 13 negatively and intrudes on the manao or spirituality of the 14 Native Hawaiian.

15 The beauty of Haleakala has been recorded in chant and song. It can be seen from almost every part of 16 17 Maui. The intrusion of a 14-story size building will destroy 18 the pristine nature of the mountain. We need not look far to 19 see how telescopes have polluted the natural beauty of our 20 mountains. On a recent trip to Waimea on the Big Island it's 21 easy to see 45 structures on the very top of Mauna Kea. It 22 is hard to appreciate the beauty of the snow capped mountain 23 in the glistening sun.

I thought to myself, How sad for the future generations that they will not be able to see the pristine,

IWADO COURT REPORTERS, INC. (808) 244-9300

the majestic nature of Mauna Kea. The mountain they will
 know is one polluted with buildings.

In a recent survey conducted by the Hawaii Tourism Authority 58 percent of the Maui residents cited loss of nature and open space as a big problem. This leads me to wonder how tourists will react to this monstrosity. We all know that our number one economic driver is tourism. Recently the Haleakala National Park had to adopt policies to control the overcrowding during peak periods.

10 My members who work in the hotel industry 11 wonder how the tourists that they depend on will have to look 12 at that and interfere with the pristineness of seeing that 13 sunrise. This accompanied by the perception that Maui is 14 overdeveloped, has too much traffic and is overcrowded could 15 lead them to look someplace else for their next vacation.

Lastly and most importantly we object to the 16 17 building of this telescope because it impedes on the 18 sacredness of our mountain. As a youngster I was told about 19 how Maui matches the sun to slow it down so his mother could 20 drive her kapa. The kupuna told me that Haleakala means 21 house of the sun and that is where the sun lives. I was 22 taught to revere the mountain because it is a place where 23 gods dwell.

In the '90s I went to the mountain toparticipate in a ceremony in preparation for the year of the

Hawaiian. I have taken our cousins from as far as New
 Zealand and Tahiti and gave homage to the kupuna that dwell
 at Haleakala. Native Hawaiians share this reverence for
 Haleakala. This is why this is an issue not only for us here
 on Maui, but it's an issue for all Native Hawaiians
 throughout the world.

7 This telescope is an affront to all Native 8 Hawaiians because it tries to prioritize science ahead of our 9 spirituality and manao. All Native Hawaiians are concerned 10 about making sure that future generations can experience the 11 manao of this mountain without intrusion from man.

Our club members from the Big Island shared with me their disgust at what has happened at Mauna Kea. One kupuna said she thought the telescope would be good for her community. She says it has not. It is just an eyesore that she can see every day from her home at Waimea.

17 On my recent trip to the Big Island I visited 18 the Imiloa Astronomy Center at the University Park. It is a 19 wonderful exhibit. When I left the center I thought to 20 myself, Is this how we will teach children about the mountain 21 once we have destroyed the mountain?

The Central Maui Hawaiian Civic Club, the Lahaina Hawaiian Civic Club, the Hoolehua Hawaiian Civic Club in conjunction with the Association of Hawaiian Civic Clubs strongly urges that this telescope not be built at

1 Haleakala. The telescope will interfere with the beauty of 2 our Haleakala, may impact our economy negatively, and is an intrusion to the Native Hawaiian spirituality. 3 4 My aunt, who is now deceased, Monalao 5 co-wrote the song "Haleakala." The chorus says, "Haleakala, б the beautiful mountain, it stands all alone so peacefully." 7 Please preserve Haleakala. Please build the 8 telescope someplace else. Mahalo. 9 (Applause.) 10 MS. LANANDA: My name is Nikhi Lananda and I have been raised here on the island of Maui. And I am here 11 12 because I object to what this process is doing and will do. 13 I understand you have context that you want to share because 14 you are consulting. I personally feel that you're insulting 15 as you continue with the presentation because I think the key 16 feeling here is we don't want it. So would it not be just 17 easier for you to wrap up with the consensus that we don't 18 want it here? Go back to whoever you consult there and say, 19 They don't want it. How hard is it to just go, Nah, let's go 20 back to not the six on the list, go back to your 72. And the 21 next time you all want to build somewhere, don't include 22 Hawaii in that list because you will forever be greeting 23 people like us. That's all I have to say. 24 (Applause.) 25 AUDIENCE SPEAKER: (Statement in Hawaiian.)

IWADO COURT REPORTERS, INC. (808) 244-9300

How many of you here had tutus? You ever saw
 your tutu cry? Ever see your tutu cry? How many of you have
 ever saw your kupuna, ever saw him cry? I saw mine cry.
 When my grandfather first took me up to Haleakala, took me
 to (inaudible), he cry.

6 When I was a young kid in Kapalakua and they 7 bought me to Kahoolawe, my tutu would say, Pelo, come in the 8 house. All the kids got to go inside and I watched them cry. 9 They're not alive anymore, they're dead, but I cry now. I'm 10 crying because I'm a kupuna now, I've got grandkids, and I 11 got to explain to them what's happening to the land. Shit, 12 no. My kupuna dead. I'm not. This is serious.

My wife's not here so I can talk. She doesn't like me talking like this, because it come from the naau. Yeah? And what is that? Way down. Not here. Not here. Down deep inside, that's why, that's where this all come from.

 18
 And on paper it can be approved by congress,

 19
 it can be approved -- Dan Inouye can approve it, but we're

 20
 not going to have another Kahoolawe. We're not. Mahalo.

 21
 (Applause.)

 22
 AUDIENCE SPEAKER: Are you taking testimony

 23
 yet?

 24
 MS. CARNEY-NUNES: We're taking testimony now

25 because we're going with it.

1 One thing I can say, since we have a little 2 break here, is -- I didn't stress this earlier on because I 3 thought I was going to go through the entire presentation, but I understand where we are now. But I do ask we go 4 5 forward with testimony. I do want to make clear what those 6 of you who were here last month or in March already know, is that we are here about resolving the adverse effect. And I 7 do understand that many of -- all of whom have spoken thus 8 9 far have -- think that the adverse effect cannot be resolved 10 and are offering what we would call under the law as avoidance. That's no action. 11

12 But I do want to just make clear that under 13 the law when we talk about resolving the adverse effect, we 14 look at three things: Avoidance, what we call minimizing, and what we call mitigation. Okay? And avoidance is what we 15 have been talking about here this evening thus far. 16 17 Minimize, we have talked about it a little bit when we talked 18 about changes in the technology that we could -- the project 19 could undertake like with the sound. That would be -- that 20 would be a strategy under minimization. And then mitigation 21 strategies, that would be like the education proposal, 22 strategies that would lead to a memorandum of agreement that 23 NSF could be held to. So just wanted to provide that 24 context. 25 But please go ahead.

AUDIENCE SPEAKER: I came up here thinking that you were going to listen and you immediately started talking. I wanted to tell you, Charisse, that I really appreciate all the work you've done and all your colleagues have done. It's really nice science. And as my ohana -everybody here has been trying to make the point to you: Good science. Wrong place.

8 But I want to just -- I can't really add 9 anything more than what everybody has already said. I came 10 here to show my manao. And if it's repetitive, well, I don't 11 know how many times we're going to have to say it before you 12 do get it. So I'm going to add my little piece, wherever 13 that goes.

14 My cousin Oliver said there's a real basic 15 issue of jurisdiction here. We are not under US law. We are 16 an independent nation. We have never relinquished our 17 nationhood. There is someone sitting in our seat of government. His name is Sam. We would like to ask him to 18 19 leave so that we can fill our own seat with our own people. 20 And so there's this basic issue that you need 21 to take back to Washington or wherever you have to take this 22 to and say, The sleeping giant is beginning to wake up and is 23 stirring and we need to listen. Because there are some big 24 issues coming up in terms of nationhood that you folks are 25 going to be forced to respond to either in court or out of

1 court. We'd like to do it peacefully however we can because 2 we -- our people have aloha. But that's a real basic issue. 3 You have no jurisdiction here. It doesn't matter what the 4 congress does, it doesn't matter what Akaka does; it just 5 does not apply. We are an independent nation. We are all 6 citizens here of our nation, which happens to be Hawaii, not 7 United States. So that's one point.

8 I don't know how you're going to be able to 9 mitigate that issue because we just do not -- we are separate 10 nations. And if NSF -- I'm not really sure how the Canary 11 Islands was eligible as a potential site because it's not 12 part of the US. Maybe there would be some sort of 13 international treaty between our government and Spain or 14 whoever, but that's none of our business. Just as what 15 you're doing is really none of our business. You need to do a really nice project someplace else. It's really great 16 science, but it just doesn't fit here. 17

18 The other thing I wanted to say really simply 19 is to basically reiterate and summarize what people have been 20 trying to get you folks to listen to, hear us, is that when 21 you're talking about, Well, you know, we're here to consult, 22 but concurrence is not required, but we're going to go ahead 23 anyway. Well, you're not listening because it's not going to 24 happen. Because we have had it up to here with these kinds 25 of projects that come and basically rip us off and really

1 minimize.

2 What you really need to understand is that we're not talking about really legal issues or mitigation 3 issues. We're not even talking about scientific issues. 4 5 We're talking about our my deep spirituality. My brother 6 right over here just laid it all out to you. He just said 7 it. And you got back to your little dog-and-pony show here, with all due respect. It's a very nice PowerPoint 8 9 presentation. I'm impressed with all your technology. It's 10 really great. It's somewhat entertaining. But I cannot forget the impression that we're being entertained, but we're 11 12 really not being listened to. 13 But I think you need to really hear this: 14 That project will not go through. Because as we here in our 15 physical bodies communicate with our kupuna who have gone 16 before us, we are a much larger force than the United States 17 Congress, United States corporation, United States anything. 18 And events are happening other than this project here that 19 are leading us to our independence. It's inexorable. It's 20 inevitable. And it will happen in our lifetime. It will happen soon, sooner than you think. 21 22 So the last thing I want to say is that if we 23 can stall you long enough so that the other events can take 24 place, then our government may negotiate with your government 25 to get the rest of the stuff up there off our mountain. We

1 would like to see America go away. Thank you.

2 (Applause.) AUDIENCE SPEAKER: (Hawaiian statement.) 3 4 Aloha. As my brother said, history is the 5 people's memory. And without a memory, mad is the motive to 6 the lower animals. And I here to tell you and the NSF and 7 everybody else here, we are a real people with a real memory. 8 It will not be erased. We will not stand here and act as if 9 that mountain is not important to our people, because it is. 10 And no matter what kind of projects they propose, it's important to us. We are people. 11 12 Just going to run real quickly through, as

you all know the (Hawaiian). And we don't have time to run through it all, but it's very clear through our traditions and our memory and history that's a very important mountain from the shores of Pali to Namakokai to Maui to Liinoi. How many stories do we have to provide? How much evidence does it take? A hundred pages? 200 pages? When is enough enough?

20 Understanding history, you also understand 21 1843 what happens in Hawaiian history. We, Hawaiian king was 22 recognized an independent state, part of the family of 23 nations. But, of course, you understand 1893 what occurs. 24 An act of war occurs in Hawaii, and that's the words of 25 President Cleveland of that time. He also talks about an

IWADO COURT REPORTERS, INC. (808) 244-9300

1 illegal occupation that occurs in Hawaii at that time.

2 That's the word of President Cleveland. The occupation has 3 never left these islands. And it's because of these islands, 4 we just -- because of this occupation, that's why we're here 5 today.

6 The question of title to land, we know this 7 area, Papaanui, part of Kolekole, which also extends over to 8 Kahoolawe, that's the same ahupua'a, same moku, same kalana. 9 That land in the mahale was given as part of the government 10 lands of the Hawaiian Kingdom. Check the title yourself. 11 1893 you have the invasion. US military lands, occupies 12 Hawaii.

13 1897 this occupies -- purport to try to annex 14 Hawaii into a treaty of annexation. The treaty of annexation 15 fails in the senate, fails. There is no treaty of annexation of the Hawaiian islands. Check your history. Anyone knows 16 17 in US history. Section 2, Clause 2, "For a treaty of 18 annexation to occur, you must have Senate ratification." It 19 never occurs in the Hawaiian Islands. There is no treaty of 20 annexation.

There is a New Lands Resolution that occurs in 1898 which purportedly passes the citizenship of those of the Republic of Hawaii. How many citizens in 1898 in Republic of Hawaii? Less than 4,000. It also talks about passing of the lands owned by Republic of Hawaii now passes

to the United States of America, but which lands do the
 Republic of Hawaii own? When did they gain title to these
 lands? This, of course, directly affects the title of
 Haleakala. Haleakala is part of that lands, the Hawaiian
 Kingdom.

б In 1961 Governor Quinn, the State of Hawaii 7 then passes Executive Order 1987 to the University of Hawaii to manage. Where did Quinn and the State of Hawaii gain 8 9 title to that land? Just because they claim to manage the 10 land don't mean that they own the land. Hawaiian people have 11 never, never, ever given up control of that mountain. We never done. Have never done so. That's the history. 12 13 Just because we're occupied nation does not 14 mean that we've given up our title to that land or the 15 management of that land. Did we have a say when the air force built their space observatory there? We have no say in 16 17 the process, nothing to talk about, just shove it down our 18 throat. And we smell the same kind of stench coming out of 19 this process, also. That's clear. Unlawful control, that's 20 what's going on up there. Unlawful. No piece is sacred, 21 kapu.

This whole process, in fact, is based upon a supremacist belief that particular people's rights supercedes us, the native people of this land. It's the same sickness that has been going for too long in these islands and other

IWADO COURT REPORTERS, INC. (808) 244-9300

1 parts of the world. But it defecates and urinates and spit 2 upon native peoples as if we're secondary peoples of the 3 earth. And I'm here to say no way, that's over, we're not. We will fight this project. We will organize against this 4 5 project. I will be there. And I make this a promise. I б will be there to organize against this project, using our 7 bodies to organize against this project. Take that home to 8 NSF.

9 The great Mahatma Gandhi said -- A hero of 10 mine. One of the greatest books, "Satyagraha" -- Read that book you never read that before -- Gandhi talked about the 11 12 seven sins: Wealth without work, pleasure without 13 conscience, knowledge without character, congress without 14 morality, science without humanity, worship without 15 sacrifice, and politics without principle. The last thing that I want to leave you is, as Gandhi said, also, "First 16 17 they ignore you, then they laugh at you, then they fight you, 18 but then you win."

19 (Applause.)

20 MR. LINDSAY: Aloha, my name is Ed Lindsay.
21 AUDIENCE: Aloha.

22 MR. LINDSAY: And I would like to speak 23 against this project. First of all, to our counsel, I notice 24 you have your cultural displays on: The hair in which you 25 wear is fabulous, the colors you have matches your character

1 and your principles and your culture. I would like to 2 implore you under the -- for the Hawaiian people to fight 3 this. And all we can pay you is a dollar and love. You, who come from a race that have been oppressed, are witnessing 4 5 from the people here who are also oppressed. So I would like 6 for you, if you are willing, to use your knowledge and your 7 education to stop the oppression. And, you know, in rape 8 there's no concurrence. And take this back to the people who 9 are funding it.

You know, usually you cut the funding off, the thing dies. And along this -- the line of rape, that 14-story thing over there, that's not going to look like a middle finger. It's going to look like a phallic. And it will stand as a monument to the oppression of all oppressed peoples of this world by a government who feels that, Huh, we don't care.

17 So I implore you to please use your 18 knowledge, your wit, your heart and your cultural heritage to 19 help fight the oppression. Please tell the NSF to take their 20 toys home and don't bring it over here. Aloha.

21 (Applause.)

AUDIENCE SPEAKER: Hi again. You know, I was reading your fact sheet here and I wanted to talk about some of the utilities that's mentioned in your fact sheet and about the possible environmental degradation because of the

1 fact there is waste water collected in onsite underground 2 septic tank. Now, that's one thing. Also, the communications part: Underground fiber optics and copper 3 4 lines for telephone, which means there's going to be wires 5 all over underground. Right? Underground lines, electric б service extended from existing MECO substation on observatory 7 property. Underground environmental degradation. 8 And, also, the part of education and public 9 outreach, this particular segment was manipulating to me. 10 The goals of this partnership are to advance local students 11 particularly Native Hawaiians and women into Maui's technical 12 and scientific work force, to develop courses and program to 13 prepare students, dah, dah, dah, to open opportunities for 14 underrepresented groups particularly Native Hawaiians. 15 Opposition. We're all opposing it. How is this supporting us at all? To me it's a manipulation because it's using us, 16

17 our name, who we are to say, Hey, this is what we're giving 18 you. Just like that Olowalu project. It's called tourism 19 grammar.

20 Why Haleakala? The clean, dry air at the 21 summit of Haleakala provides some of the best astronomical 22 seeing conditions in the world, seeing conditions. Now, you 23 have other 72 potential sites. Well, would it be possible 24 for the examinations that you have done for those other 72 or 25 all the other sites that you have examined to be given to us

IWADO COURT REPORTERS, INC. (808) 244-9300

1 so that we can evaluate, we as a scientist?

2 (Applause.) 3 MS. CARNEY-NUNES: Actually, I wanted to address what you said earlier about the Environmental Impact 4 5 Statement and that whole process. And it is not that we're 6 trying to leave anything out of the process and, in fact, we 7 will have public meetings on the Environmental Impact Statement. As soon as the draft document is prepared, it 8 9 will be published. You'll be able to comment on all of the 10 those issues that you brought up the first time you spoke as 11 well as the issues that you brought up just now. 12 The scientists can probably speak to this 13 better than I can, but I do know that environmentally that 14 astronomy is one of the cleanest, cleanest kinds of science, 15 technology that, in fact, there is. 16 And I don't know if (pause) --17 MR. BAR: Yeah. Let me just talk briefly 18 about -- because you brought up the utilities. And you're 19 right, there's going to be a lot of stuff underground. And 20 one of the big reasons that it will be underground is because 21 that's the way -- the Long-Range Development Plan that IFA 22 developed in consultation with the community and others 23 dictates that utilities be put underground. All of the 24 electric -- We certainly wouldn't be putting it up on power 25 poles where it can be seen and be even more of a visual

IWADO COURT REPORTERS, INC. (808) 244-9300

1 problem.

2 I understand that putting these underground is in some way intrusive, but, you're right, I mean, you 3 don't build an observatory without a certain amount of 4 5 utilities and there will be that kind of stuff there. And б the underground septic tank will be -- it's a containment 7 tank that will treat water, treat the waste and will be pumped and removed regularly. But, again, that's an element 8 9 that will be underground and will require a certain amount of excavation and kind of, you know, disturbance of the earth 10 11 that you're concerned about. 12 AUDIENCE SPEAKER: But not on our mountain. 13 MS. CARNEY-NUNES: But, again, those -- we're 14 at the beginning of that. And as soon as the document comes 15 out, it will be available in all of the public libraries. It 16 will be available on the Internet. If you left your name and 17 your e-mail address at the door, it can -- a link to it can 18 be e-mailed directly to you so that you'll be able to see it 19 and comment on it. And there will be another opportunity for 20 us to meet again and to specifically discuss those issues. 21 Does anybody else have anything? 22 MS. BURNS: Hi. I'm Suzanne Burns. I spoke 23 earlier. I'm a student in the ESET program at MCC. I love 24 science. I'm very excited about it. This whole thing is so 25 neat to me, I'm really excited about it, but I'm Hawaiian.

1 This is my family here.

2 You had said that you spoke to 50 groups of Hawaiians. Did any single group support this? Did anybody 3 4 support this? I'm asking. 5 MS. CARNEY-NUNES: Oh. We're actually going б through the consultation process right now. We're actually going through the process as we speak. 7 MS. BURNS: So up until this point no one has 8 9 supported this project that I think is really fun and I'm 10 excited about personally, but I don't want it here. 11 Has anyone supported it being here, Hawaiian 12 groups? MS. CARNEY-NUNES: Well, nobody has supported 13 14 or -- Well, actually, tonight -- Where's the gentleman who 15 spoke with the resolution? Right. That's actually -- I'm 16 sorry, I don't remember your name, but that was actually the 17 first official resolution that I have heard of a group 18 actually not supporting it. 19 We're -- Again, as I said, honestly, we're 20 actually in the thick of the consultation process right now. 21 And so it is our hope, our optimistic hope that we will get 22 support of Native Hawaiian organizations, of local 23 organizations, but we are moving along in the process right 24 now. 25 MS. BURNS: And that was 50 groups; correct?

IWADO COURT REPORTERS, INC. (808) 244-9300

1 51, okay.

2 When I first came here, the first person I talked to was Jeremy, the manager of the program. Correct? 3 4 And I wasn't trying to trick you or anything. I didn't know 5 anything about this. I'm still learning about my heritage and about my own culture. But what I found tonight is it 6 means so much to my family here. And I know that you have 7 8 dreams and when you got that telescope when you were eight, 9 it was so exciting. I know what it feels like a dream, but 10 would your dream die if you couldn't build it here? Could you still build it somewhere else? Because our dreams are 11 12 going to die. Thank you. 13 (Applause.) MR. MABERRY: Please forgive me, I don't mean 14 15 any disrespect, but just to share with you that it was King 16 Kalakaua who brought the first telescope to Hawaii. 17 AUDIENCE SPEAKER: But he didn't put it on 18 Haleakala. He put it upstairs. 19 AUDIENCE SPEAKER: He was a well-educated 20 man. MS. CARNEY-NUNES: Well, I think -- I don't 21 22 want to silence anyone, so -- If there is nothing further, we 23 can wrap up, but -- Mickey. 24 AUDIENCE SPEAKER: Aloha kaua. 25 AUDIENCE: Aloha.

1 AUDIENCE SPEAKER: Aloha. I have already 2 given my testimony in prior meetings. Again, with this ATS 3 telescope my concern now is with so many of our people 4 voicing their concentration on avoidance to just prevent this 5 whole ATST from coming to Maui, my concern is that you're б going to have another meeting after this. And I would like before we close for the people here to know what is the next 7 step so that we don't have to be hunting around for the 8 9 information.

10 And, you know, I know Charlie said it's going 11 to be on the website, but not everybody has computers to 12 check. And, you know, I know that millions were spent, if 13 I'm not mistaken, on funding this work up to this point for 14 this ATST project. And my concern is that, you know, how 15 much has been spent on letting our people know what is happening? You know, I understand that -- I don't know. 16 17 It's something that came up now, this Section 106 wasn't here 18 before, but our people need to know.

"The Maui News" article that was in the paper -- I'm not blaming anyone, but it was in the paper this week letting people know on Wednesday, if I'm not mistaken, that we're having the meeting this evening and -- Wasn't that it, Charlie? The meeting -- the Wednesday article in "The Maui News" talked about this meeting tonight and then it talked about where to send your comments by mail to Charlie,

IWADO COURT REPORTERS, INC. (808) 244-9300

where to send the e-mail comments. And then on Thursday I
 found a small little article that was a correction that
 somehow there was a mistake on the e-mail address and there
 was a mistake on the address.

5 So my concern is that if you're going to б spend millions -- And I'm not blaming you. This thing has had to much impetus already, but millions are being spent on 7 planning this project and we need to have some money set 8 9 aside to let our people know not only here in Maui, Maui Nui, 10 all over the place, like you were saying, all over, and let them know so that they can -- Because I was told that people 11 12 can give their testimony in person at these meetings, they 13 can send it e-mail which will be recorded in your records, they can send a letter. But the thing is our people have to 14 know and I think some money should be spent on that process 15 16 and not have people have to go hunting around.

17 Everybody is so busy just trying to live, but 18 they care so much about our own aina here, that's why they're 19 here this evening. And so we would like to see some money 20 put aside and not say that there's too much expense to print 21 out something. And we want to see -- you know, like that, we 22 don't want to waste a lot of paper and whatnot, but we want 23 our people to know. And so that's what we -- I would like to 24 see. Thank you.

(Applause.)

25

MS. CARNEY-NUNES: I couldn't agree with you more. And we'll make sure that that does happen. I can't speak to the typo about the e-mail, but I can apologize to you on behalf of NSF for that.

5 In terms of the next steps, we will take all б the comments that we heard here, the comments that we heard 7 at the March meeting, we'll take all of the e-mails that we've received, the written comments that we've received, the 8 9 letters -- I think some of you submitted letters here tonight 10 and brought that; we'll take all of those into consideration. 11 And probably the next step that will happen will be the 12 publication of the draft Environmental Impact Statement. 13 That will probably happen in about a month.

When that happens, it will be published in the newspaper. It will be published in -- it will be placed in all of the libraries in Maui. It will be posted on the website. If you leave your contact information here with us, it will be mailed or e-mailed to you if that's what you request. It will be.

I'm open to other suggestions. If you -- We did -- I know we did a post card campaign for this meeting. So if we had your addresses from previous contacts or lists that we got through either the State Historic Preservation Office or OHA, then we did, in fact, send post cards out to people whose addresses that we did have and organizations'

addresses that we did have. But we're open to suggestions
 because consultation actually means consultation on every
 piece including if we're not doing our job in terms of
 notifying the community.

5 AUDIENCE SPEAKER: I just wanted to ask 6 that -- Because tonight is too soon and our people need more 7 time to get there to meetings. To get the information out 8 and to get the comments to you folks. And so I -- You know, 9 Charlie told me tonight is not the last night, that we can 10 still -- people can still submit their comments.

MS. CARNEY-NUNES: Yeah. Let me clarify. 11 12 Under the law, like I said at the beginning, there is two 13 things that is going on here. We have the environmental side 14 of things and we have the cultural and historic side of 15 things, the 106 process. We were asking for comments either before or to be brought in at the meeting just so that we 16 17 could have a productive discussion with everyone here 18 tonight. That does not mean that you cannot comment any 19 further. It doesn't mean that you can't give us a comment 20 tomorrow. It doesn't mean you can't give us a comment next 21 week.

The environmental piece of this is actually broader, it encompasses all of those issues that we talked about before; the visual impacts, the specific environmental impacts. But it also does encompass the cultural and the

IWADO COURT REPORTERS, INC. (808) 244-9300

historic impacts and that as well. When -- And when you see the draft document when it appears in about a month, you will see reference to this whole Section 106 process right in there. You will be given from the point that it was -- it's published, you will be given 45 days to give us comments on the Environmental Impact Statement, the Draft Environmental Impact Statement.

8 During that 45-day period, probably toward 9 the end of the 45-day period, we will have another public 10 meeting. That's the public meeting that I was talking about before where we will -- it will be a broad public meeting. 11 12 It will encompass not only the issues that are of specific 13 emphasis and importance to Native Hawaiians, but all of the 14 environmental issues including those that are the traditional 15 cultural property issues. Okay? That meeting will happen towards the end of that 45-day period. If I had to project 16 17 from here, it probably would be near the end of June or the 18 beginning of July, but sometime in that time frame over the 19 summer.

20 We will accept comments at that meeting. We 21 will accept comments after that meeting through the 45-day 22 period, through the end of that. After that we will have to 23 go into a decision-making mode that will happen at the end of 24 that 45-day period. During that time we will be consulting 25 with -- we'll be consulting with other federal agencies. We

IWADO COURT REPORTERS, INC. (808) 244-9300

1 are required to consult with the Environmental Protection 2 Agency. We will be required -- probably particularly after 3 what has happened here this evening, we will be consulting with the -- She left -- with the Advisory Council on Historic 4 5 Preservation about all of these issues. So that's a federal б process, a federal decision-making process that will happen 7 after that. 8 But we'll make sure that you do get the 9 notice. Charlie, I think we're done. 10 MR. FEIN: Okay. Are there any other final 11 12 or other comments that you wish to make at this time? 13 If not, as Charisse said, there will be a 14 public meeting for consideration, comments on the Draft 15 Environmental Impact Statement. We anticipate publishing that -- We're trying to get that out by the end of May, but 16 17 it's a large document and there are lots of logistics that go 18 into publication of that. 19 And so that would be for that purpose. And 20 then, of course, for the National Historic Preservation Act, for this Section 106 process, a separate meeting. I think 21 22 Charisse explained it very well. 23 So are there any final comments or anything 24 else anybody would like to say? 25 If not, we're going to close the meeting. We

1 do have to be out of here by 10:00. And I apologize if 2 anybody has something they would like to say, but we do have 3 to close the place up.

MS. CARNEY-NUNES: I actually have another comment. And this is something, forgive me, that comes from my cultural, but often we'll end a meeting, particularly difficult ones, with a prayer. And so I would ask again, Kahu, if you could bless this process just to close us out and set us a positive note, at least.

10 MR. MAXWELL: Bow heads.

Heavenly Father, we ask that you look down on 11 12 us as Hawaiian people that believed in the word that was 13 brought us to by the first missionaries. And our kupuna had 14 told us that they left the pearls with us, which is all what 15 we have, the power to pray. The power to pray to the Lord for help. And every time that things are hard, we ask for 16 17 help and guidance from you, dear Lord. We ask and pray that 18 you bless everyone here that spoke, that came to listen, that 19 submitted their testimonies. Protect them as they go home to 20 their individual homes and to wherever they're staying and 21 back to their homes in the mainland for the people that came 22 from there.

We ask and pray that you touch the souls of all the people involved in congress, in the ATST and touch them and let them feel our plight. There's so much that has

been done to us, dear Lord, and we have suffered as natives, as Kanaka Maoli of this land. We ask this, that you bless us all and give us this hope and inspiration. We ask this in your name. (Hawaiian.) Amen. AUDIENCE: Amen. (The proceedings were adjourned at 10:02 p.m.)

1 ATTENDANCE 2 NATIONAL SCIENCE FOUNDATION	1 generous, keep your hearts open. It's a time to learn, a
Dr. Craig Foltz, ATST Program Officer	2 time to grow, a time to bring what is pono to this
 Ms. Caroline Blanco, Assistant General Counsel NATIONAL SOLAR OBSERVATORY 	3 discussion. And I will try to see what I can do to help
4 NATIONAL SOLAR OBSERVATORY Mr. Jeremy Wagner, ATST Project Manager	4 assist in that way.
5	5 I think we need to sort of set some context to
6 NATIONAL OPTICAL ASTRONOMY OBSERVATORY 6 Mr. Jeff Barr, ATST Project Architect	6 today's discussion, today's consultation, because we have
7 UNIVERSITY OF HAWAII INSTITUTE FOR ASTRONOMY	7 been accustomed to three years of public hearing. Today
Mr. Mike Maberry, Assistant Director	8 is a shift. We are not doing that. We are moving into
8 KC ENVIRONMENTAL, INC.	9 consultation.
9 Dr. Charlie Fein, Vice President	10 So as we move forward in consultation, we are
Ms. Sharon Loando-Monro, Planning Projects Manager	11 talking about mitigation, how to minimize, or to mitigate,
MEETING FACILITATOR	12 to soften, any adverse impact that this construction may
11 Ms. Annelle Amaral	13 have. That is what we are here to discuss.
12 OTHER ATTENDEES: Ms. Mikahala Helm	14 And some things cannot be mitigated. So what we
13 Ms. Camille Kalama	15 need to do is to set that in context first and then to
Mr. Kiope Raymond	16 move beyond that.
14 Mr. Sol Kaho'ohalahala Ms. Pua Aiu	17 To do so, then, I am going to ask Craig
15 Ms. Nancy McMahon	1710 do so, then, 1 an going to ask Crarg18DR. CRAIG FOLTZ: I can talk briefly about that,
Ms. Verna Kaiulani Nahulu 16 Mr. Warren Shibuya	
17 17	
18	20 Annelle, if possible, could I ask Caroline to
19 20	21 discuss this sort of being an overview of the Section 106
21	22 process before I
22 23	23MS. ANNELLE AMARAL: Yes. Let's do that.
23	24 Let me ask. Are you three here to be involved
25	25 as part of the consultation?
3	5
1 NATIONAL SCIENCE FOUNDATION	1 Come. Let's come closer. Come to the table.

1	with that.	1	meeting is it is an open house style format to allow
2	So we had requested information on avoidance,	2	people to come in at their convenience. If people are
	minimization, mitigation years ago. And that process	3	working, there are evening hours and so forth. So we are
	continued on. And, also, opportunities were allowed in	4	trying to be as accommodating as we can, to talk about any
	the Draft Environmental Impact Statement process. And we	5	sort of mitigation ideas that people have. We are
	received nothing, frankly. No information.	6	certainly more than open to whatever people have in terms
7	And we did receive a couple of mitigation	7	of ideas.
	proposals. And those mitigation proposals are in the back	8	We requested those ideas in the November 8th
	of the room as well in handouts.	9	letter I had written to the Advisory Counsel. We received
10	And so the National Science Foundation reached	10	nothing then.
	the process where we looked at, is there a viable	11	In May, again, we requested that additional
	alternative site that is reasonable. And it is	12	mitigation proposals be forwarded to us. Again, we
	interesting, in this particular process, this is a	13	received nothing.
	science-driven process, and the question is really will it	14	So our hope is to, once again, provide another
	go forward or will it not. And if it is to go forward,	15	opportunity for consulting parties, interested parties, to
	that this is the place where it would be. And so we are	16	come on in and provide any ideas they may have.
	looking at ways in which to mitigate adverse effects	17	We received a letter today from the National
	onsite.	18	Trust for Historic Preservation requesting to be a
19	But, also, we've opened up recently in	19	consulting party. We are allowing them in as a consulting
	response to requests that have been received, we're	20	party. And we have allowed additional groups in over the
	interested in looking at ways to avoid, minimize or	20	last week.
	mitigate park resources, the road in particular.	21	
23	• •	23	So at this point we are trying to move the
	And, unfortunately, Ms. Parris was not able to be here from the Haleakala National Park, nor was she able	23	process forward with the hope that tomorrow, between 10:00 and 2:00, we can look at the ideas that have been
		24	
25	to provide staff here today. We will be meeting with her	25	generated today and throughout the process, and start to
	7		9
1	on August 22nd. So we look forward to that conversation	1	begin the work of drafting a memorandum of agreement.
2	then.	2	So that's where we are at this stage of the
3	So we have put up a white board. I've written	3	process.
4	out sort of the topics here.	4	MS. ANNELLE AMARAL: Did you want to ask any
5	And for the proposed site, mitigation is what we	5	questions?
6	are requesting input on at this meeting today.	6	MS. MIKAHALA HELM: I have a question about
7	And park resources, we're looking at the whole	7	when you say nothing was received early on, when you were
8	scheme of these things, since that wasn't included before.	8	explaining things, are you meaning nothing was received
9	Avoidance, minimization and mitigation, we are	9	what were you meaning by nothing was received?
	requesting input there.	10	MS. ANNELLE AMARAL: In terms of we sent
11	And we are allowing it on all three of those	11	postcards out to all the consulting parties, requesting
	factors because that was not before the consulting parties	12	ideas on avoidance, minimization, mitigation. In response
	in 2005, 2006, 2007. Whereas the onsite impacts were	13	to those requests, we did not receive a response.
14	before the consulting parties back then.	14	There were comments that were received in
15	And there is a need to move the process forward.	15	response to the Draft Environmental Impact Statement.
16	We are very cognizant that people have sincere and	16	There had been two, I believe and resource folks can
17	significant concerns about the location.	17	help me out here there were supplemental cultural
18	Since this meeting is not designed to really	18	resources studies that were done, interviews that were
19	discuss that, there is another opportunity that we are	19	made, and, you know, for that particular study to try to
20	providing for people up in the second floor conference	20	reach out and find out what are the issues, what are the
21	room. If there are other issues that you would like to	21	concerns.
22	have National Science Foundation consider, we ask that you	22	Some of the concerns were even that people did
	nuve i tutional belenee i oundation consider, we ask that you		
	feel free to go up there and videotape your concerns or	23	not want us to even raise the issue again because they
23		23 24	not want us to even raise the issue again because they thought it would be disrespectful. So we found ourselves

3 (Pages 6 to 9)

1 2 3 4	10		12
2 3	ideas, trying to be respectful, and, yet, trying to also	1	because we did not feel that we wanted to finalize that
3	respect the wishes of not asking again.	2	until we've been able to resolve what we can through the
	But nevertheless, in terms of the federal	3	106 process.
	process, we did feel we had an obligation to continue	4	MS. MIKAHALA HELM: Okay. So things that were
5	consultation. So we did.	5	mailed out were not only to Section 106 consulting party
6	And that is what I meant in response to that.	6	people, is that correct? It's beyond Section 106?
7	Were there other ideas that you had as far as	7	MS. SHARON LOANDO-MONRO: Section 106 had the
8	comments that have been submitted that perhaps	8	most mail-outs, yeah. Then the DEIS, of course, had
9	MS. MIKAHALA HELM: You just mentioned a lot of	9	everybody.
10	things that were received. So I was confused when you	10	MS. MIKAHALA HELM: On the latest letters that
11	said nothing was received. Because there was a lot that	11	we received I'm sorry, but I have these questions.
12	was submitted in that time period that may not have been	12	MS. CAROLINE BLANCO: No. That's fine.
13	supporting mitigation, but it was supporting avoidance.	13	MS. MIKAHALA HELM: So I just want
14	So I just wanted a clarification of that.	14	clarification.
15	MS. CAROLINE BLANCO: Right. Thank you.	15	On the latest letters that we just received
16	And the other was, you know, in terms of	16	about these meetings here today, was that the Section 106
17	minimization. I don't believe we've had any comments that	17	list in totality?
18	have addressed minimization.	18	MS. CAROLINE BLANCO: Yes.
19	The main source of comments have been not at	19	MS. MIKAHALA HELM: Because I know of people
20	this site, pretty much where, you know, a different,	20	that had requested to be consultants in the Section 106
21	alternative site needs to be picked. So we acknowledge	21	process in 2006, and I don't see their names on these
22	that has been forwarded to us and considered. And that's	22	letters or know that they have received any information
23	why, you know, because this is a science-driven project,	23	about this particular process now. So I have concerns
24	it's a question of does the science move forward. And, if	24	about that.
25	it does, this is where it will be. And, if not, then it	25	MS. CAROLINE BLANCO: I think, since I came to
	11		13
1	won't move forward at all.	1	NSF last fall, I am not as familiar with the particulars
2	MS. MIKAHALA HELM: Okay. And I had another	2	of them.
3	question.	3	Charlie or Sharon, do you have ideas?
4	MS. CAROLINE BLANCO: Sure.	4	DR. CHARLIE FEIN: I think anybody who ever
5	MS. MIKAHALA HELM: That was, when you said that	5	requested to be a consulting party was sent the
6	you asked for input or I forgot the exact words you	6	information. Anybody who was willing to give us an
7	said, but requested with the postcard and whatever. Who	7	address to mail to has been a consulting party.
	were what people were sent these postcards? And, you	8	MS. SHARON LOANDO-MONRO: Then everything that
8	know, what kind of people were consulted?	9	we sent, when Bijan was counsel then, we sent everybody
8 9	line w, while line of people were consulted.	1	we sent, when Dijan was counsel then, we sent everybody
	MS. CAROLINE BLANCO: I think, Charlie, did you	10	that was on the list, no matter what, and we were asking
9		10 11	
9 10	MS. CAROLINE BLANCO: I think, Charlie, did you		that was on the list, no matter what, and we were asking
9 10 11	MS. CAROLINE BLANCO: I think, Charlie, did you want to we have a whole list of people.	11	that was on the list, no matter what, and we were asking for things. And it got to the point where only a very few
9 10 11 12	MS. CAROLINE BLANCO: I think, Charlie, did you want to we have a whole list of people. MS. And it got to the point where only a very few people would ever respond with anything or kept coming to the meetings. And so the list got narrowed because it
9 10 11 12 13 14	MS. CAROLINE BLANCO: I think, Charlie, did you want to we have a whole list of people. MS. SHARON LOANDO-MONRO: It was people that came to the meetings, that signed up, people that had made requests. Remember I had all those handout sheets if you	11 12 13 14	that was on the list, no matter what, and we were asking for things. And it got to the point where only a very few people would ever respond with anything or kept coming to the meetings. And so the list got narrowed because it didn't appear that, you know, there was that much
9 10 11 12 13 14 15	MS. CAROLINE BLANCO: I think, Charlie, did you want to we have a whole list of people. MS. SHARON LOANDO-MONRO: It was people that came to the meetings, that signed up, people that had made requests. Remember I had all those handout sheets if you want to be on the list? I had lists of people. So it was	11 12 13 14 15	that was on the list, no matter what, and we were asking for things. And it got to the point where only a very few people would ever respond with anything or kept coming to the meetings. And so the list got narrowed because it didn't appear that, you know, there was that much interest. Like you were constantly coming to the meetings, you know, you gave input.
9 10 11 12 13 14 15 16	MS. CAROLINE BLANCO: I think, Charlie, did you want to we have a whole list of people. MS. SHARON LOANDO-MONRO: It was people that came to the meetings, that signed up, people that had made requests. Remember I had all those handout sheets if you want to be on the list? I had lists of people. So it was everybody that was on the list, everybody that ever showed up. And then we kind of, over the years, never got anything else, you know.	11 12 13 14 15 16	that was on the list, no matter what, and we were asking for things. And it got to the point where only a very few people would ever respond with anything or kept coming to the meetings. And so the list got narrowed because it didn't appear that, you know, there was that much interest. Like you were constantly coming to the meetings,
9 10 11 12 13 14 15 16 17	MS. CAROLINE BLANCO: I think, Charlie, did you want to we have a whole list of people. MS. SHARON LOANDO-MONRO: It was people that came to the meetings, that signed up, people that had made requests. Remember I had all those handout sheets if you want to be on the list? I had lists of people. So it was everybody that was on the list, everybody that ever showed up. And then we kind of, over the years, never got	11 12 13 14 15 16 17	that was on the list, no matter what, and we were asking for things. And it got to the point where only a very few people would ever respond with anything or kept coming to the meetings. And so the list got narrowed because it didn't appear that, you know, there was that much interest. Like you were constantly coming to the meetings, you know, you gave input.
9 10 11 12 13 14 15 16 17 18	MS. CAROLINE BLANCO: I think, Charlie, did you want to we have a whole list of people. MS. SHARON LOANDO-MONRO: It was people that came to the meetings, that signed up, people that had made requests. Remember I had all those handout sheets if you want to be on the list? I had lists of people. So it was everybody that was on the list, everybody that ever showed up. And then we kind of, over the years, never got anything else, you know.	11 12 13 14 15 16 17 18	that was on the list, no matter what, and we were asking for things. And it got to the point where only a very few people would ever respond with anything or kept coming to the meetings. And so the list got narrowed because it didn't appear that, you know, there was that much interest. Like you were constantly coming to the meetings, you know, you gave input. So that's how those got narrowed down.
9 10 11 12 13 14 15 16 17 18 19 20 21	MS. CAROLINE BLANCO: I think, Charlie, did you want to we have a whole list of people. MS. SHARON LOANDO-MONRO: It was people that came to the meetings, that signed up, people that had made requests. Remember I had all those handout sheets if you want to be on the list? I had lists of people. So it was everybody that was on the list, everybody that ever showed up. And then we kind of, over the years, never got anything else, you know. You were always on the list because you had	11 12 13 14 15 16 17 18 19 20 21	 that was on the list, no matter what, and we were asking for things. And it got to the point where only a very few people would ever respond with anything or kept coming to the meetings. And so the list got narrowed because it didn't appear that, you know, there was that much interest. Like you were constantly coming to the meetings, you know, you gave input. So that's how those got narrowed down. MS. ANNELLE AMARAL: So it sounds like some people were dropped from the list. MS. SHARON LOANDO-MONRO: Some didn't give
9 10 11 12 13 14 15 16 17 18 19 20	MS. CAROLINE BLANCO: I think, Charlie, did you want to we have a whole list of people. MS. SHARON LOANDO-MONRO: It was people that came to the meetings, that signed up, people that had made requests. Remember I had all those handout sheets if you want to be on the list? I had lists of people. So it was everybody that was on the list, everybody that ever showed up. And then we kind of, over the years, never got anything else, you know. You were always on the list because you had requested to be a consulting party. And there was a lot	11 12 13 14 15 16 17 18 19 20	 that was on the list, no matter what, and we were asking for things. And it got to the point where only a very few people would ever respond with anything or kept coming to the meetings. And so the list got narrowed because it didn't appear that, you know, there was that much interest. Like you were constantly coming to the meetings, you know, you gave input. So that's how those got narrowed down. MS. ANNELLE AMARAL: So it sounds like some people were dropped from the list.
9 10 11 12 13 14 15 16 17 18 19 20 21	MS. CAROLINE BLANCO: I think, Charlie, did you want to we have a whole list of people. MS. SHARON LOANDO-MONRO: It was people that came to the meetings, that signed up, people that had made requests. Remember I had all those handout sheets if you want to be on the list? I had lists of people. So it was everybody that was on the list, everybody that ever showed up. And then we kind of, over the years, never got anything else, you know. You were always on the list because you had requested to be a consulting party. And there was a lot of people. MS. MIKAHALA HELM: You know, is the EIS out? MS. CAROLINE BLANCO: The final?	11 12 13 14 15 16 17 18 19 20 21 22 23	 that was on the list, no matter what, and we were asking for things. And it got to the point where only a very few people would ever respond with anything or kept coming to the meetings. And so the list got narrowed because it didn't appear that, you know, there was that much interest. Like you were constantly coming to the meetings, you know, you gave input. So that's how those got narrowed down. MS. ANNELLE AMARAL: So it sounds like some people were dropped from the list. MS. SHARON LOANDO-MONRO: Some didn't give
9 10 11 12 13 14 15 16 17 18 19 20 21 22	MS. CAROLINE BLANCO: I think, Charlie, did you want to we have a whole list of people. MS. SHARON LOANDO-MONRO: It was people that came to the meetings, that signed up, people that had made requests. Remember I had all those handout sheets if you want to be on the list? I had lists of people. So it was everybody that was on the list, everybody that ever showed up. And then we kind of, over the years, never got anything else, you know. You were always on the list because you had requested to be a consulting party. And there was a lot of people. MS. MIKAHALA HELM: You know, is the EIS out?	11 12 13 14 15 16 17 18 19 20 21 22	 that was on the list, no matter what, and we were asking for things. And it got to the point where only a very few people would ever respond with anything or kept coming to the meetings. And so the list got narrowed because it didn't appear that, you know, there was that much interest. Like you were constantly coming to the meetings, you know, you gave input. So that's how those got narrowed down. MS. ANNELLE AMARAL: So it sounds like some people were dropped from the list. MS. SHARON LOANDO-MONRO: Some didn't give legitimate addresses.

