## PROJECT OVERVIEW

Hā'ena, at the far northwestern corner of Kaua'i's beautiful North Shore, is one of Hawai'i's busiest state parks, Hā'ena State Park. Approximately 65.7 acres in area, it contains significant cultural and ecological resources, with beaches, a sheltered lagoon, and scenic resources that make it a popular visitor attraction. It has a beach for swimming and sunbathing, archaeological features that include the famous Ka Ulu a Paoa Heiau and Ke Ahu a Laka hula sites, Lohi'au's house platform, wet caves, and the trailhead to Kalalau Trail and the Nāpali Coast State Wilderness Park.

After several years of research, community meetings and interviews, and previous attempts to develop a master plan for the park, the State of Hawai'i Department of Land and Natural Resources (DLNR), Division of State Parks (State Parks) engaged PBR HAWAII to complete the master plan and to process a Chapter 343, Hawai'i Revised Statutes (HRS) Environmental Impact Statement (EIS) for the park. Together with a 32-member ~~community~~ Master Plan Advisory Committee (MPAC), State Parks staff, and a team of consultants, PBR HAWAII refined a community-preferred alternative drafted in 2001 with a renewed emphasis on the cultural and historic significance of Hā'ena. Alternatives for transportation and parking were also incorporated into the plan given the growing traffic and safety concerns. ~~The draft pre-final master plan (Master Plan), which is the preferred plan and the subject of this EIS, has undergone additional revisions based on the feedback received during the Draft EIS (DEIS) process, was completed in October 2014 and is attached available in its entirety as an electronic file on the State Parks website for Hā'ena State Park (<http://dlnr.hawaii.gov/dsp/parks/kauai/haena-state-park/>) in Appendix I.~~ The Master Plan graphic is shown in (Figure 1) with a closer view of the park entry shown in Figure 2.

The Master Plan includes minimal physical improvements to the park in order to maintain the natural beauty and openness of the area. Only a few new structures are proposed including a Welcome Hale that is envisioned as an open traditional Hawaiian hale and located near the improved main parking lot. Interpretive and informational signage will be posted at the hale and two small comfort stations to the side of the main parking lot will provide a second set of facilities to reduce wastewater flows at the existing Kē'ē comfort station. The current overflow parking area will serve as the main parking lot and be resurfaced with permeable paving. Portions of it will be shifted slightly makai to avoid a rockfall hazard zone. According to the rockfall hazard study completed for the park (Appendix B), several areas along the existing highway are predicted to be within a Class A (high estimated potential) and Class B (medium estimated potential) rockfall hazard zone. After considering costly and undesirable engineering solutions that would deface Ka Pali 'Ōahi o Makana, the MPAC together with Hui Maka'āinana o Makana (Hui) leadership, recommended that all visitor facilities be located outside of the estimated rockfall hazard zones to the extent possible. This includes the main parking lot, new entry turnaround and shuttle stop, and a new pedestrian-only path that connects the main parking lot with Kē'ē Beach through the lo'i. The new pedestrian path would follow along the first berm of the lo'i closest to the highway. It is proposed to be placed just over the berm so as not to impact the

---

berm or any of the historic resources and will maintain a low profile just above the berm. The new path will provide visitors with a unique view of Makana, a famous mountain peak, as well as views of the restored wetlands, loko, and lo'i as they walk to Kē'ē.

New restrooms are also proposed near the main parking lot in order to provide additional alternative comfort stations for visitors. The latest proven green wastewater treatment technologies should be installed and these new facilities will also help lessen the use of the existing comfort station at Kē'ē, which has sensitive cultural sites nearby.

The main parking lot is envisioned to be flexible, but with a maximum of 100 striped stalls. The overall size of the main parking lot would be adjusted accordingly to support visitor use of third-party shuttles to the park, or the County's proposed North Shore shuttle should it be established, with the goal of right-sizing the parking lot. The idea is to accommodate local demand, complement shuttle volume, and minimize parking impacts outside of the park. In addition, the main parking lot would be separated into a fee-paying lot and non-fee paying lot by moveable bollards and cordons so the parking can be adaptively managed on an as-needed basis to support the varying numbers in either group parking at the park on any given day and even throughout the day. A smaller special access parking lot will be located at Kē'ē in the existing paved areas. These stalls will be reserved for ADA accessibility, the lifeguards, park staff, the Hula Complex, and other cultural practices. It will also be accessible for emergencies as well as safety and rescue operations.

Other recommendations include reestablishing the area makai of the Kalalau trailhead and encompassing Ka Ulu a Paoa Heiau and the former Allerton property as a Hula Complex, recognizing the extreme significance of this ancient wahi kapu to hula practitioners worldwide. In addition, a Cultural Gathering Place will be created inland of Ka'ilio Point with a traditional hale and Hālau Wa'a, where educational and community programs could be staged, including overnight stays.

The plan also supports the continued restoration of the Agricultural Complex and encourages restoration of the varied historic, cultural, and natural resources throughout the park. It prioritizes the restoration of the dune complex as a potential first effort, recognizing the multiple benefits of ecological restoration, beach protection, and caring for the ancestors whose bones lay interred in the sand dunes. The plan also encourages green building design, integrated water use, reuse, and rainwater catchment, and renewable energy throughout the park.

The two key management recommendations include 1) the establishment of a Cultural Advisory Committee and a Community Advisory Committee, both of whom will be consulted on all aspects of park management and proposed improvements; and 2) the implementation of adaptive management principles with regards to all management issues at the park. This includes the 900 people per day on average visitor limit instituted during peak visitor hours and parking management, which will be adjusted as needed at the park. Together, these two key management recommendations mean that State Parks will consult with community and cultural experts for both the proposed construction projects at the park

---

and ongoing management of the park in order to receive input early and throughout the processes so adjustments can be made as appropriate based on the advisory groups' recommendations.

The existing historic state highway that runs through the park is also recommended to be transferred from the State Department of Transportation to State Parks so that it may be closed to general through traffic and State Parks can shift the bulk of visitor traffic and parking outside of a potential rockfall hazard zone.

A significant proposal in the master plan is to limit the number of people who can enter the park to 900 people per day as an initial ceiling, and can be adjusted over time based on overall negative or positive impacts to the area with an emphasis on public safety. This initial number includes day hikers on the Kalalau Trail but does not include overnight campers or hunters with valid permits, members of the Hui, cemetery caretakers, kūpuna who have cultural or ancestral ties to the area, or attendees at special educational or cultural events such as volunteer workdays or events at the Hula Complex. This will encourage visitors to plan ahead and an informational system via the internet, text messages, and email could be developed to distribute real-time information on park access, entry ticket availability, special events, and weather, ocean and any hazardous conditions at the park. The Master Plan acknowledges that park access will be an ever-evolving operational issue and will likely change over time as new policies are implemented. However, the goal is to study the impacts of these proposed policies and to adjust them as appropriate to improve the long-term management of the park and visitor satisfaction. ~~sets forth a phased implementation process depending on available funding for the proposed park improvements. This EIS covers the full buildout of the Master Plan but also provides a discussion of the Near Term Plan which provides interim solutions as funding becomes available for the proposed improvements. The Near Term Plan for the Entry Complex (Figure 2) includes a controlled entry for the park at a new Welcome Pavilion equipped with restrooms. In addition, the Interpretive Path will provide access to Kē'ē makai of the highway via an elevated boardwalk that is located outside of a projected rockfall hazard zone. It will provide visitors with a unique view of Makana, a famous mountain peak, as they traverse the lo'i and walk through the Hau Tunnel which leads to Kē'ē Beach. There is also a unique opportunity for State Parks to work with the County and other agencies to initiate a North Shore shuttle and possibly a remote entry location in Princeville in the near term. If this happens, the size of the proposed parking lot should be adjusted in the Near Term Plan to support use of the shuttle.~~

~~The next phases would involve the full buildout of the Master Plan as funding becomes available. The plan includes additional facilities such as a larger Educational and Cultural Center (ECC), which would replace the Welcome Pavilion as the point of entry for the park, and a Caretaker's Cottage, which will support a 24-hour a day presence at the park. The area makai of the Kalalau trailhead and encompassing Ka Ulu a Paoa Heiau and the former Allerton property are designated as the Hula Complex, recognizing the extreme significance of this wahi pana to hula and practitioners worldwide. Coordination with the County of Kaua'i (County) will be required as the heiau sits on County land. Other features of the Master Plan include the development of a Cultural Gathering Place inland of Ka'ilio Point~~

---

with a traditional hale and Hālau Wā'ā, where educational and community programs could be staged including overnight stays. The Master Plan prioritizes the restoration of the dune complex as a potential first effort, recognizing the multiple benefits of ecological restoration, beach protection, and caring for the ancestors whose bones lay interred there. The Master Plan also supports the continued restoration of the Agricultural Complex and encourages restoration of the varied historic, cultural, and natural resources throughout the park which are covered in various studies and restoration plans previously prepared, and encourages green building design and renewable energy use for the proposed facilities.

Parking at the park is a contentious issue as there are some community members who feel having a large parking lot within the park boundaries is inappropriate as there is the potential to locate it outside of the park at a remote entry facility in Princeville. Various transportation alternatives are discussed in the Master Plan and the proposed parking lot may be reduced in size or even eliminated should a shuttle/transit system provide adequate visitor access to the park. The area no longer needed for parking could be converted into other park uses such as additional educational gardens and picnic areas, event space with a grand entry lawn, or the ECC could be moved eastward into the graded area to open up more outdoor park/event space west of the facility. An expanded shuttle stop with shelters, benches and informational signage may also be required if a shuttle is the primary means for park entry.

The Master Plan includes key management strategies such as the establishment of a Cultural Advisory Group and community advisory group early in the implementation process, and prior to the awarding design and construction contracts. Mandatory visitor education and orientation is also recommended for all who come to the park. The existing historic state highway that runs through the park is also recommended to be transferred from the State Department of Transportation to State Parks so that it may be closed to general through traffic. It will also allow State Parks to shift the bulk of visitor traffic within the park outside of a potential rockfall hazard zone.

A significant management proposal in the plan is to limit the number of people who can enter the park to 900 people per day as an initial ceiling. This number may be adjusted over time based on the impacts to the natural and cultural resources, traffic, public safety and visitor satisfaction at the park among other potential variables. This initial number includes day hikers on the Kalalau Trail but does not include overnight campers or hunters with valid permits, members of Hui Maka'āinana o Makana (Hui) who care for the lo'i and famed hula heiau, or attendees at special education or cultural events such as volunteer workdays or events at the heiau. This will reduce the typical number of daily visitors by roughly half compared to current numbers and will encourage visitors to plan their visits to the park in advance. Information systems via the internet or other information technologies (IT) such as smartphone applications could be developed to distribute real time information on ticket and parking availability and could also include weather and hazard conditions. State Parks acknowledges that park access will be an ever evolving operational issue and will likely change over time as new policies are implemented. However, the goal is to study the impacts of these proposed policies over time and to adjust them as appropriate to improve the long-term management of park resources and visitor satisfaction.

---

~~Once the EIS process is completed, the Master Plan will be refined based on the input received and submitted to the Board of Land and Natural Resources for final approval. With a completed Master Plan and EIS, State Parks will then be able to pursue funding to construct the proposed improvements.~~

# 1.0 INTRODUCTION

This Environmental Impact Statement (EIS) has been prepared in accordance with Chapter 343, Hawai‘i Revised Statutes (HRS), and Title 11, Chapter 200, Hawai‘i Administrative Rules (HAR), of the Department of Health for the Hā‘ena State Park Master Plan.

## 1.1 PROJECT SUMMARY

<b>Project Name:</b>	Hā‘ena State Park Master Plan	
<b>Location:</b>	Hā‘ena Ahupua‘a, Halele‘a Moku, Kaua‘i, Hawai‘i	
<b>Judicial District:</b>	Hanalei	
<b>Applicant:</b>	State of Hawai‘i, Department of Land and Natural Resources (DLNR), Division of State Parks	
<b>Landowner:</b>	State of Hawai‘i and County of Kaua‘i	
<b>Tax Map Keys:</b>	(4) 5-9-008:001, (4) 5-9-001:025 and (4) 5-9-001:022 (por.)	
<b>Project Area:</b>	Approximately <del>65.7</del> <u>68.6</u> acres	
<b>Existing Uses:</b>	State park. Outdoor recreation includes beach activities, picnicking, sightseeing, and a hiking trailhead. Other uses include traditional agriculture, fishing, hula, and a cemetery.	
<b>Proposed Uses:</b>	State park. All existing uses would continue but additional facilities such as the <del>Education and Cultural Center; Interpretive Corridor and associated interpretive devices; Caretaker’s Cottage; baseyard; Welcome Hale; restrooms; pedestrian paths; staging areas; bicycle racks;</del> picnic areas; Hālau Wa‘a and Cultural Gathering Place with overnight uses; reconfigured parking and access; relocated lifeguard tower; ecosystem and archaeological restoration; and agricultural restoration activities within a community garden.	
<b>Land Use Designations:</b>	<i>State Land Use District:</i>	Conservation District
	<i>Conservation District Subzones:</i>	Resource and Limited Subzones within the park; Protective Subzone (offshore)
	<i>Kaua‘i General Plan:</i>	Park
	<i>North Shore Development Plan:</i>	Open
	<i>County Zoning:</i>	None
<b>Special Management Area:</b>	Within the Special Management Area	

**Need for Statement:** Compliance with Chapter 343, HRS

- Use of State lands and funds
- Use of County lands and funds
- Use within a shoreline area
- Use within a Historic site as designated on the Hawai‘i and National Registers of Historic Places
- Land uses within the Conservation District
- Modification of existing helicopter facility within the State that may affect lands within a Conservation District, shoreline area, and registered historic site

**Permits/Approvals Required:** Compliance with Chapter 343, HRS; Compliance with Chapter 6E, HRS (Historic Preservation); Special Management Area Use Permit; Site Plan Approval; Conservation District Use Permit; Shoreline Setback Determination; Wetland Delineation Study and Determination and other Department of the Army permits; National Pollution Discharge Elimination System (NPDES) Permit; FAA Form 7480-1 Notice of Landing Area Proposal; Permit to Perform Work within a State Right-of-Way; Grading and Grubbing Permits; Building Permits; and dependent on extent of instream activities pursued, Stream Channel Alteration Permit; Stream Diversion Works and/or Petition to Amend Instream Flow Standard

**Accepting Authority:** Governor of the State of Hawai‘i or Authorized Representative

## 1.2 LAND OWNERSHIP

Hā‘ena State Park encompasses approximately 65.7 acres. It is composed of three parcels, two of which are owned by the Division of State Parks, State of Hawai‘i, Department of Land and Natural Resources (DLNR) (see Table 1 below and Figure 4). A small parcel owned by the County of Kaua‘i encompasses Ka Ulu a Paoa Heiau and Ke Ahu a Laka and is surrounded by the State Park-owned parcels. The project also involves the portion of Kūhiō Highway (Route 560) that stretches from the park entry to Kē‘ē Beach, which is owned by the State Department of Transportation (DOT) and does not have a TMK number.

Parcel 01 of Tax Map Key (TMK) 5-9-008 is approximately 50 acres and entirely within the park boundary. Roughly fifteen acres of TMK: 5-9-001: 022 is located within Hā‘ena State Park. The remaining 165 acres falls within the Nāpali Coast State Wilderness Park. The small County-owned parcel TMK 5-9-001: 025 is roughly 0.68 acres. The portion of Kūhiō Highway is roughly 2.3 acres. The total project area is estimated at 68.6 acres when combining the park area and portion of the highway.

**TABLE 1: TAX MAP KEY AND OWNERSHIP**

TMK	AREA (IN ACRES)	OWNER
5-9-008: 001	50.38	State of Hawai‘i
5-9-001: 022 (por.)	15.23*	State of Hawai‘i
5-9-001: 025	0.68	County of Kaua‘i
<u>Unknown TMK (Portion of Kūhiō Highway)</u>	<u>2.3</u>	<u>State of Hawai‘i</u>
*Note: The entire parcel is 180.23 acres. Only a narrow portion of the parcel to the south of Kūhiō Highway is within Hā‘ena State Park.		

### 1.3 IDENTIFICATION OF THE PROPOSING AGENCY

The proposing agency is the State of Hawai‘i, Department of Land and Natural Resources, Division of State Parks.

Contact: ~~Daniel S. Quinn~~ Curt Cottrell, Administrator  
 Department of Land and Natural Resources  
 Division of State Parks  
 P.O. Box 621  
 Honolulu, Hawai‘i 96809  
 Telephone: (808) 587-~~0290~~-0300  
 Fax: (808) 587-0311

### 1.4 IDENTIFICATION OF THE ENVIRONMENTAL CONSULTANT

The State of Hawai‘i, Department of Land and Natural Resources’ consultant for the project is PBR HAWAII & Associates, Inc.

Contact: Kimi Yuen, LEED AP BD+C, ~~Senior Associate-Principal~~  
 PBR HAWAII & Associates, Inc.  
 1001 Bishop Street, Suite 650  
 Honolulu, Hawai‘i 96813  
 Telephone: (808) 521-5631  
 Fax: (808) 523-1402

### 1.5 IDENTIFICATION OF THE ACCEPTING AUTHORITY

In accordance with Chapter 343, HRS, the Accepting Authority is the governor or the governor’s authorized representative whenever an action proposes the use of state lands or the use of state funds. Since County lands are also involved as well as State lands, the governor or an authorized representative shall have final authority to accept the EIS. Acceptance of a required Final Environmental Impact Statement (FEIS) shall be a condition precedent to implementation of the proposed action. For this action, the governor is ~~anticipated to be~~ the accepting authority of the EIS.

Contact: The Honorable David Y. Ige  
Governor, State of Hawai‘i  
Executive Chambers  
State Capitol  
Honolulu, Hawai‘i 96813  
Telephone: (808) 586-0034  
Fax: (808) 586-0006

## **1.6 COMPLIANCE WITH STATE AND COUNTY OF KAUAI ENVIRONMENTAL LAWS**

This document has been prepared in accordance with the provisions of the State of Hawai‘i’s Environmental Impact Statement Law, Chapter 343, HRS and the Environmental Impact Statement Rules, Title 11, Chapter 200, HAR. Section 343-5, HRS, establishes nine (9) actions, or “triggers,” which require the environmental review process. Implementation of the Hā‘ena State Park Master Plan will involve the following triggers: 1) the use of State land and funds, 2) the use of county lands or funds; 3) a use within a shoreline area; 4) a use within a Historic District as designated in the Hawai‘i and National Registers of Historic Places; 5) the use of State lands classified as a Conservation District; and 6) the modification of existing helicopter facilities within the State that may affect lands within a Conservation District, shoreline area, and registered historic site.

In addition, the project may involve or impact State and/or County lands or funds relating to, connections to, and/or easements across, State or County facilities and lands including but not limited to infrastructure improvements for public roadways, water, sewer, utility, drainage, or other facilities. While the specific nature of each improvement is not known at this time, the EIS is intended to address all current and future instances involving the use of State and/or County lands or funds relating to the proposed park improvements.

The DEIS was preceded by the Hā‘ena State Park Master Plan Environmental Impact Statement Preparation Notice (EISPN) under the authority of Act 172-12. State Parks submitted the EISPN to the State Office of Environmental Quality Control (OEQC) on February 9, 2015. Notice of the availability of the EISPN was published in the February 23, 2015 edition of *The Environmental Notice*. Copies of the EISPN were provided to the appropriate government agencies and other individuals and organizations as listed in Section 8.3.1. The public comment period for the EISPN began on February 23, 2015 and ended on March 25, 2015. Comments and responses on the EISPN received during the public comment period are incorporated in this EIS and the letters are provided in Section 12.0.

Following the EISPN, State Parks submitted the DEIS to OEQC on July 13, 2015 and Notice of the availability of the Draft EIS was published in the July 23, 2015 edition of OEQC's *The Environmental Notice*. Copies of the DEIS were provided to appropriate government agencies, public officials, and other organizations and individuals (see Section 8.3.2). The official 45-day public comment period on the DEIS began on July 23, 2015 and ended on September 8, 2015. However, State Parks held a public meeting on August 19, 2015 to gather

more input on the DEIS and extended the DEIS public comment period until October 8, 2015. Comments on the DEIS received during this public comment period and the responses to the comments are incorporated in this FEIS and copies of those letters are included in Section 13.0.

## 1.7 AGENCY AND COMMUNITY GROUP ENGAGEMENT

Throughout the planning process for this project, various Federal, State of Hawai‘i, and County of Kaua‘i agencies as well as community groups, organizations and individuals have been engaged in the development of the Master Plan. A thirty-two member Master Plan Advisory Committee (MPAC) consisting of Hā‘ena kūpuna and ‘ohana members, cultural practitioners and scientific experts, business representatives, State and County agencies, and other North Shore community members provided recommendations to the physical plan and park management. Following the publication of the availability of the DEIS by OEQC in the July 23, 2015 *The Environmental Notice*, State Parks held a public community meeting on August 19, 2015 to gather input on the DEIS. A new Hā‘ena State Park Community Advisory Committee (HSPCAC) composed of a portion of the original MPAC as well as new members from the community met regularly to refine the master plan. These efforts culminated in an open house held on July 23, 2016 at Hā‘ena State Park to present to the community the revised master plan. The additional input and feedback was collected and incorporated into the plan. The HSPCAC provided further guidance on finalizing the master plan at a meeting held in November 2016 and via email through May 2018. A summary of the public and community meetings that were held is provided in Table 2.

At the onset of the project, pre-consultation letters were issued soliciting input into the Master Plan and environmental documents, and periodically through the process, public meetings and open houses were held to keep the greater community informed of the concepts being considered for the Park. Appendix A includes a record of and materials from the public meetings held with community members regarding this project with a summary of the public meeting held on August 19, 2015 for the Draft EIS in Section 8.3.3. Chapter 11.0 contains the pre-consultation correspondence.

**TABLE 2: PUBLIC AND COMMUNITY ADVISORY COMMITTEE MEETINGS**

DATE	LOCATION	PARTICIPANTS	PURPOSE
August 14 and 15, 2008	Hā‘ena State Park	Various stakeholders, consultants	Field visit
October 16, 2008	Honolulu	Debbie Gowensmith, Community Conservation Network	Learn more about the Hā‘ena community-based subsistence fishery project
October 24, 2008	Hanalei	Maka‘ala Ka‘aumoana	Learn more about the 1990’s effort to master plan Hā‘ena State Park and about her work at Hā‘ena and with the Hanalei Watershed Hui
October 24-25, 2008	Limahuli Gardens and County Planning Commission Room	Public	Open house

DATE	LOCATION	PARTICIPANTS	PURPOSE
February 4, 2009	Teleconference	Chad Listman, County of Kauaʻi Lifeguard	Discuss issues at the park with Kēʻē head lifeguard
October 14, 2009	Limahuli Gardens	SMA interveners that entered into resolution agreement with State Parks regarding comfort station	Final design for constructed wetlands and update on Master Plan progress
March 10, 2010	Honolulu	Debbie Gowensmith, Hawaiʻi Community Stewardship Network (HCSN)	Community coordination
April 17, 2010	Hanalei Elementary School	MPAC	Introductory meeting
May 8, 2010	Hanalei Elementary School	MPAC	Master Plan revisions and management issues
May 15, 2010	Hanalei Elementary School	MPAC	Master Plan revisions and management issues, continued
July 10, 2010	Hanalei	Public	Overview of process and Master Plan revisions
October 14, 2010	Land Board Conference Room, Kalanimoku Building	BLNR	Request the BLNR to accept recommendations proposed in draft Master Plan and endorse preparation of an EIS
February 17, 2011	Various	MPAC	Site visit to potential shuttle stop locations
March 1, 2011	Hanalei Community Center	Transportation and Parking Working Group	Transportation and Parking Working Group
March 18, 2011	Teleconference	Jean Souza, Hawaiian Islands Humpback Whale Marine Sanctuary	Hawaiian Islands Humpback Whale Marine Sanctuary and environmental interpretive tools
March 19, 2011	Hanalei Community Center	MPAC	Transportation issues
March 1, 2012	University of Hawaiʻi	Carlos Andrade, Konia Freitas	Learn about a conceptual initiative being discussed at Hawaiian Studies program
December 10, 2012	Hāʻena State Park	MPAC	View the pre-final Master Plan, discuss a near-term plan for the entry complex and discuss management strategies
December 26, 2012	Teleconference	Sue Kanoho, Kauaʻi Visitors Bureau	Discuss potential visitor limits at Hāʻena State Park and potential effects on visitor industry
January 10, 2013	Hāʻena State Park	MPAC	Revised plan and continuation of management issues
January 21, 2013	Hāʻena State Park	MPAC	Discuss proposed visitor limits, view pre-final Master Plan, and discuss capital improvement projects
February 7, 2013	Hāʻena State Park	MPAC	Review revised plan, capital improvement projects, and next steps
April 22, 2013	Hāʻena State Park	Hui Makaʻāinana o Makana	Rockfall hazard mitigation
May 3, 2013	Hāʻena State Park	MPAC	Pedestrian walkway alternatives, rockfall mitigation, and next steps

DATE	LOCATION	PARTICIPANTS	PURPOSE
August 27, 2014	Hā'ena State Park	MPAC	Review of latest changes to plan, kickoff for EIS
<u>August 6, 2015</u>	<u>County of Kaua'i Mo'ikeha Building</u>	<u>Kauai Historic Preservation Review Commission (KHPRC)</u>	<u>Present draft master plan to KHPRC and receive input and comments</u>
<u>August 19, 2015</u>	<u>Hanalei Elementary School</u>	<u>Public</u>	<u>Present DEIS and gather community input</u>

<u>July 23, 2016</u>	<u>Hā'ena State Park</u>	<u>Public</u>	<u>Community Open House to present revised master plan and collect input and comments</u>
<u>November 27, 2016</u>	<u>Waipā Foundation</u>	<u>HSPCAC</u>	<u>Discuss revisions to master plan</u>
<u>May 2018</u>	<u>Various</u>	<u>Key members of HSPCAC</u>	<u>Post-Flood Repairs</u>

## 1.8 STUDIES CONTRIBUTING TO THE ENVIRONMENTAL IMPACT STATEMENT

The information contained in this document has been gathered from agency and community consultations, document and historical research, site visits, technical studies and generally available information regarding the characteristics of the site and surrounding area. Technical consultant reports were commissioned as part of the 2001 and current master planning efforts. The following are included as appendices to this document as noted. Archaeological and historic information was prepared by in-house State Parks ~~staff~~ archaeologists. Section 9.0 provides the list of technical consultants who have been contracted for this current effort and have contributed to this EIS.

- Rockfall Hazard Assessment (Appendix B)
- Biological Survey (Appendix C)
- Marine Natural Resources and Recreation Assessment (Appendix D)
- Cultural Impact Assessment (Appendix E)
- Traffic Impact Assessment Report (Appendix F)
- Civil Baseline Report (Appendix G)
- Wastewater Preliminary Engineering Report (Appendix H)

## 1.9 EXECUTIVE SUMMARY

### 1.9.1 HĀ'ENA STATE PARK MASTER PLAN

The proposed master plan for Hā'ena State Park refines the master plan drafted in 2001 but never adopted with a renewed emphasis on the cultural and historic significance of Hā'ena. The Master Plan includes minimal physical improvements to the park in order to maintain the natural beauty and openness of the area. Only a few new structures are proposed including a Welcome Hale that is envisioned as an open traditional Hawaiian hale and

located near the improved main parking lot. Interpretive and informational signage will be posted at the hale and two small comfort stations to the side of the main parking lot will provide a second set of facilities to reduce wastewater flows at the existing Kēʻē comfort station. The current overflow parking area will serve as the main parking lot and be resurfaced with permeable paving. In addition, a new entry turnaround and shuttle stop, and a new pedestrian-only path that connects the main parking lot with Kēʻē Beach through the loʻi are included in the plan. The new Pedestrian Path would follow along the first berm of the loʻi system closest to the highway. It is proposed to be placed just over the berm so as not to impact the berm or any of the historic resources and will maintain a low profile just above the berm. The new path will provide visitors with a unique view of Makana, a famous mountain peak, as well as views of the restored wetlands, loko, and loʻi as they walk to Kēʻē. Understanding there are funding limitations for improvements at State Parks, the Master Plan provides a Near-Term Plan for the Entry Complex (Figure 2) which includes a controlled entry for the park at a new Welcome Pavilion equipped with restrooms and the Interpretive Path which will provide access to Kēʻē Beach along an elevated boardwalk located makai of the current highway alignment to move the main visitor path outside of a projected rockfall hazard zone. The full buildout of the Master Plan is shown in Figure 1.

The main parking lot is envisioned to be flexible, but with a maximum of 100 striped stalls. The overall size of the main parking lot would be adjusted accordingly to support visitor use of third-party shuttles to the park, or the County's proposed North Shore shuttle should it be established, with the goal of right-sizing the parking lot. The idea is to accommodate local demand, complement shuttle volume, and minimize parking impacts outside of the park. In addition, the main parking lot would be separated into a fee-paying lot and non-fee paying lot by moveable bollards and cordons so the parking can be adaptively managed on an as-needed basis to support the varying numbers in either group parking at the park on any given day and throughout the day. A smaller special access parking lot will be located at Kēʻē in the existing paved areas. These stalls will be reserved for ADA accessibility, the lifeguards, park staff, the Hula Complex, and other cultural practices. It will also be accessible for emergencies as well as safety and rescue operations.

Other recommendations include reestablishing the area makai of the Kalalau trailhead and encompassing Ka Ulu a Paoa Heiau and the former Allerton property as a Hula Complex, recognizing the extreme significance of this ancient wahi kapu to hula practitioners worldwide. In addition, a Cultural Gathering Place will be created inland of Kaʻīlio Point with a traditional hale and Hālau Waʻa, where educational and community programs could be staged, including overnight stays.

The plan also supports the continued restoration of the Agricultural Complex and encourages restoration of the varied historic, cultural, and natural resources throughout the park. It prioritizes the restoration of the dune complex as a potential first effort, recognizing the multiple benefits of ecological restoration, beach protection, and caring for the iwi kupuna. The plan also encourages green building design, integrated water use, reuse, and rainwater catchment, and renewable energy throughout the park. The latest proven green wastewater

treatment technologies should be installed and these new facilities will also help lessen the use of the existing comfort station at Kē‘ē, which has sensitive cultural sites nearby.

Key management recommendations include: 1) the establishment of a Cultural Advisory Committee and a Community Advisory Committee, both of whom will be consulted on all aspects of park management and proposed improvements; 2) the implementation of adaptive management principles with regards to all management issues at the park; 3) instituting an initial limit of 900 visitors entering the park during peak park hours and calculated on an average daily basis as opposed to a hard limit; 4) required staff and volunteer education; and 5) visitor orientation prior to park entry.

The existing historic state highway that runs through the park is also recommended to be transferred from the State Department of Transportation to State Parks so that it may be closed to general through traffic and State Parks can shift the bulk of visitor traffic and parking outside of a potential rockfall hazard zone.

~~There are improved parking lots and a new entry turnaround shown in the proposed plans. However, there is also a unique opportunity currently being explored for State Parks to work with the County and other public agencies or to solicit a concession agreement with a third-party shuttle operator to initiate a North Shore shuttle and possibly a remote entry location in Princeville in the near term. If this happens, the size of the proposed parking lot in the Near-Term Plan and full buildout plan should be adjusted to support visitor use of the shuttle. The area no longer needed for parking at the entry could be converted into other park uses such as additional educational gardens and picnic areas, event space with a grand entry lawn, or more compact development of the entry facilities. An expanded shuttle stop with shelters, benches and informational signage may also be required if a shuttle is the primary means for park entry.~~

~~The full buildout of the Master Plan includes additional facilities such as a larger Educational and Cultural Center, which would replace the Welcome Pavilion as the point of entry for the park and a Caretaker’s Cottage which will support a 24-hour a day presence at the park. The area makai of the Kalalau trailhead and encompassing Ka Ulu a Paoa Heiau and the former Allerton property are combined to create the Hula Complex. Coordination with the County of Kaua‘i will be required as the heiau sits on County land. Other features of the master plan include the development of a Cultural Gathering Place inland of Ka‘Ōlio Point with a traditional hale and Hālau Wā‘ā, where educational and community programs could be staged including overnight stays. Restoration of the dune complex as well as the continued restoration of the Agricultural Complex, Allerton Caretaker’s Cottage, Montgomery House, and other historic, cultural, archaeological, and natural resources of the park are also recommended. Picnic areas, pedestrian and bicycle paths, expanded garden areas, integrated water/wastewater/drainage facilities, a permanent location for the lifeguard tower, baseyards and a helicopter landing area for DLNR and emergency use only are also elements of the proposed master plan.~~

~~The master plan includes key management strategies such as the establishment of a Cultural Advisory Group and community advisory group, and mandatory visitor orientation and education upon entry to the park. The existing historic State highway that runs through the park is also recommended to be transferred from the State Department of Transportation to State Parks so that it may be closed to general through traffic and allow State Parks to shift the bulk of visitor traffic within the park outside of a potential rockfall hazard zone.~~

~~A significant management proposal in the plan is to limit the number of people who can enter the park to 900 people per day as an initial ceiling. This number may be adjusted over time based on the impacts to the natural and cultural resources, traffic, public safety and visitor satisfaction at the park among other potential variables. This initial number includes day hikers on the Kalalau Trail but does not include overnight campers or hunters with valid permits, members of the Hui, or attendees at special education or cultural events such as volunteer workdays or events at the Hula Complex. This will encourage visitors to plan their visits in advance. State Park acknowledges that access will be an ever evolving operational issue and will likely change over time as new policies are implemented. However, the goal is to study the impacts of these proposed policies over time and to adjust them as appropriate to improve the long-term management of park resources and visitor satisfaction.~~

## **1.9.2 SUMMARY OF SIGNIFICANT IMPACTS AND MITIGATION MEASURES**

The following is a summary of the significant impacts and proposed mitigation measures discussed in Chapters 3.0 and 4.0 of this EIS.

**Climate** – The proposed Master Plan is not expected to have an impact on climatic conditions and no mitigation measures are anticipated.

**Geology and Topography** – The proposed Master Plan is not anticipated to have a negative effect on Kaua‘i’s geology, nor will it involve alteration to important geological features, such as the wet or dry caves within Hā‘ena State Park. The Master Plan recommends shifting most of the visitor traffic away from the base of the cliff due to the potential for rockfalls, which will also reduce visitor impacts to Wai a Kanaloa (wet cave) as fewer people will access it.

One of the priority recommendations identified in the Master Plan is the restoration of the coastal dunes (Section ~~2.5.2.8~~ 2.5.1.10). Restoration will have multiple benefits including shoreline protection, protection of the iwi kupuna interred within the dunes, removal of alien and invasive species, and the potential return of native wildlife. To avoid impacts to the coastal dunes, visitors will still be permitted to picnic on the beach, but not on the dunes. Other recreational activities such as driving on the sand will also be prohibited. The relocated lifeguard tower is proposed to be built up rather than excavated into the sand to mitigate subsurface impacts. Further, the public will be encouraged to access the beach via marked and cleared trails, rather than crossing over the dunes.

**Soils** – Impacts to soils, such as soil erosion can occur during construction and over the life of a development due to rainwater runoff. Sediment from soil erosion can negatively impact

freshwater habitat in streams and can smother coral reefs. Site work is proposed in previously disturbed areas due to the high possibility of encountering subsurface archaeology and minimized to the extent possible. This also minimizes the risk of soil sedimentation, both during construction and in the long term. During construction, best management practices for soil and erosion control will be implemented to contain and/or filter any runoff and to control sedimentation, erosion, and dust. Efforts will be made to minimize all large-scale grading, grubbing, and stockpiling of soil and limit such activity to the dry season whenever possible. Long-term soil and erosion control measures have also been designed into the Master Plan including an integrated water/wastewater/drainage system, bioswales and rain gardens, and rainwater catchment cisterns to capture and filter stormwater runoff and to create the opportunity to use collected rainwater for on-site nonpotable water uses such as irrigation and toilet flushing.

**Ground and Surface Water** – On-site wastewater disposal can potentially impact groundwater resources if not treated properly. The Master Plan recommends that all wastewater be treated with an aerobic system to a minimum R-2 water quality with aeration and non-chlorine treatment such as UV disinfection to improve effluent quality and minimize potential impacts. Treatment to R-1 water quality would further improve water quality of the effluent and allow additional uses of the effluent such as overground and drip irrigation.

The Master Plan also recommends the use of non-chemical disinfectants and cleaning products for maintenance, particularly in composting toilets if utilized, and environmentally-safe soaps that contain plant nutrients and biocompatible cleaners to minimize impacts to wastewater treatment processes and effluent quality. No withdrawals of groundwater are proposed at the park and potable water use from the County's water system is anticipated to be reduced due to the reduction in the number of visitors. Therefore, no mitigation measures to offset groundwater quantity are proposed.

The Master Plan does not propose any additional water diversions or change to the volume of water currently diverted from Limahuli Stream for irrigation. However, the Master Plan suggests investigating the potential of Limahuli Stream as a renewable source of energy through a microhydropower system. To minimize the impacts of microhydropower systems on native Hawai'i amphidromous biota, the diversion intakes must be designed to have low-velocity intakes placed subsurface in relatively deep pool in the center of the stream in order to minimize entrainment of larval or post-larval stream animals. Also, as a potential in-stream use, any microhydropower system should be integrated with a public trust use such as the taro lo'i production should it be pursued. Should any new or increased diversion of water from Limahuli Stream be desired, the appropriate permits will be required from the State Commission of Water Resource Management.

Other mitigation measures under consideration to ensure that the park elements do not contribute to the degradation of surface water resources include the installation of bioswales around the parking lot to filter stormwater before it is conveyed to drainages and the use of rain barrels to collect roof runoff for nonpotable water uses, such as irrigation and toilet flushing. The Master Plan also recommends the use of non-chemical disinfectants and

cleaning products and as noted, environmentally-safe soaps that contain plant nutrients and biocompatible cleaners as well as the elimination of chemical pesticides and herbicides. All discharges related to the construction and operation of the proposed project will comply with the State's Water Quality requirements contained in Chapters 11-54 and 11-55, HAR.

Pedestrian paths throughout the parking lot and drop-off/pick-up areas should be surfaced with permeable pavers or pavements or natural soil hardeners to increase rainwater infiltration while providing a stable, ADA-accessible surface. This will stabilize the area while allowing rainwater to infiltrate into the ground to prevent ponding and soil erosion.

Further investigation will be necessary prior to detailed design of the parking lot to see if the 'auwai can be restored to serve the lo'i without extreme requirements or cost. If it is found that it can be restored, the grading and landscaping of this area should be done so that stormwater runoff from the parking lot is diverted away from the 'auwai and directed to flow across the grassed areas of the parking lot or towards the bioswales and adjacent landscaped areas, which could be designed as rain gardens. In addition, the design of the restored 'auwai should be carefully done so as not to hydraulically connect it to Limahuli Stream since Limahuli Stream is currently free of the invasive apple snail and the park's lo'i are known to have them.

During construction, best management practices to control sediment, erosion, dust, or polluting runoff from flowing into waterways will be employed to the maximum extent practicable. Certain construction activities within the park may trigger the need for a National Pollutant Discharge Elimination System permit.

**Wetlands** – No new facilities are proposed within known wetlands. However, the ~~Interpretive~~ Pedestrian Path may cross over potential wetland areas and the footings for this ~~elevated~~ walkway will need to be installed in those areas. The NWI maps are non-regulatory and do not represent a precise delineation of wetlands. Therefore, State Parks will need to carefully design the proposed improvements to ensure that wetlands are avoided or can be appropriately mitigated.

Some members of the MPAC expressed a desire to restore the loko and wetland areas for endangered native birds and possible agricultural uses. Geometrician Associates believe it might be possible to restore the small wetlands on the property for the purpose of creating a native bird habitat. However, they do not recommend modifying these areas specifically to attract endangered birds or any federally listed species for practical and legal reasons. The proposed restoration of the loko and wetlands is expected to be beneficial to the environment, thus, no mitigation measures are anticipated at this time. In particular, wetland restoration could also help protect the park against the impacts of climate change and prepare it for sea level rise. If the loko are restored for agricultural uses, the Master Plan recommends against pesticide or herbicide use.

**Marine Environment and Biological Resources** – In general, the Master Plan is not anticipated to have any impact on the natural marine processes, such as waves and currents.

All of the proposed facilities are located outside of FEMA's delineated 100-year special flood areas subject to wave action. However, because the Master Plan proposes a limit on the average number of visitors to the park per day, the improvements and management strategies seek to have a net positive impact on the park's marine environment, including marine water quality and health of the coral reef. In addition, the reduction, detainment, and filtration of stormwater runoff, restoration and protection of the dune system and reefs, increased treatment and reuse of wastewater effluent and rainwater runoff, removal of the majority of cars along the highway near Kē'ē, reduction of soil erosion, and instruction on ocean-friendly visitor behavior are anticipated to have beneficial impacts on the marine environments and biota. Lighting plans and management plans will be carefully designed and implemented so that no light from the park is visible from the beach to minimize impacts to nesting sea turtles or their hatchlings seeking the ocean. In August 2015, the National Marine Fisheries Service (NMFS) issued a final rule revising the critical habitat for the Hawaiian monk seals to include the marine habitat fronting Hā'ena State Park from the 200-meter depth contour line, including the seafloor, through the water's edge and 5 meters into the terrestrial environment from the shoreline (50 Code of Federal Regulations Part 226). Therefore, any changes in these areas will require consultation with the NMFS.

**Terrestrial and Freshwater Flora and Fauna** – The Master Plan proposes to improve the park's terrestrial flora by clearing invasive species and restoring native vegetation and native ecosystems throughout the park. The areas recommended, in order of priority, are the coastal strand, the ironwood and false kamani forest, the Limahuli riparian zone, and talus slopes. Restoration of the native flora would increase native plant conservation and opportunities to educate the public. This may also indirectly support native birds including endangered and threatened species without a formal effort to create an endangered species habitat. State Parks is also recommending a reduction in the number of daily visitors and requiring attendance at an educational session that would provide a brief overview of the park's extensive but sensitive natural and cultural resources and instruct visitors of the appropriate activities and behaviors allowed at the park. Such a significant reduction in visitor use and better education on the park's resources will have a net positive impact for the park's flora and fauna.

Seabirds are attracted to artificial lights and can be downed after circling the light source and tiring or colliding with the pole or other objects. Once grounded, they can be struck by motor vehicles or are easy prey for cats, dogs or other animals. Therefore, all exterior lights will be fully-shielded (completely opaque) and downward facing full-cut off fixtures with the lowest light level (lumens) possible, sufficiently large, and positioned so that the bulb is only visible from below to minimize distraction and disorientation of wildlife flying over the park. The use of artificial lights should be minimized or reduced as much as possible during the seabird fledging season of September to December, and during the sea turtle hatching period July to September, and yellow lighting invisible to honu should be used near the shoreline. Night time construction also should be avoided during this period. The lighting design plan will also ensure that no lights are visible from the beach to minimize impacts to nesting honu and their hatchlings seeking the ocean.

Endangered waterbirds and Hawaiian Nēnē are attracted to standing water, including the former loko and restored lo‘i. In order to minimize predation of these birds by feral animals, measures to reduce the feral cat and rat population are proposed in the park. These measures include installation of animal-proof garbage receptacles and maintaining cooperation with the Humane Society, which at times had placed traps in the park for removal of feral cats. Additionally, the Master Plan recommends that, before any wetland restoration activities proceed, that an analysis of the costs, benefits, and liabilities associated with intentionally creating habitat for endangered waterbirds be conducted. However, if the loko and wetlands are restored, they may still attract native birds and other wildlife. Perimeter fencing shielded by landscaping can help protect these areas from predatory animals and care will be taken not to disturb nesting sites during construction.

The ‘Ōpe‘ape‘a, endangered Hawaiian Hoary Bat, roosts in woody vegetation. If large trees or woody shrubs over 15-feet in height are trimmed or removed during the breeding, birthing and pupping season, in the months of June 1 through September 15, there is the risk of young bats being harmed or killed. In order to minimize impacts to ‘Ōpe‘ape‘a, it is proposed that State Parks restrict any cutting of large shrubs or trees over 15-feet in height to periods outside of these months.

In order to preserve the native aquatic species present in Limahuli Stream, the Master Plan avoids making any alterations to the stream bed or banks except for the proposed restoration of the riparian resources and clearing of alien vegetation. None of the proposed facilities or activities are proximate to the stream. No changes to the existing stream crossing at the park entry are proposed. However, control measures to prevent the spread of apple snails from the park’s lo‘i to Limahuli Stream should be included in any design or implementation of the ‘auwai and irrigation systems for the Agricultural Complex. State Parks should also continue to cooperate with DLNR, Division of Aquatic Resources (DAR) to keep new alien fish out of the ‘auwai and stream and in ridding the stream of periodic invasions of swordtails, guppies, and other alien fish. To minimize the impacts of microhydropower systems on native Hawai‘i amphidromous biota, the diversion intakes must be designed to have low-velocity intakes placed subsurface in relatively deep pool in the center of the stream in order to minimize entrainment of larval or post-larval stream animals.

**Natural Hazards** – The following summarizes the potential impacts and mitigation measures related to various natural hazards that may impact the park.

- **Flood Hazards** – All of the proposed facilities are recommended to be built outside of the special flood hazard areas Zones VE, AE, and A to minimize any potential impact from flood hazards. Evacuation routes should also be located outside of the special flood hazard areas.
- **Tropical Storms and Hurricanes** – While it is difficult to predict such natural occurrences, it is reasonable to assume that future incidents are likely, given historical events and the FEMA Special Flood Hazard Areas along the coastline. Because of the nature of these events, there will typically be advanced warning of severe weather

conditions and tropical cyclones. Therefore, the park can also be closed during these events and the public can be notified in advance of the approaching storms to avoid the area. State Parks can notify news and media outlets of park closures and utilize social media and email or text announcements to provide up-to-the-minute information to the public.

- Tsunami** – The land makai of the highway within Hā‘ena State Park is located within the tsunami evacuation zone. An "extreme tsunami evacuation zone" has been added to all state civil defense maps and also includes the entire park and portions mauka of the highway up to the pali. There are two different types of tsunami events for which State Parks will plan; locally generated tsunami give very little time to evacuate coastal areas while distantly generated tsunami can take hours to make landfall. Evacuation plans and readiness plans should be developed by State Parks for both scenarios and all visitors should be educated on what to do during the required orientation session upon entering the park. Tsunami evacuation signs should be posted appropriately on paths and evacuation routes. Park staff will be trained and assist visitors in the evacuation. As recommended by State Civil Defense, a new siren should be installed in the park, potentially in the main parking lot. A subsequent letter from the Office of State Emergency Management/Civil Defense noted that siren coverage exists for the project site, but requested the existing siren to be upgraded to a 121db(c) omni-directional siren. State Parks will work with the Hawai‘i Emergency Management Agency to ensure adequate siren coverage at the park. A grassed helipad will be retained and cleared areas within the park may be used in case people need to be airlifted out of the area.
- Shoreline Erosion** – One of the first priorities identified in the Master Plan by both community members and biologists is dune restoration. The restoration of a native dune ecosystem would involve the removal of alien species and the planting of natives and Polynesian-introduced plants such as pōhuehue, naupaka, nanea, pōhinahina, nehe, pa‘u-o-Hi‘iaka, ‘aki‘aki grass, milo, hala and kou. Not only would they provide improved and more authentic vegetation but they could also be used to help reduce coastal erosion if carefully planted. Shoreline protection structures would be prohibited in favor of allowing the natural shore building processes to occur. Drainage improvements along the highway are also recommended in the Master Plan to prevent ponding, soil erosion, and beach washouts as has happened at Kē‘ē during heavy rainfall events. State Parks will also consider resurfacing the former highway pavement with historically appropriate materials and implement creative design solutions that can improve drainage and minimize erosion in the surrounding areas.
- Rockfall Hazard** – The health and safety impacts of potential rockfalls are proposed to be mitigated by siting all of the major facilities and paths, including the ~~Interpretive~~ Pedestrian Path to Kē‘ē, outside of the potential rockfall hazard zones. In addition, warning signs will be installed at appropriate locations along the highway between the turnaround and Kē‘ē. Safety instructions and rockfall hazard warnings should be included in the visitor orientation prior to park entry. A dense native tree

screen is also recommended along Kūhiō Highway, especially near the main parking lot, as trees may serve to catch or slow smaller rockfall events. Thus, tree removal north of the highway is also not proposed. The Master Plan elements also include features to restrict the public from standing immediately in front of the wet cave, Wai a Kanaloa, where the cliffs above are identified as Class A hazards should they choose to traverse the highway despite the rockfall warnings. Native and Polynesian-introduced landscaping are recommended as aesthetic and culturally appropriate screens for the safety devices or barriers.

For all potential natural hazards, to facilitate evacuations in the event they are necessary, the helicopter landing pad is proposed to be retained with the Master Plan improvements. Emergency evacuation routes should also be planned and indicated on visitor brochures and materials. They can also be described and shown on maps ~~during the included in the~~ visitor orientation ~~sessions-materials~~ within the proposed Welcome Pavilion/Education and Cultural Center (ECC) Hale. ~~The loop paths through the lo'i can be used as an emergency route between Kē'ē and the proposed Welcome Pavilion/ECC.~~ Ocean safety and evacuation signs should be posted appropriately on paths and evacuation routes. ~~An emergency phone is expected to be retained. Additionally, the presence of an on-site caretaker is expected to improve emergency warning communications and evacuation coordination within the park when necessary. The hardline phone at Kē'ē should be retained for emergencies and an additional emergency phone could be located at the Welcome Hale.~~ If a shuttle system is developed as the main point of entry, an emergency evacuation plan will need to be developed specifically for the shuttle passengers. Staff training and visitor education sessions, as well as ongoing coordination, communication, and annual park evacuation drills with the County Fire and Police Departments are recommended management strategies proposed in the Master Plan to help improve emergency readiness and public safety.

**Archaeological and Historic Resources** – There are significant archaeological and historical resources located at the park. Human use and development has the potential to disturb and damage archaeological and historic resources. At the forefront of the proposed Master Plan are preservation, restoration, and cultural use and reactivation of the park's historic and archaeological resources while providing quality opportunities for outdoor recreation. The entire western portion of the park surrounding Ka Ulu a Paoa Heiau has been designated as the Hula Complex and the restoration of the heiau based on historic information and surveys such as Henry Kekahuna's 1959 drawing of the heiau are recommended in the plan. Similarly, the continued restoration of the Agricultural Complex, which spans the majority of the park's land, and historic structures such as the Allerton Caretaker's Cottage and Montgomery House are recommended along with the restoration of the other historic and archaeological sites scattered throughout the park such as Lohi'au's House Platform, the coastal dunes, and the loko. An archaeological sensitivity map was prepared at the outset of the project so that all new facilities proposed in the Master Plan could be located in previously disturbed areas to minimize impacts to archaeologically sensitive areas.

The plan also recommends that State Parks involve its archaeologists and staff whenever siting, designing, or installing any new park facility, especially when ground disturbance is required. Additional archaeological surveys and tests should be performed as necessary prior to undertaking projects requiring ground alteration or excavation. Ongoing efforts to identify and prioritize historic properties including archaeological resources in need of maintenance, restoration, and monitoring should be continued. The plan also recommends that alien plants and trees that undermine the archaeological sites be removed, as appropriate. State Parks archaeologists and staff should also conduct archaeological monitoring during any earth moving or ground disturbing activities in case there are inadvertent discoveries.

The primary programmatic action to mitigate impacts to archaeological resources will be to establish a Cultural Advisory Group (CAG) to help guide implementation of the Master Plan and management of all aspects of the park. Specifically, the Master Plan recommends that the CAG be consulted on management actions and construction projects as well as interpretive materials, and visitor programs. In addition, the reduction in the number of daily visitors and the required visitor education session information materials provided prior to park entry will educate visitors about the park's archaeological and historic resources and the appropriate behavior and protocols around these sensitive resources.

**Cultural Resources** – Construction, outdoor recreation, and visitor activities have the potential to undermine the cultural significance of a place if not mitigated. Development and recreational activities can also impact the cultural environment by limiting a cultural practitioner's ability to access sites of cultural importance. The Master Plan, therefore, takes the proactive approach of protecting and restoring the varied natural, cultural, and historic resources as they are all integral to the cultural values of this place. Visitor education of the cultural practices at the park and the appropriate behavior and protocols when encountering active cultural use will increase visitor sensitivity to these activities and mitigate potential conflicts. It also recommends the reduction in the number of visitors at the park so that an appropriate ambiance and space can be maintained for these cultural practices to take place. The Master Plan also includes the key recommendation that a Cultural Advisory Group be formed to advise State Parks and the potential future park management entity on all matters regarding the park including management actions, construction projects, behavior and access protocols, and interpretive signage and programs.

**Transportation and Parking** – Access to Hā'ena State Park is dominated by the personal vehicle, whether rented or privately owned. The reduction in the number of daily visitors is anticipated to reduce the traffic and congestion currently occurring at the park as well as the demand for parking especially during peak hours. The parking lot is proposed to be divided into spaces for fee-paying visitors and non-fee paying visitors, and these areas can be adjusted with movable bollards and cordons depending on the number of cars for each user group. The division between the two can be adaptively managed weekly, daily, or even hourly throughout the day depending on demand. This design gives State Parks the flexibility to provide enough parking until the shuttle/transit system is operational and to adjust as needed the number of parking stalls that are available for the different user groups while also encouraging multimodal access to the park.~~The preferred scenario is to implement a shuttle~~

depending on the stop locations, frequency, cost, and quality of the service. Green vehicles such as electric vehicles that can be charged with renewable energy sources such as solar PV or vehicles that use alternative fuels and have low or no emissions are recommended to reduce the impact to air quality and consumption of fossil fuels.

Vehicle access beyond the main parking area to Kēʻē beach is proposed to be reduced from the currently unrestricted conditions to special access only (ADA, lifeguards, and cultural practitioners). Restricting general vehicular access from the main parking area to Kēʻē Beach will effectively eliminate illegal parking along the highway's shoulder, reduce the wear on the historic roadway's macadam surface, and reduce the number of visitors traveling in a potential rockfall hazard area. It will also reduce the potential conflicts between vehicles and pedestrians ~~and bicyclists~~ as the Interpretive Pedestrian Path becomes the main visitor trail to Kēʻē and it will reduce roadway maintenance costs for the State.

The Master Plan also includes a combination of physical improvements and programmatic options that will have a positive impact on pedestrian and bicycle facilities. The new Interpretive Pedestrian Path will provide increased educational opportunities via interpretive displays and greater visual access to the Agricultural Complex, Makana, wetlands, and loko for visitors. Bicycle racks are proposed near the Welcome Hale and at Kēʻē Beach.

There are both beneficial and negative impacts anticipated with respect to construction. Construction of the Interpretive Pedestrian Path will involve setting footings for the ~~elevated~~ path in the loʻi. Due to the proximity of archaeological resources and loʻi walls and the potential of unearthing subsurface materials during construction care must be taken. Archaeological surveying prior to path construction and archaeological monitoring during construction are recommended.

Other potential negative impacts include the possible disruption of community gardening activities in the loʻi and the physical bifurcation of the loʻi, complicating maintenance and operations. Proposed mitigation measures include expanding restoration of the agricultural complex to other phases (Phases II and III) and allowing the loʻi between the highway and Interpretive Pedestrian Path to be used as an outdoor classroom for educational purposes and hands-on activities for visitor tours and school groups.

**Noise** – It is expected that the proposed reduction in the number of visitors and the removal of through traffic on the highway will have a positive impact on noise levels in the park. During construction, there will be temporary noise impacts associated with construction equipment. Similarly, restoration work and ongoing maintenance may require the use of motorized equipment, but these impacts are expected to be temporary and can be scheduled during park closures. To help mitigate temporary construction noise, State Parks will work with contractors to ensure adherence to Department of Health (DOH) regulations as required under Chapter 11-46, HAR, including obtaining noise permits as required and the use of proper equipment and regular vehicle maintenance. Equipment mufflers or other noise attenuating equipment may also be employed as additional mitigation. All construction activities will be limited to daylight work hours.

**Air Quality** – As with automobile noise, it is expected that the reduction in the number of vehicles driving along the highway to Kē‘ē will result in less automobile emissions and dust. Emissions from operation of construction equipment and other vehicles involved in construction, restoration, and maintenance activities may temporarily affect the ambient air quality in the immediate vicinity. However, these effects will be minimized through proper maintenance of construction equipment and vehicles and scheduling of such activity during park closures or in areas away from visitor activity whenever possible. In addition, there may be a temporary adverse impact on air quality attributable to dust generated during project construction, maintenance, and removal of invasive plant species particularly during earthmoving activity. Best management practices that meet DOH’s standards are anticipated to be employed as needed to mitigate dust during these activities. Construction activities will comply with the provisions of Section 11-60.1-33, Hawai‘i Administrative Rules (HAR) related to Fugitive Dust. Adequate measures to control dust during various phases of construction will be required to be implemented by any contractor employed by the DLNR to effect the project’s development. Example measures to control fugitive dust include: providing adequate water sources at the site prior to start-up of construction activities; minimizing dust from shoulders and access roads; providing adequate dust control measures during non-work hours and prior to daily start-up of construction activities; and controlling dust from debris being hauled to and from the project site.

**Scenic Resources** – Beneficial impacts to the park’s scenic resources are anticipated due to various measures proposed in the Master Plan. Limited vehicle access beyond the main parking area will reduce the number of cars along the highway at the base of the pali and thereby improve the views. Visitors will access the park by foot ~~or bicycle~~ along the Interpretive Pedestrian Path, allowing views to the lo‘i and Wai a Kanaloa without interruption by parked vehicles. Makana also will be visible from the Interpretive Pedestrian Path; it is currently not visible from the highway. New view corridors and lookouts are also proposed in the Master Plan (see Figure 28).

**Infrastructure** – The following describes the potential impacts and mitigation measures related to park infrastructure. The overall reduction in the number of daily visitors is expected to have beneficial impacts to the infrastructure services required at the park. Further discussion follows with regards to each system.

