The gill net is usually made of transparent or semitransparent materials to make the net seem invisible underwater, with mesh openings generally large enough to permit the heads of fish to pass through, ensnaring them around the gills, fins, spines, or mid-section when they attempt to escape.

"Hoa'āina" means ahupua'a tenant.

The gill net primarily entangles aquatic life within the mesh of the net as the aquatic life swim or move into the gill net. The main characteristics of surround net fishing are the closed net configuration, the moving net, person or persons chase the aquatic life into the net, and only the aquatic life that entangles in the net mesh are captured.