1	14		16
1	and got nothing.	1	MS. SHARON LOANDO-MONRO: Yeah, way back when
2	MS. ANNELLE AMARAL: I'm sorry. Sharon, I am	2	that form first came out. Because I remember seeing the
3	wondering if you can come up here just so people don't	3	difference between the two forms.
4	have to turn around to look at you as we talk.	4	MS. MIKAHALA HELM: Great. Great.
5	MS. SHARON LOANDO-MONRO: I was going to check	5	I just never saw their names on any inclusion as
6	the door, too.	6	far as correspondence.
7	MS. ANNELLE AMARAL: You can walk out. But it	7	MS. SHARON LOANDO-MONRO: Well, the most recent
8	makes it easier to hear you, to see you, talk to you.	8	kind of correspondence that was going out, I think maybe
9	MS. CAROLINE BLANCO: Sharon, there weren't	9	when you came on board, was to include the people. And
10	people who maybe had been originally included in the	10	that was the list. That was the short list that Bijan
11	broader list that had then requested again that were	11	made.
12	refused, right?	12	MS. CAROLINE BLANCO: And even in summer 2007, I
13	MS. SHARON LOANDO-MONRO: Well, everybody that	13	think it was a request from the Advisory Counsel asking
14	ever signed up for anything at any meeting was sent	14	for the list.
15	information, the postcards, letters. And we asked for,	15	MS. SHARON LOANDO-MONRO: Right. That's when
16	you know, proposals, asked for suggestions. And then at	16	the list got narrowed.
17	some point, that list got narrowed because, like I said,	17	MS. CAROLINE BLANCO: Bijan narrowed it down to
18	only very few people would come to meetings or respond to	18	who have we heard from, who can we contact, and narrowed
19	anything.	19	it down to the list of 25 or something like that. And
20	Like you guys would always write letters. And,	20	then we've added these others as they have come to us and
21	you know, you kind of kept on participating, put it that	21	requested to be consulting parties.
22	way.	22	MS. MIKAHALA HELM: My last request is if I
23	MS. ANNELLE AMARAL: So the response, I guess,	23	could just see copies of the list after maybe the
24	to your question about people who may have asked to be	24	beginning of 2007, and just see the difference. Because I
25	consulted in '06 would have not received the '08	25	would like to know if these people were ever what you
_	15		17
1	notification, is the short of it, it sounds like. The		are talking about is what I am talking about, that
2	list people were dropped from the list if they didn't	2	request. And I just wanted to make sure that they were on
3	continue to communicate.	3	because, for a few of them, I can't imagine that they
4	MS. MIKAHALA HELM: Or provide available	4	would give no response.
5	addresses, contact information.	5	MS. SHARON LOANDO-MONRO: I kept track of who
6	MS. SHARON LOANDO-MONRO: That seemed	6	responded a lot.
7	nonparticipatory.	7	MS. MIKAHALA HELM: I am just asking for that
8	MS. MIKAHALA HELM: My question is, I think	8	list.
9	there are almost 60 of them who sent in individual form	9	MS. SHARON LOANDO-MONRO: I don't have a list
10	I mean, individual notice that they wanted to be	10	right now. I can make a note.
11	considered to be consultants in this Section 106 process.	11	MS. MIKAHALA HELM: Like 2007 end of 2006,
12	And I didn't see their name on these things ever. So I am	12	then through 2007, I think that would just be helpful for
13	just curious if they were ever on the Section 106 list.	13	me to be sure. Because when people make the effort, it's
14	MS. ANNELLE AMARAL: It sounds like initially	14	something that took time and that they were sincere about.
15	they were. And if they didn't respond, they were dropped.	15	And so I just want to be sure that they are included in
16 17	That's what I am hearing.	16	this process.
	MS. CAROLINE BLANCO: Maybe some of them. Do	17	MS. CAROLINE BLANCO: Sure. And just to sort of
18	you remember that large of a number? MS_SHARON LOANDO MONRO: Ldo_There was quite	18 19	provide some feedback as well, in 2007, after that list
10	MS. SHARON LOANDO-MONRO: I do. There was quite	20	was paired down, we had not received any notification from anybody that "we were on the list before, we are no longer
19 20	a faw	<u> </u>	anybody that we were on the list before, we are no longer
20	a few.	21	
20 21	It was a form that somebody made up. It wasn't	21	on the list, why is that not the case, we haven't heard
20 21 22	It was a form that somebody made up. It wasn't us, but somebody else made up. There were two forms, they	22	on the list, why is that not the case, we haven't heard from you." So, to my knowledge, we haven't heard from
20 21 22 23	It was a form that somebody made up. It wasn't us, but somebody else made up. There were two forms, they looked similar, but one had a sentence that said, "I wish	22 23	on the list, why is that not the case, we haven't heard from you." So, to my knowledge, we haven't heard from anybody else other than the three recent ones, including
20 21 22	It was a form that somebody made up. It wasn't us, but somebody else made up. There were two forms, they	22	on the list, why is that not the case, we haven't heard from you." So, to my knowledge, we haven't heard from

	18		20
1	MS. ANNELLE AMARAL: Let me ask. There were	1	postcard. They were done September '06, to the end of
2	certain things that, before we start the consultation, we	2	that year.
3	wanted to list as cannot be mitigated, that went out, I	3	MS. CAROLINE BLANCO: At the public hearings
4	believe, in your letter.	4	that sign-up sheet was?
5	Did we want to redescribe those where no	5	MS. MIKAHALA HELM: No, they were mail-ins.
6	mitigation is available?	6	MS. SHARON LOANDO-MONRO: I don't remember
7	DR. CRAIG FOLTZ: I can answer.	7	offhand.
8	MS. CAMILLE KALAMA: Sorry. Can I go back real	8	MS. MIKAHALA HELM: Individual mail-ins.
9	quick, just as far as the narrowing down process?	9	MS. SHARON LOANDO-MONRO: But we've always
10	MS. ANNELLE AMARAL: Sure.	10	extended. I mean, Kiope was on that. At one point, he
11	MS. CAMILLE KALAMA: Where no responses were	11	wanted an extension, and we said okay. We always left
12	received, do you know if the requests were comments	12	everything open.
13	related specifically to mitigation at the time?	13	MS. MIKAHALA HELM: Right. Thank you.
14	MS. SHARON LOANDO-MONRO: It was open.	14	MS. ANNELLE AMARAL: So that's 6-05-06. I am
15	MS. ANNELLE AMARAL: You mean if the comments	15	noting when that postcard went out just for my own,
16	were limited to consultation, part of consultation?	16	naturally then the list being narrowed down summer of
17	MS. CAMILLE KALAMA: No.	17	'07.
18	MS. ANNELLE AMARAL: Or limited to mitigation is	18	Then I wanted to sort of get clear with respect
19	the intent.	19	to mitigation certain things that you have described in
20	MS. CAROLINE BLANCO: Sharon, the postcards that	20	the letter that went out that cannot be mitigated. And
21	were sent out, were those sent out to the bigger list?	21	then we can move from there on comments regarding
22	MR. MIKE MABERRY: Which postcards, what date,	22	mitigation. Okay.
23	what year?	23	DR. CRAIG FOLTZ: I've talked to several of you
24	MS. CAROLINE BLANCO: This was June 5th of 2006.	24	in the past about or Jeff has or Jeremy has about
25	MS. SHARON LOANDO-MONRO: I would have to check.	25	the design of the telescope. And I want to remind you
	10		21
	19		
1	I think it was. Because I think that list got narrowed	1	that the telescope is designed to carry out specific and
2	only like last year.	2	very well-defined scientific observation of the sun. And
3	MS. CAROLINE BLANCO: Right. It seems to me	3	the design allows that in the context of the site on which
4	that that list went out or the postcard must have gone		
5		4	the telescope would be put.
	out to the bigger list because the list was not narrowed	4 5	I remind you that the process of site selection
6	until last summer, in 2007.	5 6	I remind you that the process of site selection started with over 70 sites. And one was found to meet the
6 7	until last summer, in 2007. And the postcard had said that the National	5	I remind you that the process of site selection started with over 70 sites. And one was found to meet the science objectives of the telescope. And I won't go
7 8	until last summer, in 2007. And the postcard had said that the National Science Foundation is continuing to accept resolution	5 6	I remind you that the process of site selection started with over 70 sites. 7 8 9 10 11 12 13 14 15 16	until last summer, in 2007. And the postcard had said that the National Science Foundation is continuing to accept resolution proposals pursuant to the National Historic Preservation Act and the National Environmental Policy Act for the Proposed Advanced Technology Solar Telescope, ATST Project. You are encouraged to submit resolution proposals to KC Environmental, providing the address, that would assist NSF in directing appropriate consideration to Native Hawaiian cultural and historic interests in connection with this project. And then it provides some	5 6 7 8 9 10 11 12 13 14 15 16	I remind you that the process of site selection started with over 70 sites. And one was found to meet the science objectives of the telescope. And I won't go through that again. That has been well documented in the Draft EIS and it's also accessible on the National Solar Observatory's website, if one was to look in detail at the data and the way the data were processed. MS. CAROLINE BLANCO: I think it's also summarized in this letter DR. CRAIG FOLTZ: Summarized in November. MS. CAROLINE BLANCO: Which is a handout as well.
7 8 9 10 11 12 13 14 15 16 17	until last summer, in 2007. And the postcard had said that the National Science Foundation is continuing to accept resolution proposals pursuant to the National Historic Preservation Act and the National Environmental Policy Act for the Proposed Advanced Technology Solar Telescope, ATST Project. You are encouraged to submit resolution proposals to KC Environmental, providing the address, that would assist NSF in directing appropriate consideration to Native Hawaiian cultural and historic interests in connection with this project. And then it provides some logistics about when the DEIS will be published, in the	5 6 7 8 9 10 11 12 13 14 15 16 17	I remind you that the process of site selection started with over 70 sites. And one was found to meet the science objectives of the telescope. And I won't go through that again. That has been well documented in the Draft EIS and it's also accessible on the National Solar Observatory's website, if one was to look in detail at the data and the way the data were processed. MS. CAROLINE BLANCO: I think it's also summarized in this letter DR. CRAIG FOLTZ: Summarized in November. MS. CAROLINE BLANCO: Which is a handout as well. DR. CRAIG FOLTZ: So you build a telescope to do
7 8 9 10 11 12 13 14 15 16 17 18	until last summer, in 2007. And the postcard had said that the National Science Foundation is continuing to accept resolution proposals pursuant to the National Historic Preservation Act and the National Environmental Policy Act for the Proposed Advanced Technology Solar Telescope, ATST Project. You are encouraged to submit resolution proposals to KC Environmental, providing the address, that would assist NSF in directing appropriate consideration to Native Hawaiian cultural and historic interests in connection with this project. And then it provides some logistics about when the DEIS will be published, in the summer. And that it's announcing that we will hold public	5 6 7 8 9 10 11 12 13 14 15 16 17 18	I remind you that the process of site selection started with over 70 sites. And one was found to meet the science objectives of the telescope. And I won't go through that again. That has been well documented in the Draft EIS and it's also accessible on the National Solar Observatory's website, if one was to look in detail at the data and the way the data were processed. MS. CAROLINE BLANCO: I think it's also summarized in this letter DR. CRAIG FOLTZ: Summarized in November. MS. CAROLINE BLANCO: Which is a handout as well. DR. CRAIG FOLTZ: So you build a telescope to do certain things. You try to find a place to site that
7 8 9 10 11 12 13 14 15 16 17 18 19	until last summer, in 2007. And the postcard had said that the National Science Foundation is continuing to accept resolution proposals pursuant to the National Historic Preservation Act and the National Environmental Policy Act for the Proposed Advanced Technology Solar Telescope, ATST Project. You are encouraged to submit resolution proposals to KC Environmental, providing the address, that would assist NSF in directing appropriate consideration to Native Hawaiian cultural and historic interests in connection with this project. And then it provides some logistics about when the DEIS will be published, in the summer. And that it's announcing that we will hold public meetings.	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	I remind you that the process of site selection started with over 70 sites. And one was found to meet the science objectives of the telescope. And I won't go through that again. That has been well documented in the Draft EIS and it's also accessible on the National Solar Observatory's website, if one was to look in detail at the data and the way the data were processed. MS. CAROLINE BLANCO: I think it's also summarized in this letter DR. CRAIG FOLTZ: Summarized in November. MS. CAROLINE BLANCO: Which is a handout as well. DR. CRAIG FOLTZ: So you build a telescope to do certain things. You try to find a place to site that telescope. And the characteristics of the site fold back
7 8 9 10 11 12 13 14 15 16 17 18 19 20	until last summer, in 2007. And the postcard had said that the National Science Foundation is continuing to accept resolution proposals pursuant to the National Historic Preservation Act and the National Environmental Policy Act for the Proposed Advanced Technology Solar Telescope, ATST Project. You are encouraged to submit resolution proposals to KC Environmental, providing the address, that would assist NSF in directing appropriate consideration to Native Hawaiian cultural and historic interests in connection with this project. And then it provides some logistics about when the DEIS will be published, in the summer. And that it's announcing that we will hold public meetings. MS. MIKAHALA HELM: You know what happened?	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	I remind you that the process of site selection started with over 70 sites. And one was found to meet the science objectives of the telescope. And I won't go through that again. That has been well documented in the Draft EIS and it's also accessible on the National Solar Observatory's website, if one was to look in detail at the data and the way the data were processed. MS. CAROLINE BLANCO: I think it's also summarized in this letter DR. CRAIG FOLTZ: Summarized in November. MS. CAROLINE BLANCO: Which is a handout as well. DR. CRAIG FOLTZ: So you build a telescope to do certain things. You try to find a place to site that telescope. And the characteristics of the site fold back into the design. And so you need to do that design and in
7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 until last summer, in 2007. And the postcard had said that the National Science Foundation is continuing to accept resolution proposals pursuant to the National Historic Preservation Act and the National Environmental Policy Act for the Proposed Advanced Technology Solar Telescope, ATST Project. You are encouraged to submit resolution proposals to KC Environmental, providing the address, that would assist NSF in directing appropriate consideration to Native Hawaiian cultural and historic interests in connection with this project. And then it provides some logistics about when the DEIS will be published, in the summer. And that it's announcing that we will hold public meetings. MS. MIKAHALA HELM: You know what happened? What is the date of that postcard? 	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	I remind you that the process of site selection started with over 70 sites. And one was found to meet the science objectives of the telescope. And I won't go through that again. That has been well documented in the Draft EIS and it's also accessible on the National Solar Observatory's website, if one was to look in detail at the data and the way the data were processed. MS. CAROLINE BLANCO: I think it's also summarized in this letter DR. CRAIG FOLTZ: Summarized in November. MS. CAROLINE BLANCO: Which is a handout as well. DR. CRAIG FOLTZ: So you build a telescope to do certain things. You try to find a place to site that telescope. And the characteristics of the site fold back into the design. And so you need to do that design and in an iterative way.
7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 until last summer, in 2007. And the postcard had said that the National Science Foundation is continuing to accept resolution proposals pursuant to the National Historic Preservation Act and the National Environmental Policy Act for the Proposed Advanced Technology Solar Telescope, ATST Project. You are encouraged to submit resolution proposals to KC Environmental, providing the address, that would assist NSF in directing appropriate consideration to Native Hawaiian cultural and historic interests in connection with this project. And then it provides some logistics about when the DEIS will be published, in the summer. And that it's announcing that we will hold public meetings. MS. MIKAHALA HELM: You know what happened? What is the date of that postcard? MS. CAROLINE BLANCO: June 5th, 2006. 	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	I remind you that the process of site selection started with over 70 sites. And one was found to meet the science objectives of the telescope. And I won't go through that again. That has been well documented in the Draft EIS and it's also accessible on the National Solar Observatory's website, if one was to look in detail at the data and the way the data were processed. MS. CAROLINE BLANCO: I think it's also summarized in this letter DR. CRAIG FOLTZ: Summarized in November. MS. CAROLINE BLANCO: Which is a handout as well. DR. CRAIG FOLTZ: So you build a telescope to do certain things. You try to find a place to site that telescope. And the characteristics of the site fold back into the design. And so you need to do that design and in an iterative way. It would not be prudent to build a telescope

	22		24
1		1	
1	science goals. So it's quite large.	1	construction, like the foundations. And, to the extent
2	It is not profligately large. We did not design	2	possible, we've minimized that kind of construction and
3	it to be 50 percent or 100 percent larger than it needed	3	the amount of displaced natural material and the amount of
4	to be just so we had margin. Because that would have	4	leveling. And so there is kind of a subcategory of also
5	increased the cost by 30 or 40 percent. And it is already	5	unmitigable construction consequences.
6	a very expensive project.	6	DR. CRAIG FOLTZ: Although there has been some
7	The other issue that has been brought up and	7	there are some issues with respect to the foundation
8	I realize that it is a sensitive issue and that is the	8	that, Jeff, you may want to talk about at some point if we
9	color of the facility, that it would be white. The reason	9	would like to talk about that. And that is with respect
10	it would be white is that the sun, of course, heats	10	to the depth of the foundation.
11	darker-colored rock, it heats darker-colored buildings	11	Kiope, I know that in the past you have said it
12	during the day. And that drives turbulence in the air	12	would be five stories.
13	above that object that has been heated by the sun.	13	MR. KIOPE RAYMOND: I haven't said it.
14	That turbulence, of course, as we all know when	14	DR. CRAIG FOLTZ: It would not.
15	you look over a campfire, or down a road that has been	15	MR. MIKE MABERRY: It's on your website, so
16	heated in the summer, blurs the image behind it. That is	16	whoever
17	unacceptable.	17	MR. KIOPE RAYMOND: Whoever did, but I didn't
18	And so you can either choose to minimize the	18	say it.
19	amount of heating by painting the telescope and, in this	19	MS. ANNELLE AMARAL: So those are sort of the
20	case, the skirt around the telescope, a white color, or	20	things.
21	you can attempt to cool it actively, which you would do by	21	DR. CRAIG FOLTZ: I didn't mean to attribute
22	refrigeration. And you can do the calculation fairly	22	that to you by mistake.
23	straightforwardly. If you just find out how much input in	23	MR. KIOPE RAYMOND: That's okay.
24	watts per square meter the sun puts on the ground, then	24	MS. ANNELLE AMARAL: At this point we're open to
25	you have other factors like what the color is and what its	25	taking comments that you may have. You can proceed in
	23		25
1	reflectance is, then you can then understand what the	1	whatever way you are comfortable. And I will make notes,
2	cooling requirements would be to cool the telescope.	2	and, you know, you will talk back and forth, and we will
3	And those cooling requirements, it's my	3	see how it flows.
4	understanding Jeff can correct me if I am wrong	4	MR. KIOPE RAYMOND: My name is Kiope Raymond.
5	essentially exceed the electric power delivered to the top	5	On Section 106, does the law say about who can
6	of the mountain.	6	submit mitigation? Does it have to be Hawaiian? Does it
7	MR. JEFF BARR: If it were painted brown.	7	have to be an organization? Can it be anyone? What
8	DR. CRAIG FOLTZ: If it were painted brown.	8	who is covered?
9	So I mean, one could consider increasing that,	9	MS. CAROLINE BLANCO: It basically refers to
10	increase the carbon footprint, you increase the amount of	10	consulting parties, interested parties that would provide
11	energy that is needed and so on. But we don't consider	11	you know, it's a process for allowing something to be
12	painting it another color to be a mitigable what was	12	produced at the end, a memorandum of agreement. And so my
13	the word you used?	13	interpretation of the law is that it would take to
14	MS. ANNELLE AMARAL: I just made that up.	14	identify interested parties, and those people would be
15	DR. CRAIG FOLTZ: Characteristic. So it's big	15	invited to be consulting parties, and then they would be
16	and it's white. And the site is within the 18.116 acres	16	requested to submit mitigation proposals.
17	of Haleakala.	17	MR. KIOPE RAYMOND: Okay.
18	Those are constraints on the project that we	18	MS. CAROLINE BLANCO: So that's pretty much how
19	really can't change. I mean, other than putting it at	19	it works.
20	some other site, which essentially, in this case, means we	20	MR. KIOPE RAYMOND: So it can be anyone, anyone
21	-	21	in the community? It's open?
21	don't do the project.		
22	don't do the project. MS. ANNELLE AMARAL: Maybe it's already given,	22	MS. CAROLINE BLANCO: It can be, if they are a
22	MS. ANNELLE AMARAL: Maybe it's already given,	22	MS. CAROLINE BLANCO: It can be, if they are a
22 23	MS. ANNELLE AMARAL: Maybe it's already given, but what I thought I read, too, was construction was the	22 23	MS. CAROLINE BLANCO: It can be, if they are a consulting party. If they are a consulting party.

APPENDIX C(3): TRANSCRIPTS SECTION 106 MEETING, UH IFA, MAIKALANI FACILITY, JUNE 16, 2008

	26		28
1	MS. CAROLINE BLANCO: No. No, it's not limited	1	Otherwise, they wouldn't have the same rights if they
2	to that at all.	2	didn't sign it.
3	MR. KIOPE RAYMOND: Just wondering. Okay.	3	DR. CRAIG FOLTZ: Could I ask you a question?
4	MS. CAROLINE BLANCO: Right. Right.	4	MS. CAROLINE BLANCO: Yeah.
5	MR. KIOPE RAYMOND: And so you have received	5	DR. CRAIG FOLTZ: Is it the case that if you are
6	my question to the National Science Foundation one of	6	a signatory, then you do have legal standing should the
7	the questions is you've received three?	7	MOA be
8	MS. CAROLINE BLANCO: That's correct.	8	MS. CAROLINE BLANCO: Correct. Correct. Let's
9	MR. KIOPE RAYMOND: Are you entertaining	9	say it's not carried out for one reason or another and
10	combinations or are you thinking to pick one or be	10	I should clarify that it would not go into effect unless
11	eclectic?	11	there were a decision made to go forward with the proposed
12	MS. CAROLINE BLANCO: There is no rule as to	12	ATST project. It doesn't become finalized until that
13	picking one over the other over the other. You could take	13	point. And the language would be drafted to say, if it's
14	pieces of each, if you thought that it would be a good	14	approved, this is, you know, when it would take effect.
15	idea to do that.	15	So that is basically how it would work. And
16	MR. KIOPE RAYMOND: I'm sorry to interject.	16	they would any signatory to it would have rights to be
17	MS. CAROLINE BLANCO: Sure.	17	able to enforce implementation of it.
18	MR. KIOPE RAYMOND: But that might be tomorrow,	18	MR. KIOPE RAYMOND: Okay. Thank you.
19	if they wanted to sit down with you and hammer out a	19	Appreciate the explanation.
20	memorandum. Each person might have their	20	As an individual, I would want to share with the
21	MS. CAROLINE BLANCO: Right. And our goal is,	21	NSF that I have already made it clear that for the
22	once we start to take shape, have that process take shape,	22	record, that I do not believe desecration can be
23	it certainly wouldn't be finalized tomorrow. I don't want	23	mitigated. But we are not here to talk about that today.
24	to leave that impression.	24	So what I would like to be able to do is to
25	It would begin to take shape because, of course,	25	comment on the three that have already been submitted.

He speaks in his mitigation plan to cleaning up the rubbish, the years of stuff that has been left around DR. CRAIG FOLTZ: We understand. MR. KIOPE RAYMOND: within the 18 acres. I applaud that. I think that's really helpful. A case in point, and with all due respect, Jeremy has approached in the past and said, well, what if we were to say that we have to take things down. Well, I understand and as Jeremy knows from the get go, I've tried to follow online what is going on. And I understand that that is now part of the planning, is that you have to see closure. And I can't remember what it's called, but I understand that the new cycle for this, if it's 50 years or whatever, is \$400 million for this particular project, as I understand it, to bring it to life and then to take
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	this process does have to move forward. It can't continue on indefinitely. So what our goal is, is once we have a draft, it would be and I think this was in some of the correspondence it would be distributed for comment among all the consulting parties. Then that would be considered. MR. KIOPE RAYMOND: Then the consulting parties would choose whether they wanted to become signatories to the memorandum. MS. CAROLINE BLANCO: They can be invited to be signatories, yeah, if they wish to. And in particular, usually the way it works is if, let's say, one particular group is responsible for implementing mitigation, then it makes sense to have them be a signatory to the MOA. Not all consulting parties sign MOAs, some do not. Some concur. Some decide they don't want to sign it. So it's pretty open. At a minimum, though, there needs to be, of course, National Science Foundation, the SHPO, State	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	MS. CAROLINE BLANCO: Terrific. MR. KIOPE RAYMOND: I see merit in Mr. Warren Shibuya's presentation. Because, in some sense, it goes a long way to help with the harm, the hurt that has gone on. He speaks in his mitigation plan to cleaning up the rubbish, the years of stuff that has been left around DR. CRAIG FOLTZ: We understand. MR. KIOPE RAYMOND: within the 18 acres. I applaud that. I think that's really helpful. A case in point, and with all due respect, Jeremy has approached in the past and said, well, what if we were to say that we have to take things down. Well, I understand and as Jeremy knows from the get go, I've tried to follow online what is going on. And I understand that that is now part of the planning, is that you have to see closure. And I can't remember what it's called, but I understand that the new cycle for this, if it's 50 years or whatever, is \$400 million for this particular project, as I understand it, to bring it to life and then to take it down.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 this process does have to move forward. It can't continue on indefinitely. So what our goal is, is once we have a draft, it would be and I think this was in some of the correspondence it would be distributed for comment among all the consulting parties. Then that would be considered. MR. KIOPE RAYMOND: Then the consulting parties would choose whether they wanted to become signatories to the memorandum. MS. CAROLINE BLANCO: They can be invited to be signatories, yeah, if they wish to. And in particular, usually the way it works is if, let's say, one particular group is responsible for implementing mitigation, then it makes sense to have them be a signatory to the MOA. Not all consulting parties sign MOAs, some do not. Some concur. Some decide they don't want to sign it. So it's pretty open. 	34		36
1	you are junior faculty, you are not going to say, no, I am	1	MR. KIOPE RAYMOND: I am wondering about
2	not going to create a plan when the chancellor tells you,	2	mitigation, if the same thing would occur. I would speak
3	why don't you work on this.	3	to the NSF to say please be real careful. If we are going
4	And that I would also let the NSF know, if they	4	to be serving Native Hawaiians, let's somehow make sure
5	were not aware they might be that no other Hawaiian	5	Native Hawaiians are served, not just someone who is from
6	faculty member at Maui Community College wanted to be a	6	Hawaii.
7	part of this plan.	7	MS. CAROLINE BLANCO: Is there an aspect of the
8	In fact, we have a group on Maui Community	8	plan, the MCC proposal, that whether you know, maybe
9	campus specifically created to support programs, Native	9	you perhaps do not support the way they have drafted it,
10	Hawaiian programs, Native Hawaiian students. And spoke at	10	but, conceptually, are there some components of it that
11	length about the merits of doing this and how we all felt.	11	you think would be a good idea?
12	And unanimously agreed, very open, that this was not	12	MR. KIOPE RAYMOND: I wouldn't answer that
13	something that we could support, including author Kaleikoa	13	question in terms of I don't have the for that
14	Ka'eo. He would not put his name to it, as we understand.	14	particular plan, I've looked at it. And in my
15	And I want the NSF to know that I personally	15	honestly, I will just be candid, in my disgust of what
16	find it after the fact, but within the process, so I	16	I've just covered, the way that the plan was created, I
17	guess it's okay, a token is hired, Mr. Sol Kaho'ohalahala,	17	just dismissed it. So I won't say I hope that there's
18	to say, well, I will be the Hawaiian hired by MCC and I	18	some
19	see some merit to it. But he has never been I mean, he	19	DR. CRAIG FOLTZ: Could I ask you a question,
20	is a he has been casual hire specifically for this.	20	just a clarification?
21	And I want the NSF to know that I do not agree.	21	I'm sorry about that. I will shut it down.
22	He also misspelled his name. It's halahala	22	MR. KIOPE RAYMOND: No problem.
23	instead of holoholo on your just for Sol's benefit.	23	DR. CRAIG FOLTZ: And this gets back to the
24	So about mitigation proposals, I know that once	24	limited lifetime issue, which really it is a bit
25	it's been created, it moves along, you it's maybe not	25	different. Because on the one hand, it is a response to
	35		37
1		1	
1	something I can do anything about, but I think it's a	1	Mr. Shibuya's suggestion. It is also an issue that the
2	matter of conscience, that a junior faculty in fact ended	2	NSF grapples with as some of its facilities get older. So
3	up doing it, and the person who has authored it won't even	3	we are encouraged to think about the full life cycle of
4	sign their name to it. And someone from outside, Native	5	the project. And so when seeing the suggestion that could
5 6	Hawaiian, is hired to kind of be a point person. And I	6	have a fundamental lifetime, and that in fact depends on
	just find that of great concern. For all three, so far and for the MCC, I will	7	how you look at it, mitigates or minimizes, and also
7	try to stay with my point. For me personally, I don't see	8	depending how you restore the site.
8 9	in Maui Community College's mitigation plan something that		When you talked about the ATST and the \$400
10	mitigates the harm. I see, again, we want to hire some	10	million project, in comparison to Reber Circle, were you
11	faculty, we want to get some Hawaiian students through.	11	implying that you did not think that we would remove it?
12	And the staff is doing a wonderful job with	12	MR. KIOPE RAYMOND: I wanted NSF to twofold.
13	adaptive optics. We do summer programs. I could question	13	Again, schizophrenia. One is, I don't trust that you
14	whether or not I mean, I have gone through and looked	14	would, honestly. The other is, why would we collectively,
15	at the different summer programs. And if NSF is amenable,	15	as citizens of the United States, spend this much money,
16	there are 60 or so students who have actually gone through	16	not help humanity and then destroy it in 50 years?
17	the programs over the various summers, there is about	17	DR. CRAIG FOLTZ: Well, let me answer the
18	three who are Native Hawaiian. Everyone is saying that	18	question. If that were specifically called out in a
19	these Hawaiians have come into the summer programs. So	19	memorandum of agreement, and if an organization Kiope,
20	the actual percentages of Hawaiians who have been served	20	I don't know whether you or I would be here.
20	is minuscule.	20	MR. KIOPE RAYMOND: That's why I interject
22	DR. CRAIG FOLTZ: Let me just say that those	22	that's why I asked Kilakila to be a consultant. I thought
23	programs were not designed specifically	22	I could be hit by a car on the way over here.
23	MR. KIOPE RAYMOND: I concur.	24	DR. CRAIG FOLTZ: Certainly so.
25	DR. CRAIG FOLTZ: I just want to be fair.	25	MR. KIOPE RAYMOND: And thanks for allowing
20	DR. CRAIG FOLTZ, TJUST wall to be fall.	1 ^{2 J}	WIN. KIOLE NA I WOND. AND UTAIKS for anowing

APPENDIX C(3): TRANSCRIPTS SECTION 106 MEETING, UH IFA, MAIKALANI FACILITY, JUNE 16, 2008

	38		40
1	Kilakila to be a consulting party.	1	DR. CHARLIE FEIN: One solar cycle, yes.
2	DR. CRAIG FOLTZ: Certainly said.	2	DR. CRAIG FOLTZ: Again, it would be, if we were
3	But that MOA still has standing. And if it is	3	to write an MOA and specify, say, two solar cycles. And
4	not removed, legal action can be taken.	4	give yourself a little head room, let's say 50 years as
5	Will it be successful? I can't say what the	5	opposed to 40.
6	climate will be like in 40 years.	6	DR. CHARLIE FEIN: Originally, I think it was a
7	Why would we invest that? Because in 45 years	7	lease issue with the University of Hawaii.
8	or 50 years, we will have been through two sunspot cycles	8	MR. MIKE MABERRY: No.
9	and we will have better ways to study the sun.	9	DR. CRAIG FOLTZ: In any event, if we wrote that
10	And the maintenance costs what kills us, as a	10	into the MOA the reason we haven't published the final
11	funding agency, is we have lots and lots of historical	11	EIS is we would like to be able to include the mitigation
12	sites. I mean that from the point of view of the history	12	steps like that in the EIS as well so it would appear.
13	of astronomy. We have Kitt Peak, we have Cerro Tololo.	13	DR. CHARLIE FEIN: I would like to make a
14	Telescopes cost a lot to run. And at some point one has	14	comment about Reber Circle, because it's illustrative of
15	to make the agonizing decision that the marginal return,	15	the way the state system works.
16	scientific return on these old telescopes, is it worth the	16	In 2002, that became a historic site, regardless
17	operations funds.	17	of whether the university had removed it before then or
18	And we have gone through a very agonizing	18	not. Not the issue. But once it becomes a historic site,
19	process in the Astronomy Division, which you have probably	19	it then has to be listed, which it is, and there is a
20	seen, since you are such a careful reader, or seen the	20	restoration plan which has been approved by the State
21	review, which is the first time that we have asked for	21	Historic Preservation Office for removal of it whenever
22	advice as to how we should close telescopes down. And we	22	funding is available to do that. So there is an approved
23	will close them down. And why will they close them down?	23	plan to restore that.
24	Because they are simply too expensive to keep running.	24	DR. CRAIG FOLTZ: To remove
25	And, you know, there actually have been	25	DR. CHARLIE FEIN: The ring of Reber Circle.
	39		41
1	telescopes that have been closed down. A number of radio	1	DR. CRAIG FOLTZ: That could be included in a
2	astronomy facilities have been shut down, including	2	general plan.
3	national facilities. It just costs too much to maintain	3	MS. ANNELLE AMARAL: Could be included in the
4	them.	4	DR. CRAIG FOLTZ: In terms of specifically in
5	So the answer is, a signatory can help with	5	the issue of restoration of other parts of the site.
6	enforcement.	6	MR. KIOPE RAYMOND: I have one other question,
7	And we also believe that, in 45 to 50 years, we	7	but would reserve, if this is the ongoing discussion, the
8	will have better techniques. And those techniques may be,	8	right to ask in the future.
9	for example, a solar telescope on the moon or a very, very	9	MS. ANNELLE AMARAL: Yes.
10	large solar telescope in space. Which is beyond our	10	MR. KIOPE RAYMOND: Well, it is maybe a little
11	ability to do in the foreseeable future, but, looking at	11	long, but it is has to do with the study of the sun
12	50 years, it's not beyond the question.	12	itself and the solar physics that people want to
13	MS. ANNELLE AMARAL: So let me ask the question.	13	undertake. And I appreciate that. It is very interesting
14	In your Draft EIS, does it say there's an intention to	14	science.
15	close this site down and remove everything, and you are	15	I could perhaps be directed to this in the
16	saying that possibly in the MOA you could affirmatively	16	future. I did not see in any of the documentation any
17	request that time or request that closing down?	17	reference to whether or not actual magnetic the things
18	DR. CHARLIE FEIN: Yes.	18	that are going to affect satellites can by studying
19	I'm sorry. I am Charlie Fein, the environmental	19	this, can we stop them?
20	consultant.	20	DR. CRAIG FOLTZ: No. But in order to predict,
21	We do, in fact, give a lifespan in the Draft	21	to prepare and to mitigate against them, we need to
22	Environmental Impact Statement. I believe it was 2039,	22	understand them. And we don't understand them. And we
23	was the first end point. That was original end point in	23	don't understand the impact of solar activity on climate.
24		0.4	
2 1	the DEIS.	24	Of course, climate now, it's interesting to me that,
25	the DEIS. DR. CRAIG FOLTZ: That's one solar cycle.	24	you know, the historical records show that the lack of

11 (Pages 38 to 41)

	42		44
1	solar activity leads to a general cooling. The track	1	DR. CRAIG FOLTZ: Or to compensate.
2	we're on, in other ways, leads to a general warming.	2	MS. CAROLINE BLANCO: To compensate is a good
3	Obviously, climate is an enormously complex system.	3	word. Yes.
4	No, it will not stop it. But what you don't	4	DR. CRAIG FOLTZ: Because the difficulty I have
5	know can hurt you.	5	is between mitigation and minimization. And I even look
6	It is a far more practical application of	6	at a situation like a finite lifetime, in some sense, that
7	science than most of the astronomy that we study. And,	7	minimizes, right, integrated over time. But we call it
8	you know, the probabilities of a significant impact in our	8	mitigation. So I think that one of the things that is
9	lifetime are significant. Not overwhelming, but	9	allowed by the definition of mitigation is to compensate
10	significant.	10	for harm.
11	MR. KIOPE RAYMOND: Thank you.	11	MS. CAROLINE BLANCO: And it can be onsite and
12	MS. ANNELLE AMARAL: Thank you, Kiope.	12	it can be offsite as well. So that may help you.
13	MS. CAMILLE KALAMA: I am actually going to ask	13	And I think at some point I would be interested
14	Mikahala if she wants to go first, because both these	14	to also hear from you and Kiope about any other ideas that
15	individuals have been involved a lot longer. And I am	15	have not been proposed. But if there is anything else
16	actually representing their interests. So I will let her	16	that you think might be of value for us to consider, it
17	go.	17	would be most welcome.
18	MS. MIKAHALA HELM: I just had a question.	18	MS. MIKAHALA HELM: Thank you.
19	MS. ANNELLE AMARAL: Mikahala	19	And, you know, in working together on this over
20	MS. MIKAHALA HELM: I'm sorry. My name is	20	the past few years, an overwhelming response from not only
21	Mikahala Helm, M-I-K-A-H-A-L-A, last name H-E-L-M.	21	people from our own island, people from all of Hawaii, and
22	Well, first of all, Annelle, I wanted to ask you	22	mainland and other countries, are, you know, waiting to
23	if, on that first page, where they say, first bullet,	23	see the EIS. But the response that I know of at all the
24	parties as consulted, mailing to them, and have the date,	24	hearings or the meetings that you have held has been
25	underneath that, could you be able to add that in as a	25	overwhelmingly in support of avoidance of this ATST.
	43		45
1	second bullet perhaps that from September 2006 to the end	1	MS. CAROLINE BLANCO: Right.
2	of 2006, additional, you know, approximately 59	2	MS. MIKAHALA HELM: And so when we are here
3	individuals requested to be Section 106 consultants. And	3	today, and you say that the purpose is for consultation on
4	that I am really wanting asking for more information on	4	mitigation, I ask what is mitigation? Because unless you
5	if they were officially added to the list and then	5	have a full view of the adverse effects, how can we
6	eliminated from the list. I just want to be sure that	6	possibly discuss mitigating those effects?
7	they were included in the list.	7	So that's my mana'o.
8	MS. ANNELLE AMARAL: Okay.	8	MS. CAROLINE BLANCO: I think that's a very
9	MS. MIKAHALA HELM: Thank you.	9	helpful comment. I have noticed in the various pieces of
10	And my question was, the definition of mitigate.	10	correspondence coming from the Advisory Counsel, the SHPO,
11	We have been at this for a while, all of us here, yeah.	11	it's a bit concerning to me and, also, the park
12	And I just wanted to ask about the definition of	12	because I am not sure we all see these issues, even the
13	mitigation, since this meeting is focusing on mitigation	13	definitions, regardless of point of view in position. I
14	consultation. I just have some conflict about what	14	am not sure we see these definitions in the same way.
15	mitigation is. I want to make sure I have the correct	15	We've interpreted avoidance as we can't avoid adverse
16	understanding. And then I can ask you something else.	16	effects because if the project is going to go forward,
17	MS. CAROLINE BLANCO: What is your understanding	17	it's going to have adverse effects. So we are trying to
18	of how it works? Regulations specifically define it, as	18	be honest about it, in saying there are going to be
19	far as the term mitigation. But I will double-check here.	19	adverse effects that can't be avoided if the project is to
20	It's not in the official in the regulations	20	be approved.
21	themselves, it's not a defined term. But, I mean,	21	Minimization. I personally have interpreted
22	basically, we've looked at this as ways in which you can	22	that as, well, for scientific reasons, it has to be this
23	try to reduce the impacts, the adverse impacts, try to	23	tall. We can't minimize the project and the impacts to
24	make them more manageable or reduce them as much as possible.	24	reduce it. But what we can do is mitigate, we can
25		25	compensate, we can look at different ideas, is there some

I

^{12 (}Pages 42 to 45)

	46		48
1	way to, you know, to clean up the site, to make it better,	1	obviously aware that it's been expressed by different
2	is there a way to limit the lifespan, is there a way to,	2	groups and different agencies that, as you've said, this
3	you know, perhaps engage in some programs with Native	3	is this site is the only alternative, according to the
4	Hawaiians that would be helpful to the community, some	4	studies that you folks have done. And so that this
5	ways in which we could, as Craig said, compensate for the	5	it's been a foregone conclusion, you know, that avoidance
6	harm that is being done.	6	and minimization is just not an option.
7	And so we want to express the point that we are	7	And, to me, it's really concerning that the
8	very open to different and creative ideas that might be	8	consulting parties may not feel like this is real
9	able to be helpful here. If that's at all instructive to	9	consultation. You know, as the law requires, we need to
10	your question.	10	have meaningful consultation prior to any approval. Or,
11	MS. MIKAHALA HELM: Thank you.	11	actually, prior to the expenditure of any federal funds.
12	MS. CAROLINE BLANCO: It is sort of a unique	12	And that these different agency directors have said they
13	situation in that, in many 106 processes for example, a	13	feel as though there hasn't been opportunity for
14	federal highway, you can change the alignment and still	14	meaningful consultation, because of this limiting to the
15	accomplish the same goals. So alternatives, that makes a	15	discussion to mitigation and what has been called
16	lot of sense in that context. You can go through this	16	mitigation.
17	neighborhood, that neighborhood, or this area, or that	17	And I am not sure at this point that can really
18	area, and still accomplish the needs of the project.	18	happen because, you know, as you've said over and over,
19	Here, it's very different. There are certain	19	this is the only alternative.
20	scientific criteria that need to be met. And so the	20	And I find that troubling, too, because, you
21	alternatives become much more limited because they fail to	21	know, I know that you have said other projects have
22	meet the objectives. And that has been a different	22	alternatives and this is a different kind of thing. But
23	situation than many other agencies face.	23	there are many projects that have been proposed in Hawaii,
24	So, often, we are faced with a situation of	24	and have been said, you know, Hawaii, this is the only
25	either we go forward with the project as it's proposed or	25	place, this is the only site that this can possibly
	47		49
1	we don't go forward with it at all. And that's very	1	happen. But as we've seen, and one of the directors
2	different.	2	notified in a letter, you know, the same thing happened in
3	I think you can see that point from different	3	another telescope issue and they did find an alternative
4	alignments of a highway.	4	site.
5	MS. MIKAHALA HELM: Okay.	5	And so what I am saying is I find it hard to
6	MS. ANNELLE AMARAL: Thank you.	6	believe sometimes that there really is one site. I think
7	MS. CAMILLE KALAMA: Camille Kalama, I am an	7	it may be the best site, it may meet the goals, you know,
8	attorney with the Native Hawaiian Legal Corporation. I am	8	to the best of the ability, that there may be other sites
9	here on behalf of Kilakila o Haleakala.	9	that may not be quite as good, but I don't believe that
10	And as you know from Kiope's involvement from	10	that means there is no alternatives.
11	the beginning, I believe, the group has the same concerns.	11	MS. CAROLINE BLANCO: If I could ask you a
12	And it is focused, you know, on avoidance. And, really,	12	question. If you think the process has been flawed
13	not mitigation really isn't an option. But I am still	13	because there are limited alternatives and that there are
14	here today to, you know, express some concern for the	14	two alternatives on top Mount Haleakala and no action
15	record on behalf of their group.	15	alternative, how would you propose it be changed?
16	And one of the things	16	What would be the correct process based on your
17	MS. ANNELLE AMARAL: Express concerns on	17	position?
18	avoidance?	18	MS. CAMILLE KALAMA: At this point, I think it
19 20	MS. CAMILLE KALAMA: About the process.	19	would be difficult to go back because the consulting
20	MS. ANNELLE AMARAL: About the consultation	20 21	parties are aware that's the position of the NSF.
22	process? MS. CAMILLE KALAMA: Yes.	21	But to me, at the beginning, you know, that at least alternatives be considered and be open to the
23	MS. CAMILLE RALAMA. Tes. MS. ANNELLE AMARAL: Oh, please.	23	parties for consultation. Or just you know, I am not
24	MS. CAMILLE KALAMA: All right. And I am little	24	exactly sure how to talk about it at this point because
25	concerned, you know, in reading the letters. You are	25	we're so far down the road, if you know what I mean.
23	concerned, you know, in reading the fetters. Tou are	23	were so far down the foad, if you know what I likall.

APPENDIX C(3): TRANSCRIPTS SECTION 106 MEETING, UH IFA, MAIKALANI FACILITY, JUNE 16, 2008

	50		52
1	MS. CAROLINE BLANCO: Well, I think maybe the	1	gathered at the meetings and there was a lot of community
2	question might be said, if it's a science-driven project,	2	testimony, it came to a certain point, and I requested
3	whether it be ATST or another project, and that the	3	that oral testimony be included in the documentation about
4	alternatives selected are to be considered based on	4	this project. And that did not start at the very
5	whether or not they meet certain scientific criteria, how	5	beginning. They did it afterwards. But this was after
6	would you suggest you manage that with 106?	6	the fact.
7	MS. CAMILLE KALAMA: I think it's, you know, a	7	And, you know, for Hawaiian people, oral you
8	difficult goal. But I don't I understand that it's	8	know, being able to present things orally is important.
9	science-driven, I understand that there's goals. But you	9	It's not all going to be written.
10	know what I am saying is that there may be a site that	10	And so if you really wanted to document the
11	maybe the best possible site, but what I am still saying	11	feedback of the community and people who love Haleakala
12	is it may not be the only site. Once the funding is put	12	and have reasons about what it means to them and to our
13	towards a specific site, I think it's already limiting the	13	culture, then including those documentation would have
14	choices in that direction.	14	given a full I mean, if you are asking us to
15	MS. CAROLINE BLANCO: And the other piece of it	15	backtrack I mean, this is backtracking, but that would
16	is you have the scientific community with the expertise in	16	have been something that I hope in all processes, when you
17	this particular area going through a peer review process,	17	ask for this kind of feedback, is included.
18	that is, has gone through all of the sites, and it has	18	MS. CAROLINE BLANCO: If I could ask Charlie to
19	taken, you know, years to accomplish and looked at 72	19	just comment on what has transpired with regard to oral
20	sites, whittled it down to six, continued to do studies.	20	comments.
21	And the scientific community, not the federal agency per	21	DR. CHARLIE FEIN: All oral testimony has been
22	se, but the independent scientific community, has	22	recorded from the very beginning by a stenographer. And
23	determined this is where it is, if it's going to happen.	23	all of the transcripts were made public and available to
24	How do you take that? Perhaps it's helpful to know that	24	anybody who wanted them. Also, in the DEIS.
25	these proposals are given to NSF and that's the proposal	25	So I am not quite sure what you mean by oral
	51		53
1	that is being considered.	1	testimony was not available.
2	I mean, do you think it's practical to	2	MS. MIKAHALA HELM: I'm sorry. My
3	completely reopen it to another peer review, peer-reviewed	3	understanding and correct me if I am wrong was that
4	study of locations, when the very group with the expertise	4	you may have a stenographer taking record, but when you
5	has already conducted that?	5	had the printed material
6	I am trying to understand your position on that	6	DR. CHARLIE FEIN: Yes.
7	and how you think it could have been done better.	7	MS. MIKAHALA HELM: only those that were
8	MS. CAMILLE KALAMA: You know, I don't know that	8	submitted in writing were initially documented. The
9	I can that I would be able to say exactly. I mean, I	9	others may have been on this kind of stuff and available
10	understand that a lot of study has gone into this site and	10	if you asked for it.
11	that a lot of other sites have been considered. And in	11	But I purposely asked for it at one time. And
12	other cases, maybe that's not always happened. And that	12	then I know and I think Bijan was there, I am not too
13	they may have done a lot of careful study, but, you know,	13	sure. I am getting the dates mixed up. But my
14	still, at some point, if you are really consulting with	14	understanding is that then it was available. My concern
		15	
15	the communities, there has to be an openness to		is that it's available in the printed documentation, not
15 16	the communities, there has to be an openness to considering avoidance, considering minimization.	16	available for request, but printed in there.
15 16 17	the communities, there has to be an openness to considering avoidance, considering minimization. You know, I know it's either it goes forward or	16 17	available for request, but printed in there. DR. CHARLIE FEIN: Yes. And it certainly would
15 16 17 18	the communities, there has to be an openness to considering avoidance, considering minimization. You know, I know it's either it goes forward or not, but, as you said, the other alternative is a no	16 17 18	available for request, but printed in there. DR. CHARLIE FEIN: Yes. And it certainly would be in the final environmental impact statement, every word
15 16 17 18 19	the communities, there has to be an openness to considering avoidance, considering minimization. You know, I know it's either it goes forward or not, but, as you said, the other alternative is a no action alternative, and serious consideration of that	16 17 18 19	available for request, but printed in there. 14 (Pages 50 to 53)

APPENDIX C(3): TRANSCRIPTS SECTION 106 MEETING, UH IFA, MAIKALANI FACILITY, JUNE 16, 2008

	54		56
	1 DEIS? I know at one point it was not available.	1	to the table as well.
	2 MS. SHARON LOANDO-MONRO: It wasn't available in	2	Did you want to make some, Camille, last
	3 the DEIS because we didn't know that was something that	3	comments for Kilakila o Haleakala?
	4 would be requested.	4	MS. CAMILLE KALAMA: Sure. Yeah, just two quick
	5 MS. MIKAHALA HELM: Yes.	5	comments.
	6 MS. SHARON LOANDO-MONRO: Typically, we do that	6	But, you know, as far as the consultation
	7 because it's for our administrative record. But since you	7	process, I was kind of surprised at this open-ended open
	8 requested it, we honored that and gave you the copies and	8	house forum because it seems to me, you know, consultation
	9 decided to put it in the final. So it will be included,	9	with all the consulting parties should have everybody
1	0 all of them that we have.	10	present together so that, you know, there can be a real
1	1 MS. MIKAHALA HELM: I appreciate that.	11	discussion and a dialogue. I understand you are trying to
1	2 And I am just clarifying for her because what	12	accommodate, but, you know, for the more meaningful
1	3 she is asking, you know, backtracking, what would we have	13	discussion.
1	4 done differently. And my suggestion is if we are going to	14	MS. CAROLINE BLANCO: If I can respond to that.
1	5 think back like that, then that would have been	15	I had the same sort of thoughts as well. And there was a
1	6 something that if you wanted the full picture that	16	lot of discussion that we had.
1	7 would have been something that we started from when the	17	And we opted on this format with a more
1	8 initial meetings began. I mean, I	18	open-ended, you know, opportunity for people to make it.
1	9 MS. CAROLINE BLANCO: I guess my question was	19	We were concerned people may have to take off of work,
2	0 targeted in particular at this issue of scientific	20	people may have to, you know, travel and so forth. So we
2	1 alternatives and how to deal with that.	21	wanted to be able to allow a large amount of time during
2	2 I appreciate your comments on that and on other	22	which people could come in and voice their opinions.
2	3 aspects of it.	23	But tomorrow is a much more structured
2	4 But the alternatives issue is of concern to, you	24	traditional type of meeting. This is more of an
2	5 know, several comments or several consulting parties. And	25	opportunity to receive ideas from the consulting parties.
	55		57
	1 when you are faced with scientifically-driven	1	And I think I left that on the voicemail message
	 alternatives, and trying to include consulting parties, 	2	that I left for you.
	 3 you can't say, just move this road this way and move this 	3	Tomorrow, from 10:00 until 2:00, there will be
	 4 one this way, and still be able to meet the objectives in 	4	actual discussion, negotiation in the beginnings of the
	 this situation. And, of course, there is still a no 	5	drafting of the MOA. So that will be an opportunity that
	 action alternative. 	6	is more of a traditional meeting in a sense.
	7 It may be that, you know, the input that we've	7	We tried to do both.
	8 received that, you know, this alternative is not okay, we	8	MS. CAMILLE KALAMA: And the last, just on
	9 don't believe this is all right because there were too	9	behalf of Kilakila o Haleakala, that mitigation, in our
	 many adverse impacts that can't be avoided or minimized, 	10	view, really should be directly related to the harm that
1		11	has been caused. And I understand, you know, the
	 factor into the decision. So from that standpoint, it is 	12	difficulties trying to differentiate between minimization
	3 still a very open process. And it is a meaningful one as	13	and mitigation, but, to me, offsite mitigation doesn't
	4 well in that those comments are being considered and taken	14	really make sense, you know, that it really I mean, I
	5 into consideration.	15	guess it's compensation in a way, but, to me, that's not
1		16	necessarily mitigation. And that, you know, even though
	7 MS. ANNELLE AMARAL: I wonder if I can sort of	17	the group isn't really considering mitigation, that if
1		18	there is any mitigation planned that it address the harm
	people have come into the room. I want to give them an	19	directly.
	 opportunity, also, to speak. 	20	DR. CRAIG FOLTZ: Could I just ask whether any
	1 And so I am wondering, if you have some last	21	of you have any other suggestions for onsite mitigation?
	2 comments you need to make and these are not last	22	I mean, are there other steps that could be taken?
	 because you can continue to speak, but I wanted to give 	23	We are open to hearing that.
	4 other people an opportunity to speak as well. So I am	24	MR. KIOPE RAYMOND: Miki, because I do.
	5 inviting you to remain in the room and to bring the others	25	MS. MIKAHALA HELM: Go ahead.
		1	

T

^{15 (}Pages 54 to 57)

	58		60
1	MR. KIOPE RAYMOND: I have pointed out some. I	1	DR. CRAIG FOLTZ: We remember.
2	know Mike has seen my powerpoint presentation, that it's	2	MR. KIOPE RAYMOND: You remember, okay.
3	it would be nice to begin to get a better feel for the	3	So the tenor of the meeting was very clear. The
4	amount of Hawaiians who could be educated about the	4	Hawaiian community was upset. Remains upset.
5	ability to access the 18 acres.	5	But, again, we are talking about something. And
6	DR. CRAIG FOLTZ: Right.	6	I just wanted that clarification because that doesn't
7	MR. KIOPE RAYMOND: Should these mitigation	7	appear on the record. There is no way to, what did people
8	plans should the NSF decide to move forward with	8	feel that night, if you just got it in black and white and
9	memoranda with the Hawaiian community, then inserted would	9	you don't get everything. Because I've seen the what
10	be an enabling process for Hawaiians to know more about a	10	Charlie and Sharon have kindly sent on the CDs, the
11	respectful way, respecting the needs of the IFA, but the	11	actual the copies. A lot wasn't captured. And I
12	IFA also respecting their needs. Fully appreciating that	12	remember distinctly, wait a minute, there was lots more
13	the IFA has worked with Charles Maxwell to create two	13	that was said. But you just can't capture it all, much
14	shrines. In the future, that may or may not be the best	14	less the feeling of the evening.
15	place. The 28,000 square feet that has been given in	15	MS. ANNELLE AMARAL: What would make it better
16	perpetuity. Perpetuity means for as long as the IFA has	16	would be some audio-visual record as well. But, of
17	their executive order.	17	course, that
18	MR. MIKE MABERRY: Yes.	18	MR. KIOPE RAYMOND: That's
19	MR. KIOPE RAYMOND: It does not include the	19	MS. ANNELLE AMARAL: Once you put it in writing,
20	east-facing tower which is 80 feet away from or	20	it's, you know, lost again.
21	east-facing shrine which is 80 feet away from the proposed	21	MR. KIOPE RAYMOND: The other thing goes back to
22	ATST. Looking toward some way to enable Hawaiians.	22	that point that was originally brought up, science-driven.
23	The signage I have made a point. Due to	23	And I'm sorry, as far as I can see from the letters of
24	circumstances beyond their control, most Hawaiians cannot	24	November 8, subsequent letters from you, Craig, that no
25	read Hawaiian, but the sign is in Hawaiian. I respect the	25	one really tried to address that. I informally did. I
	59		61
1	fact that it was put in Hawaiian, but it doesn't educate	1	know I did. I tried to address the fact that the
2	Hawaiians that they are invited to come in to pay respects	2	theoretical solar physics, it's up here, and everyone
3	to their ancestors or to engage in ceremony. If there is	3	vetted that process. We created something and everyone
4	some way that the IFA, NSF, Hawaiian community could work	4	said, let's discuss that.
5	out a plan so that halau might be able to access it, all	5	Most of us, by the same way that I hope that
6	those kinds of things.	6	people are respecting, that you don't know as much about
7	Then in addition to that, the I would like to	7	Hawaiian culture or feeling as Hawaiians, we don't know as
8	switch back. I would like to go off of what could we do	8	much about the science. But there wasn't that kind of a
9	to mitigate the harm, otherwise I will lose my train of	9	lot of dialogue, because the scientists did their thing
10	thought on what had just been brought up by Caroline's	10	and they did the vetting process. And it took a long time
11	question to Camille that kind of shifted away to	11	and there were lots of meetings.
12	Mikahala's. And I wanted the NSF and I know, Craig,	12	MS. CAROLINE BLANCO: Are you saying that it
13	you were there, everyone, Jeremy, everyone was there that	13	would have been helpful to have more of an explanation of
14	night.	14	the science for most people so that they could gain a
15	And when we are talking about what was captured	15	better understanding
16	on the record, that's why I interjected, with all due	16	MR. KIOPE RAYMOND: I think so.
17	respect to court stenographers, what they were able to	17	MS. CAROLINE BLANCO: of the whole process of
18	capture. They can't capture the tenor of the meeting.	18	site selection?
19	And when Camille I'm sorry, Charisse	19	MR. KIOPE RAYMOND: Yeah. But I understand that
20	Carney-Nunes made it clear to the audience that they would	20	they are not driven to do that. This is just all after
21	be that we were there to listen, but does not mean we	21	the fact, gee, I wish.
22	are going to concur. I think the tenor of the meeting	22	MS. CAROLINE BLANCO: It's helpful to know,
23		23	though. Because I suspect that I mean, NSF really
1 [~]	changed and everyone understood, what the neck are we	20	mough. Decause I suspect that I mean. INSPIEARLY
24	changed and everyone understood, what the heck are we doing here. And I am using nice words because I could	24	
24 25	doing here. And I am using nice words because I could hear from the back of the room a lot of	1	wants to do this right. MR. KIOPE RAYMOND: I understand.