- **Water** – The existing 3-inch water main within the park is expected to be sufficient for the proposed Master Plan improvements since the number of daily visitors will be reduced compared to current conditions. The new facilities will be designed to be as efficient as possible and may utilize collected rainwater and recycled water for nonpotable water uses such as toilet flushing, dust control, and irrigation. The proposed integrated water system will involve dual water systems, which will be carefully designed and operated to prevent the cross-connection of the two systems including backflow prevention. Both systems including any non-potable spigots and irrigated areas will be clearly labeled. The two systems must be physically separated by air gaps or reduced-pressure backflow prevention devices to avoid contaminating the potable water supply. Backflow devices must be tested periodically and will comply with Chapter 11-21, HAR, Cross-Connection and Backflow Control. More efficient use of the site’s historic ‘auwai, may help capture and divert precipitation to desired locations. The Master Plan suggests redesigning the Kūhiō Highway culverts so that rainwater that passes beneath it flows more naturally and can be filtered and used in the ‘auwai system. Although continued restoration of the Agricultural Complex could also increase water demands, another alternative voiced by the Hui is to plant culturally appropriate crops that are less water intensive as was done historically in dry periods.
- **Wastewater** – Due to the remoteness of the park, no connection to any public sanitary sewer systems will be made and all wastewater will be treated and disposed of on-site. The Master Plan proposes that any new wastewater system include an aerobic treatment system that brings wastewater to an R-2 water quality level at a minimum and to reuse the effluent to minimize impacts to the sensitive natural and cultural resources at the park. The recycled water can then be used for nonpotable uses such as subsurface irrigation, dust control, and toilet flushing. As noted by the DOH, the project is located in a critical wastewater disposal area as determined by the Kaua’i County Wastewater Advisory Committee and no new cesspools are permitted. All individual wastewater systems proposed for the park will be set back as required from State surface waters such as wetlands. All wastewater plans must conform to applicable provisions of the DOH Administrative Rules Chapter 11-62, “Wastewater Systems” and that the DOH reserves the right to review the detailed wastewater plans for conformance to applicable rules.
- **Drainage** – The addition of impervious surfaces to a site can result in a decrease in water quality and an increase in surface water volume during rain events. To mitigate the increase in impervious surfaces and related impacts, the Master Plan proposes to develop an integrated water/wastewater/drainage system to maximize the efficiencies of the use of water resources available on-site and to minimize surface runoff while

improving water quality to the greatest extent practicable. This includes the installation of rainwater catchment cisterns on all the major facilities, which will help reduce the quantity of runoff. The collected water is recommended to be used for nonpotable water uses such as irrigation or toilet flushing. In addition, bioswales will be installed downslope of the parking areas to allow runoff to be detained and filtered naturally by native and/or Polynesian-introduced landscaping before percolating into the ground and serving the dual purpose of creating an aesthetically pleasing environment while managing site drainage. If the 'auwai are able to be restored, this will further divert rainwater runoff to the lo'i, reducing the total amount of water draining from the site. To prevent further washouts of Kē'ē Beach, drainage improvements should also be made along the highway to filter and redirect runoff. All discharges related to the construction and operation of the proposed project will comply with the State's Water Quality requirements contained in Chapters 11-54 and 11-55, HAR.

- Electrical and Communication Systems** – Due to the park's limited access to infrastructure and the dispersed locations of some of the proposed facilities, all facilities requiring power are recommended to be designed to be energy efficient and to use renewable energy resources to fill the remaining demand. This includes solar hot water heating and photovoltaic as well as microwind and microhydropower sources. As a potential in-stream use, any microhydropower system should be integrated with a public trust use such as the taro lo'i production should it be pursued. To minimize the impacts of microhydropower systems on native Hawai'i amphidromous biota, the diversion intakes must be designed to have low-velocity intakes placed subsurface in relatively deep pool in the center of the stream in order to minimize entrainment of larval or post-larval stream animals. In order to maintain communications and provide for public safety during emergencies, the existing hardline pay phone and emergency phone at Kē'ē Beach ~~is proposed to~~ should be maintained. For similar reasons, hardline telephone service ~~is proposed to be provided~~ should be considered at the turnaround and Welcome Hale if desired. ~~Caretaker's Cottage and Welcome Pavilion/ECC. A second pay phone or at least a closed-circuit phone which connects to the Caretaker is also proposed to be provided on the outside of the Welcome Pavilion/ECC so that emergency calls can be made when the ECC is closed and hikers who need assistance can contact the Caretaker.~~ The remote and mountainous location limits wireless communications but wireless services should also be considered for visitor convenience and may be required for certain parking management technologies.
- Solid Waste** – Although fewer users to the park will likely result in less trash generated at the park, State Parks will recommend that all visitors carry in what they carry out. In addition, new trash receptacles will be provided at key locations so that waste disposal is convenient to park users. Recycle bins are recommended to be installed along with trash receptacles and all receptacles are proposed to have animal-proof lids to minimize foraging by feral cats, dogs, rats and chickens and reduce the potential for windblown debris. Daily maintenance and removal of trash and

recyclables is recommended to be continued at the park to minimize the amount of solid waste at the park that may be windblown or washed into ocean, stream, and other sensitive natural and cultural environments. There may be hazardous substances, pollutants, or contaminants to be present in the soils in the areas where there were abandoned vehicles. However, no work is anticipated in these areas at this time. State Parks will work with the State HEER Office to determine the appropriate actions to comply with the relevant environmental laws if applicable should any work occur in those areas.

**Community Character and Population** – Because the Master Plan is not recommending a change in the use of the park, the proposed Master Plan is not anticipated to have any effect on the rural community character of the area nor impact the population characteristics of Hā‘ena ~~except for the singular increase of an on-site caretaker and his/her family if permitted to live on-site with the caretaker, if they are not from Hā‘ena.~~ No mitigation measures are planned as the potential impacts are anticipated to be minimal due to the overall reduction in the number of people at the park on a daily basis.

**Economy** – The proposed limit on the number of people entering the park may reduce the number of people who visit the North Shore and may therefore negatively impact the local economy and North Shore businesses. However, the economic impact could be mitigated by visitors who plan their visit to the North Shore in advance and potentially take greater advantage of other North Shore attractions when the park is at capacity. They may also shift their time to other areas on Kaua‘i which will benefit businesses in other parts of the island.

The proposed new fees for visitor entry, parking, and shuttle tickets may generate enough new income to support an increase in interpretive and caretaking activities. Construction of facilities will stimulate purchase of materials (generating excise tax revenues) and employment for labor (generating income tax revenues). The reduction in the number of daily visitors at the park may also reduce the number of lifeguards required at Kē‘ē Beach. However, as noted, the overall employment at the park is recommended to be increased in other areas, or may shift the requirements for lifeguards to the County beach park, which will help offset the loss.

**Police and Fire Protection** – The Master Plan will reduce the number of park users who may require police, fire and emergency rescue resources including the number of day hikers on the Kalalau Trail (hikers without permits). State Parks will work with the County Police and Fire Departments to comply with requirements of the Kaua‘i County Fire Code including emergency access by fire apparatus, ambulance, and other emergency vehicles as required. Due to the remote location of the park and the potential for hazardous conditions, emergency evacuation plans and rescue plans for various natural hazards should be developed as discussed in Sections 2.5.2 and 3.10 to help improve coordination of public safety and park staff response efforts in times of emergencies.

The Master Plan calls for the lifeguard stand to be moved north of its current location, but this will be a positive impact as it will allow better visibility of the entire Kē‘ē Lagoon for

lifeguards. A helicopter landing area will be maintained at the park and can be used for emergency landings. The emergency evacuation drills should be performed with State Civil Defense, Kaua'i fire and police departments annually, at a minimum, to ensure readiness.

**Schools** – ~~Because of the minimal increase of a single Caretaker on site at the park who may or may not have a family permitted to stay on site,~~ The proposed Master Plan is not anticipated to add a ~~significant~~ demand on public school facilities. However, many of the proposed educational and interpretive programs are expected to support the area's educational resources by providing opportunities for hands-on activities covering a range of topics spanning the natural, cultural, and archaeologic realms of study.

**Health Care Services** – The Master Plan developments and management measures are not anticipated to create any greater demand on regional health care services. It is anticipated that the reduced number of visitors as well as improved visitor education, improved signage, and location of facilities away from the rockfall hazard area will result in beneficial impacts to public health and potentially required health care services.

**Recreational Facilities** – An objective of the Master Plan is to balance outdoor recreational uses with the protection and preservation of the park's natural and cultural features, enriching the experience for all. Existing outdoor recreational opportunities such as swimming, sunbathing and snorkeling along with access to the Kalalau Trail are proposed to continue. In addition, a picnic area is proposed to be added ~~near the Welcome Pavilion/ECC and~~ at the end of the highway pavement at Kē'ē. The ~~Interpretive Pedestrian~~ Path will facilitate walking and sightseeing and possibly bicycling in the park. Table 9 provides a list of the existing and proposed recreational activities anticipated to be permitted at the park.

The probable reduction in total number of visitors per day will create both positive and potentially negative impacts if not mitigated. Limiting the number of visitors may have the positive effect of enhancing the recreational experiences within the park. However, negative effects may be the distribution of recreational demand to other facilities on the North Shore and island-wide, especially the nearby Hā'ena Beach Park. State Parks should monitor use of Hā'ena County Park to judge if the recreational demand is shifted from one facility to the other. If so, an adjustment to the number of visitors allowed per day to Hā'ena State Park might be considered as a mitigating measure. If a shuttle is employed, a mitigation measure may be to include a stop at Hā'ena Beach Park to alleviate traffic and congestion at the County park as well.

### 1.9.3 RELATIONSHIP TO LAND USE PLANS AND POLICIES

**Federal** – The following provides brief discussions on compliance with federal laws and regulations as related to the proposed Master Plan. The full discussion is provided in Section 5.1.

- **Accessibility** – State Parks will design the new facilities to meet the requirements of the Americans with Disabilities Act of 1990, as amended, including access to

archaeological and cultural sites, historic properties, and wilderness areas, to the maximum extent feasible, while preserving each site's significant features. In such instances where outdoor facilities cannot be made accessible, efforts will be made to provide an "equivalent experience." Equivalent experience may be in the form of an alternate facility that provides a similar environment, view, or interpretive encounter.

- **Endangered Species** – There is no federally-designated critical habitat within the terrestrial areas of the park. However, the National Marine Fisheries Service (NMFS) issued a final rule revising the critical habitat for the Hawaiian monk seals to include the marine habitat fronting Hā'ena State Park from the 200-meter depth contour line, including the seafloor, through the water's edge and 5 meters into the terrestrial environment from the shoreline (50 Code of Federal Regulations Part 226). Therefore, any changes in these areas will require consultation with the NMFS. Other endangered and threatened species are known to either frequent or to exist within the park. A variety of mitigating measures will be taken to protect them as discussed above and in more detail in Sections 3.5-3.9.
- **Land and Water Conservation Fund** – The proposed Master Plan and management strategies have been reviewed by the NPS and found to be in compliance with LWCF requirements as set forth by U.S. Code of Federal Regulations, Title 36, Part 59, Section 6(f) as well as with the original intent of park acquisition, which included the state's commitment to develop opportunities for "swimming, fishing, picnicking, camping, and other beach-oriented recreation opportunities" (LWCF Agreement, 1972).

**National and State Registers of Historic Places** – The park includes three registered sites: the Hā'ena Archaeological Complex, which stretches from Limahuli Stream to Kē'ē (site number 30-02-1600), Kūhiō Highway (Kaua'i Belt Road, North Shore Section) between Princeville and Kē'ē (site number 30-02-9396), and the Nāpali Coast Archaeological District (site number 30-02-3200), which overlaps the park within TMK: 5-9-01:22 in the areas mauka of the highway. Consultation with SHPD has been initiated and is ongoing. The location, layout, and design of the proposed park elements have been planned to highlight the importance of – while minimizing the impacts to – those archaeological and cultural sites that contribute to the significance of the historic sites.

**State** – The following provides a brief overview of the compliance with various State regulations and policy documents.

- **Environmental Review** – this EIS is prepared to be in compliance with Chapter 343, HRS, and Chapter 11-200, HAR, for the proposed Hā'ena State Park Master Plan.
- **Land Use Law** – The State Land Use Law (Chapter 205, HRS), establishes the State Land Use Commission and authorizes this body to designate all lands in the State into one of four districts: Urban, Rural, Agricultural, or Conservation. The park is located within the Conservation District, the majority of which is the within the Resource

Subzone. This subzone includes state parklands as well as lands suitable for outdoor recreational uses, both of which are consistent with the proposed Master Plan. A small portion of the mauka area south of the highway near the entrance is in the Limited Subzone and offshore areas of the park are within the Protective Subzone. Section 5.3.2 contains the full discussion.

- **Coastal Zone Management** – Section 205A-1, HRS, defines the entire state as being within the coastal zone management (CZM) area including the area extending seaward from the shoreline to the limit of the State's police power and management authority, including the United States territorial sea. Therefore the proposed project lies within the CZM Area. The project's conformity to CZM objectives and policies is discussed in detail in Section 0.
- **Hawai'i State Plan** – The Hawai'i State Plan, Chapter 226, HRS, sets forth the goals, objectives, policies, and priority guidelines for growth, development, and allocation of limited resources throughout the State. It contains diverse policies and objectives on topics of state interest, including, but not limited to, the economy, agriculture, the visitor industry, federal expenditure, the physical environment, facility systems, socio-cultural advancement, and sustainability. Conformity with applicable provisions of the State Plan are discussed in detail in Section 5.3.4.
- **State Functional Plans** - The Hawai'i State Plan directs State agencies to prepare functional plans for their respective program areas. There are 14 state functional plans that serve as the primary implementing vehicle for the goals, objectives, and policies of the Hawai'i State Plan. The functional plans applicability to the proposed Master Plan, along with each plan's applicable objectives, policies, and actions, are discussed in detail in Section 5.3.5.

**County of Kaua'i** – The following provides a brief overview of the compliance with various County regulations and policy documents.

- **General Plan** – The General Plan (GP) of the County of Kaua'i is a policy document that is intended to help guide long-range development for the enhancement and improvement of life on Kaua'i, advancement of the County's vision for Kaua'i, and the establishment of strategies to help achieve that vision, including recommended land uses. The GP is currently undergoing another update was recently adopted in March 2018. However, it was last adopted in 2000 and It designates the park as "Parks and Recreation" on the North Shore Land Use Map. The GP North Shore Planning District Heritage Resources Map identifies the park as a ~~conservation area~~ "State & County Park" and notes that heiau cultural sites and traditional cultivation areas are located within the park and a regulated fishing area and coral reefs are located offshore fronting the park. A full discussion of compliance with this County policy document is provided in Section 5.4.1.

- **North Shore Development Plan** – The North Shore Development Plan (DP) designates Hā‘ena State Park and surrounding lands as “Open,” with which the park is consistent. A full discussion of compliance with this County policy document is provided in Section 5.4.2.
- **County Zoning** – Because the park is located in the State Conservation District, applicable land use regulations are those associated with the State Conservation District, as discussed in Section 5.3.2.
- **Special Management Area (SMA)** - The SMA was established to protect coastal resources in areas extending inland of the shoreline. The park is within the SMA and will comply with all permit requirements for the proposed facilities.
- **Shoreline Setback** - A Shoreline Setback Determination will be required by the County of Kaua‘i for implementation of the plan. However, with the exception of the relocated lifeguard tower and dune restoration activities, State Parks will locate any proposed permanent structures described in the Master Plan outside of the shoreline setback area wherever practical.
- **Flood Plain Management** – The majority of the park elements are proposed to be outside mapped flood and tsunami hazard areas. The lifeguard stand is proposed to be moved to within the coastal high hazard area. Thus, this action should be coordinated with the County’s Flood Plain Coordinator to ensure that it is done in compliance with County regulations.

#### 1.9.4 REQUIRED PERMITS AND APPROVALS

The following is a list of required permits and approvals that are anticipated by the proposed action:

PERMIT/APPROVAL	AUTHORITY	STATUS
Compliance with Chapter 343, HRS	Office of Environmental Quality Control	In process
Compliance with Chapter 6E, HRS (Historic Preservation)	State Historic Preservation Division	Required for construction
Site Plan Approval, Conservation District Use Permit	State DLNR, Office of Conservation and Coastal Lands	Required for implementation
Special Management Area Permit	County of Kaua‘i, Planning Commission	Required for implementation
Shoreline Setback Determination	County of Kaua‘i, Planning Department/State of Hawai‘i, Department of Accounting and General Services, State Survey Office	Required for construction

PERMIT/APPROVAL	AUTHORITY	STATUS
Wetland Delineation Study and Determination	US Army Corps of Engineers	May be required if wetland areas are near proposed improvements. <u>Other Department of the Army permits may be required based on determination.</u>
<u>Form 7480-1 Notice of Landing Area Proposal</u>	<u>Federal Aviation Administration</u>	<u>Required for the helipad</u>
National Pollution Discharge Elimination System (NPDES) Permit	State Department of Health, Clean Water Branch	Required for construction
<u>Noise Permit</u>	<u>State Department of Health, Indoor and Radiological Health Branch</u>	<u>May be required for construction</u>
Stream Channel Alteration Permit; Stream Diversion Works Permit; and/or Petition to Amend Interim Instream Flow Standards	DLNR, Commission on Water Resource Management	May be required for micro-hydropower system; riparian restoration (depending on extent of instream activities)
<u>Permit to Perform Work within a State Right-of-Way</u>	<u>State of Hawai‘i Department of Transportation (DOT)</u>	<u>Required for work with the State Highway</u>
<u>Land Transfer of State Highway from DOT to State Parks</u>	<u>State of Hawai‘i Department of Transportation</u>	<u>Required for road closure from park entry to Kē‘ē Beach</u>
Grading and Grubbing Permits	County of Kaua‘i, Department of Public Works	Required for construction
Building Permits	County of Kaua‘i, Department of Public Works	Required for construction

## 1.9.5 ALTERNATIVES

The following alternatives to the preferred plan were vetted during the planning process and are discussed in Chapter 6.0.

- No action
- 2001 draft plan alternatives (four alternatives)
- 2015 master plan alternatives
  - July 2010 alternative – Interpretive Corridor on highway alignment
  - Transportation and Parking alternatives (three scenarios)
  - July 2015 master plan presented in the Draft EIS

## 1.9.6 CUMULATIVE AND SECONDARY IMPACTS

Cumulative impacts are those that result from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions. Because the proposed Master Plan is for an existing state park and does not recommend a change in its use, the plan does not compound or change the mix of uses in this rural and remote corner of Kaua‘i. The

proposed reduction in the number of visitors and restoration of the park's natural, cultural, historic, and scenic resources are anticipated to build upon similar restoration efforts initiated at nearby Limahuli Gardens by NTBG, further improving the condition of those resources and expanding the areas along the North Shore where native ecological and Native Hawaiian cultural environments are reestablished and activated again.

Secondary impacts, or indirect impacts, include those that are caused by the action and are later in time or are farther removed in distance, but are still reasonably foreseeable. They could include increased pressure at and use of surrounding recreational and shoreline areas, especially Hā'ena Beach Park and Makua due to the proposed visitor limits and reduced parking at the park; improvements to water quality of ocean and surface waters; encouraged use of the park by native wildlife; better protection of sensitive natural, cultural, and historic resources; reduced user conflicts; and improved educational opportunities. A full discussion of the potential secondary impacts are discussed in Section 7.3.

### **1.9.7 RATIONALE FOR PROCEEDING WITH THE HĀ'ENA STATE PARK MASTER PLAN NOTWITHSTANDING UNAVOIDABLE EFFECTS**

Given the potential impacts, the main reasons for proceeding with the proposed Master Plan include protection and restoration of the park's sensitive and unique natural, cultural, historic, and scenic resources; improvement of the environmental conditions such as surface and marine water quality; removal of alien species and restoration of native ecosystems; improving public safety; increasing knowledge and sensitivity of the cultural values and activities that occur within the park; providing outdoor ~~and indoor~~ educational opportunities as well as recreational opportunities for residents and visitors alike; reducing negative impacts to native flora and fauna; and reducing illegal parking and traffic congestion compared to current conditions.

### **1.9.8 UNRESOLVED ISSUES**

The main unresolved issues involve the shuttle service and the timing of implementation. For the preferred shuttle service described in Section 6.4.2.4, it is not clear whether ~~the~~ a third-party operator currently providing service to the park will continue provide the service or if ~~State Parks or some other~~ a government agency or combination of public agencies such as the County or USFWS will solicit a concession agreement or ~~will~~ start a similar service to serve the North Shore areas between the park and Princeville as has been requested by many community members in response to this project. ~~that can serve the park from the remote Princeville parking area.~~ There may also be multiple shuttle providers if it proves to be successful. ~~There is currently some momentum from the County's efforts was some effort by the County to establish this service~~ and there may be a way for multiple agencies to cooperate on a transit system to serve the North Shore. Because of the uncertainty of the shuttle service, the ultimate parking requirements and shuttle stop design for the park are not known at this time. However, this can be mitigated through implementation of various operational strategies and adjusting those operations over time if they fail as discussed in

more detail in Sections 4.3.3 and 6.4.2. The Master Plan provides for that flexibility and different alternatives in design and implementation of the parking and shuttle facilities.

The timing of implementation of the proposed Master Plan is also unknown at this time as they are subject to CIP budget requests submitted by State Parks and approved by the State Legislature. Therefore, it is not clear exactly when the proposed improvements will be made. ~~The Near Term Plan described in Section 2.5.1 will help State Parks implement some of the key management strategies with less funding, while funding is sought for the more extensive long term improvements.~~

*This page left intentionally blank.*

## 2.0 PROJECT DESCRIPTION

This section provides background information, identifies the project’s goals and objectives, and describes the proposed improvements.

### 2.1 BACKGROUND INFORMATION

#### 2.1.1 LOCATION AND PROPERTY DESCRIPTION

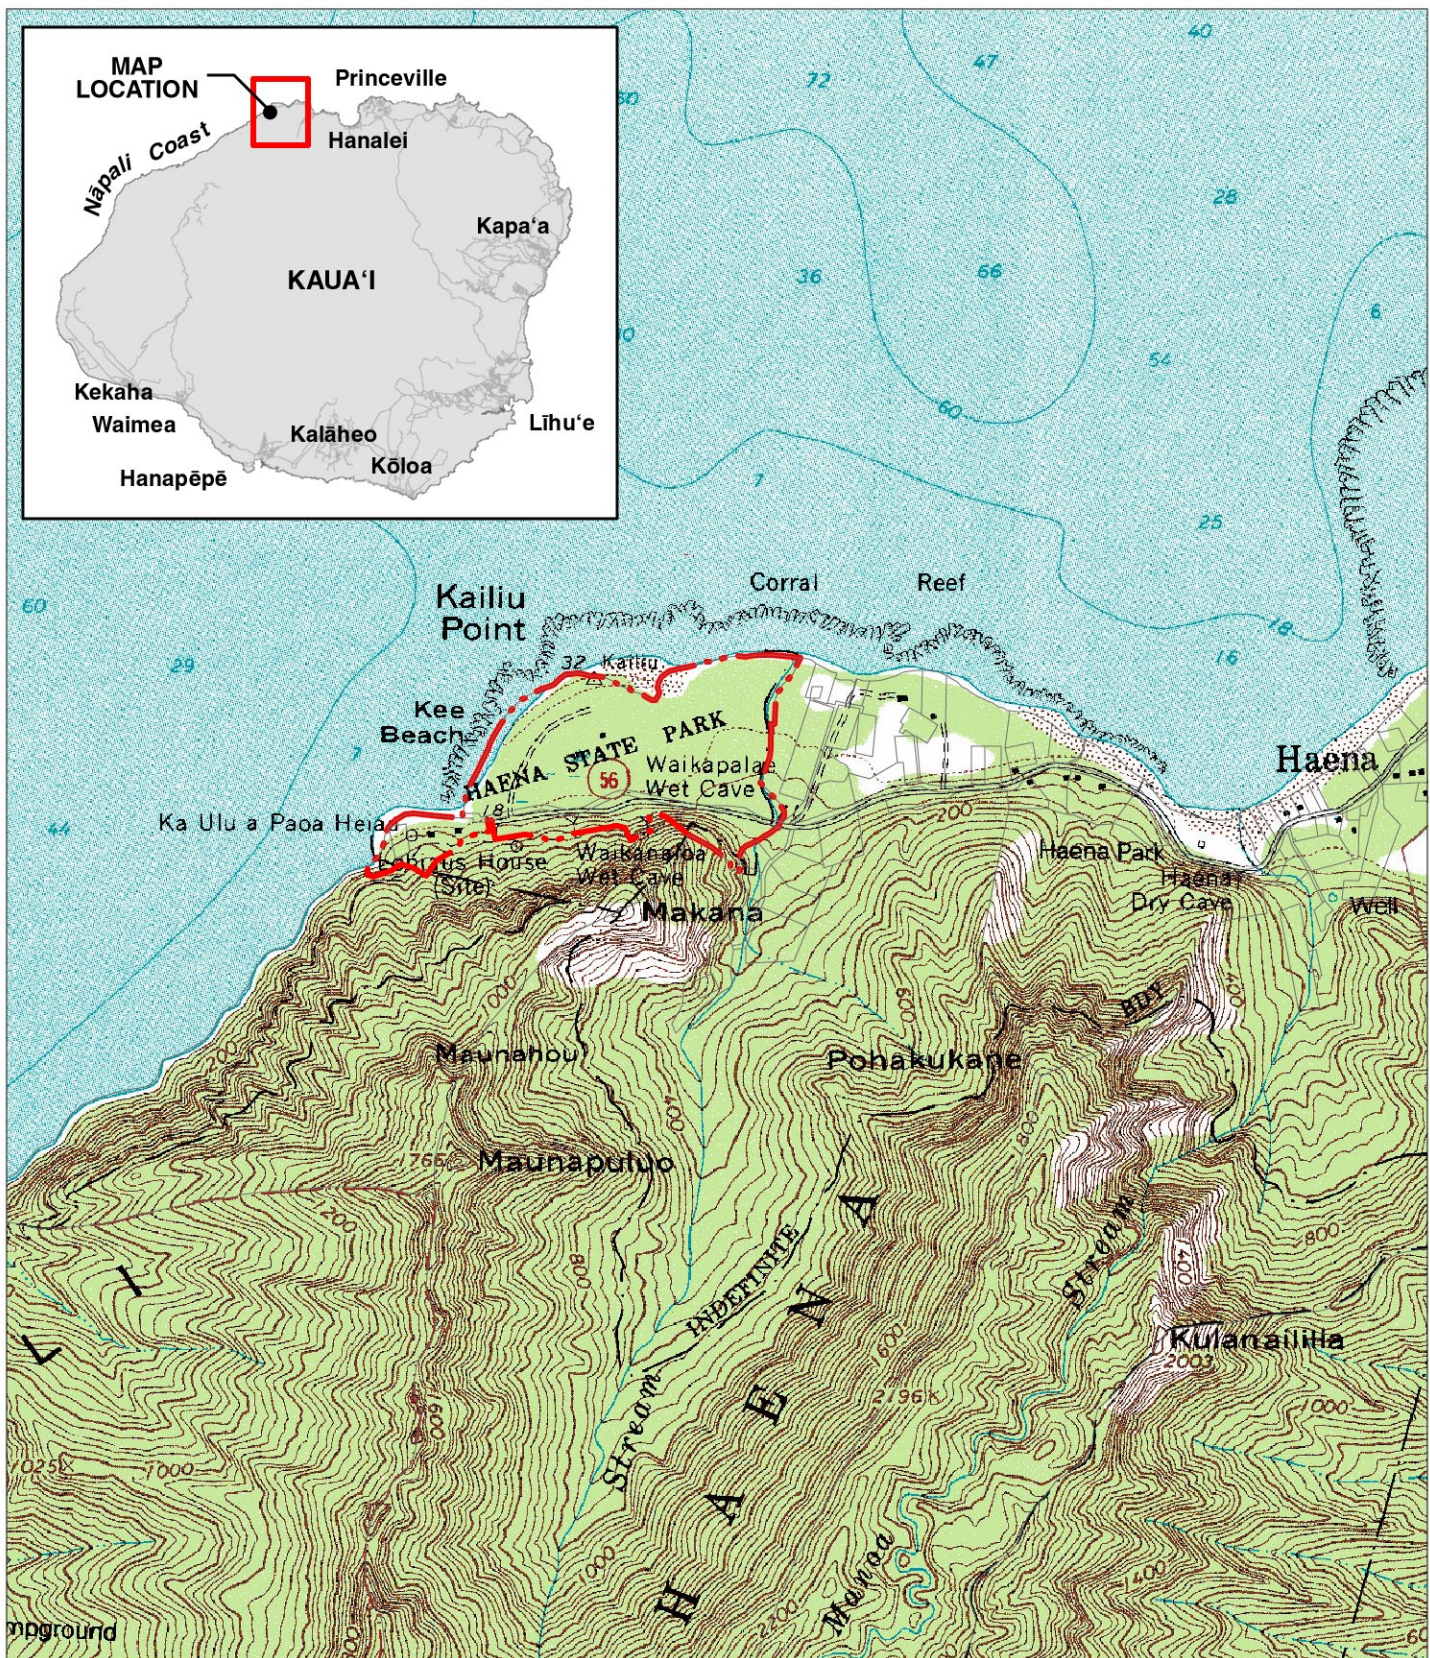

Hā’ena State Park is located in the ahupua’a of Hā’ena, Halele’a Moku, on the north shore of the island of Kaua’i. Figure 3 is a regional location map.

A summary of the research conducted by Silva (1995) reveals that control of the lands within and surrounding Hā’ena State Park transferred from Kaua’i ali’i to those of O’ahu and Maui soon after the 1824 rebellion. The Hā’ena Ahupua’a was awarded to Abner Kuho’oheliheipahu Pākī. In approximately 1837, Kekela’akalaniwahikapa’a (Kekela) was appointed konohiki (land manager) of Hā’ena. During the Great Mahele in 1848, ten kuleana awards comprising 13 parcels within what is now the park boundaries were awarded. Those kuleana parcels awarded to native tenants were then excluded from Pākī’s award. Of the ten claimants, only three trace their claims to the lands before 1824, and there are no clear records of the dispossessed chiefs of this area prior to this date. Pākī’s daughter, Bernice Pauahi Bishop, inherited their lands but soon after sold Hā’ena to W. H. Pease, a surveyor, in 1858. Kekela had one claim of her own within what are now the park boundaries.

After Pease’s death in 1871, the administrators of his estate conveyed Hā’ena to William Kinney in 1872 who then sold Hā’ena to Kenoi Kaukaha and 37 other individuals, referred to as the Hā’ena Hui (Hui Ku’ai’ainana o Hā’ena), as tenants in common in 1875. In 1955, Hā’ena Hui members John Gregg Allerton and Paul G. Rice filed a petition for partition and dissolution of the Hui. As a result of the partition, the County of Kaua’i received parcels within the current park site, which included Wai a Kanaloa and Waiakapala’e (wet caves) and Lohi’au’s house site. Title to another parcel was given to Allerton with the condition that he maintain and preserve a five-foot wide path for public access to the heiau and hula site. Forty acres were also given to the State at that time for a park. Four un-awarded lots were auctioned to cover the legal costs of the partition. Also during the late 1960s through the early 1970s, Howard Taylor, actress Elizabeth Taylor’s brother, purchased a large parcel along the Hā’ena coast. A transient community arose at the area called “Taylor Camp,” which was condemned by the State in 1975 due to unsanitary conditions and added to the park’s inventory. There are no known ceded lands within the park boundaries.

~~The current 65.7 acres comprising~~ Hā’ena State Park consists of ~~three~~ two State-owned parcels, ~~two of which were set aside to the Division of State Parks—~~ a 15.23-acre portion of a total of 180.23 acres, identified by TMKs: 5-9-01: 022, and 5-9-08: 001 with 50.38 acres.

Disclaimer: This graphic has been prepared for general planning purposes only.  
Incorrect or outdated Hawaiian spellings on source maps have not been corrected.

A small 0.68-acre parcel is also located within the park and is owned by the County of Kauaʻi. It contains Ka Ulu a Paoa Heiau and Ke Ahu a Laka and is identified as TMK: 5-9-01: 025. See Figure 4. The last half-mile Kūhiō Highway also runs through the park and is incorporated in the master plan.

There is an existing Conservation District Use Permit (CDUP) KA-1010 for Public Recreation Use, which was approved on April 28, 1978. Executive Order 3391, effective September 13, 1988, designated the subject area as Hāʻena State Park.

Current land use designations for the park are:

- State Land Use District: Conservation (Figure 30)
  - Resource and Limited Subzones within the park; Protective Subzone, offshore (Figure 31)
- Kauaʻi General Plan: Park (Figure 32)
- North Shore Development Plan: Open (Figure 34)
- County Zoning: None
- Special Management Area (SMA): Within the SMA (Figure 35)

### **2.1.2 PROJECT PURPOSE AND NEED**

Hāʻena State Park is culturally and ecologically significant and its beaches and scenic resources make it a popular visitor attraction. A recent rockfall hazard study identified a high-risk area along the highway which is the main visitor corridor to Kēʻē Beach. This mix of recreational, cultural and environmental resources gives rise to the need to develop a conscientious and comprehensive master plan in order to balance conservation, preservation, recreation, cultural integrity, and public safety. The master plan and EIS are also required in order for State Parks to move forward with the proposed improvements at the park.

The purpose of the current effort is to refine the draft plan that was developed in 2001 and to process the EIS. The 2001 draft plan was developed with extensive public input and four master plan alternatives (including a no change alternative) were carefully vetted by the community and the community selected a preferred version of the master plan. These alternatives are discussed in Section 6.0 along with key alternatives developed during the current master plan process.

The ~~updated draft revised~~ Master Plan for Hāʻena State Park includes ~~management and development strategies~~ minimal improvements that bring the significant historic, cultural, and ecological resources of the park to the forefront and balance the protection of those resources with recreational and community uses. The current Master Plan utilizes new and previously prepared data, including updated historic, cultural and ecological information where necessary, along with continued community input. Collaboration with the community was a critical and vital element throughout the planning process and will continue to be required to help ensure the success of and support for implementation of the plan and ongoing management of the park. The master plan ~~and~~ report helps document the effort and purpose of the proposed improvements and management strategies.

### 2.1.3 STATEMENT OF GOALS AND OBJECTIVES

The goals and vision for the Hā‘ena State Park Master Plan were developed with State Parks staff and the MPAC during the initial meetings held in April and May 2010. There are five main goals that have guided the development of the Master Plan and the proposed management strategies. They are:

- Recognize that the entire park is culturally significant.
- Restore Hā‘ena State Park as a living place... cleanse, restore and revive cultural practices again.
- Involve the original families and reconnect the local community to the place.
- Uphold State Parks’ responsibility for the public’s safety, access, and welfare.
- Balance the provision of recreational opportunities with the preservation of the significant natural and cultural resources.

The following section describes the more detailed objectives and policies that have been developed with the project team and MPAC to help bring the above goals to fruition. They are organized by topic area and relate directly to the recommended capital improvement projects, management strategies, interpretive concepts, park organization, and operational needs.

#### **Overall Park Objectives and Policies:**

- Consider creative management, maintenance and operational structures in operating the park.
- Build relationships and partnerships with other public agencies and organizations to help enrich and improve the overall experience for those visiting the park.

#### **Master Plan Improvements Objectives and Policies:**

- Develop park facilities and infrastructure with deference to Hā‘ena’s significant cultural and natural resources balanced with fiscal reality.
- Coordinate with appropriate public agencies on the proposed changes to the section of Kūhiō Highway within the park.
- Reduce use of the comfort station at Kē‘ē by providing additional facilities elsewhere ~~such as a new visitor facility.~~

#### **Access, Transportation, and Parking Objectives and Policies:**

- Encourage the local community and residents to return to the park. Park access policies should not discourage them or diminish their experience. Adjust access policies if issues or complaints arise.
- Balance public access to the park with the protection of natural, cultural and scenic resources.
- Encourage pedestrian and bicycle access to the park to minimize the number of vehicles driven to the park.
- Minimize potential conflicts between pedestrians and vehicle traffic by providing safe places for people to walk ~~and ride their bicycles.~~
- Coordinate with the State DOT on any proposed changes to the section of Kūhiō Highway within the park.

- Manage parking to minimize conflicts with pedestrians and improve overall experience. Consider a variety of management strategies and adjust as needed.
- Ensure that parking and traffic impacts do not spill out from the park into the neighboring residential communities.

**Cultural and Historic Resources Objectives and Policies:**

- Establish a Cultural Advisory Group (CAG) to advise State Parks on cultural matters regarding the park.
- Preserve significant historic properties (including archaeological resources) within the Hā'ena Archaeological Complex.
- Place management and restoration of the Hula Complex as a high priority. Work with cultural practitioners to restore it as a living resource.
- Continue to actively preserve, maintain, restore, and cultivate the agricultural complex with the participation of the community-based curators. Continue to restore the complex based on the existing restoration plans.

**Natural Resources Objectives and Policies:**

- Preserve and restore Hā'ena State Park's unique natural resources in order to improve the health of the mauka to makai ecosystems.
- Replace invasive alien species with native and Polynesian-introduced species.
- Restore the park's natural resources based on cultural values and practices.
- Recognize that many of the park's natural resources are culturally significant and contribute to high quality recreational opportunities.
- Involve the community and volunteers in restoration efforts to provide high quality recreational opportunities.

**Scenic Resources Objectives and Policies:**

- Enhance scenic resources by clearing invasive plant species.
- Provide safe viewing opportunities and information on the cultural and natural values of the park's key features to enrich the visitor experience.

**Recreational Resources Objectives and Policies:**

- Provide opportunities for quality outdoor recreation, with sensitivity to significant natural, scenic and cultural resources. Locate trails and recreational destinations in appropriate places that do not negatively impact those resources.
- Designate a safe swim area within view of the lifeguards, particularly for beginning swimmers. Inform and instruct visitors of the boundaries and the skill level required for various ocean recreation activities during orientation.
- Facilitate safe and high quality access to Nāpali Coast State Wilderness Park.

**Public Education and Interpretive Objectives and Policies:**

- Require visitor orientation for all visitors prior to entering the park. ~~For frequent visitors to the park, orientation may be required only once a year.~~
- Develop programs that increase visitor knowledge of the park's natural, scenic, cultural, historic and archaeological resources and enhance and enrich visitor experience.

- Implement interpretive programs and install interpretive devices that do not interfere with the scenic and cultural aspects of the features.
- Inform visitors of sensitive areas and teach them how they can help to better protect the resources. Include instruction on appropriate behavior and protocols in culturally sensitive areas.

#### **Public Safety Objectives and Policies:**

- Inform visitors of potential hazards in the park and how to safely recreate and visit the park.
- Develop pedestrian and bicycle paths to avoid natural hazards.
- Install safety signage in appropriate locations throughout the park.
- Maintain public telephones (until cellular phone service improves) and the emergency helipad.
- Develop emergency evacuation plans and routes.

## **2.2 EXISTING USES**

Hā'ena State Park is accessed from Kūhiō Highway, which serves as the park's only road right-of-way. One of the park's main features is Kē'ē Beach, a popular place for swimming, snorkeling and sunbathing. Fishermen/women also utilize the nearshore waters at Hā'ena. A lifeguard stand is located at the terminus of the highway, overlooking Kē'ē Beach and Lagoon. The park contains extensive historical, archaeological and cultural features, such as the Ka Ulu a Paoa Heiau, Ke Ahu a Laka, Lohi'au's house platform, known burials and cemeteries, a historic house site, wet caves, restored taro lo'i, as well as unrestored Agricultural Complex walls and 'auwai. Ka Ulu a Paoa and Ke Ahu a Laka are significant sites to the hula community and frequented by cultural practitioners. Community members, organized through Hui Maka'āinana o Makana (hereafter "the Hui"), work in the restored lo'i to plant, tend and harvest taro. Descendants and community members also care for the known burials and cemeteries within the park.

Additionally, within the park is the trailhead to the Kalalau Trail, which is part of the Nāpali Coast State Wilderness Park. Hā'ena State Park facilities such as parking, the comfort station, and showers service both State Park areas. Day hikers utilize the trail from the trailhead to Hanakāpī'ai Falls without need of a permit. Overnight hiking and hunting beyond Hanakāpī'ai are allowed by permits issued by State Parks and DOFAW-Kaua'i, respectively, which is currently limited to 60 campers and 30 hunters per day. Total park visitor counts, however, can reach over 2,000 people per day. According to the lifeguards stationed at Kē'ē, there are roughly 250 to 300 people on the beach at any one time during the summer months. In the winter, the beach is still busy with 100-150 people at any one time.

Currently the park is open 365 days of the year and open from sunrise to sunset. However, there is no entry gate at the park since the entry road is a State Highway. Therefore, people are able to access the park 24 hours a day, which has often lead to inappropriate use of the park during late night hours, including rave parties, illegal camping, and vandalism.

Park support facilities include two parking areas, a comfort station with potable water, a payphone, grassed helipad, garbage cans and signage. The parking areas include a gravel lot approximately 750 feet from the entry which can accommodate approximately 100 vehicles. The second parking area is the off-street parking along the highway near Kēʻē Beach. Based on a rough count, between 50 and 70 cars park along the highway, both legally and illegally. Neither parking area is paved nor are any of the parking stalls striped except for the four accessible Americans with Disabilities Act (ADA) parking spaces located at the Kēʻē Beach parking area. “No parking” signs are located along Kūhiō Highway within the park and are routinely ignored on busy days when the parking areas are full. The helipad is grassed and located adjacent to the gravel parking area near the park entrance and is used by DLNR for maintenance and emergencies.

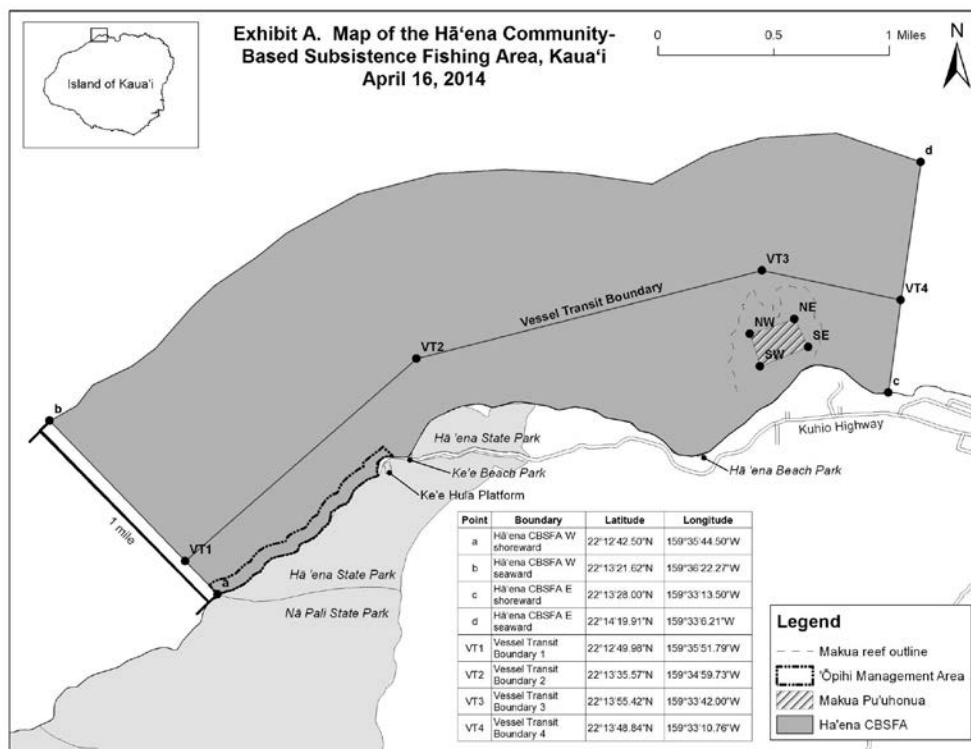

The park’s comfort station was reconstructed in 2008-2009, in compliance with the ADA of 1990, as amended. A constructed wetland was installed to treat wastewater from this facility in 2010. An interpretive sign is located near the trailhead and ocean safety signs are posted at Kēʻē.

Figure 6 is a plan showing the existing park features. Figure 7 contains site photos.

## 2.3 EXISTING PARK MANAGEMENT

State Parks is responsible for the management of Hāʻena State Park. Curatorship of the park’s Agricultural Complex and Ka Ulu a Paoa Heiau is currently provided by Hui

Makaʻāinana o Makana under respective agreements with the State and County.

**FIGURE 5:

 Disclaimer: This graphic has been prepared for general planning purpose only. Diacriticals have also been added for Hawaiian spelling.

The rules of the HCBSF were adopted by the BLNR on October 24, 2014 as Chapter 13-60.8, HAR. Surrounding and overlapping the HCBSF on the eastern portion is the Hawaiian Humpback Whale National Marine Sanctuary, which is managed jointly by the National Oceanic and Atmospheric Administration (NOAA) and the State of Hawai‘i (Figure 8). Proposed recommendations for future park management are summarized in Section 2.5.5.

## 2.4 SURROUNDING USES

Hā‘ena State Park is surrounded by lands in the Conservation District. It serves as the pedestrian entrance to Nāpali Coast State Wilderness Park, which occupies the lands south and west of Hā‘ena State Park. East of the park, land is developed at very low densities with single family dwellings. These residences include wood-frame cottages and large dwellings that serve as permanent and part-time residences. Southeast of the park is the National Tropical Botanical Garden’s Limahuli Garden and Preserve.

## 2.5 DESCRIPTION OF THE MASTER PLAN

A site analysis was prepared to map the existing resources and to guide the appropriate location of Master Plan park elements (see Figure 8). The Master Plan presented in Figure 1 shows the full build out of the plan and is the preferred alternative. Key components of the plan include new visitor and caretaker facilities, pedestrian and bicycle paths, a Hula Complex surrounding Ka Ulu a Paoa Heiau, a Cultural Gathering Area with Hālau Wa‘a and open hale, and changes to the park entry, vehicle circulation, and parking. To facilitate the initiation of the controlled entry and access changes at the park, a near-term plan for the entry complex was developed and is described in Section 2.5.1 (Near-Term Plan). It is also illustrated in Figure 2. Subsequent sections describe elements of the full build out of the Master Plan.

### 2.5.1 NEAR-TERM PLAN FOR THE ENTRY COMPLEX

The Near-Term Plan for the entry complex presented in Figure 2 offers an interim plan to help initiate the managed access concepts and safety improvements within the park which are based on an updated rockfall hazard study prepared by AECOM (Appendix B). AECOM prepared a map showing the location beyond which the potential for simulated rockfalls diminishes to a 0% chance based on computer modeling. This line is shown on all the Master Plan graphics for reference and labeled as such. The Near-Term Plan as well as the Master Plan locates all the proposed visitor facilities makai of this line. The following sections are brief descriptions of the proposed features of the Near-Term Plan.

#### 2.5.1.1 Welcome Pavilion

A Welcome Pavilion is proposed where the main entry to the park can be managed prior to the construction of the Education and Cultural Center (described in Section 2.5.2.1). The primary function of the Welcome Pavilion is to provide orientation for all visitors prior to park entry. Public restroom facilities and an information desk are also included in the structure. Areas for interpretive displays, exhibits, picnic tables, and bicycle parking are

~~provided outside of the pavilion. The leach field for the comfort station will be located beneath the parking lot. Dual waterlines will be installed for the comfort station and the lo‘i.~~

### ***2.5.1.2 Interpretive Path***

~~Due to the potential for rockfall hazards along the highway, an Interpretive Path will be provided makai of the highway, connecting the Welcome Pavilion to Kē‘ē Beach. It will traverse the lo‘i as an elevated boardwalk running along the first berm separating the first two rows of lo‘i and then turn north to avoid the wetlands. It will cross an ‘auwai over a footbridge and connect to a path through the hau tree tunnel. This path will then connect to the trail behind the dunes and turn south, leading visitors past the lifeguard tower to Kē‘ē.~~

~~Interpretive displays and wayside exhibits will be installed along this path, including directional signage and educational information for the varied sights along this trail. The portion of the path which traverses the lo‘i will be elevated with handrails and a viewing platform where the path turns. From here, distant views of Wai a Kanaloa can be seen as well as spectacular views of Makana, the lo‘i, loko, and the wetlands. The path is proposed to be a minimum of eight to ten feet wide to accommodate bicycles without being overly intrusive upon the lo‘i. Pathway footings are proposed to avoid structural impacts to lo‘i walls. The path will be designed to be ADA accessible and made with lightweight, durable, easy-to-maintain, and vandal-proof or vandal-resistant materials. Directional and ocean safety signs are proposed to be posted appropriately along the path.~~

~~The exact alignment and materials used to construct the path will be determined when construction plans are prepared based on input from rockfall engineers, State Parks archaeologists and staff, the Cultural Advisory Group, and the Hui.~~

### ***2.5.1.3 Parking***

~~In the Near-Term Plan, most of the visitor parking is consolidated into the main visitor parking lot as much of the highway will be closed to general traffic. In addition, a small ADA/special access parking area will be established at Kē‘ē. The main parking lot is proposed to be re-graded, resurfaced, and landscaped with striped parking stalls. The preferred medium for surfacing the parking lot is a permeable pavement or structural grass over the entire parking lot or at least half of the parking lot so it can be used for multiple purposes. The exact surface will be determined when construction plans are prepared based on soil drainage and material availability. The parking lot as shown in the plan is large enough to park roughly 100 vehicles. However, to encourage use of the shuttle or transit system being planned for the North Shore, the number of available stalls may be reduced and the grassed areas of the lot can be used for outdoor activities, staging areas, lo‘i, or educational purposes. The area shaded in a darker green in the plans shows how the parking lot could be partitioned for the different uses. If the shuttle system proves successful, the area may no longer be needed for parking and could permanently be converted into other park uses such as additional educational gardens and picnic areas, event space with a grand entry lawn, or expanded staging areas. The Welcome Pavilion/ECC could also be located further east to open up more garden spaces to the west.~~

The Master Plan also shows an ‘auwai running along the mauka edge of the main parking lot that is in roughly the same alignment as the original ‘auwai that used to traverse this area before it was cleared for the dirt parking lot. There have been requests by some members of the MPAC to determine whether it can be restored and made functional again, connecting to the rest of the ‘auwai system. If restoration is pursued, further investigation will be necessary prior to detailed design of the parking lot to see if the ‘auwai can be restored without extreme construction requirements or costs and if there is sufficient water quality and quantity. If the ‘auwai can be restored, the grading and landscaping of this area should be done so that stormwater runoff from the parking lot is diverted away from the ‘auwai and directed to flow across the grassed areas of the parking lot or towards bioswales and the adjacent landscaped areas could be designed as rain gardens to filter and contain the runoff. In addition, overflow drainage swales could be designed to help mitigate larger rainfall flows that may overtop the ‘auwai. If it cannot be restored, another alternative is to aesthetically integrate its design into the drainage system and to see if it has potential for microhydropower generation.

This area can double as a catchment ditch for rockfall events with hala trees could also be planted in a thick screen along the highway and parking lot as an added rockfall mitigation measure and to soften the view of the highway from the ECC and Interpretive Path.

Pedestrian paths are proposed to be provided throughout the parking lot and drop-off/pick-up areas to clearly delineate where people should walk. The pedestrian path itself could be curbed or edged for easier maintenance and may be surfaced with permeable pavers or pavements or natural soil hardeners to increase rainwater infiltration while providing a stable, ADA-accessible surface. The exact surface will be determined when construction plans are prepared based on soil drainage and material availability.

The subterranean area of the parking lot will serve as an absorption bed for the proposed restroom facilities minimizing the amount of disturbed area required to service the proposed facilities.

The smaller 13-space ADA/special access parking lot will be located at Kē‘ē for ADA accessibility, as well as to provide parking for the lifeguards, family members tending to the cemeteries, lawai‘a, hunters, and cultural practitioners visiting the Hula Complex. The two existing ADA stalls will be maintained and directly opposite the highway from them will be an 11-stall parking area. Bicycle racks should be installed here if bicycles are permitted on the Interpretive Path.

Drainage improvements to prevent ponding, soil erosion, and beach washouts during heavy rainfall events are recommended. Access to this parking area will be managed by special permit or controlled by parking staff to minimize vehicle access along the limited access corridor.

#### ***2.5.1.4 Park Entry and Turnaround***

Initial discussions with State DOT have indicated they are willing to transfer the section of highway within the park to State Parks. Therefore the proposed plan recommends closing the

highway to through traffic just past the park entry and includes a large vehicle turnaround with separate, gated accesses to and from the main parking lot, as well as to the ADA/special access parking area at Kēʻē and the separate staging area that could be used by State Parks or the Hui. A kiosk will be installed to control the gates either mechanically or manually by an operator. The gate will limit access along the highway to minimize visitor exposure to the rockfall hazards. Only those needing ADA vehicular access to Kēʻē, or special access to the cemeteries, hunting area within the Nāpali Coast State Wilderness Park, fishing grounds, and the Hula Complex will be allowed along the limited access portion of the highway. Warning signs will be installed at the gate. The gate across the highway could have a swing gate over the mauka half of the right-of-way that could be automated to open for exiting traffic only. Gate design will be included in construction drawings.

The central island of the turnaround will be landscaped, highlighted by a large hala tree or other native tree of significance to Hāʻena. An alternative for the centerpiece could be a sculpture depicting something of significance to Hāʻena or created by a Hāʻena artist. The turnaround also would include sheltered seating areas to accommodate visitor drop-offs and pickups and shuttles/transit stops, as appropriate. The shade structures could also be designed with photovoltaic (PV) panels to help power the nearby facilities. Shade structure design is conceptual at this time.

#### ***2.5.1.5 Safety Signage***

Rockfall hazard warning signs should be installed as appropriate along the highway to discourage the general public from accessing the highway between the park entry and Kēʻē, including the area around Wai a Kanaloa. In addition, directional and ocean safety signs should be posted at appropriate locations along the Interpretive Path, trails, and shoreline.

### **2.5.2 LONG-TERM MASTER PLAN**

Descriptions of the remaining elements of the full buildout of the Master Plan are provided in the following sections. Elements that remain from the Near Term Plan are not repeated here. Figure 1 illustrates the full buildout of the Master Plan and Figure 9 provides a detailed view of the entry area.

#### ***2.5.2.1 Education and Cultural Center***

The Education and Cultural Center (ECC) is envisioned as the main gathering place for all who visit the park. The ECC is anticipated to house administrative staff offices, comfort station facilities, auditorium/classroom space, meeting rooms, interpretive displays, storage rooms and other related spaces to support the park's operations and activities. The ECC is proposed to be designed with covered outdoor lanai-type spaces to encourage indoor-outdoor experiences and learning spaces. The footprint as shown is roughly 2,000 square feet (s.f.). It incorporates the 1,200 s.f. footprint of the Welcome Pavilion from the Near Term Plan and adds two 400 s.f. wings at the back of the structure. However, the final architectural program, design, and facility size will be determined during the detailed design stage of the ECC. Its exact location may also be moved further east into the graded area of the parking lot based on the size of the final parking lot needed at the park. This shift would open up more

park/event space makai of the facility and allow the smaller entry pavilion to operate while the ECC is constructed.

Because of Hā'ena's remote location and limited access to infrastructure, all aspects of green design is proposed for consideration whenever feasible to help the ECC operate self-sufficiently. To collect, filter, and reuse rainwater from the roof for irrigation, toilet flushing, and other possible uses, a rainwater catchment cistern is proposed. Renewable energy will be investigated during the building design process to help support the electrical demand of the facility with solar, microwind, and microhydropower<sup>†</sup> as potential alternatives.

#### ***2.5.2.2 Traditional Hale, Demonstration Gardens, Picnic Areas and Outdoor Event Space***

On the grounds surrounding the ECC are various outdoor spaces that are proposed for use as demonstration gardens and lo'i, tour staging areas, picnic areas, and outdoor event space. These areas are envisioned as flexible teaching spaces where outdoor demonstrations or classes could be held. They could also be landscaped with cultural and native plants, including kalo and Polynesian-introduced plants, to aid in educational programs and may be used as staging areas for tours, school groups and community work days. A traditional hale is proposed to be constructed as a shelter for these activities. Its proposed location is in an existing cleared area which cannot be put back into lo'i production due to that area having previously abandoned cars and debris.

#### ***2.5.2.3 Reconstructed Hale and Lo'i Interpretive Site***

A traditional house foundation (Feature 8, Site 1600-8) is located on the northern side of the main parking lot. According to the State Parks archaeologists, it likely has been modified by the addition of a lanai in historic times. Recent reconnaissance of the site shows it to be in relatively good condition and provides an opportunity for a reconstructed hale pili and lo'i interpretive site at the entrance to the park. Final design of this area will be done once a more detailed condition analysis of the site is conducted and the feasibility of reconstruction is determined. The layout shown in the Master Plan is purely conceptual and subject to revision based on the condition analysis.

#### ***2.5.2.4 Caretaker's Cottage and Baseyard***

The Caretaker's Cottage is a feature from the 2001 draft park plan that some members of the MPAC felt was absolutely critical to preserve in the 2015 Master Plan. Having a caretaker at the park would provide a 24-hour presence at the park for security as well as provide someone to unlock the gates for hikers who wish to exit when the park is closed if the exit gate is not automated or is locked after hours.

