

Evaluating Aquatic Invasive Species Risk for Hawai'i- Which Tool is Best?

KIMBERLY FULLER¹, BRIAN NEILSON¹

¹Department of Land and Natural Resources: Division of Aquatic Resources

What is Risk?

HAZARD

A **HAZARD** is something that has the potential to harm you

RISK

RISK is the likelihood of a hazard causing harm

© 2018 Reid Middleton, Inc.

- ▶ Merriam-Webster:
Possibility of loss or injury

Risk Assessment

1) Hazard
Identification

2) Hazard
Assessment

3) Risk
Management &
Communication

4) Risk Review
and Reporting

Uncertainty

(Copp *et al.* 2008)

Aquatic Invasive Species (AIS)

- ▶ A nonindigenous aquatic species that, if introduced into an ecosystem, may cause harm to Hawai'i's economy, environment, human health, or public safety and welfare. (HIBP 2016)

200+

20 Marine
41 Freshwater

28

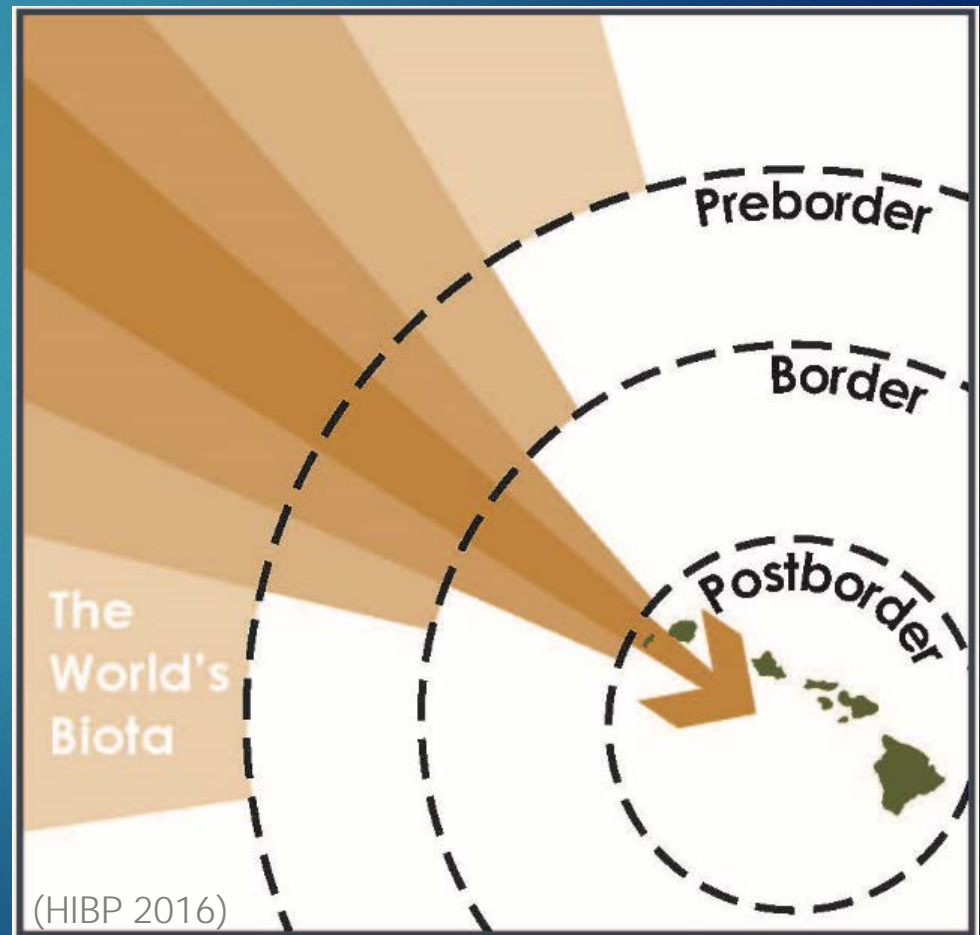

19

Biosecurity Management

- ▶ Biosecurity: measures taken to manage risk from invasive species
- ▶ Permits to Import-Hawai'i Department of Agriculture
- ▶ Benefits vs. Risk
- ▶ List high-risk AIS