16 (Pages 58 to 61)

APPENDIX C(3): TRANSCRIPTS SECTION 106 MEETING, UH IFA, MAIKALANI FACILITY, JUNE 16, 2008

	62		64
1	MS. CAROLINE BLANCO: And wants to be open and	1	MR. KIOPE RAYMOND: My brother-in-law is going.
2	follow a process that is meaningful. And my concern is	2	Remember, I told you my brother-in-law is an
3	that, you know, having seen many, many other agencies in a	3	astrophysicist at MIT. And he is going to be in
4	long federal career before coming to NSF, NSF is unique in	4	Marseille. And I saw that and I thought I wonder if
5	this science-driven, you know, alternative situation. And	5	oh, Jeremy's name
6	your feedback is very helpful to me to try to understand	6	MR. JEREMY WAGNER: I am not, but ATST will be
7	that.	7	represented.
8	MR. KIOPE RAYMOND: Also, though	8	MR. KIOPE RAYMOND: All of that is about the
9	DR. CRAIG FOLTZ: Go ahead, please.	9	machinery. That's a science of its own. It's wonderful.
10	MR. KIOPE RAYMOND: is that again, I am	10	But it just starts to consume.
11	glad Annelle is here because it could be the stepping on	11	Annelle, the point I am making is that it's
12	toes that we referred to earlier.	12	it consumes more than I am getting on my return as a
		13	
13	It is just my perspective that some of this with		Hawaiian.
14	the proposed ATST is less science-driven than	14	MS. ANNELLE AMARAL: Yes.
15	economic-driven. And that is just my perspective on it,	15	MR. MIKE MABERRY: If I may, I am Mike Maberry,
16	on all the reading that as	16	I am Assistant Director for the Institute for Astronomy.
17	MR. JEFF BARR: Why would you say	17	I will wait until he comes back. I am waiting
18	economic-driven?	18	for Kiope.
19	MR. KIOPE RAYMOND: When I am looking where	19	MS. ANNELLE AMARAL: You do that. Because you
20	Wayne Van Citters has now moved over, I think you the	20	started to speak, I am sure that's the reason why.
21	science and the big things that scientists want to build,	21	MR. KIOPE RAYMOND: Sorry about that.
22	astronomers want to build, are driven by a different set	22	MR. MIKE MABERRY: I want to quickly address
23	of rules, if you will. If you want to do something of a	23	some very important things that he said earlier on with
24	certain magnitude, you have to follow a whole new kind of	24	regards to onsite mitigation. I think it's something that
25	a process. And it's just my perspective on it. I am just	25	we need, but something I also want to but if you would
	63		65
1	sharing my personal perspective. That it seems that, for	1	like me to take a break, I will take a break.
2	the last three or four years, in reading the reports out	2	MS. ANNELLE AMARAL: I want to be sensitive
3	of the NSF, there is this understanding. Everyone has	3	to there's at least one person that has to leave, is
4	come to an understanding that the facilities are not	4	that correct? People are motioning to me in the back of
5	lasting maybe as long. I am just grabbing for words here.	5	the room.
6	And people are saying, well, how are we going to solve the	6	MS. NANCY McMAHON: No. We are here for a short
7	science we want to do in the future. Well, let's go big,	7	time. We are here for a little while.
8	let's super size, super size me. And that's just	8	MS. ANNELLE AMARAL: Are you having to leave
9	again, I am allowed	9	shortly?
10	DR. CRAIG FOLTZ: Sure.	10	MS. CAROLINE BLANCO: Maybe a quick break and go
11	MR. KIOPE RAYMOND: I think, to share my	11	say hello.
12	personal perspective	12	MS. ANNELLE AMARAL: We can take a bit of a
13	DR. CRAIG FOLTZ: Sure. Sure.	13	break and let you come to the table, the person that needs
14	MR. KIOPE RAYMOND: on how a taxpaying person	14	to leave come to the table.
15	sees how some of this might have gone.	15	(Recess.)
16	And, yet, I also understand that there has	16	MS. ANNELLE AMARAL: What we are going to do now
17	been and I want to make it clear for the record that I	17	is just sort of finish off this set.
18	respect the vetting process. It's all online. It's all	18	Kiope, just as you left the room, Mike was
19	available, it is quite fabulous, with the fabrication of	19	saying that he wanted to make some comments. And so we
20	what is going to happen.	20	will let Mike make those comments. We will see if you
20	You are going to Marseille, France, aren't you?	20	have any further comments, not too long.
22		21	
22	MR. JEREMY WAGNER: No. No. I canceled that to	22	MR. KIOPE RAYMOND: Oh, I would appreciate
	come here.		hearing them. I had to take a call from my daughter.
24 25	DR. CRAIG FOLTZ: We can't afford it. Too much	24	Thank you.
20	time.	25	MS. ANNELLE AMARAL: I noted that Sol came into

Ι

Г

17 (Pages 62 to 65)

	66		68
1	the room next. So he will be the next speaker I will	1	small, just a little larger than a one-lane, road that
2	bring up. Then DLNR came into the room next, so they will	2	goes in and out of the area. And very little area to turn
3	be the next. Then looks like I have another speaker back	3	around in.
4	there, too.	4	And because the park attracts some 1.7 million
5	Mike.	5	tourists a year, without any signage to reduce or restrict
6	MR. MIKE MABERRY: Thank you very much for your	6	the flow of vehicles into the area, it would create a
7	suggestions for consideration for onsite mitigation.	7	considerable problem and congestion. And that's why, when
8	I felt that it would be important just to share	8	you enter the site, you will notice that it says that no
9	some information with regards to the history that would	9	private vehicles are allowed.
10	possibly help, if there is some more formal process and	10	And just to take a step back, because DLNR is
11	vetting out those possibilities of onsite mitigation.	11	here, if they are not familiar with it, under the
12	The west-facing ahu was a way of asking for	12	executive order, the identified use of the Haleakala High
13	forgiveness. And to try to address the fact that there	13	Altitude Observatory Site is for observatory purposes. So
14	was a loss of a viewplain site from where the AEOS	14	there is no recreational or commercial component usage to
15	facility was built as you are aware, that was developed	15	that site. Therefore, there is signage at the entrance to
16	by Billy Fields and his people. And they chose the site	16	the site restricting private vehicles into the area.
17	within that area.	17	And it was suggested by Native Hawaiians that
18	That area that Kiope referenced as being set	18	signage be put up inviting the Native Hawaiians into the
19	aside was set aside because it had the largest	19	site in their own language. Again, to help target those
20	concentration of archeological features within the 18	20	who are receiving the invitation, and to help, again, keep
21	acres that is temporarily under the stewardship of the	21	us from running into a problem with too many vehicles in
22	University of Hawaii.	22	the area.
23	While at the summit and while working on that	23	So we are very open to looking at all those
24	west-facing ahu, we were asked by Billy Fields and his	24	things that Kiope addressed. Again, I just thought this
25	people, his crew, what we were looking at for the future,	25	background from my information might be helpful as we look

	MS. ANNELLE AMARAL: And we were hoping, I	1	program of science, technology, engineering, math students
2	think, that tomorrow that will take place, that all	2	that are at the college level. And that there would be a
3	concerned parties would then be in the room and there	3	path, perhaps, from the community college to move it up,
4	would be consultation with all parties involved as much as	4	and, also, to bridge, I think, the K to 12 within the
5	we can.	5	public schools and private schools, charter schools, as an
6	Having heard, however, that Mikahala is not	6	opportunity to encourage, especially Native Hawaiians who
7	going to be able to be here tomorrow	7	are underrepresented in these fields, to participate in
8	MR. KIOPE RAYMOND: I am not going to be here.	8	STEM program. So, to me, that was, I think, an area that
9	MS. ANNELLE AMARAL: And Kiope.	9	I thought was necessary and beneficial. And I wanted to
10	MS. PUA AIU: And we are not going to be here.	10	be able to support that.
11	MR. SOL KAHO'OHALAHALA: So is today the day,	11	What became clear to me is, when I looked at the
12	then?	12	STEM program itself, that there was a mitigation proposal
13	MS. PUA AIU: It's kind of difficult, so I	13	that was submitted by Maui Community College as part of
14	think especially if we are not going to be here.	14	the result of these ongoing proceedings. And I had not
15	MS. ANNELLE AMARAL: Yes. Perhaps we should	15	been a part of those proceedings at all. But having now
16	then take full advantage of you all being in the room as	16	looking having now to look at the STEM program itself,
17	much as we can today to do as close to the pencil and	17	see how it would be connected now to the mitigation
18	paper exercise we were headed for tomorrow, and to get	18	proposal, now really brings me to this juncture where now
19	comments back and forth. That certainly tests my skill as	19	we are looking at the ATST proposed project.
20	a facilitator, but this is why I get the big bucks.	20	So I've sort of tried to make sure that I was
21	MR. SOL KAHO'OHALAHALA: Are you going to make	21	informed about what took place along the way so that I
22	sure you allow for all of the things to happen while we	22	wasn't just getting involved into something that I wasn't
23	are still	23	really clear about.
24	MS. ANNELLE AMARAL: Absolutely. Absolutely.	24	So having said that, I can only say that I have
25	Then let us keep it is going to drive the	25	gone back, and, thanks to the availability of that
	75		77
1	court stenographer crazy, so let us keep this process in	1	
		1	information online, have been able to look at all of the
2	mind, then. As people are speaking, and if you have	1 2	information online, have been able to look at all of the proceedings and looked at most of the information that is
2 3	mind, then. As people are speaking, and if you have comment, raise your hand. We're going to take it slower.		proceedings and looked at most of the information that is
		2	
3	comment, raise your hand. We're going to take it slower.	2 3	proceedings and looked at most of the information that is available to understand what had occurred in the past
3 4	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak,	2 3 4	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself
3 4 5	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court	2 3 4 5	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now
3 4 5 6	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can	2 3 4 5 6	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred.
3 4 5 6 7	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down.	2 3 4 5 6 7	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment.
3 4 5 6 7 8	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down. So we will try to do the consultation with	2 3 4 5 6 7 8	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment. Because when I walked in, my friend here was had also
3 4 5 6 7 8 9	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down. So we will try to do the consultation with everyone that is in the room right now given that the	2 3 4 5 6 7 8 9	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment. Because when I walked in, my friend here was had also made comments about myself. And I would like to be able to speak to that for myself. And I respect Kiope, and anyone else here that
3 4 5 6 7 8 9 10	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down. So we will try to do the consultation with everyone that is in the room right now given that the majority of you will not return tomorrow.	2 3 4 5 6 7 8 9 10	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment. Because when I walked in, my friend here was had also made comments about myself. And I would like to be able to speak to that for myself. And I respect Kiope, and anyone else here that is part of this, but I am not a token Hawaiian, you know.
3 4 5 6 7 8 9 10 11	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down. So we will try to do the consultation with everyone that is in the room right now given that the majority of you will not return tomorrow. MR. SOL KAHO'OHALAHALA: Okay. Let me then just clarify my current position. Because it was brought in the discussion earlier. I am currently part-time with	2 3 4 5 6 7 8 9 10 11	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment. Because when I walked in, my friend here was had also made comments about myself. And I would like to be able to speak to that for myself. And I respect Kiope, and anyone else here that
3 4 5 6 7 8 9 10 11 12	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down. So we will try to do the consultation with everyone that is in the room right now given that the majority of you will not return tomorrow. MR. SOL KAHO'OHALAHALA: Okay. Let me then just clarify my current position. Because it was brought in the discussion earlier. I am currently part-time with Maui Community College. And one of the reasons why I kind	2 3 4 5 6 7 8 9 10 11 12	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment. Because when I walked in, my friend here was had also made comments about myself. And I would like to be able to speak to that for myself. And I respect Kiope, and anyone else here that is part of this, but I am not a token Hawaiian, you know.
3 4 5 6 7 8 9 10 11 12 13	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down. So we will try to do the consultation with everyone that is in the room right now given that the majority of you will not return tomorrow. MR. SOL KAHO'OHALAHALA: Okay. Let me then just clarify my current position. Because it was brought in the discussion earlier. I am currently part-time with Maui Community College. And one of the reasons why I kind of pursued this participation with Maui Community College	2 3 4 5 6 7 8 9 10 11 12 13	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment. Because when I walked in, my friend here was had also made comments about myself. And I would like to be able to speak to that for myself. And I respect Kiope, and anyone else here that is part of this, but I am not a token Hawaiian, you know. And I did not come into this process because I was
3 4 5 6 7 8 9 10 11 12 13 14 15 16	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down. So we will try to do the consultation with everyone that is in the room right now given that the majority of you will not return tomorrow. MR. SOL KAHO'OHALAHALA: Okay. Let me then just clarify my current position. Because it was brought in the discussion earlier. I am currently part-time with Maui Community College. And one of the reasons why I kind of pursued this participation with Maui Community College is because of a program that's termed STEM, that's	2 3 4 5 6 7 8 9 10 11 12 13 14	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment. Because when I walked in, my friend here was had also made comments about myself. And I would like to be able to speak to that for myself. And I respect Kiope, and anyone else here that is part of this, but I am not a token Hawaiian, you know. And I did not come into this process because I was ignorant of these proceedings. And I want to be here participating as a Hawaiian. But I think that, having said that, I would like
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down. So we will try to do the consultation with everyone that is in the room right now given that the majority of you will not return tomorrow. MR. SOL KAHO'OHALAHALA: Okay. Let me then just clarify my current position. Because it was brought in the discussion earlier. I am currently part-time with Maui Community College. And one of the reasons why I kind of pursued this participation with Maui Community College is because of a program that's termed STEM, that's Science, Technology, Engineering and Math, pathway that	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment. Because when I walked in, my friend here was had also made comments about myself. And I would like to be able to speak to that for myself. And I respect Kiope, and anyone else here that is part of this, but I am not a token Hawaiian, you know. And I did not come into this process because I was ignorant of these proceedings. And I want to be here participating as a Hawaiian. But I think that, having said that, I would like to be able to contribute in this process in a manner that
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down. So we will try to do the consultation with everyone that is in the room right now given that the majority of you will not return tomorrow. MR. SOL KAHO'OHALAHALA: Okay. Let me then just clarify my current position. Because it was brought in the discussion earlier. I am currently part-time with Maui Community College. And one of the reasons why I kind of pursued this participation with Maui Community College is because of a program that's termed STEM, that's Science, Technology, Engineering and Math, pathway that the community college is seeking to implement and	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment. Because when I walked in, my friend here was had also made comments about myself. And I would like to be able to speak to that for myself. And I respect Kiope, and anyone else here that is part of this, but I am not a token Hawaiian, you know. And I did not come into this process because I was ignorant of these proceedings. And I want to be here participating as a Hawaiian. But I think that, having said that, I would like to be able to contribute in this process in a manner that I think is part of my inheritance as a Hawaiian, as a
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down. So we will try to do the consultation with everyone that is in the room right now given that the majority of you will not return tomorrow. MR. SOL KAHO'OHALAHALA: Okay. Let me then just clarify my current position. Because it was brought in the discussion earlier. I am currently part-time with Maui Community College. And one of the reasons why I kind of pursued this participation with Maui Community College is because of a program that's termed STEM, that's Science, Technology, Engineering and Math, pathway that the community college is seeking to implement and encourage Native Hawaiian participation. So I thought	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment. Because when I walked in, my friend here was had also made comments about myself. And I would like to be able to speak to that for myself. And I respect Kiope, and anyone else here that is part of this, but I am not a token Hawaiian, you know. And I did not come into this process because I was ignorant of these proceedings. And I want to be here participating as a Hawaiian. But I think that, having said that, I would like to be able to contribute in this process in a manner that I think is part of my inheritance as a Hawaiian, as a Native Hawaiian, part of what I consider to be some of the
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down. So we will try to do the consultation with everyone that is in the room right now given that the majority of you will not return tomorrow. MR. SOL KAHO'OHALAHALA: Okay. Let me then just clarify my current position. Because it was brought in the discussion earlier. I am currently part-time with Maui Community College. And one of the reasons why I kind of pursued this participation with Maui Community College is because of a program that's termed STEM, that's Science, Technology, Engineering and Math, pathway that the community college is seeking to implement and encourage Native Hawaiian participation. So I thought that I might be supportive in trying to help in that	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment. Because when I walked in, my friend here was had also made comments about myself. And I would like to be able to speak to that for myself. And I respect Kiope, and anyone else here that is part of this, but I am not a token Hawaiian, you know. And I did not come into this process because I was ignorant of these proceedings. And I want to be here participating as a Hawaiian. But I think that, having said that, I would like to be able to contribute in this process in a manner that I think is part of my inheritance as a Hawaiian, as a Native Hawaiian, part of what I consider to be some of the cultural practices that have been built within us,
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down. So we will try to do the consultation with everyone that is in the room right now given that the majority of you will not return tomorrow. MR. SOL KAHO'OHALAHALA: Okay. Let me then just clarify my current position. Because it was brought in the discussion earlier. I am currently part-time with Maui Community College. And one of the reasons why I kind of pursued this participation with Maui Community College is because of a program that's termed STEM, that's Science, Technology, Engineering and Math, pathway that the community college is seeking to implement and encourage Native Hawaiian participation. So I thought that I might be supportive in trying to help in that program, where Native Hawaiians could be encouraged to	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment. Because when I walked in, my friend here was had also made comments about myself. And I would like to be able to speak to that for myself. And I respect Kiope, and anyone else here that is part of this, but I am not a token Hawaiian, you know. And I did not come into this process because I was ignorant of these proceedings. And I want to be here participating as a Hawaiian. But I think that, having said that, I would like to be able to contribute in this process in a manner that I think is part of my inheritance as a Hawaiian, as a Native Hawaiian, part of what I consider to be some of the cultural practices that have been built within us, throughout our families' lives. And then be able to draw
3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	comment, raise your hand. We're going to take it slower. We're going to slow this down. Because before you speak, then, we would ask you identify yourself for the court stenographer, and then you can make your comment, she can get this down. So we will try to do the consultation with everyone that is in the room right now given that the majority of you will not return tomorrow. MR. SOL KAHO'OHALAHALA: Okay. Let me then just clarify my current position. Because it was brought in the discussion earlier. I am currently part-time with Maui Community College. And one of the reasons why I kind of pursued this participation with Maui Community College is because of a program that's termed STEM, that's Science, Technology, Engineering and Math, pathway that the community college is seeking to implement and encourage Native Hawaiian participation. So I thought that I might be supportive in trying to help in that program, where Native Hawaiians could be encouraged to participate.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	proceedings and looked at most of the information that is available to understand what had occurred in the past couple years in this process. So trying to get myself into understanding so that it's clear to me where I am now at versus what has already occurred. So I want to at least make just a comment. Because when I walked in, my friend here was had also made comments about myself. And I would like to be able to speak to that for myself. And I respect Kiope, and anyone else here that is part of this, but I am not a token Hawaiian, you know. And I did not come into this process because I was ignorant of these proceedings. And I want to be here participating as a Hawaiian. And then be able to draw on some of the strengths, I think, that are really

20 (Pages 74 to 77)

	78		80
1	those junctures and be able to do so as Hawaiians and to	1	entity, that this is not just a scientific initiation of a
2	be able to do so respecting one another as Hawaiians.	2	project, but it is one that has to somehow integrate the
3	And so with that, Kiope, that's who I am, and, I	3	Hawaiian part of it.
4	think, why I am here.	4	And if, I think, we can have that kind of
5	And knowing that now this has become an issue	5	discussion, that you acknowledge that these things are a
6	that is important, I want to just share, I think, a little	6	part of the process, then I think we can, hopefully, agree
7	bit of my perspective and why I think it would be	7	to continue these discussions and move forward.
8	incumbent on us to participate as Hawaiians. So I agree	8	So it's that part of me that makes it important
9	that all of these positions are based on, I think, the	9	to be here.
10	best that we can understand given the best information	10	Now, as a Hawaiian, I have been supportive in
11	that we have at the moment, and, in part, trying to	11	organizations. And one of the olelo no'eau that we use is
12	understand and anticipate what are going to be some of the	12	(Hawaiian). Just so you understand, it is that we have a
13	outcomes here.	13	value that talks about Hawaiians being able to move
14	And in looking at ATST and the proposed	14	forward but mindful of their past. So they want to be
15	construction of a telescope at Haleakala, I agree with all	15	able to not make gaps in that past, or carry on the
16	of the reports that have been put out by the archeological	16	knowledge or the practice of your history and your kupuna
17	review that these are significant places. And all of the	17	and your culture, so that your presence will allow you to
18	input that you have had from Native Hawaiians about the	18	decide what is your future.
19	sacredness of this place, I agree with them all. And I	19	And with that concept, it means that in the
20	think that is why the Native Hawaiians have a stake in	20	Hawaiian and I accept this as part of my
21	these discussions and have to come and participate.	21	responsibility is to acknowledge that our kupuna have
22	As a Hawaiian, while I agree that these are	22	given us a tremendous amount of knowledge and experience.
23	important components, you have to also acknowledge the	23	And for those who are fortunate enough to have been with
24	fact that we have a history now that compounds these	24	kupuna and who have actually learned these things in
25	issues before us today, that really bring out in all of us	25	all facets I am talking, not just one, but in all facets
	79		81
1	the hurt, really, that's been a part of how we see things	1	of Hawaiian that we are probably the last generation
2	that are impacting Hawaiian cultural places, Hawaiian	2	that is here today that have had those kinds of
3	cultural sites and Hawaiian cultural resources.	3	connections with kupuna that have been living.
4	And if you add a history that has, you know,	4	So I was privileged to have had time spent with
5	many documented kinds of processes and procedures that	5	my tutus, tutus, on the island of Lana'i. They lived to
6	have bypassed Native Hawaiian input, even to the fact that	6	be in their mid-nineties. And it is that part, I think,
7	the overthrow is still another component of this that adds	7	that I hold some responsibility to ensure that their hopes
8	to that hurt, that Hawaiians carry all of those examples	8	and their knowledge and their practices is the malama
9	of past practices and experiences. So that when we look	9	hope, the things of the past. So in capturing and being
10	today at what is happening before us in a proposed	10	responsible to malama, to care for that, then the real
11	construction of a telescope at Haleakala, which is, in our	11	next question is then how do we move that forward, okay,
12	view, a sacred place, we can only see this as one more	12	into the next part.
13	example of that kind hurt that's being, I guess, generated	13	I think we are being challenged right now with
14	again.	14	those kinds of responsibilities.
15	So you have to allow us that opportunity to have	15	And I want to acknowledge that the kupuna have
16	those feelings and to have an opportunity to say that we	16	been awesome in their accomplishments of our past. And
17	view this as just another example and a continuation of	17	you need only look back into everything from the
18	that history of hurt.	18	recitation of the kumulipo, and then look at all of the
19	The thing that I think that we need now to	19	awesome accomplishments, whether they are in olelo,
20	have and that's why I would like to be a part of those	20	whether they are in navigation, whether they are in
21	discussions is be able to say and acknowledge that	21	construction and engineering, whether they are in botany
22	these things are in fact a part of our own cultural and	22	and biology, whether they are in engineering for
23	historical experience as Hawaiians. And then look at the	23	construction of auwai systems as well as massive
24	presentation of NSF, and try to understand and make clear	24	structures like Piilanihale, as an example. That
25	that this is not a process that's driven only by one	25	Hawaiians were innovative and they were critical in their

21 (Pages 78 to 81)

	82		84
1	thinking in trying to find solutions.	1	of navigation that is as innovative in its time as that of
2	And had it not been for that kind of ability	2	the space shuttle in its navigation into these new times.
3	that we have embraced as Hawaiians through our kupuna's	3	So there is a link here in who we are in terms
4	actual practices and accomplishments, I think many of us,	4	of being creative, being innovative, and being the kind of
5	we wouldn't be here today. We would not exist in Hawaii	5	critical thinkers that I think Polynesians and Native
6	today without those kinds of practices.	6	Hawaiians are, that allow us to continue to still find
7	But I want to give acknowledgment to these	7	ways.
8	practices as not just relegated to kahiko, that these	8	So if these tools were available then to my
9	practices may have begun in the time of kahiko, but they	9	kupuna, I would ask the question as to whether or not they
10	are the they are the examples that we have to hold and	10	would have excelled in their own way, having to come to
11	they are the examples that we have to carry and project	11	understand what these modern innovations and technologies
12	where we want to be, where we want to go. So I want to	12	are, what their uses are for. And could they be as
13	give credence to that as a Hawaiian and say that we have	13	innovative as to decide how best to use these kinds of
14	an inheritance of these kinds of abilities. And whether	14	technologies to continuously refine and improve and
15	it's within our own genes today, I think we have to	15	advance, I think, who we are as Hawaiians.
16	consider that where we go is as important as where we have	16	And so I come into this process not because I
17	come from.	17	think there is a right way and a wrong way. And I come
18	So the where-we-go part now is going to involve	18	into this process not because I want to side with one who
19	these times when I think, before us today, are innovations	19	is for or one who is against. But I come into this
20	and developments and research and technology that were not	20	process because I think, as a Native Hawaiian, I should be
21	available when my kupuna lived in their time. But	21	involved in these processes and I should be given that
22	nonetheless, their accomplishments still speak to these	22	kind of acknowledgment, by all parties that are seated at
23	innovations. And that their accomplishments are many.	23	the table, to not diminish the value and the quality of
24	We don't talk about the fact that they were	24	the Native Hawaiian in all aspects and in all regard.
25	engineers and had built auwai systems that were able to	25	It's that I have a history that speaks to these things.
	83		85
1	distribute water to every single lo'i and still allow for	1	And I want to be able to now, as a Hawaiian today,
2	that same water to go back into the stream and into the	2	anticipate how best to utilize the technologies that are
3	loko i'a. Who creates or thinks about that?	3	available to us for the benefit of finding the (Hawaiian),
4	We don't talk about innovations like creating	4	finding now what are the innovations that we need to be a
5	aquaculture in Hawaii, which is found nowhere else in the	5	participant in as a Hawaiian so that we can partner and we
6	Pacific except here in the Hawaiian Islands, and who took	6	can move forward.
7	the time to develop these systems that would produce food	7	Because I think we are dynamic. We are not a
8	to sustain the people in Hawaii, and to understand the	8	stagnant people. We never have been. Because had we been
9	microcosms of this system so that the fingerlings could be	9	stagnant, I don't think we would have accomplished any of
10	fed properly as well as the adult ae'o, so we could have	10	these things in our past to be able to speak of today.
11	food.	11	So it's with that passion that I have as a
12	We are happy of the accomplishments of Hokulea's	12	Hawaiian. And I wanted to consider what is you know,
13	sails, of which I am proud to have been a crew member of.	13	what is, I think, my responsibility as a Hawaiian.
14	But it has helped me to understand that we can still today	14	And when I saw that this was an issue, I thought
15	carry on those practices of celestial navigation or	15	that what in this lends Hawaiian its voice, what in this
16	non-instrument navigation in these modern times.	16	lends to science. Some of the directions that I think
17 18	Even so much so that we were innovative enough	17 18	Hawaiians could contribute, and what in this now comes to the point that we can look at Hawaiians as not only being
	to do sails on Hokule's that linked the canoo to the space	1 U	the point that we can fook at mawanans as not only being
	to do sails on Hokule'a that linked the canoe to the space		examples of its past, but Hawaiians that continue to be
19	shuttle, to the classrooms, in a continuous loop, to allow	19	examples of its past, but Hawaiians that continue to be contributors of its future of our future
19 20	shuttle, to the classrooms, in a continuous loop, to allow the children in the classroom to understand that voyaging	19 20	contributors of its future, of our future.
19 20 21	shuttle, to the classrooms, in a continuous loop, to allow the children in the classroom to understand that voyaging and navigation, in what is perceived as ancient for	19 20 21	contributors of its future, of our future. So I don't know if I am making sense to you, but
19 20 21 22	shuttle, to the classrooms, in a continuous loop, to allow the children in the classroom to understand that voyaging and navigation, in what is perceived as ancient for Hawaiian accomplishments, is no different than the	19 20 21 22	contributors of its future, of our future. So I don't know if I am making sense to you, but that is how I mean, I began simply by looking at trying
19 20 21 22 23	shuttle, to the classrooms, in a continuous loop, to allow the children in the classroom to understand that voyaging and navigation, in what is perceived as ancient for Hawaiian accomplishments, is no different than the voyaging of the space shuttle, of which L.C. Veitch	19 20 21 22 23	contributors of its future, of our future. So I don't know if I am making sense to you, but that is how I mean, I began simply by looking at trying to be supportive with the STEM program that I thought
19 20 21 22	shuttle, to the classrooms, in a continuous loop, to allow the children in the classroom to understand that voyaging and navigation, in what is perceived as ancient for Hawaiian accomplishments, is no different than the	19 20 21 22	contributors of its future, of our future. So I don't know if I am making sense to you, but that is how I mean, I began simply by looking at trying

1	behold, it brings me now to this juncture. And then I had	1	MS. CAROLINE BLANCO: I would like to start.
2	to really take a moment to consider what is it that is	2	DR. CRAIG FOLTZ: Please.
3	happening at this juncture.	3	MS. CAROLINE BLANCO: I really appreciate your
4	As I said, having spent time going back and	4	comments.
5	understanding the process, I think simply what I want to	5	And I think that NSF would view mitigation as a
6	say is that here is an opportunity, I believe, that the	6	way to move forward in the direction that you have just
7	National Science Foundation, with the development of a	7	described. And if there are, I guess, some specifics,
8	telescope, could perhaps consider taking a closer look at	8	some ideas, either concepts or specifics, that you had in
9	the cultural components that are important in moving	9	mind to try to bridge this gap, if there is one, to try to
10	forward. And that is, is there a way for us to sit down	10	move forward, that would be consistent with the concerns
11	as science and as Hawaiians, understanding that we have	11	of Native Hawaiians, that would be extremely valuable.
12	something to contribute here, and be able to now integrate	12	MR. SOL KAHO'OHALAHALA: Well, you know, I have
13	and bring these ideas together that would lend support to	13	been involved with Hokule'a for over 30 years. I was very
14	the Hawaiians and to lend support to the idea of science	14	fortunate to have been introduced to the canoe in 1975.
15	and advancement in science.	15	And the canoe has actually opened up, for me, new
16	Because I think we are the same, we are the	16	horizons, if you want to call it that. And it's also
17	people who have who have that in our history, to be	17	challenged, I think, me personally to consider what
18	participants and to be at least to acknowledge that.	18	voyaging really meant.
19	And if there is a way to integrate and a way to bring this	19	Because if you take that same concept of the
20	together, to me that would be important. And that would	20	canoe and looking at horizons as not places to be fearful
21	be the reason why I would sit at this table.	21	of, but places to discover, that, to me, is what the canoe
22	I think, you know, we could find many, many	22	represents. And in that, had the Hawaiians or Polynesians
23	examples of what might be wrong about this process or this	23	not considered horizons as new places with potentially new
24	project. And, at the same time, I would like to think	24	discoveries, we would not have advanced Polynesia to being
25	that while we are looking at those challenges might we not	25	the largest nation of islands in the largest ocean on
	87		89
1	might we not consider how we might internalize that and	1	earth.
2	look at them from a Hawaiian cultural perspective and find	2	But it is that part of it, to me, that opened up
3	ways to bridge, to build, to make better what are	3	areas that I had never thought about as a Hawaiian. One
4	perceived challenges, and allow that to be placed before	4	was to finally acknowledge that the canoe is the most
5	this body, before this group, and to be given true	5	efficient design of a seafaring vessel, even in these
6	consideration.	6	modern times. That the double-hull canoe has already been
7	Because if not, then we have made no headway in	7	demonstrated, even by computer-generated models, of what
8	terms of allowing the Hawaiians to truly participate in a	8	is the most efficient design of a vessel on the open seas.
9	project that is of this scale and is a project that is	9	And it came out with a double hull. So that innovation,
10	involving such an important place for Hawaiian people.	10	to me, is partly the kind of innovation, and I am critical
11	So it's with that, that I come forward to be	11	thinking and planning, that I think Polynesians should be
12	able to participate. And I am able to tell you that's who	12	agreed with and that Hawaiians should be acknowledged for
13	I am.	13	that dynamics.
14	But I thank you for this opportunity.	14	But in having participated on this, I was
15	And I am looking forward to having those	15	allowed an opportunity to now sail throughout Polynesia.
16	discussions where we could talk really nitty gritty about	16	So I have been on several voyages through the Society
17	what those challenges are, whether they are perceived	17	Islands, to the Cook Islands. And even have now been able
18	challenges or whether or not they are real challenges, and	18	to be a part of these islands in Polynesia to now
19	then be able to now have a broader discussion that will	19	recognize that culturally, even by our language and by our
20	help to figure out how we can resolve those kinds of	20	practices, we are definitely the same group of people.
21	challenges. And then lend Hawaiians an opportunity to	21	Now, having been on the canoe, I was now going
22	have input on that so that it's one that is inclusive.	22	to be introduced to the idea of seafaring. So here is
23 24	MS. ANNELLE AMARAL: Sol, are you open to some questions and dialogue?	23 24	where we have an opportunity now on the canoe as the perceived ancient vessel to try and teach navigation. And
24	questions and dialogue?		here is where, I think, we all learned how to put back
25	MR. SOL KAHO'OHALAHALA: Yeah.	25	hara is whara I think we all laornad how to put book

23 (Pages 86 to 89)

	90		92
1	into some order and understanding how we will navigate our	1	know.
2	canoe, north, south, east or west.	2	Is there an opportunity that science and culture
3	When I look at Haleakala, and I look and read	3	can come together, considering these kinds of ideas that I
4	about some of the cultural sites that have been part of	4	think are not old ideas?
5	Haleakala, it's clear to me and I am sure all Hawaiians	5	You know, I just want to add just a little bit.
6	would agree that it is of such significance that the	6	When I said that we are a dynamic people, I want to
7	Hawaiians themselves went to the summit of Haleakala to	7	embrace the idea the dynamics is that, as a Hawaiian, I
8	have built their sites. And whether or not the practice	8	think I am still able to create. No different than me
9	is recorded or known, nonetheless, the sites speak to the	9	having to write a song about what occurred at this time
10	fact that Polynesians and Hawaiians understood that these	10	and place, I should be able to allow some of the cultural
11	are important places and perhaps one of the best places to	11	practices to also be created in this time and this place.
12	have learned or taught navigation you know, taught	12	And that we should be responsible for the creation of
13	navigation.	13	these things because we are dynamic.
14	If we had to consider some of the future uses of	14	To say that everything ends and we can only
15	a place like Haleakala, can that future also include those	15	refer to them as kahiko, to me doesn't speak to who I am
16	things that are cultural? So is there a place at	16	as a Hawaiian. I want to be able to say I have my task in
17	Haleakala where we might once again allow for the teaching	17	which I want to embrace and acknowledge and understand so
18	of navigation?	18	that I can discern the conditions of these times. But I
19	So I am looking at, well, you are looking at	19	also, as a Hawaiian, accept the fact that I am also
20	innovations of studying the sun and, at the same time,	20	creative and I have the ability as a Hawaiian to be as
21	would we not consider the importance of Hawaiians using	21	innovative as my kupuna have been, and that I should be
22	the same place to study their own skills at celestial	22	able to create and move forward with the idea that we are
23	navigation, you know? I am not sure. But I would think	23	continuously dynamic and we are still a living people. So
24	that we have a responsibility as Hawaiians to ensure that	24	we don't just end at one place.
25	our cultural practices are going to be left intact for the	25	So what is our future?
20

And so when you are asking me is there a way to bridge, well, one of my thoughts is that, well, allow perhaps the sites at Haleakala to embrace once more cultural practitioners so that they, too, can continue the teaching of ancient practices. Our star compass that we use for navigating	2 3 4 5 6 7 8 9 10 11 12	And I think that we need to encourage Hawaiians to participate in the future and allow them those practices. So it's not just looking at innovations of a project that is scientific that is looking toward the future, but it's also one that is going to embrace the idea that Hawaiians are as innovative and creative in their future, too. So they should be allowed the same practice or exercise as Hawaiians to continuously move forward. So in that, and given these conditions, given these ideas, is there room for this kind of dialogue to allow for both?
2 3 4 5 6 7 8 9 10 11 12 13	future. And even though they might be relegated as ancient ways of teaching and of acquiring celestial understanding, it is still at the place that it probably may have been located in our times of kahiko. So does the future allow us now the same opportunity to continue this practice? And so when you are asking me is there a way to bridge, well, one of my thoughts is that, well, allow perhaps the sites at Haleakala to embrace once more cultural practitioners so that they, too, can continue the teaching of ancient practices. Our star compass that we use for navigating Hokule'a, and what we have all learned is understanding	2 3 4 5 6 7 8 9 10 11 12 13	And I think that we need to encourage Hawaiians to participate in the future and allow them those practices. So it's not just looking at innovations of a project that is scientific that is looking toward the future, but it's also one that is going to embrace the idea that Hawaiians are as innovative and creative in their future, too. So they should be allowed the same practice or exercise as Hawaiians to continuously move forward. So in that, and given these conditions, given these ideas, is there room for this kind of dialogue to allow for both? MS. CAROLINE BLANCO: I think the short answer
2 3 4 5 6 7 8 9 10 11 12 13 14	future. And even though they might be relegated as ancient ways of teaching and of acquiring celestial understanding, it is still at the place that it probably may have been located in our times of kahiko. So does the future allow us now the same opportunity to continue this practice? And so when you are asking me is there a way to bridge, well, one of my thoughts is that, well, allow perhaps the sites at Haleakala to embrace once more cultural practitioners so that they, too, can continue the teaching of ancient practices. Our star compass that we use for navigating Hokule'a, and what we have all learned is understanding the movement of the sun from its position, from the	2 3 4 5 6 7 8 9 10 11 12 13 14	And I think that we need to encourage Hawaiians to participate in the future and allow them those practices. So it's not just looking at innovations of a project that is scientific that is looking toward the future, but it's also one that is going to embrace the idea that Hawaiians are as innovative and creative in their future, too. So they should be allowed the same practice or exercise as Hawaiians to continuously move forward. So in that, and given these conditions, given these ideas, is there room for this kind of dialogue to allow for both? MS. CAROLINE BLANCO: I think the short answer is, yes, there is an opportunity. And that is how we've
2 3 4 5 6 7 8 9 10 11 12 13 14 15	future. And even though they might be relegated as ancient ways of teaching and of acquiring celestial understanding, it is still at the place that it probably may have been located in our times of kahiko. So does the future allow us now the same opportunity to continue this practice? And so when you are asking me is there a way to bridge, well, one of my thoughts is that, well, allow perhaps the sites at Haleakala to embrace once more cultural practitioners so that they, too, can continue the teaching of ancient practices. Our star compass that we use for navigating Hokule'a, and what we have all learned is understanding the movement of the sun from its position, from the equinox to the solstice, and the degree of movement that	2 3 4 5 6 7 8 9 10 11 12 13 14 15	And I think that we need to encourage Hawaiians to participate in the future and allow them those practices. So it's not just looking at innovations of a project that is scientific that is looking toward the future, but it's also one that is going to embrace the idea that Hawaiians are as innovative and creative in their future, too. So they should be allowed the same practice or exercise as Hawaiians to continuously move forward. So in that, and given these conditions, given these ideas, is there room for this kind of dialogue to allow for both? MS. CAROLINE BLANCO: I think the short answer is, yes, there is an opportunity. And that is how we've looked at mitigation, as an opportunity, both for onsite,
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	future. And even though they might be relegated as ancient ways of teaching and of acquiring celestial understanding, it is still at the place that it probably may have been located in our times of kahiko. So does the future allow us now the same opportunity to continue this practice? And so when you are asking me is there a way to bridge, well, one of my thoughts is that, well, allow perhaps the sites at Haleakala to embrace once more cultural practitioners so that they, too, can continue the teaching of ancient practices. Our star compass that we use for navigating Hokule'a, and what we have all learned is understanding the movement of the sun from its position, from the equinox to the solstice, and the degree of movement that the sun goes. And we have created our star compass to	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	And I think that we need to encourage Hawaiians to participate in the future and allow them those practices. So it's not just looking at innovations of a project that is scientific that is looking toward the future, but it's also one that is going to embrace the idea that Hawaiians are as innovative and creative in their future, too. So they should be allowed the same practice or exercise as Hawaiians to continuously move forward. So in that, and given these conditions, given these ideas, is there room for this kind of dialogue to allow for both? MS. CAROLINE BLANCO: I think the short answer is, yes, there is an opportunity. And that is how we've looked at mitigation, as an opportunity, both for onsite, offsite. If there is some sort of educational program you
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	future. And even though they might be relegated as ancient ways of teaching and of acquiring celestial understanding, it is still at the place that it probably may have been located in our times of kahiko. So does the future allow us now the same opportunity to continue this practice? And I know that it was represented that you are the signatory of the Maui Community College proposal that has been put as a mitigating proposal, is that correct? MR. SOL KAHO'OHALAHALA: I don't know if I am the signatory to that, but I do know that was a document that had already been submitted. I am aware of it and I	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 would be memorialized in the agreement, the memorandum of agreement. That may potentially include adoption of a part, all of, any of the mitigation proposals that have been submitted. They wouldn't actually go into effect unless the National Science Foundation decided to approve funding for the ATST. And then construction would go forward. If that decision happened, the memorandum of agreement would be combining and would be implemented at that point. So the way it would be drafted is, the memorandum of agreement that is to say, would be if the proposed funding is approved, these are the steps we would agree to, this is the mitigation we would all agree to undertake. So this is the opportunity to put forward some of these specific ideas. This is part of the purpose of this meeting today, also tomorrow. As I've said several
6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	MR. SOL KAHO'OHALAHALA: All I was going to say before, Kiope, was that my hope is that we can allow for this to occur. Because, you are right, I am not here to speak for all Hawaiians. But if we are able to allow for these kinds of discussions to occur, it is my hope that is what my contribution is. MS. ANNELLE AMARAL: So I need to back up a little bit. Because I think we are talking about sort of the beginning of the pencil and paper exercise of the memorandum of agreement, with some specific suggestions to mitigate. And I know that it was represented that you are the signatory of the Maui Community College proposal that has been put as a mitigating proposal, is that correct? MR. SOL KAHO'OHALAHALA: I don't know if I am the signatory to that, but I do know that was a document	5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 would be memorialized in the agreement, the memorandum of agreement. 	98		100
1	for their review and comment. And then it would be a	1	resolves those issues.
2	process where everybody would be engaged in that and try	2	MS. CAROLINE BLANCO: If I can just
3	to, you know, work with that and come up with perhaps	3	MR. SOL KAHO'OHALAHALA: It could be one of the
4	another innovation. And depending what the outcome is, of	4	documents, should you resolve all of those other layers,
5	course. But this is the opportunity to provide specific	5	that now comes about with an opportunity that says that
6	mitigation measures that could be considered.	6	there is a program that could help support the community
7	MR. SOL KAHO'OHALAHALA: Okay. I guess my only	7	in terms of education, K to 12, that allows for these
8	other comment is that the MCC Mitigation Proposal is not	8	kinds of studies to occur within the schools and the
9	the proposal or the document that should take precedence	9	community colleges, that lead to perhaps work in the field
10	over this process. It is something that is supportive of	10	of astronomy. That's what I see the mitigation proposal
11	this should the outcome be that they would allow for these	11	as.
12	kinds of programs to be initiated. But it's not the	12	So it's one component that at least tries to set
13	document that precedes these processes is what I wanted to	13	in place a track that would allow Native Hawaiians at
14	share.	14	least to participate here. And it could become a part of
15	MS. CAROLINE BLANCO: I am not sure I am	15	the entirety of this, but it's not the document that
16	following that.	16	resolves all those things.
17	Because the way I see it is let's say, for	17	MS. CAROLINE BLANCO: Is it fair to characterize
18	example, if NSF were to decide that the MCC proposal would	18	it as a mechanism through which these other ideas can be
19	be sufficient mitigation for this, and the consulting	19	realized?
20	parties, or some of them, agreed, and the SHPO agreed, the	20	MR. SOL KAHO'OHALAHALA: It would cover a part
21	Advisory Counsel agreed, we memorialized that in a	21	of it. But I think, in what I am hearing from the earlier
22	memorandum of agreement, that is how it would play out.	22	discussions, that there are several other layers that need
23	Then if there were a decision to go ahead and fund, that	23	to be resolved.
24	memorandum of agreement would be part of that decision.	24	MS. CAROLINE BLANCO: Okay.
25	It would have to be included in a decision. So any	25	MR. SOL KAHO'OHALAHALA: So I don't want to say
	99		101
1	decision to fund would have to incorporate that memorandum	1	this is going to take care of all of those.
2	of agreement and become enforceable.	2	MS. CAROLINE BLANCO: Right.
3	MS. ANNELLE AMARAL: There is another comment.	3	MR. SOL KAHO'OHALAHALA: It's not.
4	DR. CRAIG FOLTZ: I think I understood Sol's	4	MS. CAROLINE BLANCO: Right.
5	comment different.	5	MR. SOL KAHO'OHALAHALA: But it would be a
6	MS. CAROLINE BLANCO: Okay.	6	component. But there still needs to be all of these other
7	DR. CRAIG FOLTZ: That was in terms of	7	levels of
8	precedence, in terms of trying to mitigate the harm, that	8	MS. ANNELLE AMARAL: I wonder if I can clarify.
9			j.
9	what you are proposing take precedence over the MCC	9	As I came into this, which was just this morning, what I

In an acknowledgment that this has adverse impact or effect on Native Hawaiians, Native Hawaiian culture, there is an attempt to minimize that impact or effect, or mitigate that impact or effect. And today's discussion is about minimizing or mitigating that adverse impact or effect. That is not to say that this is a trade-off for,

26 (Pages 98 to 101)

	102		104
1	muffle, to try to work out the hard thing about this	1	process would allow for.
2	project coming up and its effect on the Native Hawaiians.	2	MS. CAROLINE BLANCO: Yes. The answer is, yes,
3	MR. KIOPE RAYMOND: I think you have may I?	3	we are open to those ideas.
4	I think you've recapped it, but the November 8th letter, I	4	I guess I am, in all candor, trying to translate
5	would just clarify, that avoidance and minimization are	5	that into something concrete to be included in a
6	not part of it. It's only mitigation, although semantics	6	memorandum of agreement. I would defer to you and others
7	of minimization.	7	in the room who have some ideas about how those goals
8	MS. CAROLINE BLANCO: Other than the park.	8	could be accomplished.
9	MR. KIOPE RAYMOND: Other than the park. Thank	9	MR. KIOPE RAYMOND: I have a question for Sol.
10	you.	10	Have you seen Uncle Charlie's proposal?
11	MS. ANNELLE AMARAL: Right, other than the park.	11	MR. SOL KAHO'OHALAHALA: Yeah, I saw Uncle
12	MS. CAROLINE BLANCO: Are there some specific	12	Charlie's proposal.
13	ideas you had that we ought to consider maybe including in	13	MR. KIOPE RAYMOND: I just wondered.
14	an MOA?	14	MR. SOL KAHO'OHALAHALA: And I guess the way I
15	MR. SOL KAHO'OHALAHALA: Well, I think I used	15	want to answer your question is that because I do not want
16	the example of the star compass as an idea.	16	to be perceived as speaking for all Hawaiians, that what I
17	And as I said, that may be one of many other	17	am hoping is that there will be discussions with Native
18	ideas that have not yet been placed on the table for	18	Hawaiians and organizations who are interested, where we
19	consideration or discussion.	19	can put these ideas before each other and begin to talk
20	But is NSF open to allowing these kinds of at	20	about how they view these ideas as part of, you know,
20		21	mitigation. And is that something that collectively they
22	this juncture	22	could come to any kind of agreement about, then that would
23	MS. CAROLINE BLANCO: Absolutely. MR. SOL KAHO'OHALAHALA: to allow for these	23	allow see, I could go down a whole list of things that
23	kinds of discussions or ideas to emerge and come forth?	23	I think, you know. But that is not going to do you any
24	That is my point, is allowing for so I can say I am trying	24	justice. It's not going to do the Hawaiian community any
2.5	That is my point, is anowing for so I can say I am trying	23	Justice. It's not going to do the Hawanan community any
	103		105
1	to open an opportunity here where there might be	1	justice by me just going down the list.
2	consideration by NSF to take look at how cultural concerns	2	What I am saying is that the ideas that I hope
3	might be integrated in trying to resolve and move forward.	3	will emerge is ideas that I think would come about from
4	Okay.	4	those discussions within the Hawaiian community. And the
5	It's clear to me that if you just look at some	5	timeframe is what I am not very clear about.
6	of the sites that are at Haleakala, by the reports, they	6	MS. CAROLINE BLANCO: Right. I think therein
7	have already been destroyed. They have already been	7	lies part of the issue. I think that there are always
8	dismantled. And some of them don't exist any longer. But	8	opportunities that may exist.
9	how do you resolve those kinds of issues, you know?	9	For purposes of the 106 consultation process,
10	I am not proposing that we go back and	10	our hope was to include certain mitigation measures in a
11	reconstruct them, you know, but I am open to the idea of	11	memorandum of agreement. And our hope is that this stage
12	considering what Hawaiians might want to propose in terms	12	of our process will begin to put those things in a
13	of, I guess, mitigation, you know.	13	memorandum of agreement.
14	Are you open to those ideas that would allow	14	MR. SOL KAHO'OHALAHALA: Then let me ask a real
15	Native Hawaiians to have that kind of input, you know?	15	quick question.
16	Because when we get back to some of the cultural	16	Given what you just said now, is it the
17	concerns, those hurts are already there. They have been	17	expectation that the participants that are here, that are
18	done.	18	participating in these consultation processes, is where
19	The question is, can you allow for Native	19	you expect those ideas for the MOA are going to be
20	Hawaiians to find ways to mitigate or find remedy or ideas	20	rendered from?
21	that help to rebuild or and I am not talking rebuild	21	MS. CAROLINE BLANCO: The list of all of the
22	the site, but I am talking an opportunity to allow for	22	consulting parties. I mean, only a small number are
2.2	rebuilding from a Hawaiian perspective.	23	represented here today.
23			
23 24	If you are open to those ideas, then I think	24	But, again, as I've said, I mean, the outreach