The footprint of the Caretaker's Cottage as shown on the Master Plan is roughly 1,200 s.f. under the main roof with about 500 s.f. of covered lanai space. There are two potential baseyard areas, one of which is the area immediately surrounding the Caretaker's Cottage

---

<sup>†</sup> The U.S. Department of Energy defines a microhydropower system as a renewable energy system that typically generates up to 100 kilowatts of electricity. For reference, "a 10 kilowatt microhydropower system generally can provide enough power for a large home, a small resort, or a hobby farm." (USDOE 2012)

~~and measures over 6,400 s.f., but should include a protected buffer between the baseyard uses and the lo‘i walls. The second area, which could also be used as a staging area or flexible space, measures roughly 4,800 s.f. and should similarly be buffered from the lo‘i and ‘auwai to the north and east, respectively.~~

~~These areas comprise previously disturbed land adjacent to the main parking lot. The final layout, location and sizing of the Caretaker’s Cottage and baseyard will be dependent on the condition and exact locations of the lo‘i walls, ‘auwai, and traditional house site discussed in Section 2.5.2.3. Tall hedges or landscaping should be installed along the fences to secure the facility and to screen the facilities from public view. Similar to the ECC, green design and renewable energy are recommended. For hikers who need help after hours, and for any emergencies, an intercom or hardline emergency phone should be provided at the gate fronting the Caretaker’s Cottage.~~

#### ***2.5.2.5 DLNR Helipad and Baseyard/Staging Area***

~~The helipad and baseyard/staging area will be used by DLNR for maintenance of their facilities including the Nāpali trails and sites. Since it is infrequently used, the helicopter landing area can be designed as a level, grassed site. The parking lot, entry complex, and helipad staging area will undergo a detailed design process prior to finalization to appropriately locate and size the facilities.~~

~~For emergency helicopter landings, the Fire Department tends to utilize the open grassy area near the Hui’s current shelter. This area may continue to be used as an emergency landing zone as it is unsuitable for lo‘i restoration and is proposed to remain as an open grassy field for educational and special events makai of the Welcome Pavilion/ECC. However, it is noted that the Fire Department will land wherever they need to as appropriate for the emergency situation.~~

#### ***2.5.2.6 Limited Access Corridor***

~~The highway between the turnaround and Kē‘ē will be closed to general vehicle traffic and used only for special vehicle access due to the potential rockfall hazard (Appendix B). The only vehicles that will be permitted beyond the gate will be special access vehicles such as the lifeguards, hula practitioners, family caretakers of the cemeteries, and vehicles with valid ADA placards or license plates. Because the road is currently owned by the State Department of Transportation (DOT), it will either need to be transferred to State Parks or an agreement must be made between the two state agencies for the proposed closure.~~

#### ***2.5.2.7 Hula Complex***

~~The entire area makai of the Kalalau Trailhead and south of the highway has been designated as the Hula Complex. It is the first priority of the MPAC to restore the area and to develop a culturally appropriate management plan. The complex includes Ka Ulu a Paoa Heiau and Ke Ahu a Laka, the former Allerton property, and the State lands surrounding them. Restoration of the heiau and Ke Ahu a Laka based on Henry Kekahuna’s 1959 map (Figure 10) and all other available historical maps for the area is recommended.~~

The County has entered into an agreement with the Hui to care for the hula sites and is working with State Parks on access and coordination. It is recommended that appropriate cultural protocols be established as part of the management, access, and use of the area. Review by both the Kauaʻi Historic Preservation Review Commission and the State Historic Preservation Division (SHPD) are required for any improvements and proposed management plans.

The Hui is also working on the rehabilitation of the historic Allerton Caretaker's Cottage and the Master Plan recommends reusing the structure to support park use, including the Hula Complex. The former Allerton house site and existing foundation is proposed in the Master Plan to be maintained as an open, grassed platform. State Parks notes that recent changes at the site may require short term improvements to preserve it in place. If restroom facilities are provided within the area, potable water and an individual wastewater treatment system will be needed due to the remoteness of this facility. Sustainable design elements are proposed for consideration to make it as self sufficient as possible including high efficiency fixtures, renewable energy, rainwater catchment, and wastewater treatment and reuse.

#### ***2.5.2.8 Dune Restoration***

The dunes and beach strand were identified by both the MPAC and biologists at Geometric Associates (Appendix C) as priority sites for restoration. For the MPAC, it would be an opportunity to take care of the kūpuna who are interred there. According to the biologists, the restoration of a native dune ecosystem would involve the removal of alien species and the planting of natives and Polynesian introduced plants such as Pōhuehue, Naupaka, Nanea, Pōhinahina, Nehe, Paʻu-o-Hiʻiaka, ʻAkiʻaki grass, Milo, Hala and Kou. Not only would they provide improved and more authentic vegetation but they could also be used to help reduce coastal erosion if carefully planted. Restoration of the dune system would also improve the habitat for common native shorebirds, including the Kōlea or Pacific Golden Plover, ʻŪlili or Wandering Tattler, ʻAkekeke or Ruddy Turnstone, Kioea or Bristle-thighed Curlew, Hunakai or Sanderling, and various other sandpipers (Terry and Hart 2009).

Because the beach is one of the primary recreational resources at the park, visitors should clearly be instructed to be careful as they walk along the shoreline, especially east of the proposed lifeguard station since erosion is unearthing iwi and other cultural resources. The formal picnic areas that were shown on the dunes with picnic tables in the 2001 draft park plan have been removed and new picnic areas will be located on previously disturbed areas next to the Welcome Pavilion/ECC and on the paved areas at the end of the highway at Kēʻē (Section 2.5.2.10). Visitors will still be permitted to picnic on the beach, but not on the dunes, and they will be encouraged to carry out all trash. The Master Plan further recommends that, to support dune restoration, recreational activities that impact the beach and dunes, such as driving on the sand (except for emergencies), be prohibited.

#### ***2.5.2.9 Lifeguard Tower***

A new permanent location for the lifeguard tower has been identified in the Master Plan with input from the MPAC and the Kēʻē lifeguards (Listman, 2008). As shown in Figure 1, it is roughly 50 feet north of the highway pavement and 50 feet mauka of the 2009 certified

shoreline to allow views from the end of the path to open up to the ocean and improve visibility for the lifeguards. The site is located outside any known flood hazard zone or wetland. To avoid potential impact to subsurface resources, the foundation should be built up rather than excavated down into the sand, if possible. Also, some of the existing ironwood trees may have to be cut.

#### ***2.5.2.10 Picnic Area at Kēʻē***

Picnic tables will be located on the old highway pavement at the entrance to Kēʻē Beach to provide ADA accessibility. The area is shaded by trees and overlooks the beach and lagoon.

#### ***2.5.2.11 Loko and Wetland Restoration***

Some members of the MPAC expressed a desire to restore the loko and wetland areas for endangered native birds and possible agricultural uses. Loko Naia is believed to have been a loko kalo and Loko Kēʻē either a fishpond or loko kalo.

Restoration of the small wetlands on the property for the purpose of creating a native bird habitat is a possibility according to Geometrician Associates. However, they do not recommend modifying these areas specifically to attract endangered birds for practical and legal reasons. In order to do so, there are several binding agreements and permits that must be obtained with the U.S. Fish and Wildlife Service (USFWS), such as a Safe Harbor Agreement and associated enhancement of survival permit as well as increased responsibility to protect the native birds once they are established at the park. Additionally, its location near the main public corridor would increase the potential for endangered birds to be harassed, injured or killed directly or indirectly by people or their pets and may be difficult to manage.

They do, however, recommend restoring the native flora which would increase native plant conservation and opportunities to educate the public. This may also indirectly support native birds including endangered and threatened species without a formal effort to create an endangered species habitat. A third party agreement with a local organization that may want to take on the responsibility of creating and maintaining such a habitat if a formal endangered species habitat may be another option. If pursued, the wetlands should be protected through fencing hidden with landscaping or fringing vegetation that encourages viewing but discourages direct entry to help minimize access by predators (Appendix C).

#### ***2.5.2.12 Limahuli Stream Restoration***

Based on recommendations from Geometrician Associates in Appendix C, a natural area with potential for beneficial impact is restoration of the riparian areas around Limahuli Stream. The alien tree species that form a dense, closed canopy around the stream are especially problematic since they effectively prevent sunlight from reaching the ground and prevent the mid-canopy and ground cover layers in the forest from developing. This in turn increases sediment loading in the stream due to erosion and tree litter. Reduced sunlight also limits the growth of benthic algae in streams. The algae are a major food source for many rare and federally endangered native fish and invertebrates. A reduction in this important food source, coupled with increased sediment loading, could ultimately result in decreased quality of streams.

Careful clearing of the alien trees along Limahuli Stream and the planting of appropriate native and Polynesian-introduced plants to stabilize slopes are recommended. In order to prevent impacts to ‘Ōpe‘ape‘a, the Hawaiian Hoary Bat, State Parks should restrict any cutting of large shrubs or trees over fifteen feet tall to periods outside of the June 1 through September 15 breeding and pupping season. Continued cooperation with the Division of Aquatic Resources (DAR) to keep new alien fish out of the ‘auwai and stream and in ridding the stream of periodic invasions of swordtails, guppies, and other alien fish is recommended. Details of stream and riparian restoration will be deferred until a restoration plan can be prepared.

#### ***2.5.2.13 Agricultural Complex***

In order to create a living cultural Agricultural Complex, community gardening practices restoring the lo‘i should be continued (Carpenter, 1996). The restoration phases as recommended in the Major and Carpenter (2000) restoration plan are labeled in parentheses on Figure 1. The MPAC would like to allow for other cultural crops to be planted in addition to kalo. Historically, the complex was known to be flexible, allowing dryland cultivation to be done by simply redirecting water through different paths. ‘Uala, or sweet potatoes, were known to be grown in sandy areas and mai‘a (bananas), kō (sugar cane), and ‘awa (*Piper methysticum*) were grown in the valleys.

Restoration of the ‘auwai is also recommended wherever feasible, particularly in actively cultivated areas of the lo‘i. Special care, however, needs to be taken not to make a hydraulic connection between the lo‘i and ‘auwai back to Limahuli Stream to prevent the spread of apple snails. Limahuli Stream is one of the few places in the State that does not have apple snails and the snails are currently in the park’s lo‘i.

The 2001 draft park plan also included pedestrian and bicycle pathways throughout the lo‘i, primarily along and sometimes through the ‘auwai. This is no longer recommended since the goal is to reestablish the ‘auwai as the primary means of irrigating the lo‘i. The plan currently locates the Interpretive Path over the first berm within the lo‘i and will provide visitors an up-close view of the lo‘i on their way to Kē‘ē.

In addition, access to and/or through certain areas of the lo‘i is required for both people and equipment as a part of ongoing maintenance and harvesting. For safety reasons, access within the working lo‘i should therefore be managed and primarily reserved for those restoring the lo‘i as well as for educational and work groups tending to the lo‘i. Special tours for the public and educational groups guided by knowledgeable staff may also be arranged. These access ways shall be designed and constructed as the restoration of the lo‘i progresses in order to appropriately locate them within the complex.

#### ***2.5.2.14 Montgomery House***

Rehabilitation of the historic Montgomery House/Cottage situated within the Agricultural Complex is proposed to support agricultural activities or other park uses/operations. Similar to the Allerton Caretaker’s Cottage, if restroom facilities are provided, potable water and an

individual wastewater treatment system will be needed. Sustainable design elements should be considered to make it as self-sufficient as possible including high efficiency fixtures, renewable energy, rainwater catchment, and wastewater treatment and reuse.

#### ***2.5.2.15 Cultural Gathering Place and Hālau Wa‘a***

Tucked between the lo‘i, Loko Naia and former coastal road, and up on higher ground, the Cultural Gathering Place is envisioned in the Master Plan as an outdoor gathering place to support community/educational groups and where overnight stays would be permitted. The Cultural Gathering Place is in an area of recent 20th century modification and encompasses the site of the historic poi mill.

An open hālau-type structure and Hālau Wa‘a, or canoe house, is also proposed to the east of the Cultural Gathering Place. Approximate locations of these facilities are shown in the Master Plan. However, because this area is located near potentially sensitive cultural sites, the exact extent of the area and location of the structures should be determined with input from State archaeologists and staff, the community, and kūpuna. In addition, the Hālau Wa‘a should be located as makai as possible without impacting sensitive sites and the dune system or being within areas of special flood and wave hazards. For infrastructure, potable water will be needed. Composting toilets should be considered as an option for restroom facilities or temporary restrooms could be brought in and removed as necessary to serve the campers. Alien plant species are proposed to be removed from the area and replanted with native and Polynesian-introduced plants.

#### ***2.5.2.16 Poi Mill***

In the 2001 draft plan, interpretation of the historic poi mill is recommended. However, no cost estimates were included for any reconstruction work. As remnants of the concrete foundation still remain, the MPAC discussed whether the poi mill could be rebuilt in order to process harvests from the lo‘i. However, the site is located in an area of potential flood hazard due to wave action, according to the Flood Insurance Rate Map (FIRM) and if State Parks or another entity wishes to reestablish a poi mill on-site or within the park, additional studies are recommended to determine the most suitable location, design, and size for such a facility. Therefore, the site itself is recommended to be interpreted with signage or displays and included on guided tours.

#### ***2.5.2.17 Cemetery Areas***

The two historic cemeteries that are just north of the loko are currently maintained by family members. In the 1996 Burial Treatment Plan (Carpenter, 1996), there are recommendations to install signage and fence or wall off and gate the cemetery areas, with access provided to lineal descendants and State personnel. However, during the MPAC meetings a request was made to eliminate the fencing and gates. Rather than using fences or walls, landscaping and the use of native and Polynesian-introduced plants should be considered as more natural buffers for the area. Any signage that is installed should be designed with input from the families of those interred there.

### ***2.5.2.18 Pedestrian Trails***

As discussed in the Near Term Plan, the Interpretive Path will serve as the main pedestrian route between the ECC and Kēʻē. It will be located outside the area of the known rockfall hazard and will also serve as the primary ADA-accessible route. The proposed alignment was developed with Hui leadership and the final design is subject to refinement including input from the Hui, State archaeologists, Cultural Advisory Group, and rockfall engineers.

The old coastal road behind the dune, which will be used for restricted vehicle access to the loʻi, cemetery and Cultural Gathering Place, is also proposed as a potential new pedestrian trail. Its location behind the dunes provides shelter from the winds and provides an alternate route to Poholoikeiki Channel, the Hālau Waʻa, and the historic poi mill site and passes by Loko Naia. In the Master Plan, this pathway is not envisioned as a paved, improved trail. Ocean safety signage, interpretive displays and wayside exhibits should be installed as appropriate. Bicycles should not be permitted on this portion of the trail due to the sensitivity of the area.

Another potential pedestrian trail could be developed to connect the ECC directly to the Hālau Waʻa site through the proposed native plant and loʻi demonstration gardens along an existing path at the edge of the Phase I loʻi restoration. These trails together will provide a pedestrian loop trail through the most active areas of the Park as well as opportunities for diverse interpretive experiences. Signage, landscaping and trail markings may be installed to direct visitors towards appropriate areas and away from sensitive or hazardous areas. This loop trail serves as an alternate route back to the ECC and main parking lot. The exact alignment of all trails should be developed with input from State archaeologists, the Hui leadership, and the Cultural Advisory Group.

Additional pedestrian loop trails on the eastern side of the park should also be considered and designed in conjunction with the surveying and restoration of the loʻi (Phases III and IV). All trails will need to be designed based on more detailed survey of the archaeological sites and to loop back to the ECC if access to these areas is to be managed.

### ***2.5.2.19 Bicycle Facilities***

Bicycle racks will be provided at the ECC (and the Welcome Pavilion in the Near Term Plan) and if bicycling is permitted on the Interpretive Path, racks may be installed at Kēʻē near the special access parking lot. However, riders will be required to travel at low speeds since the path is also the main pedestrian and ADA-accessible route. They will also be required to walk their bicycles between the large viewing platform on the Interpretive Path and Kēʻē due to the sensitivities along the sand dune and potential for pedestrian-bicycle conflicts in the Hau Tunnel and at the viewing platform. If conflicts between pedestrians and bicyclists arise, bicycle riding on the Interpretive Path may be discontinued.

As an alternative, bicyclists could be allowed on the limited access portion of the former highway but they would be permitted at their own risk of rockfalls. If permitted, bicycle racks should be installed at Kēʻē. To encourage bicycle access to the park, bicycle parking, according to the Pedestrian and Bicycling Information Center, should include sturdy racks

~~that are visible (for security), accessible, easy to use, and convenient. Ideally, bicycle racks should support the whole bicycle and not just one wheel, and enable the user to lock the frame and wheels.~~

## **2.5.1 VISION FOR HĀ'ENA MASTER PLAN**

The following section provides conceptual descriptions of the key features of the master plan. It starts at the park entrance and continues toward Kē'ē. The exact locations and designs of the proposed features are subject to change and refinement during the detailed design and construction phases based on conditions at the time of implementation.

### **2.5.1.1 Park Entry, Turnaround, and New Main Gate**

A new vehicle gate is recommended to be installed at the park entry when the highway is transferred to State Parks. Only those with special access to Kē'ē, such as the lifeguards and rescue personnel, those with valid ADA parking placards or plates, park staff, the Hula Complex and other cultural practitioners, will be allowed to drive along the former highway as needed to reduce visitor exposure to the rockfall hazards. It will have a separate entry off the turnaround. Rockfall hazard warning signs will be installed on the gate across the highway and a swing gate on the mauka half of the right-of-way could be automated to open for exiting traffic only. The design of the gate will be open and remain low in height to minimize the visual impact towards Kē'ē.

A vehicle turnaround is provided just past the park entry and provides separate accesses to and from the main parking lot, as well as the special access parking at Kē'ē, and a separate staging area that could be used for various park purposes. The turnaround is designed to include the shuttle stop and/or bus stop if/when such services become available and allow those dropping off visitors to pull over at the curb without blocking traffic. Shade structures are also provided to shelter those waiting at the visitor drop-off and pick-up areas. Shuttle and bus schedules should be posted at the stop if they are established. Should shuttle or transit service to the park become successful enough to eliminate or reduce the need for the parking lot, the shuttle stop area can be enlarged to accommodate the required passenger drop offs and pick-ups. The shade structures could also be designed with photovoltaic panels to help power the nearby facilities.

### **2.5.1.2 Parking**

Most of the visitor parking will be consolidated into one main visitor parking lot near the park entry as much of the highway will be closed to general traffic. Only a small special access parking area will remain at Kē'ē as noted earlier for ADA accessibility, the lifeguards, park staff, the Hula Complex and other cultural practices. It will also be accessible for emergencies as well as safety and rescue operations.

The preferred medium for the parking lot is permeable pavement or structural grass over the entire parking lot or at least half of the parking lot so it can be used for multiple purposes. The parking lot as shown in the plan is large enough to accommodate roughly 100 vehicles. However, to encourage the use of a shuttle or transit system being planned for the North Shore, the number of available stalls may be reduced as appropriate and the grassed areas

around the parking lot can be used for outdoor activities, staging areas, or educational purposes related to the adjacent traditional house site and lo'i. Eventually, if the shuttle or transit system proves successful, the areas no longer needed for parking could permanently be converted into an expanded shuttle stop area or other park uses. In the interim, the areas shown in different shades of green in Figure 1 show how the parking lot could be partitioned for different users, whether they are fee-paying visitors or non-fee paying visitors, and can be adjusted with movable bollards and cordons depending on the number of cars for each user group. The division between the two can be adaptively managed weekly, daily, or even hourly throughout the day depending on demand. This design gives State Parks the flexibility to provide enough parking until the shuttle/transit system is operational and to adjust as needed the number of parking stalls that are available for the different user groups while also encouraging multimodal access to the park.

Pedestrian paths should be provided throughout the parking lot and drop-off/pick up areas to clearly delineate safe places where people should walk and direct visitors towards the park entry. The pedestrian paths could be curbed or edged for easier maintenance and should be surfaced with permeable pavers or pavements or natural soil hardeners to increase rainwater infiltration while providing a stable, weatherproof surface. If electric vehicle parking and charging stations are provided, they must comply with the State Disability and Communications Access Board (DCAB) Interpretive Opinion 2012-01, which states, 'Where EV charging stations are provided, 5%, but not less than one of each type of EV station shall be accessible.

At the special access parking area, bicycle racks should also be installed and drainage improvements should be made in the area to prevent ponding, soil erosion, and beach washouts as has happened at Kē'ē during heavy rainfall events. It is also recommended that access to this special access parking area be managed by special permit or access codes at a controlled entry off the turnaround. Access should also be coordinated with safety and rescue personnel during emergencies and rescue operations.

### **2.5.1.3 Welcome Hale and Restrooms**

The Welcome Hale is envisioned as an open pavilion without walls where information about the park can be posted. The displays should include a park map and orientation information, park rules and cultural protocols. Daily weather, ocean and hazard conditions could also be posted at the Welcome Hale.

New public restrooms and bicycle parking are provided outside of the hale near the main parking lot. This second set of restrooms will help reduce the use of the Kē'ē comfort station, which is located near sensitive archaeological sites. Technological advances in individual wastewater treatment systems are providing higher-quality effluents and should be considered when designing the new restrooms. If possible, the effluent should be reused and the leach field for the new restrooms could be located beneath the parking lot. Dual waterlines and rainwater catchment systems can also be installed for the restrooms and the lo'i to minimize potable water use. Solar photovoltaic systems can also be installed to support electrical needs.

#### **2.5.1.4 Pedestrian Path**

Due to the potential for rockfall hazards along the highway, a pedestrian path will be provided makai of the highway, connecting the Welcome Hale to Kē‘ē Beach. It will traverse the lo‘i along the first berm separating the first two rows of lo‘i and then turn north to avoid the wetlands. It will cross an ‘auwai over a footbridge and connect to a path through the hau tunnel. This path will then connect to the trail behind the dunes and turn south, leading visitors past the comfort stations and lifeguard tower to Kē‘ē. The path will remain low to the ground but just above the berm, with structural supports located to avoid any archaeological sites. Handrails or path edging will be provided for safety if needed. It should also be designed with lightweight, durable, and easy-to-maintain materials that are resistant to vandalism and weathering.

Interpretive displays and wayside exhibits will be installed along this path, including directional signage and educational information for the varied sights along this trail. From here, distant views of Wai a Kanaloa can be seen as well as spectacular views of Makana, the lo‘i, loko and the wetlands.

#### **2.5.1.5 Restored ‘Auwai**

The master plan shows an ‘auwai running along the mauka edge of the parking lot. It is in roughly the same alignment as the original ‘auwai that used to cut through this area before it was cleared for the dirt parking lot. There have been requests by some members of the MPAC to determine whether it can be restored and made functional again, connecting to the rest of the ‘auwai system. Further investigation to see if the ‘auwai can be restored to serve the lo‘i without extreme requirements or costs should be done prior to detailed design of the parking lot. If it is found that it can be restored, the grading and landscaping of this area should be done so that stormwater runoff from the parking lot is diverted away from the ‘auwai and directed to flow across the grassed areas of the parking lot or bioswales and adjacent landscaped areas which could be designed as rain gardens. In addition, overflow drainage swales could be designed in this area to help mitigate larger rainfall flows that may overtop the ‘auwai. If it cannot be restored as an ‘auwai, another alternative is to aesthetically integrate its design into the drainage system and to see if it has potential for microhydro power generation. This area can also double as a catchment ditch for rockfall events. Native or Polynesian-introduced trees could also be planted in a thick screen along the highway and parking lot as an added rockfall mitigation measure and to soften the view of the highway from the pedestrian path.

#### **2.5.1.6 Reconstructed Hale and Lo‘i Interpretive Site**

A traditional house site (Feature 8, Site 1600-8) is located on the northern side of the main parking lot. According to the State Parks archaeologists, it likely has been modified by the addition of a lanai in historic times. Recent reconnaissance of the site shows it to be in relatively good condition and provides an opportunity for a reconstructed hale pili and lo‘i interpretive site at the entrance to the park. Final design of this area will be done once a more detailed condition analysis of the site is conducted and the feasibility of reconstruction is determined. The layout shown in the master plan is purely conceptual and subject to revision

based on the condition analysis. Access to the site should be designed to be ADA accessible from the parking lot if possible.

#### **2.5.1.7 DLNR Helipad and Staging Area**

The helipad and staging area will be used only by DLNR for maintenance of their facilities including the Nāpali trails and sites. One potential location is makai of the entry turnaround and will need to be designed with the new turnaround so the area is large enough and does not impact archaeological sites. Since it is infrequently used, the helicopter landing area can be designed as a level, grassed site. The final design and location, however, will be decided upon as part of the detailed design process for the main parking lot and entry complex.

For emergency helicopter landings, the Fire Department prefers the open grassy area near the Hui's current shelter, which is marked on the master plan as an alternate landing area. This area may continue to be used as an emergency landing zone as it is unsuitable for lo'i restoration and proposed to remain as an open grassy field for educational and special events makai of the Welcome Hale. However, the Fire Department noted they will land wherever they need to as appropriate for the emergency situation.

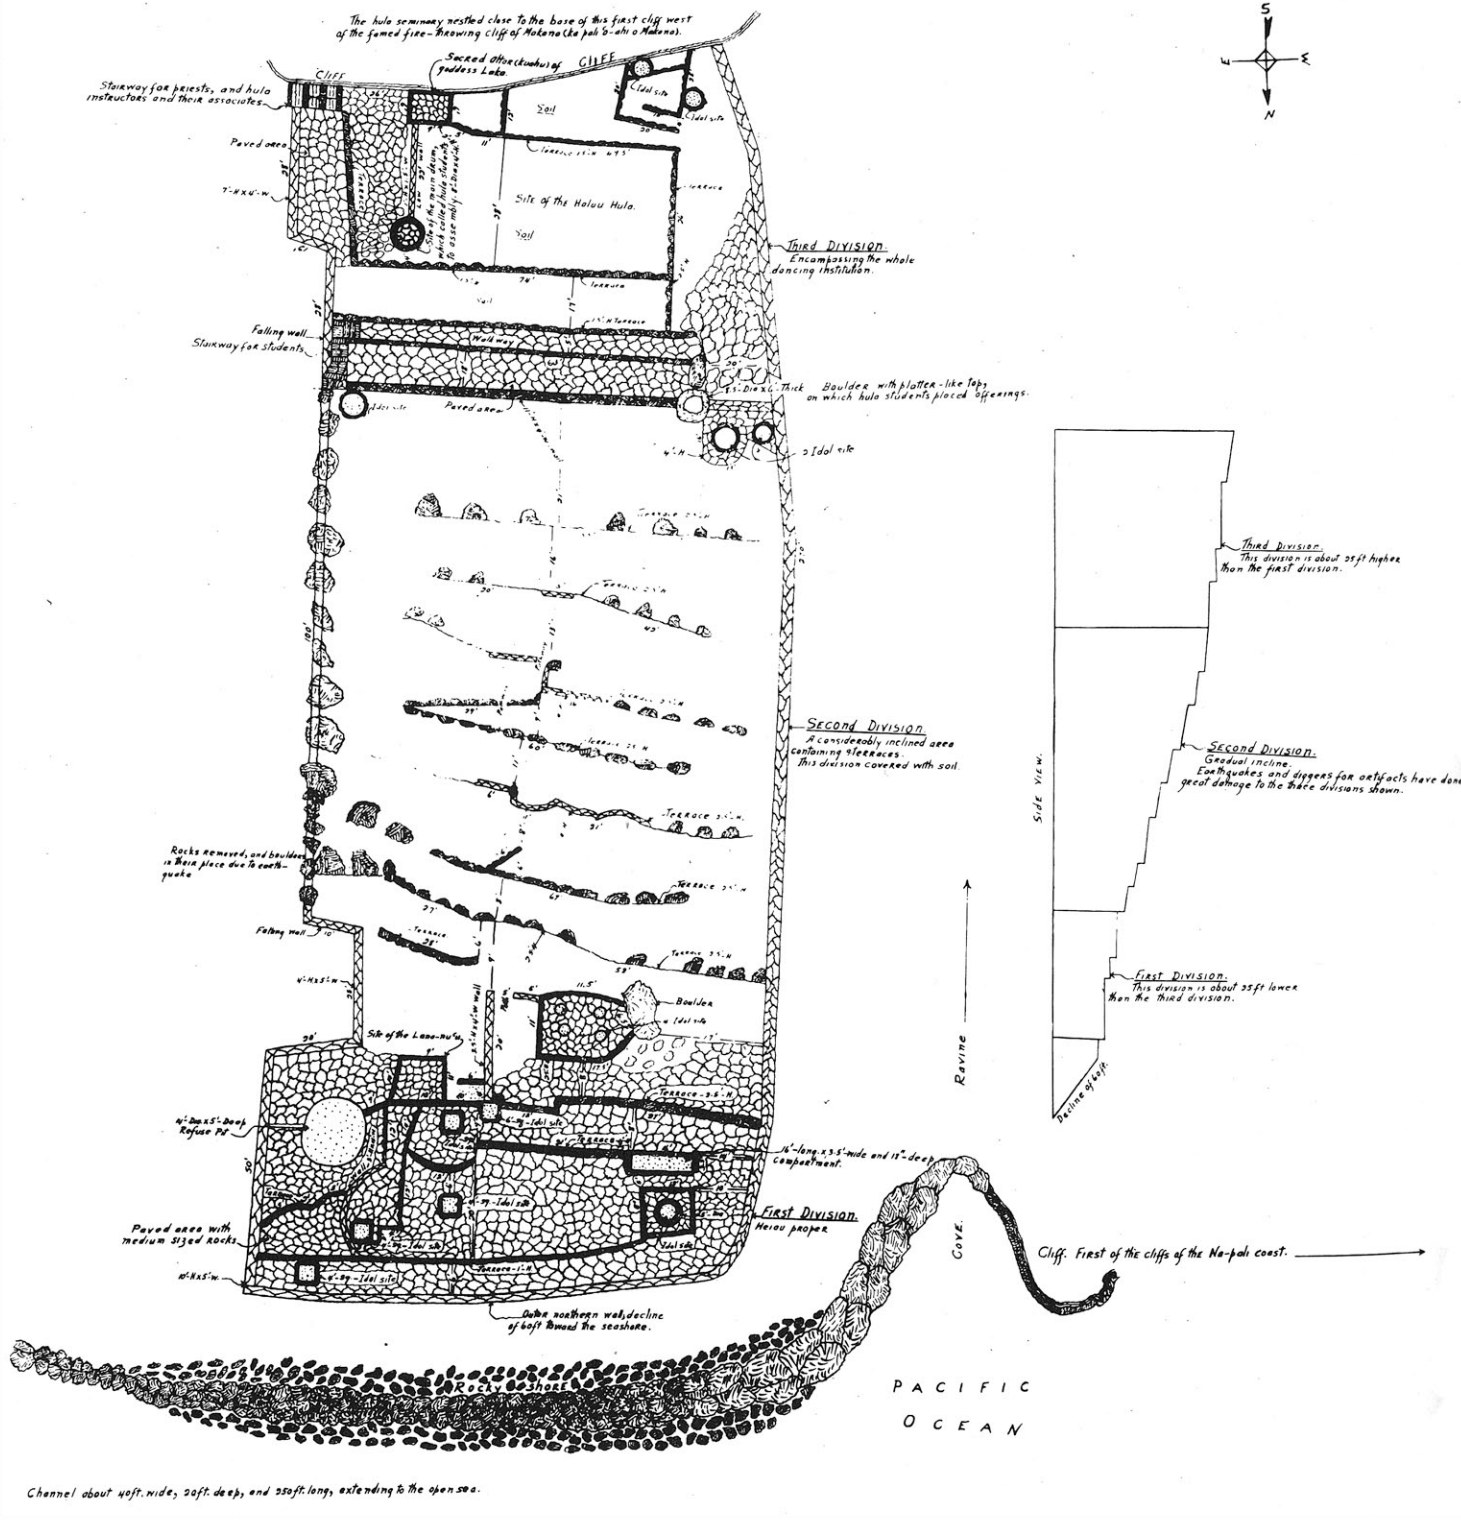

#### **2.5.1.8 Limited Access Corridor**

The highway between the turnaround and Kē'e will be closed to general vehicle traffic and used only for special vehicle access due to the potential rockfall hazard. The only vehicles that will be permitted beyond the gate will be special access vehicles such as the lifeguards and emergency and rescue teams, park staff, hula and other cultural practitioners, and ADA vehicles. Because this segment of the highway is currently owned by the State Department of Transportation, it will need to be transferred to State Parks or an agreement must be made between the two state agencies for State Parks to take over management of it. In emergency situations such as tsunami warnings, visitors will be able to evacuate along this corridor to escape to higher ground and out of the park if it is deemed safe.

#### **2.5.1.9 Hula Complex**

Given the extreme importance of the ancient Ka Ulu a Paoa Heiau and Ke Ahu a Laka and their worldwide recognition as a wahi kapu, the entire area makai of the Kalalau Trailhead and encompassing the area around the heiau and former Allerton Estate is designated as the Hula Complex. It is the first priority of the MPAC to restore the area and to develop a culturally appropriate management plan. Restoration of the heiau and Ke Ahu a Laka utilizing Kekahuna's map (Figure 10) and all available maps is recommended.

The County has established a stewardship agreement with Hui Maka'āinana o Makana to care for the sites within its parcel and is working with State Parks on access and coordination. It is recommended that appropriate cultural protocols be established as part of the management, access, and use of the area. Review by both KHPRC and SHPD will be required for any improvements and proposed management plans.

**FIGURE 10**  
**Kekahuna's 1959 Drawing**  
**of Ka Ulu A Paoa Heiau**  
**HĀ'ENA STATE PARK**

Department of Land and Natural Resources

Island of Kaua'i

NOT TO SCALE

Rehabilitation of the historic Allerton Caretaker's Cottage is currently underway for reuse to support park use, including the Hula Complex. The Allerton house site and existing foundation should be maintained as an open, grassed platform as hula hālau often use that area. State Parks notes that recent changes at the site may require emergency improvements to preserve it in place. If restroom facilities are provided, potable water and an individual wastewater treatment system will be needed due to the remoteness of this facility. Sustainable design elements should be considered to make it as self-sufficient as possible including high efficiency fixtures, renewable energy, rainwater catchment, and wastewater treatment and reuse.

#### **2.5.1.10 Dune Restoration**

The dunes and beach strand were identified by both the MPAC and biologists at Geometrician Associates as priority sites for restoration. For the MPAC, it would be an opportunity to take care of the iwi kūpuna interred there. According to the biologists, the restoration of a native dune ecosystem would involve the removal of alien species and the planting of natives and Polynesian-introduced plants such as pōhuehue, naupaka, nanea, pōhinahina, nehe, pa'u-o-Hi'iaka, 'aki'aki grass, milo, hala and kou. Not only would they provide improved and more authentic vegetation but they could also be used to help reduce coastal erosion if carefully planted. Restoration of the dune system would also improve habitat for common native shorebirds, including kōlea, 'ūlili, 'akekeke or ruddy turnstone, kioea or bristle-thighed curlew, hunakai or sanderling, and sandpiper.

Also, because the beach is one of the primary recreational resources at the park, visitors should clearly be instructed to be careful as they walk along the coast, especially east of the proposed lifeguard station since shoreline erosion is unearthing iwi and other cultural resources. The formal picnic areas that were shown on the dunes with tables in the 2001 Draft Park Plan have been removed and a new picnic area will be located at the end of the existing highway pavement at Kē'ē. Visitors, however, will still be permitted to picnic on the beach, but not on the dunes, and all trash will be encouraged to be carried out with them. Recreational activities that negatively impact the beach and dunes should be prohibited.

#### **2.5.1.11 Lifeguard Tower**

A new permanent location for the lifeguard tower has been identified with input from the MPAC and the Kē'ē lifeguards. It is roughly 50 feet north of the highway pavement and 50 feet mauka of the 2009 certified shoreline to allow views from the end of the path to open up to the ocean and improve visibility for the lifeguards. The site is located outside any known flood hazard zone or wetland. To avoid potential impact to subsurface resources, the foundation should be built up rather than excavating down into the dunes, if possible. Also, some of the existing ironwood trees may have to be cut. When asked, the lifeguards agreed the proposed site will improve their ability to see key areas of the lagoon and Kē'ē Channel compared to their current temporary location at the end of the highway pavement.

#### **2.5.1.12 Picnic Area at Kēʻē**

Picnicking is permitted at Kēʻē Beach. However, a formal picnic area with picnic tables will be located at the end of the former highway pavement at the entrance to Kēʻē Beach. The area is shaded by trees and overlooks the beach and lagoon. The tables can be placed on the old highway pavement to provide ADA accessibility.

#### **2.5.1.13 Loko and Wetland Restoration**

Some members of the MPAC expressed a desire to restore the loko and wetland areas for endangered native birds and possible agricultural uses. Loko Naia is believed to have been a loko kalo and Loko Kēʻē either a fishpond or loko kalo. However, Geometrician Associates do not recommend modifying these areas specifically to attract endangered birds for practical and legal reasons. There are several binding agreements and permits that must be obtained with the U.S. Fish and Wildlife Service in order to do so, such as a Safe Harbor Agreement and associated enhancement of survival permit as well as increased responsibility to protect the native birds once they are established at the park. They also caution its location near the main public corridor would also increase the potential for endangered birds to be harassed, injured or killed directly or indirectly by people or their pets and may be difficult to manage.

They do, however, recommend restoring the native flora which would increase native plant conservation and opportunities to educate the public. This may also indirectly support native birds including endangered and threatened species without a formal effort to create an endangered species habitat. The State could also consider a third-party agreement with a local organization that may want to take on the responsibility of creating and maintaining such a habitat if a formal endangered species habitat is desired. If pursued, the wetlands should be protected through fringing vegetation that encourages viewing but discourages direct entry and possibly fencing shielded by landscaping to help minimize access by predators.

#### **2.5.1.14 Limahuli Stream Restoration**

Based on recommendations from Geometrician Associates, the restoration of the riparian areas around Limahuli Stream is another natural area with the potential for multiple beneficial impacts. The alien tree species that form a dense, closed canopy around the stream are especially problematic since they effectively prevent sunlight from reaching the ground and prevent the mid-canopy and ground cover layers in the forest from developing. This in turn increases sediment loading in the stream due to erosion and tree litter. Reduced sunlight also limits the growth of benthic algae in streams. The algae are a major food source for many rare and federally endangered native fish and invertebrates. A reduction in this important food source, coupled with increased sediment loading, could ultimately result in decreased habitat quality of streams. They recommend careful clearing of the alien trees along Limahuli Stream and the planting of appropriate native and Polynesian-introduced plants to stabilize the slopes.

In order to prevent potential impacts to ʻōpeʻapeʻa, the native Hawaiian hoary bats, State Parks will restrict any cutting of large shrubs or trees taller than fifteen feet in height to periods outside the June 1 through September 15 breeding season for the ʻōpeʻapeʻa. State

Parks will continue to cooperate with the State Division of Aquatic Resources to keep new alien fish out of the ‘auwai and stream and in ridding the stream of periodic invasions of swordtails, guppies, and other alien fish. Additional consideration should be given to working with neighboring landowners as well as those ma uka up Limahuli Valley if restoration is pursued.

#### **2.5.1.15 Agricultural Complex**

In order to create a living cultural agricultural complex, it is recommended that community gardening practices continue the restoration of the lo‘i as recommended in the restoration plans already in place. One request of the MPAC was to allow for other cultural crops to be planted in addition to kalo. Historically, the complex was known to be flexible; water was redirected to allow certain areas to be used for dryland cultivation. ‘Uala, or sweet potatoes, were known to be grown in sandy areas and mai‘a (bananas), kō (sugar cane), and ‘awa (*Piper methysticum*) were grown in the valleys.

Restoration of the ‘auwai is also recommended wherever feasible, particularly in actively cultivated areas of the lo‘i. Special care, however, needs to be taken not to hydraulically connect the lo‘i and ‘auwai back to Limahuli Stream to prevent the spread of apple snails. Limahuli Stream is one of the few places in the state that does not have apple snails and the snails are currently in the park’s lo‘i.

The 2001 Draft Park Plan also included pedestrian and bicycle pathways throughout the lo‘i, primarily along and sometimes through the ‘auwai. This is no longer recommended since the goal is to reestablish the ‘auwai as the primary means of irrigating the lo‘i. The plan currently locates the main pedestrian path over the first berm within the lo‘i and will provide visitors a close-up view of the lo‘i on their way to Kē‘ē. There may also be opportunities for interactive educational activities within the first row of lo‘i for visitors, away from the Hui's restoration work, which will continue makai and east.

Access to and/or through certain areas of the lo‘i is required for both people and equipment as a part of ongoing maintenance and harvesting. For safety reasons, access within the working lo‘i should therefore be managed and primarily reserved for those restoring the lo‘i as well as for educational and work groups tending to the lo‘i.

#### **2.5.1.16 Montgomery House**

The historic Montgomery House situated within the Agricultural Complex is recommended for rehabilitation to support park uses. The facility could be used to support the agricultural activities or other park uses and operations. Similar to the Allerton Caretaker’s Cottage, if restroom facilities are provided, potable water and an individual wastewater treatment system will be needed. Sustainable design elements should be considered to make it as self-sufficient as possible including high efficiency fixtures, renewable energy, rainwater catchment, and wastewater treatment and reuse.

**2.5.1.17 Cultural Gathering Place and Hālau Wa‘a**

Tucked between the lo‘i, Loko Naia and former coastal road, and up on higher ground, the Cultural Gathering Place (CGP) is envisioned as an outdoor gathering place to support community and educational groups and where overnight stays would be permitted. The CGP is in an area of recent 20th century modification and encompasses the site of the historic poi mill.

An open hālau-type structure and Hālau Wa‘a, or canoe house, is also proposed on the makai side of the CGP. Approximate locations of these structures are shown in the master plan. However, because this area is located near potentially sensitive cultural sites, the exact extent of the area and location of the structures should be determined with input from State Parks archaeologists and staff, the community and cultural advisory groups, and kūpuna. In addition, the Hālau Wa‘a should be located as makai as possible without impacting sensitive sites and the dune system. For infrastructure, potable water will be needed. Composting toilets or other innovative wastewater treatment technologies should be considered for restroom facilities. Alien plant species should be removed and replaced with native and Polynesian-introduced plants.

**2.5.1.18 Poi Mill**

Interpretation of the historic poi mill is recommended. Remnants of the concrete foundation still remain and the MPAC discussed whether the poi mill could be rebuilt in order to process harvests from the lo‘i. However, the site is located in an area of potential flood hazard due to wave action (Figure 20), and if State Parks or another entity wishes to reestablish a poi mill on site or within the park, additional studies are recommended to determine the most suitable location, design, and size for such a facility. The historic site, however, can be interpreted with signage or displays and could be included on guided tours.

**2.5.1.19 Cemetery Areas**

The two modern cemeteries that are just north of the loko are currently maintained by descendent family members. In the 1996 Burial Treatment Plan, there are recommendations to install signage and fence or wall off and gate the cemetery areas, with access provided to lineal descendants and State personnel. However, during the MPAC meetings a request was made to eliminate the fencing and gates. Rather than using fences or walls, landscaping and the use of native and Polynesian-introduced plants should be considered as more natural buffers for the area. Any signage that is installed should be designed with input from the families of those buried there.

**2.5.2 HAZARD MITIGATION MEASURES**

Due to the potential for rockfalls along the highway, all of the major facilities including the ~~Interpretive Path~~ pedestrian path to Kē‘ē will be located outside of the projected high rockfall hazard zones as described by AECOM in their Rockfall Hazard Assessment report (Appendix B). These improvements should be considered part of the rockfall mitigation and prioritized in capital improvement project funding. In addition, warning signs should be installed at appropriate locations along the highway, ~~and~~ Safety instructions should be made

available online and in ~~during~~ visitor orientation materials distributed prior to park entry, and posted at the Welcome Hale.

Ocean safety signs should ~~also~~ be posted at both the main entry points by the Welcome ~~Pavilion/ECC~~Hale as well as along the major pathways leading to shoreline areas such as at Kēʻē Beach, near the Hālau Waʻa, and at the Cultural Gathering Place. Additional safety signage should be installed as necessary throughout the park in appropriate areas.

Emergency evacuation routes will be planned and ~~shown~~ provided on maps and directional signage located at key locations at the park ~~during the visitor orientation sessions~~ as well as indicated on visitor brochures and materials provided on the website and prior to park entry and park signage. ~~The loop paths through the loʻi can be used as an emergency route between Kēʻē and the Welcome Pavilion/ECC.~~ If people need to be airlifted out of the park, the emergency helipad and landing zones shown on the plan can be accessed from multiple locations.

Additional discussion about the natural hazards and mitigation measures are discussed in Section 3.10.

### 2.5.3 INFRASTRUCTURE IMPROVEMENTS

The following recommendations for infrastructure improvements were developed by Kennedy/Jenks Consultants to support the goals of the proposed Master Plan and preferences of the MPAC. See Section 4.7 and Appendix G and Appendix H.

#### 2.5.3.1 Integrated Water/Wastewater/Drainage System

The proposed Master Plan recommends installing an integrated water/wastewater/drainage system to maximize the efficiency and use of on-site water resources. It includes collecting rainwater and using treated wastewater for nonpotable water uses to minimize demand for potable water, as well as restoring the ʻauwai wherever possible and improving the drainage of surface runoff to irrigate surrounding garden areas or the loʻi if it can be appropriately filtered.

Specific design considerations for the integrated water/wastewater/drainage systems include:

- Using treated wastewater effluent and collected rainwater for irrigating the landscaping around the facilities such as the ~~ECC, picnic area, Caretaker's Cottage and baseyard~~ Montgomery House, Allerton Caretaker's Cottage, Welcome Hale, parking lot, and new restrooms. There are three levels of treated wastewater recognized by the State Department of Health (DOH) as recycled water. R-1 has the highest level of treatment and R-3 the lowest (Kennedy/Jenks 2010). The Master Plan recommends aerobic wastewater treatment to at least R-2. If the treated water quality is R-2, irrigation systems must be subsurface with no over-ground sprays. If the effluent is treated to R-1, over-ground spray and drip systems can be installed.
- Using recycled water and collected rainwater for toilet flushing at the ~~ECC, Caretaker's Cottage~~ new restrooms, Allerton Caretaker's Cottage, and Montgomery House to conserve potable water.

- Reducing the need for stream diversions by restoring the ‘auwai and collecting, storing and using rainwater.
- Using non-potable water for fire protection. Collected rainwater or even ocean water can be used for fire protection in emergencies.
- Directing rainwater runoff from the main parking to landscaped areas and rain gardens. Where possible, collecting and storing rainwater for reuse such as irrigation and possibly toilet flushing.
- Redesigning Kūhiō Highway culverts so that rainwater that passes beneath it flows more naturally and can be filtered and used in the ‘auwai system.

Control measures to prevent the spread of apple snails from the park’s lo‘i to Limahuli Stream should be included in any design or implementation of the ‘auwai and irrigation systems for the Agricultural Complex. Some suggestions include but are not limited to:

- Elevating and extending the outfall pipes from the Limahuli Stream diversions above the receiving ‘auwai so that the snails cannot crawl directly into the stream. The snails are known to dislike cold, fast-moving water, which is what flows from Limahuli Stream, and so the risk is minimized.
- Grading the ‘auwai to flow makai and away from Limahuli Stream.

For items specific to wastewater treatment:

- Treatment for wastewater should be with aerobic systems to a minimum R-2 water quality, with aeration and non-chlorine treatment such as ultraviolet (UV) disinfection to improve effluent quality. Consider using renewable energy sources to provide power.
- Locate effluent absorption beds under parking lots and driveways if permitted. DOH requires the use of aerobic treatment units certified by NSF/ANSI 245 for systems that discharge directly into the groundwater.
- Provide aeration to the existing constructed wetlands primary treatment tanks, powered by a PV system and replace the plants at the constructed wetlands to high-nutrient removing plants to improve water quality.
- For remote, low use facilities, consider composting toilets or ~~temporary/portable facilities as needed~~ innovative wastewater technologies.
- Use non-chemical disinfectants and cleaning products for maintenance, particularly in composting toilets, to minimize impacts to wastewater treatment processes and effluent quality. Use environmentally-safe soaps that contain plant nutrients and biocompatible cleaners.
- Since the proposed wastewater facilities are currently not standard according to the State Department of Health (DOH), include maintenance manuals and provide instruction to ensure proper upkeep of all wastewater systems at the park.
- As an alternative, vault systems, which are fully contained and can be pumped and treated at an off-site facility are also being considered should effluent reuse not be possible onsite.

### 2.5.3.2 Electrical Power

Many of the proposed facilities will require electrical power. There is currently no electrical power service at the park. Kaua'i Island Utility Cooperative (KIUC) service stops at the entrance to the park and should be extended to the turnaround for emergency lighting if desired at the shuttle stop, Welcome Pavilion/ECC and the Caretaker's Cottage. Renewable energy should be used to service the remaining electrical demand and as much as possible. ~~Renewable energy is encouraged with~~ Potential renewable energy resources ~~such as include~~ solar hot water heating and solar ~~electric~~ photovoltaics (PV), wind and hydro power.

Solar hot water heaters and PV electric systems are well-established technologies that have been installed widely throughout the islands. According to data from the Hawai'i Sugar Planters Association collected in 1985, an estimated 350 solar calories per square centimeter fall on the area per day (cal/cm<sup>2</sup>/day). The higher the intensity, the better the resource is. The average for the island is 350 cal/cm<sup>2</sup>/day, with ranges from 0 to 500 cal/cm<sup>2</sup>/day. A solar hot water heater can be installed at the ~~Caretaker's Cottage, the ECC, and any of the other~~ facilities that may require hot water, such as the Montgomery House and Allerton Caretaker's Cottage, once they are renovated. PV panels installed as shade structures at the shuttle stop, turnaround, restrooms, and comfort station at Kē'ē is recommended to power any new equipment needed for an upgraded wastewater treatment system.

Micro wind and micro hydropower are other sources of renewable energy that should be considered in addition to solar. There are smaller wind turbines that can be installed on rooftops at the park or those that rotate on a vertical instead of horizontal axis to minimize any impact to birds. There are also evolving wind technologies, such as the Humdinger Windbelt, developed by a Hawai'i-based company, that do not have rotating airfoils but capture energy from aeroelastic flutter (<http://www.humdingerwind.com>). As technology evolves, State Parks and DLNR should continue to look into viable alternatives as improvements are phased in and developed.

A microhydropower system needs a consistently running source of water (as little as two gallons per minute) and a relatively small elevation change (as little as two to three feet of head) to turn a turbine to create power. However, more of each will increase output. Microhydropower systems are more efficient the closer they are to the energy source and therefore Limahuli Stream, the only perennial stream at the park, could be investigated to provide a source for microhydropower. Neighboring Limahuli Gardens uses a microhydropower system to power their entire visitor center which runs on a 24V system and includes lights, a computer and cash register (Winter, personal communication 2011). Care must be taken, however, to size and locate the microhydropower to minimize impacts to the stream ecosystem and to account for periods of low stream flow. To minimize the impacts of microhydropower systems on native Hawai'i amphidromous biota, the diversion intakes must be designed to have low-velocity intakes placed subsurface in relatively deep pool in the center of the stream in order to minimize entrainment of larval or post-larval stream animals. Also, as a potential in-stream use, any microhydropower system should be integrated with a public trust use such as the taro lo'i production should it be pursued.

### **2.5.3.3 Communications**

In order to maintain communications and provide for public safety during emergencies, the existing hardline pay phone and emergency phone at Kēʻē Beach ~~is proposed to~~ should be maintained. For similar reasons, hardline telephone service ~~is proposed to be provided~~ should be considered at the turnaround and Welcome Hale if desired. ~~Caretaker's Cottage and Welcome Pavilion/ECC. A second pay phone or at least a closed circuit phone which connects to the Caretaker also is proposed to be located on the outside of the Welcome Pavilion/ECC so that emergency calls can be made when the ECC is closed and hikers who need assistance can contact the Caretaker.~~ The remote and mountainous location limits wireless communications. Wireless services should be considered for visitor convenience and may be required for certain parking management technologies.

### **2.5.3.4 Artificial Lighting**

In order to minimize impacts to Hāʻena's wildlife which can become disoriented at night by artificial lighting, the following recommendations will be followed for any lights designed for the park's facilities.

- All exterior lights will be fully-shielded (completely opaque) and downward facing full-cut off fixtures with the lowest light level (lumens) possible, sufficiently large, and positioned so that the bulb is only visible from below to minimize distraction and disorientation of wildlife flying overhead. They can also be installed lower to the ground to minimize light pollution and motion sensors and/or timers can be utilized to activate the lights only when absolutely necessary.
- Lighting plans and management plans will be carefully designed and implemented so that no light from the park is visible from the beach to minimize impacts to nesting sea turtles or their hatchlings seeking the ocean.
- The use of artificial lights should be minimized or reduced as much as possible during the seabird fledging season of September to December, and during the sea turtle hatching period July to September, and yellow lighting invisible to honu should be used near the shoreline. Night time construction should be avoided.

## **2.5.4 KEY MANAGEMENT RECOMMENDATIONS**

The following key management recommendations and principles ~~may help~~ will be followed to balance continued public and recreational use with the protection of the cultural, natural, and historic resources at the park.

### **2.5.4.1 Adaptive Management**

The HSPCAC recommended that adaptive management be the primary management concept adopted at the park given the diverse and passionate feedback received from the community. This will allow State Parks to make adjustments as they implement various management actions and learn what the impacts are. The U.S. Department of the Interior describes adaptive management as "an iterative learning process producing improved understanding and improved management over time. ...It is not a 'trial and error' process, ... but rather a means to more effective decisions and enhanced benefits. Its true measure is in how well it helps meet environmental, social and economic goals, increases scientific knowledge, and reduces tensions among stakeholders" (Williams et al, 2009).

Due to the complexity of the park environment, uncertainty of outcomes given potential changes in management strategies, and the active community, adaptive management provides a methodology State Parks can follow in order to improve resource management decisions while addressing community concerns. As noted in the technical guide,

Often the uncertainty about management impacts is expressed as disagreements among stakeholders who have differing views about the direction and magnitude of resource change in response to management. An adaptive approach explicitly articulates these viewpoints, incorporates them into the decision making process, and uses management itself to help identify the most appropriate view about resource dynamics. In this way, understanding of the resource can be enhanced over time, and management can improve. ... Management of problems like these increasingly involves a systems approach with explicit and agreed-upon objectives, management alternatives, and analytical approaches that can identify the most appropriate management strategies. (Williams et al, 2009)

The technical guide provides the following list of activities that can assist with adaptive management strategies if performed in a structured approach:

- Engaging the relevant stakeholders in the decision making process
- Identifying the problem to be addressed
- Specifying objectives and tradeoffs that capture the values of the stakeholders
- Identifying the range of decision alternatives from which actions are to be selected
- Specifying assumptions about resource structures and functions
- Projecting the consequences of alternative actions
- Identifying key uncertainties
- Measuring risk tolerance for potential consequences of decisions
- Accounting for future impacts of present decisions
- Accounting for legal guidelines and constraints

#### ***2.5.4.2 Cultural and Community Advisory Group***

A Cultural Advisory Group (CAG) ~~should~~will be established to advise State Parks on ongoing improvements, educational and interpretive materials, and cultural matters regarding the park. State Parks may also consult the CAG as needed for proposed management actions and proposed construction projects as well as interpretive programs and ~~devices~~tools. The CAG may be composed of representatives from the original Hā'ena families, as well as those persons who specifically lived in, worked, or cared for the lands within the park boundaries, and those who have relatives buried within the park. It should also include cultural practitioners with knowledge specific to hula, Ke Ahu a Laka and Ka Ulu a Paoa, fishing, and other cultural practices specific to Hā'ena. Draft recommendations for the establishment and responsibilities of the CAG are contained in the Master Plan report. They ~~may~~should be viewed as a starting point for developing the CAG and are subject to change.

~~The MPAC also believes a broader community advisory group comprised of diverse community representatives such as the MPAC can provide ongoing support and consultation on general park issues as the Master Plan is implemented. This group could be created by combining the CAG with additional members from the community. The MPAC recommends the larger group meet regularly, at least once a year, with State Parks and any future park~~

~~management entity if established. Organization and membership of such a group is yet to be determined. Should any current MPAC members be willing to continue assisting State Parks on an advisory basis, they would be welcomed.~~

Separate from the CAG, the broader community advisory group, the Hā'ena State Park Community Advisory Committee, or HSPCAC, has been established and will provide ongoing support and consultation on general park issues including the implementation of the master plan. The group has adopted a charter and plans to meet regularly, particularly when State Parks or the future management entity undertake any improvement projects or changes in park policy.

#### 2.5.4.3 Visitor Limits

Visitor counts at the park have risen significantly over the past twenty years. Table 3 summarizes various visitor counts taken at the park since 1993. The most recent counts were taken in the summer months and show that there are roughly 2,000 people who enter the park on a daily basis.

**TABLE 3: SUMMARY TABLE OF DAILY VISITOR COUNTS**

YEAR	MONTH/ SEASON	DAY OF THE WEEK	VISITORS PER DAY	SOURCE	NOTES
1993	Off-peak		50 (average)	The Keith Companies 2001	
1993	August		353 (average)	The Keith Companies 2001	
1998	September	Friday	1,501	DLNR State Parks	
1999			1,700	DLNR via Stepath 2006	
2008	August	Holiday weekend	1,950 (est.)	ATA 2011	Estimated based on 2.5 persons per vehicle
2010	February	Wednesday	1,247 (est.)	DLNR State Parks	Counts only conducted from 9 a.m.-4 p.m. Estimated based on 2.5 persons per vehicle
2011	July	Monday	2,028 (761 cars)	UH Hawaiian Studies (informal count)	Measured from 6:00 a.m. to 6:30 p.m. Includes 8 on bicycles, 14 hikers, 5 joggers, 20 pedestrians.

Currently, there are no visitor limits at the park. Many on the MPAC and in the community felt the current number of visitors is far too many and a limit should be set on the number of visitors to reduce impacts to the natural, cultural and scenic resources and to improve the overall visitor experience.

~~In response, State Parks plans to institute a daily visitor limit as part of the preferred plan. Initially, the number of people in the park would be limited to 900 people per day, which is less than half the number of daily visitors that typically enter the park during the summer months. State Parks may adjust the number over time depending on future improvements, improved/increased maintenance, and/or other studies such as impact studies, particularly if harmful impacts to the natural, cultural and archaeological resources occur.~~

~~The daily visitor limit does not include cultural practitioners, special user groups such as hālau, lo‘i workgroups, cemetery caretakers, or school groups. It also does not include the 60 hikers who obtain valid camping permits for the Kalalau Trail or the 30 hunters who obtain valid hunting permits for the Nāpali Coast State Wilderness Park Hunting Unit G.~~

In addition to these recommendations, because of the extensive archaeological, natural and cultural resources at the park, State Parks is proposing to limit the number of people in the park to 900 people per day on average during the peak hours of park use. The initial hours over which this limit would be applied are 7:30 AM to 5:30 PM, but are subject to change. This number is an initial visitor limit which State Parks may adjust over time depending on future improvements, improved/increased maintenance, and/or other studies such as impact studies, particularly if harmful impacts to the natural, cultural, and archaeological resources arise. The daily visitor counts will be averaged over the course of a month so adjustments can be made for park closure days and is therefore a soft limit that can be adjusted as needed on a daily basis.

This initial visitor limit is higher than what was recommended by the MPAC because it includes day hikers on the Kalalau Trail who numbered well over 500 in 2009. Because the trailhead is located within the park, visitors venturing on the trail are anticipated to use the park’s restroom facilities, often go swimming, and use the showers when they return from hiking on the trail. However, they are not impacting the park while on the trail. The visitor limit also does not include the hikers with valid camping permits or the hunters with valid hunting permits for the Nāpali Coast State Wilderness Park Hunting Unit G since they are not expected to be in the park using the facilities for very long and additional facilities are available at Hanakoa and Kalalau. The daily visitor limit also would not include cultural practitioners, or special user groups such as hālau, lo‘i workgroups, cemetery caretakers, or school groups.