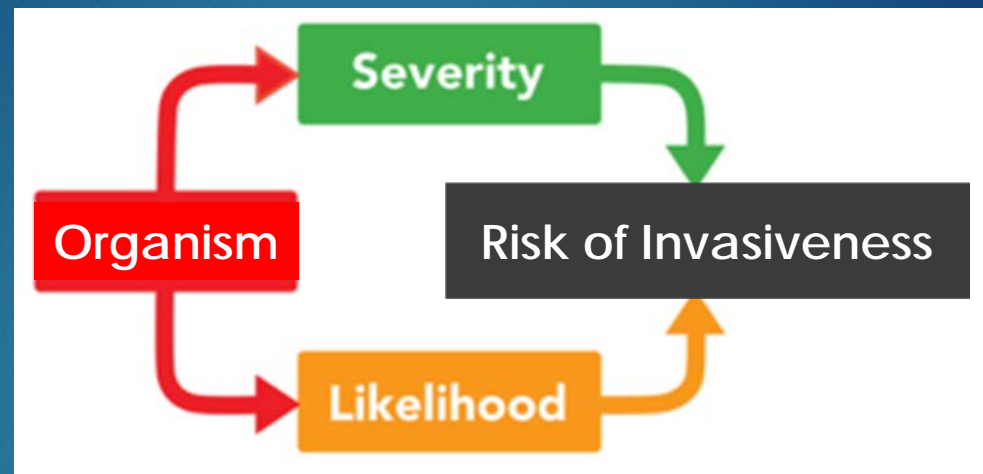

Risk Assessment Tools (RATs)

- ▶ Screening Level
- ▶ Systematic series of questions
- ▶ Semi-quantitative
- ▶ Repeatable
- ▶ Defensible
- ▶ Time efficient

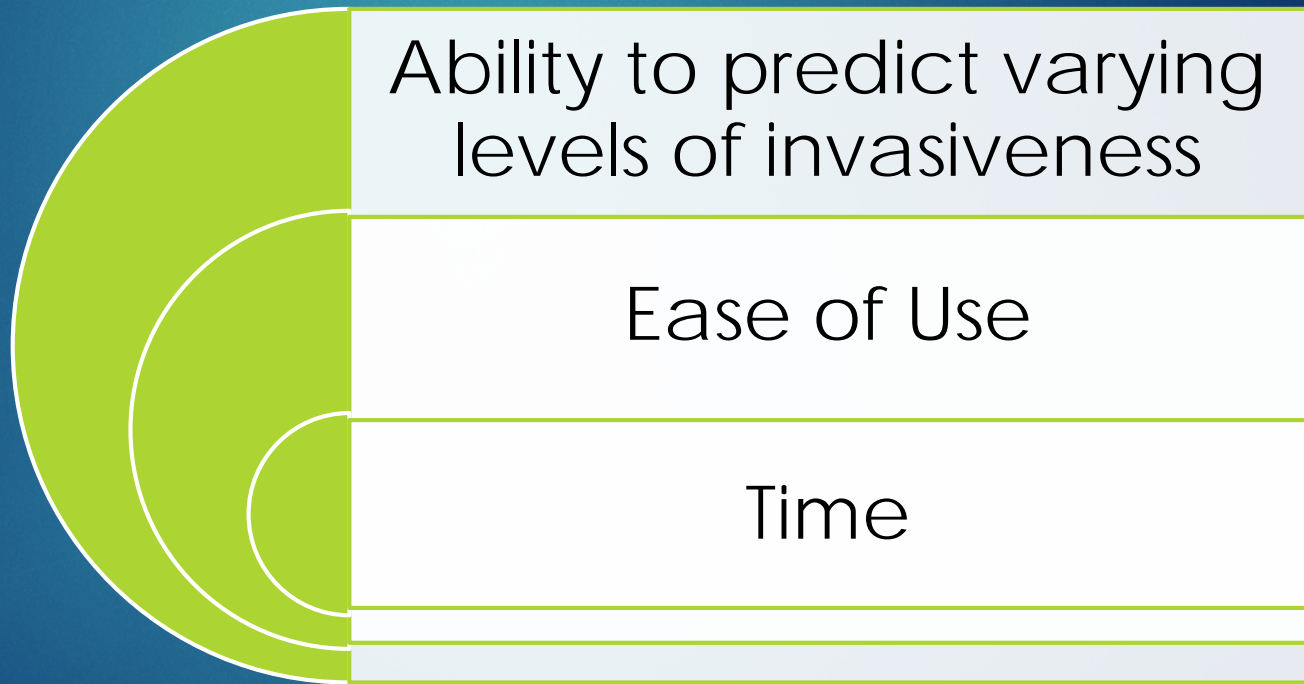

Methods

► Four Tools Tested

- Hawaii Marine Invasive Species Risk Assessment (MIRA)
- Canadian Marine Invasive Screening Tool (CMIST)
- Freshwater Fish Risk Screening Kit (FSK) v2
- Aquatic Species Invasiveness Screening Kit (AS-ISK)