27 (Pages 102 to 105)

	106		108
1	come up with here would be sent out for review and comment	1	MR. KIOPE RAYMOND: I will.
2	by the whole list of 26, 28 I forget the number now	2	MS. ANNELLE AMARAL: Yes, then.
3	consulting parties in the process.	3	MR. KIOPE RAYMOND: One of the things that I
4	MR. SOL KAHO'OHALAHALA: Okay. Then the only	4	noticed and I can only I can anecdotally share is
5	thing I can say is, for me, personally, is if you can come	5	there was a public scoping process. Someone in the room
6	about with some of those suggestions today from those	6	remembered the former director, Wayne Van Citters, came
7	people who are participating, within this day or two,	7	and there was a meeting at the Haiku Community Center.
8	then, hopefully, it comes about because there is at	8	And a microphone was set up as if it were going to be an
9	least there's been discussions about it and there is some	9	official public scoping meeting. And people from the
10	consensus about any one idea that might be offered to be	10	community went to that and offered heartfelt testimony
11	included in an MOA.	11	that night.
12	Short of that and I think there may be other	12	And I remember the night very clearly because
13	ideas that are still sort of out there. And those won't	13	Former Director Van Citters I had read a letter from
14	be identified unless there are more opportunities for	14	him and I was referring to him and somebody from the
15	discussions within the community.	15	back of the room said, well, that's him right there,
16	DR. CRAIG FOLTZ: I think we can allow for some	16	that's Wayne. And he said, "Hey, glad to meet you." So
17	openness. The difficulty is we can't establish a sense	17	that is how come I remembered the night.
18	that we can do everything.	18	The point I am making is that the process needs
19	But we could, for example, think about trying to	19	to be a little bit more clear about which nights were
20	undertake a study as to what other types of mitigation	20	official, which nights were public scoping, official,
21	might be possible arising from the Native Hawaiian	21	which nights were just, hey, let's share some thoughts.
22	community and have those included for planning purposes	22	And that very first night, there was some very
23	later on in the project.	23	compelling testimony that I recall and it would have to
24	You know, by putting something in an MOA that we	24	be anecdotal against the telescope, but it was never
25	will do the following, we will close down the telescope	25	official. Therefore, it was never part of the record,
	107		109
1	after 45 years, the signatory can hold us responsible for	1	never going to be something that KC Environmental
2	that.	2	publishes. And I think, in the future, that needs to be
3	If we say we will establish a group that will	3	much more clear.
4	investigate other cultural mitigation, onsite and offsite,	4	MS. CAROLINE BLANCO: Charlie, if you want to
5	such as your proposal for the star compass which I	5	respond to that, I am not sure that
6	think is absolutely excellent NSF is not going to sign	6	MR. KIOPE RAYMOND: I saw him eat something. I
7	off on something that says, and then we will do what we	7	saw him put it in his mouth. That's why I brought it up.
8	are told to do, because that might include something that	8	MS. CAROLINE BLANCO: I am not sure this is
9	is completely out of our ability to fund.	9	viewed the same way by everybody. Maybe Charlie could add
10	So you see where the tension is?	10	input after he is done.
11	And I would defer to counsel here as to whether	11	DR. CHARLIE FEIN: I'm sorry. I am eating one
12	there is some way that we can include reference to an	12	of those
13	activity that will be supported to develop.	13	DR. CRAIG FOLTZ: All his dental work is done.
14	MS. CAROLINE BLANCO: I think that there can be	14	MR. KIOPE RAYMOND: I saw him put it in his
15	some instruction.	15	mouth, too. That's why.
16	Also, I would defer the SHPO is here. And	16	DR. CHARLIE FEIN: Thanks a lot.
17	they have a lot of experience with helping agencies to try	17	The meeting to which Kiope is referring was an
18	to develop probably very similar things. And I think	18	informal meeting that was requested. We had a lot of
19	their guidance would be incredibly welcome on this point.	19	comments that said we need more information. So even
20	MS. ANNELLE AMARAL: Kiope.	20	though it wasn't part of the official NHPA process, we set
21	MR. KIOPE RAYMOND: Caroline, before they start,	21	up a meeting, an additional meeting, to inform the public.
22 23	could I bring up something that I forgot to share when I was sharing about what might help NSF in the future when	22 23	And that meeting did produce a number of comments. Every comment we've ever gotten has or will be
23 24	they take testimony from people?	23	addressed in the final environmental. There is nothing
24	MS. ANNELLE AMARAL: Will you be brief?	25	MR. KIOPE RAYMOND: That's heartening to hear

It's very problematic for us. We are joined in this by the Narro Incenting were not incenting. We made sure it we sidthar, because the with wasn't. 10 We are concernadout the 'ACHP here in case 12 construction incenting. We may not formal. 21 We have concernadout the 'ACHP here in case 13 scoreptice inclustely and were oblegating. 10 We are concernadout the 'ACHP here in case 14 MRS MARON ID ANDO OMORO: If I could just adi 10 We have construction. And our letter. 14		110		112
3 addressed, thar's all need. 3 MS, PUA AUU: Pua Au, Administrator of the 4 MS, CAROLINE BLANCO: Lihnik part of it is we 5 State Historic Preservation Division. And with me is 6 of it, but it's - 6 State Historic Preservation Division. And we're 7 MR, KIOPE RAYMOND: Lihnik some people	1	because there has been no record heretofore of anyone	1	scope is relatively narrow.
4 MS. CAROLINE BLANCO: I think part of it is vere as till in the middle of the process, or toward the end 4 State Historic Preservation Division. And with me is 5 are still in the middle of the process, or toward the end 5 Nancy McMahon, she's a deputy. 7 MK, KIOPE RAYMOND: I think some people - all I 7 80 our scope is claitively narrow. And we're 9 believing it was part of the public scoping, they were 9 site, the height, the color or the construction. It's 10 DR. CHARLIE TEN: We did say, right at the 10 Not have the letter from the ACHP. 11 DR. CHARLIE TEN: We did say, right at the 10 other people didty git, We also have our letter. 14 MS. SHARON LOANDO-MONCO: If could just add 14 We have concerns about the timing issues as had 15 something, at ma blarom. The informal meetings were not 13 Halekada. 16 MR. KIOPE RAYMOND: That's the confirmion an appendic to bar. 17 regard to the impact on the cultural properties of 17 meetings that we had planned to do - 17 regard to the impact on the cultural properties of 18 addressing and shring with the ST. That a some point. 10 Halekada.	2	having said anything that night. So if it's going to be	2	MS. ANNELLE AMARAL: Pua, what I need
5 are still in the middle of the process, or toward the end 5 Nancy McMahon, she's a deputy. 6 of it, but it's So our scope is relatively narrow. And we're 7 MR. KIOPE RAYMOND: 1 think some people all I So our scope is relatively narrow. And we're 8 was saying is some people were coming that night, 9 9 believing it was part of the philos conjug, they were 9 10 Standing at the microphone, giving testimony. 10 11 DR. CHARLE HEIN: We did say, right at the 11 12 outset, that is not a formal meeting. Were was not 14 13 outset, that is not a formal meeting. Were not 13 14 MS. SHARON I. OANDO-MONRO: If I could just add 14 15 meeting that we had planned to do 17 16 recorded because they were not formal. All formal 16 17 meeting that we had planned to do 17 18 MR. KIOPE RAYMOND: That's the condusion I am 18 19 addressing and sharing with the NSF. That some point. 19 10 when yee test were hormal. All formal. 19 11 movis a list latit latit bo to	3	addressed, that's all I need.	3	MS. PUA AIU: Pua Aiu, Administrator of the
6 of it, but its 6 So our scope is relatively narrow. And we're going to try and stay within our scope. 7 MR. KIOPE RAYMOND: 1 think some peopleall 11 7 going to try and stay within our scope. 8 was string is some people were coming that night, but were concremend that we cannot mitigate the site, the height, the color or the construction. It's very problematic for us. We are joined in this by the 10 10 standing at the microphone, giving testimony. 10 11 DB. CHARLIF FBN: We did say, right at the 10 10 12 outset, that this is not a formal meeting. We made sure 11 10 14 MS. SHARON LOANDO-MONRO: If I could just add 15 10 15 something. 1 and Sharon. The informal meetings were not 11 10 10 16 meetings that we had planned to do - 11 10 17 meetings that we had planned to do - 11 10 18 Haleakakau. 10 10 Nak I file falt to be talking about i 10 most so that in the KNF. That at some print, within to 20 solut it, either with an MOA in band, 20 charlie has just charified it will be addressed, 3 111 111 11 really inportant. 111 111 112 112	4	MS. CAROLINE BLANCO: I think part of it is we	4	State Historic Preservation Division. And with me is
7 MR. KIOPE RAYMOND: I think some people all I 7 going to try and stuy within our scope. 8 was saying is some people were coming that night. 8 10 standing at the microphone, giving testimony. 10 11 DR. CHARLIE FEIN: We did say, right at the 11 12 outset, that this is not a formal meeting. We mad sure 12 13 we said that, because we knew it wasnit. 13 14 MS.SHARON LOANDO-MONRO.FI I could just add 14 15 something. I am Sharon. The informal meetings were not 16 16 recorded because they were not formal. All formal 16 17 meetings mad sharing with the NST. That a some point, 16 18 MR. KIOPE RAYMOND: That's the confusion I am 18 19 addressing and sharing with we by know that the sale masc how and the cultural properties of 17 24 because I have two or three people say, whatever 24 18 24 public, maybe needs to be a lifely bit more clear. 23 And we have copies of that letter for a woll. 24 really important. 111 111 111	5	are still in the middle of the process, or toward the end	5	Nancy McMahon, she's a deputy.
9 was saying is some people were coming that night, 8 We are concerned that we cannot mitigate the site, the height, the color or the construction. It's the construction. It's 9 believing it was part of the public scoping, they were standing at the microphone, giving testimony. 9 site, the height, the color or the construction. It's someting. Lam Sharon Children in the construction. It's someting. Lam Sharon. The informal meetings were not recorded because they were not formal. All formal 11 Not have concerns about the timing issues as had been recorded because they were not formal. All formal 10 MR. KIOPE RAYMOND: That she contusion I an addressing and sharing with the NSF. That at some point, diverspect to Sharon and Charlie, that the public – what 11 Halewala. 11 really important. 11 And it's a little late to be talking about it now if you have already decided that you can't change the the public, maybe needs to be a little bit more clear. 11 11 really important. 11 11 11 really important. 11 12 MR. KIOPE RAYMOND: Thas was rearrand that was over said, even in informal. 11 12 MR. KIOPE RAYMOND: Thas was rearrand. 11 13 how you want to go about it, either with an MADA in hand, and you discuss that, or without an MAOA. But there seems avereything that was ever said, even in informal.	6	of it, but it's	6	So our scope is relatively narrow. And we're
9 believing it was part of the public scoping, they were standing at the microphone, giving testimony. 9 site, the height, the color or the construction. It's very problematic for us. We are joined in this by the NR. KIOPE RAYMOND: Marking and sure outset, that this is not a formal meetings were not recorded because they were not formal. All formal 10 We have concerns about the timing issues as had been raised by some other people, in that the consultation took place so far after the site was chosen, without 19 addressing and sharing with the NST. That at some poin, addressing and sharing with the NST. That at some poin, when you — when the contractors are hired, with no 10 We have concerns about the timing issues as had been raised by some other people, in that the consultation took place so far after the site was chosen, without 11 addressing and sharing with the NST. That at some poin, when you — when the contractors are hired, with no 10 Mat it's a little late to be talking about it now if you have already decided that you can't change the height, the color, the construction. Ad our letter details our concerns to that. 12 the public hears, what they know that they said to the inserpet to whart 1 said that night. And I think it's just 111 111 111 111 111 111 112 111 113 114 114 113 115 114 115	7	MR. KIOPE RAYMOND: I think some people all I	7	going to try and stay within our scope.
10 standing at the microphone, giving testimony, 10 very problematic for us. We are joined in this by the 11 DR. CHARLE FEIN. We did say, right at the 11 National Park Service and the ACHP. 12 outset, that this in ot a formal meeting, we made sure 13 We have the letter from the ACHP. 14 MS. 			24	
	25	MS. PUA AIU: We only have a few comments. Our	25	will have part of them here tomorrow.

T

29 (Pages 110 to 113)

	114		116
1	I think for our scope of what we can do, that's	1	And I guess, lastly, you know, my thought is all
2	about all we have to say, that we think that the 106	2	the consulting parties, even though if you provided
3	process has not been followed in terms of timing,	3	documentation like an EIS, they still need to be brought
4	basically.	4	together to hear each other out.
5	And I will let Nancy go.	5	And, perhaps, the western concept of these open
6	MS. NANCY McMAHON: We have a lot of other	6	houses or scoping meetings isn't what is needed, it needs
7	partners that are concerned, Historic Hawaii, ACPH, the	7	to be more looked at. Because the impacts are Hawaiian in
8	National Park Service and their concerns. And part of	8	nature. And having a session, honoponopono session, with
9	their concerns are, I guess, when this even this	9	the Hawaiians together is another process, another way to
10	meeting. And it goes back to what Kiope said about your	10	maybe look at having another type of setting that these
11	scoping meetings and your informal consultations.	11	people can get together. And we can hear everybody out.
12	When I saw the open house and this is exactly	12	Because, as I said, there will be some Hawaiians
13	how the partners saw that the open house is typically	13	very much for it, there will be some Hawaiians with
14	what the military do here. And they have stations set	14	different perspectives of it, there will be some Hawaiians
15	around in an area, and people walk around them. And I	15	trying to mitigate things. I think everybody needs to
16	think I heard this when I first walked in. It doesn't	16	hear everybody's perspective.
17	give any of the consultant parties a time to hear each	17	MS. CAROLINE BLANCO: If I can respond to some
18	other out.	18	of this.
19	I think if they knew we could sit here and talk	19	What happened is I joined NSF in September. And
20	at a table like this today, I think they would have been	20	I spoke with Martha Catlin of the Advisory Counsel in
21	here.	21	October of 2007. And I said you know, given my strong
22	I didn't know that, either. We thought we were	22	background in historic preservation, I teach law school
23	going to have to walk around and pull you guys to the side	23	classes in it, written books on it, very dedicated to this
24	and talk to you informally, on the side, and raise our	24	field, I want to be sure that we do this right. This is
25	concerns. And that kind of confuses things.	25	the reason I was hired. I am very committed to this. And
	115		117
1	The other issue is that we got told we cannot	1	I said to her, we would like to meet with you to find out
1 2	The other issue is that we got told we cannot mitigate this. And it seems like we are going and we	1 2	I said to her, we would like to meet with you to find out what you think as the federal agency charged with
	-	1	-
2	mitigate this. And it seems like we are going and we	2	what you think as the federal agency charged with
2 3	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we	2 3	what you think as the federal agency charged with providing guidance to other federal agencies and dedicated
2 3 4	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. 2 3 4 5	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. And looking at other proposed sites that should be looked at versus the lengthy	2 3 4 5	what you think as the federal agency charged with providing guidance to other federal agencies and dedicated to the 106 process, what you think we need to do. And after a long discussion, in which I outlined
2 3 4 5 6	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. And looking at other proposed sites that should be looked at versus the lengthy timeframe it's going to take to do this project.	2 3 4 5 6	what you think as the federal agency charged with providing guidance to other federal agencies and dedicated to the 106 process, what you think we need to do. And after a long discussion, in which I outlined to her this concern about alternatives, and said this is a
2 3 4 5 6 7	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. And looking at other proposed sites that should be looked at versus the lengthy timeframe it's going to take to do this project. And we are, also, in the bigger picture of	2 3 4 5 6 7	what you think as the federal agency charged with providing guidance to other federal agencies and dedicated to the 106 process, what you think we need to do. And after a long discussion, in which I outlined to her this concern about alternatives, and said this is a science-driven project and it's unique from other federal
2 3 4 5 6 7 8	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. And looking at other proposed sites that should be looked at versus the lengthy timeframe it's going to take to do this project. And we are, also, in the bigger picture of NSF and I talked to Caroline about this NSF does not	2 3 4 5 6 7 8	what you think as the federal agency charged with providing guidance to other federal agencies and dedicated to the 106 process, what you think we need to do. And after a long discussion, in which I outlined to her this concern about alternatives, and said this is a science-driven project and it's unique from other federal activities in that either you go forward with the science
2 3 4 5 6 7 8 9	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. And looking at other proposed sites that should be looked at versus the lengthy timeframe it's going to take to do this project. And we are, also, in the bigger picture of NSF and I talked to Caroline about this NSF does not usually do very good 106 consultations, to begin with, on	2 3 4 5 6 7 8 9	what you think as the federal agency charged with providing guidance to other federal agencies and dedicated to the 106 process, what you think we need to do. And after a long discussion, in which I outlined to her this concern about alternatives, and said this is a science-driven project and it's unique from other federal activities in that either you go forward with the science or you don't. And the reason why the structure is set up
2 3 4 5 6 7 8 9 10	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. And looking at other proposed sites that should be looked at versus the lengthy timeframe it's going to take to do this project. And we are, also, in the bigger picture of NSF and I talked to Caroline about this NSF does not usually do very good 106 consultations, to begin with, on projects they have had in Hawaii. So we are really glad	2 3 4 5 6 7 8 9 10	what you think as the federal agency charged with providing guidance to other federal agencies and dedicated to the 106 process, what you think we need to do. And after a long discussion, in which I outlined to her this concern about alternatives, and said this is a science-driven project and it's unique from other federal activities in that either you go forward with the science or you don't. And the reason why the structure is set up the way it is, the specifications, are for scientific
2 3 4 5 6 7 8 9 10 11	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. And looking at other proposed sites that should be looked at versus the lengthy timeframe it's going to take to do this project. And we are, also, in the bigger picture of NSF and I talked to Caroline about this NSF does not usually do very good 106 consultations, to begin with, on projects they have had in Hawaii. So we are really glad that you've tried to do it in this situation and brought	2 3 4 5 6 7 8 9 10 11	what you think as the federal agency charged with providing guidance to other federal agencies and dedicated to the 106 process, what you think we need to do. And after a long discussion, in which I outlined to her this concern about alternatives, and said this is a science-driven project and it's unique from other federal activities in that either you go forward with the science or you don't. And the reason why the structure is set up the way it is, the specifications, are for scientific reasons, this makes it a very big challenge. I was
2 3 4 5 6 7 8 9 10 11 12	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. And looking at other proposed sites that should be looked at versus the lengthy timeframe it's going to take to do this project. And we are, also, in the bigger picture of NSF and I talked to Caroline about this NSF does not usually do very good 106 consultations, to begin with, on projects they have had in Hawaii. So we are really glad that you've tried to do it in this situation and brought you on board to help them out through this process. And	2 3 4 5 6 7 8 9 10 11 12	what you think as the federal agency charged with providing guidance to other federal agencies and dedicated to the 106 process, what you think we need to do. And after a long discussion, in which I outlined to her this concern about alternatives, and said this is a science-driven project and it's unique from other federal activities in that either you go forward with the science or you don't. And the reason why the structure is set up the way it is, the specifications, are for scientific reasons, this makes it a very big challenge. I was looking for guidance from her. And she said, what you
2 3 4 5 6 7 8 9 10 11 12 13	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. And looking at other proposed sites that should be looked at versus the lengthy timeframe it's going to take to do this project. And we are, also, in the bigger picture of NSF and I talked to Caroline about this NSF does not usually do very good 106 consultations, to begin with, on projects they have had in Hawaii. So we are really glad that you've tried to do it in this situation and brought you on board to help them out through this process. And that is a good idea.	2 3 4 5 6 7 8 9 10 11 12 13	what you think as the federal agency charged with providing guidance to other federal agencies and dedicated to the 106 process, what you think we need to do. And after a long discussion, in which I outlined to her this concern about alternatives, and said this is a science-driven project and it's unique from other federal activities in that either you go forward with the science or you don't. And the reason why the structure is set up the way it is, the specifications, are for scientific reasons, this makes it a very big challenge. I was looking for guidance from her. And she said, what you need to do is write a letter to us that speaks about NSF's
2 3 4 5 6 7 8 9 10 11 12 13 14	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. And looking at other proposed sites that should be looked at versus the lengthy timeframe it's going to take to do this project. And we are, also, in the bigger picture of NSF and I talked to Caroline about this NSF does not usually do very good 106 consultations, to begin with, on projects they have had in Hawaii. So we are really glad that you've tried to do it in this situation and brought you on board to help them out through this process. And that is a good idea. I would recommend that we further with this	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	what you think as the federal agency charged with providing guidance to other federal agencies and dedicated to the 106 process, what you think we need to do. And after a long discussion, in which I outlined to her this concern about alternatives, and said this is a science-driven project and it's unique from other federal activities in that either you go forward with the science or you don't. And the reason why the structure is set up the way it is, the specifications, are for scientific reasons, this makes it a very big challenge. I was looking for guidance from her. And she said, what you need to do is write a letter to us that speaks about NSF's position on avoidance, minimization and mitigation, and,
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. And looking at other proposed sites that should be looked at versus the lengthy timeframe it's going to take to do this project. And we are, also, in the bigger picture of NSF and I talked to Caroline about this NSF does not usually do very good 106 consultations, to begin with, on projects they have had in Hawaii. So we are really glad that you've tried to do it in this situation and brought you on board to help them out through this process. And that is a good idea. I would recommend that we further with this further tomorrow we are not going to be here. We don't know if our partners are going to be able to come. That meeting is really about an MOA. And we are not ready for	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	what you think as the federal agency charged with providing guidance to other federal agencies and dedicated to the 106 process, what you think we need to do. And after a long discussion, in which I outlined to her this concern about alternatives, and said this is a science-driven project and it's unique from other federal activities in that either you go forward with the science or you don't. And the reason why the structure is set up the way it is, the specifications, are for scientific reasons, this makes it a very big challenge. I was looking for guidance from her. And she said, what you need to do is write a letter to us that speaks about NSF's position on avoidance, minimization and mitigation, and, at the close of that, request a meeting, and I promise you I will give it my full attention and we can set up a meeting within the next couple of weeks.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. And looking at other proposed sites that should be looked at versus the lengthy timeframe it's going to take to do this project. Then you have to look at the issue of who is going to be signatories to the MOA. You can have consulting parties, but who are going to be the	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	 what you think as the federal agency charged with providing guidance to other federal agencies and dedicated to the 106 process, what you think we need to do. And after a long discussion, in which I outlined to her this concern about alternatives, and said this is a science-driven project and it's unique from other federal activities in that either you go forward with the science or you don't. And the reason why the structure is set up the way it is, the specifications, are for scientific reasons, this makes it a very big challenge. I was looking for guidance from her. And she said, what you need to do is write a letter to us that speaks about NSF's position on avoidance, minimization and mitigation, and, at the close of that, request a meeting, and I promise you I will give it my full attention and we can set up a meeting within the next couple of weeks. I did just that, and provided all the supporting documentation. That is my November 8th letter to Martha. It was, in my opinion, not given immediate consideration. I sent a follow-up email in late December requesting further feedback, and, again, requesting a meeting. And they said, you know, we haven't gotten to it
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	mitigate this. And it seems like we are going and we still haven't looked at the avoidance perspective, we haven't looked at other mitigation. And looking at other proposed sites that should be looked at versus the lengthy timeframe it's going to take to do this project. And we are, also, in the bigger picture of NSF and I talked to Caroline about this NSF does not usually do very good 106 consultations, to begin with, on projects they have had in Hawaii. So we are really glad that you've tried to do it in this situation and brought you on board to help them out through this process. And that is a good idea. I would recommend that we further with this further tomorrow we are not going to be here. We don't know if our partners are going to be able to come. That meeting is really about an MOA. And we are not ready for the MOA yet. We want to make sure you have looked at the proposals and that you have made a decision where we are going to go, and that we have all agreed. Then you have to look at the issue of who is going to be signatories to the MOA. You can have	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 what you think as the federal agency charged with providing guidance to other federal agencies and dedicated to the 106 process, what you think we need to do. And after a long discussion, in which I outlined to her this concern about alternatives, and said this is a science-driven project and it's unique from other federal activities in that either you go forward with the science or you don't. And the reason why the structure is set up the way it is, the specifications, are for scientific reasons, this makes it a very big challenge. I was looking for guidance from her. And she said, what you need to do is write a letter to us that speaks about NSF's position on avoidance, minimization and mitigation, and, at the close of that, request a meeting, and I promise you I will give it my full attention and we can set up a meeting within the next couple of weeks. I did just that, and provided all the supporting documentation. That is my November 8th letter to Martha. It was, in my opinion, not given immediate consideration. I sent a follow-up email in late December requesting further feedback, and, again, requesting a

24	facts before me, either.	24	And there are only a few places where that could happen.
25	At a time in November, our office was going to	25	And the reasonable place is Mount Haleakala.

31 (Pages 118 to 121)

	122		124
1	And if that's the case, how would we do an	1	to have their input and they need to be on the record,
2	alternatives analysis there in that sense?	2	especially if they are not in agreement.
3	It would really be either, you know, seriously	3	MS. CAROLINE BLANCO: But if the Royal Order
4	consider an action and seriously consider no action	4	is I mean, they are a consulting party. And I am just
5	alternative.	5	concerned that if we send out these letters and nobody
6	And so, you know, I sort of view the MOA process	6	responds or they decide not to show up, what in your mind
7	as, you know, this is in the event that the action	7	is the federal agency's obligation?
8	alternative were adopted. This is what the package would	8	MS. PUA AIU: Part of the problem with this is
9	look like.	9	the format. Because we are all used to the Army saying,
10	It doesn't necessarily mean, even with an MOA,	10	oh, we're having an open house. And believe me, those are
11	that the agency is committed to funding it. It could	11	the most bogus things. They are a waste of time. You
12	still decide, no, it's not going to go forward. And that	12	don't go there to consult, so why waste your time going
13	is the perspective that we bring here.	13	there. We're all busy people. We don't really want to
14	MS. PUA AIU: Concerning the timing of this	14	walk around and be shown this is the site location, this
15	thing is a very difficult thing, especially because we	15	is what we are going to do, blah, blah, blah.
16	don't know who the signatories are. If you are	16	We have in the past, when we did the
17	negotiating a MOA, you normally are under the impression	17	consultation, they brought us all into a room, it was
18	that you are going to move forward, that your EIS is done,	18	pretty miserable negotiations, but we did it for several
19	that you are going to move forward on it. So you are	19	days and several times. And it wasn't happy. But we were
20	mitigating because you are going to move forward.	20	able to pound out some things in those negotiations
21	In this case, you have a lot of people who, one,	21	because everybody could sit there and talk about where
22	feel like they haven't been properly consulted, and, two,	22	they could go. You could get movement on some people.
23	still think that the no action alternative is the better	23	But they were in a different place, you know. They had
24	thing.	24	gotten their right and they were going to proceed, so I
25	And this has happened before, where you then	25	think they were in a different place.
	123		125
1	take the MOA and say, look, everybody agrees. But,	1	MS. CAROLINE BLANCO: And I had a conversation
2	actually, half, or more than half, of the parties who are	2	with Betsy Merritt of the Trust, several of them,
3	consulted don't agree.	3	conversations, about this. And she asked me, are you done
4	And so maybe, Sol, I will use you as an example.	4	with your NEPA work. I said no, because we were looking
5	You have Sol and you have Uncle Charlie, and	5	at this as sort of a combined process, trying to do things
6	they agree, and you let them be signatories, whatever, but	6	hand in hand. She said, oh, good, one of the biggest
7	you haven't actually completed the very difficult process	7	concerns is that people finish their NEPA process before
8	of consultation. Which our concern is that that process	8	they are done with an NHPA, and this is great.
9	isn't near complete yet. And we are not the SHPD is	9	MS. PUA AIU: True.
10	not ready to say the no action alternative, we prefer the	10	MS. FOA AIO: True. MS. CAROLINE BLANCO: So we have been continuing
11	no action alternative, or we don't prefer the no action	11	along based on that. So that's why, I am not sure I
12	alternative. We do not believe that consultation is	12	suspect there needs to be more guidance from the Advisory
13	complete. And that if you were to put forward an MOA that	13	Counsel in carrying out processes in this regard. But
14	the timing is correct.	14	nevertheless, we have what we have. And that is why we
15	MS. CAROLINE BLANCO: And how would you, in your		chose this way of moving forward. In other words, not
16	opinion, what would complete look like from this	16	completing the Final EIS until we were able to I mean,
17	standpoint?	17	my thought was if we were able to negotiate an MOA, for
18	MS. PUA AIU: I think you need to consult with	18	example, that would be weaved into the Final Environmental
19	the people behind me, the Native Hawaiian groups. I think	19	Impact Statement, it would be included in the discussion
20	a lot of them aren't here. OHA is not here. I think Kirk	20	on cultural resources impacts, and mitigation and so
21	should be added because when they do ceremonies on	21	forth. Then it would be all consistent. And then the
21	Kaho'olawe, seeing the sun come up over Haleakala is very	22	record of decision would reflect that.
23	important to those ceremonies. You might need to consult	23	MS. PUA AIU: But you would still have the
	important to mose ceremonies. Tou night need to consult		1915. I OTTTIO, Dut you would still liave the
	with hula groups who are not here. The Royal Order is not	2.4	problem of more than half of your consultants disagree
24 25	with hula groups who are not here. The Royal Order is not here. All of those groups need to be consulted and need	24 25	problem of more than half of your consultants disagree. And that needs to go into the record.

32 (Pages 122 to 125)

	126		128
1	MS. CAROLINE BLANCO: Oh, it would go into the	1	all the consulting parties in addition to tomorrow?
2	final. For example, if 75 percent of the consulting	2	MS. PUA AIU: At least one more. I think one is
3	parties disagreed, the whole process would be outlined in	3	probably not enough.
4	the final, and it would say, you know, 75 percent of the	4	MS. CAROLINE BLANCO: I'm sorry?
5	consulting parties thought an alternative site ought to	5	MS. PUA AIU: I think you will need more than
6	have been chosen and the project shouldn't have gone	6	one.
7	forward. And that would be articulated there.	7	MS. CAROLINE BLANCO: So tomorrow plus
8	I mean, I am not sure what else we would be able	8	MS. PUA AIU: Well, I think you have tomorrow
9	to say about that. But it certainly would be honestly	9	and, you know, you will see who is able to come tomorrow.
10	reflected. The record is the record. And certainly we	10	But then you might need up to three more because I am
11	wouldn't run away from it in that sense, or in any sense.	11	hearing today and there is only, what, two groups
12	So I am trying to put some structure on this. I	12	here nobody can come tomorrow. And that there is
13	am trying to figure out how to from your perspective,	13	MS. VERNA KAIULANI NAHULU: I am coming
14	how to move forward. Are you thinking that another	14	tomorrow. I am not a nobody.
15	meeting with all of the consulting parties or at least	15	MS. PUA AIU: Auntie is coming tomorrow.
16	tomorrow is an attempt to do that, maybe if we are not at	16	You haven't been up yet.
17	MOA stage exactly, but it certainly is a meeting of which	17	Especially among the Hawaiians, if you are going
18	we have set times, 10:00 to 2:00, to meet with everybody	18	to have to mitigate for the effect on Hawaiian practices.
19	to try to see where we are at.	19	And there is not there is not even close to a meeting
20	MS. PUA AIU: That was unclear, too, because it	20	of minds on that. And you might be sitting there,
21	said the 17th, if needed.	21	thinking, that's not my issue, but it is.
22	MS. CAROLINE BLANCO: But then the follow-up	22	MS. CAROLINE BLANCO: Oh, I am sure it is. This
23	letter made that more clear. And we put some structure on	23	is all part of it. We have to try to reach agreement if
24	that.	24	we can.
25	We hadn't received any mitigation proposals from	25	MS. PUA AIU: So I think you need more than one
	127		129
1	anybody. And so we said we will meet here in an open	1	meeting. I think that you need more meetings that is
2	house forum.	2	really helpful, maybe three.
3	Again, it's hard because I wasn't aware of the	3	MS. NANCY McMAHON: I have one question. Are
4	military format. In candor, we were just trying to be	4	you recording this? Are you going to send the minutes of
5	accommodating. So it's unfortunate that some people	5	this out?
6	misunderstood that. You know, it's unfortunate they	6	MS. CAROLINE BLANCO: Sharon, are we going to
7	didn't ask us questions if they thought otherwise. But	7	post the meeting minutes?
8	nevertheless, today is as it is. And tomorrow, we decided	8	MS. SHARON LOANDO-MONRO: Oh, yeah. We will put
9	to put some structure, 10:00 to 2:00, to begin discussion	9	it on the
10	about how to deal with some of these adverse effects.	10	MS. CAROLINE BLANCO: That's what they typically
11	MS. NANCY McMAHON: And we do appreciate the	11	do.
12	fact that you have opened it up to let Historic Hawaii and	12	MS. PUA AIU: Then you need to be moving
13	some other organizations come back into the process and be	13	documents back and forth in between those meetings. So
14	consulting parties. So we appreciate that part.	14	that every time you have a meeting, hopefully you are
15	MS. CAROLINE BLANCO: Sure. And I called Betsy	15	getting closer to where
16	this morning she is out, I guess, until the 20th and	16	MS. NANCY McMAHON: Consensus on where
17	told her we would let the Trust in as well.	17	MS. PUA AIU: You can get a consensus. And you
18	But I am sure you understand, too, there is a	18	are not going to get a consensus with everybody, but at
19	need for finality in any process. This one has been going	19	least show good faith consultation.
20	on for so long. And, unfortunately, there have been	20	MS. SHARON LOANDO-MONRO: If I can say
21	changes made in the Office of General Counsel and the	21	something. I believe that we did put the transcripts on
22	guidance of the process has, you know, been longer because	22	the NSO website of all the meetings we've had in the last
23 24	of that and not quite as compact.	23 24	three years, with Section 106, DEIS, scoping meetings. MS. PUA AIU: Even the informal ones?
Ζ4	But am I hearing you correctly in thinking that	L 24	wis, r UA AIU. Even the informationes?
25	we should have, from your perspective, another meeting of	25	MS. SHARON LOANDO-MONRO: No. The informal ones

33 (Pages 126 to 129)

130		132
we didn't do that because they were informal meetings. It	1	that's what it is, you can't you know, it's either
was just something that people wanted, you know, said,	2	going to be action or no action. And that is an
hey, can we have another meeting, so we scrambled and go	3	understandable position, if you have gone through, you
get another meeting for everybody. I took notes at those	4	know, the consideration of various alternatives and you've

134	

	134		136
	foundation, we tried to put in as a little of a hole as we	1	better site for solar astronomy than Mauna Kea is. So
	2 had to, to make the foundation as small as possible.	2	this was an extremely refined objective process that
	3 So those minimizations have already been done.	3	involved a number of scientists, both interested in the
	4 Those were based on what we needed to do, what we wanted	4	project and not interested in the project. People who are
	5 to do, which drives cost and such. We don't want to make	5	expert on telescope siting, both for daytime telescopes
	the structure any bigger than we have to. And the public	6	and nighttime telescopes. It went on for approximately
	7 said the same thing, they don't want to see it and they	7	four years.
	8 want it to be small. So we tried to do that.	8	MR. JEFF BARR: Something like that.
	9 The Mees site, for example, isn't visible from	9	DR. CRAIG FOLTZ: It involved innumerable
1	<u>^</u>	10	meetings and trips. And it narrowed down to one.
1	-	11	And let me be perfectly honest. If there were
1		12	another, it would go there.
1		13	There is one.
1	· –	14	So what Caroline has said before and you have
1		15	all discussed that there is a go, no go option. That
1	* -	16	is what the NSF would face.
1		17	I want to say one more thing. We are funding
1		18	this project. This is not our project. We do not work in
1		19	a proactive way. We are not like the Department of
2	, , , , , , , , , ,	20	Defense. We are not like the Department of Energy. We do
2		21	not sit down together and say, what is the direction that
2		22	we are going to take science and what are the projects
2		23	that we want to do. Everything that the NSF does is
2	-	24	reactive. That is, it reacts to the community.
2		25	That is not in response to anything that has
_	· · · · · · · · · · · · · · · · · · ·		
	135		137
	standards a full cultural assessment of what the	1	been said, but I want to make it clear that the NSF
	2 impacts were. But it was not a non-issue in terms of the	2	this project is the project of the U.S. and international
	3 feasibility studies.	3	solar and space physics community. If it moves forward,
	4 MR. JEREMY WAGNER: When we took on looking for	4	the NSF will fund it and the NSF will fund its operation.
	an environmental contractor to help advise us and push	5	
	this process forward we considered that Are they	1	But in a very real sense, this is not an NSF project.
	6 this process forward, we considered that. Are they	6	MS. PUA AIU: So I think the important thing for

	138		140
1	affect what they do, how is it going to affect the people	1	those, what can we do about those. And there is an honest
2	behind them, how is it going to affect the other people	2	openness with the NSF with regard to what can we do to try
3	who are practitioners. Because that's you say, okay,	3	to mitigate those effects as best as possible. And our
4	well, you make it shorter, you can't practice your	4	hope was to have some concrete suggestions come to the
5	astronomy. Well, I don't know, maybe you put this up, and	5	table today, and before today. Well, before today. When
6	they can't practice whatever they practice. So that's the	6	those postcards were sent out in 2006, the hope was that,
7	question and that's what you have to answer. And whether	7	you know, we would hear some concrete suggestions.
8	you can mitigate that or not is the question on the table.	8	MS. ANNELLE AMARAL: I need to give the
9	MS. CAROLINE BLANCO: I think we have at least	9	stenographer a break. She's been going for two hours
10	made efforts along those lines in that we already have set	10	without a break. So is that okay, if we take ten minutes?
11	out what adverse effects there are and acknowledged there	11	Are you ready to take your lunch break now? Are
12	are adverse effects. So going through the first initial	12	we going to lose these guys?
13	one of it's either go or no go with regard to building	13	MS. CAROLINE BLANCO: I think
14	this, what I am concerned about is I think I am hearing	14	MS. PUA AIU: If we go to lunch, you will lose
15	from you is that you think that we have not followed the	15	
16	process because we can't figure out alternative sites.	16	MS. ANNELLE AMARAL: Then we won't let you go to
17	MS. PUA AIU: I haven't seen the documentation	17	lunch. Let's take ten to give the stenographer a break.
18	saying, okay, this is going to affect these practitioners	18	(Recess.)
19	in this way. I haven't. I mean, maybe it's there, I just	19	MS. CAROLINE BLANCO: First of all, I just want
20	haven't seen it.	20	to say I really appreciate the frank conversation. I
21	MS. CAROLINE BLANCO: I don't think those	21	think this is the way we actually can work forward toward
22	particulars are in the letters. They are more in the	22	resolving some things.
23	cultural resources studies.	23	There is one point of clarification I want to
24	Correct, Charlie?	24	make about past meetings that have happened, because I
25	DR. CHARLIE FEIN: That's right.	25	think the history is not known. There have been a lot of
	139		141
1	MS. CAROLINE BLANCO: And articulated in the	1	players that have changed. So it's probably helpful for
2	Draft Environmental Impact Statement, which is all part of	2	the whole group to understand what happened.
3	the same thing. There were two separate studies that were	3	Charlie, I will ask him to speak in a moment.
4	done. And with, again, an effort to try to	4	Then the other thing is to just say that, in
5	MS. PUA AIU: No, not together.	5	light of your suggestion, I think we can all arrange our
6	MS. CAROLINE BLANCO: with an effort to try	6	schedules so that around the time of the meeting with the
7	to really make this as comprehensive as possible.	7	park, on August 22nd, we can have a meeting, another
8	So I am asking, I guess, a fairly direct	8	consulting party meeting. And maybe do it over two days
9	question in that if I mean, do you see a way in which	9	or so.
10	we can have a discussion about alternatives if, in	10	MS. PUA AIU: Okay.
11	reality, from a scientific perspective, there is no other	11	MS. CAROLINE BLANCO: Then, at that point,
12	place to carry this project forward?	12	really sit down, have a solid negotiation over what could
13	MS. PUA AIU: You may or you may not. Because	13	be in an MOA to mitigate adverse effects.
14	what you are doing and what you guys and the Army and	14	And with regard to the question of who the
15	Mauna Kea does all the time is say, well, we can't	15	signatories are, I think other than the Advisory Counsel
16	practice what we do unless you give up what you do. And	16	and the SHPD and NSF, it's uncertain to me right now
17	that is where the rub is.	17	because I don't know who is interested in doing that, in
18	So I can't answer your question until I read	18	being a signatory. I know the park has expressed an
19	your cultural facts. And I'm sorry, I haven't read it, so	19	interest. But a lot will depend on, you know, what the
20	I can't answer the question.	20	nature is of it. So it's sort of almost a cart before the
21	MS. CAROLINE BLANCO: To me, where I see the	21	horse question at this juncture.
22	valuable discussion coming into play is on mitigation.	22	I did want to take a moment out and have Charlie
23	Because at this point we've acknowledged there are adverse	23	talk about what has transpired to date in terms of
24	effects. I think everybody has concurred there are	24	consultation meetings.
25	adverse effects. So the question is what do we do about	25	I don't want to mislead folks into thinking we
	autorise erreets. So the question is what do we do about		I don't want to misicaa forks mto umiking we

36 (Pages 138 to 141)

	142		144
1	have only had, you know, two hearings in the past and that	1	correspondence that's out there, you folks haven't been
2	is the end of it and now, suddenly, we're pushing	2	doing anything, why haven't you been doing anything, or
3	everybody into an MOA. Because that's really not where	3	when are you going to start having these meetings. And
4	things are at.	4	these meetings have been going on all along.
5	Charlie.	5	MS. CAROLINE BLANCO: And that's part of the
6	DR. CHARLIE FEIN: Right. So, of course,	6	concern that NSF has, is that we have been having many,
7	beginning in 2005, in July of 2005, we had our scoping	7	many meetings, lots of formal, informal consultation
8	meetings, which identified historic and cultural issues	8	meetings, or meetings with consulting parties, in trying
9	right off the bat. And during the DEIS process, we held	9	to get a real feel for what the effects are. And the
10	meetings of all kinds, 13 altogether, in small venues,	10	supplemental first, the cultural resources study, then
11	large venues, in private offices. We held meetings	11	the supplemental one.
12	sometimes with only two or three people, sometimes with as	12	Could you explain what that process was, the
13	many as 50 or 60, all designed to discuss Section 106	13	supplemental one?
14	issues.	14	DR. CHARLIE FEIN: Yes. Sure.
15	For example, we met with OHA twice that I am	15	MS. CAROLINE BLANCO: That would be helpful,
16	aware of. We met with the public. A public invitation	16	too, for folks to know.
17	was issued for three formal meetings right after the	17	DR. CHARLIE FEIN: The original cultural
18	scoping process. And then three more formal meetings to	18	resource evaluation, which was done by Kahu Maxwell, was
19	discuss Section 106 issues after the DEIS was published.	19	very specific about certain impacts, cultural historic
20	And so there have been meetings in which certain	20	impacts, that this project might have on the site.
21	individuals have participated over and over again	21	However, Kahu Maxwell did not elaborate insofar as having
22	Kiope, for example from day one. Then there have been	22	discussed this with many other people in the community.
23	other individuals that have come in and out of the	23	He has very strong personal opinions about the site and so
24	process. There have been some who never responded. There	24	on.
25	have been some who have given written testimony, some who	25	But the comments that we received from Kiope and
	143		145
1	gave only written testimony, and others who gave written	1	others concerning potential cultural impacts to Native
2	and oral testimony.	2	Hawaiians, from this project, was sufficient for us to
3	Everything that was given to us was incorporated	3	seek additional research.
4	into the process so that, in the Final Environmental	4	So we engaged Cultural Surveys Hawaii. And
5	Impact Statement, anything that anybody said up until this	5	those folks went out into the community and spent weeks
6	point about the Section 106 process that is unique and not	6	talking to people. And they prepared a cultural resource
7	the same has to be addressed. It must be addressed in	7	evaluation, a supplemental cultural resource evaluation.
8	accordance with the federal law. And we intend to do	8	And to be frank with you, the conclusion was not
9	that.	9	terribly different from the first, that there would be
10	In that regard, for example, we received very	10	impacts to the cultural resources at the site and those
11	detailed comments from Kiope concerning the history and	11	impacts would be significant. This is not different from
12	cultural legacy of Haleakala along with comments about	12	what we concluded in the DEIS. This is not different from
13	lack of detailed information concerning the site. We	13	what we concluded early in the process when there was
14 15	commissioned a study which includes what I would consider the equivalent of at least a bachelor's thesis on	14 15	communication between NSF and SHPD.
16	<u>^</u>	16	So the supplemental cultural resource evaluation
17	Haleakala. It's 15 pages of history and so on, incorporated along with the study that was done to further	17	is part of the FEIS process, but was released to the public so that anybody could read it. Sort of an unusual
18	identify issues and to get people to speak about their	18	situation. There is no law that says we had to do that,
19	feelings concerning the summit and the use of the summit	19	but we did want other people to read that evaluation. So
20	and what this project would mean with respect to their	20	we released it shortly after it was completed.
21	practice.	21	MS. CAROLINE BLANCO: Thank you.
22	So we have been doing this. We have been doing	22	DR. CHARLIE FEIN: Thank you.
23	this for three years now. And I know it's always	23	MS. CAROLINE BLANCO: Other thoughts about the
24	difficult when you come in for the first time to say,	24	process from here on out?
25	well, it looks like you haven't based on some of the	25	MS. PUA AIU: No. I think the meeting I mean

Г

37 (Pages 142 to 145)

	146		148
1	do you have a thought?	1	were held and were noticed. And they made a special
2	MS. NANCY McMAHON: No. No. I was just going	2	effort to have one of the meetings at Waiehu, which is in
3	to get into specifics a little bit. We've run into lately	3	the Hawaiian Homes area, specifically to get Hawaiian
4	a lot of a number of federal agencies that try to tell	4	peoples inputs. And these are meetings that, actually, I
5	us they cannot mitigate and their only alternative is	5	testified in two of them. And so these are things that
6	offsite mitigation. And we don't think that is an answer.	6	have happened.
7	MS. CAROLINE BLANCO: And what types of site	7	How much more do we need? How many more do we
8	mitigation could you see here?	8	need? Thirteen have happened.
9	MS. NANCY McMAHON: Without hearing what the	9	That's my comment.
10	concerns are from the cultural practitioners, I couldn't	10	MS. PUA AIU: Go ahead.
11	tell you. But perhaps providing them resources that might	11	MR. KIOPE RAYMOND: No. Go ahead.
12	be available other places, I am not sure, and seeing what	12	MS. PUA AIU: No. I think there is a difference
13	some of those people have. I don't think offsite is	13	when you sit down to negotiate an MOA versus just hearing
14	fine. I just don't think it should be the only thing that	14	feedback.
15	should be looked at.	15	I would take a wild guess here, but most of the
16	MS. CAROLINE BLANCO: Right. And I don't think	16	feedback was negative.
17	we're saying offsite is not the only option. We are open	17	MS. CAROLINE BLANCO: I think you raise a very
18	to suggestions for onsite mitigation as well, provided, of	18	good point. I think that there is often confusion about
19	course, the scientific objectives will still be met.	19	what does consultation mean. I think certainly, from my
20	So if I understand this correctly, then as far	20	perspective, consultation has to include feedback from the
21	as the process goes, in addition to tomorrow, we will have	21	community to find out what the concerns are. I mean, you
22	two more days of meetings in addition to the meeting with	22	can't negotiate over how to address those concerns until
23	the park in late August. And during those meetings, we	23	you know what the concerns are, in the first instance.
24	will try to continue to draft an MOA to address adverse	24	So it strikes me that it was appropriate to go
25	impacts.	25	through this effort. And from my look at the history of
	147		149
1	I am also going to make an effort to try to I	1	it, it seemed like it was a pretty significant effort that
2	left a message with Betsy Merritt of the National Trust		n, n seemeu nke n was a pietty significant enon mat

1	MR. MIKE MABERRY: Yes.	1	I really appreciate Sol's input here. He spoke
2	DR. CHARLIE FEIN: We had gotten a suggestion	2	for a lot of us. But I appreciate that he talked about
3	that we actually go knock on doors and talk to people one	3	the hurt of the Hawaiians. And I acknowledge that, but I
4	on one or twos and threes. So we did that. So I include	4	also feel that we have to go beyond the hurt in order to
5	all of those as Section 106.	5	come to some kind of conclusion and not be hurting all
6	MR. KIOPE RAYMOND: The one in the library was	6	over the place and causing delays a lot.
7	not a Section 106.	7	I would like to go beyond the hurt and realize
8	MS. CAROLINE BLANCO: But, again, these two	8	the educational value of what we are talking about. And I
9	processes are joined together, so it has informed it.	9	would also like to speak for some of the children that are
10	But I think there was another comment. Do you	10	not here, for their generation.
11	want to make a comment before you, yes, before they	11	I am a teacher who can see a scientific future
12	took off?	12	for our children in their own future. That they own their
13	MS. VERNA KAIULANI NAHULU: No. I will speak	13	future. And they are not they are not at any of our
14	after.	14	meetings. So here all the old people are talking and we
15	MS. ANNELLE AMARAL: If there are no further	15	are so into our past and we're into everything that has
16	comments, are we ready to release DLNR, since this is the	16	gone on before, and sometimes we don't want to move past
17	last call?	17	that.
18	Thank you very much for coming. Appreciate it.	18	So I want to move past that and, yet, know that
19	Just a reminder, before you speak, we need you	19	our cultural lives are partly based on the fact that all
20	to oh, Warren needs to sign, too identify yourself	20	of our ancestors traveled by canoes. And the skies were
21	for the court stenographer so she knows your name. And	21	extremely important to them, extremely important. In
22	then, you know, you get to make your comments.	22	fact, they showed the way forward, for our canoes to go to
23	This is a different structure than a public	23	where we wanted to go. So the skies are still extremely
24	hearing. This is, as you can see, more of a conversation.	24	important. We still are traveling by canoes, some of us.
25	And lots of people get involved in this conversation. So	25	And our children have to know the past
	151		153
1	if there are any people who want to speak that are behind	1	information of our skies, they have to know our present
2	the speakers, we ask that you wave at me so that I will	2	and our future information about the skies. And these
3	acknowledge somebody wants to ask a question, we will call	3	people are here to contribute something towards the future
4	on them. Otherwise, you know, it will be pretty free	4	of the education of our skies for the future generations,
5	flowing.	5	for the present generations who are here and their
6	And we ask that, once you are recognized and you	6	children and their grandchildren.
7	are going to speak, beyond the person who has just	7	And so I want to move forward. And still
8	identified themselves, you've got to identify yourself for	8	appreciating our ancestors, but moving forward, to be with
9	the court stenographer. So before you speak, give your	9	the children who are steeped in technologies, steeped in
10	name.	10	technologies of their own present and future. And moving
11	I am monitoring to make sure everybody is kind	11	towards the help that we can give them to advance, to
12	to one another and behaving.	12	advance into the world they are going to live in.
13	DR. CRAIG FOLTZ: So far so good.	13	And so it's very important for me as a teacher
14	MS. ANNELLE AMARAL: Yes. We have had a very	14	to consider that our future generations of children have
15	kind group.	15	to be part of the equation. And since they are not, there
16	Please, you were here first, so I am going to	16	are teachers like me who understand the feelings of our
17	let you begin.	17	children. And we can probably go forward in that.
18	MS. VERNA KAIULANI NAHULU: Thank you.	18	I think science and the culture of our Hawaiians
19	My name is Verna Kaiulani Nahulu. I am a Native	19	can come to a harmonial and reuniting of feeling among the
20	Hawaiian kupuna, retired teacher, resident of Keokea	20	people and go forward in our lives as Hawaiians, but as
21	Hawaiian Homestead.	21	Hawaiians with a future. As the children that we have
22	And I would like to take another slant. I see	22	and the children that we have in our islands, we have
23	us going horizontal all the time in all these meetings.	23	to help them to go forward into the future that they own.
24	And there is nothing vertical happening. So I would like	24	We will not be here forever, but our children are coming,
25	to inject a more vertical point of view.	25	our grandchildren are coming, our great grandchildren are