By instituting a daily visitor limit, this will encourage visitors to plan ahead and an informational system via the internet, text messages, and email could be developed to distribute real-time information on park access, entry ticket availability during managed visitor hours, special events, and weather, ocean and any hazardous conditions at the park. Park managers will also be able to better manage park operation and resource impacts. In addition, they are able to anticipate how busy the park will be on any given day and post notices online or distribute updates to the visitor industry early in the day whether entry tickets will be available during the managed visitor hours. This could also help reduce casual drop-ins and general traffic along the highway through neighboring North Shore communities. Prior to instituting the proposed visitor limits, a public information campaign must be made far in advance so people are able to plan their visit to the park. State Parks acknowledges that park access will be an ever-evolving operational issue and will likely change over time as new policies are implemented. However, the goal is to study the impacts of these proposed policies and to adjust them as appropriate to improve the long-term management of the park and visitor satisfaction.

#### ***2.5.4.4 Required Staff/Volunteer Education***

As representatives for the park, all park staff as well as volunteers should be trained and be knowledgeable on the cultural, historic, scenic and natural resources at the park. They should also be well-versed on park rules, potential hazards, safety training and emergency evacuation processes, and proper protocol at cultural sites.

#### ***2.5.4.5 Required Visitor Orientation Prior to Park Entry***

~~It is also proposed that all visitors attend an educational session upon entering the park similar to the Hanauma Bay Nature Preserve on O‘ahu. The sessions would be held at the Welcome Pavilion in the near term and at the ECC once built. All visitors will be provided with park rules and information prior to entering the park. The visitor orientation could be made available on the State Parks website, sent via text or email, and tied to ticket distribution, particularly if advanced reservations become a requirement in the future. The orientation session could be a short online video that would educate visitors on appropriate recreational activities and behavior, safety precautions as well as sensitivity to natural and cultural resources and to cultural activities that may be occurring in the park. It should also include~~ In addition, texts or emails could be sent to park visitors prior to entry to inform them of safety precautions and updates on any special events or weather conditions. Similar orientation information should be posted at the Welcome Hale. The CAG should be consulted on appropriate cultural information to be included in the orientation session.

~~Once visitors complete the orientation session, they would not need to attend on subsequent visits to the park for a full calendar year as long as they register upon entry. Registration and orientation attendance could also be tracked and tied to annual passes, if administered. These orientation sessions could be held at the proposed Welcome Pavilion/Education and Cultural Center or even a temporary facility at the park entry.~~

## **2.6 PHASING AND TIMING OF ACTIONS**

Table 4 shows the preliminary phasing plan for the major tasks associated with implementing the Master Plan. The table is not meant to be comprehensive but is intended to identify the major implementation milestones to help guide the improvements at the park. It is also subject to the availability of project funding. For all improvements, appropriate permits, agency coordination, infrastructure improvements, landscaping, educational programing, and staff management and training will be required. Consultation with the Cultural Advisory Group and Hā‘ena State Park Community Advisory Committee should also be done on a regular basis throughout implementation.

TABLE 4: ANTICIPATED PHASING PLAN

SHORT TERM (IMMEDIATE - 5 YEARS)		
Capital Improvements	Cultural Environment	Natural Environment
<ol style="list-style-type: none"> <li>1. Rehabilitate Montgomery House.</li> <li><del>2. Mitigate immediate rockfall hazard above highway as mentioned in Section 2.5.3 and described in greater detail in Section 3.10.5.</del></li> <li>2. Work with County and other agencies as appropriate to establish shuttle/transit services <del>from the Princeville property.</del></li> <li>3. Improve main parking lot, sized appropriately based on shuttle/transit service. Include new turnaround and Entry Kiosk. Make provisions for subgrade leach field.</li> <li>4. Construct Welcome Pavilion Hale and new restrooms. <u>Ensure exit gate allows pedestrian and bicycle access even when locked for vehicles.</u></li> <li>5. Install <del>elevated</del> Interpretive Pedestrian Path from <del>ECC Welcome Hale</del> to Kē'ē Beach.</li> <li>6. Determine whether parking and/or entry fees should be collected. <del>If so, Install temporary</del> facilities near the main parking lot to support <del>fee</del> <u>ticket</u> collection and visitor orientation.</li> <li>7. Install safety signage (as appropriate).</li> <li>8. Plan for and make accommodations for future required infrastructure <u>as needed.</u></li> <li>9. Coordinate with the DOT on closure of highway or <del>eliminate vehicle traffic altogether. If decided, formalize transfer of this portion of the highway to State Parks. Install main gate to control vehicle access.</del></li> </ol>	<ol style="list-style-type: none"> <li>1. Establish Cultural Advisory Group early, prior to any design and construction contract awards.</li> <li>2. Complete rehabilitation of the Allerton Caretaker's Cottage.</li> <li><del>3. Work with County on management agreement for Ka Ulu a Paoa and Ke Ahu a Laka site and initiate solicitations for third-party management.</del></li> <li>3. Prior to any improvements within the main parking lot, survey the extent of the traditional house site (Feature 1600-8).</li> <li>4. Continue lo'i restoration, kalo cultivation.</li> <li>5. Update Interpretive Plan. Implement as appropriate.</li> <li>6. Coordinate with Hui on relocation of staging areas prior to construction of new entry facilities.</li> <li>7. <del>Initiate</del> <u>Develop</u> visitor orientation <del>sessions materials and institute proposed visitor limits during managed park hours</del> when new park entry facilities constructed, including appropriate behavioral conduct and protocols and cultural/historic/archaeological resource protection. <u>Initiate public education of new entry policies well-before any proposed visitor limits are instituted.</u></li> </ol>	<ol style="list-style-type: none"> <li>1. Relocate Life Guard Tower. Establish safe swim zones and set up markers.</li> <li>2. Restore and maintain Dune System, starting from Kē'ē.</li> <li>3. Plant dense native hala tree screen for rockfall mitigation along the highway and new parking lot.</li> <li>4. <del>Initiate visitor orientation sessions upon park entry including</del> <u>Include information on ocean and trail safety and natural resource protection information in visitor orientation materials.</u></li> <li>5. Start clearing invasive species in/around the loko. Review loko restoration requirements including water <u>resources.</u> Consider phasing restoration work starting with Loko Kē'ē. Consider whether native bird habitat is feasible to establish at loko in consultation with the U.S. Fish and Wildlife Service (USFWS) and provide ongoing maintenance. Restore with native plants and maintain.</li> <li>6. <u>Replace the plants at the Kē'ē constructed wetlands to high-nutrient removing plants to improve effluent water quality.</u></li> </ol>

<b>MID RANGE (5 - 10 YEARS)</b>		
Capital Improvements	Cultural Environment	Natural Environment
<del>1. Build Caretaker's Cottage and Baseyard.</del> 1. Improve pedestrian trails and install interpretive displays/wayside exhibits. 2. Improve drainage flows and install native plant bioswales to mitigate erosion/runoff problem areas.	1. Continue restoration and maintenance of Hula Complex. 2. Continue restoration and maintenance of lo'i. Design and implement restoration of 'auwai in conjunction with <u>main visitor complex drainage improvements</u> . 3. Establish the Cultural Gathering Area. 4. Build Hālau Wa'a. 5. Evaluate feasibility of/research potential restoration and development of Hale Interpretive Site (Feature 1600-8) located <u>within entry complex near the main parking lot</u> . 6. Restore and maintain other cultural sites such as Lohi'au's House Platform and the Historic Poi Mill.	1. Continue work on the Dune System, continuing eastward. 2. Continue loko restoration. 3. Initiate stream restoration work along Limahuli Stream and maintain. 4. Maintain work <u>initiated in the short-term above</u> .
<b>LONG RANGE (10 – 20 YEARS)</b>		
Capital Improvements	Cultural Environment	Natural Environment
<del>1. Build ECC, Picnic Area, and surrounding grounds. Review visitor parking requirements and adjust parking lot as appropriate. Locate ECC eastward of Welcome Pavilion into graded area if smaller parking lot is needed. Reuse or relocate Welcome Pavilion structure for other park uses.</del> 1. Refresh functionality of constructed wetland system at Kē'ē and install additional aeration component.	<del>1. Formalize visitor orientation sessions at ECC, including education on the cultural environment.</del> 1. Continue restoration and maintenance of Hula Complex and other cultural sites. 2. Continue restoration and maintenance of lo'i and loko. 3. Continue expansion of cultural programs.	<del>1. Formalize visitor orientation sessions at ECC, including education on the natural environment.</del> 1. Clear remaining invasive species. Restore and maintain with natives. 2. Continue and maintain work above. 3. Continue expansion of educational programs.

## 2.7 COST ESTIMATES

Order-of-magnitude cost estimates for the major elements of the proposed Master Plan are provided in Table 5 and should be updated and refined as detailed designs are developed for each. In addition, no topographic surveys were performed for the conceptual master plan so additional costs for site work and grading and related design and planning costs should be added to the estimates below. Public funds are anticipated to be used. However, there may be opportunities that arise during implementation to partner with other organizations on individual projects. Therefore the cost estimates are subject to change depending on the scope of the individual improvements and timing of implementation.

**TABLE 5: ORDER-OF-MAGNITUDE COST ESTIMATES**

	<b>QUANTITY</b>	<b>UNITS</b>	<b>UNIT COST</b>	<b>SUBTOTAL</b>	<b>WITH 15% CONTINGENCY (+15%)</b>	<b>PLANNING AND DESIGN FEES (15%)</b>
<b>NEAR-TERM PLAN</b>

## **3.0 DESCRIPTION OF THE NATURAL ENVIRONMENT, POTENTIAL IMPACTS, AND MITIGATION MEASURES**

This section describes the existing conditions of the physical or natural environment, potential impacts of the Hā'ena State Park Master Plan on the environment, and the proposed mitigation measures to minimize any potentially negative impacts.

### **3.1 CLIMATE**

#### ***Existing Conditions***

In general, northeasterly trade winds, interrupted by the occasional large-scale storm, are present year round at Hā'ena. Hā'ena State Park receives roughly  $97 \pm 2.5$  inches of rain per year on average (Giambelluca et al 2011). Other climatic data is not officially collected for Hā'ena. However, the Western Regional Climate Center<sup>2</sup> collects historic weather data at Wainiha, which can provide some generalities about climatic conditions along this stretch of Kaua'i's coastline. At Wainiha, the average annual temperature ranges between a high of 79.3 degrees to a low of 63.2 degrees Fahrenheit. While December through February are generally the coolest months, June through September are the warmest. Mean annual relative humidity ranges between 61 to 80 percent (NCDC 2009, 2015).

Surface winds are generally around 13 to 24 miles per hour from the northeast. There are some seasonal changes in prevailing wind direction in winter with southerly Kona winds. Strong winds occur at times in connection with storm systems moving through the area. Wind velocities and directions are influenced by the mountainous terrain to the south and west. Daily variations include diurnal effects of winds from the southwest quadrant during the night and morning hours, shifting to the northeast during the day.

#### ***Potential Impacts and Mitigation Measures***

The proposed Master Plan is not expected to have an impact on typical climatic conditions and no mitigation measures are anticipated.

### **3.2 GEOLOGY AND TOPOGRAPHY**

#### ***Existing Conditions***

Approximately five million years in age, the Island of Kaua'i is among the oldest islands of the Hawaiian archipelago. Originally thought to have been built from a single shield volcano, the island may in fact have been built primarily by the initial Nāpali formation of the Waimea (also Wai'ale'ale) shield volcano 4.35-5.1 million years ago with a possible second shield

---

<sup>2</sup> a three-partner program with NOAA's National Climatic Data Center, the Regional Climate Centers and State Climate Offices

volcano building upon the eastern portion of the island after a catastrophic collapse of the eastern side of the original volcano. This second volcano, the Līhu‘e shield volcano, was active about a million years later and is believed to have been located in the area of the Līhu‘e Basin. The flows along the coast in the area of Hā‘ena are of the original Nāpali Member and have been dated between 4.27-4.36 million years old (Blay and Siemers 2004).

The Nāpali scarp’s dramatic 1,000-2,000 foot cliffs that stretch for over fourteen miles along the northwestern coastline are generally believed to represent a major structural failure of the original volcanic dome. However, there is a more recent theory that this formation may have been created mainly by wave erosion (Blay and Siemers 2004). According to Blay and Siemers (2004), this remains a geologic controversy but they believe it is probably a combination of both theories.

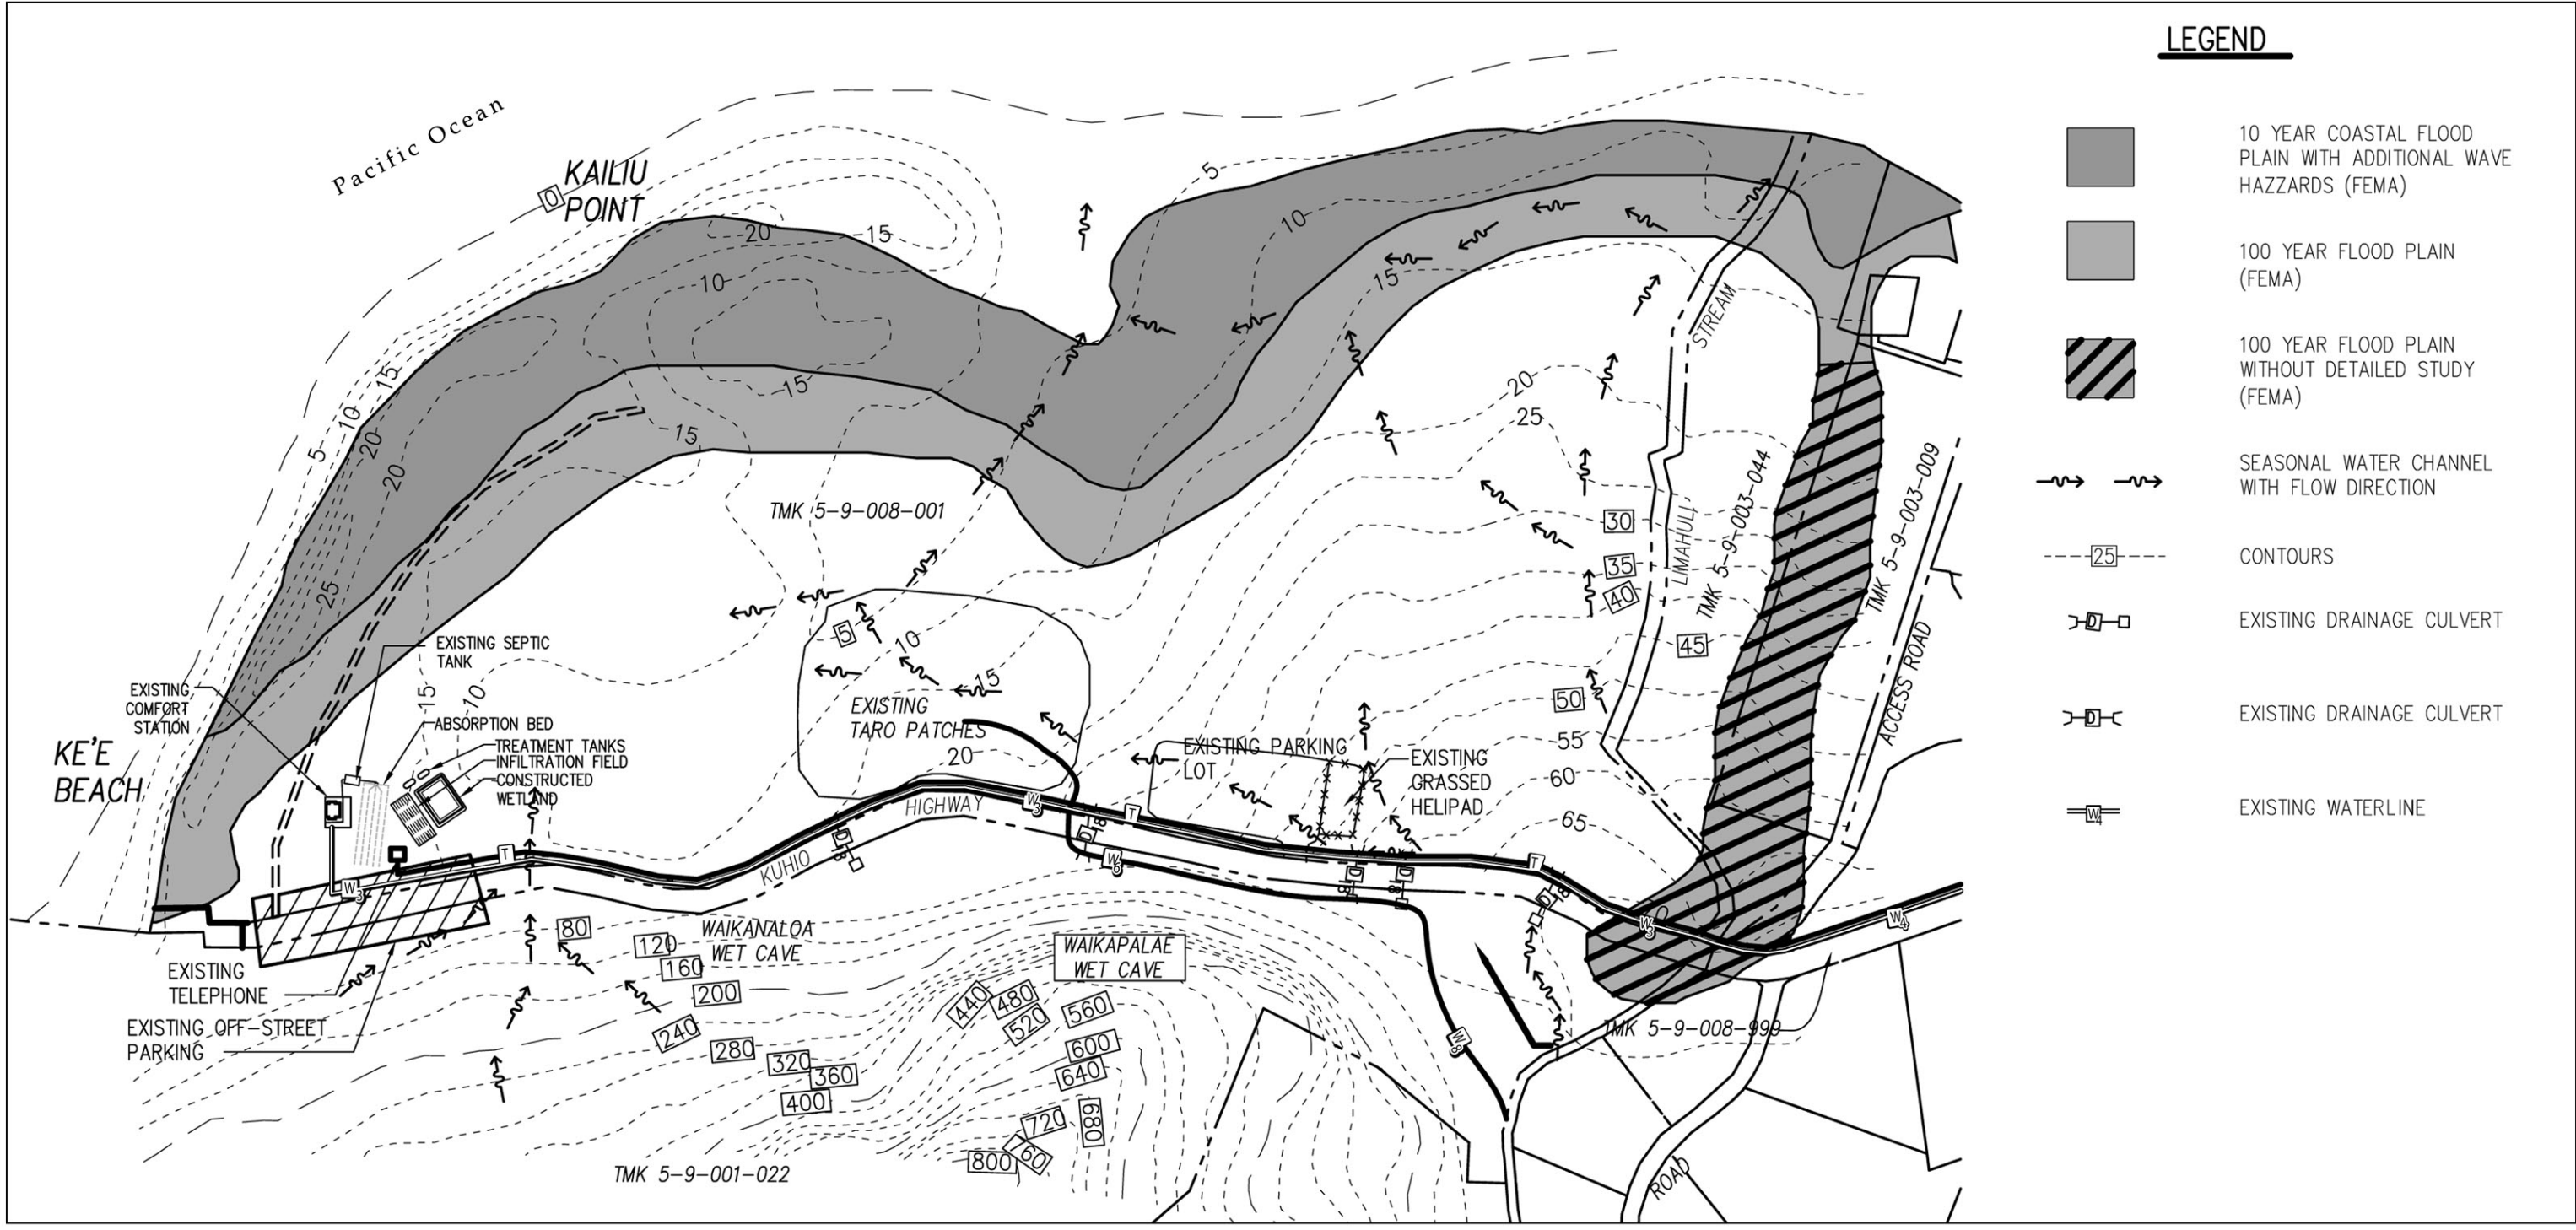

Kaua‘i’s post-erosional volcanic activity has largely been limited to the eastern portion of the island, leaving sedimentary processes as the major geological influence affecting the Hā‘ena State Park and Nāpali Coast.

Hā‘ena State Park sits at the western end of the Hā‘ena Plain, a coastal plain ~~comprised~~ of a basalt substrate covered by alluvial deposits along its mauka reaches and sandy beaches makai. Biogenic reefs, ~~comprised~~ composed mainly of coral and coralline algae, have grown like a “fringe” around the island. These reefs have provided skeletal matter for fragmentation, transport, and deposition at the shoreline to produce sandy beaches (Blay and Siemers 2004).

During the Pleistocene epoch (0.126 to 2.558 million years ago), the Earth experienced large fluctuations in global sea level. Drops in sea level lowered the erosional baseline for streams, carving valleys and cliffs to steep grades. The lower sea level allowed for the deposition of calcareous and alluvial deposits, including calcareous dunes now lithified. These dunes run along the park’s makai boundary and are a prominent feature along the existing beach.

Another geologic feature of note within the park boundary is the variety of sea caves carved into the side of the mountain through natural processes. These caves were carved as a result of a rise in sea level during the Pleistocene, when existing lava tubes were enlarged by wave action. Currently, the valley flats are a result of alluvial fill from stream erosion and a decrease in sea level of five feet from its highest level.

The majority of Hā‘ena State Park lies on coastal plain formed by colluvial and alluvial deposition. The bulk of the park area is at a ground elevation of between 10 and 30 feet above sea level. However, mauka of Kūhiō Highway, the land rises steeply into the Nāpali cliffs. A dune system parallels the shoreline while the area of the park bound by the dunes and Kūhiō Highway is generally flat with hydrology that was altered by a prehistoric (pre-western contact) ‘auwai. Figure 11 provides a topographic map of Hā‘ena State Park.

## HĀ'ENA STATE PARK

Department of Land and Natural Resources

Island of Kaua'i

NORTH

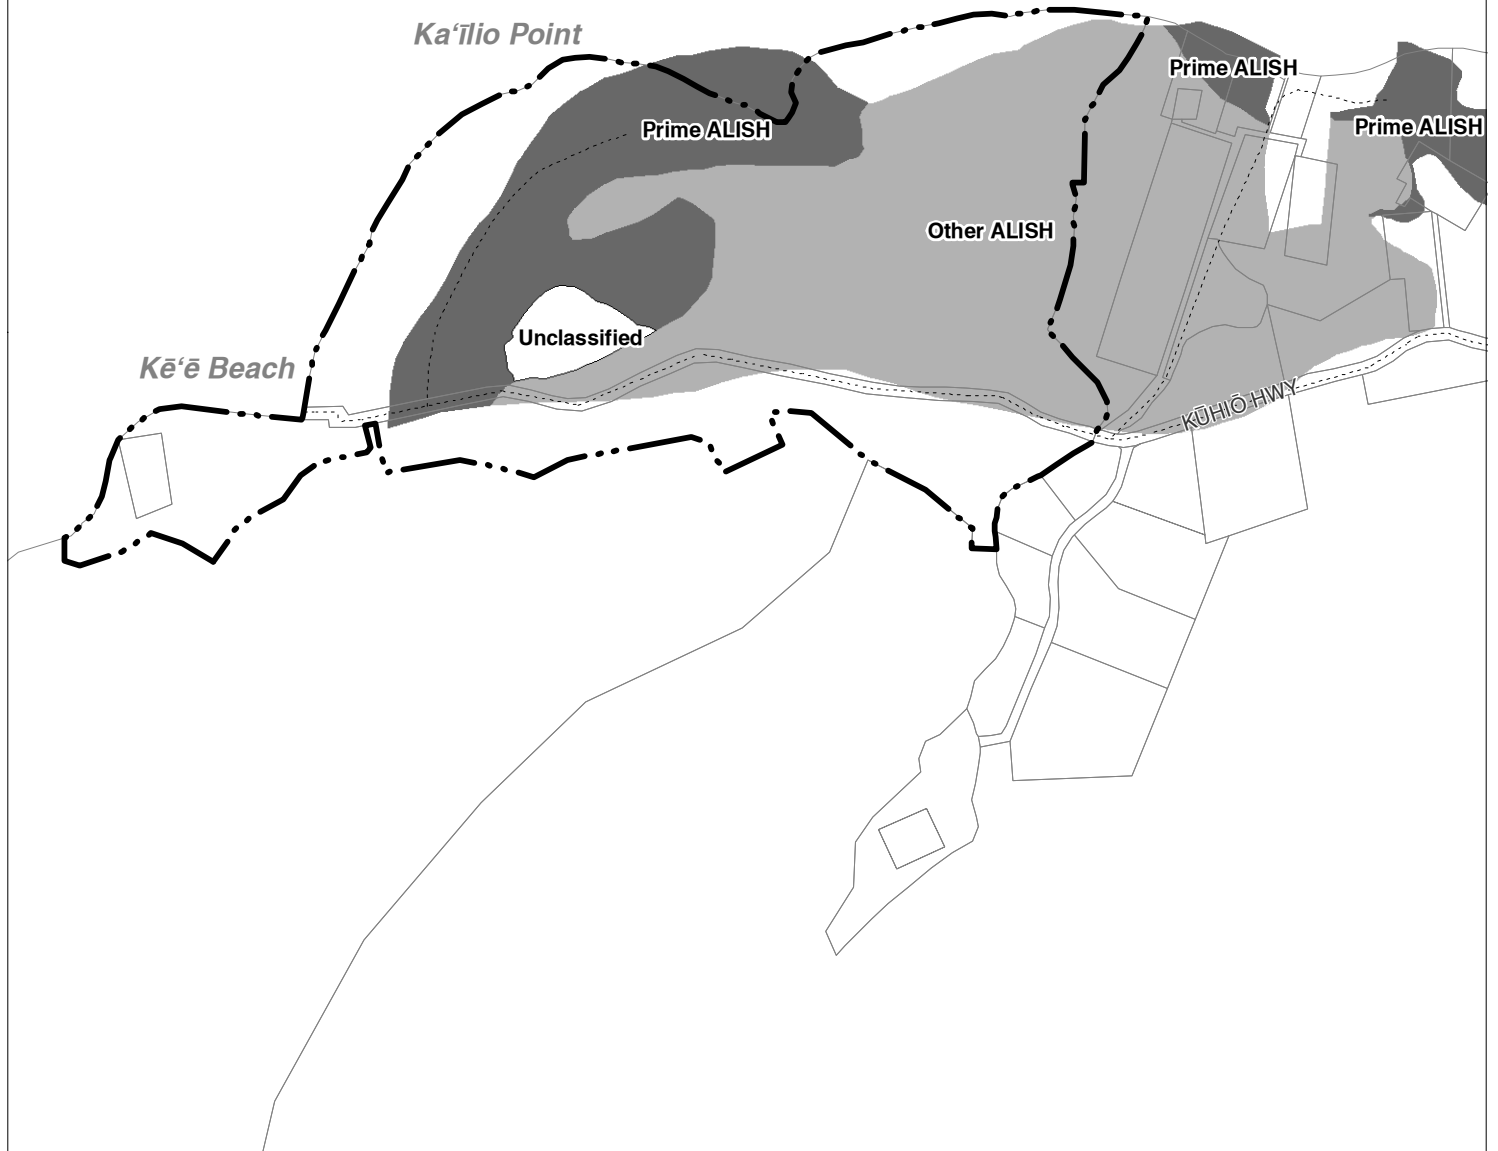

LINEAR SCALE (Feet)

As the land rises mauka of Kūhiō Highway, weathering has exposed rock formations and talus boulders pile up along the cliffs. Within the boundary of Hāʻena State Park, the cliffs rise nearly 500 feet in elevation. Beyond the park boundaries into the Nāpali Coast State Wilderness Park, the shoreline cliffs are over 1,000 feet in height.

### ***Potential Impacts and Mitigation Measures***

The proposed Master Plan will have no effect on Kauaʻi's geology. Nor will it involve alteration to important geological features, such as the wet or dry caves within Hāʻena State Park. The Master Plan also recommends shifting most of the visitor traffic away from the base of the cliff due to the potential for rockfalls, which will also reduce visitor impacts to Wai a Kanaloa (wet cave) as fewer people will access it.

One of the priority recommendations identified in the Master Plan is the restoration of the coastal dunes (Section ~~2.5.2.8~~–2.5.1.10). Restoration will have multiple benefits including shoreline protection, protection of the iwi kupuna interred within the dunes, removal of alien and invasive species, and the potential return of native wildlife. To avoid impacts to the coastal dunes, visitors will still be permitted to picnic on the beach, but not on the dunes. Other potentially damaging recreational activities such as driving on the sand will also be prohibited. The relocated lifeguard tower is proposed to be built up rather than excavated into the sand to mitigate subsurface impacts. Further, the public will be encouraged to access the beach via marked and cleared trails, rather than crossing over the dunes.

## **3.3 SOILS**

### **3.3.1 SOIL SURVEY**

The U.S. Department of Agriculture's Natural Resource Conservation Service (NRCS, formerly the Soil Conservation Service), *Soil Survey for the Islands of Kauaʻi, Oʻahu, Maui, Molokaʻi, and Lānaʻi, State of Hawaiʻi* (1972) identifies six different soil types within the park (Figure 12). NRCS descriptions of the soil types, which emphasize agricultural uses and productivity, follow below.

**Beaches (BS)** occur as sandy, gravelly, or cobbled areas on all the islands. They are washed and rewashed by ocean waves. The beaches at the park consist mainly of light-colored sands derived from coral and seashells. Where accessible and free of cobblestones and stones, they are highly suitable for recreational uses.

**Hanalei silty clay, 0 to 2 percent slopes (HnA)** is found on stream bottoms and flood plains. In a representative profile, the surface layer, about ten inches thick, is dark gray and very dark gray silty clay that has dark brown and reddish mottles. The subsurface layer is very dark gray and dark gray silty clay about three inches thick. The subsoil, about 13 inches thick, is mottled, dark gray and dark grayish brown silty clay loam that has angular blocky structure. The substratum is stratified alluvium. The soil is strongly acid to very strongly acid in the surface layer and neutral in the subsoil. Permeability is moderate. Runoff is very slow, and the erosion hazard is no more than slight. The available moisture capacity is about 2.1

inches per foot of soil. Roots penetrate to the water table. Flooding is a hazard. This soil is used for taro, pasture, and sugarcane.

**Hanalei silty clay, 0 to 6 percent slopes (HrB)** has a profile like that of HnA (above) except that it has fewer mottles and the water table is at a depth of more than three feet. This soil is used for sugarcane, taro, pasture, and vegetables. The Hanalei silty clay soils, HnA and HrB, comprise the bulk of the park's soils and underlay the Agricultural Complex.

**Marsh (MZ)** consists of wet, periodically flooded areas covered dominantly with grasses and bulrushes or other herbaceous plants. It occurs as small, low-lying areas along the coastal plains. Water stands on the surface, but marsh vegetation thrives. The water is fresh or brackish, depending on proximity to the ocean.

**Mokulē'ia fine sandy loam (Mr)** occurs on the northwestern coastal plains of the park, and is nearly level. Below the surface, the soil has a profile similar to that of Mokulē'ia clay loam, which is characterized by dark-brown and light-gray, single-grain sand and loamy sand. Permeability is moderately rapid in the surface layer and rapid in the subsoil. Runoff is very slow, and the erosion hazard is slight. The available water capacity is about one inch per foot in the surface layer and 0.7 inch per foot in the subsoil.

**Rock outcrop (rRO)** consists of areas where exposed bedrock covers more than 90 percent of the surface. It occurs on all five islands. The rock outcrops are mainly basalt and andesite. This land type is gently sloping to precipitous. This land type is not suited to farming. It is used for water supply, wildlife habitat, and recreation.

### 3.3.2 LAND STUDY BUREAU DETAILED LAND CLASSIFICATION

The *Detailed Land Classification, Island of Kaua'i* by the University of Hawai'i Land Study Bureau (LSB) document classifies non-urban land by a five-class agricultural productivity rating system, using the letters A, B, C, D and E, where "A" represents the highest class of productivity and "E" the lowest. The entire Hā'ena State Park is classified as "E," or "Very Poor," according to this soil rating system (Figure 13).

### 3.3.3 AGRICULTURAL LANDS OF IMPORTANCE TO THE STATE OF HAWAII

The State of Hawai'i Department of Agriculture's Agricultural Lands of Importance to the State of Hawai'i (ALISH) system rates agricultural land as "Prime," "Unique," or "Other." The remaining land is not classified.

"Prime" agricultural land is best suited for production of food, feed, forage and fiber crops. The land has the soil quality, growing season and moisture supply necessary to economically sustain high yields of crops when treated and managed including water management, according to modern farming methods.

"Unique" agricultural land can be used for specific high-value food crops. The land has a special combination of soil quality, growing season, temperature, humidity, sunlight, air drainage, elevations, aspect, moisture supply, or other conditions that favor the production of

a specific crop of high quality and/or high yield when the land is treated and managed according to modern farm methods.

“Other” agricultural land is vital to production of food, feed, fiber and forage crops, yet they exhibit properties that are not ideal, such as seasonal wetness, erosion, limited rooting zone, slope, flooding, or drought. The land can be farmed satisfactorily through greater fertilization and other soil amendment, drainage improvement, erosion control practices, and flood protection and can produce fair to good crop yields when properly managed.

Figure 14 shows that the lands behind the coastal dunes are classified as “Prime” and the majority of the remaining park land is classified as “Other.” The soils associated with Loko Kē‘ē and Kē‘ē Beach are “Unclassified.”

### ***Potential Impacts and Mitigation Measures***

Impacts to soils, such as soil erosion can occur during construction and during the life of a development. Sediment from soil erosion can negatively impact freshwater habitat in streams and can smother coral reefs. New facilities are proposed in previously disturbed areas to minimize the possibility of encountering subsurface archaeology and opening new areas to erosion. During construction, best management practices for soil and erosion control will be implemented to contain and/or filter any runoff and to control sedimentation, erosion, and dust. Efforts will be made to minimize all large-scale grading, grubbing, and stockpiling of soil and limit such activity to the dry season whenever possible. Long-term soil and erosion control measures have also been designed into the Master Plan including the installation of an integrated water/wastewater/drainage system, bioswales and rain gardens, and rainwater catchment cisterns, which will capture and filter stormwater runoff and create the opportunity to use collected rainwater for on-site nonpotable water uses such as irrigation and toilet flushing. Restoration of the loko, wetlands and the ‘auwai system or at least the redirection of rainwater to the restored Agricultural Complex and the proposed drainage area adjacent to the main parking area will also help reduce the amount of water sheet flowing through the park and causing erosion and runoff problems. Subject to available funding, State Parks is also currently considering an interim drainage study to see if there are improvements that can be made at the park immediately to help prevent washouts at Kē‘ē as has happened recently.

## **3.4 GROUND AND SURFACE WATER**

### **3.4.1 GROUND WATER**

#### ***Existing Conditions***

The dominant water resources on each of the Hawaiian Islands are volcanic rock aquifers. There are four general types of groundwater, dike, perched, unconfined basal and confined basal. Especially on Kaua‘i, perennial streams fed by groundwater springs are common. The groundwater resource beneath Hā‘ena State Park is basal water floating on salt water (UH Department of Geography 1983).

However, due to the presence of a discontinuous, unmapped confining layer, the nature and extent of the basal ground water lens is not well understood (Wilson Okamoto 2008). Further mauka, beneath the Nāpali mountains, the water is confined by dikes and not floating on salt water (UH Department of Geography 1983). According to the DLNR Commission on Water Resource Management's (CWRM) Water Resource Protection Plan, Hā'ena State Park is located within the Wainiha System (Hanalei Sector), which has an estimated sustainable yield of 24 million gallons per day (gpd) (Wilson Okamoto 2008).

#### ***Potential Impacts and Mitigation Measures***

On-site wastewater disposal can potentially impact groundwater resources if not treated properly. The Master Plan recommends that all wastewater be treated with an aerobic system to a minimum R-2 water quality with aeration and non-chlorine treatment such as UV disinfection to improve effluent water quality and minimize potential impacts. Replace the plants at the constructed wetlands to high-nutrient removing plants to also improve water quality. Treatment to R-1 water quality would further improve effluent water quality and allow additional uses of the recycled water such as overground and drip irrigation.

The Master Plan also recommends the use of non-chemical disinfectants and cleaning products for maintenance, particularly in composting toilets if utilized, and environmentally safe soaps that contain plant nutrients and biocompatible cleaners to minimize impacts to wastewater treatment processes and effluent quality. No withdrawals of groundwater are proposed at the park and potable water use from the County's water system is anticipated to be reduced due to the reduction in the number of visitors. Therefore, no mitigation measures to off-set groundwater quantity are proposed.

### **3.4.2 SURFACE WATER**

#### ***Existing Conditions***

Surface water resources in Hā'ena State Park include Limahuli Stream, which flows mauka to makai along the eastern border of the park, and standing water in the two wet caves, Wai a Kanaloa and Waiakalapa'e, and Loko Kē'e. There is also an extensive 'auwai system that irrigated the lo'i up until the mid-twentieth century and still exists in parts. There is interest among community members to see if it can be restored and made active again along with the restoration of the lo'i.

The *Hawai'i Stream Assessment* (1990) lists Limahuli Stream as a perennial stream that flows to the sea year-round and identifies it as an "outstanding aquatic resource" due to the presence of native 'o'opu. The source of freshwater within Hā'ena State Park begins at the top of the valley at 3,300 feet above sea level and reaches the valley floor after plummeting down an 800-foot waterfall. Only the lower 1,500 feet of the stream courses through Hā'ena State Park.

The *Atlas of Hawaiian Watersheds and their Aquatic Resources* (Parnham, James E., Higashi, Glenn R., et al., 2008) acknowledges the protection Limahuli Stream enjoys due to its Conservation designation and location primarily within Limahuli Preserve, managed by the

National Tropical Botanical Garden (NTBG). The Atlas also documents that previous studies have identified the presence of native species and confirmed few introduced genera.

In October 2001, Mike Kido with the University of Hawai‘i’s Hawai‘i Stream Research Center produced an overview of the existing conditions, flora, and fauna in Limahuli Stream. Kido reported that between 1994 and 1999, average stream flow was approximately 6.3 million gallons per day (mgd). Even in severe drought periods, substantial groundwater flow in the valley sustains base flows of approximately 2.6 mgd. According to U.S. Geologic Survey’s Annual Statistics for Hawai‘i, for the period of 1999-2005 the average surface flow was 7.72 mgd.

Limahuli Stream water is diverted for irrigation and residential purposes by multiple landowners. According to the CWRM, there were seven separate diversions from Limahuli Stream, six of which are still active. Of the six active diversions, three supply NTBG’s Limahuli Garden and Preserve and three serve private residences. A portion of the water diverted for Limahuli Garden is conveyed to the lo‘i at Hā‘ena State Park by PVC pipe. Two of the diversions serve domestic uses and the rest are for agricultural, landscaping, or other irrigation purposes. The total diversion amount for five of the diversions is 0.8822 cubic feet per second (cfs), or just over 570,000 gpd. The amount diverted for one of the private residences is unknown. Table 7 provides a summary of the registered diversions from Limahuli Stream.

**TABLE 7: REGISTERED DIVERSIONS FROM LIMAHULI STREAM**

<b>DIVERSION DIAMETER</b>	<b>OPERATOR</b>	<b>QUANTITY DIVERTED (CFS)</b>	<b>WATER USE</b>
3” pipe	National Tropical Botanical Garden	0.00203	Irrigation
1.5” pipe	National Tropical Botanical Garden	0.44557	Irrigation (May have been restored to the stream)
6” pipe	National Tropical Botanical Garden	0.3342	Agriculture, Landscaping, Irrigation
Pipe (diameter unknown)	Private Residence	0.0892	Domestic, Irrigation
2” pipe	Private Residence	0.0112	Agriculture, Landscaping, Irrigation
5” pipe	Private Residence	Unknown	Domestic
<b>TOTAL</b>		<b>0.8822</b>	
Source: CWRM (2008, 2011)			

### ***Potential Impacts and Mitigation Measures***

The Master Plan does not propose any additional water diversions or change to the volume of water currently diverted from Limahuli Stream for irrigation. However, the Master Plan suggests investigating the potential of Limahuli Stream as a renewable source of energy through a microhydropower system. Should any new or increased diversion of water from Limahuli Stream be desired, permits may be required from the CWRM, as described in the pre-consultation response letter dated August 25, 2008 (Section 11.0). CWRM permits that

may be required include: Stream Channel Alteration Permit; Stream Diversion Works permit and/or a Petition to Amend Instream Flow Standards. To minimize the impacts of microhydropower systems on native Hawai‘i amphidromous biota, the diversion intakes must be designed to have low-velocity intakes placed subsurface in relatively deep pool in the center of the stream in order to minimize entrainment of larval or post-larval stream animals. Also, as a potential in-stream use, any microhydropower system should be integrated with a public trust use such as the taro lo‘i production should it be pursued.

Microhydropower systems use the energy of instream flows to turn a turbine and produce electricity so no stream diversions are required. As noted in Section 2.5.3.2, a microhydropower system requires a consistently running source of water (as little as two gallons per minute) and a relatively small elevation change (as little as two to three feet of head) to turn a turbine to create power. Neighboring Limahuli Gardens uses a 24V microhydropower system to power their visitor center which includes lights, a computer, and cash register (Winter, personal communication 2011). Larger systems will power more uses.

Mitigation measures under consideration to ensure that the park elements do not contribute to the degradation of surface water resources include the installation of bioswales around the parking lot to filter stormwater before it is conveyed to drainages and the use of rain barrels to collect roof runoff for nonpotable water uses such as irrigation and toilet flushing. The Master Plan also recommends the use of non-chemical disinfectants and cleaning products and environmentally-safe soaps that contain plant nutrients and biocompatible cleaners as well as the elimination of chemical pesticides and herbicides.

Further investigation will be necessary prior to detailed design of the parking lot to see if the ‘auwai can be restored to serve the lo‘i without extreme requirements or cost. If it is found that it can be restored, the grading and landscaping of this area should be done so that stormwater runoff from the parking lot is diverted away from the ‘auwai and directed to flow across the grassed areas of the parking lot or towards the bioswales and adjacent landscaped areas, which could be designed as rain gardens. In addition, the design of the restored ‘auwai should be carefully done so as not to hydraulically connect it to Limahuli Stream since Limahuli Stream is currently free of the invasive apple snail and the park’s lo‘i are known to have them.

Pedestrian paths throughout the parking lot and drop-off/pick-up areas should be surfaced with permeable pavers or pavements or natural soil hardeners to increase rainwater infiltration while providing a stable, ADA-accessible surface. The proposed surface for the near-term visitor parking lot and the Kē‘ē special access parking area is permeable pavement and/or structural grass over the entire parking lot or at least half of the parking lot so it can be used for multiple purposes. This will stabilize the area while allowing rainwater to infiltrate into the ground to prevent ponding and soil erosion.

During construction of park elements, best management practices to control sediment, erosion, dust, or polluting runoff to the maximum extent practicable from flowing into

waterways will be employed. Certain construction activities within the park may trigger the need for a National Pollutant Discharge Elimination System permit.

### 3.5 WETLANDS

#### *Existing Conditions*

Throughout the park, there are areas designated as wetlands by the USFWS National Wetlands Inventory (NWI), using the best available data. They are primarily created through aerial photography interpretations and, while they cannot provide a definite wetland boundary for construction or regulatory purposes, they are useful for guidance when evaluating an area's suitability for development or uses.

The primary designation, PFO3C, covers most of the interior areas of the park behind the dunes and makai of the highway. PFO3C is a palustrine (inland, non-tidal) wetland that is forested with broad-leaved evergreen vegetation and is seasonally flooded. The PEM1C wetland type is mapped over Loko Kēʻē and east of the parking area. These areas are palustrine (inland), persistently emergent (characterized by hydrophytic plants) and seasonally flooded.

Along and off the coast are several classifications of marine wetlands. M1RFL is the predominant offshore classification indicating a subtidal (permanently submerged below tidal waters) marine wetland with coral reefs. Along the narrow splash zone of the coast are two different intertidal marine wetlands – M2USN (unconsolidated shores that are regularly flooded at least once daily such as beaches and flats) and M2RSN (rocky shorelines that are regularly flooded by tidal waters). Within the two broader beach areas are M2USP wetlands which are intertidal, unconsolidated shorelines that are irregularly flooded (less than daily). Limahuli Stream is classified as an upper perennial (high gradient with fast water velocity) riverine system with a rocky bottom that is permanently flooded (R3RBH).

In October 2008, a wetland delineation study was prepared by AECOS, Inc. for the renovated comfort station's individual wastewater system (constructed wetland) project at Kēʻē. AECOS interpreted the western edge of the PFO3C wetland to be a former pond wall (thought to be the edge of Loko Kēʻē). However, in their June 15, 2009 letter<sup>3</sup>, the U.S. Army Corps of Engineers (USACOE) determined that the wetland did not extend as far as the wall and recommended that any work performed fifteen feet east of the wall require a new wetland delineation study. The new study would also require a new determination by the USACOE. The AECOS wetland delineation study and USACOE determination letter are documented in the Final Environmental Assessment for the Hāʻena State Park Individual Wastewater System Improvements (PBR HAWAII & Associates 2010) and are included as an appendix in the Master Plan report, which is available on the State Parks website for Hāʻena State Park (<http://dlnr.hawaii.gov/dsp/parks/kauai/haena-state-park/>) attached as Appendix I.

---

<sup>3</sup> USACOE File Number POH-2009-00067.

Presently, ongoing management of the wetlands is limited to the stocking of the surface water with mosquito guppies as a vector control measure (Juran, personal communication).

Figure 15 compiles the approximate NWI wetland boundaries from the State GIS files, the AECOS wetland survey map, and the recommendation from the USACOE.

In the biological report prepared by Geometrician Associates (Appendix C), two of the eleven vegetation zones are identified as wetland-related: “Marsh/Pond and Marsh/Cultivated Zones” and “Hau swamp and Hau Forest Zones.”

### ***Potential Impacts and Mitigation Measures***

No new facilities are proposed within known wetlands. However, the ~~Interpretive-Pedestrian~~ Path may cross over them and therefore the footings for this ~~elevated~~ walkway will need to be installed in potential wetland areas. The NWI maps are non-regulatory and do not represent a precise delineation of wetlands. Therefore, State Parks will need to carefully design the proposed improvements to ensure that wetlands are avoided or can be appropriately mitigated. If it appears that water, hydric soils or wetland plants are present in the vicinity of proposed construction or grading activity, a wetlands delineation study will be conducted to locate the boundary of the resource and verification from the USACOE will be sought.

Some members of the MPAC expressed a desire to restore the loko and wetland areas (Loko Kē‘ē and Loko Naia) for endangered native birds and possible agricultural uses. Geometrician Associates believe it might be possible to restore the small wetlands on the property for the purpose of creating a native bird habitat. However, they do not recommend modifying these areas specifically to attract endangered birds or any federally listed species for practical and legal reasons. However, if this is pursued, there are several management requirements to be considered, some of which are outlined below.

- Consult and coordinate with state and federal agencies to determine best course of action for improvements and ongoing management of the park for endangered animal species.
- State Parks must enter into a Safe Harbor Agreement (SHA) prior to undertaking the habitat improvement. This is a voluntary arrangement between the USFWS and a cooperating non-federal landowner under the authority of Section 10(a)(1) of the Endangered Species Act of 1973, 16 U.S.C. 1536(b)(4), 1539(a)(1). Under the SHA and an associated enhancement of survival permit, the non-federal property owner implements actions that will result in a net conservation benefit for species listed under the Act without the risk of further restrictions pursuant to Section 9 of the Act, which prohibits take of listed species. The property owner also receives assurances related to modifications of the SHA or termination of the permit. Such agreements allow a landowner to promote threatened and endangered species on their property without liability for incidental takes that may occur.
- The wetlands should be protected through fringing vegetation that encourages viewing but discourages direct entry and possibly fencing shielded by landscaping to

help minimize access by predators. This would reduce the potential for endangered birds to be harassed, injured or killed directly or indirectly by people or their pets due to the wetlands' proximity to the main entrance. This action should be done for any wetland restoration effort.

Restoration of the loko is expected to be beneficial to the environment, thus, no mitigation measures are anticipated at this time. In particular, wetland restoration would help protect the park against the impacts of climate change, particularly sea level rise, in accordance with the climate change adaptation priority guidelines (§226-109, HRS). If the loko are restored for agricultural uses, the Master Plan recommends the avoidance of pesticide or herbicide use. No diversion of the surface waters present in the park's wetlands are proposed.

### **3.6 MARINE ENVIRONMENT**

#### ***Existing Conditions***

SWCA Environmental Consultants investigated the existing marine conditions at Hā'ena State Park in 2008. The subsequent report (SWCA 2010) analyzed the adjacent nearshore waters around Kē'ē Beach and is attached as Appendix D. As part of the initial master planning efforts, a beach and ocean recreation study for Hā'ena State Park was prepared for DLNR by John Clark in 1992. In addition to analyzing potential recreational opportunities and constraints, the study also provides a description of the nearshore marine environment including the reefs that fringe the Hā'ena coastline (Figure 16). The SWCA report included a review of Clark's 1992 report and provided updates to Clark's findings where necessary.

Hā'ena State Park is located in the Ka'ilio shoreline sub-section of Hā'ena. Three outlets bisect the beach within the park boundaries—Limahuli Stream, a small intermittent tributary stream, and several freshwater seeps. Ocean conditions in the park are typical of northern exposed coasts in Hawai'i which can experience dangerously high surf conditions, primarily during winter months. Between October and May, swells can be in excess of ten feet at Hā'ena, but during summer months when trade wind swells typically dominate, the surf is generally reduced (Clark 1992). Recent observations show that many of the tree roots along the shoreline have become exposed due to erosion from wave action (SWCA 2010).

According to SWCA, northeast trade winds are present between 90-95 percent of the year and almost always generate some surf activity on the outer reef margins. Predominant longshore currents run east to west outside the reef. High surf conditions added to these currents can generate a powerful rip current that exits the narrow channel at the west end of Kē'ē Lagoon and into the open ocean, creating a hazard for swimmers and divers (SWCA 2010). Previous studies found tidal currents ranging from 0.1 to 1.0 knots, and Clark (1992) suggested that such current velocities were not usually a concern for nearshore ocean recreation activities. However, lifeguards at Kē'ē Beach strongly objected to SWCA biologists' plan to conduct snorkel surveys of the outer reef in November 2008 even during a day with unusually calm conditions (SWCA 2010).

Between Kēʻē Beach and Limahuli Stream, the beach is the wide and extends up to 150 feet mauka. The edge of the beach is lined with false kamani and ironwood trees. The area between Hāʻena Point and Kēʻē Beach is backed by low sand dunes roughly four to eight feet high. Growth of these sand dunes is limited due to the presence of introduced tree stands. Clark noted a continued recession of the existing shoreline based on historical photo analysis of the region since the 1920s.

Since Clark’s inventory, the University of Hawai‘i, School of Oceanography and Earth Science and Technology (SOEST) has similarly studied beach erosion based on aerial photography. Depending upon the location along the shoreline at Hāʻena State Park, SOEST found the beach to be eroding at a rates ranging between less than six inches per year to as much as one foot per year (see Figure 17).

The primary swimming area in Hāʻena State Park is Kēʻē Lagoon, which is a large sand pocket protected by the surrounding platforms of fringing reef. SWCA found that much of Clark’s description of the reef in 1992 still remains accurate in 2008. “Sand and reef pavement comprise the dominant marine geomorphologic structures between Kēʻē Beach and Maninihola Bay to the east. From Maninihola Beach west to Hāʻena Point the reef consists of aggregate reef, scattered coral and rock, and rubble with small patches of reef pavement. The reef pavement is covered with “macro-algae, coralline algae, and corals; however, the sandy lagoon floors and channels are uncolonized” (SWCA 2010). Live coral cover in Kēʻē Beach ranges between 4 and 47 percent in some areas due to the large amount of visitor traffic. There are a variety of inshore reef species in addition to macroinvertebrates, algae, and live coral species (SWCA 2010).