Which Tool is Best?: Evaluation Criteria

Species Tested

Hawaii Marine Invasive Species Risk Assessment Tool (MIRA)

Hawai'i Marine Invasive Species Risk Assessment (MIRA) Tool

Date: January 16, 2018

DLNR:DAR

Hawaii

Long-fin Armored Catfish

For the marine species: **(Pterygoplichthys multiradiatus)**

The Overall Hawai'i MIRA Score is (Note: this score is comparative only and is independent of the matrix below):

309

HIGH

The Modified Tiered Risk Assessment Score is Highlighted Below:

Probability of Species in Question Establishment

		A	B	C	D
Severity of Negative Impact	I	X			
	II				
	III				
	IV				

Criteria:

X

Tier 1 = Critical – Very High Risk

Tier 2 = Serious – High Risk

Tier 3 = Moderate Risk

Tier 4 = Minor Risk

Tier 5 = Negligible Risk

Suggested Action:

No import allowed; full vector & Species control; no live trade.

No import allowed; vector & Species control. Strongly regulated live trade.

Limited imports with strong conditions; limited vector and Species control. Regulated live trade.

Conditional import; vector & species monitoring. Regulated live trade.

No limits.

Canadian Marine Invasive Screening Tool (CMIST)

CMIST: Canadian Marine Invasive Screening Tool

Version: 1.03

Last Updated: April 2017

Fisheries and Oceans Canada / Pêches et Océans Canada

Project: Pterygoplichthys multiradiatus	Likelihood of invasion	2.83
	Lower confidence limit	2.63
	Upper confidence limit	3.00
Species:	Impact of invasion	2.29
Study Area: Hawaii	Lower confidence limit	2.00
Assessor: DLNR DAR	Upper confidence limit	2.56
Date: January/2018	CMIST score	6.49
	Lower confidence limit	5.54
	Upper confidence limit	7.35

For further guidance see Manual, Assessment Example, and Glossary sheets in this workbook.

Uncertainty score guidance

Low certainty = 1
Little to no reliable information is available AND assessor has no experience with species.

Moderate certainty = 2
Some reliable information is available. Incomplete information is supplemented with information on (or experience with) similar species in a similar environment.

High certainty = 3
Considerable reliable information is available OR assessor has experience with species and assessment area.

Rationale guidance

Include key information used to determine risk and uncertainty scores.

Include direct quotations from literature, paraphrased summaries, and statements of expert opinion.

In cases where the answer is one of two options (e.g., high impact in few areas OR moderate impact in many areas), indicate which option was favoured and why.

Include annotated references in the text (e.g., Drolet et al. 2016; EOL; personal observation). Please include full citations in the References sheet in this workbook.

Stage of invasion	Questions	Answers	Risk score guidance	Risk score	Uncertainty score	Rationale
	1. Is the species established in the assessment area?	1 - No 2 - Observed but not reported as established 3 - Yes	This question is meant to differentiate species that are not present in the assessment area (1) from species that are established in the assessment area (3). Species that are present in the assessment area but not established would score 2.	3	3	Froese and Pauly 2017

- ▶ Designed and tested for Marine Invertebrates, but suitable for other organisms

O'opu Akupa (<i>Eleotris sandwicensis</i>)	No	No	8

Results- AS-ISK

Species	Invasive History	Invasive in Hawaii	ASISK Basic Score (-20 to 68)	ASISK Climate Change Score (-32 to 80)
Long-Fin Armored Catfish (<i>Pterygoplichthys multiradius</i>)	Yes	Yes	44	46
Rainbow Trout (<i>Oncorhynchus mykiss</i>)	Yes	No	28.5	20.5
Nile Tilapia (<i>Oreochromis niloticus</i>)	Yes	No*	43	47
Kanda (<i>Osteomugil engeli</i>)	No	Yes	20	24
Ayu (<i>Plecoglossus altivelis</i>)	No	No	14	10
O'opu Akupa (<i>Eleotris sandwicensis</i>)	No	No	15	9

Which Tool is Best?

Main Findings

- ▶ Effort and Time- comparable
- ▶ CMIST- scoring best detected varying levels of invasiveness (i.e. Kanda and Trout)
- ▶ Eliminate FISK
- ▶ Further Assessment
 - ▶ Climate matching, Pathway and Facility Assessment
- ▶ Management suggestions to HDOA
- ▶ Need to be Validated for Hawai'i- peer reviewed and published
- ▶ Larger and more taxonomically diverse sample size