39 (Pages 150 to 153)

	154		156
1	coming. And they need the possibility of growing in their	1	about pardon me if I just prod along here but I
2	future.	2	thought about this when you were talking about going up
3	And the fact that we have come from someplace in	3	and experiencing the sky. Because, you know, I've taught
4	our past should not negate our children's future. And	4	astronomy and been an astronomer for 30 years. The thing
5	this is what I am here for, to help to see that we can	5	that I like best I used to take guest to our
6	have a structural situation where our children can grow	6	observatories in Arizona. The thing that I liked best is
7	and our children can learn, and their children, too.	7	explaining the sky, standing out as the sun goes down and
8	And so it is very important for me to see some	8	explaining the sky. There is where the planets are,
9	kind of vertical point that we can come to, to come to	9	that's where the sun goes. You know, that's the sort of
10	some kind of conclusion, instead of wandering	10	thing that you can do from my heritage or from your
11	horizontally. Maybe if we can take a few baby steps and	11	heritage. And in the end, you end up with somebody who
12	then bigger steps to go forward.	12	has an understanding of the way the sky works.
13	So that is what I have to say today.	13	It's not simple. It's not something you just
14	And so are there any questions?	14	learn in an hour and-a-half. You know, you need to sit
15	DR. CRAIG FOLTZ: I have a question. Verna, do	15	under it, you need to watch it. Whether you watch it from
16	you think that we can actually and I ask this question	16	the dome of a telescope or whether you watch it with an
17	of Sol, too, and Warren, and anyone else do you believe	17	elder who is teaching in a different perspective, that's
18	that we can integrate modern technology and respect for	18	what you need to learn in order to be equipped to work at
19	historical practices and culture?	19	an observatory. Even if you are working at an observatory
20	MS. VERNA KAIULANI NAHULU: It has always	20	as a programmer or as an engineer or technician or
21	happened. And it needs to happen now, again and again.	21	telescope operator or an astronomer. That's the sort of
22	You know, you look at Europe, you know, and they come from	22	thing that I see.
23	a very, very big past. But they go forward, too.	23	You know, if we want to tap into the economic
24	DR. CRAIG FOLTZ: I agree with that. It's not	24	and I am talking economic because that's in many ways
25	the articulation I would put it, but in the realization	25	that's what you are talking about, too.
	155		157
1			
1	MS. VERNA KAIULANI NAHULU: Exactly.	1	MS. VERNA KAIULANI NAHULU: Exactly.
2	DR. CRAIG FOLTZ: that I have trouble. I	2	DR. CRAIG FOLTZ: The economic potentials of the
3	look at these islands and, you know, we've asked, been	3	resources that you have here, does this mitigate the hurt?
4	asked many times about the economic impact of ATST, how	4	I don't think it does. I think we have to do that another
5	many jobs will you bring. And that's an important	5	way. I think we have to work on other things. But that
6	question. And, really, my sense is that the important	6	is what allows people to live a good life, maintain the
7	thing is to fill those jobs with people who live here.	7	connection to the past.
8	Because people who live here like to live here. People	8	MS. VERNA KAIULANI NAHULU: Right.
9 10		0	-
	who come here from the mainland don't stay very long for a	9	DR. CRAIG FOLTZ: Maintain a connection to their

1	Haleakala, at the point where it would be the best place.	1	And this is a great opportunity, as my previous
2	And you have already said which point is the very best	2	colleague mentioned. Here is a chance to provide for an
3	place. And I think it is very intelligent, considering	3	opportunity to grow, not only internationally, not only
4	all the possibilities I mean, it's behind the Mees,	4	for national, not only for Hawaii, but for Maui, too.
5	it's not like it's not like a blue, brown structure and	5	Here is that chance. Let's do it.
6	everything has been so delicately put together. And I	6	I also want to mention that, yes, this is a
7	completely am in favor of it.	7	delicate and very touchy situation. We are trying to
8	And I think if 1,000 children were with me, I	8	restore and build the cultural heritages of the Hawaiians.
9	think they would be in favor of it, too. Because we	9	Respectfully, we're trying to do this.
10	oldsters, we like to stay with our past, you know. And	10	Maui's Haleakala was the home and I say
11	it's the children who want to go forward with their	11	was was the home of Pele. Pele has since moved to
12	future.	12	Kilauea.
13	And I think we should allow the children their	13	However, that doesn't mean that Haleakala is
14	future and not stick with the past that is like so, so	14	less than Kilauea. It's still revered. The sacred wahi
15	we've already lived the past, you know. In the present, I	15	pana, this area is a sacred area of the demigod Maui, as
16	think we have to provide for our children's future. And	16	you know.
17	it is not being discussed.	17	And there are other gods and goddesses, 40,000
18	DR. CRAIG FOLTZ: Thank you.	18	of them, all in this area floating above this area called
19	MS. ANNELLE AMARAL: Thank you.	19	Wao Akua where the gods reside. And, yes, you will be
20	Warren.	20	looking through this area.
21	MR. WARREN SHIBUYA: Thank you. I am Warren	21	It's sensitive, yes, because, if you apply it to
22	Shibuya. I am a private resident.	22	our today's culture, we're peeping through a neighbor's
23	And this is my fifth time, I believe, that I am	23	house, we're invading their privacy. But we are not
24	meeting with you people. So in comment in retrospect to	24	really looking at them, we are looking at the sun.
25	the couple previous Dr. Aiu, with all due respect to	25	So, yes, there is going to be this conflict
	159		161
1	her that there was inadequate opportunity to express,	1	here. Today, it's misdemeanor, called peeping into your
2	to provide comments, to provide mitigation, I think there	2	neighbor's privacy. But we are not looking at the
3	was more than enough opportunity to do that.	3	neighbors' privacies.
4	But here I am. I am retired from the Space &	4	So here is an opportunity for both the National
5	Missile Systems Center in El Segundo, California. I have	5	Science Foundation, perhaps and, Craig, we talked about
6	been passionate for 32 years in science. And we did lots	6	this in one of our meetings. That I ask that the National
7	of satellites. And I am very proud of that.	7	Science Foundation consider, and the Institute of UH
8	And I hope this pride can be brought over and	8	Astronomy, and the State contribute to a workforce
9	shared with the people of Maui, even to Hawaii. And this	9	development type program on Maui, and hire residents, Maui
10	opportunity does not come every day. This is one of a	10	as well as Hawaii, to work on the ATST project. Not only
11	kind, one-time shot, folks.	11	the OJT, on-the-job, type training, but programming,
12	MS. VERNA KAIULANI NAHULU: Right.	12	educational funding, supporting the studies of
13	MR. WARREN SHIBUYA: And we're going to do it.	13	mathematics, physical and gaseous sciences, solar physics,
14	Let's do it right. And I think we can do it because you,	14	thermal and plasma dynamics, engineering, and Hawaiian
15	NSF, the astronomy people at UH, worked with this and	15	culture.
16	tried to work issues to make it as acceptable as possible.	16	This proposal needs the joint community, State
17	Yes, Craig, I believe the hurt is always going	17	and business support.
18	to be there.	18	The State to provide the land, facilities and
19	Looking back at the 18th Century culture where	19	faculty. And create a four-year university college of
20	you have Kolekole, which is the summit area, which is	20	sciences, technology, engineering on Maui. And I believe
21	where the Kahuna Po'o, the high priest, consulted with the	21	that is the Maui Community College that is making that
22	gods and goddesses to answer questions and delve into	22	proposal, or will be making that proposal.
23	tough questions and issues. Yes, this is the same	23	The second would be the ATST is to employ Maui
24	Kolekole that today we are now considering building a	24	residents as much as possible and develop the ATST
25	project that will be a promise for our youth.	25	workforce through a close working relationship among the

	162		164
1	NSF, NSO, UH, State, Maui County and the Council.	1	I am also asking that the UH Institute of
2	And the contributions of the private and	2	Astronomy remove most of the remaining historical radio
3	business partners, this would be in terms of having the	3	telescope structures that were used in the 1950s by the UH
4	funds to construct and staff a long-term commitment that	4	professor, Dr. Grote Reber.
5	is a mentoring program, like a bootstrap, to bring the	5	It's not being used today. So why have it
6	people from today's level of expertise or knowledge to a	6	there? Start cleaning it up.
7	higher level.	7	This helps mitigate some of the problems that we
8	The third would be to initiate and suggest, as	8	have and allow for less scientific, so to speak, or
9	Uncle Charlie Maxwell mentioned, that ATST establish a	9	technical junk up there, to allow for more space for
10	Maui Solar and Hawaiian Culture Center. I believe the	10	worshiping and to appreciating the sacredness of this
11	land has been acquired through a private donor. And that	11	summit area.
12	this center would be a cultural center to show the people	12	The site number 5443 would be restored to its
13	of the United States as well as internationally that the	13	original pu'u, that's a heiau, 24-feet height, from
14	Hawaiian culture has pride. They have programs in which	14	required ATST excavation surcharge. That's when you
15	they can explain and provide more information on, as well	15	excavate for the ATST, you would restore that pu'u to 24
16	as explain the online solar images and solar disturbance	16	feet height.
17	impacts on earth and satellite communications.	17	And I think that would help the people, make
18	Making these connections is the most important	18	this a little bit more acceptable. We are trying to
19	aspect. And here is that center that will help bring lots	19	restore, we are trying to bring back. And this sunset
20	of data points together and bring pride to Maui, bring	20	clause not only apply to ATST, but set the precedent for
21	pride to Hawaii.	21	UH, as well as the Mees Observatory, as well as for the
22	MS. VERNA KAIULANI NAHULU: Absolutely.	22	Air Force Space Surveillance Programs, all of these have
23	MR. WARREN SHIBUYA: Thank you.	23	specific time limits in which they will be restored. That
24	So this is very important. Our astronauts in	24	you would not add to any more that you already have.
25	space need this type of information because if you had	25	Thank you.
	163		165
1	solar storms coming out, there's tremendous amount of	1	DR. CRAIG FOLTZ: Thank you, Warren.
2	radiation. And I think people on Maui as well as the rest	2	MS. ANNELLE AMARAL: Thank you very much.
3	of the world are not fully aware of this. What types of	3	MS. CAROLINE BLANCO: Thank you.
4	rays hit us?	4	MS. ANNELLE AMARAL: Does anyone wish to
5	And we start talking in terms of global warming.	5	inquire?
6	Well, is it really global warming or is the sun getting	6	DR. CRAIG FOLTZ: I would just like to say I
7	hotter, or is it radiating more? We need to study it,	7	appreciate it that you have a number of very specific well
8	folks. That's what we need to know.	8	thought out points. And I think that, in many ways, they
9	The fourth would be ATST adopt and enter a	9	mesh with other part of what we have ahead of us is
10	written contract and I call this a sunset clause for	10	taking suggestions such as yours and merging them with
11	the ATST structure and program and I realize that this	11	suggestions such as we heard from Sol earlier.
12	may not be very friendly and proactive, but I would say	12	MR. WARREN SHIBUYA: Sure.
13	that here is an opportunity to return the land to the	13	DR. CRAIG FOLTZ: I think that's kind of the
14	Hawaiians for their sacred worshiping. And it will not	14	challenge ahead. And to take issues of like science,
15	happen in my lifetime or the next generation, but at least	15	technology, education, workforce development programs and
16	for four cycles of the sun, which is 22.5 years each	16	merge them with Maui Community College sorts of proposals,
17	cycle, I believe.	17	I think you have given us the nub of a lot of really good
18	DR. CRAIG FOLTZ: It's either eleven and-a-half	18	ideas. And I appreciate that.
19	or 22, depends on whether you count it once or twice.	19	MR. WARREN SHIBUYA: Thank you. Thank you for
20	MR. WARREN SHIBUYA: Yes. And then they will be	20	this chance.
21	for approximately 90 years, is that okay? That sort of	21	MS. ANNELLE AMARAL: Thank you.
22	thing.	22	MR. WARREN SHIBUYA: I will be listening to
23	After the 90 years, the sunset clause strikes in	23	others.
24	and save that ATNUE to remove the structures and restore	24	MS. VERNA KAIULANI NAHULU: Warren has been a
25	and says that ATST is to remove the structures and restore used summit grounds to original sacred configuration.	25	very eloquent person in our discussions. And I really

	100		168
	166		108
1	appreciate his input because he is a forward moving	1	
2	person.	2	
3	I would like to say, what I didn't include in my	3	
4	presentation, is that a lot of us teachers and people like	4	
5	Warren who want to go forward because we haven't been	5	
6	able to and we are going around in circles, people like me	6	
7	have just begun writing books for the children. And I	7	
8	have written a book introducing physics to	8	
9	three-year-olds. And in the next ten years, I will be	9	
10	writing textbooks for grade one physics, grade two	10	
11	physics, like it should have been from the very beginning.	11	
12	And I was inspired to do this when Mike took me	12	
13	to the summit and showed me around, what facilities we	13	
14	have up there. And it just struck me that each of us has	14	
15	to do something. And writing is where I am coming from.	15	
16	And I am contributing on that part.	16	
17	Because all the way up, from three years old all	17	
18	the way up, our children need to be they need to have	18	
19	something. And I have grown up in Hawaii where, you know,	19	
20	the children have said, go out and play, go, go out and	20	
21	play, where there is no structure for them to get a hold	21	
22	of and learn from. And so I depend on my books to do it.	22	
23	And I am going to be doing some film work just	23	
24	to be able to share with children the possibility of the	24	
25	future they should own.	25

1		1	
1	resources involved here. And so even though it's a		So that is why we have moved beyond avoidance in
2	process that has been joined, it also has been expanded	2	terms of what other alternatives are there to consider.
3	upon on the 106 side. So that's why you will see in the	3	You can see up at the white board there, for the
4	whole process, if you look at it historically, there were	4	proposed site, we are really focused on mitigation. We
5	additional meetings on 106 that weren't necessarily part	5	are completely open to ideas about ways in which things
6	of NEPA.	6	can be mitigated both at the site not in terms of the
7	So that being said, what happened back in 2005,	7	height of the telescope or the color of it, because those
8	2006, letters went out to the consulting parties at that	8	things are certain requirements to meet the science
9	time who were people who were identified as having an	9	objectives for this proposed project. If you lowered it,
10	interest. Since NSF had acknowledged this doesn't	10	it wouldn't work.
11	always happen with federal agencies, but NSF acknowledged	11 12	And we have folks here who can help describe
12	that there were cultural resources that would be impacted,		that a little bit better than I can.
13	and the impact would be that it would have an adverse	13	And so that's the reason why we have moved
14	effect. And so rather than focus on or dispute that	14	forward to mitigation. We are also very interested in
15	issue, we just move forward to how can we resolve them,	15	offsite mitigation. And we can go through some of the
16	can we resolve them.	16	things that were identified yesterday as possibilities and
17	And so questions were asked of people who were	17	ways in which to try to work this through.
18	interested in the process, how can these impacts be	18	Because, also moving to the process again
19	resolved, these effects be resolved. There was not much	19	yesterday, when the SHPD folks were here, there seemed to
20	of a response. There had been some responses throughout	20	be, I think, some confusion where they did recognize that
21 22	the process, including as of late, that focused on alternative sites.	21 22	they were there has been a lot of I am sure you can
23	And the problem here and we are sort of in a	23	speak to it a lot of changeover of personnel and continuity. So there was some misunderstanding about what
23	unique situation, I think, compared to most other federal	23	had transpired early on.
24	agencies, certainly based on my experience and what I have	24	And, also, they were unfamiliar with the Draft

And so this is problematic. And as I said, in other 106 situations, you might say, well, can't we just move it over here. If we did that in this situation, the project wouldn't be built. Because the way that Haleakala was identified, Mount Haleakala, was because it met certain science objectives. There are two sites that are under consideration. Nothing has been decided at this point. But if the telescope is to be built, it would be built at	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	Environmental Impact Statement and all of the work that has been done this far. And their position was, as you know, that there should be more alternatives looked at. But I think, hopefully, we explained that. The same situation about the science-driven reasons for choosing the sites as being alternative sites. And, also, the no action alternative. And, hopefully, that was better understood yesterday. So we made a copy of the entire correspondence file for them, left it with them yesterday. And, also, we will be happy to provide them, or you, with any documentation you might need to help you understand it more fully. I would point you to my November 8th letter to the Advisory Counsel for a real summary of how the science objectives were set up and how the alternatives stemmed from that.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	seen NSF deals with cutting-edge science. And so when we look at this project, this proposed project, for funding, it's an interesting situation. It's not as though you are building a highway and you could move the highway this way or this way or this way to avoid impacts on cultural resources or minimize the impact. This is very unique in that in order to meet the objective of the project, the science objectives of the project, alternatives need to be identified that can meet that criteria. And so this is problematic. And as I said, in other 106 situations, you might say, well, can't we just move it over here. If we did that in this situation, the project wouldn't be built. Because the way that Haleakala was identified, Mount Haleakala, was because it met certain science objectives. There are two sites that are under consideration. 1	Then I think it might have gone down to three,	1	resources we are still looking at. Since that was
2	even.	2	identified as something in the February letters from the
3	DR. CRAIG FOLTZ: That's correct.	3	SHPD and, also, the park as a request to broaden the scope
4	MS. CAROLINE BLANCO: And this took place over	4	of the area potential effects, we responded and said we
5	the course of many years, to try to determine whether or	5	would accept that and we would go forward and look at
6	not certain sites were identifiable or could be identified	6	impacts to the road.
7	as potential viable sites from a scientific perspective.	7	So we are looking at avoidance, minimization and
8	That was what was presented to the National	8	mitigation, the whole suite of options there, because
9	Science Foundation. And so it really is a unique agency	9	there may be some way to avoid some impacts. There may be
10	from the standpoint that it's either an action or no	10	some ways to mitigate.
11	action alternative if it's going to be built. And the	11	It's not the same analysis as would be done with
12	action alternative, there are two sites that are under	12	this science-driven project in terms of location. So it
13	consideration.	13	is a bit difficult.
14	MR. JEFF BARR: Both on Haleakala.	14	When I asked the question yesterday to the SHPD,
15	MS. CAROLINE BLANCO: Both on Haleakala, yeah.	15	how would you do this in terms of choosing alternatives
16	So, hopefully, that will help to answer some of	16	I mean, we wouldn't want to be disingenuous and say, well,
17	the questions you may have had about the process. And we	17	we will pick something else out, even though we know it's
18	hope to have a continual dialogue.	18	not viable. It just wouldn't be honest and that would not
19	Because of some of the concerns yesterday about,	19	be right.
20	I think, quite honestly, some confusion about the efforts	20	So in terms of looking at scientifically viable
21	that had been made to try to reach out to different	21	sites, that has been done by the scientific community.
22	consulting parties, and more process and so forth. There	22	Not NSF, but, you know, the world community in terms of
23	have been a lot of correspondence over the course of the	23	astronomy. And they were the ones who picked that out,
24	years. And we haven't received a whole lot back. We have	24	those site selections out. So there has been a
25	only received three written proposals that all the	25	peer-reviewed analysis that had been done to identify
	11		13
1	consulting parties have had.	1	sites.
2	And I know you came to the process a little late	2	So yesterday, we had a long meeting, 9:00 in the
3	in the game.	3	morning until 8:00 at night. Most of the discussion
4	And there are the proposals out there as	4	happened the first half of the day. And Annelle had so
5	handouts in the back of the room, if you are interested in	5	kindly written many, many notes on the discussion.
6	looking at those.	6	Once there was a break, rather than doing
7	But because the SHPD thought that it would be	7	nothing, we decided we would try to summarize the events
8	helpful to have more consultation meetings, we asked them	8	of the morning and try to figure out what types of
9	what they thought would be advisable, you know, what would	9	concrete identifiable proposals for mitigation could we
10	be a good way of doing this. And they said at least two	10	take from these notes. And as you see up there, MOA
11	more consultation meetings in addition to today, making a	11	issues in the black and red, there were several proposals
12	total of three more. And so we agreed to that since they	12	that were put forth that we started discussing.
13	said that would be sufficient for them.	13	And we could take a moment out to take a look at
14	They thought that would be a good idea and	14	some of those.
		15	One was site cleanup at the site, removal of
15	satisfy the process.		-
16	So we are looking at August 27th and 28th.	16	Reber Circle and all remnants of it. And, you know, some
16 17	So we are looking at August 27th and 28th. Because we have a meeting with the National Park Service	16 17	Reber Circle and all remnants of it. And, you know, some thoughts were by other consulting parties, I think the
16 17 18	So we are looking at August 27th and 28th. Because we have a meeting with the National Park Service Superintendent, Marilyn Parris, on August 22nd, to discuss	16 17 18	Reber Circle and all remnants of it. And, you know, some thoughts were by other consulting parties, I think the IFA
16 17 18 19	So we are looking at August 27th and 28th. Because we have a meeting with the National Park Service Superintendent, Marilyn Parris, on August 22nd, to discuss impacts on the road. So we thought that we would time it	16 17 18 19	Reber Circle and all remnants of it. And, you know, some thoughts were by other consulting parties, I think the IFA Right, Mike? You had thought that maybe it
16 17 18 19 20	So we are looking at August 27th and 28th. Because we have a meeting with the National Park Service Superintendent, Marilyn Parris, on August 22nd, to discuss impacts on the road. So we thought that we would time it around that time we would be coming back out, some of us	16 17 18 19 20	Reber Circle and all remnants of it. And, you know, some thoughts were by other consulting parties, I think the IFA Right, Mike? You had thought that maybe it might be an opportunity to urge the partners to also clean
16 17 18 19 20 21	So we are looking at August 27th and 28th. Because we have a meeting with the National Park Service Superintendent, Marilyn Parris, on August 22nd, to discuss impacts on the road. So we thought that we would time it around that time we would be coming back out, some of us from Washington, and try to combine it with that trip.	16 17 18 19 20 21	Reber Circle and all remnants of it. And, you know, some thoughts were by other consulting parties, I think the IFA Right, Mike? You had thought that maybe it might be an opportunity to urge the partners to also clean it up as well. Was that part of it?
16 17 18 19 20 21 22	So we are looking at August 27th and 28th. Because we have a meeting with the National Park Service Superintendent, Marilyn Parris, on August 22nd, to discuss impacts on the road. So we thought that we would time it around that time we would be coming back out, some of us from Washington, and try to combine it with that trip. And those would be the final consultation meetings we	16 17 18 19 20 21 22	Reber Circle and all remnants of it. And, you know, some thoughts were by other consulting parties, I think the IFA Right, Mike? You had thought that maybe it might be an opportunity to urge the partners to also clean it up as well. So I want to make it clear that although we are the federal party, the federal agency
2 3 4 5 6 7 8 9 10	usage as appropriate. MS. CAROLINE BLANCO: Right. MS. ANNELLE AMARAL: Onsite. MS. CAROLINE BLANCO: Right. There also is moving to the second or the third, I guess, piece of paper there. There was the Maui Community College proposal that looked at integrating the Hawaiian culture with science into a curriculum. And I think this was Sol's. You can probably where is Sol? He can speak a little bit more about that.	2 3 4 5 6 7 8 9 10	observatory. What we do is to react to the community, to be responsive to the scientific community. And they express their priorities and their desires in a number of ways. National academy studies, other independent studies, and eventually through proposals to us. Because, essentially, what we do is we're a funding agency. So I want to make it clear that although we are the federal party, the federal agency MS. CAROLINE BLANCO: Funding agency.
2 3 4 5 6 7 8 9 10 11	usage as appropriate. MS. CAROLINE BLANCO: Right. MS. ANNELLE AMARAL: Onsite. MS. CAROLINE BLANCO: Right. There also is moving to the second or the third, I guess, piece of paper there. There was the Maui Community College proposal that looked at integrating the Hawaiian culture with science into a curriculum. And I think this was Sol's. You can probably where is Sol? He can speak a little bit more about that. And there also would be possibly the idea of	2 3 4 5 6 7 8 9 10 11	observatory. What we do is to react to the community, to be responsive to the scientific community. And they express their priorities and their desires in a number of ways. National academy studies, other independent studies, and eventually through proposals to us. Because, essentially, what we do is we're a funding agency. So I want to make it clear that although we are the federal party, the federal agency MS. CAROLINE BLANCO: Funding agency. DR. CRAIG FOLTZ: Funding agency for this, we
2 3 4 5 6 7 8 9 10 11 12	usage as appropriate. MS. CAROLINE BLANCO: Right. MS. ANNELLE AMARAL: Onsite. MS. CAROLINE BLANCO: Right. There also is moving to the second or the third, I guess, piece of paper there. There was the Maui Community College proposal that looked at integrating the Hawaiian culture with science into a curriculum. And I think this was Sol's. You can probably where is Sol? He can speak a little bit more about that. And there also would be possibly the idea of providing appropriate names for the roads on Mount	2 3 4 5 6 7 8 9 10 11 12	observatory. What we do is to react to the community, to be responsive to the scientific community. And they express their priorities and their desires in a number of ways. National academy studies, other independent studies, and eventually through proposals to us. Because, essentially, what we do is we're a funding agency. So I want to make it clear that although we are the federal party, the federal agency MS. CAROLINE BLANCO: Funding agency. DR. CRAIG FOLTZ: Funding agency for this, we are a bit agnostic. We are not the proponents of the
2 3 4 5 6 7 8 9 10 11 12 13	usage as appropriate. MS. CAROLINE BLANCO: Right. MS. ANNELLE AMARAL: Onsite. MS. CAROLINE BLANCO: Right. There also is moving to the second or the third, I guess, piece of paper there. There was the Maui Community College proposal that looked at integrating the Hawaiian culture with science into a curriculum. And I think this was Sol's. You can probably where is Sol? He can speak a little bit more about that. And there also would be possibly the idea of providing appropriate names for the roads on Mount Haleakala. So changing some of the names, and subject to	2 3 4 5 6 7 8 9 10 11 12 13	observatory. What we do is to react to the community, to be responsive to the scientific community. And they express their priorities and their desires in a number of ways. National academy studies, other independent studies, and eventually through proposals to us. Because, essentially, what we do is we're a funding agency. So I want to make it clear that although we are the federal party, the federal agency MS. CAROLINE BLANCO: Funding agency. DR. CRAIG FOLTZ: Funding agency for this, we are a bit agnostic. We are not the proponents of the project. We are the funding agency that, if a decision is
2 3 4 5 6 7 8 9 10 11 12 13 14	usage as appropriate. MS. CAROLINE BLANCO: Right. MS. ANNELLE AMARAL: Onsite. MS. CAROLINE BLANCO: Right. There also is moving to the second or the third, I guess, piece of paper there. 1	collaboration, who we went through.	1	to work.
2	And we have funded the design of this telescope	2	So, you know, a perfect example, I could build a
3	for at least the last seven years. The telescope is	3	ten-meter nighttime telescope. It would be a wonderful
4	designed to study the sun in exquisite detail.	4	thing. If I located it in Central Park, it wouldn't work
5	We understand a lot about the sun. We know how	5	because of the sky is too bright.
6	old it is. We know how it creates its energy. We know	6	So in the case of this solar telescope, what you
7	more or less how that energy gets out.	7	need is a site that has low water vapor above it, all
8	What we don't understand is solar activity, the	8	right, so it's dry it's called precipitable water
9	existence of sunspots, why do we have sunspots. And those	9	vapor. That's actually an easy criterion to meet for most
10	sunspots are clearly tied to very energetic phenomena, the	10	mountain sites.
11	sun.	11	It needs to have a very stable atmosphere above
12	Let me say I am not a solar physicist. I am an	12	it. If you think about driving down the road in the
13	observation cosmologist, my training. Now I am a	13	afternoon when the road has been heated, or looking over a
14	bureaucrat.	14	campfire, the image that you see, it's distorted. And
15	So we need to understand the solar activity	15	that is caused by turbulence in the earth's atmosphere.
16	which is magnetic I don't want to go into a long	16	Different cells of air with different temperature rising
17	lecture. It's magnetic in origin and it can lead to very	17	through your field of view. So you need to have a very
18	explosive phenomena on the sun which affect the life on	18	stable air condition.
19	earth, things like solar flares, coronal mass ejections,	19	And you also need to have and this needs a
20	which are truly impressive events which spew billions of	20	bit of explanation. You need a dark daytime sky. Now,
21	tons of material out from the sun at very high speeds.	21	what I mean by that yeah, I know. What I mean by that
22	We also believe that there is an intrinsic	22	is you need to have very low dust and sort of haze
23	connection between solar activity, the level of solar	23	conditions.
24	activity, and the climate on earth. We have historical	24	So if you were to go out Mike can show us
25	records that date back well before 1600, in the case of	25	some pictures, then, if you really want to see it. If you
	19		21
1	the Chinese who actually did see sunspots before Galileo	1	were to go outside from ground level in Maui, in fact this
2	discovered them.	2	morning, sort of hold your hand up over the sun. Don't
3	And from associated tree ring data that the sun	3	look at the sun, it's not wise. Galileo did and he went
4	has periods of inactivity where there isn't sometimes	4	blind. So, you know, hold your fingers up over the sun.
5	they are quite long. Sometimes they are hundreds of years	5	You can see that the sky around your finger is bright and
6	long. And these are correlated this is a bit	6	it's bright because there's scattering in the atmosphere.
7	circumstantial because we don't know the connection.	7	It's due to dust, it's due to water vapor and so on.
8	These are correlated with extreme climate changes on	8	What you really need to study the outer layers
9	earth.	9	of the sun, which are very tenuous and very low contrast,
10	So, for example, the little ice age which	10	is you need to have not much of that haze.
11	occurred in the beginning of the 17th Century and extended	11	In fact, if you go on many days to the top of
12	out for about 150 years was a time of extreme cold and	12	Haleakala, as well as some other sites, and hold your
13	extreme famine, and, I think, Black Death. That was also	13	fingers up over the sun, you will see that the sky right
14	a time when the sun showed no activity. And we don't	14	around your fingers is as dark as it is anywhere else.
15	understand why that is the case.	15	That's very important. And that means the low dust
16	Okay. Long story.	16	content in the air.
17	What do you need to study solar activity? And	17	So, essentially, the 72 sites which were
18	that's what this telescope is for, to try to understand	18	whittled down to six based on a number of site
19	the root causes of solar activity. Not to prevent them,	19	characteristics some of them were quantitative, some of
20	not to stop it, but what we don't know can hurt us. And	20	them were a bit more qualitative. The quantitative ones
21	the first steps in understanding how we might predict	21 22	were the average clear sky fraction, the amount of
22	solar activity is to understand its root cause.	22	rainfall, strong seasonal trends and climate. Also, the presence of infrastructure, the ability to get to the site
·) ·)		1 2 3	presence of minastructure, the admity to get to the site
23	This telescope is designed for that purpose. In order to do that, it needs to be of a certain design. And	24	
23 24 25	order to do that, it needs to be of a certain design. And it also needs to be on the site that can allow that design	24 25	and so on factored into that. Six sites were then instrumented. So identical

Г

6 (Pages 18 to 21)

	22		24
1	instruments were put at each site to measure the	1	the telescope. And so that is where we get the height.
2	precipitable water vapor, the turbulence in the atmosphere	2	If we could build it shorter, we would build it
3	and the sky brightness.	3	shorter because it would be cheaper.
4	Those measurements were taken for a year, am I	4	The color of the dome is established by the fact
5	right?	5	that the sun not only heats the ground, but it would heat
6	MR. JEFF BARR: That's about right. Sorry.	6	the building. If the building were black or if it were
7	MR. JEREMY WAGNER: A little over that.	7	painted brown, it would get hotter. It would transfer
8	DR. CRAIG FOLTZ: And they were compared against	8	that heat to the air around it. It would drive
9	objective criteria that were established. That is, the	9	turbulence. And it would render the telescope unusable at
10	scientific community said if this telescope is going to	10	the limit at which we need to use it.
11	work, it has to have a certain design, furthermore it has	11	So somewhere over here, we said we cannot
12	to have a site that has good conditions for a certain	12	mitigate the site, the height, the color, what we meant by
13	fraction of a time. So of those six, three were thrown	13	that was, if we put it on a different site, it won't work.
14	out.	14	If we build it lower, it won't work. If we paint it
15	And the remaining three were Big Bear Lake in	15	brown, it won't work.
16	California, La Palma in the Canary Islands, and Haleakala.	16	And so that is really where we are. I mean, we
17	Those were then they continued to be measured for at	17	are, in some sense, in a very small box. If we are unable
18	least another year.	18	to go with the telescope on this site with this design, we
19	MR. JEFF BARR: Another year.	19	would not spend federal money on the construction of it.
20	DR. CRAIG FOLTZ: Then, again, all the data were	20	That was probably more than you wanted to hear.
21	analyzed and the data were compared against objective	21	MS. CAROLINE BLANCO: No. I think that's really
22	criteria that were established before the sites began.	22	helpful. I mean, it should be understood. It's not an
23	And I think that's an important issue. This was not a	23	unwillingness. It's just whether or not it would work.
24	capricious choice. Of the three sites, Big Bear Lake	24	And that is, hopefully, something that folks will

And we are completely open to ideas. MR. MIKE MABERRY: Real quick. Everyone else has seen this except you two. You may have to tilt that so it's at the right angle. Can you see this big circle? Those two photos were taken an hour apart. One was taken at sea level and one was taken at the top of Haleakala. There's Haleakala. See how dark it is all the way up to the edge? One hour apart, just the two different spots. MR. HINANO RODRIGUES: Thank you. MS. ANNELLE AMARAL: I would like to see if you want to ask questions or MS. TONIA MOY: Being that I am not a scientist, I just does it not work at all any place else or just

	26		28
1		1	
	MS. TONIA MOY: Okay.		Now you might put a telescope somewhere else and
2	DR. CRAIG FOLTZ: What you need to do with this	2	get lucky. And you might make an individual measurement.
3	telescope for its principal science-driver is you need to	3	But an individual measurement and you might get really
4	be able to resolve features on the sun that have the size	4	lucky and you might be able to do a few measurements in a
5	of about 20 miles. We could go there with a ruler and	5	row and try to get some evolution. But in order to really
6	measure it. No. The sun is 93 million miles away. So	6	make the telescope work, it needs to have conditions that
7	that requires exquisite detail.		are stable in time relative to the use cases.
8	If you put it somewhere else and what you	8	It would work less well.
9	need to do is you need to watch those that feature,	9	Let me make one more point.
10	which is a little magnetic feature. It's a little bundle	10	I know. I mean, I apologize. I am lapsing in
11	of magnetism which will interact with other bundles of	11	my native tongue.
12	magnetism. Sometimes they grow into sunspots this is	12	The detail that an optic can see and this
13	what we think sometimes they nullify each other. You	13	includes your eye or it includes a telescope or
14	need to watch that evolve.	14	binoculars is a function of its size. It's linear, the
15	So what the designers of this telescope did is	15	size of its lens or the sizes of its mirror. This
16	they literally sat down and said, let's set up a bunch of	16	telescope has a four-meter diameter, 154-inch diameter
17	use cases. We want to observe the development of the	17	mirror, which is not a big mirror. I mean, it would sort
18	field and the photosphere, or we want to watch the field	18	of fit in this room. It's small compared to some of the
19	on a fibral which this is solar physics talk. And I	19	nighttime telescopes. You need that to be just able to
20	know just strut my stuff and I don't really know what it	20	observe details of 20 miles, seen from a distance of 93
21	means. No, I do. So you can look at that and say, well,	21	million miles. That's what you got to get to. So we
22	what does that mean. Over how many hours do I expect	22	design right to the margin. We don't over-design things
23 24	something to change. You know, if I have a flare, how	23 24	because we're trying to minimize costs, we're trying to
24	long does it take for that flare to evolve, how frequent are the flares.	24	minimize size. We have very good reason, we know that, from physical principles, that is the size. We don't need
2.5	are the flates.	2.5	from physical principles, that is the size. We don't need
	27		29
1	Suppose I have a telescope that I want to see a	1	to worry about sizes smaller than that.
2	flare, and a flare goes off, hope it doesn't happen at	2	If it doesn't work at its limit, then it won't
3	night. Okay. I mean, that's a real fundamental	3	answer the questions that it would be put to.
4	limitation. It works when the sun is up.	4	I make that statement unequivocally. And I
5	So you can ask yourself what is the probability	5	don't mean it to be completely unequivocal. But, you
6	of a flare. And let me compare that against the number of	6	know, we are basing our funding decision on the ability of
7	clear hours that you have in a year. And you can do the	7	the telescope to solve the problems that are laid out in
8	probability. You know, they just sort of multiply. And	8	the use cases. So, therefore, it is sort of a convolution
9	you say what's the probability we will have a flare during	9	of the design of the telescope, the properties of the
10	good conditions if I had my telescope in New Orleans. And	10	telescope, the properties of the site.
11	the answer would be zero, essentially.	11	So if the site could not deliver that again,
12	You can also say, suppose I want to watch a	12	if the site can't deliver it, we wouldn't build it.
13	feature evolve. And I know how long it takes for those	13	Because this is expensive, \$250 million. We are not the
14	features to evolve. I just can't see them in the detail	14	Department of Defense, nor are we NASA. NSF has roughly a
15	that I need. And you might say, I need to be able to	15	\$6 billion a year budget that supports all sciences except
16	observe that thing for a period of four or five hours,	16	the life sciences the health sciences. We support life
17	say. So that's a use case. I want to study the	17	sciences. So this would be a substantial investment.
18	development of the magnetic field in a certain kind of	18	MS. ANNELLE AMARAL: Did you want to ask any
		19	other questions with respect to what has been said so far?
19	feature in the solar photosphere, and I need to do that		
20	for four hours. And so that factors in to the conditions	20	MS. TONIA MOY: I guess I had one more, though.
20 21	for four hours. And so that factors in to the conditions for the site.	21	MS. ANNELLE AMARAL: Please, yes.
20 21 22	for four hours. And so that factors in to the conditions for the site. So if you look at the detailed condition for the	21 22	MS. ANNELLE AMARAL: Please, yes. MS. TONIA MOY: Because, I mean, I am just
20 21 22 23	for four hours. And so that factors in to the conditions for the site. So if you look at the detailed condition for the site, they are very detailed. So many periods with the	21 22 23	MS. ANNELLE AMARAL: Please, yes. MS. TONIA MOY: Because, I mean, I am just getting all of this
20 21 22	for four hours. And so that factors in to the conditions for the site. So if you look at the detailed condition for the	21 22	MS. ANNELLE AMARAL: Please, yes. MS. TONIA MOY: Because, I mean, I am just

8 (Pages 26 to 29)