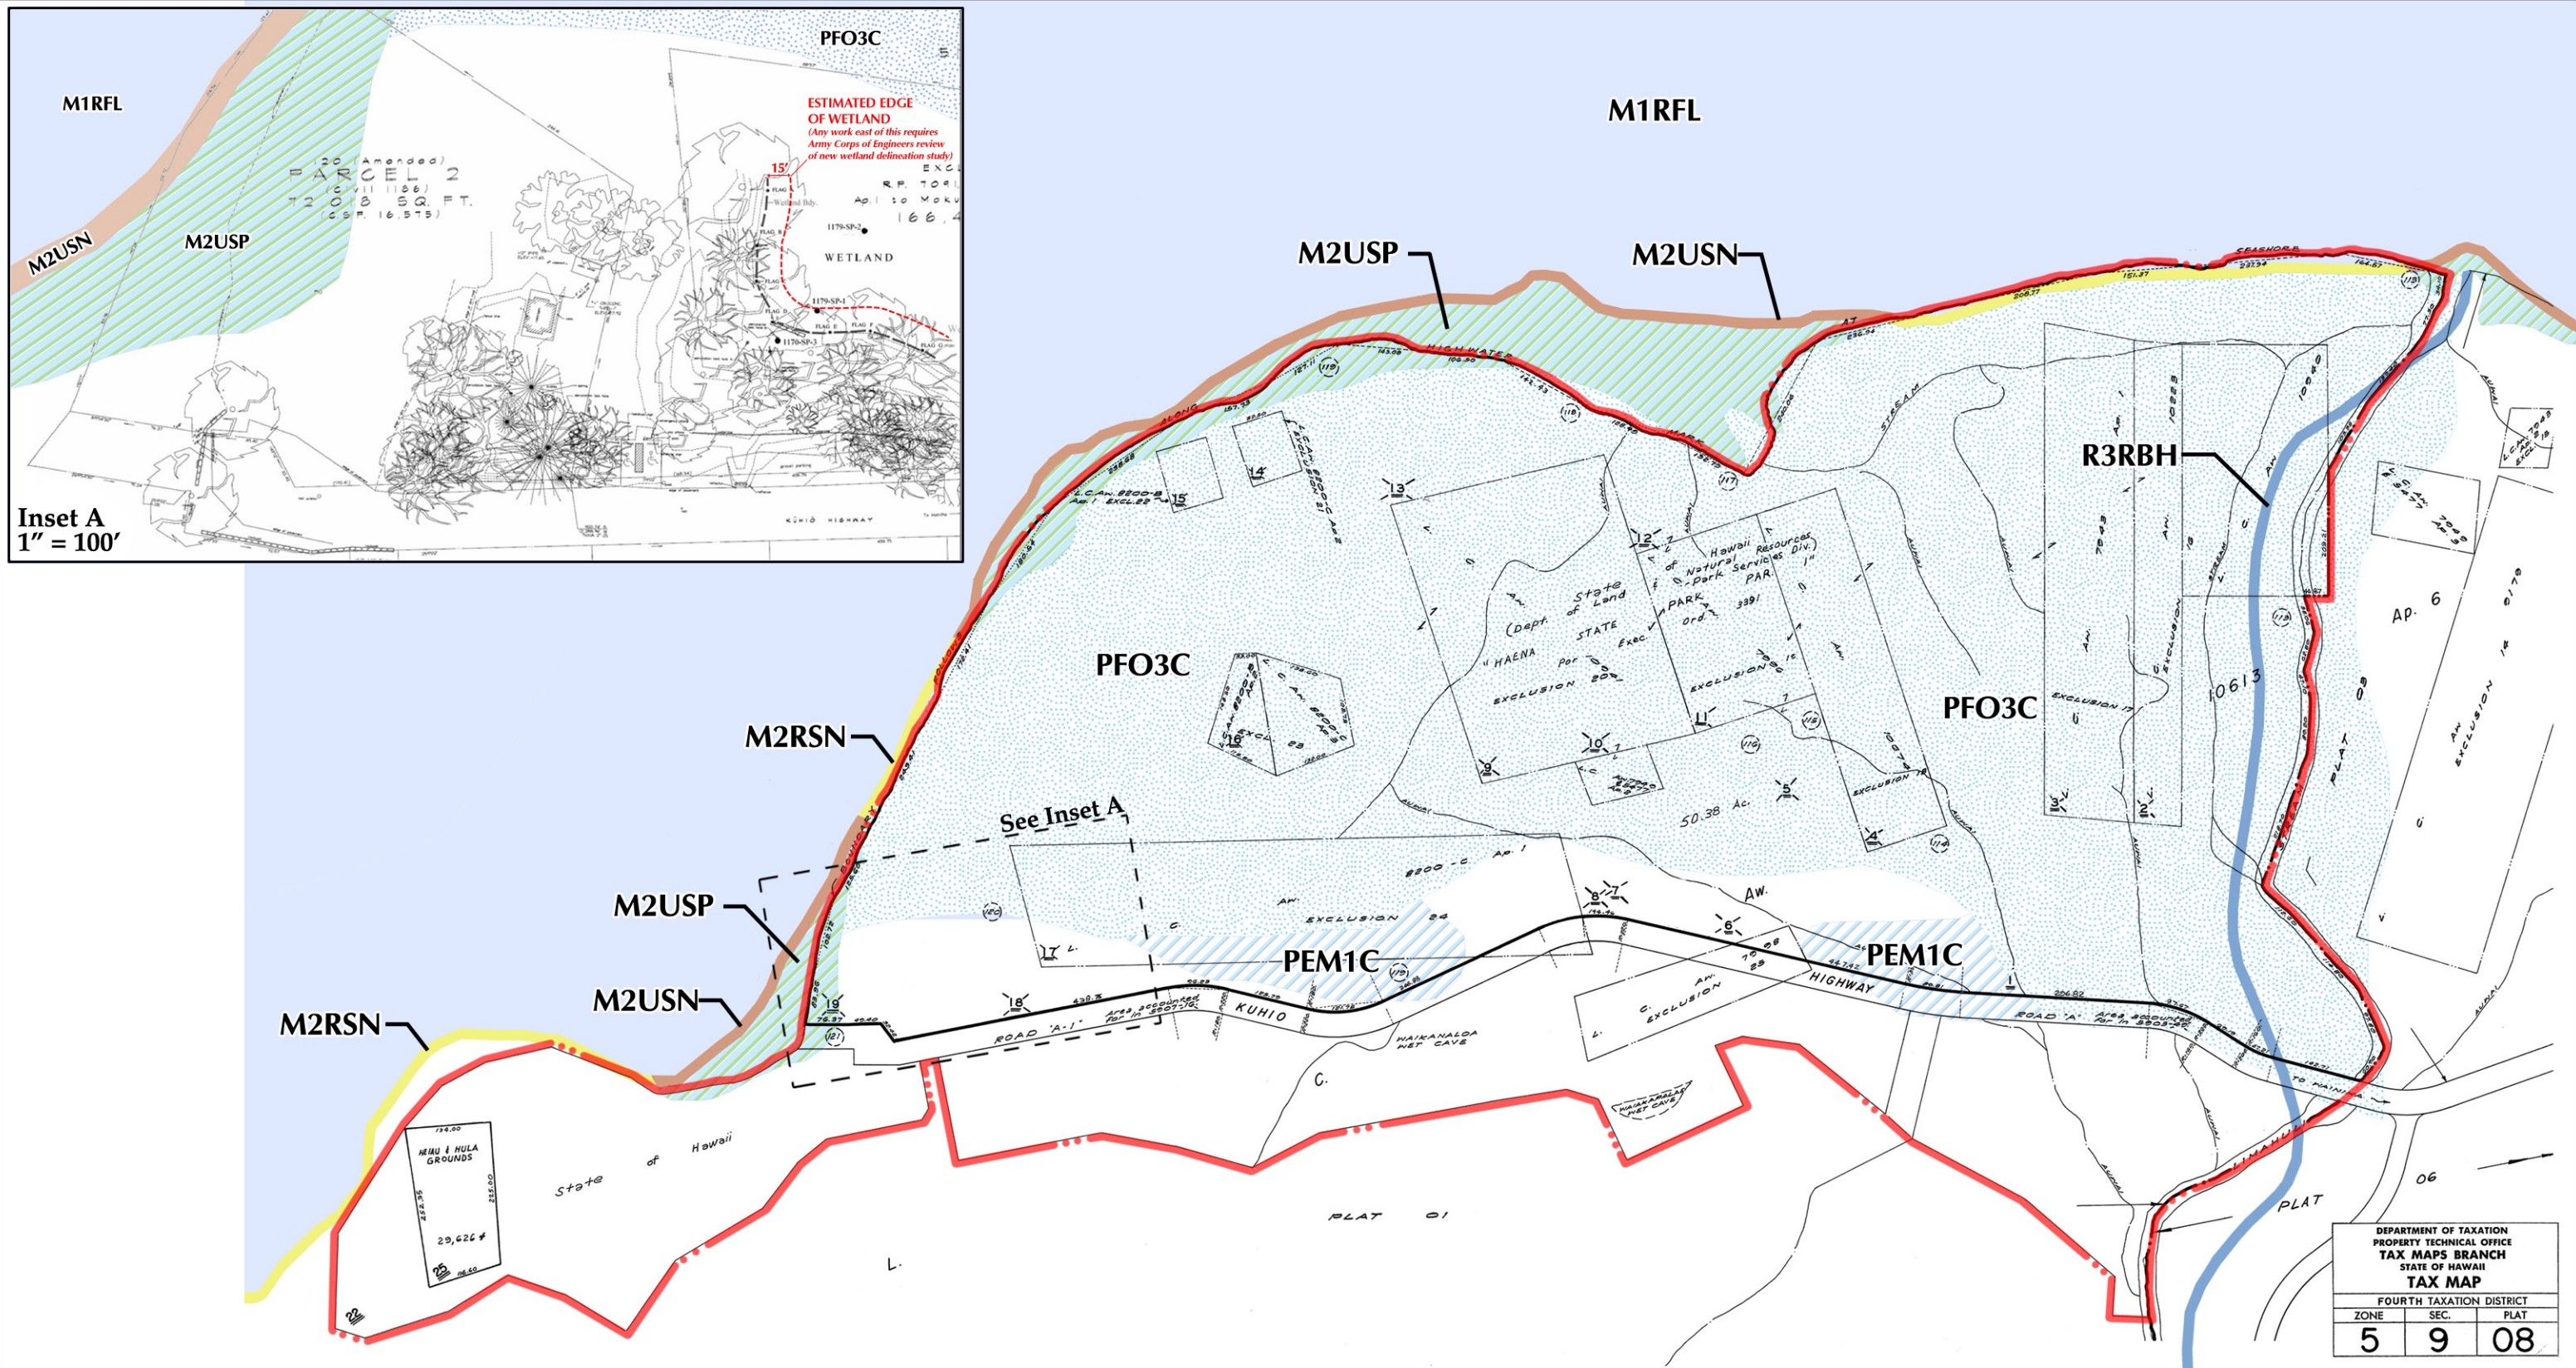

The State DOH has designated the offshore marine waters of Hāʻena with a Class AA rating which recognizes the area’s significant ecological and recreational value (Figure 18). The Class AA waters are bounded by areas less than 18 meters (60 feet) in depth. Uses to be protected in this class of waters include oceanographic research, the support and propagation of shellfish and other marine life, conservation of coral reefs and wilderness areas, compatible recreation, and aesthetic enjoyment.

Based on initial samples collected in 2005-2006, the DOH (2008) found that state standards for Class AA waters for enterococci and coliform were attained at Kēʻē Lagoon. State standards for Class AA waters were also attained at Hāʻena State Park for temperature, salinity, dissolved oxygen, pH, and turbidity (SWCA 2010).

### ***Potential Impacts and Mitigation Measures***

In general, the Master Plan is not anticipated to have any impact on the natural marine processes, such as waves and currents. All of the proposed facilities are located outside of FEMA’s delineated 100-year special flood areas subject to wave action. However, because the Master Plan proposes a limit on the average number of visitors to the park per day, the improvements and management strategies seek to have a net positive impact on the park’s marine environment, including marine water quality and health of the coral reef.

NORTH

LINEAR SCALE (Feet)

A variety of potential management measures are recommended to maintain Class AA coastal water standards and prevent shoreline erosion. They include reduction, detainment, and filtration of stormwater runoff, increased treatment and reuse of wastewater effluent, prevention of soil erosion, and instruction on ocean-friendly visitor behavior. Shoreline erosion can be slowed or even halted by allowing natural tidal, current and wind processes to shape Hā'ena's shoreline. Measures under consideration to accomplish this goal include studying Hā'ena's specific natural dune building processes, restoring or removing vegetation as appropriate, compliance with the County of Kaua'i's shoreline setback regulations, and prohibition of shoreline hardening structures. These mitigation measures may also help protect the park against the impacts of climate change, particularly sea level rise, in accordance with the climate change adaptation priority guidelines (§226-109, HRS).

### **3.7 MARINE BIOLOGICAL RESOURCES**

#### ***Existing Conditions***

The nearshore waters of Hā'ena are known for their abundance of marine life. The plant and animal life of Hā'ena's waters provided sustenance for the ahupua'a and have become an attraction for sport fishers and snorkelers. Historically, Hā'ena is particularly known for abundant limu kohu (*Aparagopsis taxiformis*) and a large population of octopus (*Octopus vulgaris* and *Octopus ornatus*).

In 1999, Carl Stepath and Save our Seas compiled a variety of studies and found that fish populations in Kē'ē were not as diverse as in other areas. During the survey, approximately 40 species of fish were identified by divers. In neighboring Hanalei Bay, approximately 160 species of fish were identified. However, the majority of fish observed in the Hā'ena study areas were in their juvenile stage which indicates Kē'ē is an important nursery area for native fish species.

Endangered Hawaiian monk seals (*Monachus schauinslandi*) or 'īlio-holo-i-ka-uaua, "the dog who runs in the sea," are frequently observed at Hā'ena State Park. In August 2015, the National Marine Fisheries Service (NMFS) issued a final rule revising the critical habitat for the Hawaiian monk seals to include the marine habitat fronting Hā'ena State Park from the 200-meter depth contour line, including the seafloor, through the water's edge and 5 meters into the terrestrial environment from the shoreline (50 Code of Federal Regulations Part 226). Therefore, any changes in these areas will require consultation with the NMFS. The honu, or green sea turtle (*Chelonia mydas*), is listed as threatened under the Endangered Species Act and are known to graze upon algae in shallow nearshore reef waters around the north shore of Kaua'i, including the waters of Hā'ena State Park. Although no evidence of turtle nests were reported in SWCA's survey, the sandy beaches within Hā'ena State Park are suitable for sea turtle nesting, and the possibility of a future turtle nesting there cannot be dismissed (SWCA 2010, Appendix D).

#### ***Potential Impacts and Mitigation Measures***

Human disturbance in the water can also cause harm to marine resources, including coral, fishes, and honu. As described in Section ~~2.5.2.1~~ 2.5.4.5, it is recommended that all visitors

~~attend an educational session~~ receive visitor orientation information prior to park entry that would provide a brief overview of the park's extensive but sensitive natural and cultural resources and instruct visitors of the appropriate activities and behaviors allowed at the park, such as no reef walking or harassing marine life, especially endangered and threatened species. The recommendation to apply sunscreen after exiting the water rather than just before entering will also be made to reduce impacts to water quality.

The proposed Master Plan seeks to reduce potential impacts to marine wildlife compared to current conditions. State Parks is proposing to limit the average number of people in the park to 900 people per day ~~which is less than half of the current number of visitors per day during the summer during peak visitor hours~~. This number is an initial visitor limit which State Parks may adjust over time depending on future improvements, improved/increased maintenance, and/or other studies such as impact studies, particularly if harmful impacts to the natural, cultural and archaeological resources arise.

Marine species, including coral and the fishes and invertebrates that live in coral reef environments, are sensitive to land-based polluted runoff (Wilkinson and Brodie 2011). The Master Plan includes measures to minimize polluted runoff, including the consolidation of visitor parking to the main entry lot and subsequent reduction in the number of motor vehicles driving the length of Kūhiō Highway and idling and turning around at Kē'ē Beach. Currently, there is no limit to the number of vehicles entering the park and driving the length of the highway to Kē'ē. However, cars will not be permitted to drive along the highway in the proposed plan. In addition, the total number of vehicles in the park will decrease as a result of the reduction in visitors permitted to enter the park and the provision of a shuttle service to the park could further reduce that number.

Land-based pollution will be further minimized through solid waste management and the installation of bioswales around the parking areas to capture sediment and pollutants that might run off this surface. Rainwater cisterns will also be employed to collect rainwater that falls on the roofs of the proposed facilities, further reducing the quantity of runoff flowing into the ocean. Collected rainwater is recommended for irrigation and other nonpotable water uses such as toilet flushing.

The Master Plan recommends secondary treatment of all wastewater to a minimum of R-2 water quality with an aerobic system with aeration and non-chlorine treatment such as UV disinfection to improve effluent quality and reduce potential impacts to marine water quality. Also recommended is replacement of the plants at the constructed wetlands to high-nutrient removing plants to improve water quality, the use of non-chemical disinfectants and cleaning products for maintenance, particularly if composting toilets are installed, and environmentally-safe soaps that contain plant nutrients and biocompatible cleaners to minimize impacts to wastewater treatment processes and effluent quality. Chemical herbicides and pesticides for agricultural uses and park maintenance are also not recommended.

In their EISPN comment letter, the USFWS also recommends that lighting plans and management plans be carefully designed and implemented so that no light from the park is visible from the beach to minimize impacts to nesting sea turtles or their hatchlings seeking the ocean. These recommendations have been added to the Master Plan.

One of the management ~~strategies~~ goals in the Master Plan is to protect and sustain the long-term viability of Hā'ena State Park's nearshore resources. The Master Plan includes recommendations for interpretive devices such as signage and programs administered at the ECC to assist visitors in understanding the fragility of nearshore marine resources. State Parks will also support the rules adopted for the Hā'ena Community-Based Subsistence Fishery Area. Other management strategies under consideration include:

- Establish a program of long-term scientific monitoring of fish and invertebrate populations trends within park marine waters.
- Allow sufficient flexibility and insure long-term monitoring to employ the principal of adaptive management and allow changes to be made to permitting processes and management actions, as deemed appropriate, based upon the results of long-term monitoring and catch statistics.

As noted earlier, better protection and maintenance of the health of the coral reef will also better protect the park against the impacts of climate change, particularly sea level rise, in accordance with the climate change adaptation priority guidelines (§226-109, HRS).

### **3.8 TERRESTRIAL AND FRESHWATER FLORA**

#### ***Existing Conditions***

In May 1988, Kenneth M. Nagata conducted a botanical study for Hā'ena State Park on behalf of DLNR (Nagata 1991). In addition to identifying the various types of vegetation found within the confines of the park, Nagata also provides additional recommendations to preserve existing fauna. In January 2009, Drs. Terry and Hart (Geometrician Associates, LLC) conducted an updated biological survey of Hā'ena State Park. The survey included a physical survey of flora and fauna; a review of previous surveys of the area (including Nagata's work); report of the results describing plant communities, and habitats; and, discussion of potential effects from increased recreation on wildland resources. Appendix C contains Terry and Hart's survey report.

Terry and Hart found that biological resources within the park have been drastically affected by the introduction and proliferation of non-native, invasive plants and trees. They identified eleven vegetation zones compared with Nagata's six (Figure 19). Over time, areas that were grasslands have become more wetland-like. Terry and Hart dug several soil pits during their winter survey (January 2009) and noted the presence of mucky, sulfidic soils indicating frequent saturation and reducing conditions, meaning that the inundated condition is not unusual. They recommended further investigation to delineate the boundaries of the wetlands per the definitions of Section 404 of the Clean Water Act. The area also included approximately an acre of standing water and they noted native Koloa Maoli or Hawaiian ducks (*Anas wyvilliana*) utilizing the ponds daily.

Additionally, areas that Nagata found to be dominated by ironwood trees (*Casuarina equisetifolia*) near the dunes have been encroached upon by Java plum (*Syzygium cumini*) and false kamani (*Terminalia catappa*) forests.

A total of 117 flowering plants and nine ferns or fern allies were observed by Terry and Hart at the park in 2009. Most of the plant species found were alien. However, fifteen were indigenous and six were Hawai'i endemics. Several of the alien species recorded are also considered invasive. In whole, native species comprise approximately 17 percent of the total number of species, but account for negligible land cover. No listed or proposed threatened or endangered plant species were found on-site during Terry and Hart's survey.

However, comments from the USFWS dated August 29, 2008 (Section 11.0) indicate that one endangered plant species, makou (*Peucedanum sandwicense*), is reported from the area, but there is no designated critical habitat in the planning area. In 2010, critical habitat ecosystems were updated for the Island of Kaua'i. A review of Geographic Information Systems (GIS) data after this update found that no new critical habitats have been designated for Hā'ena State Park. USFWS confirms that there are no critical habitats within the park, but there is one nearby in the Nāpali Coast State Wilderness Park for the makou.

The native plants Terry and Hart did find within the park were scattered and in small numbers. The exceptions were along the strand associated with the dune complex, on rugged pali cliffs, and in the wetland areas where hau (*Hibiscus tiliaceus*) dominates although the hau is a relatively recent newcomer and was not nearly as widespread in 1991 as it is today. Of the 15 native species, only Koali, or morning glory (*Ipomoea indica*), and the Ni'ani'au fern (*Nephrolepis exaltata hawaiiensis*) are widely common today, with hala (*Pandanus tectorius*) and hau scattered but locally abundant. Pōhuehue (*Ipomoea pes-caprae*) is considered abundant in the strand zone. Except in the pali area, all of the endemic species are uncommon in the park.

Two endemics found in 1988 were also found in 2009. They are Ko'oko'olau (*Bidens forbesii*), a common lowland species on the north shore, and 'Āhinahina (*Artemisia kauaiensis*), which is found throughout the sea cliffs of Kaua'i and are found only on Kaua'i.

Kumu Roselle Bailey noted in her article published in *Humu Mo'olelo: Journal of the Hula Arts*, that the native 'Ālula (*Brighamia citrina*) and 'Ēkaha (*Asplenium nidus*) once grew at Ke Ahu a Laka but disappeared after a news story of the Keonelo petroglyphs made the site popular to the general public (Bailey 2008). Terry and Hart make no mention of them in their 2009 survey however they may have historically been there as noted.

Species of cultural importance, such as Ki or Ti (*Cordyline fruticosa*), 'Ōhi'a 'ai or mountain apple (*Syzygium malaccense*), Kō or sugar cane (*Saccharum officinarum*), Mai'a or banana (*Musa paradisiaca*), Noni (*Morinda citrifolia*), Niu or coconut (*Cocos nucifera*), 'Ulu or breadfruit (*Artocarpus altilis*), 'Ape (*Alocasia macrorrhizos*), kalo or taro (*Colocasia esculenta*) and kukui or candlenut (*Aleurites moluccana*) are found in small numbers

throughout the park, with some larger specimen of kukui and breadfruit indicating old plantings.

According to an unpublished report prepared for DAR by Mike Kido, riparian cover along Limahuli Stream's contours are predominantly alien species and provide shade for approximately 70.4 percent of the stream. Native tree species account for less than one percent of all riparian areas below Limahuli Falls. Approximately 328 metric tons of plant litter is deposited within riparian areas annually, which Kido estimates translates into 48,204 metric tons of plant litter being processed within the stream environment and exported as organic nutrients in times of flooding (Kido 2001 unpublished).

### ***Potential Impacts and Mitigation Measures***

The Master Plan proposes to improve the park's terrestrial flora by clearing invasive species and restoring native vegetation and native ecosystems throughout the park. The areas in order of priority are the coastal strand, the ironwood and false kamani forest, the Limahuli riparian zone, and talus slopes. Restoration of the native flora would increase native plant conservation and opportunities to educate the public. This may also indirectly support native birds including endangered and threatened species without a formal effort to create an endangered species habitat.

State Parks also proposes a 900 person daily visitor limit ~~in the Master Plan on average during peak hours~~, which is less than half of the current number of visitors during the summer. Additionally, as described in Section ~~2.5.2.1-2.5.4.5~~, it is recommended that all visitors be ~~required to attend an educational session provided with visitor orientation information prior to park entry~~ that would provide a brief overview of the park's extensive but sensitive natural and cultural resources and instruct visitors of the appropriate activities and behaviors allowed at the park. Such a significant reduction in visitor use and better education on the park's resources will have a net positive impact for the park's flora.

These restoration activities are considered to be beneficial to the park's botanical resources. Therefore, no mitigation measures are anticipated.

### 3.9 TERRESTRIAL AND FRESHWATER FAUNA

#### *Existing Conditions*

Terry and Hart's January 2009 biological survey (Appendix C) conducted for the Master Plan also included a survey of animals within the park. Thirteen species of birds were observed during their survey including the endangered Koloa Maoli, or native Hawaiian Duck (*Anas wyvilliana*), two indigenous shorebirds (Kōlea, Pacific Golden Plover, *Pluvialis fulva* and 'Ūlili, *Heteroscelus incanus*) and Koa'e Kea, the White-tailed Tropicbird (*Phaethon lepturus dorotheae*), an indigenous seabird. All other observed birds were non-native introductions.

Additional species of seabirds, waterbirds, shorebirds and forest birds that are federally listed as endangered or threatened may use the park. The wetlands may also provide feeding and nesting areas to the indigenous 'Auku'u or Black-crowned Night-heron (*Nycticorax hoactli*). Other federally endangered waterbirds that would likely use the wetlands are the Ae'o or Black-necked Stilt (*Himantopus mexicanus knudseni*), 'Alae ke'oke'o or Hawaiian Coot (*Fulica alae*), 'Alae'ula or Hawaiian Moorhen (*Gallinula chloropus sandvicensis*), and Nēnē or Hawaiian goose (*Branta sandvicensis*).

It is also expected that the federally endangered 'Ua'u or Hawaiian Petrel (*Pterodroma phaeopygia sandwichensis*), federally threatened 'A'o or Newell's Shearwater (*Puffinus auricularis newelli*) and the 'Ake'ake or Band-rumped Storm-petrel (*Oceanodroma castro*), listed by the State of Hawai'i as endangered, would fly over Hā'ena State Park to their nests in the mountains. These birds, especially the young, can be affected by exterior lighting and become disoriented.

Although not sighted during the survey, the endangered 'Ōpe'ape'a, or Hawaiian Hoary Bat (*Lasiurus cinereus semotus*), probably utilizes Hā'ena State Park as it has been seen in the Hanalei and Princeville areas.

Terry and Hart detected feral cats (Pōpoki; *Felis catus*) during their survey, and also recognized that mice ('Iole li'ili'i; *Mus* spp.) and rats ('Iole; *Rattus* spp.) are likely also present. They also acknowledged the presence of wild pigs (Pua'a; *Sus s. scrofa*) and goats (Kao; *Capra h. hircus*) that are known throughout this part of Kaua'i.

Terry and Hart's survey also identified various skinks, anole, gecko and bullfrog in the park, and acknowledge that there are likely more species of reptiles and amphibians throughout the park. All were alien species and common on Kaua'i.

Terry and Hart also surveyed the freshwater species inhabiting Limahuli Stream. They note five species of endemic 'O'opu or Hawaiian gobies may inhabit this stream, including the 'O'opu alamo'o (*Lentipes concolor*), 'O'opu nopili (*Sicyopterus stimpsoni*), 'O'opu naniha (*Stenogobius hawaiiensis*), 'O'opu akupa (*Eleotris sandwicensis*) and 'O'opu nakea (*Awaous guamensis*).

Invasive species in Limahuli Stream include the Tahitian prawn (*Macrobrachium lar*) and poeciliids (swordtails, *Xiphophorous helleri* and guppies, *Poecilia reticulata*). According to Kido, the presence of poeciliids in particular poses a serious threat to the native ‘O‘opu. Poeciliids are known to carry water-borne pathogens which infect ‘O‘opu (Kido 2001 unpublished). Limahuli Garden and Preserve staff have observed that poeciliids are now well-established in the lower stream reaches.

### ***Potential Impacts and Mitigation Measures***

Seabirds are attracted to artificial lights and can be downed after circling the light source and tiring or colliding with the pole or other objects. Once grounded, they can be struck by motor vehicles or are easy prey for cats, dogs or other animals. Therefore, all exterior lights will be fully-shielded (completely opaque) and downward facing full-cut off fixtures with the lowest light level (lumens) possible, sufficiently large, and positioned so that the bulb is only visible from below to minimize distraction and disorientation of wildlife flying over the park. The use of artificial lights should be minimized or reduced as much as possible during the seabird fledging season of September to December, and during the sea turtle hatching period July to September, and yellow lighting invisible to honu should be used near the shoreline. Night time construction also should be avoided. The Master Plan does not include any parking lot lighting. However, if lighting is needed for safety, they can be installed lower to the ground with motion sensors and/or timers to minimize the amount of time they would be lit. The lighting design plan will also ensure that no lights are visible from the beach to minimize impacts to nesting honu and their hatchlings seeking the ocean.

Endangered waterbirds and Hawaiian Nēnē are attracted to standing water, including the former loko and restored lo‘i. In order to minimize predation of these birds by feral animals, measures to reduce the feral cat and rat population are proposed in the park. These measures include installation of animal-proof garbage receptacles and maintaining cooperation with the Humane Society, which at times had placed traps in the park for removal of feral cats. Additionally, the Master Plan recommends that, before any wetland restoration activities proceed, that an analysis of the costs, benefits and liabilities associated with intentionally creating habitat for endangered waterbirds be conducted. However, if the loko and wetlands are restored, they may still attract native birds and other wildlife. Perimeter fencing shielded by landscaping can help protect these areas from predatory animals and care will be taken not to disturb nesting sites during construction as recommended by DOFAW in their comment letter (Section 11.0).

The ‘Ōpe‘ape‘a, endangered Hawaiian Hoary Bat, roosts in woody vegetation. If large trees or woody shrubs over 15-feet in height are trimmed or removed during the breeding, birthing and pupping season during the months of June 1 through September 15, there is the risk of young bats being harmed or killed. In order to minimize impacts to ‘Ōpe‘ape‘a, it is proposed that State Parks restrict any cutting of large shrubs or trees over 15-feet in height to periods outside of these months.

In order to preserve the native aquatic species present in Limahuli Stream, the Master Plan avoids making any alterations to the stream bed or banks except for the proposed restoration

of the riparian resources and clearing of alien vegetation. None of the proposed facilities or activities are proximate to the stream. No changes to the existing stream crossing at the park entry are proposed.

A potential threat to Limahuli Stream and upstream resources is the further introduction of alien fishes and invertebrates. Limahuli Stream is one of the few places in the State that does not have apple snails and the snails are currently in the park's lo'i. Control measures to prevent the spread of apple snails from the park's lo'i to Limahuli Stream should be included in any design or implementation of the 'auwai and irrigation systems for the Agricultural Complex. Some suggested control measures include but are not limited to:

- Elevating and extending the outfall pipes from the Limahuli Stream diversions above the receiving 'auwai so the snails cannot crawl directly into the stream. The snails are known to not like cold, fast-moving water which is what flows from Limahuli Stream so the risk is minimized.
- Grading the 'auwai to flow makai and away from Limahuli Stream so water does not flow back to Limahuli Stream.

State Parks should also continue to cooperate with DAR to keep new alien fish out of the 'auwai and stream and in ridding the stream of periodic invasions of swordtails, guppies, and other alien fish (Terry and Hart 2009). To minimize the impacts of microhydropower systems on native Hawai'i amphidromous biota, the diversion intakes must be designed to have low-velocity intakes placed subsurface in relatively deep pool in the center of the stream in order to minimize entrainment of larval or post-larval stream animals.

The proposed daily limit of 900 visitors during peak visitor hours will further reduce impacts on these biological resources and the proposed ~~educational session—visitor orientation information provided prior to park entry described in Section 2.5.2.1 that all visitors must attend~~ will provide a brief overview of the park's extensive but sensitive natural and cultural resources and instruct visitors of the appropriate activities and behaviors allowed at the park. The reduction in overall visitor use and better education on the park's resources will have a net positive impact for the park's fauna.

### 3.10 NATURAL HAZARDS

#### *Existing Conditions*

Typical natural hazards impacting the Hawaiian Islands include flooding, tsunami inundation, tropical storms and hurricanes, volcanic eruptions, and earthquakes. The following sections describe the natural hazards that may impact the park and general area, as appropriate.

#### 3.10.1 FLOOD HAZARD

According to the FIRM Panel 1500020030E (9/16/05) prepared by the Federal Emergency Management Agency (FEMA), National Flood Insurance Program (NFIP), there are several special flood hazard areas within Hā'ena State Park (see Figure 20). They are located along the coast and along Limahuli Stream and include Zones VE, AE and A. Zone VE is a coastal

flood zone with velocity hazard for wave action subject to the one percent chance annual flood (100-year flood). Within the park and nearshore waters, base flood elevations have been determined and range between 10 and 21 feet with the lower base flood elevations at the furthest eastern and furthest western edges of the park. The highest base flood elevations are located offshore of Kaʻilio Point.

Moving inland of the Zone VE areas are the Zone AE areas. These are the special flood hazard areas subject to the one percent chance annual flood and where base flood elevations have been determined. Base flood elevations start at 10 to 11 feet near Limahuli Stream and increase to 15 feet near Kēʻē and 18 feet near Kaʻilio Point.

The base flood elevations have not yet been determined along the mauka portions of Limahuli Stream and therefore these areas are located in Zone A. However, they are still within the special flood hazard areas subject to the 100-year flood. Also according to Kennedy/Jenks, there are mapping discrepancies between the location of Limahuli Stream on the FEMA maps, the Kauaʻi Online Hazard Assessment database, and the Hawaiʻi NFIP database. As a result, the exact location of the Zone A area is not clear and Kennedy/Jenks has contacted DLNR, which is currently working to resolve this issue with the U.S. Environmental Protection Agency (EPA) Region 9. Kennedy/Jenks recommends maintaining a buffer along the stream until this can be resolved.

#### ***Potential Impacts and Mitigation Measures***

All of the proposed facilities are recommended to be built outside of the special flood hazard areas Zones VE, AE, and A to minimize any potential impact from flood hazards. Evacuation routes should also be located outside of the special flood hazard areas. Due to the remote location of the park and the potential for hazardous conditions, an emergency evacuation plan and rescue plans should be developed. Ocean safety signs and evacuation signs should be posted appropriately on paths and evacuation routes.

To facilitate evacuations in the event they are necessary, the helicopter landing pad is proposed to be retained with the Master Plan improvements. Emergency evacuation routes should also be planned and indicated on visitor brochures and materials and park signs. They can also be described and shown on maps during the visitor orientation sessions within the proposed Welcome Pavilion/Education and Cultural Center (ECC) included in the visitor orientation materials provided prior to park entry. The loop paths through the loʻi can be used as an emergency route between Kēʻē and the proposed Welcome Pavilion/ECC. An emergency phone is expected to be retained. Additionally, the presence of an on-site caretaker is expected to improve emergency warning communications and evacuation coordination within the park when necessary. The hardline phone at Kēʻē should be retained for emergencies and an additional emergency phone could be located at the Welcome Hale. If a shuttle system is developed as the main point of entry, an emergency evacuation plan will need to be developed specifically for the shuttle passengers.

### **3.10.2 TROPICAL STORMS AND HURRICANE HAZARDS**

The Central Pacific Hurricane Center (CPHC) notes that “in Hawaii, mountainous terrain accelerates hurricane and tropical storm winds causing extremely high winds that can destroy buildings, structures, trees, vegetation and crops. Heavy and prolonged rains can accompany all types of tropical cyclones including hurricanes, tropical storms, and tropical depressions. Even the weakest tropical depressions can bring torrential rains and flash flooding to the Hawaiian Islands.” (CPHC 2015)

Since 1980, two hurricanes have had devastating effects on Kaua‘i—Hurricane ‘Iwa, a Category 1 on the Saffir-Simpson scale in 1982 and Hurricane ‘Iniki, a Category 4 in 1992. Since Hurricane ‘Iniki hit from the south, there was no significant storm surge or overwash in Hā‘ena. However, ‘Iniki’s sustained winds reached over 100 mph with gusts up to 150 mph as it passed over Kaua‘i, making landfall near Makahū‘ena Point and sweeping northward to Hanalei (Businger 1998). ‘Iwa’s sustained winds were 75 mph with maximum winds at 110 mph and did not make landfall. However, its diameter was so great that it enveloped Kaua‘i as it passed to the north.

#### ***Potential Impacts and Mitigation Measures***

While it is difficult to predict such natural occurrences, it is reasonable to assume that future incidents are likely, given historical events and the FEMA Special Flood Hazard Areas along the coastline. The CPHC reports that between four and five tropical cyclones are observed in the Central Pacific every year on average. This number has ranged from zero, most recently in 1979, to as many as 11 in 1992 and 1994 ~~(CPHC 2015)~~ and fifteen in 2015 (CPHC Website 2018). Staff training and visitor education sessions, as well as ongoing coordination, communication, and annual park evacuation drills with the County Fire and Police Departments are recommended management strategies proposed in the Master Plan to help improve emergency readiness and public safety. Because of the nature of these events, there will typically be advanced warning of severe weather conditions and tropical cyclones. Therefore, the park can also be closed during these events and the public can be notified in advance of the approaching storms to avoid the area. State Parks can notify news and media outlets of park closures and utilize social media and email or text announcements to provide up-to-the-minute information to the public.

### **3.10.3 TSUNAMI HAZARD**

Hā‘ena has been struck by tsunami waves multiple times in recorded history. The tsunami of 1946 is remembered as particularly devastating, destroying homes, a church, and a school and taking lives. Another destructive tsunami struck in 1957, leaving only four of the 29 homes in Hā‘ena standing. Thankfully, it did not result in loss of life. The land makai of the highway within Hā‘ena State Park is located within the tsunami evacuation zone. An "extreme tsunami evacuation zone" has been added to all state civil defense maps and also includes the entire park and portions mauka of the highway up to the pali. During the 1946 tsunami, wave heights reached 30 feet near Kē‘ē and 24 feet off Ka‘īlio Point. Wave heights reached 28 feet off Ka‘īlio Point in the 1957 tsunami. Both of these tsunamis were generated by large earthquakes (magnitude 7.1 and 8.3, respectively) in the Aleutian Islands off Alaska. See Figure 21. The nearest State Civil Defense siren is located at Hā‘ena County Park.

### ***Potential Impacts and Mitigation Measures***

Staff training and visitor education sessions, as well as ongoing coordination, communication, and annual park emergency evacuation drills with the County Fire and Police Departments are recommended management strategies proposed in the Master Plan to help improve emergency readiness and public safety. There are two different types of tsunami events for which State Parks will plan; locally-generated tsunami give very little time to evacuate coastal areas while distantly generated tsunami can take hours to make landfall. Evacuation plans and readiness plans should be developed by State Parks for both scenarios and all visitors should be educated on what to do ~~during~~ via the required orientation ~~session upon information provided prior to entering the park.~~ Tsunami evacuation signs should be posted appropriately on paths and evacuation routes and park staff will be trained and will assist visitors in the evacuation. As recommended by State Civil Defense, a new siren should be installed in the park, potentially in the main parking lot. A subsequent letter from the Office of State Emergency Management/Civil Defense noted that siren coverage exists for the project site, but requested the existing siren to be upgraded to a 121db(c) omni-directional siren. State Parks will work with the Hawai'i Emergency Management Agency to ensure adequate siren coverage at the park. Also, a grassed helipad will be retained and cleared areas within the park may be used if people need to be airlifted out of the area.

### **3.10.4 SHORELINE EROSION**

The coastal geology group at SOEST has documented shoreline rates of change since 1927. As shown in Figure 17, shoreline erosion rates averages between zero and nearly one foot per year along different transects of the park's coastline.

### ***Potential Impacts and Mitigation Measures***

One of the first priorities identified in the Master Plan by both community members and biologists is dune restoration. According to Terry and Hart, the restoration of a native dune ecosystem would involve the removal of alien species and the planting of natives and Polynesian-introduced plants such as pōhuehue, naupaka, nanea, pōhinahina, nehe, pa'u-o-Hi'iaka, 'aki'aki grass, milo, hala and kou. Not only would they provide improved and more authentic vegetation but they could also be used to help reduce coastal erosion if carefully planted. Shoreline erosion can be slowed or even halted by allowing natural tidal, current and wind processes to shape Hā'ena's shoreline. Measures under consideration to accomplish this goal include studying Hā'ena's specific natural dune building processes, restoring or removing vegetation as appropriate, compliance with the County of Kaua'i's shoreline setback regulations, and prohibition of shoreline protection structures. These mitigation measures may also help protect the park against the impacts of climate change, particularly sea level rise.

Drainage improvements along the highway are also recommended in the Master Plan to prevent ponding, soil erosion, and beach washouts as has happened at Kē'ē during heavy rainfall events. State Parks will also consider resurfacing the former highway pavement with

appropriate materials as permitted by historical review and implement creative design solutions that can improve drainage and minimize erosion in the surrounding areas.

### **3.10.5 ROCKFALL HAZARD**

A Rockfall Hazard Assessment was performed by AECOM during the months of August and September, 2008 and updated in 2013 with a supplemental rockfall analysis and computer simulation in the area between the main parking lot and Wai a Kanaloa. The assessment, attached in its entirety as Appendix B, included a geological survey of the site and rockfall hazard identification which included a visual assessment and preparation of a geological report, locating rock outcroppings with GPS readings, and color photography. The Assessment also included an engineering planning study of the rockfall condition, development of preliminary rockfall protection design options, and cost estimates. A summary of their findings is presented graphically in Figure 22.

To evaluate rockfall risk, AECOM utilized the U.S. DOT Federal Highway Administration Rockfall Hazard Rating System methods and guidelines. This rating system evaluates a number of criteria including: slope height, ditch effectiveness, structural conditions, rock friction, erosion rates, volume of rockfall events, climate and presence of water on slope, rockfall history and slope topography. It uses a three-class rating system for hazardous conditions based on its potential to impact adjacent properties.

- **Class A** – high estimated potential for rockfall on adjacent properties with high historical rockfall activity. Chances for rockfall is moderate to high and when rockfalls occur, they will more than likely reach adjacent properties.
- **Class B** – moderate estimated potential for a rock to fall on adjacent properties with moderate historical rockfall activity. Class B rating indicates that although a rockfall is probable, the chances of it reaching adjacent properties are low to moderate. This could involve scenarios where risk is mitigated by the presence of catchment ditches or large flat areas that can contain rockfalls.
- **Class C** – low to no estimated potential for rockfall on adjacent properties with low historical rockfall activity.

AECOM also analyzed the chance of rockfall. This is primarily based on the stability of the rock face and condition of the supporting materials. There are four categories:

- **Category 1** – imminent potential for rockfall (could happen anytime)
- **Category 2** – short term potential for rockfall (within several to a dozen years)
- **Category 3** – medium term potential for rockfall (within dozens of years)
- **Category 4** – long term potential for rockfall (up to or more than a hundred years)

Please note that the time scale references are used symbolically and are not meant to represent an actual timeframe within which the rockfall events may occur.

AECOM used computer simulation to model rockfall events along five transects within the park. They determined that the rockfall hazard conditions at Hā'ena State Park consists of both Class A and Class B rockfall ratings based on the potential for rockfalls to reach the

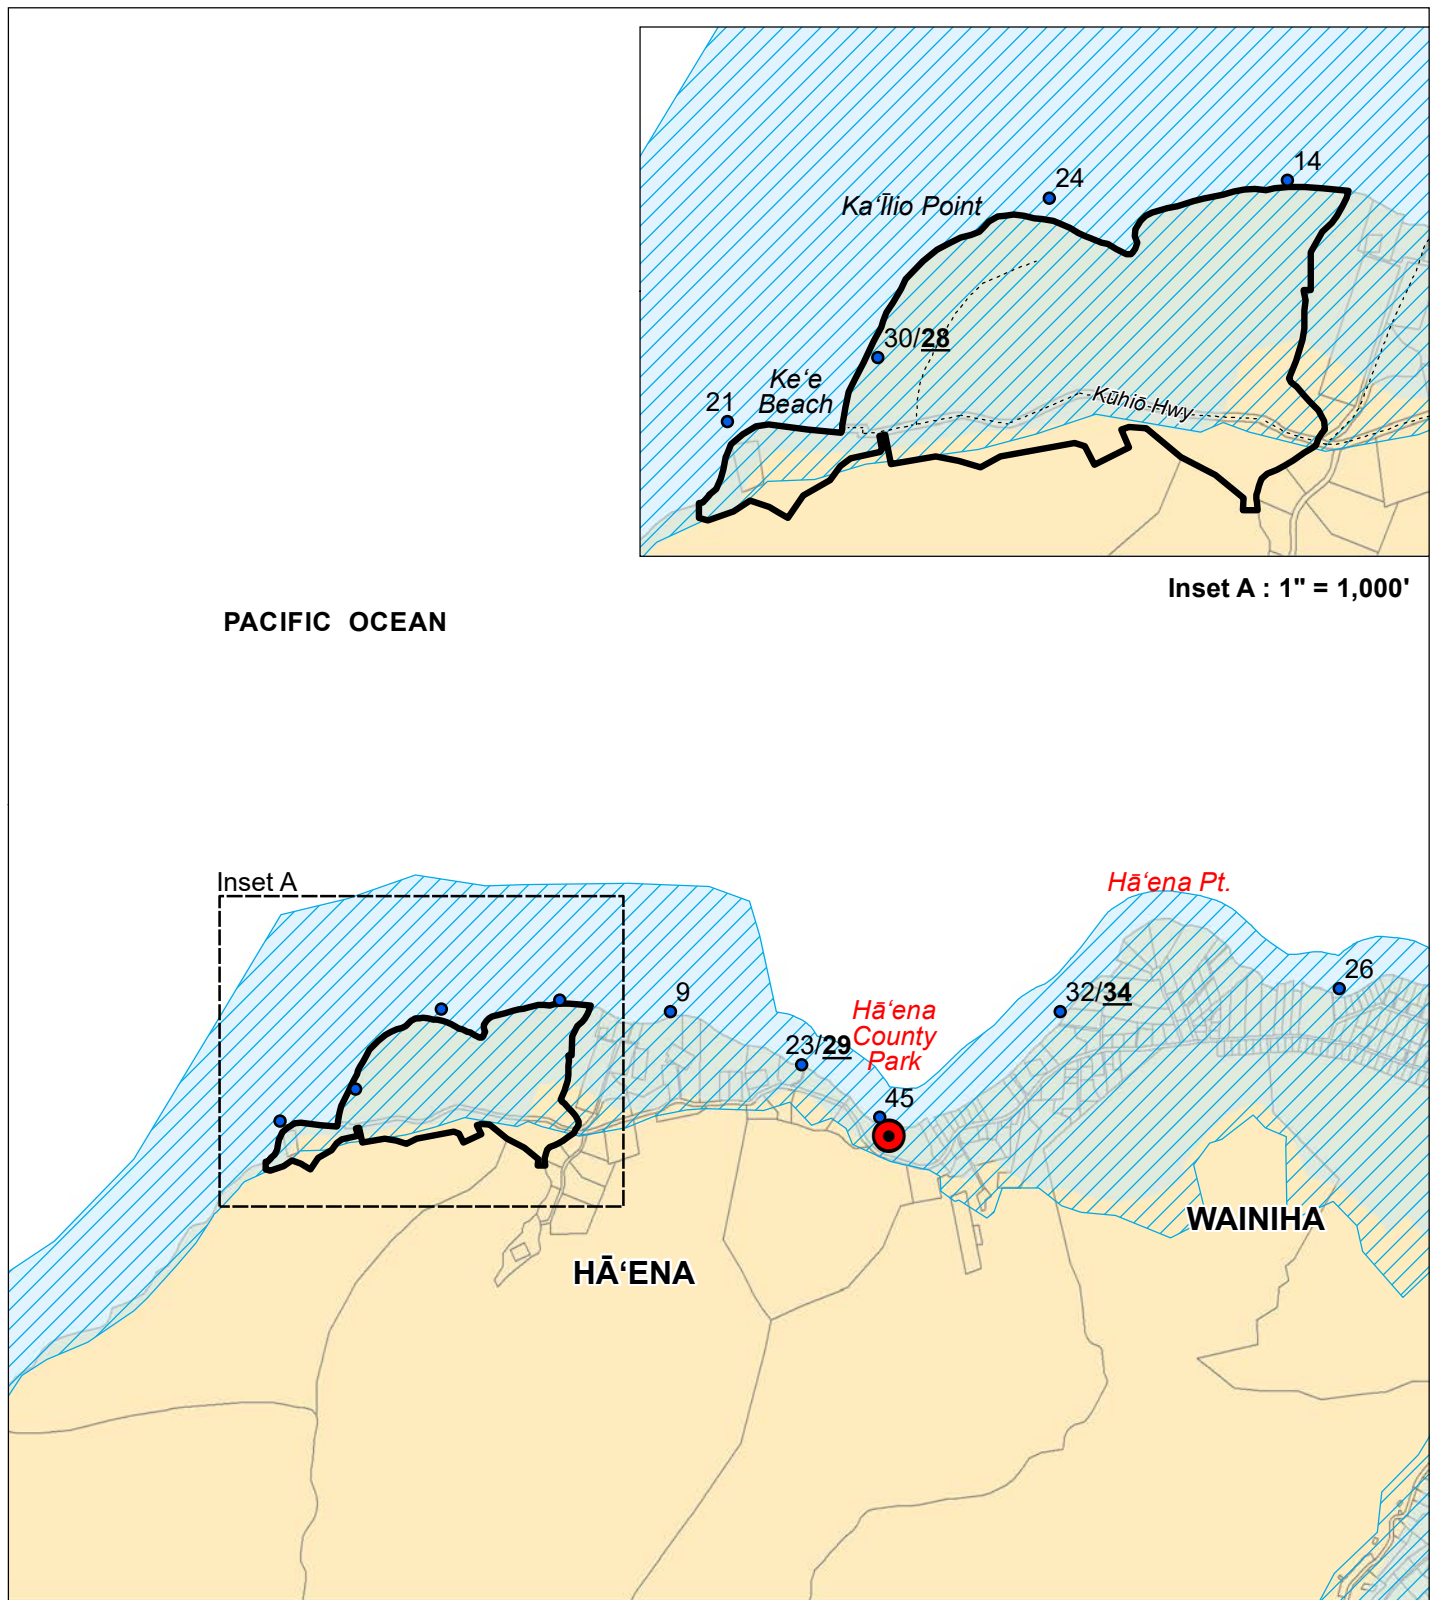

highway at various positions as well as at Kēʻē Beach and the Kalalau Trailhead. See Figure 22. The area around Wai a Kanaloa is the most hazardous rockfall area (Class A) because: 1) many rockfall features exist here; 2) the very high probability for rockfalls to reach the highway and Wai a Kanaloa; and 3) the almost constant presence of visitors. Rockfalls are less likely to reach the highway or beach at the other areas (Class B). AECOM also analyzed the chance of rockfall at specific locations within the park which are also shown on Figure 22. They range from Category 1 through 3. AECOM performed supplemental analysis in the area between the main parking lot and Wai a Kanaloa to help guide the design of the proposed park Master Plan. Using computer modeling, they provided a baseline estimate of how far simulated rockfalls would reach. The 0% and 5% chance of simulated rockfall lines were determined based on computer modeling and then used to help locate all major facilities outside of the rockfall zones. The approximate location of these lines are also shown on Figure 22 in green and red, respectively.

### ***Potential Impacts and Mitigation Measures***

The health and safety impacts of rockfalls are proposed to be mitigated by siting all of the major visitor facilities and paths, including the ~~Interpretive-Pedestrian~~ Path to Kēʻē, Welcome Hale, and main parking lot outside of the 0% chance of modeled rockfalls as mapped by AECOM in their Rockfall Hazard Assessment report (Appendix B). Specifically, these improvements along with the ~~Welcome Pavilion/ECC, Interpretive Path, proposed highway closure to through traffic and installation of warning with~~ signage and gates, and the main parking lot/shuttle improvements should be considered elements of rockfall mitigation and therefore prioritized in capital improvement project funding as they will shift the park's major visitor traffic away from the area of potential rockfall hazard. In addition, warning signs should be installed at appropriate locations at both ends of the highway and between the turnaround and Kēʻē. ~~Safety warnings information should also be given during the visitor orientation session as part of the visitor orientation materials~~ prior to park entry. The only vehicles that will be permitted on the highway to Kēʻē beyond the gate will be special access vehicles such as the lifeguards, hula practitioners, lawai'a and hunters, family caretakers of the cemeteries, and vehicles with the appropriate ADA placard to minimize the public's exposure to rockfall hazards. A dense native tree screen is also recommended along Kūhiō Highway, especially near the main parking lot, as trees may serve to catch or slow smaller rockfall events. Thus, general tree removal north of the highway is also not proposed unless the tree itself poses a hazard. The Master Plan elements also include features to restrict the public from standing immediately in front of the wet cave, Wai a Kanaloa, where the cliffs above are identified as Class A hazards should they choose to traverse the highway despite the rockfall warnings. Native and Polynesian-introduced landscaping are recommended as aesthetic and culturally appropriate screens for the safety devices or barriers.

## 4.0 ASSESSMENT OF THE HUMAN ENVIRONMENT, POTENTIAL IMPACTS, AND MITIGATION MEASURES

This section describes the conditions of the human environment, potential impacts of the proposed Master Plan and mitigation measures proposed to minimize any impacts.

### 4.1 ARCHAEOLOGICAL AND HISTORIC RESOURCES

#### *Existing Conditions*

State Parks, under the guidance of Joseph Souza, a Kauaʻi native, undertook extensive efforts to study and document the rich Hāʻena heritage and archaeology starting in the late 1970s (Griffin 1984). The first survey and testing program began with Griffin et. al. in 1977 in the western portion of the park, stretching from the eastern edge of Loko Kēʻē and the outlet of the ʻauwai just east of Kaʻilio Point to the western dunes and back dune areas. In 1978, Dr. Hallett Hammatt and his colleagues at the Archaeological Research Center Hawaiʻi, Inc. (ARCH) performed a series of five excavations along the Hāʻena State Park dunes to characterize the prehistoric use of the area. Based on their findings, they provide a preliminary sequence of human settlement and subsistence beginning with a marine oriented occupation at Kēʻē Beach sometime before 1000 AD. After 1000 AD, occupation expanded at Kēʻē as well as inland utilizing a broader resource base and further intensification occurred after 1400 AD with the construction of the agricultural fields and loʻi. By 1700–1800, occupation continued but with less emphasis on exploitation of marine resources and the density of cultural material in the deposits indicates a possible depopulation of the area or a shifting settlement pattern (Hammatt et al. 1978).

Other surveys, restoration plans, and burial treatment plans followed covering various areas of the park (Hammatt and Meeker 1979; Riley and Clark 1979; Yent 1980; Carpenter 1996; Major and Carpenter 2000; Major and Carpenter 2001). As a result, archaeological surveys have been conducted throughout most of the park. When combined, this information characterizes the distribution pattern of archaeological and historic properties throughout the park.

An archaeological sensitivity map was produced by State Park’s archaeologist to identify those areas where future development should be avoided due to the known sites and potential for finding extant archaeological sites (see Figure 23). As such, the proposed Master Plan locates new facilities and improvements away from these sensitive areas. The Master Plan graphics also include labels on all the major sites and features for future reference.

The park includes the “Hāʻena Archaeological Complex,” listed in the Hawaiʻi and National Register of Historic Places in 1984 (State site #30-02-1600). It also includes a portion of the “Kauaʻi Belt Road” (North Shore Section) (Site #30-02-9396), which was listed on the National Register of Historic Places in 2004. The Nāpali Coast Archaeological District (30-

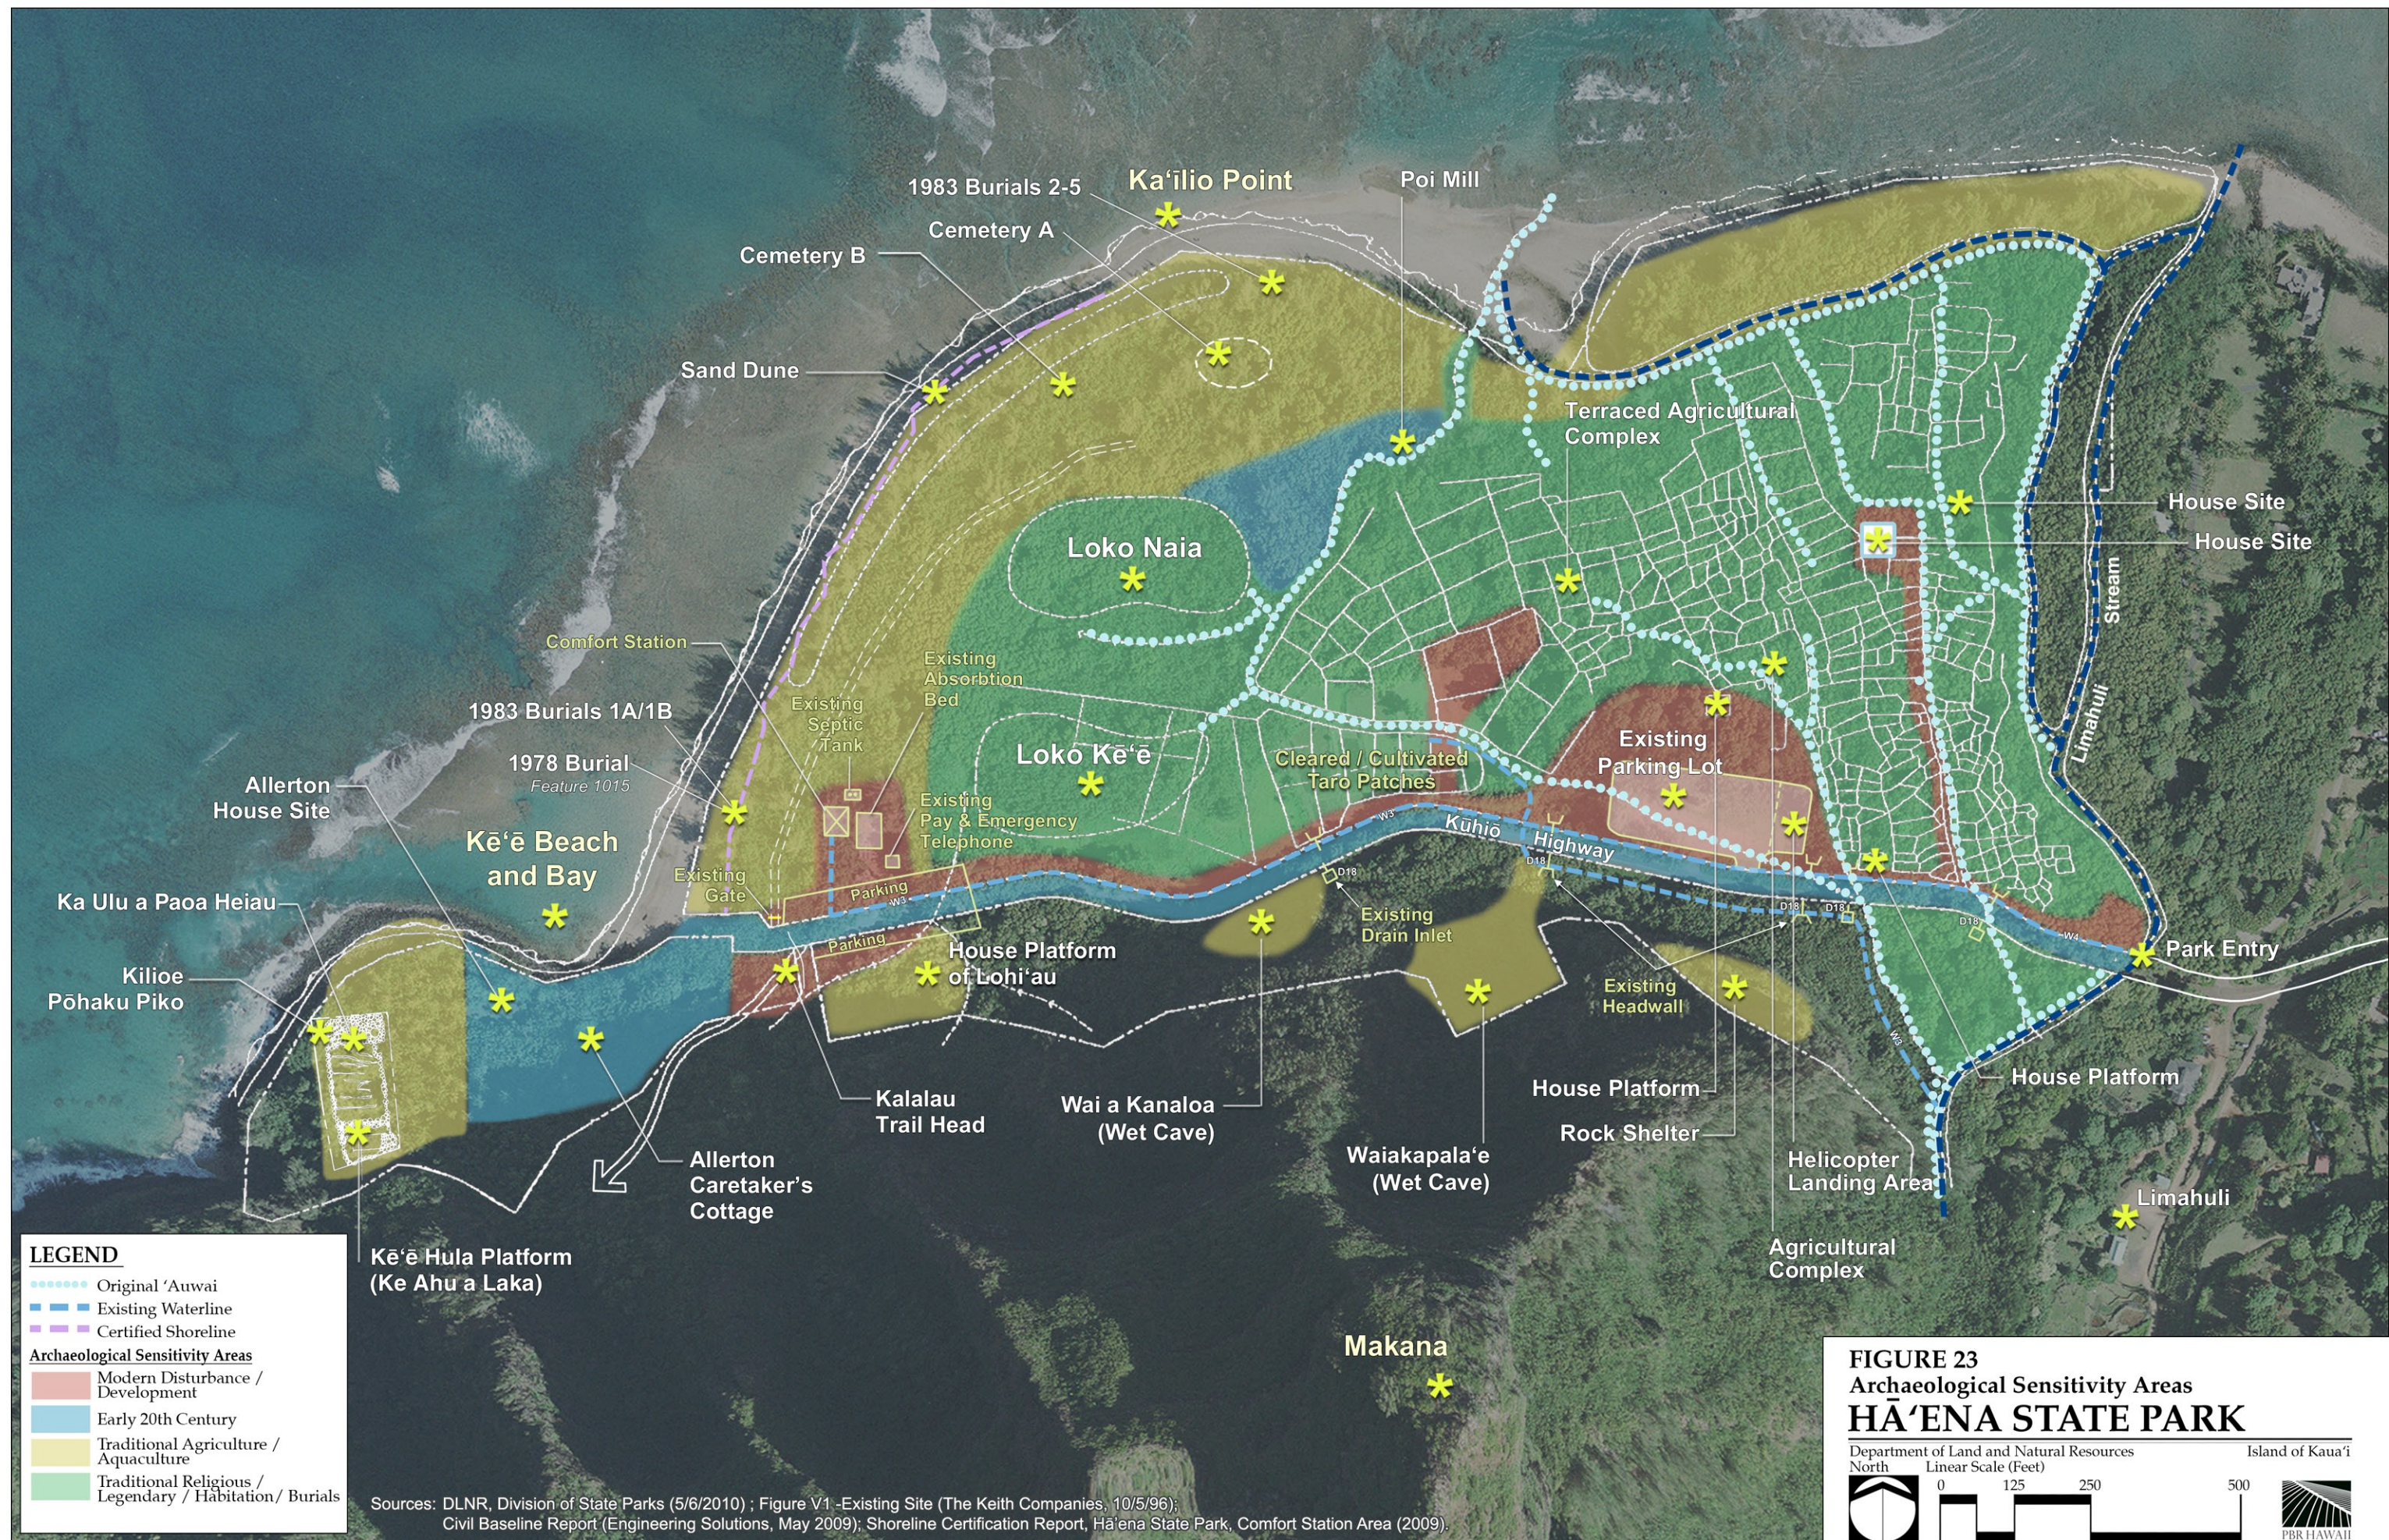

02-3200) overlaps the park within TMK: 5-9-01: 022 in the areas mauka of the highway and was listed on both National and State Registers in 1984 at the same time the “Hā‘ena Archaeological Complex” was listed.

The “Hā‘ena Archaeological Complex” was deemed significant because it represents a large, nearly continuous, and mostly intact complex of archaeological features dating from the early prehistoric period to the recent historic period (Yent 1983). Grouped broadly by location and type, the complex includes: 1) subsurface cultural layers and features, including burials, found within sand dune and beach-derived deposits forming a band along the seaward edge of the coastal flat; 2) irrigated agricultural field systems and wetlands that dominate the alluvial flat between the sand dune and the talus slopes along the cliff base, and 3) the traditionally important sites located along the talus slope, including the cliff face itself, that are significant to native Hawaiians because of their association with various legends, customs, and beliefs. These sites include Ka Ulu a Paoa Heiau, Ke Ahu a Laka hula platform, Lohi‘au’s house site, Wai a Kanaloa and Waiakapala‘e caves. In addition to burials, the subsurface cultural layers include fire hearths, refuse pits and post holes. The field systems include agricultural walls and ‘auwai. Historic-era cemeteries are also located within the park. The cemeteries continue to be visited and cared for by local families. Remnants of a poi mill have also been identified within the park.

The following highlights a few of the significant sites within the park. Additional detail and a history of the site are provided in the Master Plan report (~~Appendix I~~) available on the State Parks website (<http://dlnr.hawaii.gov/dsp/parks/kauai/haena-state-park/>) and in the Cultural Impact Assessment (Appendix E).

- **Kē‘ē.** As the setting of one of the most famous mo‘olelo, Kē‘ē holds extreme cultural importance and significance to Native Hawaiians and those who practice hula. Ka Ulu a Paoa Heiau overlooks Kē‘ē from atop the cliffs and is Hā‘ena’s most sacred and significant site. It is where the legendary love affair between Pele and Lohi‘au began.
- **Coastal dunes.** Archaeological excavations conducted within the sand dunes indicated the widely distributed presence of at least one and sometimes multiple cultural layers and an array of subsurface feature types (Site No. 30-02-7001). Along the seaward edge of the dune, the thickness of the cultural layers, their composition, and depth below surface varied to the point of making generalizations and correlations difficult. Cultural layers could range in depth from 15 cm to 4 meter (5.9” to 13’) below the surface and be between 5 to 50 cm (1.97” to 19.7”) inches thick. This high level of variability was attributed to the instability of sand dunes which are repeatedly, but not always evenly, disturbed by high surf and tsunami or by the persistent and heavy winds. In all excavations, midden analyses suggested, as could be expected, a reliance on marine resources with shell fish and fish bone being well represented and predominant. Near shore fish species were better represented than pelagic species despite the proximity of a reef channel and canoe landing at Kē‘ē Beach that gives advantageous access to off-shore waters. Use of the coastal sand dune and beach deposits primarily for settlement purposes, at least during the late prehistoric and early historic period, is supported by the Land Commission Awards and related testimony recorded between 1848 and 1852 (McEldowney 2007).

- **Ka Ulu a Paoa Heiau and Ke Ahu a Laka.** According to Kehaulani Kekua, a kumu hula and cultural expert from Kaua'i and member of the MPAC, "hula in its most primordial and sacred form is to inspire growth (physical, spiritual, intellectual growth) and the continuum of life cycles for the land and resources, mankind, ancestors and gods. The entire site is a heiau that was dedicated to the worship and practices of 'aiha'a and hula, including the highest level of the site named Ke Ahu a Laka." Ka Ulu a Paoa translates to "the inspiration and growth of Paoa." Paoa comes from the formal name, "Kauakahiapaoa," who was an ali'i of Hā'ena. He was a very close friend of Lohi'au, as well as a master of hula himself (K. Kekua, personal communication, November-December 2010).
- **Lohi'au's House Platform.** Mauka of Kūhiō Highway and near Kē'ē Beach is Lohi'au's House Platform. The physical remnant of the legendary character, it consists of a dry stack rock platform that is earth and stone-filled with an unpaved terrace. It is 80 feet long, 54 feet wide and 8.5 feet high at its highest part. It is an impressive site located at the base of the bluff near the Kalalau trailhead but it has suffered in recent history. Invasive exotic forest plants have overgrown portions of this site. However, several MPAC members have noted that its relative obscurity has probably protected it from vandalism.
- **Kilioe.** A large boulder located near the edge of the ocean cliff at Kē'ē. According to Wichman (1998), Kilioe was a chiefess of the hālau hula at Hā'ena whose body became this furrowed rock. This pōhaku piko is still used today to safeguard the umbilical cords of newborns and in doing so, place those children under the protection of Kilioe. According to mo'olelo, the boulder Kilioe is the physical remains of one of two mo'o (lizard) women who challenged Pele when she arrived at Kē'ē and later stole Lohi'au's spirit from his body (Andrade 2008).
- **Makana.** Translated as "gift," Makana is a triangular peak, prominent and unmistakable, overlooking the park. Firebrands made up of hau (*Hibiscus tiliaceus*) or pāpala (*Charpentiera*) wood whose soft core burns before the outer layers, were once thrown from the top of this peak. Under the right conditions, the brands would fall and rise, moving slowly a mile or more over the ocean, leaving a trail of glowing embers. These exhibitions were normally reserved for very special celebrations or sacred ceremonies such as chiefly graduations or visits. It was done for Queen Emma's visit in 1860. The cliffs that edge the park are often referred to as Ka Pali o Ahi o Makana.
- **Agricultural Complex.** Previous archaeological studies show that nearly the entire coastal flat behind the dunes was developed as irrigated lo'i terraces which originated in prehistory (Major and Carpenter 2000). There is also evidence that the lo'i extended to the base of the pali, but was disrupted by the construction of the highway (Hammatt 1978). The vast Hā'ena agricultural complex extended east of Limahuli Stream beyond the park and also included loko kalo, or swampy planting areas that

used innovative methods of planting on rafts within ponds (Handy 1972). Other crops such as ‘uala, or sweet potato, in sandy areas and mai‘a (bananas), kō (sugar cane) and ‘awa in the Mānoa and Limahuli Valleys were also known to be cultivated (Handy 1972). Portions of the Hā‘ena lo‘i were cultivated into the 1960s although the loko were abandoned by then (Carpenter 1996).

- **Waiakapala‘e and Wai a Kanaloa.** These caves were carved as a result of a rise in sea level during the Pleistocene, when existing lava tubes were enlarged by wave action. Wai a Kanaloa, “water made by Kanaloa,” is a wet cave located in the pali face on the south side of Kūhiō Highway. The waters of the cave were called, “Halaaniani,” or “clear pandanus.” The waters were thought to have restorative properties and were reserved for the ali‘i. The feature may have been an important water source, but no archaeological work has been conducted in the area. Waiakapala‘e, “water of the lace fern,” is a wet cave to the east of Wai a Kanaloa, also in the pali face south of the highway but further up the slope. This feature is another probable water source with legendary associations. It is said that the water in the cave had a brown hue, and was the hair of a beautiful mo‘o. The story goes that as she grew older, her hair and thus the water turned grey (Orr 2010).
- **Loko Kē‘ē and Loko Naia.** The two former loko within the park are seasonally flooded and designated as wetlands on the U.S. Fish and Wildlife Service’s National Wetland Inventory. Loko Naia is thought to have been a loko kalo, or a low-lying area for the planting of taro. The depression measures roughly 100 by 200 meters and is located mauka of the sand dune. Archaeological testing in 1977 indicated an agricultural use of the feature, including evidence of ‘auwai and agricultural soils. Loko Kē‘ē has been described as both a buried fishpond and a loko kalo (Griffin et al 1977). It is located to the south of Loko Naia and adjacent to the highway. Testing indicated low walls and an ‘auwai suggestive of a kalo lo‘i. It measures approximately 150 by 50 meters.

The post-contact history of the area within and surrounding Hā‘ena State Park from just after the 1824 rebellion saw control over the lands undergoing a transition from Kaua‘i to O‘ahu and Maui ali‘i. Abner Kuho‘oheiheipahu Pākī was awarded the entire Hā‘ena ahupua‘a as a direct result of the partition following the 1824 rebellion. Pākī, father of Bernice Pauahi Bishop, was married to Konia, one of Kamehameha I’s granddaughters, who was an ali‘i wahine or high chiefess in her own right (Silva 1995).

Pākī, as chief of Hā‘ena, held control over Hā‘ena’s fresh water sources, the produce harvested from the ocean, fisheries, mountain and special fields reserved for the chief, called kō‘ele. These kō‘ele were harvested once a week to support the chief and his household. Hā‘ena residents cultivated at least twelve kō‘ele, each having a specific name, to serve Pākī (Silva 1995). As chief, Pākī also had the privilege of putting a kapu on certain fish harvested from the waters off the coast. Pākī placed this kapu on he‘e (octopus) (Carpenter 1996, Silva, 1995).

Interestingly, Silva notes that Kekela‘akalaniwahikapā‘a (Kekela) was appointed the konohiki (land manager) of Hā‘ena circa 1837.

It was unusual for Kekela to hold this position of authority; although she was a ranking chiefess, she nevertheless was a woman and remains in history as one of the few known female konohiki. Women were rarely given the right to claim lands during this period; widows of bonafide native tenants or female heirs (in absence of a male heir) of long-time residents of an area would apply for lands, however this was uncommon and infrequent. Native testimony recorded that Kekela herself had claimed five parcels in Haena [sic] and had resided there in 1839. (Silva 1995)

Silva explains that during the time Kamehameha and Kaumuali‘i were negotiating their truce, Kamehameha impressed the Kaua‘i chiefs by presenting his recently widowed sister-in-law, Kekela, to Kamaholelani, sometimes referred to as Kaumuali‘i’s cousin and son. Kekela returned with Kamaholelani to Kaua‘i and the two settled in Lumahai, which Kaumuali‘i had given to both of them. In 1820, Kamaholelani dies and Kekela remains in Lumahai until 1824, the time of Kaumuali‘i’s death and the uprising, when she returns to O‘ahu and either forfeits her claim to Lumahai or is dispossessed of it. However, Silva also states that Kekela is well-spoken-for in the courts of Kamehameha and Kaumuali‘i, and she is also the sister of Abner Pākī’s own mother. Hence, her close association to her Hā‘ena claim, Pākī’s claim to the ahupua‘a and her management of Pākī’s Hā‘ena holdings (Silva 1995).

Kekela is also credited for advising many of the maka‘āinana to apply for kuleana awards during the Mahele (Wichman 1998). There is a slight difference between Silva and Carpenter’s counts as to how many Land Commission Awards (LCA) were within Hā‘ena. However, it is either 22 or 23 claims made within the Hā‘ena ahupua‘a, ten of which overlap the current park boundaries. They range in size from 0.75 acres to 4.4 acres and are shown in Figure 24.

Although Pākī retained interest to the entire ahupua‘a, those parcels awarded to native tenants were respected and excluded from his award (Silva 1995). Ten of these kuleana awards (or portions of awards) are located within the Hā‘ena State Park boundaries, and they consisted of thirteen parcels (Carpenter 1996). Of the ten claimants, only three trace their claims to the lands before 1824, and there are no clear records of the dispossessed chiefs of this area prior to this date, again a reflection of the political changes that occurred in that year (Carpenter 1996).

Pākī died in 1855, followed soon after by his wife, Konia, in 1857. Pākī’s daughter, Bernice Pauahi Bishop, inherited their lands but soon after sold Hā‘ena to W. H. Pease, a surveyor, in 1858. Because the lands were “in name only,” this meant that the lands were never described or surveyed at the time of deeding (Silva 1995). Kekela died in Honolulu in 1865 but did make five claims of her own in Hā‘ena (Silva 1995), at least one of which was within the park site (Carpenter 1996). Pease died in 1871 and the administrators of his estate conveyed Hā‘ena to William Kinney in 1872 who then sold Hā‘ena to Kenoī Kaukaha and 37 other individuals, referred to as the Hā‘ena Hui (Hui Ku‘ai‘ainana o Hā‘ena), as tenants in common in 1875. In this transaction, roughly 2,500 acres were transferred. Five years later,

“Mahuiki and Company of 30 natives” are listed as “taro planters” in Hā‘ena. The company was said to be owners of 900 acres, 40 acres of which was in active cultivation (Silva 1995).

Missionary censuses showed a relatively small population residing in Hā‘ena over this time period. In 1835, there were 116 people (16 of whom were minors) who resided in Hā‘ena. By 1847, the population rose to 162 (54 of whom were under the age of 20). According to Silva (1995), this rise was probably due to the arrival of Chiefess Kekela and her entourage in 1839. However, by 1900, there were only 45 residents (seven households) in Hā‘ena, all of whom were native Hawaiian, a drastic decrease over 50 years. Ten years later in 1910, there was a slight population increase to 67 individuals in fifteen households. However, demographically the population was beginning to change with two Asian immigrant households leasing land to grow rice in Hā‘ena (Carpenter 1996).

Carpenter also notes that photographs from the early 1900s show that extensive areas of the park were still under taro cultivation. This included Loko Kē‘ē which photos show planted with taro and Loko Naia, which appears in photos to have two dividing walls within it. The entire park area also appeared to be a treeless plain with only low-lying beach vegetation just behind the dunes (Carpenter 1996). According to Handy, by the 1930s, taro production dropped significantly, with the Limahuli and Mānoa Valley terraces being abandoned first. Limited production continued in the flatlands but also large areas along the lower reaches of Limahuli Stream were turned over to pasture or overgrown with brush and grass (Carpenter 1996).

Then, in 1946 and again in 1957, tsunami devastated the area. According to Silva, there was a stable Hawaiian population of about 60 individuals in Hā‘ena at the time of the 1946 tidal wave. In the 1946 tsunami, at least nine people died and one went missing (Silva 1995). During the 1957 tsunami, all but four of the 29 homes that stood in Hā‘ena were destroyed or deemed unlivable, but amazingly, there were no injuries or deaths.

Prior to the second tsunami, Hā‘ena Hui members John Gregg Allerton and Paul G. Rice filed a petition for partition and dissolution of the Hā‘ena Hui in June 1955. The three commissioners assigned to the case submitted their report ten years after the 1957 tsunami in April 1967.

As a result of the suit filed against the heirs of Hannah K. Ahi et. al., the County of Kaua‘i received parcels within the current park site, which included Wai a Kanaloa and Waiakapala‘e wet caves and Lohi‘au’s house site. The County also received Maniniholo, which is in Hā‘ena County Park. The County was tasked with the maintenance and preservation of these sites for the general public. Disregard for this meant automatic transfer of the sites to the Pacific Tropical Botanical Garden. Title to another parcel was given to Allerton with the condition that he maintains and preserves a five-foot wide path for public access to the heiau and hula site. Upon his death or conveyance of property, title would automatically transfer to the County.

The State also requested a 40-acre section of prime beach front property for a public park. Four unawarded lots were also auctioned in 1967 to cover the legal costs of the partition. The auction was limited to existing shareholders and \$35,801 was netted (Silva 1995).

Also during the late 1960s through the early 1970s, Howard Taylor, actress Elizabeth Taylor's brother, purchased a large parcel along the Hā'ena coast. A transient community arose at the area called "Taylor Camp." The Taylor Camp is remembered through various lenses; fondly by some who came across the place during the "flower power" years; and far less so by those who observed drug use, disrespect for the place, an abundance of rubbish, lack of sewer or waste disposal facilities and resulting hepatitis outbreaks.

Eventually, the State condemned this property in 1975 due to the unsanitary conditions and it was added to the Park's inventory. According to Carpenter, the last of the Taylor Camp residents were evicted in 1977, which allowed the State to finally create the park.

Carpenter also notes that by 1964, based on a historical photograph of the area, both loko within the park site seem to be abandoned although several lo'i on the eastern side of the park were still actively cultivated. He also notes that the vast majority of the park site, particularly along the coast, is covered by a dense canopy of trees, similar to conditions today (Carpenter 1996).

### ***Potential Impacts and Mitigation Measures***

Human use and development has the potential to disturb and damage archaeological and historic resources. Therefore, in implementing the Master Plan, State Parks will employ both programmatic as well as physical mitigation measures to minimize negative impacts to archaeological and historic resources and to provide positive impacts wherever possible.

Preservation, restoration, and cultural use and reactivation of the park's historic and archaeological resources while providing quality opportunities for outdoor recreation are at the forefront of the proposed Master Plan. The entire western portion of the park surrounding Ka Ulu a Paoa Heiau has been designated as the Hula Complex and the restoration of the heiau based on historic information and surveys such as Henry Kekahuna's 1959 drawing of the heiau are recommended in the plan. Similarly, the continued restoration of the Agricultural Complex, which spans the majority of the park's land, and historic structures such as the Allerton Caretaker's Cottage and Montgomery House are recommended along with the restoration of the other historic and archaeological sites scattered throughout the park such as Lohi'au's House Platform, the coastal dunes, and the loko.

Using the archaeological sensitivity map as an overlay, all new facilities in the proposed Master Plan have been located in previously disturbed areas to minimize impacts to archaeologically sensitive areas. Design efficiencies such as locating the absorption bed for the wastewater facilities under the parking lot is also recommended to minimize the amount of land area disturbed for the proposed improvements.

The closure of the highway to general traffic will also serve as a mitigation measure. By limiting the volume of vehicle traffic on the historic roadway segment between the main highway and Kēʻē, the macadam surface of the Kauaʻi Belt Road will be better preserved than if it continues to experience current volumes of traffic.

At Kēʻē, the lifeguard stand is proposed to be relocated, in order to improve the ability for lifeguards to see key areas of the lagoon and Kēʻē Channel. To avoid potential impact to subsurface resources, the foundation is proposed to be built up rather than excavated down into the sand. The picnic tables once located on the dunes in the Keith Companies' 2001 draft plan have been removed and located to previously disturbed areas such as the end of the highway pavement at Kēʻē ~~and adjacent to the Welcome Pavilion and ECC.~~

The plan also recommends that State Parks involve its archaeologists and staff whenever siting, designing, or installing any new park facility, especially when ground disturbance is required. Additional archaeological surveys and tests should be performed as necessary prior to undertaking projects requiring ground alteration or excavation. Ongoing efforts to identify and prioritize historic properties including archaeological resources in need of maintenance, restoration, and monitoring should be continued. The plan also recommends that alien plants and trees that undermine the archaeological sites be removed, as appropriate. State Parks archaeologists and staff should also conduct archaeological monitoring during any earth moving or ground disturbing activities in case there are inadvertent discoveries.

The primary programmatic action to mitigate impacts to archaeological resources will be to establish a Cultural Advisory Group (CAG) to help guide implementation of the Master Plan and management of all aspects of the park. Specifically, the Master Plan recommends that the CAG be consulted on management actions and construction projects as well as interpretive materials and educational programs. The participation by the CAG will enrich interpretation of the park's archaeological resources, and as a result, the visiting public will become more aware and sensitive to the importance and fragility of the site's archaeology.

State Parks is also proposing to limit the number of people in the park to 900 people per day during peak visitor hours, which will reduce the exposure of the sites to human activity ~~by over half~~. This number is an initial visitor limit which State Parks may adjust over time depending on future improvements, improved/increased maintenance, and/or other studies such as impact studies, particularly if harmful impacts to the natural, cultural and archaeological resources arise.

~~Additionally, the Interpretive Path through the loʻi is expected to serve as a key component to the interpretive program at the park. Access to the park will be via the Interpretive Path, which will begin at the Welcome Pavilion/ECC, where the visiting public has an opportunity to learn about the archaeological, historic, cultural and ecological significance of the park's resources through interpretive displays and exhibits installed along the path. Additionally, the interpretive displays and visitor orientation information provided to visitors and made available on the State Parks website will help educate visitors of the rich cultural, historic,~~

and archaeological resources at the park and of appropriate behaviors and cultural protocols to be observed while at the park.

## 4.2 CULTURAL RESOURCES

### *Existing Conditions*

Maria Ka'imipono Orr prepared a Cultural Impact Assessment (CIA) including a detailed overview of the historical and cultural background of Hā'ena and Kaua'i, traditional literature from mo'olelo (stories and legends), oli (chants), mele (songs), genealogies, and interviews and surveys of those most familiar with the area. The CIA underscores the importance of Hā'ena to Hawaiian culture, describes the ahupua'a life-system that existed into the 20<sup>th</sup> century, and highlights individuals' personal relationships with Hā'ena's resources through their stories and recollections. The CIA is attached as Appendix E.

In addition to the sites and cultural values described in Section 4.1, Orr summarizes her findings as follows:

Wahi Pana or sacred places are important cultural resources to native Hawaiians regardless that the original sites that may have been there no longer exist.

The project lands were once a part of an ancient Hawaiian ahupua'a life-system as well as a support system for the ali'i who lived there and the hula hālau. The physical evidence of multi-use ancient or traditional cultural practices still exists (e.g. Lohi'au's hale, hula platform, heiau, fishponds and lo'i), which not only indicate traditional land-use of the area, but that [Kē'ē] was/is considered a wahi pana. The evidence also indicates that Hā'ena was not only well established, but part of ancient Hawaiian life-systems that included the traditional gods, goddesses, other significant deities, ali'i nui, officiating kahuna and people who lived and cared for the land. The hale or house complex of Lohi'au confirms that portions of Hā'ena were ali'i lands with all the necessary traditional infrastructure and required support systems. According to several sources, there are burial grounds for ancient as well as historic Hawaiians. The project area also included fishponds, considered resource/property of the ali'i nui and an extensive taro lo'i -'auwai system with documented kō'ele or taro patches set aside for ali'i nui. (Orr 2010)

The CIA describes ancient cultural practices that continue today, as well as the wishes voiced by interviewees to see other practices revived.

[Cultural practice] includes items that are essential to the practices that have cultural value to either native Hawaiians or other ethnic groups. Burials are considered a very significant cultural practice and both cave and sand dune burials are located within the project lands. The whole area of Kē'ē, Hā'ena, was once part of the original hula hālau connected to Laka, and honored by Hā'ena ali'i nui Lohi'au whose hale or house is located at the base of Pu'u Makana, to current kumu hula. Other traditional practices included 'ōahi (firebrand throwing), crop cultivation (e.g. taro, sweet potato and banana), salt water and stream fishing, marine gathering (e.g. seaweed or limu, limpets or 'opihi, wana, he'e or octopus and sea cucumber), stream gathering of crayfish and kupe'e), forest gathering of medicinal plants, food plants and craft plants. Many of these latter practices continue to today.

There are historic burials within the project lands, but while people are no longer being buried there, their families continue to honor them, a filial practice that has been continuous. The poi mill foundation is all that exists of a historic cultural practice, however, some of the Hā'ena people would like to see it restored to be used in conjunction with ancient and historic taro lo'i that have been restored and re-cultivated within the last twelve years. The ancient fishponds were also used in

historic times, but often modified to include non-traditional species such as introduced fish, ducks and rice. And although both Kēʻē fishponds were discontinued years ago, some Hāʻena people would like to see them restored and utilized again as a community food and education resource. ... the two historic wooden [houses] should be assessed on their integrity and possible future uses.

The historic practice of sand dune burials was discontinued; the historic use of the fishpond aquaculture was also discontinued in Hāʻena. The restoration and continued practice of growing kalo (taro) has been revitalized in recent years in Hāʻena State Park and elsewhere in Hawaiʻi. Fishpond aquaculture has also been revitalized around Hawaiʻi and there is some hope that this will happen in Hāʻena State Park as well, for subsistence and cultural purposes. Several marine cultural practices continue today with some modifications. Limited fishing continues although hampered somewhat by the extensive use of the visiting tourist who use the beaches and snorkel in the protected Kēʻē lagoon. Use of the reef is discouraged so there is little likelihood of limu gathering there, although limited gathering of ʻopihi may still continue on shore-line. (Orr 2010)

The CIA also provides recommendations from the recent interviews and surveys. Several recommendations that have been incorporated into the plan such as the creation of a Cultural Advisory Group, installation of a full-time caretaker or kahu on-site, shifting the flow of visitor traffic makai away from the edge of the cliff for safety, permeable pavement in the parking lot, closing the highway within the park to through traffic, restoration of the dunes, Agricultural Complex, and Hula Complex, increased interpretive materials, developing cultural and ceremonial protocols, and creating a cultural retreat. The CIA also includes a recommendation to take a cultural approach to organizing the ongoing management and implementation of the Master Plan into different “houses,” or areas of expertise. These cultural “houses” include fishing, marine biology, kalo, botany, protocol, masonry, and State Parks.

Supplementing the information in the CIA, the following cultural knowledge was primarily shared by the MPAC at various meetings, and via phone calls, emails and other communications. As this summary is but a snapshot of these core values, the hope is that these basic concepts drive the implementation of the Master Plan and management of the park and that the discussions and collaborations between State Parks, the families, the cultural practitioners, and the community continue into the future.

For the families and kūpuna who remember living here and tending to this place, everything is connected. The health of the land, flora and fauna, the health of the ocean, streams and waterways, and the health of the people are all connected. Many feel that the people and families who are from this place need to return and need to feel welcomed to help take care of this place as well as the kūpuna whose iwi and spirits still reside in the park. Many also feel that there are currently too many visitors in the park and that the place needs space and time on a regular basis to rest and to be restored.

During one of the MPAC meetings, Kehaulani Kekua graciously shared with the group the deep connection that exists between hula and the forests and how this area is sacred to hula. She explained that hula is not just about dance for the sake of beautiful movements, but about regeneration and that there is a profound connection between the practice of hula and the health and regeneration of the natural environment.

She described the three kuahu (shrine) of hula that are recognized by the guild of hula practitioners. The first kuahu is the native forest. The second is the kuahu within the hālau hula, which could be described as a miniature of the native forest within the hālau. The third kuahu is the body of the hula practitioner. When adorned with greenery from the native forests, the dancer's body itself becomes a kuahu. So in practicing hula, it is the forest that is central and it is for the forest that hula is practiced. The health of our native forest in turns brings good health to the waters that flow in our streams and eventually to the ocean. The health of the forest brings health to the land, the waters, and the people.

### ***Potential Impacts and Mitigation Measures***

Human development, outdoor recreation, and visitor activities have the potential to undermine the cultural significance of a place if not understood or mitigated. Potential negative impacts include inadvertently offending cultural sensibilities by walking, climbing, or picnicking on features that are considered significant to Hawaiian culture such as the Ke Ahu a Laka hula platform or Lohi'au's house platform, or disturbing cultural practitioners while fishing, practicing hula, or caring for their ancestors at various internment sites in the park. Development and recreational activities can also impact the cultural environment by limiting a cultural practitioner's ability to access sites of cultural importance.

The Master Plan, therefore, takes the proactive approach of protecting and restoring the varied natural, cultural, and historic resources as they are all integral to the cultural values of this place and requiring visitor education of everyone who enters the park so they understand the cultural values and practices, and the appropriate behavior and protocol when visiting. Instruction should also be given on what to do when encountering active cultural practices so as not to disturb them. These measures are proposed to help increase visitor sensitivity to these activities and mitigate potential conflicts. The Master Plan also recommends the reduction in the number of visitors at the park so that an appropriate ambiance and space can be maintained for these cultural practices to take place. Initially, this visitor limit is set at 900 people per day during peak visitor hours. However, this number may be adjusted over time depending on future improvements, improved/increased maintenance, and/or other studies such as impact studies, particularly if harmful impacts to the natural, cultural and archaeological resources arise. The daily visitor limit would not include cultural practitioners such as lawai'a or hunters (with valid hunting permits for the Nā Pali Coast State Wilderness Park), or special user groups such as hula hālau, lo'i workgroups, cemetery caretakers, or school groups.

The Master Plan also includes the key recommendation that a Cultural Advisory Group be formed to advise State Parks and the potential future park management entity on all matters regarding the park (Section 2.5.4.2). Specifically, the Master Plan recommends that the Cultural Advisory Group be consulted on management actions, construction projects, behavior and access protocols, interpretive signage, and educational programs.

The primary physical mitigation measure is to avoid cultural resources when locating new improvements and, where appropriate, enhance existing cultural and historic resources with restoration, interpretation, and cultural reuse. For example, new development in the

Agricultural Complex is limited to facilities that support community gardening, such as a baseyard for equipment storage, which is located in previously disturbed areas where lo'i cannot be restored due to the condition of the soils. Similarly, the remnant Allerton house foundation and restored Allerton Caretaker's Cottage are recommended to be incorporated into the Hula Complex and serve as support or park-related facilities.

Beneficial impacts to the cultural environment are expected from enabling cultural practices in the park through lo'i restoration and kalo cultivation; hula; traditional subsistence fishing; and caretaking of the Hula Complex and cemeteries. As a means to preserve access to cultural resources, perpetuate tradition, and provide essential maintenance of resources, State Parks has entered into a partnership with the Hui to curate the Agricultural and Hula Complexes. Additional partnerships will be encouraged to help manage other cultural resources within the park. In addition, the plan recommends that State Parks undertake separate efforts to work with cultural practitioners and the CAG to develop appropriate protocol for the park's cultural and historic resources, such as the Hula Complex, Agricultural Complex, and other archaeological/historic sites. These protocols will be incorporated into the visitor education program.

## 4.3 TRANSPORTATION

### 4.3.1 ROADWAYS AND TRAFFIC

#### *Existing Roadway Conditions*

Public vehicular access to Hā'ena State Park is limited to Kūhiō Highway (State Highway 560), which runs the length of the park and terminates at Kē'ē Beach. The highway is owned and managed by the State DOT and consists of two paved twelve-foot lanes. Approaching Hā'ena State Park, the highway has gravel and asphalt concrete pavement shoulders. The highway enters into the park over Limahuli stream by a single lane, 10-foot wide by 12-foot long concrete bridge. Within the park, the highway becomes two lanes again and measures approximately 24 feet in width. The pavement structure is unknown.

The North Shore section of the highway is listed on the National Register of Historic Places, including the segment that leads up to and enters the park. It is the only remnant of the Belt Highway system on Kaua'i to retain a high degree of integrity (Duensing 2003). However, paved shoulder lanes were installed along the highway within the park in 1985 and in 2002 guardrails were added (Kennedy/Jenks 2011). The shoulders are often used for illegal parking, particularly in areas around Wai a Kanaloa and closer to Kē'ē.

The narrow lanes and one-lane stream crossings give the highway its unique and scenic character. The narrowness and weight limits of these bridges also eliminates the passage of large tour buses and trucks through this portion of the North Shore. Passenger vehicles are limited to a 15-20-person maximum and the vehicle weight limits for the bridges range between 16,000 and 50,000 pounds (gross vehicular weight) according to the State DOT (DOT personal communication 2011). However, these are not the tested strengths of these historic bridges and it could be far less in reality. A typical 15-passenger van has a gross

weight limit (includes passengers and load) of 10,000 pounds (Austin Tsutsumi and Associates 2011).

The highway within the park has no pedestrian or bicycle amenities. Narrow shoulders on both sides of the highway often require pedestrians and bicyclists to traverse the vehicle travel lanes, creating potential conflict points. Pervasive illegal parking occurs along both sides of Kūhiō Highway within the park, despite the posted “no parking” signs. Cars park on the narrow shoulders, further blocking passage of pedestrians and bicyclists as well as narrowing the travel lanes for vehicles.

Unpaved access roads exist within the park, including the coastal beach road which runs behind the sand dunes and is gated at Kēʻē. There are also unpaved access roads to the Montgomery House, to the cleared loʻi (Phase I), and the driveway/access road to the former Allerton property. All of these roads are gated or chained along the highway.

### ***Existing Traffic Conditions***

Access to Hāʻena State Park is dominated by the personal vehicle, whether rented or privately owned. According to a 2007 OmniTrak survey of 283 park users performed for the Hawaiʻi Tourism Authority (HTA), 69 percent of visitors from Hawaiʻi and 42 percent of non-Hawaiʻi visitors arrived by private vehicle and another 19 percent of visitors from Hawaiʻi and 55 percent of non-Hawaiʻi visitors arrived by rental cars.

Austin, Tsutsumi and Associates, Inc. (ATA) prepared a Traffic Impact Analysis Report (TIAR) for the Master Plan, which is attached as Appendix F. According to historic data, Kēʻē experiences its highest attendance during the summer months. Recent traffic data was collected via pneumatic tubes placed at the Hāʻena State Park entrance between August 14, 2008 and August 18, 2008. During this analysis period, the three-day Admission’s Day weekend was included in the counts. This was also prior to the recession and downturn in Hawaiʻi visitor counts.

Weekend peak hour traffic occurred between 12:00 p.m. and 1:00 p.m. However, a large influx and efflux of traffic generally occurred between 10:45 a.m. and 3:45 p.m. Regional weekday morning and afternoon commuter traffic was assumed to occur between 8:00 a.m. and 9:00 a.m. and between 3:00 p.m. and 4:00 p.m. respectively.

A total of 1,550 vehicles per day were counted entering and exiting Hāʻena State Park. On the average over the study period, there are 781 vehicles entering the park and 767 vehicles leaving the park. Peak traffic was observed on Sunday, August 17<sup>th</sup> between 12:00 p.m. and 1:00 p.m. where a total of 107 vehicles entered and 85 exited the park. ATA concluded that observed traffic was well below the potential capacity of a two-lane highway; two-lane highways have the potential capacity of 1,700 passenger vehicles per hour per direction of travel. However, congestion within the park occurred due to the slow speeds resulting from pedestrians on the roadways and cars waiting for parking stalls. Some waited as long as five minutes for a stall.

Although no standards exist for determining the capacity of the one-lane bridges along the highway leading up to the park, ATA used Simtraffic Analysis software to estimate a baseline for the existing traffic. The Waipā Bridge was used for the analysis since it has the longest one-lane span and is located near the State DOT's count location. With 487 vehicles crossing the bridge in both directions per hour and an estimated bridge capacity of 1,250 vehicles per hour, the existing volume-to-capacity (VTC) ratio for the bridge is about 39 percent. This number was used to compare different scenarios for the master plan.

The most recent biennial DOT traffic counts in June 2013 registered 6,700 vehicles per day on the stretch of highway just before the County's Hā'ena Beach Park. This includes vehicles traveling in both directions with the counts split almost exactly in half for each direction, or roughly 3,350 traveling in each direction (DOT Kaua'i District 2015). This is a roughly 55 percent increase since the 2003 biennial counts, which recorded over 2,100 vehicles per day in each direction in August (DOT Kaua'i District 2007).

The overwhelming sentiment from the public and project team is that the traffic congestion is a significant problem that needs to be addressed as it continues to worsen. It causes safety concerns for pedestrians and bicyclists, backs up traffic into the neighboring areas, discourages local residents from going to the park, and negatively impacts the overall experience at the park. Community members also voiced the desire to continue to allow early morning and late afternoon access to the park and Kē'ē Beach for recreational jogging, walking, and biking and to institute a shuttle from Princeville as the main means of bringing visitors to the park.

### ***Potential Traffic Impacts and Mitigation Measures***

Because of the unique nature of the traffic congestion and circulation issues at the park, ATA took an innovative approach to the TIAR. ATA provided analyses of engineering considerations and potential traffic impacts as well as five example shuttle service scenarios to help inform the direction and design of the preferred Master Plan. They also considered varying amounts of parking spaces at the park and estimated the potential costs and break even requirements for the shuttle.

Scenario 1 describes baseline projection of traffic with the 900-daily visitor limit but without a shuttle. Traffic is reduced and remains well below the estimated roadway capacities for two-lane highways and the one-lane bridge. However, ATA noted that there may be backups at the parking lot unless parking passes or some other parking management system is instituted.

Scenarios 2 and 3 are the shuttle scenarios, comparing the proposed 900 daily visitor limit with a smaller 50-stall parking lot and with no parking lot. The reduced parking lots were requested by members of the MPAC since it was discussed that the demand for a shuttle may not be high enough if there is ample parking at the park. For comparison's sake, ATA also studied what the shuttle requirements would be if there were no visitor limit with both a 50-stall parking lot and no parking lot in Scenarios 4 and 5.

In Scenarios 2 and 3, ATA estimated that six or seven 15-person capacity vans making nine trips per day would be needed to serve the 50-stall parking lot and no parking lot scenarios, respectively. They estimated it would cost \$10.28 and \$10.18, respectively, per person for the system to be self-sustaining. It also included a 30% contingency for low or sporadic ridership.

Scenarios 4 and 5 estimated the requirements of the current unconstrained situation with 2,000 visitors per day and found that 15 vans operating constantly from a remote parking lot would be needed to shuttle all visitors to the park or 14 vans with a 50-stall parking lot. Roundtrip shuttle tickets would need to be about \$10.80 to break even with a 50% contingency for low or sporadic ridership.

In a previous analysis, ATA provided a reverse calculation and estimated that it would take 245 riders per day at \$10 per roundtrip ticket to make a two van (15-passenger capacity) system sustainable. This is comparable to what the owners of the Experience Kaua'i shuttle service shared with the County of Kaua'i's North Shore Shuttle Committee in March 2014. In all the shuttle scenarios, there was not much difference in estimated costs per rider or difference in traffic impacts based on the Waipā Bridge's volume-to-capacity (VTC) ratio. The VTC ranged from 27% to 31%, compared with the existing traffic's 39%, a difference of about 55 cars per hour. The reduction in daily visitors alone is estimated to reduce the hourly flow by 100 vehicles per hour, which is less than two cars every minute.

During the meetings with the MPAC and community, various suggestions were made to encourage or even require that visitors arrive at the park by different modes of transportation to help reduce traffic. Three concepts were explored with the MPAC: (a) Princeville-based park entry, (b) Combination on-site parking and Princeville entry facility, and (c) On-site parking only. ~~The preferred scenario, which best mitigates the potential traffic and parking impacts of the Master Plan, is described as follows.~~

The MPAC's originally preferred scenario is to implement the shuttle from the Princeville facility at the start of Phase I, minimizing the need for visitor parking in the parking lot in the park. However, the remote Princeville entry was rejected by the community due to the inconvenience of this and the fact that it might actually increase traffic for those who live closer to the park since they would have to find their way to Princeville and then double back to the park. Therefore, the Master Plan includes space to accommodate a parking lot for up to 100 vehicles ~~if needed~~. The design and materials of the parking lot would allow its size to be adjusted as the Master Plan is implemented. It could be reduced to accommodate as few as zero vehicles if the shuttle service is fully implemented and meets all needs, or expanded to accommodate up to 100 vehicles to address the possibility that the shuttle service might not be implemented on schedule or to accommodate special needs that could only be met by additional on-site parking (for example, the need for after-hours on-site parking, or additional parking for cultural practitioners, kūpuna, subsistence fishermen or ~~handicapped~~ visitors requiring ADA accessibility). This scenario should significantly reduce traffic in the park and surrounding neighborhoods. By providing visitors an alternative means to get to the park at the outset of the improvements, this will also reduce the potential for “spillover”

parking issues in the surrounding neighborhoods that could happen if parking is limited without providing an alternative for visitors to access the park.

### ***Potential Roadway Impacts and Mitigation Measures***

The Master Plan includes a combination of physical improvements and programmatic options that when applied in combination will have a positive impact on the existing roadway conditions.

Vehicle access beyond the main parking area to Kēʻē beach is proposed to be reduced from the currently unrestricted conditions to special access only (ADA, lifeguards, and cultural practitioners). Restricting general vehicular access from the main parking area to Kēʻē Beach will effectively eliminate illegal parking along the highway's shoulder, reduce the wear on the historic roadway's macadam surface, and reduce the number of visitors traveling in a potential rockfall hazard area. It will also reduce the potential conflicts between vehicles and pedestrians and bicyclists as the ~~Interpretive~~ Pedestrian Path becomes the main visitor path to Kēʻē and the highway is limited to special access vehicles, and it will reduce roadway maintenance costs for the State. Reducing the number of vehicles turning around and/or idling while waiting for parking at Kēʻē is expected to be a beneficial impact by reducing vehicle/pedestrian conflicts; reducing dust, noise and exhaust fumes; and reducing the amount of pollutants running off vehicles and washing into the lagoon and surrounding park areas.

## **4.3.2 PARKING**

### ***Existing Conditions***

Within the park, there are two designated parking areas, one approximately 800 feet from the park entrance and one at the terminus of the highway near Kēʻē Beach. The parking lot nearest the park entrance is unpaved and measures approximately 30,000 square feet in area, it is unsigned and unstriped. In the absence of striping, visitor parking patterns are informal and at times inefficient. During wet weather conditions the dirt/gravel surface becomes muddy and deeply grooved from vehicle maneuvering. As the parking surface dries, the grooved mud becomes hard packed ruts creating an uneven surface that further reduces the area available for parking.

The parking area near Kēʻē beach is hard-packed dirt on each side of the highway. Two ADA accessible spaces are paved, striped and signed.

ATA also noted the considerable amount of vehicles that were parked alongside the highway within the park leading to Kēʻē, many illegally parked despite the posted “no parking” signs. Visitors who park along the roadway or park in the lot closer to the entrance were exposed to oncoming traffic due to a lack of pedestrian sidewalks.

### ***Potential Impacts and Mitigation Measures***

The Master Plan recommends closing the highway within the park to general through traffic which will effectively eliminate the illegal parking that currently occurs along the highway.

Parking will be simplified and better organized by limiting it to two lots; the main one at the entrance and the special access parking lot at Kēʻē. The turnaround at the entrance will also keep traffic moving rather than allowing drivers to idle or requiring a multi-point turn to turnaround should the parking area be full. This should ease congestion and backups along the highway approaching the park and reduce the potential for conflicts between vehicles and pedestrians.

The main parking area is proposed to be surfaced with pervious paving material or structured grass that is ADA accessible over the entire parking lot or at least half of the parking lot so it can be used for multiple purposes and can be striped to create an efficient parking layout. Beneficial impacts are expected to include more orderly and efficient use of the parking area, an improved driving surface, and a reduction in sediment runoff. Bioswales around the parking area are also proposed to capture and help filter runoff. Methods for stormwater systems will be integrated with the overall water/wastewater/drainage system designed for the park as well as investigation of whether the ʻauwai can be restored or not. The area between the parking lot and the highway should be designed to provide rockfall catchment as recommended in the Master Plan as well as drainage and ʻauwai restoration as appropriate. Therefore, the design of the main parking lot should be coordinated with the design of the entry facilities and based on sustainability, cost, and availability of materials/technology.

The parking lot as shown in the Master Plan is large enough to park roughly 100 vehicles. However, to encourage use of the shuttle or transit system being planned for the North Shore, the number of available stalls may be reduced and the grassed areas of the lot can be used for outdoor activities, staging areas, loʻi, or educational purposes. The area shaded in a darker green in the plans shows how the parking lot could be partitioned for the different uses park users, whether they are fee-paying visitors or non-fee paying visitors, and can be adjusted with movable bollards and cordons depending on the number of cars for each user group. The division between the two can be adaptively managed weekly, daily, or even hourly throughout the day depending on demand. This design gives State Parks the flexibility to provide enough parking until the shuttle/transit system is operational and to adjust as needed the number of parking stalls that are available for the different user groups while also encouraging multimodal access to the park. Overnight parking could also be reduced or restricted and parking lot time limits could be proposed as needed to encourage turnover of the stalls. If the transit system proves successful once implemented, the areas ~~may~~ no longer ~~be-needed~~ for parking ~~and~~ could permanently be converted into an expanded shuttle stop area or other park uses such as additional educational gardens and picnic areas, event space with a grand entry lawn, or expanded staging areas.

The beneficial impacts of removing the illegal parking include fewer cars parked within rockfall hazard areas, elimination of vehicles from scenic views such as Wai a Kanaloa and Kēʻē Lagoon, the reduction of wear and erosion along the highway, and the reduction of car fluids seeping into the ground particularly near sensitive cultural and natural resources. The potential negative impacts of removing the illegal parking include an increased demand for legal parking spaces within the park, the potential displacement of parking to the highway or other areas and communities outside the park (also illegal), increased visitor use at Hāʻena

Beach Park and other nearby coastal resources, and driver frustration at the park entry for those who do not plan ahead and check parking availability prior to driving to the park in the event parking is not available when they arrive. However, the reduction in the number of visitors ~~permitted~~ at the park on average during peak hours will serve to reduce the overall demand for parking and it is recommended that State Parks or the future management entity institute public information processes to inform visitors ahead of time whether parking is available or not. This can be done via social media, text messages and emails, the State Parks webpage, and daily information disseminated to the visitor industry and media outlets. The limited parking will also force visitors to plan their trips to Hā'ena ahead of time and may encourage visitors to use a shuttle, if available.

When visitors plan ahead, park managers will be better able to anticipate park operation needs and potential resource impacts. In addition, it could help reduce the number of drop-ins at the park and reduce general traffic along the highway through neighboring North Shore communities. Prior to instituting the proposed visitor limits, a public information campaign must be made far in advance so people are able to prepare for the changes proposed to the park.

### 4.3.3 PUBLIC TRANSIT AND SHUTTLE SERVICE

#### *Existing Conditions*

The County of Kaua'i Transportation Agency provides public transit service between Hanalei and Kekaha via the Kaua'i Bus. Service between Līhu'e and Hanalei is provided ~~six~~ seven days a week, ~~Monday through Saturday~~, between ~~6:20-5:25~~ a.m. and ~~8:00-10:40~~ p.m. Route ~~400/450~~ runs from the Hanalei Courthouse to Kaua'i Community College and Route 500 runs in the opposite direction. Fares are \$2.00 per trip for adults, \$1.00 per trip for seniors (60+ years) and youth (7–18 years). The County also offers monthly passes for ~~\$35.00~~ \$40.00 and annual passes for \$400.00. All buses are wheelchair accessible. Folding baby strollers, musical instruments, and body boards are permitted onboard. However, surfboards, large backpacks and other bulky items that block the aisle or seat are not permitted onboard. Currently, there is no public transportation service to Hā'ena. Private shuttles and taxis can be arranged for a fee.

In 2014, the County provided a \$75,000 grant to a private shuttle operator, Experience Kaua'i, to supplement the County's transit service between Princeville and Kē'ē in an experiment to see what the ridership potential would be and to reduce traffic along this stretch of the highway. In its first month of operation in November 2014, they had over 1,000 passengers. In January 2015, ridership peaked with nearly 1,900 riders and average monthly ridership was over 1,500. The shuttle used two 15-passenger vehicles and charged introductory fares of \$2 each way for visitors and \$1 each way for residents during its first two weeks. After that, the fares increased to \$4 and \$2, respectively. Between 41 and 50 percent of riders were residents.

The shuttle service runs ~~ran~~ from 6:00 AM until 7:00 PM originating at the Westin Princeville, stopping at major resorts, the Princeville Center, Hanalei Town, the Wainiha

Store, Hanalei Colony Resort, and Hā'ena Beach Park before heading to Kē'ē. The shuttle then ~~reverses~~reversed its route back to Hanalei Town. At 9:00 AM, the second shuttle ~~starts~~began running between Princeville and Hanalei, while the earlier shuttle ~~loops~~looped between Hanalei and Kē'ē to increase frequency of service. Funding to support the shuttle, however, was not provided in the 2015-2016 County budget approved by the County Council in June 2015.

### ***Potential Impacts and Mitigation Measures***

The preferred scenario described in the Master Plan proposes a combination of shuttle service to the park with ~~reduced~~ parking on-site as part of Phase I of implementation. While State Parks is unlikely to initiate its own shuttle service, several options for a shuttle system are identified in the Master Plan including extending the County public transit service to Kē'ē, contracting with a third-party operator to provide the service, or allowing independent private shuttles to stop at the park, or a combination of the above. The Master Plan identifies a shuttle stop in the proposed Master Plan with sheltered seating areas along the turnaround at the entry to the park. The turnaround should be designed to allow other vehicles to pass while shuttles are stopped at the shuttle stop in order to reduce backups and congestion along the highway. In order to encourage ridership, the shuttle service should be initiated in Phase I and the parking lot should be sized appropriately. Various management strategies including parking and entry fees, point of entry tickets ~~sales~~ are also discussed in the Master Plan report to provide a range of options to support the shuttle.

If the shuttle service is implemented, it has the potential benefit of serving multiple populations including residents and not just park visitors depending on the stop locations, frequency, cost, and quality of the service. Recent record rainfall events, mudslides, and highway closures have brought a new focus and opportunity to change how transportation operates on the North Shore as a whole. State Parks is actively working with the County and the community to discuss potential solutions to these issues. If shuttle service to the park is not implemented, the larger parking lot will need to be constructed to serve the park and a grass surface is not recommended since grass would require that the parking lot be uncovered for at least three days out of the week to receive adequate sun. If the parking spaces turn over two to three times during the peak hours, the 100 stalls are estimated to be sufficient if visitors are carpooling and arriving with an average of three people per vehicle. Green vehicles such as electric vehicles that can be charged with renewable energy sources such as solar PV or vehicles that use alternative fuels and have low or no emissions are recommended to reduce the impact to air quality and consumption of fossil fuels.

## **4.3.4 PEDESTRIAN AND BICYCLE FACILITIES**

### ***Existing Conditions***

Although primary access to the park is by car, people also walk, jog, and bicycle to the park; some of whom enjoy early morning or late afternoon treks to the beach when the park is not as crowded. There are currently no designated pedestrian or bicycle facilities within the park or en route to the park. Pedestrians and bicyclists typically share the vehicle travel lanes or along the narrow shoulders of the highway (Kennedy/Jenks 2011). However, there are many

areas where rock slopes, vegetation, guardrails, and illegal parking block the shoulder, dangerously pushing pedestrians and bicyclists further into the vehicle travel lanes, and forcing drivers to slow down creating potential conflicts and accidents.

### ***Potential Impacts and Mitigation Measures***

The Master Plan includes a combination of physical improvements and programmatic options that will have a positive impact on pedestrian and bicycle facilities.

Currently, the primary pedestrian flow through the park is along Kūhiō Highway from the main parking area or from illegal parking spots on the highway shoulders to Kēʻē Beach. The Master Plan proposes the construction of the Interpretive Pedestrian Path which will be a separated pedestrian- and possibly bicycle-only path between the Welcome Pavilion/ECC Hale and Kēʻē Beach. It will traverse the loʻi along the first berm separating the first two rows of loʻi and then turn north to avoid the wetlands. It will cross an ʻauwai over a footbridge and connect to a path through the hau tunnel. This path will then connect to the trail behind the dunes and turn south, leading visitors past the lifeguard tower to Kēʻē. Vehicle traffic will terminate at the main parking lot or at the special access parking lot via the limited access portion of the highway. Pedestrians and bicyclists will be discouraged from using this stretch of the highway due to the potential for rockfalls. The Interpretive Pedestrian Path as well as all other pedestrian paths recommended in the Master Plan are located outside of the modeled rockfall zone. The separation of vehicle traffic from pedestrian/bicycle traffic will improve safety by reducing the potential for conflicts between vehicles and pedestrians/bicyclists, and will reduce congestion at the park.

The new Interpretive Pedestrian Path will also provide increased educational opportunities via interpretive displays and greater visual access to the Agricultural Complex, Makana, wetlands, and loko for visitors. ~~Other loop paths for pedestrians are planned throughout the park as the Agricultural Complex is restored. This will also open up more recreational and education opportunities for visitors. However, the expansion of these paths will also require additional maintenance and oversight so the sensitive natural, cultural, and archaeological resources are not impacted negatively due to inadvertent damage, vandalism, or inappropriate use or activities.~~ Direct views and access to Wai a Kanaloa will be reduced as it will have to be viewed from a distance along the Interpretive Pedestrian Path. However, this also has the added benefit of removing visitors from one of the higher rockfall hazard areas.

With regards to construction, there are both beneficial and negative impacts anticipated. Construction of the Interpretive Pedestrian Path will involve setting footings for the elevated path in the loʻi and possible wetland areas. Care must be taken due to the proximity to natural and archaeological resources and loʻi walls and the potential of unearthing subsurface materials during construction. Coordination with the U.S. Army Corps of Engineers and archaeological surveying prior to path the detailed design and construction of the path and archaeological monitoring during construction are recommended.

Other negative impacts include the potential for disruption of community gardening activities in the loʻi and the physical bifurcation of the loʻi, complicating maintenance and operations.

Proposed mitigation measures were developed with recommendations from Hui leadership and include expanding restoration of the Agricultural Complex makai and eastward (Phases II and III) and allowing the lo'i between the highway and ~~Interpretive Pedestrian~~ Path to be used as an outdoor classroom for educational purposes and hands-on restoration activities ~~for visitor tours and school groups~~.

## 4.4 NOISE

### *Existing Conditions*

The predominant sources of noise in the park stem from automobile traffic accessing the park and idling cars waiting for parking spaces. Other sources of noise are from the visitors who recreate on the beach and in the ocean, at Cold Pond, and on the trails, and who congregate in areas around the Kalalau Trailhead, the comfort station, Wai a Kanaloa, and the parking areas. Natural sources of noise include wildlife and birds, the wind rustling vegetation, rain, Limahuli Stream, and ocean waves.

### *Potential Impacts and Mitigation Measures*

It is expected that the proposed reduction in the number of visitors during peak visitor hours and the removal of through traffic on the highway will have a positive impact on noise levels in the park as it will result in less vehicle and human-generated noise at the park's most popular recreation areas such as Kē'ē Beach and the Kalalau Trailhead and important cultural sites such as Ka Ulu a Paoa Heiau and Wai a Kanaloa. No further mitigation is proposed.

During construction, there will be temporary noise impacts associated with construction equipment. Similarly, restoration work and ongoing maintenance may require the use of motorized equipment, but these impacts are expected to be temporary and can be scheduled during park closures. As proposed mitigation for temporary construction noise, State Parks is ~~anticipated to will~~ work with contractors to ensure adherence to DOH regulations as required under Chapter 11-46, HAR, including obtaining noise permits as required and to ensure the use of proper equipment and regular vehicle maintenance. Equipment mufflers or other noise attenuating equipment may also be employed as additional mitigation. All construction activities will be limited to daylight work hours.

## 4.5 AIR QUALITY

### *Existing Conditions*

Regional and local climate, together with the amount and type of activity generally determine the air quality of a given location. At the project site, winds are predominantly trade winds, blowing from the northeast.