 consultation issue clarified for mc. And you guys night a have clarified it yesteday, but, you know, fait it was consulting party, and then I read, you know, that it was consulting party, and then I read, you know, that it was consulting party, and then I read, you know, that it was consulting party, and then I read, you know, that it was consulting party, and then I read, you know, that it was consulting party, and then I read, you know, that it was consulting party, and then I read, you know, that it was consulting party. Laws Belsy think: Vend I know show consulting party. Laws Belsy things. Merrit ut he Trust. And I have ilabed ther about this project and this situation, oh, since far fail, on and off. And I know she doesn't have the entire record of thing Vend I know she back to look at, hum yguess is you didn't look at 2005 2006. MS. CANOLINE BLANCO: And the Draft HIS. There are many fhings that may be helpful to you as you consider proposals three years go, we asked for proposals two party sites is because this process has been going on for so long. And from our perspective, we asked for proposals stary were have, radin than you helpful to you as you consider proposals stary were have, radin than you helpful to you as you consider proposals stary were have. Fraght in May, anglin, And ther bash' been a lot fortheoming offer than process. on for so long. And from our perspective, we asked for proposals stary were have. Fraght in May, anglin, And ther bash' been a lot fortheoming other than perspective, we asked for proposals stary were have. Fraght in May, anglin, And ther bash' been a lot fortheoming other than process. So allowing that Kinge Raymond was here May and the final than and than and than than base on due to native peoples. How at You to build it on Mount Haleakala. Hoerself, and than was then provided to him. How at You have, and an than finale on it would have an i		30		32
3 consolution issue clarified for me. And you goys might quie get it. Like National Trust has been asked to be a consulting party, and then 1 read, you know, that it was sort of the there's this cutoff date of na allowing any more consulting party, and then 1 read, you know, that it was sort of the there's this cutoff date of na allowing any more consulting party. And so I warn all that1 3 will have a chance to meet with her and brief her on this dui a more fail way. 8 sort of the there's this cutoff date of na allowing any more consulting party. And so I warn all that1 7 will area chance to meet with her and brief her on this dui a more fail way. 10 MS. CANOLINE II ANCO: Sure. We've allowed the think I would like that part clarified. 7 will area chance to meet with her and brief her on this duit to come in as a consulting parties. 11 Trust to come in as a consulting party. Linow Betsy things. 1 To add to it, and as you have already been told, there will be two more with expan to meet for more one with there and brief her on this 11 Trust to come in as a consulting party. Linow Betsy things. 1 To add to it, and as you have already been told, there will be two more with there all there will be two more with expan to more sole and the part to the sole of the participact. 12 Merrit at the trust. And to that the all fall, on and there with there all to exponenting thom sole and the part to the sole of the reprosenting the one does of the trust to the sole of the reprosenting the reaw with there all to the there the sole of the reprosenting the	1	most of it on the plane over.	1	some back and forth emails, voicemail exchanges with
4 have charified it ysterchy, but you know, 1 still don't 4 and in a more full way. 5 quite get it. Like National Trust has been asked to be a consulting parties. The thought was to use for consulting parties. And so I want all that -1 MS. ANNELLE AMARAL: The thought was to use for proposals for an MOA and to get your input, the input from consulting parties. National Trust is come in as a consulting partie. I know Beby MS. CAROLINE BLANCO: Sure. We've allowed the form and in a more full way. 10 MS. CAROLINE BLANCO: Sure. We've allowed the form and the situation, on, since has full, on and more consulting parties. I know Beby 11 rough that the Trust. And I have inliked to her about this 12 Before we do that, what I feed to know from the form and this situation, on, since has full, on and 13 two of you that have just arrived, and you werent here 12 off. And I know she doesn't have the entire record of 14 two of you that have just arrived, and you werent here 13 didn't hook 2005.2006. 15 To porty, by the way. 16 14 researce you may not, either. I am not sure 17 porty, by the way. 18 14 researce you may not, either. I am not sure 17 porty, by the way. 18 15 MS. CAROLINE BLANCO: And the Druft EIS. 17	2	So National Trust has I guess I want that	2	Betsy. And, hopefully, when we get back to Washington, we
5 quite get it. Like National Trust has been asked to be a 5 MS. ANNEL JF AMARAL: The thought was to use to day to be able to go through some of the specific proposals for a MOA and to get your input, the input from more consulting parties. And so I want all that - 1 8 more consulting parties. And so I want all that - 1 7 10 MS. CAROLINE BLANCO: Sure. We've allowed the first input the input from and to get your input, the input from and to get your input, the input from and to and you have already been told. 11 Trust to come in as a consulting partie. And so i, since tast fall, on and the first. There and this input. The what correspondence you housed at, but my guess is you didn't look at 2005-2006. 10 The part eag at the did you it as yeatenday. 12 more on subing parties. NMM NY: 1 just got something from 2006. 10 NS. CAROLINE BLANCO: And the Druft ITS. There are many things that may be helpful to you as you consider anythings that may be helpful to you as you consider anythings parties is process. 10 NS. CAROLINE MLANCO: And the Druft ITS. There are many things that may be helpful to you as you consider anythings parties is process. 11 Consulting parties. 11 21 on for so long. And from our perspective, we asked for proposals tare years ago, we askede for proposals tare years ago,	3	consultation issue clarified for me. And you guys might	3	will have a chance to meet with her and brief her on this
6 consulting party, and then 1 read, you know, that it was row or of like there's this catoff date of not allowing any more consulting parties. And so 1 ward 11 that - 1 in there's this catoff date of not allowing any more consulting parties. And so 1 ward 11 that - 1 in thick I would like that part clarified. in thick I would like that part clarified. 9 thick I would like that part clarified. in thick I would like that part clarified. in the two more days of seeking informatin from consulting parties. 12 Merritt at the Trust. And I have tailed to ber about this project and this situation, on k, since kat full, on and in the two more days of seeking informatin from 16 I suspect you may not, either. I am not sure in this. TONIA MOY: I just got something from 2006. in the sum more togo through these poorly-written notes? 17 what correspondence you looked at, but my guess is you in the reason Why NSF was trying to limit in 18 didn't look at 2005-2006. in in 19 MS: CANOLINE BLANCO: And the Draft EIS. There ideas for mitigation or consider your position with regard in 21 on for so long. And from our perspective, we asked for proposals hare years ago, we asked for proposals two iyears ago, we ask	4	have clarified it yesterday, but, you know, I still don't	4	and in a more full way.
7 sort of like there's this cudoff due of not allowing any proposals for an MOA and to get your input, the input from 8 more consulting parties. And so I want all that -1 think think consulting parties. 10 think to dol like that part clarified. to dol like that part clarified. 11 Trust to come in as a consulting partie. Now Betty to add to it, and as you have already been told, 12 Merritt at the Trust. And I have talked to her about this project and this situation, oh, since last fall, on and 13 project and this situation, oh, since last fall, on and two of you that have just artived, and you weren't here 14 vester consulting parties. two do you that have just artived, and you weren't here 14 vester consulting parties. two do you that have just artived, and you weren't here 15 twink correspondence you looked at, but my guess is you two do you that have just artived, and you weren't here 16 Ms. CAROLINE BLANCO: And the Draft FIS. There two for easoled part possition with regard 17 proposals fair November, again in May, again. And there two for proposals bas November, again in May, again. And there 18 to this process. this process als for proposals tair November, again in May, again. And there	5	quite get it. Like National Trust has been asked to be a	5	MS. ANNELLE AMARAL: The thought was to use
8 more consulting parties. And so I want all that1 8 consulting parties. 9 think I would like that part clarified. 10 Mst. CAROLINE BLANCO: Sure. We've allowed the 11 Trust to come in as a consulting parties. And so I wave already been told. 10 there will be two more days of seeking information from the 12 Merrit at the Trust. And I have talked to her about this 11 To add to it, and as you have already been told. 14 off. And I know she doesn't have the entire record of 11 two of you that have just arrived, and you weren't here 15 bings. I suspect you may not, either. I am not sure 12 16 I suspect you may not, either. I am not sure 12 Before we do that, what I need to know from the 17 what correspondence you looked at, but my guess is you 16 To add to the op through these poorly-written 18 DS. CAROLINE BLANCO: And the Druft EIS. There 18 DR. CAROLINE BLANCO: and the propeosals that were may thing that may be helpful to you as you consider 12 consulting parties is because this process has here going 21 MS. ANNELLE AMARAL: No. They don't pay me anything to read it then. 12 consulting parties is because this process has	6	consulting party, and then I read, you know, that it was	6	today to be able to go through some of the specific
9 think I would like that part clarified. 9 To add to it, and as you have already been told, 10 MS. CAROLINE BLANCO. Sure. We've allow the 10 there will be two more days of seeking information from 12 Merritr at the Trust. And I have talked to ber about this 12 there will be two more days of seeking information from 13 project and this situation, ob, since last fall, on and 13 two of you that have just arrived, and you weren't here 14 vestered, because SO was here all day with us yesterday, would you like me to go through these poorly-written 16 I suspect you may not, either. I am not sure 15 inotes? They pay me a great deal of money to write this 17 what correspondence you looked at, but my guess is you 16 MS. CAROLINE BLANCO: And the Draft IDS. There 18 idents for mitigation or consider your position with regard 17 NG. ANNELLE AMARAL: No. They don't pay me anythings that may be helpfol to you as you consider 18 18 14 restered. 20 So let me try to go through it as quickly as I 21 21 consulting party: Lisk got someshing from 2005 21 23 23 21 on for so long. And from ou	7	sort of like there's this cutoff date of not allowing any	7	proposals for an MOA and to get your input, the input from
10 MS. CAROLINE BLANCO: Sure. We've allowed the 10 there will be two more days of seeking information from Consulting parties towards the creation of an MOA. 11 Trust to come in as a consulting part. I know Betsy 11 13 project and this situation, on, since last fall, on and 12 14 off. And I know she doesn't have the entire record of 14 15 two of you that have jists arrived, and you weren't here 16 I suspect you may not, either. I am not sure 16 17 what correspondence? you nook ole stat, but my guess is you 17 18 what correspondence? you nook ole stat, but my guess is you 18 19 MS. TONIA MOY: I just got something from 2006. 18 12 are many things that may be helpful to you as you consider 18 16 to this process. 20 17 proposals that way be neason why NSF was trying to limit. 21 22 so the reason why NSF was trying to limit. 21 23 on for so long. And from our perspective, we asked for proposals that were made. 18 24 no for so long. And from our perspective, we asked for proposals that were made. 19 7 forthe dev/ts, full stath and	8	more consulting parties. And so I want all that I	8	consulting parties.
11 Trust to come in as a consulting party. Iknow Betsy 11 consulting parties towards the creation of an MOA. 12 Merritt at the Trust. And I have talked to her about this 11 Before we do that, what I need to know from the 13 project and this situation, oh, since last fail, on and 13 Before we do that, what I need to know from the 14 off. And I know she doesn't have the entire record of 14 Before we do that, what I need to know from the 15 things. 15 would you like me to go through these poorly-written 16 Tsuspect you may not, either. I am not sure 16 noses? The yap we a great deal of money to write this 17 what correspondence you looked at, but my guess is you 18 idea for mitigation or consider your position with regard 19 it. 18 didn't look at 2005-2006. MS. CAROLINE BLANCO: And the Draft ELS. There 20 MS. CAROLINE BLANCO: And the Draft ELS. There 21 MS. CAROLINE BLANCO: And the proposal stare argo, we asked for proposals argo argo, we asked for proposals argo, we asked for the proposals argo, we asked for the reasons Dr. Foltz outlined, 11 representing himself, as Kiope speaks, his comments go to som of the proposals argo, we asked for proposals ar	9	think I would like that part clarified.	9	To add to it, and as you have already been told,
12 Merritt at the Trust. And I have talked to her about this 13 project and this situation, ch, since last fall, on and 14 off. And I know she doesn't have the entire record of 15 things. 16 1 suspect you may not, either. I am not sure 17 what correspondence you looked at, but my guess is you 18 didn't look at 2005-2006. 19 MS, TONIA MOY: I just got something from 2006. 10 MS, CAROLINE BLANCO: And the Draft ELS. 21 are many things that may be helpful to you as you consider 22 consulting parties is because this process. 23 consulting parties is because this process has been going 21 on for so long. And from our perspective, we asked for proposals hat Kore maa, we asked for proposals hat were made. He notes that he harm that has been done to naive peoples. 21 on for so long. And from our perspective, we asked for proposals hat November, again in May, again. And there the ana to from the reasons Dr. Foltz outlined, 23 for saying, if it's to be built, then we can't avoid the impacts. And so that is may we now, to allow the Historic 24 keep adding new parties to it, it will take on a life of the assone. 25 Since you all agreed to respect that processin in that as seen. dono thathew we thendison in. And	10	MS. CAROLINE BLANCO: Sure. We've allowed the	10	there will be two more days of seeking information from
13 project and this situation, oh, since last fall, on and 13 two of you that have just arrived, and you weren't here 14 off. And 1 knows she doesn't have the entire record of 14 stress of was here all day with us yesterday, because Sol was here all day with us yesterday, because Sol was here all day with us yesterday, because Sol was here all day with us yesterday, because Sol was here all day with us yesterday, because Sol was here all day with us yesterday. 16 I suspect you may not, either. I am not sure 16 17 what correspondence you looked at, but my guess is you 16 18 MS. TONIA MOY: I just got something from 2006. 17 20 MS. CAROLINE BLANCO: And the Draft ELS. There 18 21 are many things that may be helpful to you as you consider 21 22 ideas for mitigation or consider your position with regard 22 23 consulting parties is because this process has been going 23 31 on for so long. And from our perspective, we asked for 24 y years ago, we asked for proposals two 25 so allowing that kitope speaks, his comments go to 31 reprosals hat November, again in May, again. And there 24 34 hopful there is a better understanding of NSF's reaxon 34	11	Trust to come in as a consulting party. I know Betsy	11	consulting parties towards the creation of an MOA.
14 off. And I know she desen't have the entire record of 14 yesterday, because Sol was here all day with us yesterday, would you like me to go through these poorly-written 15 Issupect you may not, either. I am not sure 16 notes? They pay me a great deal of money to write this 18 didn't look at 2005-2006. 18 DR. CRAIG FOLTZ: We don't pay you much to read 19 MS. CANOLINE BLANCO: And the Draft EIS. There 21 anything to read it then. 22 20 MS. CANOLINE BLANCO: And the Draft EIS. There 21 anything to read it then. 22 21 ideas for mitigation or consider your position with regard 22 So let me try to go through it as quickly as 1 can. And it sort of flows with the way people spoke 24 So the reason why NSF was trying to limit 22 So allowing that Kiope Raymond was here 33 10 on for so long. And from our perspective, we asked for proposals three years ago, we asked for proposals two 24 so allowing that kope speaks, his comments go to 10 proposals last November, again in May, again. And there 34 The harm that has been done to native peoples. 10 for the reasons Dr. Foltz outlined, 14 He acknowledges, too, that he has some 16 11 <th>12</th> <th>Merritt at the Trust. And I have talked to her about this</th> <th>12</th> <th>Before we do that, what I need to know from the</th>	12	Merritt at the Trust. And I have talked to her about this	12	Before we do that, what I need to know from the
15 things. 15 would you like me to go through these poorly-written 16 I suspect you may not, either. I am not sure what correspondence you looked at, but my guess is you 16 notes? They pay me a great deal of money to write this 17 what correspondence you looked at, but my guess is you 16 notes? They pay me a great deal of money to write this 18 MS. TORIA MOY: I just got something from 2006. 18 DR. CAROI FOLTZ: We don't pay you much to read 20 MS. CAROLINE BLANCO: And the Draft EIS. There are many things that may be helpful to you as you consider 20 21 are many things that may be helpful to you as you consider 21 So let me try to go through it as quickly as I 22 can. And it sort of flows with the way people spoke yesterday. So allowing that Kiope Raymond was here 21 on for so long. And from our perspective, we asked for proposals three years ago, we asked for proposals that were made. He notes that he 32 are maxing, if if so be built, then we cant avoid the in formation with respect to hat proposal 1 33 for so sping, if if so be built, then we cant avoid the information with respect to that proposal 1 34 hopefully there is a better understanding of NSF's reason f	13	project and this situation, oh, since last fall, on and	13	two of you that have just arrived, and you weren't here
16 I suspect you may not, either. I am not sure 16 notes? They pay me a great deal of money to write this 17 what correspondence you looked at, but my guess is you 16 notes? They pay me a great deal of money to write this 18 didn' look at 2005-2006. 17 DR. CRAIG FOLTZ: We don't pay you much to read 19 MS. TONIA MOY: I just got something from 2006. 18 DR. CRAIG FOLTZ: We don't pay you much to read 21 are many things that may be helpful to you as you consider 20 So It mough it as quickly as I 23 to this process. 20 So It meet ty to go through it as quickly as I 24 So the reason why NSF was trying to limit 21 23 25 consulting parties is because this process has been going 21 31 on for so long. And from our perspective, we asked for proposals tare years ago, we asked for proposals taw, gain. And then appel saying we don't want you to build it on Mount Haleakala. 1 36 notes? They pay me a great deal of money to write this process on indefinitely. it won't have an end. If we harm that has been done to native peoples. 33 10 not or so long. And from our perspective, we asked for proposals hast Newermore, again in May, again. And the was then provided to him. 11 11 industry proposa	14	off. And I know she doesn't have the entire record of	14	yesterday, because Sol was here all day with us yesterday,
17 what correspondence you looked at, but my guess is you 17 poorly, by the way. 18 didn't look at 2005-2006. 18 19 MS. TONIA MOY: I just got something from 2006. 18 20 MS. CAROLINE BLANCO: And the Draft EIS. There 18 21 are many things that may be helpful to you as you consider 20 22 ideas for mitigation or consider your position with regard 21 23 to this process. 22 24 So the reason why NSF was trying to limit 22 25 So allowing that Kiope Raymond was here 26 on for so long. And from our perspective, we asked for proposals tay ear ago, we asked for proposals as year ago, we asked for proposals as year ago, we asked for proposals as year ago, we asked for missing from Uncle Charlie Marren Shibulya's notation of trying to repair 7 And for the reasons Dr. Foltz outlined, 8 Ho acknowledges that he supports the cleaning up 9 oft way in this to to built, then we carit avoid the 10 ingwarts to this will it not our therstanding of NSF's reason 9 for saying, if it's to be built, then we carit avoid the 11 this process in indefinitely, it won't have an end. If we 12 keep ad	15	things.	15	would you like me to go through these poorly-written
18 didn't look at 2005-2006. 19 MS. TONIA MOY: I just got something from 2006. 20 MS. CAROLINE BLANCO: And the Draft EIS. There 21 are many things that may be helpful to you as you consider 22 ideas for mitigation or consider your position with regard 23 to this process. 24 So the reason why NSF was trying to limit 25 consulting parties is because this process has been going 26 on for so long. And from our perspective, we asked for 27 proposals three years ago, we asked for proposals tast November, again in May, again. And there 31 on for so long. And from the reasons Dr. Foltz outlined, 4 hopefully there is a better understanding of NSFs reason 6 for asying, if it's to be built, then we can't avoid the 10 impacts. And so that is why we thought if we continue 11 that sense. 12 Since you all agreed to respect that process in 14 that sense. 15 Since you all agreed to respect that process in 16 that, you know, we are in the final stages of this at this 16 that, you know, we are in the final stages of this at this 16	16	I suspect you may not, either. I am not sure	16	notes? They pay me a great deal of money to write this
19 MS. TONIA MOY: I just got something from 2006. 19 it. 20 MS. CAROLINE BLANCO: And the Draft EIS. There 20 MS. ANNELLE AMARAL: No. They don't pay me 21 are many things that may be helpful to you as you consider 20 MS. ANNELLE AMARAL: No. They don't pay me 21 are many things that may be helpful to you as you consider 20 MS. ANNELLE AMARAL: No. They don't pay me 22 ideas for mitigation or consider your position with regard 20 So let me try to go through it as quickly as I 23 to this process. 23 can. And it sort of flows with the way people spoke 24 years ago, we asked for proposals two 25 So allowing that Kiope Raymond was here 21 0 on for so long. And from our perspective, we asked for proposals two 25 some of the proposals that were made. He notes that he 31 0 no for so jung, if it's to be built, then we can't avoid the 34 appreciated Warren Shibuya's notation of trying to repair 4 the harm that has been done to native peoples. 6 He acknowledges, too, that he has some 16 5 singmatch it is not a responsible federal process in 16 He needed more information with respect to that proposal.	17	what correspondence you looked at, but my guess is you	17	poorly, by the way.
20MS. CAROLINE BLANCO: And the Draft EIS. There are many things that may be helpful to you as you consider20MS. ANNELLE AMARAL: No. They don't pay me21are many things that may be helpful to you as you consider21anything to read it then.2222ideas for mitigation or consider your position with regard22So the me try to go through it as quickly as I2223to this process.24So the reason why NSF was trying to limit22can. And it sort of flows with the way people spoke2425So allowing that Kiope Raymond was here23131on for so long. And from our perspective, we asked for proposals last November, again in May, again. And there31331on for so long other than people saying we don't want you to build it on Mount Haleakala.1representing himself, as Kiope speaks, his comments go to some of the proposals that were made. He notes that he appreciated Warren Shibuya's notation of trying to repair the harm that has been done to native peoples.331of the densis, the rubbish up at Haleakala.6He acknowledges that he supports the cleaning up of the debris, the rubbish up at Haleakala.10impacts. And so that is why we thought if we continue this process on indefinitely, it wont have an end. If we is some, and it's not a responsible federal process in that sores.1112keep adding new parties to it, it will take on a life of that sore.12He made some comments about the Maui Community13is too the reasons by, fow, we are in the final stages of this at this point, that is fine, you know, to allow the H	18	didn't look at 2005-2006.	18	DR. CRAIG FOLTZ: We don't pay you much to read
21 are many things that may be helpful to you as you consider 21 anything to read it then. 22 ideas for mitigation or consider your position with regard 22 can. And it sort of flows with the way people spoke 23 to this process. 23 can. And it sort of flows with the way people spoke 24 So the reason why NSF was trying to limit 22 can. And it sort of flows with the way people spoke 24 So the reason why NSF was trying to limit 23 can. And it sort of flows with the way people spoke 25 So allowing that Kiope Raymond was here 25 31 on for so long. And from our perspective, we asked for proposals three years ago, we asked for proposals two 30 32 years ago, we asked for proposals two some of the proposals that were made. He notes that the 34 nawn tyou to build it on Mount Haleakala. appreciated Warren Shibuya's notation of trying to repair 4 the harm that has been done to native peoples. 6 6 the acknowledges, too, that he has some 9 9 information with respect to that proposal. 14 16 thes spee. 14 17 And for the reasons Dr. Foltz outlined, 14	19	MS. TONIA MOY: I just got something from 2006.	19	it.
22 ideas for mitigation or consider your position with regard 22 So let me try to go through it as quickly as I 23 to this process. 23 can. And it sort of flows with the way people spoke 24 So the reason why NSF was trying to limit 23 can. And it sort of flows with the way people spoke 25 So allowing that Kiope Raymond was here 33 1 on for so long. And from our perspective, we asked for proposals three years ago, we asked for proposals a year ago, we asked for so more of the proposals that were made. He notes that the 3 proposals three years ago, we asked for proposals a year ago, we asked for so some of the proposals that were made. He notes that the 3 proposals that November, again in May, again. And there hear that has been done to native peoples. 6 He acknowledges that he supports the cleaning up of the debris, the rubbish up at Haleakala. 7 And for the reasons Dr. Foltz outlined, He acknowledges, too, that he has some 10 impacts it is wort have an end. If we He acknowledges, that were made. He notes that procesal. 14 that sense. He acknowledges, that he supports the cleaning up 15 Since you all agreed to respect that process in that, you know, we are in the final stages of this at this </th <th>20</th> <th>MS. CAROLINE BLANCO: And the Draft EIS. There</th> <th>20</th> <th>MS. ANNELLE AMARAL: No. They don't pay me</th>	20	MS. CAROLINE BLANCO: And the Draft EIS. There	20	MS. ANNELLE AMARAL: No. They don't pay me
23 to this process. 23 can. And it sort of flows with the way people spoke 24 So the reason why NSF was trying to limit 23 can. And it sort of flows with the way people spoke 24 So the reason why NSF was trying to limit 23 can. And it sort of flows with the way people spoke 25 So allowing that Kiope Raymond was here 24 yesterday. 31 on for so long. And from our perspective, we asked for proposals two years ago, we asked for proposals ats November, again in May, again. And there in representing himself, as Kiope speaks, his comments go to some of the proposals hat were made. He notes that the appreciated Warren Shibuya's notation of trying to repair 1 the harm that has been done to native peoples. 6 He acknowledges that he supports the cleaning up 7 And for the reasons Dr. Foltz outlined, 8 He acknowledges, too, that he has some 9 information missing from Uncle Charlie Maxwell's proposal. 10 impacts. And so that is why we thought if we continue 11 this sprocess on indefinitely, it won't have an end. If we 12 Keep adding new parties to it, it will take on a life of 13 Since you all agreed to respect that process in 14 that sense. <td< th=""><th>21</th><th>are many things that may be helpful to you as you consider</th><th>21</th><th>anything to read it then.</th></td<>	21	are many things that may be helpful to you as you consider	21	anything to read it then.
24So the reason why NSF was trying to limit24yesterday.25So allowing that Kiope Raymond was here31331on for so long. And from our perspective, we asked for2proposals three years ago, we asked for proposals a year ago, we asked for proposals as year ago, we asked for proposals a year ago, we asked for3proposals three years ago, we asked for proposals a year ago, we asked for4proposals three years ago, we asked for proposals a year ago, we asked for5hash't been a lot forthcoming other than people saying we6don't want you to build it on Mount Haleakala.7And for the reasons Dr. Foltz outlined,8hopefully there is a better understanding of NSF's reason9for saying, if it's to be built, then we can't avoid the10impacts. And so that is why we thought if we continue11this process on indefinitely, it won't have an end. If we12Keep adding new parties to i, it will take on a life of13its own. And it's not a responsible federal process in14that sense.15Since you all agreed to respect that process in16that, you know, we are in the final stages of this at this17point, that is fine, you know, to allow the Historic18Hawaii Foundation in. And, also, Kiope and his group.19I am trying to reemember the name of it.24MS. CAROLINE BLANCO: We let them in as well.25MS. CAROLINE BLANCO: We let them in as well.26MS. CAROLINE BLANCO: We let them in as well.<	22	ideas for mitigation or consider your position with regard	22	So let me try to go through it as quickly as I
25consulting parties is because this process has been going25So allowing that Kiope Raymond was here3131313131313331313133333333343135323532363137333833393131333333333434343535363237363839393939393039313132313331333234313531353136313732373338313931393131313131313131313131313132313331333134313535363537363836393739393931313131313231333233323435 <t< th=""><th>23</th><th>to this process.</th><th>23</th><th>can. 1	When he is pau talking, then Mikahala Helm then	1	Haleakala, the sacredness of the place, but also asserts
2	speaks.	2	the need to integrate science and Hawaiian cultural
3	MS. CAROLINE BLANCO: Was it up there?	3	knowledge. And that although often Hawaiian cultural
4	MS. ANNELLE AMARAL: This comes from SHPO.	4	practice is seen as something in the past, that, quite
5	Yeah, at least I can read my notes.	5	frankly, the knowledge of Hawaiians, inherited knowledge,
6	Mikahala Helm speaks, quite frankly, wanting a	6	is also something that can be looked towards the future.
7	definition of mitigation.	7	And that perhaps the partnership in this endeavor could
8	It's answered by saying that mitigation refers	8	utilize Hawaiian cultural knowledge in a forward-looking
9	to ways to reduce adverse effects, adverse impacts, or	9	manner, preparing us and using Hawaiian knowledge to
10	compensate for adverse effects or impact or harm. It can	10	advance cultural values and cultural practices.
11	be onsite or offsite.	11	There is discussion, also, from Verna, Verna
12	Her comment in response, then, is not knowing	12	Nahulu. Substantially, her comments go to the need to
13	the full effect of adverse impacts, she is then reluctant	13	support the children and the education of the children.
14	to share comments on mitigation of those.	14	That truly this project is about preparing for the future
15	What is offered to her is then, perhaps, that we	15	generation, providing them with opportunities that, in her
16	would be open to creative ideas, any creative ideas she	16	assertion, have not been addressed by comments in public
17	may have. She declines.	17	hearings heretofore.
18	Camille is here, then, from Kilakila o	18	Warren Shibuya has a list of proposals that he
19	Haleakala, and offers comments with respect to the	19	gives, including workforce development, including
20	consultation process. Asserting that it is in fact not	20	partnerships with businesses to enhance the work that's
21	real consultation, that there are no alternative sites	21	taking place up at Haleakala, including the removal of
22	being proposed, that the project is flawed.	22	debris that is not being utilized and the setting
23	A question is asked, if that were true, do you	23	precedent for other users in the future.
24	have some suggestions on how to change the process. Her	24	So I think like that, that sort of the summary.
25	response is that she does not, that we should simply	25	Then Department of Land and Natural Resources
	35		37
1	consider alternative sites.	1	arrived. And that was Pua and Nancy that were here.
2	So, quite frankly, the substance of her remarks	2	
3		2	They had concerns about the timing of the
5	go to having other sites be taken into consideration	3	They had concerns about the timing of the consultation that is taking place. They felt that there
4	rather than and if there are some mitigation measures,	1	
	rather than and if there are some mitigation measures, it should go directly to the harm that is caused, the harm	3	consultation that is taking place. They felt that there was not significant consultation to bring us to this point of now being to discuss the MOA.
4	rather than and if there are some mitigation measures, it should go directly to the harm that is caused, the harm that is created.	3 4	consultation that is taking place. And we should create a process that assures that Hawaiians are enabled by the considerations given to them. Sol Kaho'ohalahala then speaks, in part giving background about his involvement with the Maui Community College and the proposal and the Science, Technology, Economic and Math, STEM. MR. SOL KAHO'OHALAHALA: Engineering. MS. ANNELLE AMARAL: Engineering and math cohort, as it were, that helps Native Hawaiians then to participate in the effort, as well as the Akamai program. And so it is an initiative that perhaps prepares Native	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	consultation that is taking place. They felt that there was not significant consultation to bring us to this point of now being to discuss the MOA. And so, you know, you have heard Caroline begin to address this. There was some criticism about the publicity or the letters that went out with respect to yesterday's meeting in that open house, they felt, was sort of a term that designated a certain type of behavior. They said the military has used the term "open house" to designate that they would have displays up and there usually is not a lot of conversation and discussion. And so people are put off by the term open house and, therefore, choose not to participate. They didn't realize that in fact yesterday's open house meant that we would all be talking to one another. So there was some criticism of the process and some question as to what actually has been done and there has been a lot of catching up, this is how many public
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	rather than and if there are some mitigation measures, it should go directly to the harm that is caused, the harm that is created. And she acknowledges that if there is offsite mitigation, then we should consider things like the number of Hawaiians that would benefit from this offsite mitigation, the proposals perhaps from Maui Community College. And we should create a process that assures that Hawaiians are enabled by the considerations given to them. Sol Kaho'ohalahala then speaks, in part giving background about his involvement with the Maui Community College and the proposal and the Science, Technology, Economic and Math, STEM. MR. SOL KAHO'OHALAHALA: Engineering. MS. ANNELLE AMARAL: Engineering and math cohort, as it were, that helps Native Hawaiians then to participate in the effort, as well as the Akamai program. And so it is an initiative that perhaps prepares Native Hawaiians to be competitive or to be part of the workforce	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	consultation that is taking place. They felt that there was not significant consultation to bring us to this point of now being to discuss the MOA. And so, you know, you have heard Caroline begin to address this. There was some criticism about the publicity or the letters that went out with respect to yesterday's meeting in that open house, they felt, was sort of a term that designated a certain type of behavior. They said the military has used the term "open house" to designate that they would have displays up and there usually is not a lot of conversation and discussion. And so people are put off by the term open house and, therefore, choose not to participate. They didn't realize that in fact yesterday's open house meant that we would all be talking to one another. So there was some criticism of that. Aside from the criticism of the process and some question as to what actually has been done and there has been a lot of catching up, this is how many public meetings we've had, this is how many documents that have
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	rather than and if there are some mitigation measures, it should go directly to the harm that is caused, the harm that is created. 10 (Pages 34 to 37)

	38		40
1	as Caroline has indicated, that the proponents in fact	1	mean maybe you can fill me in before, you know, we get any
2	allow for more MOA discussions.	2	further. But according from this from the paper
3	And so the agreement was made when asked how	3	trail I got, there was a Draft EIS, right, in 2005 or
4	many more do we need, the suggestion was at least two	4	2006?
5	more, bringing this to a total of three. And it was	5	MS. CAROLINE BLANCO: 2006. Charlie, it was
6	agreed that around or after August 22nd, there would be at	6	2006?
7	least two additional consultation meetings.	7	DR. CHARLIE FEIN: I'm sorry?
8	You see here the discussion, the litany of how	8	MS. CAROLINE BLANCO: The Draft EIS.
9	many meetings there were. And I don't think we need to go	9	DR. CHARLIE FEIN: The Draft EIS was issued in
10	into that.	10	September of 2006.
11	Sometimes I am making note of things here that	11	MS. TONIA MOY: Okay.
12	make no sense to me whatsoever.	12	MS. CAROLINE BLANCO: Public comments were
13	DR. CRAIG FOLTZ: I am just impressed you can	13	received on it.
14	find your direction.	14	MS. TONIA MOY: There is a letter from the SHPO,
15	MS. ANNELLE AMARAL: Going around here.	15	right? There was a letter. So they did see it and they
16	And then you see, I guess, there were some	16	did respond.
17	comments from Warren Shibuya. This seems to bring to an	17	MS. CAROLINE BLANCO: I think different people
18	end the discussion of DLNR.	18	there. I think it was Melissa Kirkendale and, also, David
19	So that is a quick summary of what my	19	Brown before. So the continuity has not quite been there.
20	goodness. Oh, no, I didn't lose you. It wasn't that	20	DR. CHARLIE FEIN: I am Charlie Fein, the
21	boring.	21	environmental consultant.
22	DR. CRAIG FOLTZ: Could I make one observation?	22	MS. TONIA MOY: The one that did this?
23	MS. ANNELLE AMARAL: Yes.	23	DR. CHARLIE FEIN: Yeah. And in talking to Pua
24	DR. CRAIG FOLTZ: There was essentially no	24	yesterday, I was showing her some things in the DEIS. She
25	discussion of the park resources.	25	said, "I guess I should read it." She had not read it as
	39		41
1	MS. ANNELLE AMARAL: Yes.	1	of yesterday.
2	DR. CRAIG FOLTZ: Just so that's clear. There	2	MS. TONIA MOY: So did it ever get into final?
3	is nothing being hidden here. This was concentrated on	3	MS. CAROLINE BLANCO: No. What we have done
4	the issue of whether this could be mitigated.	4	and, in fact, this was an interesting point of discussion
5	MS. ANNELLE AMARAL: Yeah.	5	with Betsy Merritt of the Trust. You know, the advice I
6	MS. CAROLINE BLANCO: Even though the option	6	have been given is to not conclude the FEIS process.
7	certainly was there for people to we outlined as well	7	Because it is a joint process.
8	that those were the two basic topics of discussion. And	8	MS. TONIA MOY: To include all this in it.
9	the only focus really was on the proposed site.	9	MS. CAROLINE BLANCO: It seems to me to make
10	MS. TONIA MOY: Parks wasn't here, were they?	10	sense to resolve the Section 106 issue so that that could
11	MS. CAROLINE BLANCO: They were not. They said	11	be put into the final EIS. And then, ultimately, a record
12	they would not be available to meet with us.	12	of decision, whatever direction that decision goes. So it
13	DR. CRAIG FOLTZ: We have arranged for a meeting	13	would be wrapped in. To me, it seems like it would be
14	on August 22nd.	14	premature to issue the final before we've concluded this.
15	MS. TONIA MOY: Oh, okay.	15	MS. TONIA MOY: Okay.
16	DR. CRAIG FOLTZ: Which was really almost the	16	MS. CAROLINE BLANCO: And Betsy had said, back
17	earliest time the superintendent was available.	17	then, that's a great thing. Most agencies don't do that,
18	MS. CAROLINE BLANCO: They had also indicated to	18	which is fine.
19	us in some I believe email traffic it was that they	19	MS. TONIA MOY: I guess, you know, there are a
20	would be sending us some sort of document for discussion.	20	lot of issues from the EPA as well as SHPO that is that
21	And we should have received it by now, but we have not.	21	being addressed through this? So that's trying to be
22	DR. CRAIG FOLTZ: As of yesterday, we have not	22	addressed now, before
0.0		0.0	
23	received it.	23	MS. CAROLINE BLANCO: Through the MS. TONIA MOV: Through this consultation
23 24 25	received it. MS. TONIA MOY: So I guess as far as my paper trail is concerned, which isn't extensive, I know so I	23 24 25	MS. CAROLINE BLANCO: Through the MS. TONIA MOY: Through this consultation process is when

11 (Pages 38 to 41)

	42		44
1	MS. CAROLINE BLANCO: Those were, I think, in	1	other agencies in my past where they didn't think they
2	response to the Draft EIS, correct, comments on the NEPA	2	should follow the process or wanted to follow the process.
3	process?	3	And I won't mention those agencies now. But I will say
4	DR. CHARLIE FEIN: Right. The EPA comments were	4	NSF has really, really tried to do this right.
5	on the NEPA process. Those will be responded to in the	5	And we can't force people to show up for
6	FEIS.	6	meetings. We can't force people to respond to letters and
7	MS. TONIA MOY: Then the comments from the SHPO	7	requests for proposals.
8	is trying to be resolved now at this consultation?	8	There were outreach efforts made to the Royal
9	MS. CAROLINE BLANCO: We're trying to. And I	9	Order. Mike had even made an effort last week to try to
10	think that there may have been with perhaps the Advisory	10	invite them to these meetings. And they didn't decide to
11	Counsel.	11	come.
12	One thing I also mentioned to Nancy and Pua	12	So there are certain limitations in that
13	yesterday was that we have made several requests of the	13	respect. It has to be a two-way interaction.
14	Advisory Counsel to meet with us. They are in Washington.	14	So all of that being said, our hope is that the
15	It's easy for us to go over the river and meet with them.	15	Advisory Counsel will meet with us when we get back to
16	And they have not agreed to meet with us.	16	Washington. And we do hope to meet with the Trust and see
17	We requested it in the November 8th letter,	17	how that goes before the August meetings.
18	which followed a conversation I had with Martha Catlin,	18	MS. TONIA MOY: Okay. Then I guess I just have
19	the program analyst. And I had said, what do you need us	19	one other comment.
20	to do at this point, we want to do this right.	20	MS. ANNELLE AMARAL: Yes, please.
21	MS. TONIA MOY: Yeah.	21	MS. TONIA MOY: So, you know, talking about the
22	MS. CAROLINE BLANCO: She said, write this	22	alternatives and stuff, when you explain it, it's great.
23	letter. She said, in the letter, request the meeting. I	23	But I guess for the general public maybe and this is
24	asked her, you know, would she give us quick attention on	24	just a suggestion for the final EIS.
25	it. She said, yes.	25	MS. CAROLINE BLANCO: Please, yeah.
	43		45
1	And so I wrote the letter. We did not hear a	1	MS. TONIA MOY: You know, you have the 72 sites,
2	response back.	2	you list them all out, you list out the criteria and how
3	I flagged it again toward the end of December.	3	it scored. I mean, I am sure you guys kept data. Or is
4	She said sorry for the delay, we're still working on it.	4	it in there?
5	We didn't get a response until January 17th.	5	DR. CRAIG FOLTZ: It's in the draft.
6	And that letter said that they didn't think it was	6	MS. TONIA MOY: It's in the draft?
7	advisable to meet at that time, they were trying to find	7	DR. CRAIG FOLTZ: Color-coded.
8	out who their contact was at the SHPD. They were trying	8	DR. CHARLIE FEIN: Very large section.
9	to gather information from the park and other people, and	9	MS. CAROLINE BLANCO: Do you have a copy?
10	that letters would be forthcoming. And that after that,	10	MR. MIKE MABERRY: Only of the last six. But I
11	you know, they might be in a better position to talk about	11	do have the last six here, if you just wanted to see it.
12	it.	12	But, yeah, the 72 sites is in the final.
13	The letters came in February, mid-February. We	13	DR. CHARLIE FEIN: There's a very detailed
14	still did not hear from the Advisory Counsel. We wrote	14	discussion of each and how the selection process occurred
15	them again in mid-May, again requesting the meeting, and	15	and what the results were and comparisons between sites.
16	telling them about this meeting. They did not agree to	16	And ultimately
17	meet with us.	17	MS. TONIA MOY: And the criteria and why the
18	They sent us another letter June 12th, basically	18	criteria was chosen?
19	saying that the project needed more alternatives and we	19	DR. CHARLIE FEIN: Yes.
20	hadn't followed the process.	20	DR. CRAIG FOLTZ: We realize that's a complex
21	It's a bit frustrating as an agency when we are	21	argument. And it's not one you want to address in normal
22	trying to do things right and really, really trying to do	22	life. We tried to discuss the turbulence, the sky
23	things right, and not getting the response from the	23	brightness and
24 25	agencies charged with making sure the process works correctly. And so it's difficult. I mean, I have seen	24	MS. TONIA MOY: The scientific
· / ``	CORRECTIVE AND SOLIS OTTICULT I MEAN I NAVE SEEN	25	DR. CRAIG FOLTZ: The science drivers.

Г

12 (Pages 42 to 45)

	46		48
1	MS. TONIA MOY: Practical issues.	1	Advisory Counsel that you made me. Maybe we should make
2	MS. CAROLINE BLANCO: That's, frankly, one of	2	another one for our records. I can hand this to you now.
3	the reasons why we wanted to meet with the Advisory	3	This is some of the 106 correspondence. This is what I
4	Counsel, to help them understand that.	4	gave to Nancy yesterday.
5	I do think NSF is a unique federal agency in	5	That might be helpful for you to look at. You
6	that regard. Because the whole reason to do it is to	6	can have that copy.
7	accomplish, you know, cutting-edge science, to fund	7	MS. ANNELLE AMARAL: I think some of the
8	cutting-edge science. And it's not as though you have	8	frustration, at least I heard yesterday as the
9	choices to accomplish the goal as you might in another	9	facilitator, was Pua and Nancy asserting that it wasn't
10	situation.	10	sufficient understanding of cultural impact or cultural
11	Did you need further documentation or the	11	significance. And then, I guess, because of transitions
12	website?	12	of people coming in and going out, they were not aware
13	I think, Sharon and Charlie, maybe you can point	13	that there was cultural impact study and then a
14	her to the website where there is additional information.	14	supplemental cultural impact study to deal with the
15	DR. CHARLIE FEIN: Yes. The DEIS is on the	15	concerns that were written about the original cultural
16	website.	16	impact study.
17	MS. TONIA MOY: Okay.	17	So I hear challenges to issues. And then what I
18	DR. CHARLIE FEIN: It can be found at	18	hear, also, is that there are documents that can be
19	atst.nso.edu. And you will find Draft Environmental	19	referred to that perhaps explain the positions that are
20	Impact Statement and all of the appendices, supporting	20	taken now.
21	documentation that goes with it.	21	So we are all sort of catching up on
22	MS. CAROLINE BLANCO: Aren't, also, the	22	information. But that's fine, we're happy to play
23	transcripts of all the hearings on that website?	23	catch-up.
24	DR. CHARLIE FEIN: No.	24	In the meantime, let me ask sort of a process
25	MS. SHARON LOANDO-MONRO: The transcripts, it	25	question. Understanding that we would like to see if we
	17		49
	47		
1	was requested by some of the public, comments that we have	1	can move forward a bit with respect to at least some MOA
2	had, they will be in the FEIS. But if you would like, I	2	issues, are the consulting parties comfortable,
3	can have that put on the website now. I checked it this	3	sufficiently comfortable, for me to walk through some of
4	morning, because I wasn't certain yesterday.	4	the points that have been raised to date for consideration
5	MS. CAROLINE BLANCO: I think in response to	5	in a memorandum of agreement? And can we have a
6	some of the	6	discussion of, yes, this makes sense, no, this doesn't
7	MS. SHARON LOANDO-MONRO: Let's put them on	7	make sense, and, if it doesn't make sense, this is why,
8	there?	8	then I can make note? Are you comfortable with us using
9	MS. CAROLINE BLANCO: Let's put them on so	9	the next couple of hours to do that? Yes?
10	people have access to that.	10	And you all are comfortable with it? Okay.
11	MS. ANNELLE AMARAL: Certainly some of the	11	Then let's proceed.
12	testimony is on because I read it before I came here.	12	Starting with perhaps one of the easiest issues
13	MS. SHARON LOANDO-MONRO: It was on the website?	13	in the MOA, and that is a memorandum of agreement, should
14	MS. ANNELLE AMARAL: Testimony, written	14	contain some provision for site cleanup or general cleanup
15	testimony was on. Also, even those form letters, I	15	of the area. Do we have any disagreement with that, any
16	support or I oppose, with the signatures, written comments	16	reservations about that?
17	of people were on the website because I read them.	17	DR. CRAIG FOLTZ: Since the IFA is a consulting
18	MS. SHARON LOANDO-MONRO: That might have been	18	party, they may want to speak to that.
19	in the DEIS.	19	Mike, sorry to put you on the spot.
20	MR. JEREMY WAGNER: In the appendix.	20	MR. MIKE MABERRY: Hi, I am Mike Maberry. I am
21	MS. SHARON LOANDO-MONRO: I am talking about	21	Assistant Director for the University of Hawaii Institute
22	transcripts from meetings.	22	for Astronomy. So I will be representing the IFA as a
23	MS. CAROLINE BLANCO: Sharon, I wonder if we can	23	consulting party.
24	get another copy. I mean, this is an extra. I could give	24	And the Institute for Astronomy, as the entity
25	this to her. Then I think you have one here for the	25	that has stewardship under the executive order for the

	50		52
1	site, first off, definitely believes that the impacts can	1	MR. MIKE MABERRY: It was not specific. And,
2	and should be mitigated. And that site cleanup issues	2	therefore, I am not prepared to address anything that's
3	related a little background on this probably would be	3	not specific.
4	useful specifically.	4	This was the only thing that was identified
5	The first telescope experiment that was ever	5	specifically.
6	undertaken up on Pu'u Kolekole there were experiments	6	MS. ANNELLE AMARAL: Yeah.
7	done before that time on Ulaula, Red Hill and the national	7	MR. MIKE MABERRY: We're more than happy to
8	park. But the first observations really undertaken at	8	well, it kind of goes beyond this, on to the konohiki. If
9	Pu'u Kolekole were done by a gentleman named Grote Reber.	9	we actually have someone to consult with at some point in
10	It was a radio telescope. There are remnants of that	10	time that is accepted in the community as a kupuna with
11	telescope mount still at the site. And they have been	11	kuleana for Haleakala, and we work together and look at
12	identified.	12	other things. I mean, we would certainly be willing to
13	DR. CHARLIE FEIN: Because they are more than 50	13	entertain it.
14	years old, they are historic resources. It has been given	14	MS. ANNELLE AMARAL: These two seem to be
15	a state number. And a removal plan has been approved by	15	connected. There is also some recommendation that not
16	SHPO in the event that it needs to be removed.	16	only are we talking about the immediate area, but a larger
17	MR. MIKE MABERRY: It hasn't, obviously, been	17	area where partners sited up at Haleakala could be engaged
18	implemented. And it hadn't really been discussed up until	18	in larger cleanup projects. Yes?
19	yesterday.	19	DR. CRAIG FOLTZ: I think that was a bit of some
20	MR. JEFF BARR: Just to add a little bit. It's	20	cross signals there. I think the March date related to
21	not quite just because they were 50 years old. Also, they	21	the transmission towers.
22	have some contributing cultural and scientific merit as	22	MS. CAROLINE BLANCO: Encourage the removal of
23	artifacts of an experiment.	23	five broadcast towers, and ancillary junk is what we
24	MR. MIKE MABERRY: He is considered the father	24	called it.
25	of radio astronomy worldwide.	25	DR. CRAIG FOLTZ: Ancillary junk.
	51		53
1	So yesterday was the first time we had heard a	1	MR. MIKE MABERRY: That's not really on property
1 2	So yesterday was the first time we had heard a suggestion of removing that. And it's something we	1 2	MR. MIKE MABERRY: That's not really on property that is under our stewardship. It's on DLNR property.
2	suggestion of removing that. And it's something we	2	that is under our stewardship. It's on DLNR property.
2 3	suggestion of removing that. And it's something we definitely can entertain.	2 3	that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of
2 3 4	suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by	2 3 4	that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is
2 3 4 5	suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others.	2 3 4 5	that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it
2 3 4 5 6	suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe.	2 3 4 5 6	that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula
2 3 4 5 6 7	suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the	2 3 4 5 6 7	that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions
2 3 4 5 6 7 8	suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST	2 3 4 5 6 7 8	that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions made that we seek to relocate and then clean up that area.
2 3 4 5 6 7 8 9	suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST after 50 or 90 years, or whatever the number is, but, yet,	2 3 4 5 6 7 8 9	that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions made that we seek to relocate and then clean up that area. And that is something we would be very interested in.
2 3 4 5 6 7 8 9 10	suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST after 50 or 90 years, or whatever the number is, but, yet, you have this remnant up there for 50-plus years that has	2 3 4 5 6 7 8 9 10	that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions made that we seek to relocate and then clean up that area. And that is something we would be very interested in. DR. CRAIG FOLTZ: I think somehow we got crossed
2 3 4 5 6 7 8 9 10 11	suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST after 50 or 90 years, or whatever the number is, but, yet, you have this remnant up there for 50-plus years that has no real use, and you haven't removed that. So as a	2 3 4 5 6 7 8 9 10 11	that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions made that we seek to relocate and then clean up that area. And that is something we would be very interested in. DR. CRAIG FOLTZ: I think somehow we got crossed with partners, but I think that encapsulated the cleanup
2 3 4 5 6 7 8 9 10 11 12	suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST after 50 or 90 years, or whatever the number is, but, yet, you have this remnant up there for 50-plus years that has no real use, and you haven't removed that. So as a gesture of good faith, remove that which is no longer	2 3 4 5 6 7 8 9 10 11 12	that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions made that we seek to relocate and then clean up that area. And that is something we would be very interested in. DR. CRAIG FOLTZ: I think somehow we got crossed with partners, but I think that encapsulated the cleanup discussion. MS. ANNELLE AMARAL: I see. Any further comments, concerns or issues around
2 3 4 5 6 7 8 9 10 11 12 13 14 15	suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST after 50 or 90 years, or whatever the number is, but, yet, you have this remnant up there for 50-plus years that has no real use, and you haven't removed that. So as a gesture of good faith, remove that which is no longer useful and give yourselves some credibility with respect to removal of debris from the site, unsightly or useless material.	2 3 4 5 6 7 8 9 10 11 12 13 14 15	that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions made that we seek to relocate and then clean up that area. And that is something we would be very interested in. DR. CRAIG FOLTZ: I think somehow we got crossed with partners, but I think that encapsulated the cleanup discussion. MS. ANNELLE AMARAL: I see. Any further comments, concerns or issues around site cleanup? Okay.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST after 50 or 90 years, or whatever the number is, but, yet, you have this remnant up there for 50-plus years that has no real use, and you haven't removed that. So as a gesture of good faith, remove that which is no longer useful and give yourselves some credibility with respect to removal of debris from the site, unsightly or useless material. MS. ANNELLE AMARAL: So you have an issue with	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	 that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions made that we seek to relocate and then clean up that area. And that is something we would be very interested in. DR. CRAIG FOLTZ: I think somehow we got crossed with partners, but I think that encapsulated the cleanup discussion. MS. ANNELLE AMARAL: I see. Any further comments, concerns or issues around site cleanup? Okay. We move then to the promotion it comes up
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST after 50 or 90 years, or whatever the number is, but, yet, you have this remnant up there for 50-plus years that has no real use, and you haven't removed that. So as a gesture of good faith, remove that which is no longer useful and give yourselves some credibility with respect to removal of debris from the site, unsightly or useless material. MS. ANNELLE AMARAL: So you have an issue with respect to the removal because it has cultural or	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	 that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions made that we seek to relocate and then clean up that area. And that is something we would be very interested in. DR. CRAIG FOLTZ: I think somehow we got crossed with partners, but I think that encapsulated the cleanup discussion. MS. ANNELLE AMARAL: I see. Any further comments, concerns or issues around site cleanup? Okay. We move then to the promotion it comes up often, acknowledgment of Native Hawaiians, acknowledgment
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST after 50 or 90 years, or whatever the number is, but, yet, you have this remnant up there for 50-plus years that has no real use, and you haven't removed that. So as a gesture of good faith, remove that which is no longer useful and give yourselves some credibility with respect to removal of debris from the site, unsightly or useless material. MS. ANNELLE AMARAL: So you have an issue with respect to the removal because it has cultural or scientific merit?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions made that we seek to relocate and then clean up that area. And that is something we would be very interested in. DR. CRAIG FOLTZ: I think somehow we got crossed with partners, but I think that encapsulated the cleanup discussion. MS. ANNELLE AMARAL: I see. Any further comments, concerns or issues around site cleanup? Okay. We move then to the promotion it comes up often, acknowledgment of Native Hawaiians, acknowledgment of proper respectful access to sites. And so what comes
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST after 50 or 90 years, or whatever the number is, but, yet, you have this remnant up there for 50-plus years that has no real use, and you haven't removed that. So as a gesture of good faith, remove that which is no longer useful and give yourselves some credibility with respect to removal of debris from the site, unsightly or useless material. MS. ANNELLE AMARAL: So you have an issue with respect to the removal because it has cultural or scientific merit? MR. MIKE MABERRY: No. No. It simply means 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions made that we seek to relocate and then clean up that area. And that is something we would be very interested in. DR. CRAIG FOLTZ: I think somehow we got crossed with partners, but I think that encapsulated the cleanup discussion. MS. ANNELLE AMARAL: I see. Any further comments, concerns or issues around site cleanup? Okay. We move then to the promotion it comes up often, acknowledgment of Native Hawaiians, acknowledgment of proper respectful access to sites. And so what comes out of this broad category of proper protocols and
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST after 50 or 90 years, or whatever the number is, but, yet, you have this remnant up there for 50-plus years that has no real use, and you haven't removed that. So as a gesture of good faith, remove that which is no longer useful and give yourselves some credibility with respect to removal of debris from the site, unsightly or useless material. MS. ANNELLE AMARAL: So you have an issue with respect to the removal because it has cultural or scientific merit? MR. MIKE MABERRY: No. No. It simply means there's a process that would have to be followed. And we 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions made that we seek to relocate and then clean up that area. And that is something we would be very interested in. DR. CRAIG FOLTZ: I think somehow we got crossed with partners, but I think that encapsulated the cleanup discussion. MS. ANNELLE AMARAL: I see. Any further comments, concerns or issues around site cleanup? Okay. We move then to the promotion it comes up often, acknowledgment of Native Hawaiians, acknowledgment of proper respectful access to sites. And so what comes out of this broad category of proper protocols and respectful access is the more important discussion, at
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST after 50 or 90 years, or whatever the number is, but, yet, you have this remnant up there for 50-plus years that has no real use, and you haven't removed that. So as a gesture of good faith, remove that which is no longer useful and give yourselves some credibility with respect to removal of debris from the site, unsightly or useless material. MS. ANNELLE AMARAL: So you have an issue with respect to the removal because it has cultural or scientific merit? MR. MIKE MABERRY: No. No. It simply means there's a process that would have to be followed. And we are willing to entertain that. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions made that we seek to relocate and then clean up that area. And that is something we would be very interested in. DR. CRAIG FOLTZ: I think somehow we got crossed with partners, but I think that encapsulated the cleanup discussion. MS. ANNELLE AMARAL: I see. Any further comments, concerns or issues around site cleanup? Okay. We move then to the promotion it comes up often, acknowledgment of Native Hawaiians, acknowledgment of proper respectful access to sites. And so what comes out of this broad category of proper protocols and respectful access is the more important discussion, at least to Native Hawaiians, of culturally appropriate
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST after 50 or 90 years, or whatever the number is, but, yet, you have this remnant up there for 50-plus years that has no real use, and you haven't removed that. So as a gesture of good faith, remove that which is no longer useful and give yourselves some credibility with respect to removal of debris from the site, unsightly or useless material. MS. ANNELLE AMARAL: So you have an issue with respect to the removal because it has cultural or scientific merit? MR. MIKE MABERRY: No. No. It simply means there's a process that would have to be followed. And we are willing to entertain that. MR. JEFF BARR: Right. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. And it has been expressed as having a visual impact from Ulaula from within the national park. So there was suggestions made that we seek to relocate and then clean up that area. And that is something we would be very interested in. DR. CRAIG FOLTZ: I think somehow we got crossed with partners, but I think that encapsulated the cleanup discussion. MS. ANNELLE AMARAL: I see. Any further comments, concerns or issues around site cleanup? Okay. We move then to the promotion it comes up often, acknowledgment of Native Hawaiians, acknowledgment of proper respectful access to sites. And so what comes out of this broad category of proper protocols and respectful access is the more important discussion, at least to Native Hawaiians, of culturally appropriate conduct.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	 suggestion of removing that. And it's something we definitely can entertain. MS. CAROLINE BLANCO: I think that was made by Kiope and others. MR. MIKE MABERRY: Warren, too, I believe. DR. CHARLIE FEIN: Yeah. I think it was in the context of, well, you say you are going to remove ATST after 50 or 90 years, or whatever the number is, but, yet, you have this remnant up there for 50-plus years that has no real use, and you haven't removed that. So as a gesture of good faith, remove that which is no longer useful and give yourselves some credibility with respect to removal of debris from the site, unsightly or useless material. MS. ANNELLE AMARAL: So you have an issue with respect to the removal because it has cultural or scientific merit? MR. MIKE MABERRY: No. No. It simply means there's a process that would have to be followed. And we are willing to entertain that. MR. JEFF BARR: Right. DR. CRAIG FOLTZ: There was also discussion of 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	 that is under our stewardship. It's on DLNR property. Without bringing up video, there is a group of television and what was a radio broadcast tower that is adjacent to the site that we have stewardship of. We move then to the promotion it comes up often, acknowledgment of Native Hawaiians, acknowledgment of proper respectful access to sites. And so what comes out of this broad category of proper protocols and respectful access is the more important discussion, at least to Native Hawaiians, of culturally appropriate conduct.