The main source of air emissions at the park is vehicle exhaust along Kūhiō Highway and in the parking areas. The remaining areas of the park have relatively good air quality as there is minimal development and activities with air emissions. There are no point sources of airborne emission registered with the U.S. Environmental Protection Agency (EPA) within proximity of the project site (EPA 2015). Pollutants that exist may be attributable to

automobile traffic accessing the park and idling vehicles waiting for parking spaces. Emissions from such sources are intermittent and are quickly dispersed by prevailing winds. The State of Hawai‘i is in attainment with all National Ambient Air Quality Standards.

### ***Potential Impacts and Mitigation Measures***

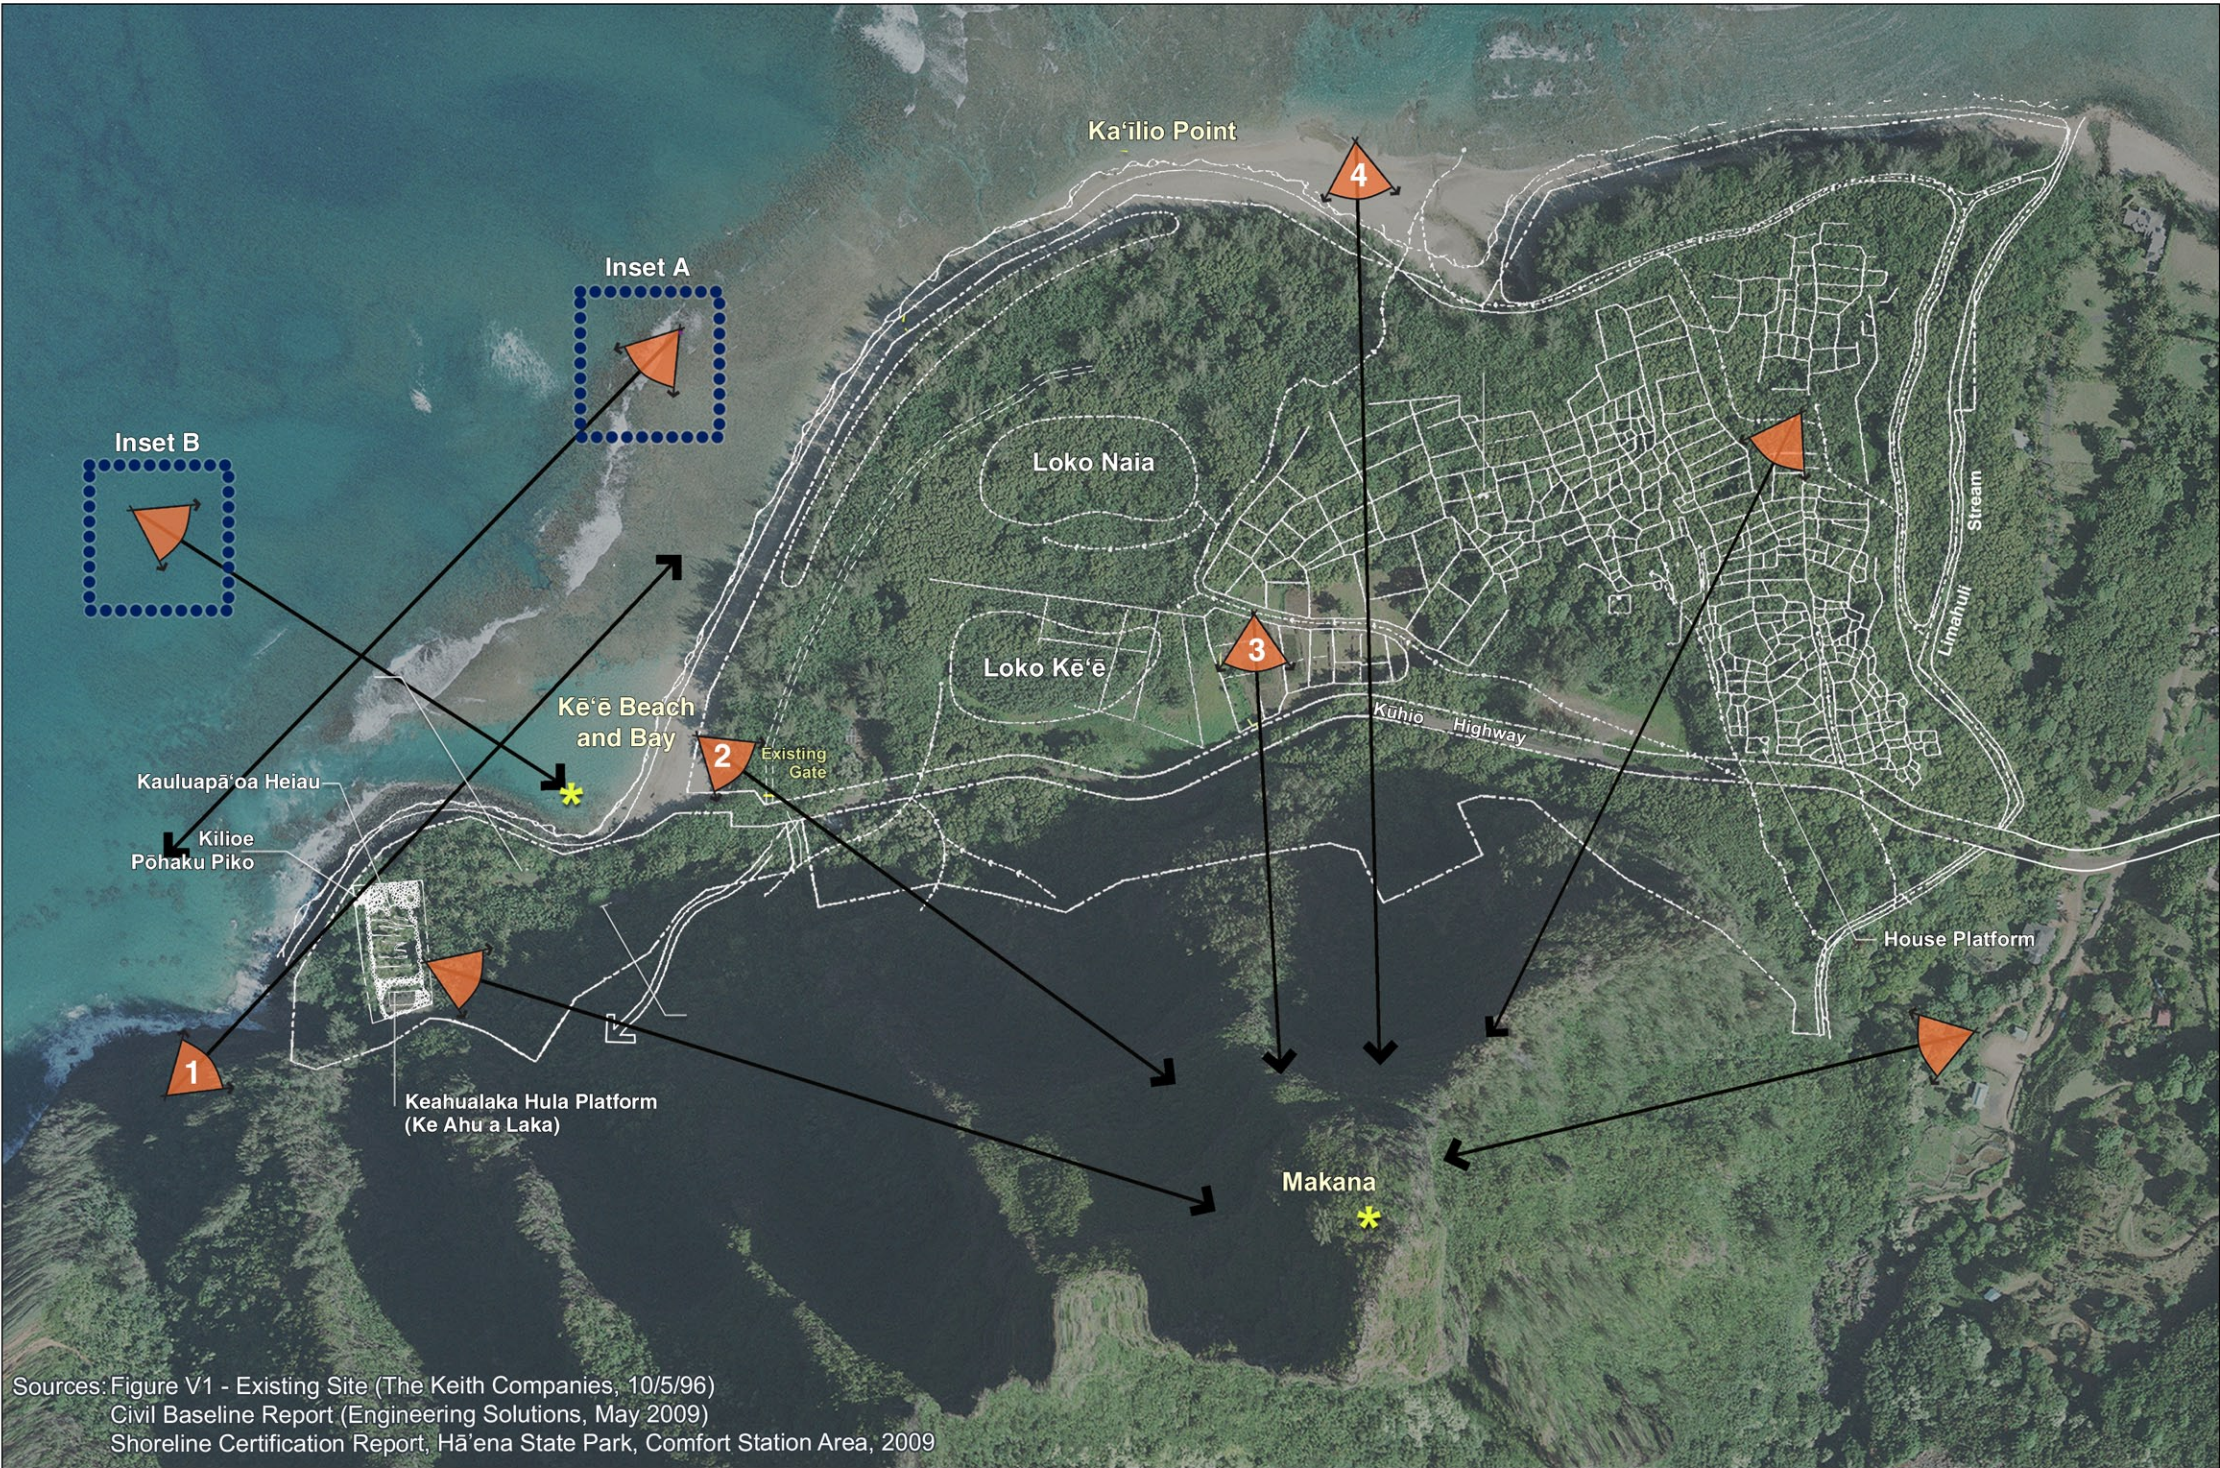

As with automobile noise, it is expected that the reduction in the number of vehicles driving along the highway to Kē‘ē will result in less automobile emissions and dust at the popular recreation sites and important cultural sites. Emissions from operation of construction equipment and other vehicles involved in construction, restoration, and maintenance activities may temporarily affect the ambient air quality in the immediate vicinity. However, these effects will be minimized through proper maintenance of construction equipment and vehicles and scheduling of such activity during park closures or in areas away from visitor activity whenever possible. In addition, there may be a temporary adverse impact on air quality attributable to dust generated during project construction, maintenance, and removal of invasive plant species particularly during earthmoving activity. Best management practices that meet DOH’s standards are anticipated to be employed as needed to mitigate dust during these activities. Construction activities will comply with the provisions of Section 11-60.1-33, Hawai‘i Administrative Rules (HAR) related to Fugitive Dust. Adequate measures to control dust during various phases of construction will be required to be implemented by any contractor employed by the DLNR to effect the project’s development. Example measures to control fugitive dust include: providing adequate water sources at the site prior to start-up of construction activities; minimizing dust from shoulders and access roads; providing adequate dust control measures during non-work hours and prior to daily start-up of construction activities; and controlling dust from debris being hauled to and from the project site.

## **4.6 SCENIC RESOURCES**

### ***Existing Conditions***

Hā‘ena State Park is well known for its scenic qualities and in particular, views of the rugged Nāpali coast. Kūhiō Highway’s present alignment provides access to many of the park’s varied scenic resources, ending at Kē‘ē, where the vista opens to the ocean and the beginning of the Nāpali coastline. At the park entrance, a single-lane bridge crosses Limahuli Stream, where views up- and downstream offer a rare view of a natural and relatively intact perennial stream. Under the shadow of Makana, which stands 1,280 feet above the park, the roadway passes the wet cave, Wai a Kanaloa, the Agricultural Complex, the seasonally-flooded wetlands of Loko Kē‘ē and ultimately terminates at Kē‘ē Beach. Wai a Kanaloa and the other wet caves in the area are both visually interesting to visitors and home to mo‘o in Hawaiian legend. From within the Agricultural Complex, Makana’s peak is visible and from this vantage point, the mountain’s prominence in Hā‘ena’s stories can be appreciated. For most of the park’s visitors, the white sand beach and lagoon at Kē‘ē are the primary destination. From here, one can observe important visual resources including the sea cliffs of the Nāpali Coast. Kē‘ē beach and lagoon are also valuable visual resources viewed from the air or points on the Kalalau Trail. Views of Kē‘ē and beyond from Ka Ulu a Paoa Heiau and the hula platform are also integral to these important cultural resources.

**LEGEND**

Historic and Scenic Resources

HĀ'ENA STATE PARK

Source: Based on 2001 Community Preferred Master Plan prepared by The Keith Companies  
Disclaimer: This graphic has been prepared for general Planning purposes only and should not be used for boundary interpretations or other spatial analysis beyond the limitations of the data.

Other areas rich with scenic resources are along the shoreline and Kalalau Trail. The park's major views and scenic resources are documented in Figure 25 and Figure 26.

Visual access to the park's scenic resources are currently diminished or outright impaired by the many cars parked illegally along the highway and the dense invasive tree canopy that covers much of the site's interior. Because Hā'ena is a major destination for visitors, hikers, and residents, parking is in high demand. Oftentimes people will park illegally directly in front of scenic resources blocking views wholesale or at best, altering the landscape with parked cars. The lifeguard stand at Kē'ē beach serves a vital function, however, its current location is directly in the line of sight as one approaches the beach from Kūhiō Highway. Scenic resources are also obscured by a heavy forest canopy dominated by alien vegetation. See Figure 27.

### ***Potential Impacts and Mitigation Measures***

Beneficial impacts to the park's scenic resources are anticipated due to various measures proposed in the Master Plan. New view corridors and lookouts proposed in the Master Plan are illustrated in Figure 28. First, clearing strategic areas of the dense interior of the park is recommended to be the focus of earlier phases of restoration and improvement. In addition, general vehicle access will be limited beyond the main parking area so the view of cars strewn along the highway at the base of the pali will be cleared. Visitors will access the park by foot or bicycle along the ~~Interpretive~~ Pedestrian Path, allowing views to the lo'i and Wai a Kanaloa without interruption by parked vehicles. Makana also will be visible from the ~~Interpretive~~ Pedestrian Path; it is currently not visible from the highway.

Interpretive displays will be installed along the ~~Interpretive~~ Pedestrian Path at key historical and cultural sites. As mitigation against potential negative impacts to views, such displays are recommended to be carefully designed so as not to impact the visually integrity and beauty of the park and its features. At Kē'ē, it is expected that elimination of the steady stream of vehicles waiting for parking and turnaround will serve as a beneficial impact and improve scenic views at this active area of the park.

The lifeguard stand is proposed to be moved northeast of its current location. This will serve to remove an obstruction of the view of the beach from Kūhiō Highway while also allowing better visual access of the entire lagoon for the lifeguards for public safety purposes.

New development in the park such as the ~~Welcome Pavilion, ECC, and Caretaker's Cottage Hale, main parking lot, and new restrooms~~ will be limited to areas of previous disturbance that do not obstruct any major or important viewplanes. Surrounded by forest, this location does not create an impact on any of the important views previously discussed and as shown in Figure 25. Similarly, the Hālau Wa'a proposed with the Cultural Gathering Place is located near the shoreline to create new scenic views of a Native Hawaiian structure in a restored coastal environment. Lastly, the restoration of the dune system, wetlands, and native forests and the removal of alien tree canopy in these areas will improve the park's scenic resources by restoring native ecosystems and inviting native wildlife back to the park.

## 4.7 INFRASTRUCTURE

Infrastructure and utilities serving the park are described in detail in the Civil Baseline Report (Appendix G) and the Wastewater Preliminary Engineering Report (Appendix H), which were prepared by Kennedy/Jenks Consultants.

### 4.7.1 WATER

#### *Existing Conditions*

According to Kennedy/Jenks, the County of Kauaʻi Department of Water (DOW) currently provides potable water to the park via a four-inch PVC pipe that terminates at the entrance to the park and has a one-inch meter. Water is gravity-fed from a 0.1 million gallon reservoir 1.1 miles away at a ground elevation of 126.5 feet above mean sea level. Within the park, a three-inch galvanized iron pipe runs along Kūhiō Highway in an east-west direction and serves the comfort station and associated shower at Kēʻē Beach. Most of the three-inch pipe is installed above ground and buried pipe depths are unknown. Recorded water usage from October 2003 to November 2006 averages 2,125 gpd. More efficient fixtures were added when the comfort station was upgraded in 2008. It is expected that the new fixtures will decrease water demand from 25 gallons per minute to 21 gallons per minute.

As a condition of the SMA permit for the existing comfort station, the Kauaʻi County DOW required that a backflow prevention device be installed (County permit number(s) SMA(U)-2007-2 and SMA(U)-2010-3). A backflow prevention device was installed in 2009 with the comfort station construction.

Limahuli Stream water is diverted for irrigation and residential purposes by multiple landowners. According to the CWRM, there were seven separate diversions from Limahuli Stream, six of which are still active. Of the six active diversions, three supply Limahuli Garden and Preserve and three serve private residences. All consist of PVC pipes and none pump water from the stream. Two of the diversions serve domestic uses and the rest are for agricultural, landscaping, or other irrigation purposes. The total diversion amount for five of the diversions is 0.8822 cfs, or just over 570,000 gpd. The amount diverted for one of the private residences is unknown.

A portion of the water (average of 760,000 gpd) diverted for Limahuli Garden is conveyed to the loʻi at Hāʻena State Park by PVC pipe. The intake is located on the south side (mauka) of the highway and the water flows by gravity through an HDPE pipe to and into the loʻi. The line begins as an eight-inch HDPE line at an elevation of 95.9 feet amsl and transitions to a six-inch HDPE line at 57.5 feet amsl. It crosses the highway through one of the 18-inch drainage culverts (Kennedy/Jenks 2011).

There is no fire protection water system within the park. Collected catchment water can be used and if needed, seawater is—could be airlifted to the site of any fire. The last fire hydrant/standpipe is located outside of the park, roughly 75 feet away, and is connected to the County's potable water system.

***Potential Impacts and Mitigation Measures***

The existing 3-inch water main within the park is expected to be sufficient for the proposed Master Plan improvements. This is due to the anticipated reduction in number of daily visitors recommended by the Master Plan. Comments from the County DOW, found in Section 11.0, indicate that water will be limited to the existing water meter until adequate water system facilities are available. To minimize demand and impacts on the County water system, the Master Plan recommends designing the new facilities to be as water efficient as possible and suggests using treated wastewater and collected rainwater for irrigating the landscaping ~~around the new facilities such as the Welcome Pavilion/ECC, picnic area, Caretaker's Cottage and Baseyard~~ as well as for toilet flushing wherever possible, at the Welcome Pavilion/ECC, Allerton Caretaker's Cottage, Montgomery House, and Caretaker's Cottage. The proposed integrated water system will involve dual water systems, which will be carefully designed and operated to prevent the cross-connection of the two systems including backflow prevention. Both systems including any non-potable spigots and irrigated areas will be clearly labeled. The two systems must be physically separated by air gaps or reduced-pressure backflow prevention devices to avoid contaminating the potable water supply. Backflow devices must be tested periodically and will comply with Chapter 11-21, HAR, Cross-Connection and Backflow Control.

As additional traditional lo'i are cleared, there may be more demand for irrigation water. More efficient use of the site's historic 'auwai, may help capture and divert precipitation to desired locations. The Master Plan suggests redesigning the Kūhiō Highway culverts so that rainwater that passes beneath it flows more naturally and can be filtered and used in the 'auwai system.

Additional diversion from Limahuli Stream should be reduced as much as possible by collecting, storing, and using rainwater. However, should additional volumes be desired from Limahuli Stream, effects on the stream's function and the biological resources it supports will need to be taken into consideration and permits may be required from the CWRM. The CWRM provided a pre-consultation response letter to this effect on August 25, 2008 (Section 11.0) noting that approvals required from the CWRM may include Stream Channel Alteration Permit; Stream Diversion Works and/or Petition to Amend In-stream Flow Standards.

An additional mitigation measure under consideration to minimize or avoid additional stream water diversion or demands on potable water is diversification of agricultural crops to include the addition of dryland crops within the Agricultural Complex. One request of the MPAC was to allow for community gardening activities to include other culturally relevant crops to be planted in addition to kalo. It is generally thought that complex was known to be flexible, allowing dryland cultivation to be done by simply redirecting water through different paths. 'Uala, or sweet potatoes, were grown in sandy areas and mai'a (bananas), kō (sugar cane), and 'awa (*Piper methysticum*) were grown in the valleys. If this mitigation measure is employed, close coordination with State Parks archaeologists and staff will be critical to ensure that the lo'i walls or other archaeological sites are not disturbed.

## 4.7.2 WASTEWATER

### *Existing Conditions*

Hā‘ena State Park’s first comfort station was built in 1979 at Kē‘ē Beach by DLNR and wastewater previously emptied into a six by eight-foot diameter cesspool. In 2001, a 2,500-gallon individual wastewater system including a 2,500 gallon septic tank and 2,700 s.f. leach field was built for the comfort station to comply with EPA’s large capacity cesspool closures.

In 2008, the original comfort station was demolished and replaced by a new one built in the same location. It maintains the same number of fixtures as the original – three water closets, one urinal, and two lavatories (sinks). These fixtures are estimated to generate 2,016 gpd (Kennedy/Jenks 2011). According to DOH standards for picnic parks, this equates to approximately 403 visitors per day based on an average 5 gpd per person (toilet wastes only). An outdoor shower with multiple shower heads and spigots is located to the south of the comfort station and runoff water is allowed to drain and infiltrate into the surrounding soils.

In the years 2007-2010, DLNR and members of the Hā‘ena community collaborated on the design of an alternate individual wastewater system to mitigate impacts to cultural and archaeological resources beneath the existing leach field. The preferred design of a more natural system, or constructed wetland, was installed in 2011. The constructed wetland is a subsurface flow-based wastewater treatment system, or one where the constructed wetland is contained within a liner, but the wastewater flows beneath the surface of a gravel medium within the liner so there is no exposed water under normal operating conditions. Native plants such as makaloa (*Cyperus laevigatus*) and ahu‘awa (*Cyperus javanicus*), two perennial sedges, are native species that were planted within the constructed wetland. Wastewater is first treated within a primary treatment tank. Then, the effluent flows to the constructed wetland where it is further treated by having the plants take up nitrogen and more importantly, create an environment where organisms that thrive in the root systems can feed on bacteria in the wastewater, further improving water quality before discharging it into the leaching chambers. The new infiltration field is located to the east of the archaeological site but west of the delineated natural wetlands of the two loko. The new comfort station and treatment facilities are sized to manage the same amount of wastewater, 2,016 gpd, or roughly 403 visitors per day, based on DOH standards (Kennedy/Jenks 2011). The existing septic tank and leach field will continue to serve as an emergency backup system in the event the constructed wetlands system is not operational.

Greywater from the outdoor shower at Kē‘ē is allowed to infiltrate into the surrounding ground.

In addition to the existing comfort station wastewater system, an abandoned cesspool was found at the Montgomery House. The existing Allerton House and Caretaker’s Cottage also likely have abandoned cesspools.

***Potential Impacts and Mitigation Measures***

Due to the remoteness of the park, Kennedy/Jenks does not propose connection to any public sanitary sewer systems and recommends that all wastewater be treated with an aerobic system with aeration to a minimum of R-2 water quality and disposed of on-site. As noted by the DOH, the project is located in a critical wastewater disposal area as determined by the Kaua'i County Wastewater Advisory Committee and no new cesspools are permitted. All individual wastewater systems proposed for the park will be set back as required from State surface waters such as wetlands. All wastewater plans must conform to applicable provisions of the DOH Administrative Rules Chapter 11-62, "Wastewater Systems" and the DOH reserves the right to review the detailed wastewater plans for conformance to applicable rules.

The addition of the ~~Welcome Pavilion/ECC, Caretaker's Cottage, and Hale at the Cultural Gathering Place~~ new restrooms near the Welcome Hale as well as the restoration of the Allerton Caretaker's Cottage and Montgomery House will include additional restroom facilities. However, as noted, the actual number of people using the facilities will decrease with the recommended reduction in daily visitor counts. In addition, toilets and water fixtures are becoming more efficient, which will also contribute to the reduction of projected water use per person. Therefore the overall volume of projected wastewater generated at the park will be less than current conditions.

The availability of new restroom facilities ~~at~~ near the Welcome ~~Hale Pavilion/ECC~~ is anticipated to help reduce the use of the Kē'ē comfort stations and therefore lessen the impact to nearby cultural and archaeological sites. Due to the remoteness of the Allerton Caretaker's Cottage and Montgomery House, they will require individual wastewater systems, which should also consider using natural systems to treat and improve water quality to minimize potential impacts and allow the effluent to be reused.

Based on strong community preference, the Master Plan proposes that any new wastewater systems include an aerobic wastewater treatment system that brings wastewater to an R-2 water quality level at a minimum and to reuse the effluent as much as possible to minimize impacts to the sensitive natural and cultural resources at the park. The following details the suite of mitigation measures under consideration to offset any impacts that could be caused by wastewater treatment and disposal:

- Treatment for wastewater should be with aerobic systems to a minimum R-2 water quality, with aeration and non-chlorine treatment such as UV disinfection to improve effluent quality. Consider using renewable energy sources to provide power.
- To minimize the footprint of wastewater facilities on ecological, cultural and archaeological resources, locate effluent absorption beds under parking lots and driveways if permitted. DOH requires the use of aerobic treatment units certified by NSF/ANSI 245 for systems that discharge directly into the groundwater.
- Add aeration to the existing constructed wetlands primary treatment tanks, powered by a PV system and replace the plants at the constructed wetlands to high-nutrient removing plants to improve water quality.

- For remote, low-use facilities, such as the Cultural Gathering Place, Montgomery House, and the Hula Complex, utilize composting toilets or ~~temporary/portable facilities as needed~~ innovative wastewater technologies.
- Use non-chemical disinfectants and cleaning products for maintenance, particularly in composting toilets, to minimize impacts to wastewater treatment processes and effluent quality. Use environmentally-safe soaps that contain plant nutrients and biocompatible cleaners.
- ~~Since the proposed wastewater facilities are currently not standard according to the DOH,~~ Include maintenance manuals and provide instruction to ensure proper upkeep of all wastewater systems at the park.
- Reuse effluent for irrigation, dust control, or toilet flushing rather than disposal.
- As an alternative, vault systems, which are fully contained and can be pumped and treated at an off-site facility are also being considered should effluent reuse not be possible onsite.

Kennedy/Jenks also provides a matrix of design alternatives in their Wastewater Preliminary Engineering Report (Appendix H), which will assist State Parks in selecting the appropriate wastewater treatment system at the time of building design. Beyond recommending that secondary treatment be provided at a minimum, the Master Plan does not prescribe the specific type of systems to be employed, allowing maximum flexibility for building designers to take advantage of emerging technologies in wastewater management. If defunct cesspools are located during the construction process, they will be abandoned in accordance with current regulations.

### 4.7.3 DRAINAGE

#### *Existing Conditions*

Kennedy/Jenks notes in their Civil Baseline Report that the drainage facilities at the park consist of five 18-inch reinforced concrete drain culverts that allow storm water to cross beneath Kūhiō Highway from south to north. Three have at-grade three-by-four-foot drain inlets and the other two have headwalls. Drainage calculations are provided in the Civil Baseline Report (Appendix G). It is estimated that approximately 56.8 cfs and 37.9 cfs of runoff from approximately 14.2 acres above Kūhiō Highway flows downslope into the culverts during the ten-year and two-year storm, respectively.

The drain culverts satisfy the requirements set forth in the County of Kauaʻi Department of Public Works Storm Drainage Standard. However, during a 50-year storm, an estimated 7,300 cfs of runoff flows directly to the ocean. This includes runoff from the west end of Makana that flows over Kūhiō Highway as well as the entire area of the park below Kūhiō Highway. During heavy rain storm events, the entire park is inundated with rushing waters from this surge of rainwater. The existing drainage improvements do not have the capacity and were not designed to handle the larger storm events (Kennedy/Jenks 2011).

**FIGURE 29: KĒ'Ē BEACH  
DAMAGE FOLLOWING HEAVY  
RAINS, MARCH 2012**

Also noted by Kennedy/Jenks, stormwater runoff is typically full of sediment, soil, plant and animal material and other debris during heavy rains, which causes muddy plumes at the outfalls. The two main outfalls are Limahuli Stream and Poholokeiki Channel (see Figure 11). However, the Kē'ē lifeguards and community members have also witnessed heavy runoff flowing from the end of the highway across the beach, eroding the sand and emptying into Kē'ē Lagoon. In March 2012, there was a major washout of the beach during heavy rains which required emergency repairs (see Figure 29).

*Photo courtesy of Kawika Winter*

### ***Potential Impacts and Mitigation Measures***

The addition of impervious surfaces to a site can result in a decrease in water quality and an increase in surface water volume during rain events. Water quality can be impacted by rainwater sheet flowing across impervious surfaces, collecting pollutants, sediment and trash and delivering the pollutants to natural drainages and streams. These same impervious areas, can also impact the quantity of water and the speed in which it is delivered to natural drainages and streams because there is no opportunity for water to infiltrate in place.

To mitigate increase in impervious surfaces and related impacts, the Master Plan proposes to develop an integrated water/wastewater/drainage system to maximize efficiencies of water use given the available resources on-site and to minimize surface runoff while improving water quality to the greatest extent practicable. This includes the installation of rainwater catchment cisterns on all the major ~~facilities—rooftops~~ including the Welcome Hale Pavilion/ECC, ~~Caretaker's Cottage~~, Allerton Caretaker's Cottage, Montgomery House, Cultural Gathering Area Hale, new restrooms, shuttle stop shelters (if not constructed only with PV panels), and existing comfort station at Kē'ē. The collected water is recommended to be used for nonpotable water uses such as irrigation or toilet flushing. In addition, the parking areas and its pedestrian paths will be paved with pervious surfaces. This will allow water to infiltrate more easily on-site, minimizing sheet flows of water during normal rain events and any accompanying pollutants, sediment or trash. Bioswales will be installed downslope of the parking areas to allow runoff to be detained and filtered naturally by native and/or Polynesian-introduced landscaping before percolating into the ground and serving the dual purpose of creating an aesthetically pleasing environment while managing rainwater runoff. If the 'auwai are able to be restored, this will further divert rainwater runoff to the lo'i, reducing the total amount of water draining from the site. The area mauka of the main parking lot can also be designed to serve multiple purposes including the restored 'auwai (if

feasible), overflow drainage and natural remediation and filtration of mauka runoff prior to entering the loko and lo'i areas, as well as rockfall catchment. Drainage improvements should also be made along the highway to filter and redirect runoff to prevent further washouts of Kē'ē Beach.

As very little activity occurs in or adjacent to the stream, sediment sources at the mouth of Limahuli Stream are assumed to be bank erosion due to the riparian conditions within the park as well as the condition of the forest and riparian area upstream. Riparian restoration is recommended as part of the Master Plan, including stream bank stabilization, clearing of invasive species, all of which are anticipated to have beneficial impacts to the stream biota and reduce sedimentation in the stream. Also, careful design of the park's lo'i and 'auwai restoration will be required so as not to allow a hydrologic connection between the park's lo'i and Limahuli Stream to prevent the spread of apple snails to the stream.

Best management practices during construction will be implemented to control sedimentation, erosion, and dust, and green design of the facilities will help prevent the runoff of contaminants to streams and coastal waters. Efforts will be made to minimize all large-scale grading, grubbing, and stockpiling of soil and limit such activity to the dry season whenever possible. NPDES permits will be sought as necessary. All discharges related to the construction and operation of the proposed project will comply with the State's Water Quality requirements contained in Chapters 11-54 and 11-55, HAR.

#### **4.7.4 ELECTRICAL AND COMMUNICATION SYSTEMS**

##### ***Existing Conditions***

The KIUC is the major electric utility for the Island of Kaua'i. There is no electricity service at the park, however, as KIUC's service terminates at the park entry. A ~~3/4-inch Hawaiian Telecom~~ DLNR-owned 11 pair cable telephone line runs along Kūhiō Highway to the pay phone ~~near the comfort station and emergency phone~~ at Kē'ē Beach and parallels the existing three-inch water line.

##### ***Potential Impacts and Mitigation Measures***

Due to the park's limited access to infrastructure and the dispersed locations of some of the proposed facilities, all facilities requiring power are recommended to be designed to be as energy efficient as possible and to use renewable energy resources to fill the remaining demand wherever feasible.

A cursory review of the potential renewable energy resources that may be available at Hā'ena State Park was conducted based on readily available information. Solar hot water heaters and solar PV energy are well-established technologies that have been installed widely throughout the islands. According to data from the Hawai'i Sugar Planters Association collected in 1985, an estimated 350 solar calories per square centimeter falls on the park area per day. The higher the intensity, the better the resource is. The average for the island is 350 cal/cm<sup>2</sup>/day, with ranges from 0 to 500 cal/cm<sup>2</sup>/day. A solar hot water heater can be installed at ~~the Caretaker's Cottage, the Welcome Pavilion/ECC, and any of the other~~ facilities that may

require hot water such as the Cultural Gathering Area, or Montgomery House and Allerton Caretaker's Cottage, once they are restored. Solar PV panels could also be installed at all of these locations to provide a renewable source of power as well as at the shuttle stop at the entry turnaround. The panels could be designed to double as a shade structure over the seating areas. Solar PV could also be installed at the comfort station at Kē'ē to power any new equipment needed for an upgraded wastewater treatment system.

Microwind and microhydropower are other sources of renewable energy that should be considered in addition to solar. There are smaller wind turbines that can be installed on rooftops at the park or those that rotate on a vertical instead of horizontal axis to minimize any impact to birds. There are also evolving wind technologies, such as the Humdinger Windbelt developed by a Hawai'i-based company, that does not have rotating airfoils but captures energy from aeroelastic flutter (<http://www.humdingerwind.com>). As technology evolves, State Parks and DLNR should continue to look into viable alternatives as improvements are phased in and developed.

A microhydropower system needs a consistently running source of water (as little as two gallons per minute) and a relatively small elevation change (as little as two to three feet of head) to turn a turbine to create power. However, more of each will increase output. Microhydropower systems are more efficient the closer they are to the energy source and therefore Limahuli Stream, the only perennial stream at the park, could be investigated to provide a source for microhydropower. Neighboring Limahuli Gardens uses a microhydropower system to power their entire visitor center which runs on a 24V system and includes lights, a computer, and cash register (Winter, personal communication 2011). No water is diverted for a microhydropower system. However, care must still be taken to size and locate the microhydropower to minimize impacts to the stream biota and to account for periods of low stream flow if installed. These potential impacts include decreased water quality, loss of habitat, and entrainment and impingement and associated mortality of migratory fishes, such as native Hawaiian amphidromous stream fauna made up of goby fishes ('o'opu), prawns or shrimp ('ōpae) and snails (hīhīwai and hapawai). To minimize the impacts of microhydropower systems on native Hawai'i amphidromous biota, the diversion intakes must be designed to have low-velocity intakes placed subsurface in relatively deep pool in the center of the stream in order to minimize entrainment of larval or post-larval stream animals. Also, as a potential in-stream use, any microhydropower system should be integrated with a public trust use such as taro lo'i production should it be pursued.

In order to maintain communications and provide for public safety during emergencies, the existing hardline pay phone and emergency phone at Kē'ē Beach ~~is proposed to should~~ be maintained. For similar reasons, hardline telephone service is proposed to be provided at the ~~Caretaker's Cottage and Welcome Pavilion/ECC Hale~~. ~~A second pay phone or at least a closed-circuit phone which connects to the Caretaker is also proposed to be provided on the outside of the Welcome Pavilion/ECC so that emergency calls can be made when the ECC is closed and hikers who need assistance can contact the Caretaker.~~ The remote and mountainous location limits wireless communications but wireless services should also be

considered for visitor convenience and emergency situations. It also may be required for certain parking management technologies.

#### **4.7.5 SOLID WASTE DISPOSAL**

##### ***Existing Conditions***

Trash receptacles and recycle bins are stationed throughout the Kēʻē Beach area. State Parks staff provides trash removal on a daily basis.

##### ***Potential Impacts and Mitigation Measures***

Although fewer users to the park will likely result in less trash generated at the park, State Parks will also recommend that all visitors carry in what they carry out. In addition, new trash receptacles will be provided at the Welcome ~~Pavilion/ECC~~ Hale, picnic areas, ~~Caretaker's Cottage~~, Montgomery House, and Allerton Caretaker's Cottage so that waste disposal is convenient to park users. Recycle bins are recommended to be installed along with trash receptacles and all receptacles are proposed to have animal-proof lids to minimize foraging by feral cats, dogs, rats and chickens and reduce the potential for windblown debris. Daily maintenance and removal of trash and recyclables is recommended to be continued at the park to minimize the amount of solid waste at the park that may be windblown or washed into the ocean, stream, and other sensitive natural and cultural environments. There may be hazardous substances, pollutants, or contaminants to be present in the soils in the areas where there were abandoned vehicles. However, no work is anticipated in these areas at this time. State Parks will work with the State HEER Office to determine the appropriate actions to comply with the relevant environmental laws if applicable should any work occur in those areas.

### **4.8 SOCIO-ECONOMIC CHARACTERISTICS**

#### **4.8.1 COMMUNITY CHARACTER**

##### ***Existing Conditions***

Hāʻena State Park is located at the terminus of Kūhiō Highway, in the ahupuaʻa of Hāʻena, District of Hanalei, Island of Kauaʻi. The area is characterized by its rural residential communities, traditional agriculture, cultural and recreational amenities, including Limahuli Garden and Preserve, the Kalalau Trail, and Hāʻena County Park.

##### ***Potential Impacts and Mitigation Measures***

The proposed Master Plan does not change the use of Hāʻena State Park. It will continue to be a State Park and therefore is not anticipated to have any impact to the rural character of the area. The reduction in the number of ~~daily~~ visitors on average during peak hours may help improve the quiet and reduce congestion in this rural community in the long-term.

## 4.8.2 POPULATION

### *Existing Conditions*

According to the 2010 United States Census, the population of the Hā‘ena Census Designated Place (CDP) was 431. The median age of Hā‘ena residents in 2010 was 42.6 years of age with just over a fifth of the population under the age of 18 and just under a fifth of the population over the age of 60. A significant proportion of the population identified themselves as white (66.8%) and 16.7% identified themselves as two or more races. Native Hawaiians and other Pacific Islanders were the next most populous ethnic group at 13.2%. The average household size was 2.6 persons compared with 2.84 for all of Kaua‘i (Table 8).

**TABLE 8: 2010 CENSUS DATA**

	<b>HĀ‘ENA CENSUS DESIGNATED PLACE (CDP)</b>	<b>KAUA‘I</b>	<b>HAWAI‘I</b>
Total Population	431	67,091	1,360,301
Median Age	42.6	41.3	38.6
% Population under 18	21.6%	22.7%	22.3%
% Population 60 Years and Over	18.3%	21.9%	20.4%
% of Total Population that Identifies as One Race	83.3%		
<i>White</i>	66.8%	33%	24.7%
<i>Black or African American</i>	0%	.4%	1.6%
<i>Am. Indian and Alaska Native</i>	.2%	.4%	.3%
<i>Asian</i>	1.6%	31.3%	38.6%
<i>Native Hawaiian and Other Pacific Islander</i>	13.2%	9%	10%
<i>Some other Race</i>	1.4%	.9%	1.2%
<i>Two or more races</i>	16.7%	24.9%	23.6%
Average Household Size (persons per household)	2.6	2.84	2.89

Occupied Housing Units	166	23,240	455,338
Vacant Housing Units	166	6,553	64,170
% Vacant Housing Units that are for Seasonal/Recreational/Occasional Use	84.9%	63.7%	46.9%

### *Potential Impacts and Mitigation Measures*

It is not expected that the proposed Master Plan will have any effect on the age, population, or racial distribution in the Hā‘ena CDP or Kaua‘i ~~except for the singular increase of an on-site caretaker and his/her family if permitted to live on-site with the caretaker, if they are not from Hā‘ena.~~ No mitigation measures are ~~planned as the potential impacts are anticipated to be minimal proposed~~ due to the overall reduction in the number of people at the park on a daily basis and the improved facilities proposed in the Master Plan would help to mitigate any negative impacts.

### 4.8.3 ECONOMY

#### *Existing Conditions*

According to the 2013 State of Hawai‘i Data Book, the average annual number of employed members of the civilian labor force was 617,850 statewide. The average annual number of employed civilians on Kaua‘i was 30,550. The greatest number of wage and salaried jobs was in the leisure and hospitality industry (9,100), followed by trade, transportation and utilities (5,800), government (4,500), professional and business services (2,700) and education (2,700). As of March 2014, the 2013 annual average statewide unemployment rate (not seasonally adjusted) was 4.8%. Kaua‘i’s average unemployment rate (not seasonally adjusted) reported in March 2014 for the year of 2013 was 5.7%, a significant improvement over 2012 in which unemployment was at 7.2%. It was as high as 9.3% in 2009.

The Kaua‘i GP also recognizes the visitor industry to be the driving force of the County’s economy. While the GP highlights the need to diversify the economy, it also recommends that existing facilities require regular maintenance and upgrades to support the industry.

For the Hā‘ena CDP, 2010 Census data on income and employment has high margin of errors due to the relatively low number of responses. However, according to what was reported, the average household income was estimated to be \$48,882 with a mean household income of \$75,915. Of the 187 people who responded to the occupation questions, roughly half were in management, business, science and arts occupations and another 30% worked in service occupations. Thirteen percent worked in sales and office occupations and 10% worked in natural resources, construction, and maintenance occupations. All 187 drove alone to work. No information was available on the amount of families or people living below the poverty level.

#### *Potential Impacts and Mitigation Measures*

The proposed limit on the number of people entering the park may reduce the number of people who visit the North Shore and may therefore negatively impact the local economy and North Shore businesses. However, the economic impact could be mitigated by visitors who plan their visit to the North Shore in advance and potentially take greater advantage of other North Shore attractions when the park is at capacity. They may also shift their time to other areas on Kaua‘i which will benefit businesses in other parts of the island.

The recommendation for an increase in ~~interpretive and caretaking activities in the park~~ staff and shuttle operations may stimulate additional employment with the proposed new fees for visitor entry, parking, and shuttle tickets recommended to generate enough new income to support these activities respectively. Construction of facilities will stimulate purchase of materials (generating excise tax revenues) and employment for labor (generating income tax revenues). However, the timing of the improvements is subject to CIP funding through the state budget process and will be temporary.

The reduction in the number of daily visitors during peak visitor hours at the park may also reduce the number of lifeguards required at Kē‘ē Beach. However, as noted, the overall

employment at the park is recommended to be increased in other areas, or may shift the requirements for lifeguards to the County beach park, which may help offset the loss.

## **4.9 PUBLIC SERVICES AND FACILITIES**

### **4.9.1 POLICE AND FIRE PROTECTION**

#### ***Existing Conditions***

The Kauaʻi Police Department has three stations located approximately 25 miles apart. The station nearest the park is co-located with a fire station just north of the Princeville Shopping Center. The main police station and administrative headquarters are located in Līhuʻe at the County facility off Kaʻana Street near Kapule Highway. The Kauaʻi County Fire Department has a temporary lifeguard stand at the end of the highway fronting Kēʻē Beach. There are typically three lifeguards stationed at the beach under a State contract with the County. A helicopter landing pad is also located in the park, in the event of emergencies.

#### ***Potential Impacts and Mitigation Measures***

The Master Plan will reduce the number of park users who may require police, fire and emergency rescue resources including the number of day hikers on the Kalalau Trail (hikers without camping permits). State Parks will work with the County Police and Fire Departments to comply with requirements of the Kauaʻi County Fire Code including emergency access by fire apparatus, ambulance, and other emergency vehicles as required. Due to the remote location of the park and the potential for hazardous conditions, emergency evacuation plans and rescue plans for various natural hazards should be developed as discussed in Sections 2.5.2 and 3.10 to help improve coordination of public safety and park staff response efforts in times of emergencies. Signs indicating where evacuation routes are located are also recommended to be installed at the park and information about what to do in different emergency situations should be included as part of the ~~required~~ visitor orientation ~~session~~ information.

The Master Plan calls for the lifeguard stand to be moved north of its current location, but this will be a positive impact as it will allow better visibility of the entire Kēʻē Lagoon for lifeguards. A helicopter landing area will be maintained at the park and can be used for emergency landings. However, the Fire Department prefers the open grassy area near the Hui's current shelter in the loʻi for emergency helicopter landings. This area may continue to be used as an emergency landing zone as it is unsuitable for loʻi restoration and proposed to remain as an open grassy field for educational and special events makai of the Welcome ~~Pavilion/ECC-Hale~~. However, the Fire Department has noted they will land wherever they need to as appropriate for the emergency situation.

The emergency evacuation drills should be performed with State Civil Defense, Kauaʻi fire and police departments annually at a minimum to ensure readiness. All park staff and others involved with the ongoing maintenance of the park such as volunteers, concessionaires/lessees and their staff, and specialists tending the Agricultural Complex and Hula Complex should be trained in the proper procedures for handling different emergency situations and participate in the annual drills.

## 4.9.2 SCHOOLS

### *Existing Conditions*

Public school education is under the direct supervision of the Hawai‘i State Department of Education. Kaua‘i’s public schools are divided into three school complexes, Kapa‘a, Kaua‘i, and Waimea. There are a total of ten elementary schools, three intermediate schools, four high schools, and four charter schools. A total of 9,505 students were enrolled in Kaua‘i’s public school system in the 2013–2014 school year. Higher education in Kaua‘i is provided through Kaua‘i Community College, which is part of the University of Hawai‘i system. This two-year college offers Associate degrees in Applied Science, Science, and Arts with a variety of concentrations as well as a number of certificates. Hā‘ena State Park is located in the Kapa‘a Complex and the closest public school is Hanalei Elementary School in Hanalei.

### *Potential Impacts and Mitigation Measures*

~~Because of the minimal increase of a single Caretaker on-site at the park who may or may not have a family permitted to stay on-site,~~ The proposed Master Plan is not anticipated to add a significant any demand on public school facilities. However, many of the proposed educational and interpretive programs are expected to support the area’s educational resources by providing opportunities for hands-on activities covering a range of topics spanning the natural, cultural, archaeologic realms of study. The park’s proposed facilities at the ECC interpretive displays and Cultural Gathering Area and the restoration of the dune system, Hula and Agricultural Complexes, wetlands and loko, riparian and forest environments will provide a variety of facilities for both indoor and outdoor learning experiences.

## 4.9.3 HEALTH CARE SERVICES

### *Existing Conditions*

There are three major hospitals on Kaua‘i. They are: the Kaua‘i Veterans Memorial Hospital in Waimea, the Samuel Mahelona Hospital in Kapa‘a, and the Wilcox Memorial Hospital in Līhu‘e. The closest health care facility to the park is the Samuel Mahelona Hospital in Kapa‘a, which has 24-hour emergency services available.

### *Potential Impacts and Mitigation Measures*

The Master Plan developments and management measures are not anticipated to create any greater demand on regional health care services. It is anticipated that the reduced number of visitors as well as improved visitor education, improved signage, and location of facilities away from the rockfall hazard area will result in beneficial impacts to public health and potentially required health care services.

## 4.9.4 RECREATIONAL FACILITIES

### *Existing Conditions*

Hā‘ena State Park is one of seven state parks on Kaua‘i. There are also two state recreational piers on the island. County facilities in the Princeville-Hā‘ena corridor include Hā‘ena Beach

Park, ‘Anini Beach Park, Hanalei Black Pot, and Hanalei Pavilion. The only nearby federal facility is the Hanalei National Wildlife Refuge, which includes a lookout at Hanalei and developed visitor facilities at Kīlauea.

Hā‘ena State Park is heavily utilized year round by as many as 2,000+ visitors per day during high-season months. The park is used for a variety of ocean-oriented recreational activities including, swimming, snorkeling, sunbathing, beachcombing and fishing. Land-based recreation within the park is primarily hiking on the Kalalau trail. The popularity of the park manifests itself in traffic congestion along Kūhiō Highway; illegal parking (inside and outside the park); and user group conflicts between fishers and those recreating in the nearshore waters. There is minimal interpretation of the park’s cultural, archaeological and ecological resources; thus, users of the park may not know the sensitivity of the resources, nor are they provided with any information on how to conscientiously interact with them. Minimal management of the park’s flora has resulted in an overgrowth of alien plants and trees, impacting the park’s ecological health and scenic resources.

### ***Potential Impacts and Mitigation Measures***

An objective of the Master Plan is to balance outdoor recreational uses with the protection and preservation of the park’s natural and cultural features, enriching the experience for all. Existing outdoor recreational opportunities such as swimming, sunbathing and snorkeling along with access to the Kalalau Trail are proposed to continue. In addition, a picnic area is proposed to be added ~~near the Welcome Pavilion/ECC and~~ at the end of the highway pavement at Kē‘ē. The ~~Interpretive-Pedestrian~~ Path will facilitate walking and sightseeing ~~and possibly bicycling~~ in the park. Table 9 provides a list of the existing and proposed recreational activities anticipated to be permitted at the park.

The probable reduction in total number of visitors per day will create both positive and potentially negative impacts if not mitigated. Limiting the number of visitors may have the positive effect of enhancing the recreational experiences within the park. As examples, nature viewing such as bird watching may be enhanced with fewer vehicles driving in the area and snorkelers may observe reef life without interference by other humans. ~~Picnicking near the ECC and overlooking~~ Views of the lo‘i may expose a visitor to traditional agricultural practices unanticipated at a visit to a beach park. Beach goers may find more room on the sand and less trash will generally be generated by fewer visitors.

However, negative effects may be the distribution of recreational demand to other facilities on the North Shore and island-wide. The 2003 Hawai‘i Tourism Authority’s Natural Resources Assessment identified both Hā‘ena State Park and its nearest neighboring public park, Hā‘ena Beach Park, to be “high use” parks and high priorities for improvements. Thus, if the number of visitors to Hā‘ena State Park, are restricted, it may serve to redistribute the demand in Hā‘ena to the County park, placing greater demand on the County facilities and further degrading its resources. State Parks should monitor visitor use of the County’s Hā‘ena Beach Park to judge if the recreational demand is shifted from one facility to the other. If so, an adjustment to the number of visitors allowed per day to Hā‘ena State Park might be considered as a mitigating measure. If a shuttle is employed, a mitigation measure

may be to include a stop at Hā'ena Beach Park to alleviate traffic and congestion at the County park as well.

**TABLE 9: EXISTING AND PROPOSED RECREATIONAL ACTIVITIES**

Activity	Existing	Proposed	Modifications
Kayak	x		Discourage kayak launching and landing
Paddling/Canoe		x	Launching only permitted near Hale Wa'a
SCUBA	x	x	
Snorkeling	x	x	
Surfing/Bodyboarding	x	x	Outside lagoon
Stand Up Paddleboarding	x	x	
Windsurfing/Kiteboarding	x	x	Outside lagoon
Swimming	x	x	
Fishing (shore)	x	x	
Fishing (boat)	x	x	
Beach Activities	x	x	
Kalalau Trailhead Access	x	x	
Camping		x	Scheduled events at the Cultural Gathering Area
Wilderness Camping Access	x	x	Require check-in/out
Bicycling		x	Interpretive Path
Picnicking	x	x	
Pavilion/Hale		x	traditional hale at Cultural Gathering Place and a traditional hale at Phase I lo'i
Walking/Jogging	x	x	
Comfort Station	x	x	Additional facilities at the Welcome Pavilion/ECC, Allerton House, and Montgomery House.
Concessions		x	To be permitted under an approved management entity
Nature Viewing	x	x	Increase interpretation of natural resources
Botanical Gardens		x	Demonstration Gardens at ECC, flora restoration along dunes, lo'i and wetland restoration
Scenic Lookout		x	Sites along Interpretive Path, trails, shoreline, entry complex, picnic areas
Historical/Cultural Interpretive Display	x	x	Include appropriate interpretation of archaeological, cultural and historic resources

## 5.0 CONFORMANCE WITH LAND USE PLANS, POLICIES, AND CONTROLS

The processing of various permits and approvals are prerequisites to the implementation of the Hā'ena State Park Master Plan. Relevant federal, state and county regulations, land use plans, policies, and ordinances are described below.

### 5.1 FEDERAL

#### 5.1.1 AMERICANS WITH DISABILITIES ACT (ADA) OF 1990, AS AMENDED

The Americans with Disabilities Act of 1990, as amended (ADA) is a civil rights law that prohibits discrimination on the basis of disability. The ADA requires that all buildings, facilities, and sites shall conform to applicable federal, State, and County accessibility guidelines and standards. Section 103-50, HRS, requires that all State of Hawai'i or County government buildings, facilities, and sites to be designed and constructed to conform to the ADA Accessibility Guidelines, the federal Fair Housing Amendments Act, and other applicable design standards, as adopted and amended by the Disability and Communication Access Board (DCAB).

All plans and specifications prepared for the construction of State of Hawai'i or County government buildings, facilities, and sites are to be reviewed by the DCAB for conformance to the ADA guidelines and standards. All new construction and alterations of buildings and facilities are required to comply with the Department of Justice's (DOJ) 2010 ADA Standards for Accessible Design. For accessible outdoor elements such as trails, picnic and camping areas, viewing areas, beach access routes, and other components of outdoor developed areas, the Final Guidelines, Architectural Barriers Act Accessibility Guidelines (ABAAG); Outdoor Developed Areas, published in September 26, 2013 will be referenced. Improvements to existing roadways, access roads, intersections, and other areas of the public right-of-way must comply with HRS §103-50.

Title II of the ADA requires that state and local government do not discriminate against persons with disabilities in the provision of government services. It is the policy of DLNR to pursue all reasonable efforts to ensure that its facilities, programs, and services are accessible to persons with disabilities.

**Discussion:** If feasible and appropriate, State Parks intends to provide ADA access to archaeological and cultural sites, historic properties, and wilderness areas while preserving each site's significant features. In such instances where outdoor facilities cannot be made ADA accessible, efforts will be made to provide an "equivalent experience." Equivalent experience may be in the form of an alternate facility that provides a similar environment, view, or interpretive encounter. Under the direction of DLNR's ADA Coordinator, State Parks will develop an accessibility plan to make as much of the park's visitor facilities accessible to persons with disabilities as appropriate. Although not required, State Parks may

also consider referring to the appropriate standards for outdoor areas and recreational facilities as adopted in Chapter 10 of the Architectural Barriers Act of 1968 Accessibility Standards for federal facilities in order to increase the accessibility of the park's outdoor areas, if economically feasible, and they do not impact the cultural, historic, and scenic resources of the park.

The new facilities will be designed to be compliant with ADA requirements. The recently constructed comfort station near Kē'ē Beach is constructed to ADA standards and the proposed Welcome Pavilion and ECC Hale and new restrooms will be as well. Parking areas and walkways have been laid out to accommodate the appropriate number of accessible stalls and dimensional requirements of the ADA. If electric vehicle parking and charging stations are provided, they must comply with DCAB Interpretive Opinion 2012-01, which states, 'Where EV charging stations are provided, 5%, but not less than one of each type of EV station shall be accessible. Any new shuttle service also must be accessible. The drop-off and boarding facilities at the park and any remote parking are considered passenger loading zone and must comply with the requirements for an accessible bus loading area. Bicycle racks must connect to an accessible route and a wheelchair clear floor space that is firm, stable, and slip resistant adjacent to the bike racks.

### 5.1.2 ENDANGERED SPECIES ACT

The Endangered Species Act of 1973 provides a program for the conservation of threatened and endangered plants and animals and their habitats. The lead federal agencies for implementing the Act are the USFWS and the NOAA Fisheries Service.

**Discussion:** Hā'ena's biological resources, along with mitigation measures are discussed in greater detail later in this report, in Sections 3.5-3.9. The USFWS provided a Technical Assistance letter in response to the pre-consultation process (see Section 11.0). The letter confirms that there is no federally-designated critical habitat within the park. However, endangered and threatened species are known to either frequent or to exist within the park. USFWS confirmed this in their subsequent comment letter on the EISPN (see Section 12.0). The letter provides additional recommendations to minimize impacts to protected species which have been incorporated into this DEIS and discussed further in Chapter 3.0. 'Īlio-holo-i-ka-uaua, the Hawaiian monk seal (*Monachus schauinslandi*), 'ōpe'ape'a or Hawaiian hoary bat (*Lasiurus cinereus semotus*), honu or native green sea turtle (*Chelonia mydas*), and honu 'ea or hawksbill turtle (*Eretmochelys imbricata*), along with a number of native Hawaiian waterbirds are listed by the Endangered Species Act as "Threatened" or "Endangered" and are among those that may frequent the park. In August 2015, the National Marine Fisheries Service (NMFS) issued a final rule revising the critical habitat for the Hawaiian monk seals to include the marine habitat fronting Hā'ena State Park from the 200-meter depth contour line, including the seafloor, through the water's edge and 5 meters into the terrestrial environment from the shoreline (50 Code of Federal Regulations Part 226). Therefore, any changes in these areas will require consultation with the NMFS. Also, if habitats are created within the park specifically for endangered or threatened wildlife, additional permits and approvals may be required such as a Habitat Conservation Plan. USFWS recognizes that the

proposed Master Plan is a programmatic project and recommends that State Parks contact them for technical assistance should any proposed actions be determined to affect federally-listed species.

### 5.1.3 LAND AND WATER CONSERVATION FUND (LWCF)

The National Park Service (NPS), Department of the Interior implements the Land and Water Conservation Fund Act of 1965 (Public Law 88-578). The Land and Water Conservation Fund (LWCF) program provides matching grants for the acquisition and development of public lands to meet the needs of all Americans for outdoor recreation and open space.