14 (Pages 50 to 53)

	54		56
1	cultural practices. And that is for Hawaiians to come	1	going to be.
2	together to identify, by genealogy and lineal descendants	2	If we apply true ancient Hawaiian standards,
3	and practice, proper konohiki and develop protocols. And	3	well, the answer is really simple. It's not the Native
4	would all the parties involved be willing to then yield to	4	Hawaiian community that is going to decide who the
5	that cultural practice?	5	konohiki is. The question is going to be in which moku is
6	We think it's simple enough, don't we, Sol?	6	this property located, in which ahupua'a is this property
7	MR. SOL KAHO'OHALAHALA: Well, I think it comes	7	located, in which ili is this property located. So you
8	about because our discussions were focused on the fact	8	narrow it down from the Native Hawaiian community to the
9	that the signage was in 'olelo, Hawaii, and that there are	9	lineal descendants of this specific parcel of property.
10	Hawaiians that may not understand 'olelo themselves. So	10	And then it gets a little bit easier there because then
11	that was a proper problem.	11	you know like how you went from 72 to six, we might go
12	And the other was a concern for signage. You	12	from 200,000 Native Hawaiians down to five.
13	keep adding signs to clarify. And then you keep it in	13	MS. CAROLINE BLANCO: Well, okay. That's
14	'olelo, Hawaii, do you put it in English.	14	helpful.
15	So I think from that I think the idea of maybe	15	MR. HINANO RODRIGUES: Just getting through that
16	what we should be doing is reconsidering the signages is	16	process itself is going to be
17	the way we want to prepare and help people to understand.	17	MR. SOL KAHO'OHALAHALA: But that, like Hinano
18	Would it now be appropriate to consider someone	18	says, refines it so that
19	like a konohiki who is responsible for the sites that are	19	MS. CAROLINE BLANCO: Is it manageable, though?
20	there, that are considered to be special, and that they	20	Is this a realistic idea?
21	would be the ones to impart what protocol might be?	21	MR. HINANO RODRIGUES: Yes. And I like it. We
22	So leaving a lot of that kind of decisions to	22	are really going out on a limb here, but I think that, in
23	the Hawaiian community to determine so that we are not	23	Hawaii, we are making changes that take us back to our
24	here trying to decide which sign is more appropriate.	24	ancient practices rather than utilizing western law. The
25	And, you know, so that's how I think that idea or	25	perfect example is the ahumoku process. We decided
	55		57
1		1	
1 2	55 suggestion has come about. MS. CAROLINE BLANCO: If I could add to that.	1 2	57 that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the
	suggestion has come about.		that we are the preliminary stage at this point. We
2	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say	2	that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you
2 3	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to	2 3	that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the
2 3 4	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to	2 3 4	that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically
2 3 4 5	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to	2 3 4 5	that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku,
2 3 4 5 6	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to	2 3 4 5 6	that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It
2 3 4 5 6 7	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to carry out the goals.	2 3 4 5 6 7	that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It would probably be an ali'i. Because the konohikis are
2 3 4 5 6 7 8	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to carry out the goals. MR. SOL KAHO'OHALAHALA: Yeah. I think in the	2 3 4 5 6 7 8	that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It would probably be an ali'i. Because the konohikis are actually for the ahupua'a land division itself.
2 3 4 5 6 7 8 9	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to carry out the goals. MR. SOL KAHO'OHALAHALA: Yeah. I think in the Hawaiian community, that is going to be an important	2 3 4 5 6 7 8 9	that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It would probably be an ali'i. Because the konohikis are actually for the ahupua'a land division itself. So, yeah, we're moving in that direction. We
2 3 4 5 6 7 8 9 10	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to carry out the goals. MR. SOL KAHO'OHALAHALA: Yeah. I think in the Hawaiian community, that is going to be an important discussion, because just the idea of a konohiki itself,	2 3 4 5 6 7 8 9 10	that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It would probably be an ali'i. Because the konohikis are actually for the ahupua'a land division itself. So, yeah, we're moving in that direction. We are way ahead of the game right now. But we are moving
2 3 4 5 6 7 8 9 10 11	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to carry out the goals. MR. SOL KAHO'OHALAHALA: Yeah. I think in the Hawaiian community, that is going to be an important discussion, because just the idea of a konohiki itself, you know. But nonetheless, I think the practice is what	2 3 4 5 6 7 8 9 10 11	that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It would probably be an ali'i. Because the konohikis are actually for the ahupua'a land division itself. So, yeah, we're moving in that direction. We are way ahead of the game right now. But we are moving there.
2 3 4 5 6 7 8 9 10 11 12	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to carry out the goals. MR. SOL KAHO'OHALAHALA: Yeah. I think in the Hawaiian community, that is going to be an important discussion, because just the idea of a konohiki itself, you know. But nonetheless, I think the practice is what we are trying to establish and perhaps allow for, so that	2 3 4 5 6 7 8 9 10 11 12	that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It would probably be an ali'i. Because the konohikis are actually for the ahupua'a land division itself. So, yeah, we're moving in that direction. We are way ahead of the game right now. But we are moving there. And maybe this might serve as the prototype for
2 3 4 5 6 7 8 9 10 11 12 13	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to carry out the goals. MR. SOL KAHO'OHALAHALA: Yeah. I think in the Hawaiian community, that is going to be an important discussion, because just the idea of a konohiki itself, you know. But nonetheless, I think the practice is what we are trying to establish and perhaps allow for, so that would be a way of managing, you know, managing the area,	2 3 4 5 6 7 8 9 10 11 12 13	that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It would probably be an ali'i. Because the konohikis are actually for the ahupua'a land division itself. So, yeah, we're moving in that direction. We are way ahead of the game right now. But we are moving there. And maybe this might serve as the prototype for the rest of the Hawaiian community to see, well, you know,
2 3 4 5 6 7 8 9 10 11 12 13 14	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to carry out the goals. MR. SOL KAHO'OHALAHALA: Yeah. I think in the Hawaiian community, that is going to be an important discussion, because just the idea of a konohiki itself, you know. But nonetheless, I think the practice is what we are trying to establish and perhaps allow for, so that would be a way of managing, you know, managing the area, managing access and in helping to educate.	2 3 4 5 6 7 8 9 10 11 12 13 14	 that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It would probably be an ali'i. Because the konohikis are actually for the ahupua'a land division itself. So, yeah, we're moving in that direction. We are way ahead of the game right now. But we are moving there. And maybe this might serve as the prototype for the rest of the Hawaiian community to see, well, you know, we got something really important, Haleakala is so
2 3 4 5 6 7 8 9 10 11 12 13 14 15	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to carry out the goals. MR. SOL KAHO'OHALAHALA: Yeah. I think in the Hawaiian community, that is going to be an important discussion, because just the idea of a konohiki itself, you know. But nonetheless, I think the practice is what we are trying to establish and perhaps allow for, so that would be a way of managing, you know, managing the area, managing access and in helping to educate. So that I don't think we are necessarily saying	2 3 4 5 6 7 8 9 10 11 12 13 14 15	that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It would probably be an ali'i. Because the konohikis are actually for the ahupua'a land division itself. So, yeah, we're moving in that direction. We are way ahead of the game right now. But we are moving there. And maybe this might serve as the prototype for the rest of the Hawaiian community to see, well, you know, we got something really important, Haleakala is so important to our religion, and let's try to apply this old
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to carry out the goals. MR. SOL KAHO'OHALAHALA: Yeah. I think in the Hawaiian community, that is going to be an important discussion, because just the idea of a konohiki itself, you know. But nonetheless, I think the practice is what we are trying to establish and perhaps allow for, so that would be a way of managing, you know, managing the area, managing access and in helping to educate. So that I don't think we are necessarily saying that there needs to be someone there 24/7, but that authority is available for community and organizational meetings that help to impart education about what is	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	 that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It would probably be an ali'i. Because the konohikis are actually for the ahupua'a land division itself. So, yeah, we're moving in that direction. We are way ahead of the game right now. But we are moving there. And maybe this might serve as the prototype for the rest of the Hawaiian community to see, well, you know, we got something really important, Haleakala is so important to our religion, and let's try to apply this old concept in the year 2008 and see what happens by utilizing the konohiki. DR. CRAIG FOLTZ: Why is it controversial,
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to carry out the goals. MR. SOL KAHO'OHALAHALA: Yeah. I think in the Hawaiian community, that is going to be an important discussion, because just the idea of a konohiki itself, you know. But nonetheless, I think the practice is what we are trying to establish and perhaps allow for, so that would be a way of managing, you know, managing the area, managing access and in helping to educate. So that I don't think we are necessarily saying that there needs to be someone there 24/7, but that authority is available for community and organizational meetings that help to impart education about what is expected of anyone who seeks to access the sites. And if	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	 that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It would probably be an ali'i. Because the konohikis are actually for the ahupua'a land division itself. So, yeah, we're moving in that direction. We are way ahead of the game right now. But we are moving there. And maybe this might serve as the prototype for the rest of the Hawaiian community to see, well, you know, we got something really important, Haleakala is so important to our religion, and let's try to apply this old concept in the year 2008 and see what happens by utilizing the konohiki. DR. CRAIG FOLTZ: Why is it controversial, because it's different? Why would this be you know,
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to carry out the goals. MR. SOL KAHO'OHALAHALA: Yeah. I think in the Hawaiian community, that is going to be an important discussion, because just the idea of a konohiki itself, you know. But nonetheless, I think the practice is what would be a way of managing, you know, managing the area, managing access and in helping to educate. So that I don't think we are necessarily saying that there needs to be someone there 24/7, but that authority is available for community and organizational meetings that help to impart education about what is expected of anyone who seeks to access the sites. And if there are events that come about that there will be some	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It would probably be an ali'i. Because the konohikis are actually for the ahupua'a land division itself. So, yeah, we're moving in that direction. We are way ahead of the game right now. But we are moving there. And maybe this might serve as the prototype for the rest of the Hawaiian community to see, well, you know, we got something really important, Haleakala is so important to our religion, and let's try to apply this old concept in the year 2008 and see what happens by utilizing the konohiki. DR. CRAIG FOLTZ: Why is it controversial, because it's different? Why would this be you know, you said we're out on a limb here.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	suggestion has come about. MS. CAROLINE BLANCO: If I could add to that. So I could envision a provision in an MOA that would say that the Native Hawaiian community would work together to try to identify a konohiki and work with the IFA to try to work out an arrangement for that person being there to carry out the goals. MR. SOL KAHO'OHALAHALA: Yeah. I think in the Hawaiian community, that is going to be an important discussion, because just the idea of a konohiki itself, you know. But nonetheless, I think the practice is what we are trying to establish and perhaps allow for, so that would be a way of managing, you know, managing the area, managing access and in helping to educate. So that I don't think we are necessarily saying that there needs to be someone there 24/7, but that authority is available for community and organizational meetings that help to impart education about what is expected of anyone who seeks to access the sites. And if there are events that come about that there will be some manner in which that would be organized. I think those	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 that we are the preliminary stage at this point. We decided that our natural resources shall be managed in the ancient way. And for all intents and purposes, if you just take this island itself, this island is basically composed of 12 mokus, 12 divisions. So within each moku, you would have it wouldn't even be a konohiki. It would probably be an ali'i. Because the konohikis are actually for the ahupua'a land division itself. So, yeah, we're moving in that direction. We are way ahead of the game right now. But we are moving there. And maybe this might serve as the prototype for the rest of the Hawaiian community to see, well, you know, we got something really important, Haleakala is so important to our religion, and let's try to apply this old concept in the year 2008 and see what happens by utilizing the konohiki. 	62		64
1	talking about with this konohiki who would have a	1	archeology and all that.
2	long-term role with what we've identified as the cultural	2	Your cultural monitor probably has more
3	monitor during construction, and whether or not there	3	experience in standing out there and, let's say, seeing
4	could not be some overlap or might be more appropriate to	4	the backhoe hits something and go, woah, wait a minute, I
5	try to find somebody who is more culturally attuned or	5	see a profile, I see a burial pit profile, you know,
6	acceptable to the Native Hawaiian community as the	6	like
7	legitimate representative of the native culture on the	7	MR. JEFF BARR: Uh-huh.
8	mountain, earlier on. Because certainly that five-year	8	MR. HINANO RODRIGUES: So he probably will catch
9	period of construction will be some of the most disruptive	9	those stuff better than a konohiki would.
10	activity and some of the most greatest potential for, you	10	MR. JEFF BARR: Well, maybe there's a
11	know, conflicts of access, and all kinds of other	11	relationship, though, between the cultural monitor and the
12	potential cultural issues. Rather than us going out and	12	konohiki. And maybe the konohiki should be established
13	contracting a cultural monitor the way we would, you know,	13	before construction.
14	somebody to do the plumbing up there, or something else	14	MR. HINANO RODRIGUES: That would be ideal.
15	like that.	15	MR. JEFF BARR: The cultural monitor can be a
16	So, to me, I mean and it's not a trivial	16	representative and, you know, sort of more answer to
17	issue, the cultural monitoring in itself. It's	17	MR. SOL KAHO'OHALAHALA: That would have been my
18	incorporated well, I think, into the long-range	18	comment, is don't merge the two because they are not
19	development plan.	19	necessarily by labeling or assuming the konohiki means
20	I am giving Mike a little bit of heartburn over	20	all this.
21	there because it's a well worked out arrangement. But it	21	MR. JEFF BARR: By the way, I am also not trying
22	seems to be more appropriate somehow to have that early	22	to assert that we wouldn't properly compensate the
23	input and have somebody who is, as I say, maybe considered	23	cultural monitor.
24	to be the more legitimate representative of the native	24	MR. SOL KAHO'OHALAHALA: You are demonstrating
25	culture there during the construction, not just during the	25	that you are going to be responsible for cultural
	63		65
1	operation.		
	operation.	1	monitoring?
2	MR. SOL KAHO'OHALAHALA: Do you want my two	1 2	monitoring? MR. JEFF BARR: Yeah.
2 3	-		
	MR. SOL KAHO'OHALAHALA: Do you want my two	2	MR. JEFF BARR: Yeah.
3	MR. SOL KAHO'OHALAHALA: Do you want my two cents?	2 3	MR. JEFF BARR: Yeah. MR. SOL KAHO'OHALAHALA: You are also going to
3 4	MR. SOL KAHO'OHALAHALA: Do you want my two cents? Go ahead.	2 3 4	MR. JEFF BARR: Yeah. MR. SOL KAHO'OHALAHALA: You are also going to allow for this konohiki as a manager?
3 4 5	MR. SOL KAHO'OHALAHALA: Do you want my two cents? Go ahead. MR. HINANO RODRIGUES: You know, you need to understand what a konohiki is. You see, our ancestors were really smart. You know, you look up at them and you	2 3 4 5	MR. JEFF BARR: Yeah. MR. SOL KAHO'OHALAHALA: You are also going to allow for this konohiki as a manager? MR. JEFF BARR: To me, it seems they are very integrated and linked concepts. It should not be something where a cultural monitor does this activity
3 4 5 6	MR. SOL KAHO'OHALAHALA: Do you want my two cents? Go ahead. MR. HINANO RODRIGUES: You know, you need to understand what a konohiki is. You see, our ancestors were really smart. You know, you look up at them and you think, wow, they really got these leadership qualities and	2 3 4 5 6	MR. JEFF BARR: Yeah. MR. SOL KAHO'OHALAHALA: You are also going to allow for this konohiki as a manager? MR. JEFF BARR: To me, it seems they are very integrated and linked concepts. It should not be something where a cultural monitor does this activity during construction and somebody takes over then. You
3 4 5 6 7	MR. SOL KAHO'OHALAHALA: Do you want my two cents? Go ahead. MR. HINANO RODRIGUES: You know, you need to understand what a konohiki is. You see, our ancestors were really smart. You know, you look up at them and you think, wow, they really got these leadership qualities and skills. But the true leader is the one who depends on	2 3 4 5 6 7	MR. JEFF BARR: Yeah. MR. SOL KAHO'OHALAHALA: You are also going to allow for this konohiki as a manager? MR. JEFF BARR: To me, it seems they are very integrated and linked concepts. It should not be something where a cultural monitor does this activity during construction and somebody takes over then. You know, to me it seems like there ought to be kind of a more
3 4 5 6 7 8 9 10	MR. SOL KAHO'OHALAHALA: Do you want my two cents? Go ahead. MR. HINANO RODRIGUES: You know, you need to understand what a konohiki is. You see, our ancestors were really smart. You know, you look up at them and you think, wow, they really got these leadership qualities and skills. But the true leader is the one who depends on people under him. Right?	2 3 4 5 6 7 8 9 10	MR. JEFF BARR: Yeah. MR. SOL KAHO'OHALAHALA: You are also going to allow for this konohiki as a manager? MR. JEFF BARR: To me, it seems they are very integrated and linked concepts. It should not be something where a cultural monitor does this activity during construction and somebody takes over then. You know, to me it seems like there ought to be kind of a more natural segue between the long-term stewardship of the
3 4 5 6 7 8 9 10 11	MR. SOL KAHO'OHALAHALA: Do you want my two cents? Go ahead. MR. HINANO RODRIGUES: You know, you need to understand what a konohiki is. You see, our ancestors were really smart. You know, you look up at them and you think, wow, they really got these leadership qualities and skills. But the true leader is the one who depends on people under him. Right? Now they say that the good manager is the one	2 3 4 5 6 7 8 9 10 11	MR. JEFF BARR: Yeah. MR. SOL KAHO'OHALAHALA: You are also going to allow for this konohiki as a manager? MR. JEFF BARR: To me, it seems they are very integrated and linked concepts. It should not be something where a cultural monitor does this activity during construction and somebody takes over then. You know, to me it seems like there ought to be kind of a more natural segue between the long-term stewardship of the site.
3 4 5 6 7 8 9 10 11 12	MR. SOL KAHO'OHALAHALA: Do you want my two cents? Go ahead. MR. HINANO RODRIGUES: You know, you need to understand what a konohiki is. You see, our ancestors were really smart. You know, you look up at them and you think, wow, they really got these leadership qualities and skills. But the true leader is the one who depends on people under him. Right? Now they say that the good manager is the one who brings out the best in himself. But the true leader	2 3 4 5 6 7 8 9 10	MR. JEFF BARR: Yeah. MR. SOL KAHO'OHALAHALA: You are also going to allow for this konohiki as a manager? MR. JEFF BARR: To me, it seems they are very integrated and linked concepts. It should not be something where a cultural monitor does this activity during construction and somebody takes over then. You know, to me it seems like there ought to be kind of a more natural segue between the long-term stewardship of the site. MR. SOL KAHO'OHALAHALA: My only caution is
3 4 5 6 7 8 9 10 11 12 13	MR. SOL KAHO'OHALAHALA: Do you want my two cents? Go ahead. MR. HINANO RODRIGUES: You know, you need to understand what a konohiki is. You see, our ancestors were really smart. You know, you look up at them and you think, wow, they really got these leadership qualities and skills. But the true leader is the one who depends on people under him. Right? Now they say that the good manager is the one who brings out the best in himself. But the true leader is the one who brings out the best in others.	2 3 4 5 6 7 8 9 10 11 12 13	MR. JEFF BARR: Yeah. MR. SOL KAHO'OHALAHALA: You are also going to allow for this konohiki as a manager? MR. JEFF BARR: To me, it seems they are very integrated and linked concepts. It should not be something where a cultural monitor does this activity during construction and somebody takes over then. You know, to me it seems like there ought to be kind of a more natural segue between the long-term stewardship of the site. MR. SOL KAHO'OHALAHALA: My only caution is don't lump it all together and expect that that that is
3 4 5 6 7 8 9 10 11 12 13 14	MR. SOL KAHO'OHALAHALA: Do you want my two cents? Go ahead. MR. HINANO RODRIGUES: You know, you need to understand what a konohiki is. You see, our ancestors were really smart. You know, you look up at them and you think, wow, they really got these leadership qualities and skills. But the true leader is the one who depends on people under him. Right? Now they say that the good manager is the one who brings out the best in himself. But the true leader is the one who brings out the best in others. So your konohiki will not necessarily be the one	2 3 4 5 6 7 8 9 10 11 12 13 14	MR. JEFF BARR: Yeah. MR. SOL KAHO'OHALAHALA: You are also going to allow for this konohiki as a manager? MR. JEFF BARR: To me, it seems they are very integrated and linked concepts. It should not be something where a cultural monitor does this activity during construction and somebody takes over then. You know, to me it seems like there ought to be kind of a more natural segue between the long-term stewardship of the site. MR. SOL KAHO'OHALAHALA: My only caution is don't lump it all together and expect that that that is a cover-all.
3 4 5 6 7 8 9 10 11 12 13 14 15	MR. SOL KAHO'OHALAHALA: Do you want my two cents? Go ahead. MR. HINANO RODRIGUES: You know, you need to understand what a konohiki is. 	70		72
1	construction people are required to.	1	MS. CAROLINE BLANCO: How about this? Again
2	And then the cultural monitor is up there, opens	2	thinking in terms of provisions, how about if we have a
3	the day with a pule, you know, is there throughout the	3	provision just saying that we will have a cultural monitor
4	day, there for consultation, anything specific. Like you	4	and archeologist onsite, and then the IFA would work with
5	say, watching for anything special that may require and	5	the Native Hawaiian community to identify a konohiki and
6	I've seen where they have liked stopped construction, make	6	the tasks to be undertaken?
7	a couple of phone calls, talk to kupuna, and then come	7	MR. HINANO RODRIGUES: Right. We keep it
8	back and make a decision as to how to proceed.	8	totally separate.
9	So that is what Jeff is referring to, he is	9	MS. CAROLINE BLANCO: Okay.
10	talking about.	10	MR. MIKE MABERRY: Please.
11	So the university has done a project since this	11	MS. CAROLINE BLANCO: IFA is the right entity?
12	has been implemented in 2004, that has utilized the	12	Does that sound good? Okay.
13	cultural monitor, in fact a couple, as well as the Air	13	MR. MIKE MABERRY: The three of us, at least,
14	Force. The Air Force used a different cultural monitor	14	know it will be controversial because there are kupuna who
15	than we did.	15	already feel they have the kuleana. If you actually go
16	I just felt, in order to kind of bring this	16	back and look at the genealogy, that's not going to be the
17	together here, I would explain a little bit about what has	17	case. So it's going to it may not be in place and
18	been going on.	18	DR. CRAIG FOLTZ: Rough waters ahead.
19	MR. HINANO RODRIGUES: I think maybe, because	19	MR. MIKE MABERRY: Yeah, any time soon.
20	some of us are involved in archeology, that we already	20	MS. CAROLINE BLANCO: It sounds like a very
21	have our own definition of what a cultural monitor's role	21	MR. JEFF BARR: We may not be building any time
22	is and others don't. So, yeah, I think you kind of	22	soon, either.
23	clarified that.	23	MS. CAROLINE BLANCO: And there may be a
24	To make it really easy, the stage at which a	24	decision not to build at all. Who knows? But at least
25	cultural monitor is involved is different from when a	25	MR. MIKE MABERRY: That being said, the

19 (Pages 70 to 73)

	74		76
1	the ball is you called this an open house. Maybe if you	1	creation of the star compass utilizing sites on Haleakala
2	had called it a talk story session, more people would have	2	and, as another way of engaging the skills of the Hawaiian
3	showed up.	3	community, for learning, for traditional knowledge. It
4	MS. CAROLINE BLANCO: Huh.	4	moved to the larger issue of that perhaps there are
5	MR. HINANO RODRIGUES: Because, again, we have a	5	proposals by the larger Hawaiian community similar to
6	different perspective.	6	something like what was proposed for the star compass. I
7	We think people who know not much about the	7	am wondering if these two are in fact one provision that
8	Hawaiian culture think talk story is just chitchat. It's	8	needs to be made in the MOA, or do we want to talk about
9	not. It's for all of us to come into the same room and,	9	it as two separate provisions?
10	to use local lingo, for me to check you out. And what	10	Is the star compass so singularly important that
11	happens in that process is you create a trust	11	it needs to be pulled out and discussed separately from
12	relationship. Once you create the trust relationship,	12	seeking proposals from the Native Hawaiian community for
13	then you start to move on and everybody works together.	13	additional learnings and cultural sensitivity?
14	Unless you get to that point and I share your	14	MR. SOL KAHO'OHALAHALA: Well, again, my
15	frustrations with you. Unless you get to that point, you	15	thought and the reason I introduced that as a
16	will be frustrated all the way because you haven't created	16	suggestion is that, obviously, at Haleakala, in
17	the trust relationship. So from that that's why 2005	17	reference to the la, the sun, the compass itself, in terms
18	until now, you know, you don't get much response.	18	of teaching navigation through Hokule'a and through Nainoa
19	MS. CAROLINE BLANCO: Right.	19	and through Mau have always been focused on the rising
20	MR. HINANO RODRIGUES: Because you didn't quite	20	sun, moon, constellation, and the location. There are
21	jump that first hurdle yet. So, again, this is an example	21	very it's very important to have a clear view of the
22	where, in the Hawaiian culture, it's a Hawaiian issue, you	22	horizons if you are going to be able to teach you know,
23	got to approach it the Hawaiian way. If not, you will	23	the best conditions for teaching.
24	ultimately fail in that process.	24	If you are looking at the fact that the
25	MS. ANNELLE AMARAL: Uh-huh.	25	telescope is looking for the best location for observing
	75		77
1	MR. HINANO RODRIGUES: Our whole culture is	1	the la, then shouldn't you be able to acknowledge the fact
2	process.	2	that the Hawaiians also seek the best location for
3	MS. CAROLINE BLANCO: I so greatly appreciate		
		3	teaching. And this might be a location where we might
4	those comments. The next time we're in Hawaii, we're	3	teaching. And this might be a location where we might consider bringing culture and its teaching and its
4 5	calling you.		teaching. And this might be a location where we might
5 6	calling you. MS. ANNELLE AMARAL: I wonder if I could step in	4 5 6	teaching. And this might be a location where we might consider bringing culture and its teaching and its practice at a same location where science would like to advance its thinking and its research as well.
5	calling you. MS. ANNELLE AMARAL: I wonder if I could step in here. We have been going at this for more than two hours	4 5	teaching. And this might be a location where we might consider bringing culture and its teaching and its practice at a same location where science would like to
5 6 7 8	calling you. MS. ANNELLE AMARAL: I wonder if I could step in here. We have been going at this for more than two hours and I need to give the stenographer a break.	4 5 6 7 8	teaching. And this might be a location where we might consider bringing culture and its teaching and its practice at a same location where science would like to advance its thinking and its research as well. So the compass itself relies only on the horizons. And it's not usable anywhere above 15 degrees
5 6 7 8 9	calling you. MS. ANNELLE AMARAL: I wonder if I could step in here. We have been going at this for more than two hours and I need to give the stenographer a break. MS. CAROLINE BLANCO: Not quite two hours, 13	4 5 6 7 8 9	teaching. And this might be a location where we might consider bringing culture and its teaching and its practice at a same location where science would like to advance its thinking and its research as well. So the compass itself relies only on the horizons. And it's not usable anywhere above 15 degrees above the horizon. So I think there is more of a specific
5 6 7 8 9 10	calling you. MS. ANNELLE AMARAL: I wonder if I could step in here. We have been going at this for more than two hours and I need to give the stenographer a break. MS. CAROLINE BLANCO: Not quite two hours, 13 minutes left. It's quarter until 12:00.	4 5 7 8 9 10	teaching. And this might be a location where we might consider bringing culture and its teaching and its practice at a same location where science would like to advance its thinking and its research as well. So the compass itself relies only on the horizons. And it's not usable anywhere above 15 degrees above the horizon. So I think there is more of a specific reason why this would be a location for this consideration
5 6 7 8 9 10 11	calling you. MS. ANNELLE AMARAL: I wonder if I could step in here. We have been going at this for more than two hours and I need to give the stenographer a break. MS. CAROLINE BLANCO: Not quite two hours, 13 minutes left. It's quarter until 12:00. MS. ANNELLE AMARAL: Then we will give her a	4 5 7 8 9 10 11	teaching. And this might be a location where we might consider bringing culture and its teaching and its practice at a same location where science would like to advance its thinking and its research as well. So the compass itself relies only on the horizons. And it's not usable anywhere above 15 degrees above the horizon. So I think there is more of a specific reason why this would be a location for this consideration than any other place. So it's not just a checklist of
5 6 7 8 9 10 11 12	calling you. MS. ANNELLE AMARAL: I wonder if I could step in here. We have been going at this for more than two hours and I need to give the stenographer a break. MS. CAROLINE BLANCO: Not quite two hours, 13 minutes left. It's quarter until 12:00. MS. ANNELLE AMARAL: Then we will give her a break early. And hold the thought.	4 5 7 8 9 10 11 12	teaching. And this might be a location where we might consider bringing culture and its teaching and its practice at a same location where science would like to advance its thinking and its research as well. So the compass itself relies only on the horizons. And it's not usable anywhere above 15 degrees above the horizon. So I think there is more of a specific reason why this would be a location for this consideration than any other place. So it's not just a checklist of things that are Hawaiian, but I think, because you're
5 6 7 8 9 10 11 12 13	calling you. MS. ANNELLE AMARAL: I wonder if I could step in here. We have been going at this for more than two hours and I need to give the stenographer a break. MS. CAROLINE BLANCO: Not quite two hours, 13 minutes left. It's quarter until 12:00. MS. ANNELLE AMARAL: Then we will give her a break early. And hold the thought. Could we take ten minutes?	4 5 7 8 9 10 11 12 13	teaching. And this might be a location where we might consider bringing culture and its teaching and its practice at a same location where science would like to advance its thinking and its research as well. So the compass itself relies only on the horizons. And it's not usable anywhere above 15 degrees above the horizon. So I think there is more of a specific reason why this would be a location for this consideration than any other place. So it's not just a checklist of things that are Hawaiian, but I think, because you're talking solar exploration and research, that you might
5 6 7 8 9 10 11 12 13 14	calling you. MS. ANNELLE AMARAL: I wonder if I could step in here. We have been going at this for more than two hours and I need to give the stenographer a break. MS. CAROLINE BLANCO: Not quite two hours, 13 minutes left. It's quarter until 12:00. MS. ANNELLE AMARAL: Then we will give her a break early. And hold the thought. Could we take ten minutes? MR. JEFF BARR: Sure.	4 5 7 8 9 10 11 12 13 14	teaching. And this might be a location where we might consider bringing culture and its teaching and its practice at a same location where science would like to advance its thinking and its research as well. So the compass itself relies only on the horizons. And it's not usable anywhere above 15 degrees above the horizon. So I think there is more of a specific reason why this would be a location for this consideration than any other place. So it's not just a checklist of things that are Hawaiian, but I think, because you're talking solar exploration and research, that you might give some credence to the fact that Hawaiians have a

1	ATST. Specific proposals like this I think are very good.	1	rather than try to define something up front? And then
2	I spent quite a bit of time last night reading	2	MR. HINANO RODRIGUES: Well, maybe and I will
3	about the compass. It's very interesting. Very exciting,	3	leave this up to Caroline craft the language such that
4	actually.	4	it makes it very clear that the Hawaiian community is
5	MR. SOL KAHO'OHALAHALA: Perhaps you can	5	involved in this, and then maybe come up with a couple
6	participate in the Hawaiian learning center	6	more examples of how they could be involved in this.
7	MR. JEREMY WAGNER: Sure.	7	MR. SOL KAHO'OHALAHALA: Let me just add to
8	MR. SOL KAHO'OHALAHALA: for astronomy.	8	this, is that Nainoa and I have had these discussions for
9	But I think that would be the reason why this	9	a long, long time. Even so much so that they felt it
10	would be a standalone, because I know in discussion with	10	would be appropriate that each island have a location
11	Nainoa, the society has always been seeking to find a	11	where a star compass is placed. So that the people on
12	place, you know, which would be conducive to the teaching.	12	that island will have an opportunity to also be oriented
13	And, again, there's a difference between teaching the	13	to the celestial bodies.
14	constellations and the positions of the sun and the moon	14	So what I am trying to say is that this is not a
15	versus that of being on the sea. So this location is	15	void of any discussion, these are discussions we've had
16	specific for the teaching of the celestial bodies versus	16	for and as I told you, there is only one notation that
17	the other part of it which would be actually on the sea	17	I know of where this compass has actually been
18	itself, you know. So	18	implemented. And that's Hualalai, you know.
19	MS. CAROLINE BLANCO: If I can ask reactions	19	MR. JEREMY WAGNER: Sol, is there a Hawaiian
20	from some of the other consulting parties, too, to this.	20	name for the compass? I mean, star compass, but is there
21	I think it sounds like a fabulous idea.	21	a Hawaiian name? I couldn't find one. I was looking last
22	MR. HINANO RODRIGUES: I think from a more	22	night.
23	dynamic approach, you need to find a way to involve the	23	Just an aside. Sorry.
24	Hawaiian people and make this their project, also. And I	24	MR. SOL KAHO'OHALAHALA: I know that all of the
25	think that's what Sol is doing right here.	25	components of the compass is named in Hawaiian. You could
	79		81
1	And I hate to say this, because I used to teach	1	call it something, I guess.
2	at the university, also. And I was accused of, oh, yeah,	2	MR. JEREMY WAGNER: I just wondered.
3	you guys in your ivory tower kind of thing. I am quite	3	MS. CAROLINE BLANCO: From a logistical
4	sure that the Maui community or the Native Hawaiian	4	standpoint this is clearly the western side of me
5	community looks at this in the same way. So there needs	5	coming out, right how do you approach that? Is it
6	to be that attitude adjustment, no, you are a part of us,	6	that
7	also. The Hawaiian culture is ever-exclusive versus, in	7	MR. SOL KAHO'OHALAHALA: Okay. What I was going
8	certain ways, the western culture which is more I mean	8	to say is that one of the things I am considering and
9	Hawaiian culture is more inclusive. Western culture is	9	planning to do now is to, again, meet with Nainoa.
10	somewhat exclusive in that everybody is put in a	10	Because, as I said, that the compass itself is a good
11	cubbyhole, and this is you, this is your label and all	11	idea. And in a location, I think, they would agree would
12	that.	12	be an appropriate place. But as the navigators, I would
13	So with the Hawaiian people, you need to make it	13	like their collective input, because there are many
14	perfectly clear to them, this is about you and we want you	14	navigators today. At a time there were none. Okay. But
15	involved. And so projects like the star compass I am	15	get Nainoa to help to participate or spearhead the
16	assuming I know what it is, I am not too sure. But based	16	gathering of the navigators, even to the point that they
17	on the discussion, I can guess what it is. Now the people	17	would come and assemble here at Haleakala to actually look
18	are involved in it.	18	at the site and look at what is being proposed in the
19	You know, the Hokule'a and Nainoa Thompson and	19	project to understand how they would consider integrating
20	all that, that has had such a great impact on the	20	in terms of design, location.
21	self-esteem of the Native Hawaiian people. So let's run	21	And we're talking about some of these things
22	with the ball, you know. This is it.	22	right now, which is good. So that there are other bits of
23	MR. JEFF BARR: Excuse me. Are you saying that	23	information that would be helpful to them as navigators.
	we should leave it more onen anded until there is this	24	But that would be the next step that I am planning to do.
24 25	we should leave it more open-ended until there is this kind of grass roots buy-in and proposal from the community	25	MS. CAROLINE BLANCO: And maybe one thought

Ι

21 (Pages 78 to 81)

1		1	
1	tell me what you think about this, because I certainly	1	And so it's not something that would be used during the
2	don't want to sound presumptuous in any of this. Much	2	day because the sun will take off all, you know, other
3	like what we are talking about with the konohiki, maybe	3	orientations of constellations. But the rising sun and
4	another way to do this, for purposes of putting this in a	4	the setting sun and the nighttime is the use. So the
5	document, is to have the IFA work with the Native Hawaiian	5	early morning, early evening, and then through the night.
6	community to find a location for the star compass. Would	6	That is the time that the compass is used.
7	something like that work?	7	MS. ANNELLE AMARAL: So you wouldn't have too
8	I mean, I hate to box it in too much because I	8	much competition, then, for the site or interference with
9	want the flexibility of that development to go on. But,	9	the
10	yet, I want some assurance, at least, so, you know, people	10	MR. SOL KAHO'OHALAHALA: It would be like
11	can look at this and know what the expectation is and make	11	talking about the compass, but you couldn't really
12	them comfortable with that.	12	demonstrate how it applied, the compass.
13	I am trying to translate it into a provision	13	MR. JEFF BARR: As I was mentioning to you
14	again. It's that lawyer thing again.	14	yesterday, there are some nighttime activities at the
15	DR. CRAIG FOLTZ: I also wanted to add I	15	observatory, preparing for the next day. But I wouldn't
16	think we talked about this a bit yesterday is that if	16	see any
17	there are other support facilities now, I mean, we're	17	DR. CRAIG FOLTZ: However, there are other
18	not going to build dormitories, stuff like that but if	18	nighttime observatories there.
19	there are modifications to building that would allow for a	19	MR. JEFF BARR: That's right.
20	warm place, a safe place, a place to get out of the	20	MR. MIKE MABERRY: Eleven other observatories
21	weather, a place to use the restroom facilities, that's	21	working at night.
22	something that we, the project, would need to iterate.	22	DR. CRAIG FOLTZ: We can't go up and set off a
23	And it's not specific to the design of a	23	flare.
24	compass, but having some understanding of how many people	24	MR. JEFF BARR: Lots of astronomical
25	will be there, what happens if it snows, you know, where	25	observatories, including Kitt Peak, accommodate a very
	83		85
1	do we put people, that sort of thing. So that actually	1	robust visitor program.
2	factors into the planning.	2	MS. ANNELLE AMARAL: I am getting very excited
3	It may be premature for that. I mean, I think	3	because one of the other things I facilitate is a landfill
4	that it's got to be cooperative in that sense because we	4	over in Nanakuli. That's very exciting, I know. Talk
5	don't want I will express my western leanings and	5	about getting screamed at, that's one of those places.
6	thinking about liability, we want to make sure that this	6	But I bring that up because when you talk about the star
7		7	
8	is a safe experience. MR. JEFF BARR: And there are a lot of other	8	compass, you talk about other islands, other locales, I don't know if you are aware of it, but Nanakuli has lots
9		9	-
10	astronomical observatories that build in very nice visitor facilities.	10	of Maui stories. And, you know, you have the reclining
		11	Maui in Wai'anae, you have the Cave of Hina, the mother of Maui, in Nanakuli. Just as I think about it, and I think
11	MR. MIKE MABERRY: Galleries.		
12	MR. JEFF BARR: Galleries and facilities. So	12	about sending the navigators out to find another site,
13	people can get up close to look at the telescopes and also	13	Wai'anae, the place where there isn't a whole lot of pride
14	appreciate the sites for the spiritual and cultural	14 15	in being Hawaiian, this could be one of the sources of
15	values.	16	pride as you think about this being the model and then
16	So it wouldn't be new. We could certainly		taking it out to other sites. It could be quite exciting.
17	incorporate some of that kind of infrastructure.	17	MR. SOL KAHO'OHALAHALA: I mean I think talking
18	In fact, for some of the other six sites that we	18	about the you know, gaining sense of place once more
19	looked at, that was very much on the table. Because they	19	and gaining the kind of respect and esteem that I think
20	were very much sort of visitor-oriented, whereas Haleakala	20	Hawaiians surely could use a lot more of, that if you
21	observatory has been open in the ways that it's been open,	21	bring them to Haleakala and you allow them to now be a
22	but it's never really been a big important part of the	22	part of this mountain, that that in itself is already a
23	program.	23	major accomplishment in terms of having them access the
24	MR. SOL KAHO'OHALAHALA: The other thing is that	24	summit and being able to talk about the sun, the moon and
25	the star compass is really most usable during the night.	25	the stars and to be able to teach them alongside, I think,

22 (Pages 82 to 85)

	86		88
1	with new innovative technologies and sciences. That is	1	representation of the star compass.
2	the kind of, I think, preparing that gives empowerment and	2	But, basically, you don't need anything except a
3	gives use and practice once more in a very significant	3	level place with a circle of stones and then different
4	place.	4	stones that represent different constellations at
5	DR. CRAIG FOLTZ: Those are programs.	5	different seasons, you know. I mean, that's basically how
6	Certainly, we could develop programs. I mean, obviously,	6	it works.
7	there are limits as to numbers.	7	But perhaps we might want to be more creative in
8	MR. SOL KAHO'OHALAHALA: Right. Right.	8	these times to allow for a compass that would be as
9	DR. CRAIG FOLTZ: For your information, all of	9	magnificent as the telescope. No. Just kidding.
10	the observatories that we fund and there are a large	10	DR. CRAIG FOLTZ: We will make it out of glass.
11	number all are required to have education, public	11	MR. SOL KAHO'OHALAHALA: But, you know,
12	outreach programs and internships and research experience	12	Hawaiians are very, very simple. And they only wanted to
13	for undergraduates and for teachers and so on. So if	13	know that these are the simple tools that help to teach
14	there were a way to integrate the activities in the ATST,	14	the concepts. So
15	which are all going to happen after sun, with these sort	15	DR. CRAIG FOLTZ: Thank you.
16	of activities you are talking about, to not exclude them.	16	MS. ANNELLE AMARAL: Any more discussion about
17	Maybe they don't perfectly integrate, but they are both	17	the star compass? Are we pau with that? Okay.
18	cool.	18	Proposals from
19	MR. SOL KAHO'OHALAHALA: I know, but I think	19	MR. SOL KAHO'OHALAHALA: Just one more comment.
20	being side by side and allowing for that overlap is what	20	I think what we are steering toward is that I
21	we are trying to achieve here. So you can pull them in	21	have heard it asked several times what benefit is this
22	out of the star compass and then look at the ATST	22	to the Native Hawaiian community, you know, what do the
23	telescope and see some of the things that are being done	23	Hawaiian people gain from this project, the ATST project.
24	with the telescope is to bring to them possibilities, you	24	And I am hoping that what we are trying to do is
25	know, for their own	25	demonstrate and we're trying to build some of the ideas
	87		89
1	DR. CRAIG FOLTZ: Sure.	1	that are beneficial so that we can talk about what are
2	MR. SOL KAHO'OHALAHALA: careers, perhaps.	2	some of the beneficial outcomes in the project like this
3	And that is what, I think, this is intended, in part, to	3	that is going to collaborate with Hawaiian input, with
4	do, you know. So that would be wonderful.	4	Hawaiian support, and for education, for practices, and
5	DR. CRAIG FOLTZ: Just a question. And being a	5	even for a compass like this. So I hope that this answers
6	Harvard kind of guy. Would you build this out of stone?	6	some of those questions. And that we're leading toward
7	Would you build it out of how would you construct it?	7	these kinds of directions, that will help to bring to the
8	Do you have an image of it?	8	table these kinds of things that would be beneficial to
9	MR. SOL KAHO'OHALAHALA: Again, the only	9	the Hawaiian community who perceive of a compass
10	resources Hawaiians had was sticks and stones. So the	10	telescope as something that doesn't benefit any Hawaiian,
11	compass itself was really just tiny ahu of stone in a	11	you know.
12	circle. And those ahu represented the rising, and, on the	12	MS. CAROLINE BLANCO: That's great.
13	opposite side, the corresponding setting. So standing	13	MS. ANNELLE AMARAL: Nice. That's a nice one.
14	there in the middle, you could use Pohaku as your point.	14	Other proposals from the Native Hawaiian
15	And that's how we would measure the movement of the sun's	15	community, I don't remember how that got up there or what
16	path.	16	the thought was. Do you recall?
17	DR. CRAIG FOLTZ: Sure.	17	MR. SOL KAHO'OHALAHALA: Well, I think what we
18	MR. SOL KAHO'OHALAHALA: And eclipses.	18	were talking about is it was commented yesterday as to
19	DR. CRAIG FOLTZ: Get your latitude.	19	whether or not Sol spoke for the Hawaiian people.
20	MR. SOL KAHO'OHALAHALA: I mean the solstice and	20	MS. ANNELLE AMARAL: Oh, that was it.
21	equinox. So they are marked and it's stone.	21	MR. SOL KAHO'OHALAHALA: I made very clear that
22	The compass that's on Hawaii island, that I	22	I wasn't speaking for the Hawaiian people, but that this
23	The compass that's on Hawaii island, that I talked to you about, is all made out of slab blue rock.	23	is an example of an idea. And I used the compass as an
	The compass that's on Hawaii island, that I		

23 (Pages 86 to 89)

	90		92
1	open that opportunity up. And I think the idea of the	1	MR. SOL KAHO'OHALAHALA: And my personal feeling
2	further leanings that are being planned is to help get	2	is that I am not necessarily supportive of the idea of
3	some of that. So if there are other organizations and	3	restoration, but I would like to consider that if we were
4	other individuals or entities that would like to put on	4	Hawaiians today looking toward the future, as a Hawaiian
5	the table some of these things, that there is an	5	cultural practice, should I be allowed the same exercise
6	opportunity for that. So	6	to create today something for tomorrow, or am I only
7	MS. ANNELLE AMARAL: So perhaps that would be as	7	relegated to the fact that I can only restore what was
8	sort of a note in the correspondence that goes out for	8	there. So there's two tracks. You can look at the
9	future MOA meetings, is that we would welcome a discussion	9	restoration of sites because, from your archeological
10	or proposal, other proposals, from the Hawaiian community.	10	studies, you show that the Hawaiian site that existed
11	DR. CRAIG FOLTZ: I think this was I'm sorry.	11	there no longer is there. Except we have the reports that
12	MS. CAROLINE BLANCO: Go ahead.	12	give you the measurements of the site. And if you were to
13	DR. CRAIG FOLTZ: First of all, I think Sol was	13	restore that, then, simply, you would be putting in place
14	being very modest. I mean, he presented the star compass	14	something that is documented as having been there.
15	idea. It's a fabulous idea. But he did, I think, want to	15	One of the things that I would be cautioned is
16	allow for other ideas.	16	whether or not that site, while it's restored, would also
17	MS. CAROLINE BLANCO: Right.	17	come with the knowledge and the practice that's associated
18	DR. CRAIG FOLTZ: And certainly that is very	18	with the site.
19	reasonable.	19	On the flip side, if I had an opportunity to
20	And, obviously, we are eventually constrained as	20	create as a Hawaiian, and I am going to go back to the
21	to how many things that we can do. This is a beautiful	21	compass, should I be able to create a compass here that
22	one. I mean, I think it's beautiful from its conception.	22	has purpose and has use that's forward movement, or should
23	It's also beautiful from its economy, to be honest,	23	I just relegate the Hawaiian culture and practice to its
24	speaking as a funding agency.	24	past and in that the restored site, which has not
25	MR. SOL KAHO'OHALAHALA: Wait. Wait. Don't	25	necessarily the same purpose or use today, you know. So I
	91		93
1		1	
1	limit me there. I can be creative.		am trying to make a distinction between restoration and
2	MR. MIKE MABERRY: Because you're going to have	2	the ability for Hawaiians to be creative and not relegate
3 4	to buy Ulaula from the park. MS. CAROLINE BLANCO: I think there was	3	cultural practice only to its past. DR. CRAIG FOLTZ: You are talking specifically
4 5	another	4 5	
-	DR. CRAIG FOLTZ: The park would do well to	6	about a site that does not exist anymore. MR. JEFF BARR: We are talking about
6 7	*	7	DR. CRAIG FOLTZ: This is not an issue of
8	support this. MS. CAROLINE BLANCO: They would.	8	preservation.
9	There was another point under the other	9	MR. JEFF BARR: You are saying where Reber
10	proposals from the Native Hawaiian community that I had in	10	Circle was built?
11		11	MR. SOL KAHO'OHALAHALA: Right.
12	my notes. MS. ANNELLE AMARAL: Okay.	12	MR. SOL KATO ONALAMALA. Right. MS. CAROLINE BLANCO: You are saying that, for
13	MS. CAROLINE BLANCO: It was this idea of create	13	example, one of the thoughts was this came, I think,
14	an opportunity for a new site, not just restore a	14	within the context of restore the site, the Reber Circle.
15	destroyed one, and to allow for a living practice. And I	15	MR. SOL KAHO'OHALAHALA: I think that was a
16	apologize for not remembering your Hawaiian name for	16	comment, somebody said that, you know, we should restore
17	the	17	the sites that were
18	MR. SOL KAHO'OHALAHALA: Pu'u.	18	MR. JEFF BARR: Put back the pu'u.
19	MS. CAROLINE BLANCO: I was afraid to say it. I	19	MS. CAROLINE BLANCO: Right. And we wouldn't
20	didn't want to get it wrong. Wasn't that one of the	20	just leave a hole. We would do something with it. What
21	discussion points?	21	you are saying is maybe find even another location for it,
22	MR. SOL KAHO'OHALAHALA: You might want to	22	or not restore the old one? Create something new is what
23	comment, because yesterday it was it was brought up by	23	I am hearing.
24	one of the consultants about restoration of sites.	24	MR. SOL KAHO'OHALAHALA: I would like us to
25	MS. CAROLINE BLANCO: Right.	25	allow for Hawaiians to still have the ability to create
2.5	mo, cristella delativo, inglit.		anow for flawalians to suit have the ability to clean

24 (Pages 90 to 93)

	94		96
1	sites that are new sites. And then there's the other part	1	So there is an element to it versus a restoration of a
2	of it that says you can preserve and restore old sites.	2	site that has really very little knowledge of practice,
3	Okay.	3	you know.
4	MR. MIKE MABERRY: Which is the case with the	4	MS. CAROLINE BLANCO: So any thoughts on how we
5	two ahu. The two ahu are new, they are not restorations	5	translate this into sort of a provision, or is there an
6	of previous ahu. The Native Hawaiians chose those sites	6	idea here that we want to pursue? Is there something that
7	and they developed, built the ahu.	7	might just be another conceptually similar
8	DR. CRAIG FOLTZ: These are on the mountain,	8	MR. SOL KAHO'OHALAHALA: If you wanted to just
9	recently built?	9	generalize it and say that part of this is an
10	MR. SOL KAHO'OHALAHALA: What are your thoughts?	10	acknowledgment of the dynamics of the people, so you can
11	MR. HINANO RODRIGUES: Those are issues that I	11	put it in that context, without being so specific that you
12	face every day at work, Monday through Friday, 8:00 to	12	are saying that this and this is what you can do and this
13	5:00. Good question.	13	is what you cannot do. But an acknowledgment that the
14	I think, my personal opinion not my SHPD	14	culture is dynamic and that we would be supportive of.
15	opinion, my personal opinion is only recreate or we	15	You know, I don't know if that's too broad or too scary.
16	can't say recreate. Only create if you have to, yeah. So	16	MR. JEFF BARR: That's pretty broad.
17	with reference to a specific example of the star compass,	17	MS. CAROLINE BLANCO: Again, the idea is, you
18	we have to. So we have to do it, you know. But if you	18	know, long after we're gone, I mean, somebody can look
19	have a site that needs to be restored, and you have many	19	back at this MOA and say this is what was intended, and so
20	examples of that specific site, let's say a heiau, no need	20	there is an understanding of expectations and to try to be
21	to, no need to. Because the whole process of actually	21	able to clarify this as best as possible. So
22	building the heiau 400 years ago, the feeling is not here	22	MR. SOL KAHO'OHALAHALA: Well, you are
23	today. It's not that you have a site, a heiau site, and	23	supporting the ideas of recreating, let's say, a star
24	you have the rocks there. It was what was put in it. And	24	compass. You are supporting the ideas of allowing for the
25	that, we cannot recreate. So let's not attempt to	25	idea of konohiki.
	95		97
1	recreate that.	1	MS. CAROLINE BLANCO: Right. Right.
2	But, you know, the thing about art it's kind	2	MR. SOL KAHO'OHALAHALA: If you take those
3	of like art, right? What is beautiful to one person is	3	things and you're saying that you know, in an MOA, that
4	not to the other. So it's the same thing here, you know.	4	we acknowledge that these things are cultural practices of
5	You can look at somebody who practices his	5	importance and that the idea of allowing them to I
6	culture. Then you're going to have the purist who is	6	don't know. Can you pick up on these examples as an
7	going to do things only one way. And then you have the	7	acknowledgment to show that
8	one that needs to move on. You know, because life is not	8	MS. TONIA MOY: Can I?
9	static, even within our own culture. How they built the	9	MS. CAROLINE BLANCO: Yeah.
10	heiau in 1200 is not the same as how they built it in	10	MS. TONIA MOY: I think if you have it in the
11	1500. How we spoke Hawaiian in 1200 is not the same	11	whereas, whereas, you know, the dynamic of the Hawaiian
12	Hawaiian that we speak today. It's dynamic. It's not	12	culture, dah, dah, dah, then the provisions are
13	static.	13	MS. CAROLINE BLANCO: That's interesting.
14	So as educated people, we need to understand	14	MR. MIKE MABERRY: Yeah. Yeah, it is. Good
15	that.	15	idea.
16	MR. SOL KAHO'OHALAHALA: And that, I think, idea	16	MS. CAROLINE BLANCO: Good idea. Thank you.
17	of being dynamic is what I am really asking is that you	17	DR. CRAIG FOLTZ: I just think differently.
18	still allow for that opportunity within the culture so	18	MR. JEFF BARR: I know. She started writing
19	that culture can see that they are not static and that	19	when she said "whereas."
20	there is some room for this.	20	MS. CAROLINE BLANCO: Well, that's the
21	Like you described the ahu that were placed	21	traditional thing in an MOA. She knows exactly.
22	there, it is a dynamic implementation or practice that	22	MR. SOL KAHO'OHALAHALA: Provided that.
23	comes with some purpose. And I would look at the compass	23	MS. CAROLINE BLANCO: Very good. And a
	as perhaps another expression of that in the dynamic To	21	"beretofore" is good
24 25	as perhaps another expression of that in the dynamic. To allow but it's living and it's using and it's teaching.	24 25	"heretofore" is good. DR. CRAIG FOLTZ: Don't stipulate.

25 (Pages 94 to 97)

	98		100
1	MS. CAROLINE BLANCO: I want to work with you to	1	years. And you really want to study over two. Because
2	come up with that language to sort of since you	2	you would really like to know are the observations of the
3	suggested it. If we could find something that is	3	
	responsive, you know, and reflective of the		first one unique.
4		4	Now what happens if they are different the
5	acknowledgment, I think that we want to make sure we	5	second time around? Well, you know, you'll cross that
6 7	get that one right. It's important.	6	bridge when you come to it.
	DR. CRAIG FOLTZ: The big ones.		We also believe sorry.
8	MS. ANNELLE AMARAL: Now comes the provision	8	MS. TONIA MOY: You will need another 23 years.
9	that there is a finite lifetime for telescopes, that the	9	DR. CRAIG FOLTZ: I think that if you look at
10	MOA would reflect that time and would make provisions for	10	the progress of astronomical technology and one thing I
11	the commitment to deconstruct this expensive piece of	11	never said before is going to space doesn't help us. You
12	machinery, remove all man-made objects.	12	know, people have said just launch your telescope.
13	MS. TONIA MOY: You guys feel technology is	13	If you put a telescope in space, you get outside
14	going to	14	of the atmosphere, but you still need this really big
15	MR. MIKE MABERRY: You did a really good job	15	telescope.
16	yesterday.	16	Now, in 45 years, we may have telescopes on the
17	MS. TONIA MOY: Sorry. Again, got to repeat	17	moon. Now that's where you put a solar telescope. That's
18	everything.	18	where you put the big, big wonderful solar telescope. We
19	DR. CRAIG FOLTZ: We support long-range	19	can't do it now. It's absolutely precluded. We can't
20	facilities and we have observatories that we have been	20	send anything to the moon.
21	running for almost 50 years. And there is always a reason	21	But we are willing to say, in 45 years, or 50,
22	to keep them going, and because there's always	22	give us a little margin because it will take a little
23	astronomical facilities. This isn't true of like physics	23	while to get it going, but in the order of 50 years of
24	colliders and accelerators and things like that, but even	24	operation, this telescope will do its scientific mission.
25	the very small telescopes. The one-meter telescopes, in a	25	And we could keep it running and we could do good science.
	99		101
1	world of eight and ten-meter telescopes a ten-meter	1	And we could do that. But I think that out of respect
2	telescope has 100 times the collection area of a one-meter	2	from the point of view of planning for the long-term, it
3	telescope. I am on nighttime telescopes now. There are	3	is entirely sensible for us to require that the project
4	still uses for them. They are great.	4	plan for, put in escrow for, before request of funds at
5	But in some sense they continue to cost money	5	the end of the lifetime, in order to take the facility
6	and their existence hamstrings us a little bit in terms of	6	down and remove all traces of it. Now I won't say restore
7	the discretionary money that we spend. They get in the	7	the site.
8	way of being able to really dedicate yourself to moving	8	MR. MIKE MABERRY: Anymore.
9	forward on some of the new things.	9	DR. CRAIG FOLTZ: Yeah. And what happens to
10	I am not saying that this one will, but what I	10	that site is something that we could discuss. But that is
11	am saying is that in roughly 45 years or so, in a 45-year	11	something that the NSF is perfectly comfortable signing
12	period, we will observe the sun go through two very	12	off on.
13	important cycles. The sunspot cycle is you know, if	13	MR. MIKE MABERRY: Or the university could make
14	you just sit and count the number of sunspots every day,	14	it a condition of the lease. And, you know, we could give
15	over an eleven-year period it goes from low to high and	15	them a lease for only 50 years.
16	then back down to low again. That's the sunspot cycle,	16	DR. CRAIG FOLTZ: So, you know, this whole issue
17	it's half of what is called the Hale cycle.	17	of mitigation and minimization, this is where we've had
18	What happens is the magnetic field of the sun	18	discussions which are just of academic interest. In some
19	flips, so what was the North Pole becomes the South Pole	19	interest, it's a minimization because if you integrate
20	every 11 years, then it flips again. We don't know why.	20	over time the impact of the telescope over a 100-year
	We have these really cute theories that you can draw on	21	period, well, it's gone, you know. So we sort of
21	we have mese really cute meones that you can draw on		windowing the many set is in the 10 The stands do in the termination
22	the board with flux tubes become bouyant, all this stuff,	22	minimized it, we cut it in half. I don't think there's
	the board with flux tubes become bouyant, all this stuff, migrating to the poles. But really, in order to	22 23	much else to discuss on it other than we will do it, we
22	the board with flux tubes become bouyant, all this stuff, migrating to the poles. But really, in order to understand this is all about magnetic activity, you	1	
22 23	the board with flux tubes become bouyant, all this stuff, migrating to the poles. But really, in order to	23	much else to discuss on it other than we will do it, we

26 (Pages 98 to 101)

	102		104
1	I understand it.	1	Coronal loop.
2	MS. TONIA MOY: Yes.	2	DR. CRAIG FOLTZ: Have you got a coronal mass
3	MR. JEFF BARR: Very new to astronomical	3	ejection?
4	observatories, that they have a finite lifetime and that	4	We are sort of off the point here, but everybody
5	they are taken down at the end of it. Which they do tend	5	is eating.
6	to collect dust after a while.	6	MR. MIKE MABERRY: That's pretty cool.
7	DR. CRAIG FOLTZ: And this telescope, over 50	7	MR. JEREMY WAGNER: Is it? Okay.
8	years, with construction and operations, will cost \$1	8	DR. CRAIG FOLTZ: What you got?
9	billion. Most of that is not in construction, most of	9	MR. JEREMY WAGNER: I don't know. All kinds of
10	that is you know, three quarters of that or so will be	10	videos.
11	in operation.	11	MR. SOL KAHO'OHALAHALA: So, Craig, the ATST
12	MR. MIKE MABERRY: What you were talking	12	telescope, you are saying, will give you an image that's
13	about	13	going to be 20 miles versus
14	DR. CRAIG FOLTZ: I forgot what I was talking	14	DR. CRAIG FOLTZ: Yeah. Versus 100 or 200. It
15	about.	15	depends on the wavelength. It will improve that picture
16	MR. MIKE MABERRY: What the sun does, what we	16	by at least a factor of five.
17	are trying to see.	17	Down at the finest scales, at the 20-mile
18	Computer not working. Can you see that?	18	scales, there's other processes that are forcing
19	MR. SOL KAHO'OHALAHALA: That's the surface of	19	everything into equilibrium. They are forcing things to
20	the sun?	20	be the same over like a 20-mile scale. That's the photon
21	DR. CRAIG FOLTZ: You want to talk, Mike, or you	21	mean free path. That's the distance that a typical photon
22	want me to?	22	travels. And photons are a little bundle of light. So
23	MR. MIKE MABERRY: Go ahead.	23	that sort of keeps things in equilibrium.
24	DR. CRAIG FOLTZ: This is the photosphere. This	24	That's the pressure scale height. That's the
25	is where the light comes from. The sun doesn't have a	25	distance over which pressure doesn't change by much. So
	103		105
1	surface, it's gaseous. If you were to fall into it, you	1	given the temperatures and the radiation environment, and
2	would burn up long before you fell into it. But there is	2	the pressure, below 20, you expect everything is going to
3	no surface, you would just fall into it. The temperature	3	be the same, right. So that's kind of where
4	is about 6,000 degrees centigrade.	4	And that's beautiful. That's beautiful. So
5	And what you see here is the surface of the sun	5	there's a sunspot moving. Again, to calibrate, you can
6	is turbulent, sort of boiling. This is just away from the	6	see the granulation around the outside. Again, these
7	sunspot. And you can see these sort of turbulent cells	7	blobs are like the size of Texas.
8	that come and go. It's like, you know, slow boiling where	8	This is a sunspot first discovered in the
9	blobs of gas rise up from below.	9	western world by Galileo, who got into serious trouble.
10	And to give you some idea, a typical size of one	10	You could easily this is called the umbra of the
11	of these blobs since it's moving it's hard, but you get	11	sunspot. It's an analogy to a shadow. This is the
12	some idea that's about the size of Texas. And what you	12	penumbra. You can easily drop the earth into this. This
		13	is the base of an active region.
13	see is that I love this word at the interstices of		
14	the convective cells, sometimes you see these little	14	And what we know is the reason that this looks
14 15	the convective cells, sometimes you see these little bright points. See these sort of bright areas? That's	15	dark is it's not dark. It turns out it's just dark in
14 15 16	the convective cells, sometimes you see these little bright points. See these sort of bright areas? That's the field being gathered. And the action there is sort of	15 16	dark is it's not dark. It turns out it's just dark in contrast to the bright photosphere. This is cooler. And
14 15 16 17	the convective cells, sometimes you see these little bright points. See these sort of bright areas? That's the field being gathered. And the action there is sort of on a 30 kilometer or 20-mile light scale.	15 16 17	dark is it's not dark. It turns out it's just dark in contrast to the bright photosphere. This is cooler. And it's cooler get ready because there's a strong
14 15 16 17 18	the convective cells, sometimes you see these little bright points. See these sort of bright areas? That's the field being gathered. And the action there is sort of on a 30 kilometer or 20-mile light scale. But what you are resolving here this is the	15 16 17 18	dark is it's not dark. It turns out it's just dark in contrast to the bright photosphere. This is cooler. And it's cooler get ready because there's a strong magnetic field here. Magnetic fields contribute to
14 15 16 17 18 19	the convective cells, sometimes you see these little bright points. See these sort of bright areas? That's the field being gathered. And the action there is sort of on a 30 kilometer or 20-mile light scale. But what you are resolving here this is the best we can do. It's the best we can do from the ground.	15 16 17 18 19	dark is it's not dark. It turns out it's just dark in contrast to the bright photosphere. This is cooler. And it's cooler get ready because there's a strong magnetic field here. Magnetic fields contribute to pressure. Pressure times temperature in an equilibrium
14 15 16 17 18 19 20	the convective cells, sometimes you see these little bright points. See these sort of bright areas? That's the field being gathered. And the action there is sort of on a 30 kilometer or 20-mile light scale. But what you are resolving here this is the best we can do. It's the best we can do from the ground. It's equivalent to the best we can do from space. And you	15 16 17 18 19 20	dark is it's not dark. It turns out it's just dark in contrast to the bright photosphere. This is cooler. And it's cooler get ready because there's a strong magnetic field here. Magnetic fields contribute to pressure. Pressure times temperature in an equilibrium situation is constant. So the pressure in here times the
14 15 16 17 18 19 20 21	the convective cells, sometimes you see these little bright points. See these sort of bright areas? That's the field being gathered. And the action there is sort of on a 30 kilometer or 20-mile light scale. But what you are resolving here this is the best we can do. It's the best we can do from the ground. It's equivalent to the best we can do from space. And you are resolving here 200 to 300 miles. So you are off by	15 16 17 18 19 20 21	dark is it's not dark. It turns out it's just dark in contrast to the bright photosphere. This is cooler. And it's cooler get ready because there's a strong magnetic field here. Magnetic fields contribute to pressure. Pressure times temperature in an equilibrium situation is constant. So the pressure in here times the temperature in here is equal to the pressure out here
14 15 16 17 18 19 20 21 22	the convective cells, sometimes you see these little bright points. See these sort of bright areas? That's the field being gathered. And the action there is sort of on a 30 kilometer or 20-mile light scale. But what you are resolving here this is the best we can do. It's the best we can do from the ground. It's equivalent to the best we can do from space. And you are resolving here 200 to 300 miles. So you are off by almost a fact of a tenth, maybe a little less.	15 16 17 18 19 20 21 22	dark is it's not dark. It turns out it's just dark in contrast to the bright photosphere. This is cooler. And it's cooler get ready because there's a strong magnetic field here. Magnetic fields contribute to pressure. Pressure times temperature in an equilibrium situation is constant. So the pressure in here times the temperature in here is equal to the pressure out here times the temperature out here. Since the pressure is
14 15 16 17 18 19 20 21 22 23	the convective cells, sometimes you see these little bright points. See these sort of bright areas? That's the field being gathered. And the action there is sort of on a 30 kilometer or 20-mile light scale. But what you are resolving here this is the best we can do. It's the best we can do from the ground. It's equivalent to the best we can do from space. And you are resolving here 200 to 300 miles. So you are off by almost a fact of a tenth, maybe a little less. What else you got on this? You got the	15 16 17 18 19 20 21 22 23	dark is it's not dark. It turns out it's just dark in contrast to the bright photosphere. This is cooler. And it's cooler get ready because there's a strong magnetic field here. Magnetic fields contribute to pressure. Pressure times temperature in an equilibrium situation is constant. So the pressure in here times the temperature in here is equal to the pressure out here times the temperature out here. Since the pressure is higher, the temperature is lower.
14 15 16 17 18 19 20 21 22	the convective cells, sometimes you see these little bright points. See these sort of bright areas? That's the field being gathered. And the action there is sort of on a 30 kilometer or 20-mile light scale. But what you are resolving here this is the best we can do. It's the best we can do from the ground. It's equivalent to the best we can do from space. And you are resolving here 200 to 300 miles. So you are off by almost a fact of a tenth, maybe a little less.	15 16 17 18 19 20 21 22	dark is it's not dark. It turns out it's just dark in contrast to the bright photosphere. This is cooler. And it's cooler get ready because there's a strong magnetic field here. Magnetic fields contribute to pressure. Pressure times temperature in an equilibrium situation is constant. So the pressure in here times the temperature in here is equal to the pressure out here times the temperature out here. Since the pressure is

27 (Pages 102 to 105)

	106		108
1	DR. CRAIG FOLTZ: The brightness varies as the	1	sure that signatories to the MOA would have the leverage
2	temperatures of the fourth power. So the brightness is a	2	to say, no, you said you would take it down, take it down.
3	strong factor to function of the temperature. So this is	3	MR. SOL KAHO'OHALAHALA: Okay. I just want to
4	dark because it's cool.	4	kind of toss in another idea. Is that not only the
5	Why is it cool? Because there's a huge mass of	5	potential for divesting it to a Native Hawaiian, but is
6	magnetic field that has been bundled in here. And it's	6	there a potential for it to have some economic value to
7	supporting in here.	7	Native Hawaiians? Because at some point, if they chose to
8	And so in the umbra, the field lines are coming	8	be the owners of a facility that would allow continuous
9	out toward you. In the penumbra, it's bent over. It's	9	use, that there would be an opportunity for it to have an
10	just beautiful. You look at this, you say there's got to	10	economic
11	be flow, there's got to be stuff coming out. And in some	11	DR. CRAIG FOLTZ: There is always potential.
12	of these movies, you can see this.	12	What I would say is that if I take any telescope that was
13	What is wonderful about this is these things	13	built 50 years ago, and a telescope that was built 50
14	come in pairs typically. So you will have another sunspot	14	years ago and take the Palomar 200-inch, great
15	nearby, opposite polarity. And over those is where the	15	monument, beautiful thing, fabulous machine, you wouldn't
16	field is strong, the field interacts, the field it's	16	build another one like it now. And you might find people
17	usually a matter of energy. A magnetic field has	17	to buy some of the time. But we have such better
18	intrinsic energy.	18	technology now. And I believe that that will probably
19	If you release that energy by some process, that	19	continue.
20	I do not understand because when they talked about this	20	We could certainly allow that. I mean, we will
21	stuff when I was studying physics, astrophysics, I decided	21	iterate the language, but we will make sure that there is
22	I am not going to do solar. This is magnetohydrodynamics.	22	some possibility, should it be of value to Native Hawaiian
23	I don't understand a word of it.	23	groups, that value could be realized.
24	So this is where the active sun, that's where	24	MR. JEFF BARR: How were you thinking that
25	it happens. That's so cool. I love that.	25	what kind of economic value were you imagining?
	107		109
1	And that's done with a National Solar	1	DR. CRAIG FOLTZ: You could sell time.
2	Observatory telescope in New Mexico. And it uses a	2	MR. JEFF BARR: Well, that is a possibility.
3	technique called adaptive optics, which I won't talk	3	MR. SOL KAHO'OHALAHALA: Remember what Mike
4	about.	4	said, that, in 50 years, it's going to be Hawaiian
5	We should be back to mitigation here.	5	sovereign lands?
6	MR. JEREMY WAGNER: Sure.	6	MR. MIKE MABERRY: Well, it's ceded land.
7	MS. ANNELLE AMARAL: So with respect to the	7	MR. SOL KAHO'OHALAHALA: The Hawaiians would
8	deconstruction of the telescope, we have no comments,	8	have an interest in understanding how their own lands will
9	concerns, we're going to leave the language to	9	have some economic value for use. So I am just trying to
10	DR. CRAIG FOLTZ: We will write it.	10	say that, in the future, should there be an opportunity
11	MS. ANNELLE AMARAL: All right. Okay.	11	for Hawaiians to consider what economic value there might
12 13	MR. SOL KAHO'OHALAHALA: Wasn't it brought up in	12 13	be in the use of these lands of which they will be
13	that discussion that what if the Native Hawaiians wanted	13	responsible for maintaining or operating or whatever, that's an opportunity, I guess.
14	now to own and operate it? DR. CRAIG FOLTZ: We can talk about either the	14	MS. CAROLINE BLANCO: So are you referring to
16	deconstruction or the divestment. And the divestment in	16	the telescope or the underlying plans?
17	the case of the Native Hawaiians. And I know that Clyde	17	MR. MIKE MABERRY: Telescope.
18	is sensitive to this. And I think that we would just	18	MR. SOL KAHO'OHALAHALA: Telescope and the
19	allow for that to happen. We could even say divestment to	19	lands.
·			
2.0		20	MR. MIKE MABERRY' BUI INSIS DOLVOUT ISSUE
20 21	Native Hawaiian interests.	20 21	MR. MIKE MABERRY: But that's not your issue. MS. CAROLINE BLANCO: I think that is beyond the
20 21 22	Native Hawaiian interests. I think what we would want is if the NSF were	21	MS. CAROLINE BLANCO: I think that is beyond the
21	Native Hawaiian interests. I think what we would want is if the NSF were prepared to tear it down, and somebody else came in and		MS. CAROLINE BLANCO: I think that is beyond the scope of this MOA.
21 22	Native Hawaiian interests. I think what we would want is if the NSF were	21 22	MS. CAROLINE BLANCO: I think that is beyond the
21 22 23	Native Hawaiian interests. I think what we would want is if the NSF were prepared to tear it down, and somebody else came in and said, no, you know, I am here from the University of	21 22 23	MS. CAROLINE BLANCO: I think that is beyond the scope of this MOA. MR. SOL KAHO'OHALAHALA: But the facility.

28 (Pages 106 to 109)

	110		112
1	MS. ANNELLE AMARAL: So some provision made in	1	DR. CRAIG FOLTZ: I would rather not right now.
2	the language of the MOA not only with respect to the	2	Because it will be on the record. And I haven't read it
3	deconstructing of the telescope, but provisions for it to	3	in a while and I don't want to get it wrong.
4	be divested to Native Hawaiian interests, or, should there	4	MS. CAROLINE BLANCO: Okay. Maybe we can just
5	be a potential of economic use, either of the equipment or	5	talk about workforce development programs, educational
6	some other future use of it, that language would be	6	programs.
7	provided for the MOA for that. Understanding, of course,	7	DR. CRAIG FOLTZ: Internship programs.
8	that the use is limited in time.	8	MS. CAROLINE BLANCO: Internship programs.
9	Michael, can you raise this?	9	That's the kind of thing.
10	MR. MIKE MABERRY: I'm sorry. Excuse me.	10	DR. CRAIG FOLTZ: One of the things that we
11	DR. CRAIG FOLTZ: She could have written all	11	support on Maui through one of our other centers is a very
12	over your nice new screen.	12	successful internship program which tries to address two
13	MS. ANNELLE AMARAL: I would be happy to do	13	needs. One is the need for technical expertise, technical
14	that, but Michael would not be happy with me.	14	adept workforce here on Maui, because it's the high-tech
15	MR. MIKE MABERRY: No.	15	industry on Maui, of which there is substantial finds
16	MS. ANNELLE AMARAL: That was this reference,	16	that it's tremendously expensive to bring people from the
17	then, to use by Hawaiians as appropriate.	17	mainland and the resident's time here is short, typically
18	Let's see. Moving on to number three, the MCC	18	two years. And so the relocation costs and the training
19	proposal I mean, page three, MCC proposal and	19	and so on makes it expensive.
20	integrating Hawaiian knowledge and Hawaiian science and	20	Furthermore, the other role was to provide
21	Hawaiian practices with the science curriculum. That	21	internships for Hawaiian, and not necessarily Native
22	DR. CRAIG FOLTZ: It's a very broad proposal.	22	Hawaiian, but for Hawaiian students, to let them know that
23	It has workforce development through internships,	23	if they were interested in a technical, science,
24	internships at a variety of levels, it has curriculum	24	technology, engineering or mathematic, type of career that
25	development. And it is something that we will have to	25	there are places for them to work here. So it tries to
	111		113
1	negotiate. It is entirely consistent with the NSF's	1	fight sort of two countervailing forces. One, the sense,
2	mission, which is the integration of training and	2	you know, if you grow up on Maui and you love computers,
3	research.	3	that somehow you're going to have to move to California.
4	And as I said, we support education, public	4	And the other is the difficulty in recruiting talented
5	outreach, et cetera, directly. And we also support it at	5	workforce to come to Maui. This has been a very
6	our federally-funded observatories.	6	successful program.
7	I think at this point I would like to not	7	MS. ANNELLE AMARAL: I'm sorry here, but I
8	discuss this too openly because it's a subject that we	8	wonder, as the facilitator, if you could give me a moment
9	need to have more discussion on. It is an expensive	9	for me to take a break and I can come back in about five
10	mitigation. And we, the NSF, need to continue to talk to	10	minutes?
11	MCC. And we also at NSF need to talk to ourselves, which	11	DR. CRAIG FOLTZ: Sure. I understand that.
12	we do so well.	12	MR. MIKE MABERRY: And you haven't eaten yet.
13	MS. CAROLINE BLANCO: Could we, though, Craig,	13	MS. ANNELLE AMARAL: And I haven't eaten yet,
14	talk in concepts?	14	either. Just give me five minutes.
15	DR. CRAIG FOLTZ: Sure.	15	(Recess.)
16	MS. CAROLINE BLANCO: As far as	16	DR. CRAIG FOLTZ: Let me clarify my previous
17	DR. CRAIG FOLTZ: I am not taking it off the	17	position, about not wanting to discuss this in detail.
18	table. I am just saying not everybody has read it and	18	The issue is that, you know, I don't want to misspeak.
19	I mean, I don't want to discuss it in detail here. We	19	Then, Clyde, perhaps you can talk about it
20	could certainly say the components of workforce	20	MR. MIKE MABERRY: Sol, representing Clyde. I
21	development.	21	am just kidding.
22	MS. CAROLINE BLANCO: Why don't you go through,	22	DR. CRAIG FOLTZ: I apologize.
23	just for their knowledge, so everybody is on the same page	23	This is an area that NSF is very active in.
	with it to maybe talk about the various components of it?	24	It's very active in that we have lots of buzzwords on
24 25	with it, to maybe talk about the various components of it? Then we can maybe	25	creating the workforce of the 21st century, we have a lot

29 (Pages 110 to 113)

	114		116
1	of emphasis on reaching out to underrepresented groups,	1	DR. CRAIG FOLTZ: And furthermore, the community
2	both for education and for workforce development. And	2	college is developing some four-year programs.
3	this is an area I think where things come naturally	3	MR. SOL KAHO'OHALAHALA: So the potential
4	together.	4	DR. CRAIG FOLTZ: And they are technical
5	The other thing that is an issue is the recently	5	programs. And they are working on developing
6	passed American Competes Act, specifically talks about the	6	electrooptics curriculum, which is very much aligned with
7	roles of community colleges.	7	the sort of technical needs of observatories and so on.
8	So, Sol, maybe you want to just summarize.	8	So it all plays well.
9	MR. SOL KAHO'OHALAHALA: Well, basically, I	9	The details and the funding level, the funding
10	think what this proposal does is it creates like a bridge	10	requirements, are yet to be negotiated.
11	program that is not only looking at the community college	11	MS. ANNELLE AMARAL: Okay. Good. Yes.
12	level, but it's looking at the K to 12, you know, an	12	MS. TONIA MOY: Is it a good time now?
13	opportunity to introduce STEM programs, you know, to allow	13	MS. ANNELLE AMARAL: Yes.
14	our keiki, our children, to be involved in these kinds of	14	What we wanted to do, because we're sensitive to
15	fields of interaction and study so that as they are	15	the time constraints here and you have to leave to
16	seeking higher education that they already have some	16	catch a flight so we are going to pull away right now
17	familiarity with the field of science, technology,	17	from this next proposal. We're going to stop here for a
18	engineering and math. So it's sort of a bridge into the	18	moment in order to raise an additional point. So we are
19	community college level.	19	going to be off track a little bit.
20	Then on the opposite end of the spectrum, we	20	MS. TONIA MOY: I just wanted to make a point,
21	already are collaborating with the akamai program which	21	because it's not up there right now for any of the park,
22	puts in place college students in an intern program in	22	the national park. Because there is a road, right,
23	those fields of science, technology, engineering and math.	23	there's the 1930s road. And I don't really know and I
24	And so we see it as complimenting, so that there	24	think National Park Service is actually the ones who
25	will be a clear path perhaps that a student can begin that	25	should be discussing what the mitigation is because I am
	115		117
1	as early as kindergarten and can continue on into higher	1	not as familiar. All I know is that there's a road. And
2	education, and then allow for all of these things to be	2	I am sure there's other sites within the park that the
3	put in place.	3	tower will have a visual impact for.
4	It was, I think, offered as a proposal for	4	DR. CHARLIE FEIN: We can address that.
5	mitigation, seeing that the telescope is really one of the	5	If you don't mind, I would like Jeff to talk a
6	tools, that kind of enhancement for students who are	6	little about what has been done with respect to the road
7	seeking careers. And if we are intending now to look at	7	and what is left to be done. Then I will talk about the
8	creating a workforce here at home, then we better start as	8	visual impact.
9	early as we can. So this is an opportunity to introduce a	9	MS. CAROLINE BLANCO: Okay. If we can have her
10	proposal for mitigation where we would be creating sort of	10	finish her thought, too, that would be great.
11	a bridge program that creates a path for these kinds of	11	MS. TONIA MOY: No. Well, I just wanted to make
12	things.	12	sure that there is someplace in the MOA for all of that.
13	DR. CRAIG FOLTZ: Thank you. I think that's it.	13	It is just that it hasn't been mentioned yet. I know you
14	MR. SOL KAHO'OHALAHALA: That's why I got	14	guys are going to talk to National Park Service.
15	involved, yeah.	15	MR. JEFF BARR: Yes. And we have been
16	DR. CRAIG FOLTZ: There are potential curriculum	16	attempting, really, to elicit some commentaries and some
17	development issues and laboratory, you know, development	17	useful dialogue with the park regarding specifically the
18	issues and so on. But it really is an attempt to build on	18	road and protection of it as, as you say, a potentially
19	our previous successes and add to them and to extend them	19	historic element of the park, 1930s WPA project, to
20	to K-12.	20	construct the road. And there are several specific
21	MR. SOL KAHO'OHALAHALA: And it did seem the	21	elements of the road, a bridge which has like rock
22	other thing, I guess, at the community college level, that	22	railings and embankments, and several culverts that were
23	was a good progression from K to 12 into the community	23	made with the native rock from the site. And they are
24	college. Then further on into the four-year university if	24	contributing elements to the character of the road as
25	you want to continue.	25	potentially listable as a historic place on the national

30 (Pages 114 to 117)

	118		120
1	register.	1	Again, I mean, it's a bit of a tangent, but it
2	And, frankly, we weren't aware of that until the	2	certainly is one of the big concerns for the park. And we
3	park pointed it out to us after their review of the Draft	3	do intend to engage in discussion with them. They weren't
4	EIS. And so becoming aware of that and the park at the	4	able to make these meetings, but we are going to be
5	time had also, previous to this, knowing that the project	5	meeting with them in August on that.
6	was coming in, that their review of the Draft EIS and that	6	DR. CHARLIE FEIN: Thank you, Jeff.
7	the telescope project was being proposed, on their own and	7	I am going to talk about viewplain and visual
8	sort of proactively, contracted with the National Highways	8	impact level. The facility, the proposed facility, this
9	Association for a study of the condition of the pavement	9	is a rendering of what it would look like from the Red
10	of the road and what impact construction traffic for ATST	10	Hill overlook. And what you are looking at, this is the
11	would have on it. Then eventually they shared that report	11	Air Force facility, AEOS, the Advanced Electrooptical
12	with us after the release of the Draft EIS.	12	System. This building is 117 feet tall. It currently is
13	And that report was a bit inconclusive in terms	13	visible from the valley, on other places on Maui.
14	of how much impact ATST construction traffic might have.	14	This is the Maui space surveillance complex with
15	It was very specific about the exact condition of the	15	its two 48-foot diameter domes.
16	pavement. And, again, this gets a little bit into sort of	16	Over on this side, the University of Hawaii
17	technical details here that I am not sure is useful. And	17	facilities, which are currently present, Panstars One and
18	what would be necessary in terms of a refurbishment	18	Magnum facility, some other facilities back here.
19	project for the road, either before or after ATST. And	19	And this is what ATST would look like from Red
20	then some aspects of the road that were totally	20	Hill. Now, from Red Hill, it is visible. There is no
21	independent of ATST. There's certainly a lot of traffic	20	doubt about it, that is a park resource.
22	on the road already.	22	•
23	And so it recognized all the traffic that	23	When visitors come up to the national park and stand on the west side of Red Hill, this is what they see.
23 24	yeah, here are a couple of examples. That's a picture of	23	And in fact, there is a large plaque there describing
24 25	the bridge. Then there's a picture of the culvert there.	24	astronomy and the dark skies on Haleakala and so on.
2.5	the bridge. Then there's a picture of the curvert there.	25	astronomy and the dark skies on Haleakala and so on.
	119		121
1	I don't know if we have the other pictures, or just	1	Perhaps you've seen that. It was put up about a year ago
2	generally the road. But the condition of the road	2	or so by the national park.
3	yeah. Here we go.	3	With respect to visibility within the park
4	This was a lava tube under the road here on the	4	itself where did we go? To the right. The Draft
5	left that had collapsed.	5	Environmental Impact Statement had a viewplain analysis
6	Again, all of this is obviously independent and	6	which used software, GIS maps, GPS locations, overlays,
7	not really related to ATST construction in general.	7	topography and so on. And in a DEIS, the National Park
8	But in general, the condition of the pavement	8	Service superintendent was not satisfied with that
9	and the park's concern that ATST, especially construction	9	particular viewplain analysis.
10	traffic, but also, to some extent, operational traffic,	10	So in the interim, in the time since, we have
11	would have an impact and would have an impact on their	11	gone out into the field, we have sent folks out into the
12	obligation to maintain the road and how they act as proper	12	field with GPS locators, photography equipment, and so on.
13	stewards of this potentially cultural resource as well as	13	And using the viewplain software and GIS overlays, Google
14	just, obviously, a facility for public use.	14	Earth, every kind of overlay you can think of, we
15	So I am not sure what all else Charlie had in	15	calculated a model of what you would see from the national
16	mind.	16	park. This being the crater area. This would be the
17	Oh, also, at this point we are expecting to	17	location of ATST at its primary site next to the Mees
18	contract for an engineering assessment of this bridge and	18	observatory.
19	the culverts because they were pointed out specifically by	19	As you can see from all and each of these
20	the park as potentially being subject to damage by heavy	20	points represents a photographic and GPS point. In other
21	loads from ATST.	21	words, the engineers stood at that point, took a
22	So we want to find out, get better information,	22	photograph back in that direction, and got a GPS location,
23	really, to find out what potential there really is for	23	and then it was all overlaid on GIS mapping.
24	damaging these things and how we would go about protecting	24	In that location, ATST would not be visible from
25	them.	25	anywhere in the crater, on any of the trails anywhere in

31 (Pages 118 to 121)

1 the crater. 1 DR. CRAIG FOLTZ: Pick one, Charlie. 2 Now, in its alternative location, the alternative site, Roher Cruels – DR. CHARLIE FEIN: This is for the site in the Roher Cruels site. Now, Roher Cruels is a limit bit higher. If is also a limit bit in the Roher Cruels site. Now, Roher Cruels is a limit bit higher. If is also a limit bit in the site. This is where it would be a limit bit in the Roher Cruels site. Now, Roher Cruels is a limit bit higher. If is also a limit bit in the site of the reater. Iooking back toward the park overlook. These red areas are what you as places from minde facility. DR. CHARLIE FEIN: This is the entrance to the initianal park, right so the cruet is now if the cruet. Iooking back toward the ration index on the reater. Iooking back toward the ration index on the reater. Iooking back toward the ration index on the route. DR. CHARLIE FEIN: This is the entrance to the initianal park, right. So this is that you would to a limit bit in red area represents what you as efform initide in the reater. Iooking back toward the ration index on the route. DR. CHARLIE FEIN: This is the entrance to the initianal park, right. So the site the reater is the AT Force facility. 21 If the reater is old park overlook. These red areas are what you as places from which you can see the two would not be size into a reater. DR. CHARLIE FEIN: This is the onternation park. The first is most in the reater. 22 you can see from the park overlook right at the creater. Iooking back toward the reater veal the reater.<		122		124
3 alternative site, Reher Circle a- DR. CRAIG FOLTZ: Charlie, just to clarify, the green areas are places where you could see it? 3 that's from Kihel. So it would be most visible from the 6 DR. CRAIG FOLTZ: See any pant of it. DR. CRAIG FOLTZ: See any pant of it. DR. CRAIG FOLTZ: See any pant of it. 7 DR. CRAIG FOLTZ: See any pant of it. DR. CHARLE FEIN: This its alternative site. DR. CHARLE FEIN: This is where it would be 11 DR. CHARLE FEIN: This is there it would be its betwee it. MR. JEREMY WAGNER: Which one? 13 Intel bit higher. It's also a little bit further 10 MR. CRAIG FOLTZ: Take your fingers off the 14 MR.MIKE MABERRY: Nrth. 15 DR. CHARLIE FEIN: to the north and east. 16 15 DR. CHARLIE FEIN: to the north and east. 15 DR. CHARLIE FEIN: to the north and east. 16 16 So you can see that it would be a little bit 15 DR. CHARLIE FEIN: 17 18 the park overlook inside the park overlook inside the arrance to the antional park, the first time you would appear as 17 18 18 the carker places from which you can see from the park overlook inside the carker any magnification. 18 DR. CHARLIE FEIN: Or course, that lo	1	the crater.	1	DR. CRAIG FOLTZ: Pick one, Charlie.
3 alternative site, Reher Circle a- DR. CRAIG FOLTZ: Charlie, just to clarify, the green areas are places where you could see it? 3 that's from Kihel. So it would be most visible from the 6 DR. CRAIG FOLTZ: See any pant of it. DR. CRAIG FOLTZ: See any pant of it. DR. CRAIG FOLTZ: See any pant of it. 7 DR. CRAIG FOLTZ: See any pant of it. DR. CHARLE FEIN: This its alternative site. DR. CHARLIE FEIN: Or course, that lo	2	Now, in its alternative location, the	2	DR. CHARLIE FEIN: Yeah, that's good. Well,
5 green areas are places where you could see it? 5 DR. CRAIG FOLTZ: Score app and to fit. 6 DR. CHARLIE FEIN: In this one, the purple is 6 7 DR. CRAIG FOLTZ: Score app and to fit. 7 8 DR. CHARLIE FEIN: In this one, the purple is 7 9 where you would be able to see it. 7 10 MR. CHARLIE FEIN: In this is where it would be 10 11 MR. CHARLIE FEIN: In this alternative site. 10 12 DR. CHARLIE FEIN: This is there it would be 11 13 hitle bit higher. It's also a little bit further - 11 14 MR. MIKE MABERRY: North. 10 15 DR. CHARLIE FEIN: - to the north and east. 10 16 So you can see that it would be alittle bit 10 17 more visible. Athough, still not visible for many of the 11 18 the crater, looking back toward the park overlook. right at the crater, a 11 19 is right on the cade of Kolckole. And this is what ATST 20 red areas are what you see, places from which you can see 21 you can see from the park overlook right at the crater, a 21 the crater, looking back toward the park overlook right at the crater, a 21 you can see from the park overlook right at the crater, a	3		3	-
5 green areas are places where you could see it? 5 DR. CHARLIE FEIN: Where you could see it. 6 DR. CHARLIE FEIN: This one, the purple is where you would be able to see it. 5 DR. CHARLIE FEIN: This is, where it would be able to see it. 10 MR. MIKE MABERRY: In its altermitive site. 0 MR. JEREMY WAGNER: Which one? 11 DR. CHARLIE FEIN: This is where it would be able to see it. 0 MR. JEREMY WAGNER: Which one? 12 With you would be able is see. 0 MR. JEREMY WAGNER: Which one? 0 13 little bit higher. It's also a little bit further 10 MR. CANCINE BLANCO: The tone. That's a good 14 MR. MABERRY: In it's where it would be a little bit further 10 DR. CHARLIE FEIN: This is the entrance to the attainal park, the first time you would appear as 15 DR. CHARLIE FEIN: This is the park overlook inside the crater. A man-made facility. 10 be able to see it. 10 Now, curiously if we put up the next one 10 10 MR. MIKE MABERRY: That is the armance to the attainal park, the first time you would appear to would appear to act materian the system the arter. 10 Now, we'no done these weight and starts of the asson the system the crater. 10 10 11 11 12 12 12 12<	4	DR. CRAIG FOLTZ: Charlie, just to clarify, the	4	Kihei
6 DR. CHARLIE FEIN: Mere you could see it. 6 DR. CHARLIE FEIN: This is more any part of it. 7 DR. CHARLIE FEIN: In this one, the purple is 7 man. 8 DR. CHARLIE FEIN: In this one, the purple is 7 man. 9 where you would be able to see it. 10 MR. MIKE MABERY: In its is more, when the outh of the bottom one. 11 12 wisble at the Reber Circle site. Now, Reber Circle is at 10 mR. MIKE MABERY: North. 11 15 DR. CHARLIE FEIN: This is where it would be 11 maional park, right. So this is how it would appear as 16 more visible. Although, still not visible for many of the 15 DR. CHARLIE FEIN: The the north and cast. 16 red arear represents what you see from miside 10 be able to see it. Thre is the Air Force facility which 19 all of this red arear represents what you see, places from which you can see 10 mR. MIKE MABERY: Mais is and so on. 22 red arear apresents what you see from miside 12 would look like. 24 looking out, visible form almosd anywhere in the crater. 24 through himocalum. Because with the nakel eye, they are 11	5		5	DR. CRAIG FOLTZ: Stop that.
7 DR. CHARL IF FEIN: In this one, the purple is man. 10 MR. MIKE MABERRY: In its alternative site. MR. CAROLINE BLANCO: The bottom one. Charlie, the bottom one. 11 DR. CHARL FEIN: This is where it would be MR. CAROLINE BLANCO: The bottom one. Charlie, the bottom one. 12 Visible at the Reber Circle is it. Now, Reber Circle is at MR. CAROLINE BLANCO: The bottom one. Charlie, the bottom one. 13 Inthe bit higher. It's also a little bit further MR. MIKE MABERRY: North. 16 So you can see that it would be a little bit trails. DR. CHARL FEIN: - to the north and east. 16 So you can see that it would be a little bit trails. DR. CHARL FEIN: - to the north and east. 17 all of this red area represents what you see from inside The order facility which is is how it would appear as 18 read eras are what you see, places from which you cans as The order facility which is is how? 18 the rank overlook inside the carter. A man-made facility. The final image, the blue areas represent what 19 so with respect to ATST wisbillity, because of The final image, the blue areas represent what 10 It would be visible from almost any-where in the crater, a man-made from may of the sis whot you would lack. 11 <th>6</th> <th></th> <th>6</th> <th></th>	6		6	
B DR. CHARLIF FEIN: In this one, the purple is where you would be able to see it. MS. CAROLINE BLANCO: The bottom one. Charlie, the bottom one. 9 Where you would be able to see it. MS. JERRAW WAGNER: Which one? 11 DR. CHARLIE FEIN: This is where it would be 12 Will able MBERRY: In its alternative site. 12 Visible at the Reber Circle site. Now, Reber Circle is a 13 Iffit bit higher. It's also a little bit further - 14 MR. JERRAW WAGNER: Which one? 13 DR. CHARLIE FEIN: - to the north and cast. DR. CHARLIE FEIN: - to he north and cast. DR. CHARLIE FEIN: - to sit balk for any of the 14 16 To you can see that it would be a little bit 17 DR. CHARLIE FEIN: - to know prove the sit balk for a first time you would 18 To the first time you would 19 New, curously if we put up the next one 20 MR. MIKE MABERRY: That is ten X magnification. 11 You can see from the park overlook right at the crater. 123 Now, we've done these viewplain studies from all 23 124 12 You can see from the park overlook right at the crater. 123 Now, y	7	-	7	
9 where you would be able to see it. 9 the bottom one. 10 MR. MIKE MABERRY: In its alternative site. 10 MR. JEREMY WAGNER: Which one? 11 MR. CARALLE FEIN: This is where it would be 11 MS. CAROLINE BLANCO: That one. That's a good 12 visible at the Reber Circle sire. Now, Reber Circle is a 11 MS. CAROLINE BLANCO: That one. That's a good 13 little bit higher. It's also a little bit further 12 0 DR. CHARLE FEIN: This is the outmance to the mational park, right. So this is how it would appear as 10 more visible. Although, still not visible for many of the trains. 16 DR. CHARLE FEIN: This is the atternate to the mational park, right. So this is how it would appear as 10 nore visible. Although, still not visible for many of the trains. 16 DR. CHARLE FEIN: This is the atternate to the mational park, right. So this is how it would appear as 11 nore visible. Although, still not visible form any ore the mational park. the first time you would be be be areasen as end wary ous explaces from which you can see are whary you see, places from which you can see are whary you see, places from which you can see are whary you see, places from which you can see are not saying that the 123 125 12 you can see from the park overlook right at the crater. 1 125 126 12	8	• •	8	MS. CAROLINE BLANCO: The bottom one. Charlie,
10 MR. MIKE MABERRY: In its alternative site. 10 MR. EREMY WAGNES: Which one? 11 DR. CHARLE FEIN: This is where it would be 11 MS. CAROLINE BLANCO: That one. That's a good 13 little bit higher. It's also a little bit further 12 one. 14 MR. MIKE MABERRY: North. 14 keybard. 15 DR. CHARLE FEIN: - to the north and cast. 15 DR. CHARLE FEIN: This is the entrance to the national park, right. So this is how it would appear as you drow into the national park, the first time you would 16 So you can see that it would be a little bit traits or darce approxems what you see, floares from which you can see 10 be able to see it. There is the Air Force facility which 19 Now, curiously if we put up the next one 10 10 MR. MIKE MABERRY: That is ten X magnification. 21 the cark overhook night at the park overhook. These 10 MR. MIKE MABERRY: That is lowing the max-made facility. 22 thow and overhook inside the carter. 12 00 Now. we've done these viewplain studies from all 12 you can see from the park overhook right at the crater. 12 over the island. We have photographs and we've had 14 thow and be visible from 110 overthe island. We have photogr	9		9	the bottom one.
11 DR. CHARLIE FEIN: This is where it would be 11 MS. CAROLINE BLANCO: That one. That's a good 12 visible at the Reber Circle site. Now, Reber Circle is a 12 one. 14 MR. MIKE MABERRY: North. 13 DR. CHARLIE FEIN: This is the entrance to the 15 DR. CHARLIE FEIN: - to the north and east. 15 DR. CHARLIE FEIN: This is the entrance to the 16 So you can see that it would be alittle bit 16 national park, right on the edge of Kolekole. And this is what ATST 18 more visible. Although, still not visible for many of the 17 you drove into the national park, right on the edge of Kolekole. And this is what ATST 19 Now, curiously if we put up the next one 10 BR. CHARLIE FEIN: That is ta max magnification. 10 red area; nooking back toward the park overlook. These 12 MR.MIKE MABERRY: That is ta max magnification. 12 the park overlook inside the crater. A man-made facility. 12 DR. CHARLIE FEIN: This is from all 12 the park overlook inside the crater. A man-made facility. 12 The one from Maked ease, they are visible form almost anywhere in the crater. a 11 toyout asee from the park overlook right at the crater, a 12 This one from Maalaea Harbor. Wow, I mean, you <th>10</th> <th>•</th> <th>10</th> <th>MR. JEREMY WAGNER: Which one?</th>	10	•	10	MR. JEREMY WAGNER: Which one?
12 visible at the Reber Circle site. Now, Reber Circle is a 12 one. 13 little bit higher. It's also a little bit further - 13 DR. CRAIG FOLTZ: Take your fingers off the 14 MK. MIKE MABERRY: North. 14 keyboard. 15 DR. CHARLIE FEIN: - to the north and cast. 15 DR. CHARLIE FEIN: This is the entrance to the 16 so you can see that it would be a little bit 16 national park, right. So this is the valued appear as 17 more visible. Although, still not visible for many of the 17 you drow into the national park, the first time you would 18 be able to see it. There is the Air Force facility which 18 be able to see it. There is the Air Force facility which 19 Now, curiously if we put up the next one 10 18 be able to see it. There is the Air Force facility which 21 the crater, looking back toward the park overlook. These 12 19 Now, we've done these wither anter A man-made facility. 22 the park overlook right at the crater, a 11 110 123 124 12 you can see from the park overlook right at the crater, a 111 125 125 13 you can see from the park overlook	11		11	MS. CAROLINE BLANCO: That one. That's a good
13 little bit higher. It's also a little bit further 13 DR. CRAIG FOLTZ: Take your fingers off the 14 MR. MIKE MABERRY: North. 15 DR. CHARLIE FEIN: to the north and east. 15 DR. CHARLIE FEIN: to the north and east. 16 16 So you can see that it would be a little bit 17 17 more visible. Although, still not visible for many of the 18 18 be able to see: it. There is the Air Force facility which 19 Now, curiously if we put up the next one 19 20 all of this red area represents what you see, form which you can see 18 21 the orater, looking back toward the park overlook, inside the crater. A man-made facility, visitor, likres and so on. 21 23 the orate, looking back toward the park overlook, right at the crater, a 21 24 little bit further downhill. The flashing windows of that 22 25 The final image, the blue arears neaready 23 26 word hoe kroad past Hosmer Grove. Two observatories with the naked 24 27 125 over the island. We have photographs and we've had 28 renderings done. 35 39 so with respect to ATS	12		12	-
14 MR. MIKE MABERRY: North. 14 keyboard. 15 DR. CHARLIE FEIN:			13	DR. CRAIG FOLTZ: Take your fingers off the
15 DR. CHARLIE FEIN: to the north and east. 15 DR. CHARLIE FEIN: This is the entrance to the national park, right. So this is how it would appear as 16 So you can see that it would be a little bit national park, right. So this is how it would appear as 17 more visible. Although, still not visible for many of the is right on the ational park, the first time you would 18 Now, curiously if we put up the next one is right on the edge of Kolekole. And this is what ATST 20 all of this red area represents what you see from inside is right on the edge of Kolekole. And this is what ATST 21 red areas are what you see, places from which you can see MR. MIKE MABERRY: That is ten X magnification. 22 DR. CHARLIE FEIN: Of course, that's looking This is would look like. 23 the park overlook inside the crater. A man-made facility. DR. CHARLIE FEIN: Of course, that's looking 24 looking out, visible to visitors, liters and so on. 2121 15 over the island. We have photographs and we've had 26 renderings done. 2122 27 1223 125 28 over the island. We have photographs and we've had 22 29 this of parking with dows of that 23	14	-	14	
16 So you can see that it would be a little bit 16 national park, right. So this is how it would appear as 17 more visible. Although, still not visible for many of the 17 you drove into the national park, the first time you would 18 trails. 17 you drove into the national park, the first time you would 19 Now, curiously if we put up the next one all of this red area represents what you see, from inside 21 the crater, looking back toward the park overlook. These 18 23 the park overlook inside the crater. A man-made facility. 24 24 looking out, visible to visitors, hikers and so on. 25 25 The final image, the blue areas represent what 123 125 123 123 125 124 125 over the island. We have photographs and we've had 125 13 so with respect to ATST visibility, because a are already 125 over the island. We have photographs and we've had 14 the would to be significant area. 16 over the island. We have photographs and we've had 15 so with respect to ATST visibility, because are already 16 would hoot be significant area. 16 the would be vi	15		1	-
17 more visible. Although, still not visible for many of the 17 you drove into the national park, the first time you would 18 trails. Now, curiously if we put up the next one is right on the degle of Kolekole. And this is what ATST 20 all of this red area represents what you see from inside is right on the degle of Kolekole. And this is what ATST 21 the park overlook, inside the crater. A man-made facility, would look like. 22 the park overlook inside the crater. A man-made facility, DR. CHARLIE FEIN: Of course, that's looking 22 through bincoulars. Because with the naked eye, they are 11 23 through bincoulars. 1223 14 1223 125 15 you can see from the park overlook right at the crater. A 1 over the island. We have photographs and we've had 16 title bit further downhill. The flashing windows of that 1 1 16 the road, so on, would not be visible from 1 2 16 the road, so on, would not be visible from 5 1 10 It would be visible for a bird period as you 1 1 1 11 would not be siginificantly altered, there would be 1 <th></th> <th></th> <th>16</th> <th>national park, right. So this is how it would appear as</th>			16	national park, right. So this is how it would appear as
 trails. 18 trails. 19 Now, curiously if we put up the next one 20 all of this red area represents what you see from inside 21 the crater, looking back toward the park overlook. These 22 red areas are what you see, places from which you can see 23 the park overlook inside the crater. A man-made facility, 24 looking out, visible to visitors, hikers and so on. 25 The final image, the blue areas represent what 20 21 you can see from the park overlook right at the crater, a 21 little bit further downhill. The flashing windows of that 21 facility are visible from almost anywhere in the crater. 22 so with respect to ATST visibility, because of 23 is position and because of the terrain blocking from 24 so we are not saying that the 25 Uroud be visible from 26 are already visible from that rea. 27 tivisibility from the glaced on the road. 28 the visitor spect to the national park, the viewplain 29 wisibility from Red Hill. It is a large white facility. 20 Would appear in between AEOS, for example, and lite visitor from that ser are. 29 MR. MIKE MABERRY: This is from the visitor 20 over the island. We have photographs and we've had 21 over the island. We have photographs and we've had 21 renderings done. 21 over the island. We have photographs and we've had 21 even, little dots. But if you use binoculars, ten power 21 binoculars. this is what you would see. And there is what 22 so want or saying that the 23 MR. MIKE MABERRY: This is from the top of the 24 street here. So this is a good example of how the 25 so this is a good example of how the 26 so want particular location. 27 bree it is. 28 The visibility of the facility from elsewhere on 29 Maui is variable, depending on where yo	17		17	
19 Now, curiously if we put up the next one 19 is right on the edge of Kolekole. And this is what ATST 20 all of this red area represents what yous see from inside 20 would look like. 21 the crater, looking back toward the park overlook. These 21 MR. MIKE MABERRY: That is ten X magnification. 22 red areas are what you see, places from which you can see 23 through binoculars. Because with the naked eye, they are 23 the park overlook inside the crater. A man-made facility, 23 through binoculars. Because with the naked eye, they are 24 listle dots, as you well know. 25 Now, we've done these viewplain studies from all 10 red areas are what you see, places of the trarin blocking from 1223 125 1 you can see from the park overlook right at the crater. 1 over the island. We have photographs and we've had 2 renderings done. 2 This one from Malaea Harbor. Wow, I mean, you 4 little dots. But if you use binoculars, this is what you would see. And there is what 2 5 renderings done. 3 So we are not saying that the 6 store there. So this is a good example of how the 3 7 <t< th=""><th></th><th></th><th>18</th><th></th></t<>			18