In 1977, grant monies from the LWCF were used to acquire the 65.7 acres that comprise Hā‘ena State Park. As a condition of this funding, any development or use in the park must follow the post-completion and stewardship requirements of this program. These requirements are specified in Section 8 of the LWCF State Assistance Program Manual (LWCF Manual, 2008).

**Discussion:** The proposed Master Plan and management strategies have been reviewed by the NPS and were found to be in compliance with LWCF requirements as set forth by U.S. Code of Federal Regulations, Title 36, Part 59, Section 6(f) as well as with the original intent of park acquisition, which included the state’s commitment to develop opportunities for “swimming, fishing, picnicking, camping, and other beach-oriented recreation opportunities” (LWCF Agreement, 1972). NPS commented in their letter dated June 6, 2014 (Section 11.0) that the draft Master Plan for the park shows:

*“some changes to the Park’s use [that] reflect contemporary sensitivities to cultural resources and the sensitive shoreline ecosystem....The recreation opportunities include a variety of ocean recreation, walking, picnicking, nature viewing, sight-seeing, and interpretive exhibits with the potential for camping and bicycling. These provide assurance that the ‘public beach park’ qualities that make this a valuable LWCF park are planned for the future.”*

The NPS letter also describes the restoration of the agricultural terraces as a “community gardening area.” In order to remain compliant with LWCF requirements, NPS states:

*“The Master Plan draft also shows that the park will encompass a significant community gardening area with the proposed restoration of the lo‘i kalo (wetlands). Although such an area is unusual within a state park and more common in local parks, such areas are not out of compliance with LWCF requirements. Community gardens are allowed in LWCF-protected parks with the understanding that they are accessible to the general public in an equitable manner and are not intended for any private or commercial use....Maintaining such a practice with an interpretive/educational component is clearly consistent with several goals within the 2008 SCORP...it is advisable to include trails and interpretive opportunities to ensure all members of the public – including visitors from afar and anyone not engaged in the community garden activities—can still understand what is happening there, the cultural significance, and generally not feel excluded from this public place...any*

*agricultural goods harvested within the community garden areas should be generally for park programs and personal use and not part of a formal commercial or for-profit farming organization.”*

The ~~Interpretive~~ Pedestrian Path which takes visitors safely through the lo‘i and the proposed community work days and ~~special guided tours in the lo‘i~~ interpretive materials will ensure consistency with LWCF requirements.

## 5.2 NATIONAL AND STATE REGISTERS OF HISTORIC PLACES

The National Register of Historic Places identifies those places over fifty years old that have the integrity and significance to be recognized nationally for preservation. Authorized by the National Historic Preservation Act of 1966, the National Register of Historic Places Program is administered by the National Park Service and is regulated by Title 36, Chapter 1, Section 60 of the Code of Federal Regulations (CFR). The State of Hawai‘i also maintains a state register called the Hawai‘i Register of Historic Places. It is authorized by Chapter 6E, HRS. The SHPD of the DLNR is charged with implementing the provisions of Chapter 6E, HRS.

The park includes the Hā‘ena Archaeological Complex, which stretches from Limahuli Stream to Kē‘ē (site number 30-02-1600), as well as Kūhiō Highway (Kaua‘i Belt Road, North Shore Section) between Princeville and Kē‘ē (site number 30-02-9396). The Nāpali Coast Archaeological District (site number 30-02-3200) overlaps the park within TMK: 5-9-01: 022 in the areas mauka of the highway. Both the Hā‘ena Archaeological Complex and Nāpali Coast Archaeological District are listed on both the State and National Registers of Historic Places. The Kaua‘i Belt Road, North Shore Section is listed on the National Register of Historic Places.

The Hā‘ena Archaeological Complex was deemed significant because it represents a large, nearly continuous, and mostly intact complex of archaeological features dating from the early prehistoric period to the recent historic period (Yent 1983). Grouped broadly by location and type, the complex includes: 1) subsurface cultural layers and features, including burials, found within sand dune and beach-derived deposits forming a band along the seaward edge of the coastal flat; 2) irrigated agricultural field systems and wetlands that dominate the alluvial flat between the sand dune and the talus slopes along the cliff base, and 3) the traditionally important sites located along the talus slope, including the cliff face itself, that are significant to native Hawaiians because of their association with various legends, customs, and beliefs.

The Kaua‘i Belt Road stretches ten miles from Princeville to Kē‘ē Beach and is considered the only remnant of the Belt Highway system on Kaua‘i to retain a high degree of integrity (Duensing 2003). It is characterized by its narrow lanes, winding road alignments, historic bridges and culverts, road cuts, and scenic settings. The stretch from the County’s Hā‘ena Beach Park to Kē‘ē was the last to be completed, probably in 1928. The concrete culvert crossing Limahuli Stream at the entrance to the Hā‘ena State Park is one of 13 bridges and culverts designated as contributing to the significance of the Belt Road.

**Discussion:** Consultation with SHPD has been initiated and is ongoing. The location, layout, and design of the proposed park elements have been planned to highlight the importance of—while minimizing the impacts to—those archaeological and cultural sites that contribute to the significance of the historic sites. Archaeological testing for prior projects provided information on the probable distribution and nature of intact subsurface archaeological deposits and burials (McEldowney and Yent 2007; Major and Carpenter 2001; Yent and Carpenter, field notes, 2009). The Master Plan proposes to confine development primarily to areas that have been previously disturbed as shown in the archaeological sensitivity map prepared by State Park archaeologists (see Figure 23). To ensure that impacts to archaeological resources are avoided, archaeological surveys and coordination with State Park’s archaeologists and staff will be conducted prior to all ground-disturbing activities. Greater discussion regarding site archaeology, potential impacts and mitigation measures can be found in Section 4.1.

The project will not directly or indirectly affect the structural character or integrity of the Belt Highway segment within the project area. This segment has had minor alterations over the years to accommodate ADA parking near the terminus. However, several defining characteristics of the Belt Highway, such as its scenic setting and narrow pavement width, have been retained. The Master Plan does not propose any changes to the highway but it does propose to limit public access along the stretch of highway within the park due to the potential for rockfalls. Therefore, the potential impacts to the highway are projected to be minimal and in fact less use of the highway will incur less wear. The scenic qualities of the highway will remain and will improve as the illegal parking will be removed. It will also be visible from the parallel ~~Interpretive-Pedestrian~~ Path although from a different perspective. No impacts are anticipated to the Nāpali Coast Archaeological District as there are no changes proposed to any of the features in the Master Plan. However, portions of the ancient lo‘i that remain on the mauka side of the highway have been identified on the Plan and recommended for further survey and restoration as appropriate.

## **5.3 STATE OF HAWAII**

### **5.3.1 STATE ENVIRONMENTAL REVIEW LAW (CHAPTER 343, HRS AND SECTION 11-200, HAR)**

The State Environmental Review Law (Chapter 343, HRS, Environmental Impact Statement Law and Chapter 11-200, HAR, Environmental Impact Statement Rules) requires an environmental review for any action that proposes the use of State or County lands and funds, or when an action is proposed within the Conservation District, shoreline area, or in a nationally or state registered historic place, or when a modification of an existing helicopter facility within the State may affect lands within a Conservation District, shoreline area, and registered historic site is proposed. Therefore the proposed Hā‘ena State Park Master Plan triggers Chapter 343, HRS, and State Parks has determined that an EIS is required.

**Discussion:** Section 1.6 discusses this document's compliance with Chapter 343, HRS and Chapter 11-200, HAR for the proposed Hā'ena State Park Master Plan. In summary, this the environmental review process started with pre-consultation, from which comment letter were received and responded to and are incorporated in this EIS in Section 11.0. The DEIS was preceded by an EISPN which was prepared in compliance with Chapter 343, HRS and under authority of Act 172-12. The EISPN was published on February 23, 2015 and a 30-day comment period closed on March 25, 2015. Comments received on the EISPN during the public comment period and the responses are incorporated throughout this EIS and attached in Section 12.0. Following the EISPN, State Parks submitted the DEIS to OEQC on July 13, 2015 and Notice of the availability of the Draft EIS was published in the July 23, 2015 edition of OEQC's *The Environmental Notice*. Copies of the DEIS were provided to appropriate government agencies, public officials, and other organizations and individuals (see Section 8.3.2). The official 45-day public comment period on the DEIS began on July 23, 2015 and ended on September 8, 2015. However, State Parks held a public meeting on August 19, 2015 to gather more input on the DEIS and extended the DEIS public comment period until October 8, 2015. Comments on the DEIS received during this public comment period and the responses to the comments are incorporated in this FEIS and copies of those letters are included in Section 13.0.

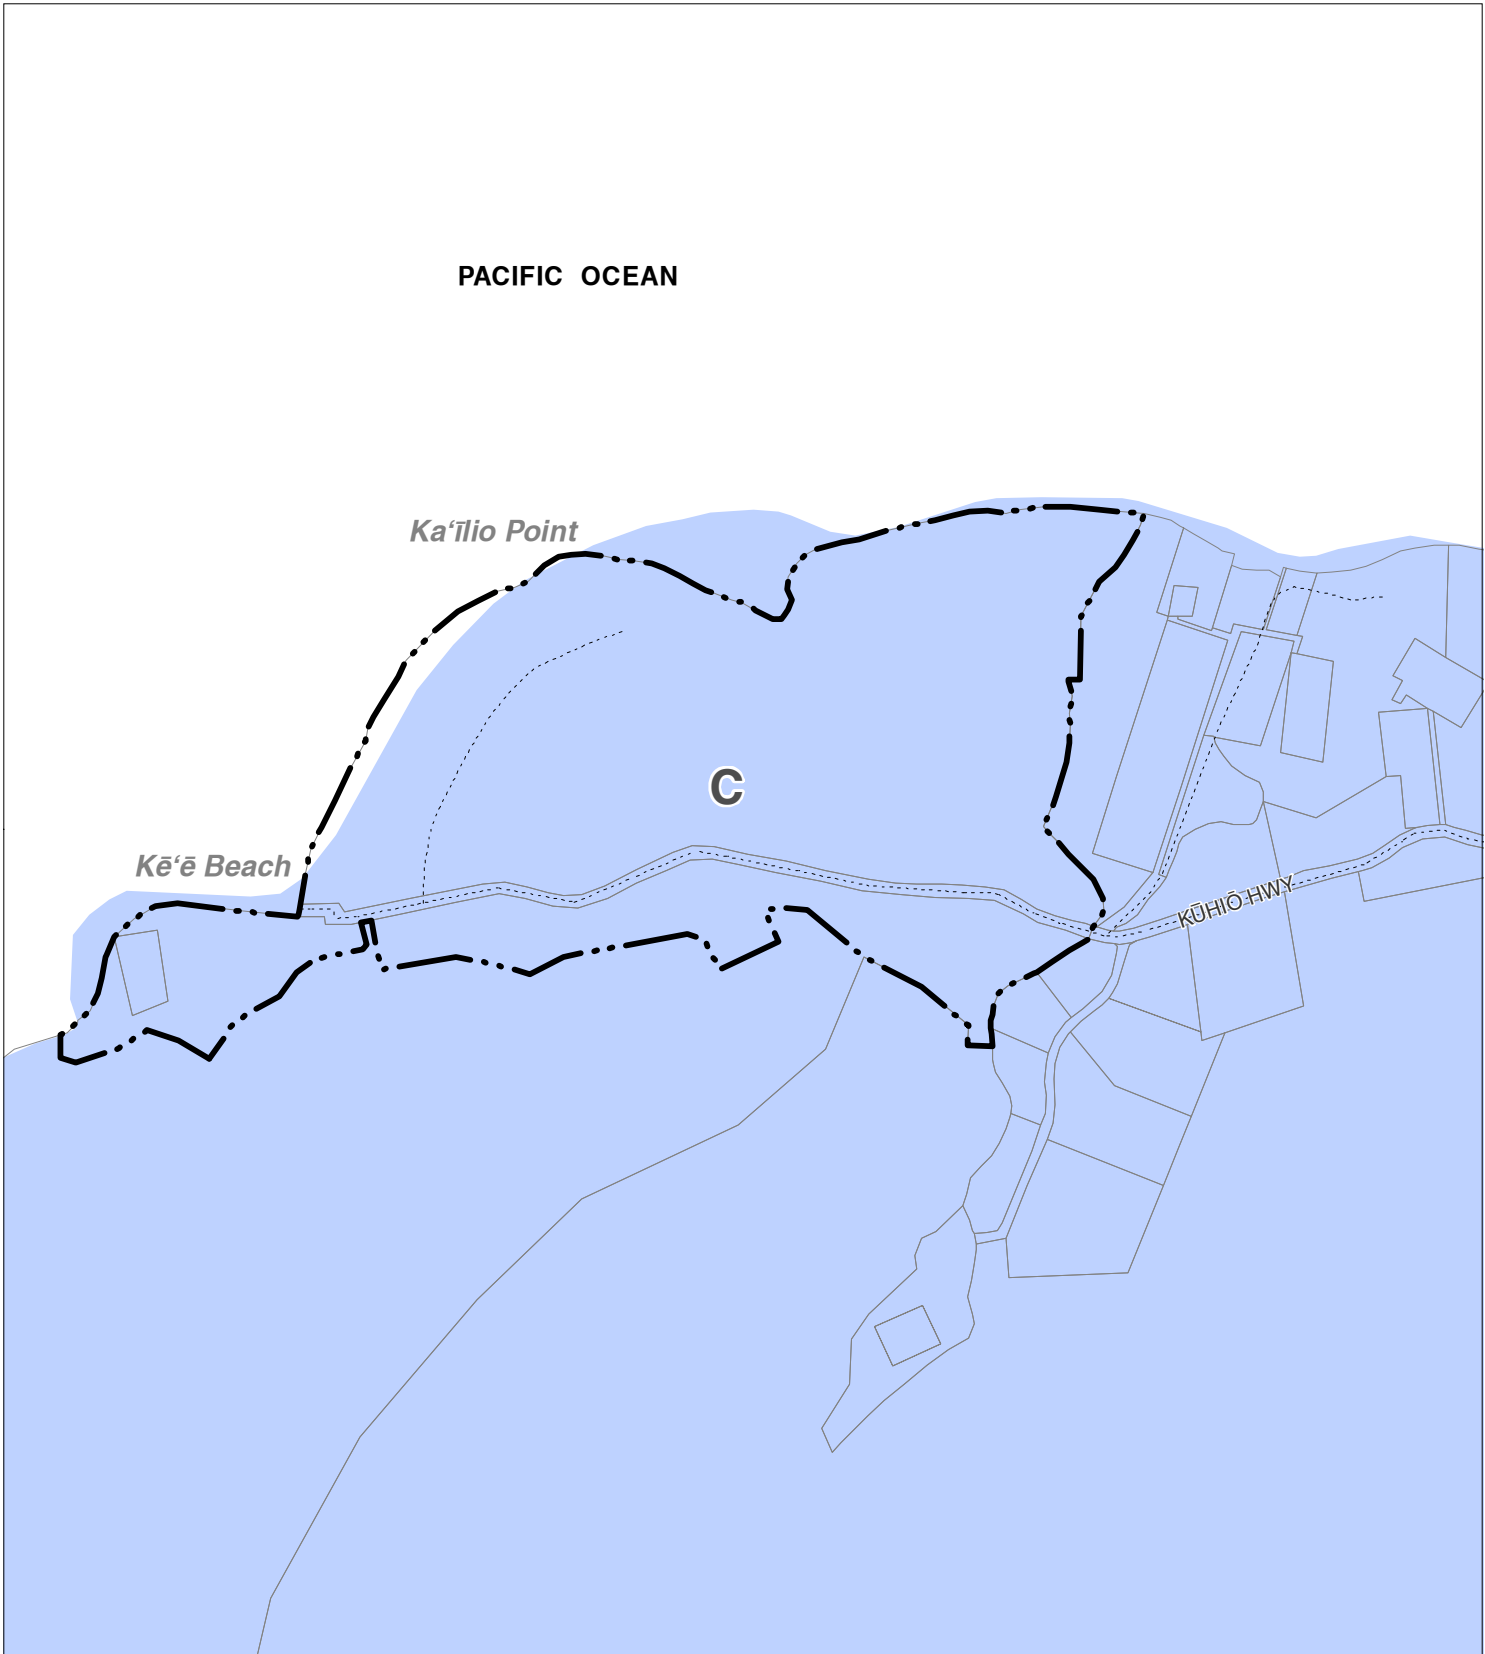

### 5.3.2 STATE LAND USE LAW (CHAPTER 205, HRS)

The State Land Use Law (Chapter 205, HRS), establishes the State Land Use Commission and authorizes this body to designate all lands in the State into one of four districts: Urban, Rural, Agricultural, or Conservation.

**Discussion:** Hā'ena State Park is located within the State Land Use Conservation District (Figure 30). This district is intended to protect watersheds and water sources; scenic and historical areas; parks; wilderness; open spaces; recreational areas; habitats of endemic plants; fish and wildlife; and all submerged lands seaward of the shoreline. The DLNR, Office of Conservation and Coastal Lands (OCCL) is responsible for implementation of land use policies in the Conservation District and the BLNR makes determinations on permit requests within the Conservation District.

Within the Conservation District, there are five subzones: Protective, Limited, Resource, General and Special. Excluding the Special Subzone, the four subzones are arranged hierarchically with regards to environmental sensitivity. The most sensitive areas are within the Protective Subzone and the least sensitive are within the General Subzone. The Special Subzone is applied only to certain areas to allow a unique land use on a specific site.

The majority of the terrestrial portions of Hā'ena State Park are located within the Resource Subzone, which includes state parklands as well as lands suitable for outdoor recreational uses, both of which are consistent with the proposed Master Plan. A small portion of the mauka area south of the highway near the entrance is classified as Limited Subzone and offshore areas of the park are within the Protective Subzone. (Figure 31).

NORTH

LINEAR SCALE (Feet)

The OCCL notes in their pre-consultation letter that a previous Conservation District Use Application (KA-1373) was granted by the BLNR for the park on March 12, 1982 (Section 11.0). In their subsequent EISP comment letter (Section 12.0), OCCL notes that they will review the DEIS and determine if a new Conservation District Use Application will be required prior to the implementation of the proposed Master Plan. If it does, State Parks will work with OCCL to seek the appropriate permit or approval prior to implementation.

### **5.3.3 COASTAL ZONE MANAGEMENT (CHAPTER 205A, HRS)**

Section 205A-1, HRS, defines the entire state as being within the coastal zone management (CZM) area, including the area extending seaward from the shoreline to the limit of the State's police power and management authority, including the United States territorial sea. Therefore the proposed project lies within the CZM Area. The project's conformity to CZM objectives and policies is discussed below.

#### **(1) Recreational resources;**

**(b)(1)(A)Objective:** *Provide coastal recreational opportunities accessible to the public.*

#### **(c)(1) Policies**

- (A) Improve coordination and funding of coastal recreational planning and management; and*
- (B) Provide adequate, accessible, and diverse recreational opportunities in the coastal zone management area by:*
  - (i) Protecting coastal resources uniquely suited for recreational activities that cannot be provided in other areas;*
  - (ii) Requiring replacement of coastal resources having significant recreational value including, but not limited to surfing sites, fishponds, and sand beaches, when such resources will be unavoidably damaged by development; or requiring reasonable monetary compensation to the State for recreation when replacement is not feasible or desirable;*
  - (iii) Providing and managing adequate public access, consistent with conservation of natural resources, to and along shorelines with recreational value;*
  - (iv) Providing an adequate supply of shoreline parks and other recreational facilities suitable for public recreation;*
  - (v) Ensuring public recreational uses of county, state, and federally owned or controlled shoreline lands and waters having recreational value consistent with public safety standards and conservation of natural resources;*
  - (vi) Adopting water quality standards and regulating point and nonpoint sources of pollution to protect, and where feasible, restore the recreational value of coastal waters;*
  - (vii) Developing new shoreline recreational opportunities, where appropriate, such as artificial lagoons, artificial beaches, and artificial reefs for surfing and fishing; and*
  - (viii) Encouraging reasonable dedication of shoreline areas with recreational value for public use as part of discretionary approvals or permits by the land use*

*commission, board of land and natural resources, and county authorities; and crediting such dedication against the requirements of section 46-6;*

**Discussion:** The Master Plan itself is an effort by State Parks to improve funding of coastal recreational planning and management. Completion of the plan and Chapter 343, HRS processing will enable State Parks to move forward with capital improvement projects to improve coastal recreation at the park. No coastal resources are anticipated to be damaged by the plan; in fact the Master Plan proposes to help restore and better manage coastal resources within the park. Therefore, the requiring of the replacement of such resources are not applicable to the proposed project.

Hā'ena State Park is culturally and ecologically significant, and its beaches and scenic resources make it a popular visitor attraction. Public access will remain available at the park and will be better managed by instituting the daily visitor limit during peak hours ~~and entry control points~~ in order to help conserve the park's natural, historic, and cultural resources. The daily visitor limit will be managed as an average and may be adjusted over time and does not include cultural practitioners, special user groups such as hālau, lo'i workgroups, cemetery caretakers, or school groups. It also does not include the 60 hikers who obtain valid camping permits for the Kalalau Trail or the 30 hunters who obtain valid hunting permits for Nāpali Coast State Wilderness Park Hunting Unit G. The proposed ~~Interpretive-Pedestrian~~ Path also incorporates public safety and conservation of natural resources into the plan as current public access along the highway has the potential to be impacted by rockfall hazards. Efforts to protect water quality will primarily focus on best management practices during construction to control sedimentation, erosion, and dust, and green design including filtering and capturing rainwater runoff in the parking lots using bioswales and pervious paving, grading and designing improvements to prevent the runoff of contaminants to streams and coastal waters. An integrated water/wastewater/drainage system is also recommended to maximize the potential use and reuse of on-site waters.

New interpretive trails and facilities, including the Welcome ~~Pavilion and ECC Hale~~, the restoration of historic sites, construction of the Hālau Wa'a, and new picnic areas, bicycle facilities, garden areas ~~and demonstration gardens~~ as proposed in the plan will expand recreational opportunities at the park. The quality of nearshore waters is critical to the recreational value of the park. Finally, dedication of shoreline areas is not necessary as the park is already publicly owned.

**(2) Historic resources;**

**(b)(2)(A)Objective:** *Protect, preserve and, where desirable, restore those natural and manmade historic and prehistoric resources in the coastal zone management area that are significant in Hawaiian and American history and culture.*

**(c)(2) Policies**

- (A) Identify and analyze significant archaeological resources;*
- (B) Maximize information retention through preservation of remains and artifacts or salvage operations; and*

- (C) *Support State goals for protection, restoration, interpretation, and display of historic resources.*

**Discussion:** One of the main purposes of the current master planning effort is to incorporate cultural and historic preservation priorities into the plan while balancing the park's provision of quality outdoor recreation. Several archaeological inventory studies have been performed at the park over the years and an archaeological sensitivity map (Figure 23) was developed early in the process to help locate new facilities in previously disturbed areas and to identify areas for preservation and restoration. While continuing its commitment to offer outdoor recreational activities at Hā'ena State Park, State Parks will employ both programmatic as well as physical mitigation measures to avoid and minimize impacts to archaeological and historic resources. The primary programmatic action to mitigate impacts to archaeological resources will be to establish a Cultural Advisory Group, whose oversight is expected to improve interpretation of the park's archaeological resources, to help guide management of all aspects of the park, and to provide input on proposed improvement projects and educational programs. The Master Plan also anticipates that there will be continued restoration and interpretation of the park's archaeological and historic resources, such as the Hula Complex and Agricultural Complex (including the 'auwai where feasible or desired), the dunes, the historic cottages and house sites, the cemeteries, the loko, the native forests and stream habitats, and various archaeological sites scattered throughout the park. Educational programs and interpretive materials will also be developed to highlight the rich historical resources at the park and educate visitors. Barring a catastrophic event, active management of these historic resources will mitigate against their loss to the elements, improper treatment or inadvertent damage by visitors, and overgrowth of invasive vegetation. More detail on the archaeological and historic resources of the park can be found in Section 4.1.

**(3) *Scenic and open space resources;***

**(b)(3)(A)Objective:** *Protect, preserve and, where desirable, restore or improve the quality of coastal scenic and open space resources.*

**(c)(3) Policies:**

- (A) *Identify valued scenic resources in the coastal zone management area;*
- (B) *Ensure that new developments are compatible with their visual environment by designing and locating such developments to minimize the alteration of natural landforms and existing public views to and along the shoreline;*
- (C) *Preserve, maintain, and, where desirable, improve and restore shoreline open space and scenic resources; and*
- (D) *Encourage those developments which are not coastal dependent to locate in inland areas.*

**Discussion:** The Master Plan will protect, preserve, restore, and improve the quality of coastal scenic and open space resources in the park. Various measures proposed in the Master Plan are anticipated to improve scenic and open space views such as the restoration of the

Agricultural Complex, the dunes, loko and wetlands, and stream environment. Shifting the main visitor traffic to the ~~Interpretive~~ Pedestrian Path will provide visitors with unique views of the lo‘i, the wetlands and loko, Makana, and the shoreline as they emerge from the hau tunnel. At Kē‘ē, it is expected that elimination of the steady stream of vehicles waiting for parking and turnaround will further improve scenic views. The lifeguard stand is proposed to be moved northeast of its current location to remove an obstruction of the view of the beach from Kūhiō Highway while also allowing better visual access of the entire lagoon for the lifeguards for public safety purposes. Finally, new development in the park will be limited to areas of previous disturbance so that the development does not obstruct any important viewplanes. More detail on the scenic and open space resources of the park can be found in Section 4.6 with new view corridors and lookouts highlighted in Figure 28.

**(4) Coastal ecosystems;**

**(b)(4)(A)Objective:** *Protect valuable coastal ecosystems, including reefs, from disruption and minimize adverse impacts on all coastal ecosystems.*

**(c)(4) Policies:**

- (A) Exercise an overall conservation ethic, and practice stewardship in the protection, use, and development of marine and coastal resources;*
- (B) Improve the technical basis for natural resource management;*
- (C) Preserve valuable coastal ecosystems, including reefs, of significant biological or economic importance;*
- (D) Minimize disruption or degradation of coastal water ecosystems by effective regulation of stream diversions, channelization, and similar land and water uses, recognizing competing water needs; and*
- (E) Promote water quantity and quality planning and management practices that reflect the tolerance of fresh water and marine ecosystems and maintain and enhance water quality through the development and implementation of point and nonpoint source water pollution control measures.*

**Discussion:** The proposed Master Plan takes a conservation ethic in its recommendations and focuses on improved stewardship of the park’s extensive natural, cultural, and historic resources, including the coastal ecosystem. The proposed visitor limit of 900 people per day during peak visitor hours is less than half of the number of visitors per day during the summer. Additionally, it is recommended that all visitors ~~attend an educational session~~ receive visitor orientation information prior to park entry that would provide an overview of the park’s extensive but sensitive natural and cultural resources and instruct visitors of the appropriate activities and behaviors allowed at the park, such as not walking on the reefs or applying sunscreen right before entering the ocean, nor harassing marine life. The significant reduction in visitor use and better education on the park’s resources will have a net positive impact compared to current conditions for the park’s valuable coastal ecosystems, which people rely on for recreation as well as for sustenance. The visitor limit may also be adjusted depending on future studies such as impact studies, particularly if harmful impacts to the natural, cultural, and archaeological resources arise.

Several elements of the Master Plan specifically seek to reduce the quantity and improve the water quality of the land-based runoff that enters coastal waters. These include a reduction in the number of motor vehicles driving the length of Kūhiō Highway and idling and turning around at Kēʻē Beach; restoration of the loʻi, loko, and wetlands; installation of rainwater catchment cisterns, bioswales and rain gardens to help capture and filter rainwater runoff; use of pervious paving materials in parking areas to prevent the runoff of contaminants to streams and coastal waters; and use and reuse of collected rainwater and treated effluent for flushing toilets, irrigation, and other nonpotable uses. Pollution of marine resources is proposed to be further minimized by secondary treatment of effluent and increased treatment such as UV disinfection, at comfort stations. An integrated water/wastewater/drainage system is also recommended for the park. The quality of nearshore waters is critical to the recreational and cultural values of the park. All discharges related to the construction and operation of the proposed project will comply with the State's Water Quality requirements contained in Chapters 11-54 and 11-55, HAR.

**(5) Economic uses;**

**(b)(5)(A)Objective:** *Provide public or private facilities and improvements important to the State's economy in suitable locations.*

**(c)(5) Policies:**

- (A) Concentrate coastal dependent development in appropriate areas;*
- (B) Ensure that coastal dependent development such as harbors and ports, and coastal related development such as visitor industry facilities and energy generating facilities, are located, designed, and constructed to minimize adverse social, visual, and environmental impacts in the coastal zone management area; and*
- (C) Direct the location and expansion of coastal dependent developments to areas presently designated and used for such developments and permit reasonable long-term growth at such areas, and permit coastal dependent development outside of presently designated areas when:
  - (i) Use of presently designated locations is not feasible;*
  - (ii) Adverse environmental effects are minimized; and*
  - (iii) The development is important to the State's economy.**

**Discussion:** The park is an important natural, cultural, and recreational resource for the state and for Kauaʻi. Home to one of the few sheltered bays on Kauaʻi's scenic North Shore and the trailhead for the renown Kalalau Trail, the park has become a popular tourist destination and one of the State's most visited parks. Many of the park's main attractions and important resources are coast-dependent. Therefore, proposed Master Plan improvements are planned to be located, designed, and constructed in such a way as to have beneficial economic, social, visual, and environmental impacts.

**(6) Coastal hazards;**

**(b)(6)(A)Objective:** *Reduce hazard to life and property from tsunami, storm waves, stream flooding, erosion, subsidence, and pollution.*

**(c)(6) Policies:**

- (A) Develop and communicate adequate information about storm wave, tsunami, flood, erosion, subsidence, and point and non-point source pollution hazards;*
- (B) Control development in areas subject to storm wave, tsunami, flood, erosion, hurricane, wind, subsidence, and point and non-point source pollution hazards;*
- (C) Ensure that developments comply with requirements of the Federal Flood Insurance Program; and*
- (D) Prevent coastal flooding from inland projects.*

**Discussion:** Due to the remote location of the park and the potential for hazardous coastal conditions, an emergency evacuation plan and rescue plans should be developed for various scenarios, including, but not limited to locally-generated and remotely-generated tsunami, flooding, high winds, and storms. Coordination, training, and regular drills with State Civil Defense and Kaua'i Fire and Police Departments should be performed annually at a minimum to ensure readiness. The State DOT recently installed updated tsunami evacuation signs along the highway; however, none were installed within the park. Currently, there are no State Civil Defense sirens in the park. However, the 25 s.f. requested for a new siren by State Civil Defense in their pre-consultation letter (Section 11.0) can be accommodated in the park, most likely in the main parking area. A subsequent letter from the Office of State Emergency Management/Civil Defense noted that siren coverage exists for the project site, but requested the existing siren to be upgraded to a 121db(c) omni-directional siren. State Parks will work with the Hawai'i Emergency Management Agency to ensure adequate siren coverage at the park.

The proposed reduction in the number of visitors permitted daily in the park during peak visitor hours and along the Kalalau Trail will mitigate evacuations and rescue operations whenever coastal hazards arise. The orientation ~~session in~~ information which all visitors ~~must participate will receive~~ should also include ~~information directions~~ on what to do during evacuations and emergency situations, as well as up-to-the-minute weather and ocean conditions to help educate visitors on the coastal hazards that they may encounter while visiting the park.

To facilitate evacuations in the event they are necessary, a helicopter landing area is proposed to be retained in the park. Emergency evacuation routes should also be planned and indicated on visitor brochures and materials. They can also be described and shown on maps during the visitor orientation sessions. ~~The loop paths through the lo'i can be used as an emergency route between Kē'ē and the Welcome Pavilion/ECC. An emergency phone is expected to be retained. Additionally, the presence of an on-site caretaker is expected to improve emergency warning communications and evacuation coordination within the park when necessary. The hardline phone at Kē'ē should be retained for emergencies and an additional emergency phone could be located at the Welcome Hale.~~ If a shuttle system is developed (as described

in Section 4.3.1), an emergency evacuation plan will need to be developed specifically for the shuttle passengers.

Except for the lifeguard tower, all proposed structures are planned to be outside the 100-year flood zone and areas subjected to wave action as indicated on the Federal Flood Insurance Rate Maps, thus minimizing any potential impacts to proposed facilities. Impacts to floodplain are further avoided by focusing development away from Limahuli Stream and its riparian zone. Where applicable, the Master Plan improvements will adhere to the regulations of the National Flood Insurance Program.

**(7) *Managing development;***

**(b)(7)(A)Objective:** *Improve the development review process, communication, and public participation in the management of coastal resources and hazards.*

**(c)(7) Policies:**

- (A) Use, implement, and enforce existing law effectively to the maximum extent possible in managing present and future coastal zone development;*
- (B) Facilitate timely processing of applications for development permits and resolve overlapping or conflicting permit requirements; and*
- (C) Communicate the potential short and long-term impacts of proposed significant coastal developments early in their life cycle and in terms understandable to the public to facilitate public participation in the planning and review process.*

**Discussion:** The Master Plan improvements to the park will follow the existing state, county, and federal laws related to coastal zone development. Relatively little development has occurred in the park since its inception. The major improvements completed recently are the renovated comfort station and showers and constructed wetlands for which the appropriate permits and approvals were obtained.

For the current Master Plan process, State and County agencies as well as Hā'ena kūpuna and family members, community groups, organizations, businesses, and interested individuals have been engaged in the development of the Master Plan from the beginning of the project. At the ~~onset~~ beginning of the project, pre-consultation letters were issued to various government agencies and community members soliciting input into the Master Plan and environmental documents. The thirty-two member MPAC provided thoughtful insights and critical feedback throughout the process and helped the project team develop solutions to complex and often conflicting issues. Later, the HSPCAC was created and also helped refine the master plan. Their input was integral to development of the proposed physical plan and park management strategies. Periodically throughout the process, open houses and public meetings were held and kept the greater community informed of the concepts being considered for the park. Appendix A includes ~~a record of information from~~ the public meetings held for the project and materials presented at the meetings. Section 11.0 contains pre-consultation correspondence. Section 12.0 includes the EISPN comment letters and respective responses. Section 13.0 includes the DEIS comment letters and respective

responses including the comment cards received from the public meeting held for the DEIS on August 19, 2015.

**(8) Public participation;**

**(b)(8)(A)Objective:** *Stimulate public awareness, education, and participation in coastal management.*

**(c)(8) Policies:**

- (A) Promote public involvement in coastal zone management processes;*
- (B) Disseminate information on coastal management issues by means of educational materials, published reports, staff contact, and public workshops for persons and organizations concerned with coastal issues, developments, and government activities; and*
- (C) Organize workshops, policy dialogues, and site-specific mediations to respond to coastal issues and conflicts.*

**Discussion:** As noted above, the State and County agencies as well as community groups, organizations and individuals have been engaged throughout the development of the Master Plan and EIS processes. Regular MPAC and HSPCAC meetings were held throughout the process with general public meetings and open houses held to keep the greater community informed of the concepts being considered for the park. Appendix A includes a record of information from the public meetings held for the project and materials presented at the meetings. Section 11.0 contains pre-consultation correspondence. Section 12.0 includes the EISPN comment letters and respective responses. Section 13.0 includes the DEIS comment letters and respective responses including the comment cards received from the public meeting held for the DEIS on August 19, 2015.

In addition, the Master Plan improvements and changes in management policies were developed based on input received from the community to help encourage the community to return to the park and increase the educational value of the park. New facilities such as the ECC will house auditorium/classroom space, and meeting rooms where workshops, meetings, and classes can be held. Interpretive displays and other materials will help educate the public on coastal resources and hazards at the park. Signs will also be posted on evacuation routes, as well as for ocean safety and rockfall hazards. The required orientation information and education session all visitors must attend prior to entering the park materials will inform visitors of appropriate behavior and interaction with the varied resources and of the cultural uses and protocols at the park in order to help minimize conflicts. ~~These sessions would also provide safety information and instruct visitors what to do in emergency situations.~~

**(9) Beach protection;**

**(b)(9)(A)Objective:** *Protect beaches for public use and recreation.*

**(c)(9) Policies:**

- (A) *Locate new structures inland from the shoreline setback to conserve open space, minimize interference with natural shoreline processes, and minimize loss of improvements due to erosion;*
- (B) *Prohibit construction of private erosion-protection structures seaward of the shoreline, except when they result in improved aesthetic and engineering solutions to erosion at the sites and do not interfere with existing recreational and waterline activities;*
- (C) *Minimize the construction of public erosion-protection structures seaward of the shoreline;*
- (D) *Prohibit private property owners from creating a public nuisance by inducing or cultivating the private property owner's vegetation in a beach transit corridor; and*
- (E) *Prohibit private property owners from creating a public nuisance by allowing the private property owner's unmaintained vegetation to interfere or encroach upon a beach transit corridor.*

**Discussion:** With the exception of the lifeguard tower, no permanent structures in the Master Plan are recommended within the shoreline setback or within the VE coastal flood zone, which is the 100-year flood area subject to velocity hazards due to wave action as identified on the FIRM (Figure 20). Restoration of the coastal sand dunes for natural and cultural purposes was also highlighted as one of the priorities identified by the MPAC for the Master Plan improvements. This will include clearing of invasive species or cutting trees where appropriate and planting natives to help restore the natural dune building processes. If carefully planned and executed, this may help reduce coastal erosion as well. In addition, drainage improvements are proposed near the end of the historic highway pavement at Kēʻē to prevent ponding, soil erosion, and beach washouts as has happened during heavy rainfall events. No shoreline hardening or protection structures are recommended within the park. Instead, restoration of the natural beach processes is part of the preferred alternative.

**(10) Marine resources;**

**(b)(10)(A)Objective:** *Promote the protection, use, and development of marine and coastal resources to assure their sustainability.*

**(c)(10) Policies:**

- (A) *Ensure that the use and development of marine and coastal resources are ecologically and environmentally sound and economically beneficial;*
- (B) *Coordinate the management of marine and coastal resources and activities to improve effectiveness and efficiency;*
- (C) *Assert and articulate the interests of the State as a partner with Federal agencies in the sound management of ocean resources within the United States exclusive economic zone;*
- (D) *Promote research, study, and understanding of ocean processes, marine life, and other ocean resources in order to acquire and inventory information necessary to*

*understand how ocean development activities relate to and impact upon ocean and coastal resources; and*

*(E) Encourage research and development of new, innovative technologies for exploring, using, or protecting marine and coastal resources.*

**Discussion:** The proposed Master Plan improvements will better protect and improve education of visitors about the park’s marine and coastal resources. Currently, nearshore waters are managed through the HCBSF, which was established through the State’s rulemaking process. The Master Plan improvements will not impact HCBSF’s management efforts. It is also recommended that State Parks defers to the management rules and protocols for the Hā‘ena Community-Based Subsistence Fishery Area.

Because the Master Plan proposes a limit on the number of visitors to the park per day during peak visitor hours, the reduced human impact is anticipated to have a net positive effect on the park’s marine environment and resources, including improved ocean water quality and health of the coral reef. In addition, visitors will be ~~required to attend an educational orientation session provided with visitor orientation information~~ prior to entering the park which will inform visitors of the sensitive marine resources and appropriate activities and behaviors that will help reduce the impact and harm caused during ocean recreation activities. The Master Plan also recommends improvements such as bioswales and rain gardens to reduce and filter stormwater runoff. Secondary wastewater treatment and reuse of treated effluent for nonpotable water uses may in turn reduce the amount of effluent that may seep or spill into the ocean. Stream, native forest, and ‘auwai restoration activities can also help prevent soil erosion.

Based on community concern about how ocean development activities relate to and impact ocean and coastal resources, the Master Plan also recommends that State Parks establish a program of long-term scientific monitoring of fish and invertebrate populations trends within the park’s marine waters.

### **5.3.4 HAWAI‘I STATE PLAN (CHAPTER 226, HRS)**

The Hawai‘i State Plan (Chapter 226, HRS) sets forth the goals, objectives, policies, and priority guidelines for growth, development, and allocation of limited resources throughout the State. It contains diverse policies and objectives on topics of state interest including but not limited to, the economy, agriculture, the visitor industry, federal expenditure, the physical environment, facility systems, socio-cultural advancement, and sustainability. Conformity with applicable provisions of the State Plan are discussed below. The State Plan is divided into three parts: Part I (Overall Theme, Goals, Objectives and Policies); Part II (Planning, Coordination and Implementation); and Part III (Priority Guidelines). Part II elements of the State Plan pertain primarily to the administrative structure and implementation process of the Plan. As such, comments regarding the applicability of Part II to the Master Plan are not appropriate and are therefore not included. Parts I and III are provided in matrix format below and the checked boxes indicate whether the individual objectives and policies are

supported, not supported, or not applicable. Applicable goals and policies of the Hawai‘i State Plan are discussed below.

### 5.3.4.1 Part I: Overall Theme, Goals, Objectives and Policies

HAWAI‘I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	S	N/S	N/A
<b>HRS § 226-1: Findings and Purpose</b>			
<b>HRS § 226-2: Definitions</b>			
<b>HRS § 226-3: Overall Theme.</b>			
<p><i>Hawai‘i’s people, as both individuals and groups, generally accept and live by a number of principles or values which are an integral part of society. This concept is the unifying theme of the State Plan. The following principles or values are established as the overall theme of the Hawai‘i State Plan:</i></p> <ol style="list-style-type: none"> <li><i>(1) Individual and family self-sufficiency refers to the rights of people to maintain as much self-reliance as possible. It is an expression of the value of independence, in other words, being able to freely pursue personal interests and goals. Self-sufficiency means that individuals and families can express and maintain their own self-interest so long as that self-interest does not adversely affect the general welfare. Individual freedom and individual achievement are possible only by reason of other people in society, the institutions, arrangements and customs that they maintain, and the rights and responsibilities that they sanction.</i></li> <li><i>(2) Social and economic mobility refers to the right of individuals to choose and to have the opportunities for choice available to them. It is a corollary to self-sufficiency. Social and economic mobility means that opportunities and incentives are available for people to seek out their own levels of social and economic fulfillment.</i></li> <li><i>(3) Community or social well-being is a value that encompasses many things. In essence, it refers to healthy social, economic, and physical environments that benefit the community as a whole. A sense of social responsibility, of caring for others and for the well-being of our community and of participating in social and political life, are important aspects of this concept. It further implies the aloha spirit--attitudes of tolerance, respect, cooperation and unselfish giving, within which Hawai‘i’s society can progress.</i></li> </ol> <p><i>One of the basic functions of our society is to enhance the ability of individuals and groups to pursue their goals freely, to satisfy basic needs and to secure desired socio-economic levels. The elements of choice and mobility within society’s legal framework are fundamental rights. Society’s role is to encourage conditions within which individuals and groups can approach their desired levels of self-reliance and self-determination. This enables people to gain confidence and self-esteem; citizens contribute more when they possess such qualities in a free and open society.</i></p> <p><i>Government promotes citizen freedom, self-reliance, self-determination, social and civic responsibility and goals achievement by keeping order, by increasing cooperation among many diverse individuals and groups, and by fostering social and civic responsibilities that affect the general welfare. The greater the number and activities of individuals and groups, the more complex government’s role becomes. The function of government, however, is to assist citizens in attaining their goals. Government provides for meaningful participation by the people in decision-making and for effective access to authority as well as an equitable sharing of benefits. Citizens have a responsibility to work with their government to contribute to society’s improvement. They must also conduct their activities within an agreed-upon legal system that protects human rights.</i></p>			
<p><b>Discussion:</b> The Hā‘ena State Park Master Plan seeks to fulfill basic elements of the State Plan’s overall theme in allowing cultural practices such as fishing, agriculture, hula, and caring for ancestral remains to continue at the park. The management strategies also seek to encourage cooperation and partnerships among the State and other government agencies, the local community and Hā‘ena families, and visitors in the ongoing maintenance and care of the park so that it and its varied natural, cultural, and historic resources can be enjoyed for generations.</p>			

HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
<b>HRS § 226-4: State Goals.</b>			
<p><i>In order to guarantee, for the present and future generations, those elements of choice and mobility that insure that individuals and groups may approach their desired levels of self-reliance and self-determination, it shall be the goal of the State to achieve:</i></p> <ol style="list-style-type: none"> <li><i>(1) A strong, viable economy, characterized by stability, diversity and growth that enables fulfillment of the needs and expectations of Hawai'i's present and future generations.</i></li> <li><i>(2) A desired physical environment, characterized by beauty, cleanliness, quiet, stable natural systems, and uniqueness, that enhances the mental and physical well-being of the people.</i></li> <li><i>(3) Physical, social and economic well-being, for individuals and families in Hawai'i, that nourishes a sense of community responsibility, of caring and of participation in community life.</i></li> </ol>			
<p><b>Discussion:</b> Several aspects of the proposed Master Plan seek to achieve the stated goals of the Hawai'i State Plan. The reduction in <u>average daily visitors during peak visitor hours</u>, restoration of cultural and archaeological sites, restoration of the dunes, wetlands, and varied ecosystems, consolidation of parking and transportation facilities, and green design of the park facilities will help restore the park's beauty, cleanliness, quiet, natural systems, and unique historic, cultural and natural resources. The restoration and proper management of the park will in turn improve the mental and physical well-being of those from the area or those with ancestral ties to the area or who participate in cultural activities here as there is a deep connection between them and this place. Improved conditions at the park will also enrich the experience for all those who visit. The local community, Hā'ena families, and cultural and scientific experts are encouraged to continue participating in the ongoing implementation and care for the park via the Cultural Advisory Group and broader community advisory group as well as participation in future events and activities at the park such as educational programs and volunteer work days which will strengthen the sense of community responsibility and caring for the park. The various management options provide a mix of potential economic opportunities such as the creation of a non-profit hui which could be contracted by State Parks to manage the park as a whole as well as individual aspects of park management or operation such as visitor education, research, habitat and ecosystem restoration, shuttle service, and construction.</p>			
<b>HRS § 226-5: Objectives and policies for population.</b>			
<p><b>(a) Objective:</b> <i>It shall be the objective in planning for the State's population to guide population growth to be consistent with the achievement of physical, economic and social objectives contained in this chapter.</i></p>			
<b>(b) Policies:</b>			
(1) <i>Manage population growth statewide in a manner that provides increased opportunities for Hawai'i's people to pursue their physical, social and economic aspirations while recognizing the unique needs of each county.</i>			X
(2) <i>Encourage an increase in economic activities and employment opportunities on the neighbor islands consistent with community needs and desires.</i>	X		
(3) <i>Promote increased opportunities for Hawai'i's people to pursue their socio-economic aspirations throughout the islands.</i>	X		
(4) <i>Encourage research activities and public awareness programs to foster an understanding of Hawai'i's limited capacity to accommodate population needs and to address concerns resulting from an increase in Hawai'i's population.</i>	X		
(5) <i>Encourage federal actions and coordination among major governmental agencies to promote a more balanced distribution of immigrants among the states, provided that such actions do not prevent the reunion of immediate family members.</i>			X

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
(6) <i>Pursue an increase in federal assistance for states with a greater proportion of foreign immigrants relative to their state's population.</i>			<b>X</b>
(7) <i>Plan the development and availability of land and water resources in a coordinated manner so as to provide for the desired levels of growth in each geographic area.</i>			<b>X</b>
<b>Discussion:</b> The proposed Master Plan improvements and potential activities provide opportunities for Kaua'i residents and more specifically natives and descendants of those from Hā'ena and the neighboring communities to participate and potentially be employed in the restoration and ongoing care of the park, reconnecting the people to the place and welcoming them to share their knowledge and teach current and future generations about this storied place. The Master Plan recommends conducting research studies to help State Parks better understand how the varied resources are impacted by the proposed change in visitor numbers over time. Other research studies could be initiated to study the effects of habitat and wildlife restoration, wetland and stream restoration, archaeological restoration, renewable energy production and use in remote locations, productivity of native agricultural complexes, and recovery of marine resources in an area managed by a community-based subsistence fishery area. The information could then be incorporated into educational and interpretive programs and shared throughout the State.			
<b>HRS § 226-6: Objectives and policies for the economy in general.</b>			
<b>(a) Objectives:</b> <i>Planning for the State's economy in general shall be directed toward achievement of the following objectives:</i>			
(1) <i>Increased and diversified employment opportunities to achieve full employment, increased income and job choice, and improved living standards for Hawai'i's people, while at the same time stimulating the development and expansion of economic activities capitalizing on defense, dual-use, and science and technology assets, particularly on the neighbor islands where employment opportunities may be limited.</i>	<b>X</b>		
(2) <i>A steadily growing and diversified economic base that is not overly dependent on a few industries, and includes the development and expansion of industries on the neighbor islands.</i>	<b>X</b>		
<b>(b) Policies:</b>			
(1) <i>Promote and encourage entrepreneurship within Hawai'i by residents and nonresidents of the State.</i>			<b>X</b>
(2) <i>Expand Hawai'i's national and international marketing, communication, and organizational ties, to increase the State's capacity to adjust to and capitalize upon economic changes and opportunities occurring outside the State.</i>			<b>X</b>
(3) <i>Promote Hawai'i as an attractive market for environmentally and socially sound investment activities that benefit Hawai'i's people.</i>			<b>X</b>
(4) <i>Transform and maintain Hawai'i as a place that welcomes and facilitates innovative activity that may lead to commercial opportunities.</i>			<b>X</b>
(5) <i>Promote innovative activity that may pose initial risks, but ultimately contribute to the economy of Hawai'i.</i>	<b>X</b>		
(6) <i>Seek broader outlets for new or expanded Hawai'i business investments.</i>			<b>X</b>
(7) <i>Expand existing markets and penetrate new markets for Hawai'i's products and services.</i>			<b>X</b>
(8) <i>Assure that the basic economic needs of Hawai'i's people are maintained in the event of disruptions in overseas transportation.</i>			<b>X</b>
(9) <i>Strive to achieve a level of construction activity responsive to, and consistent with, state growth objectives.</i>			<b>X</b>

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
(10)Encourage the formation of cooperatives and other favorable marketing arrangements at the local or regional level to assist Hawai'i's small scale producers, manufacturers, and distributors.			<b>X</b>
(11)Encourage labor-intensive activities that are economically satisfying and which offer opportunities for upward mobility.			<b>X</b>
(12)Encourage innovative activities that may not be labor-intensive, but may otherwise contribute to the economy of Hawai'i.	<b>X</b>		
(13)Foster greater cooperation and coordination between the government and private sectors in developing Hawai'i's employment and economic growth opportunities.	<b>X</b>		
(14)Stimulate the development and expansion of economic activities which will benefit areas with substantial or expected employment problems.	<b>X</b>		
(15)Maintain acceptable working conditions and standards for Hawai'i's workers.	<b>X</b>		
(16)Provide equal employment opportunities for all segments of Hawai'i's population through affirmative action and nondiscrimination measures.	<b>X</b>		
(17)Stimulate the development and expansion of economic activities capitalizing on defense, dual-use, and science and technology assets, particularly on the neighbor islands where employment opportunities may be limited.	<b>X</b>		
(18)Encourage businesses that have favorable financial multiplier effects within Hawai'i's economy, particularly with respect to emerging industries in science and technology.			<b>X</b>
(19)Promote and protect intangible resources in Hawai'i, such as scenic beauty and the aloha spirit, which are vital to a healthy economy.	<b>X</b>		
(20)Increase effective communication between the educational community and the private sector to develop relevant curricula and training programs to meet future employment needs in general, and requirements of new, potential growth industries in particular.			<b>X</b>
(21)Foster a business climate in Hawai'i--including attitudes, tax and regulatory policies, and financial and technical assistance programs--that is conducive to the expansion of existing enterprises and the creation and attraction of new business and industry.			<b>X</b>
<p><b>Discussion:</b> The proposed expansion of programs, increased maintenance, and restoration of various areas within the park will provide innovative and culturally enriching employment opportunities. The proposed improvements seek to improve visitor experience for both residents and nonresidents and to better coordinate and to support the multiple values and uses of the wahi pana. These varied uses and values include recreation, cultural practices, relaxation, natural habitats and ecosystems, and education—all of which can contribute to various economic activities both within and beyond the park's boundaries.</p> <p>State Parks and all contractors hired by State Parks must abide by current labor laws which include maintaining acceptable working conditions and providing equal employment opportunities.</p> <p>The proposed Master Plan seeks to improve intangibles such as the scenic qualities of the park by restoring and protecting its natural, cultural, and historic resources and to reduce user conflicts at the park which will engender the aloha spirit for those who visit the park. Interpretive materials and the orientation <del>sessions</del> <u>information</u> will help educate visitors of the sensitive and varied resources at the park, of the behaviors and activities that are appropriate, and to respect cultural activities that may be occurring within the park.</p>			

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
<b>HRS § 226-7: Objectives and policies for the economy – agriculture</b>			
<b>(a) Objectives:</b> <i>Planning for the State's economy with regard to agriculture shall be directed towards achievement of the following objectives:</i>			
<i>(1) Viability of Hawai'i's sugar and pineapple industries.</i>			<b>X</b>
<i>(2) Growth and development of diversified agriculture throughout the State.</i>			<b>X</b>
<i>(3) An agriculture industry that continues to constitute a dynamic and essential component of Hawai'i's strategic, economic, and social well-being.</i>			<b>X</b>
<b>(b) Policies:</b>			
<i>(1) Establish a clear direction for Hawai'i's agriculture through stakeholder commitment and advocacy.</i>			<b>X</b>
<i>(2) Encourage agriculture by making best use of natural resources.</i>	<b>X</b>		
<i>(3) Provide the governor and the legislature with information and options needed for prudent decision making for the development of agriculture.</i>			<b>X</b>
<i>(4) Establish strong relationships between the agricultural and visitor industries for mutual marketing benefits.</i>	<b>X</b>		
<i>(5) Foster increased public awareness and understanding of the contributions and benefits of agriculture as a major sector of Hawai'i's economy.</i>	<b>X</b>		
<i>(6) Seek the enactment and retention of federal and state legislation that benefits Hawai'i's agricultural industries.</i>			<b>X</b>
<i>(7) Strengthen diversified agriculture by developing an effective promotion, marketing, and distribution system between Hawai'i's food producers and consumers in the State, nation, and world.</i>			<b>X</b>
<i>(8) Support research and development activities that strengthen economic productivity in agriculture, stimulate greater efficiency, and enhance the development of new products and agricultural by-products.</i>			<b>X</b>
<i>(9) Enhance agricultural growth by providing public incentives and encouraging private initiatives.</i>			<b>X</b>
<i>(10) Assure the availability of agriculturally suitable lands with adequate water to accommodate present and future needs.</i>	<b>X</b>		
<i>(11) Increase the attractiveness and opportunities for an agricultural education and livelihood.</i>	<b>X</b>		
<i>(12) In addition to the State's priority on food, expand Hawai'i's agricultural base by promoting growth and development of flowers, tropical fruits and plants, livestock, feed grains, forestry, food crops, aquaculture, and other potential enterprises.</i>			<b>X</b>
<i>(13) Promote economically competitive activities that increase Hawai'i's agricultural self-sufficiency, including the increased purchase and use of Hawai'i-grown food and food products by residents, businesses, and governmental bodies as defined under section 103D-104.</i>			<b>X</b>
<i>(14) Promote and assist in the establishment of sound financial programs for diversified agriculture.</i>			<b>X</b>
<i>(15) Institute and support programs and activities to assist the entry of displaced agricultural workers into alternative agricultural or other employment.</i>			<b>X</b>
<i>(16) Facilitate the transition of agricultural lands in economically nonfeasible agricultural production to economically viable agricultural uses.</i>			<b>X</b>
<b>Discussion:</b> Although the Agricultural Complex within the park cannot be used for economic purposes, it does provide an important educational and experiential resource promoting native agricultural practices and increasing the knowledge base of best-practices related to the restoration and activation of prehistoric agricultural complexes so that other similar sites can be made productive again. The Agricultural Complex is also highlighted as an educational feature of the park, where visitors can learn about native agricultural practices and participate in special tours or volunteer work days in the lo'i.			

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
<b>HRS § 226-8: Objectives and policies for the economy – visitor industry</b>			
<b>(a) Objectives:</b> Planning for the State's economy with regard to the visitor industry shall be directed towards the achievement of the objective of a visitor industry that constitutes a major component of steady growth for Hawai'i's economy.			
<b>(b) Policies:</b>			
(1) Support and assist in the promotion of Hawai'i's visitor attractions and facilities.	<b>X</b>		
(2) Ensure that visitor industry activities are in keeping with the social, economic, and physical needs and aspirations of Hawai'i's people.	<b>X</b>		
(3) Improve the quality of existing visitor destination areas by utilizing Hawai'i's strengths in science and technology.	<b>X</b>		
(4) Encourage cooperation and coordination between the government and private sectors in developing and maintaining well-designed, adequately serviced visitor industry and related developments which are sensitive to neighboring communities and activities.	<b>X</b>		
(5) Develop the industry in a manner that will continue to provide new job opportunities and steady employment for Hawai'i's people.			<b>X</b>
(6) Provide opportunities for Hawai'i's people to obtain job training and education that will allow for upward mobility within the visitor industry.			<b>X</b>
(7) Foster a recognition of the contribution of the visitor industry to Hawai'i's economy and the need to perpetuate the aloha spirit.	<b>X</b>		
(8) Foster an understanding by visitors of the aloha spirit and of the unique and sensitive character of Hawai'i's cultures and values.	<b>X</b>		
<b>Discussion:</b> The proposed Master Plan embodies many of the policies identified above. As one of the most popular visitor destinations on the island, Hā'ena State Park has become a victim of its success, becoming overcrowded and experiencing conflicts between the varied recreational and cultural uses of the park. The new facilities, educational and interpretive materials and programs, and changes in management and maintenance will improve the conditions at the park, better protecting and caring for the natural, cultural, historic, and scenic resources that are valued at the park. The <u>visitor orientation session</u> <del>all visitors must attend</del> <u>information and materials</u> will help educate visitors on the unique and sensitive resources at the park and appropriate behavior, protocols, and activities which will in turn engender a greater sense of respect and aloha visitors have while at the park. The proposed educational programs and interpretive materials will also enrich the visitor experience as they learn about the varied and multilayered resources of this storied place.			
<b>HRS § 226-9: Objective and policies for the economy – federal expenditures</b>			
<b>(a) Objective:</b> Planning for the State's economy with regard to federal expenditures shall be directed towards achievement of the objective of a stable federal investment base as an integral component of Hawai'i's economy.			
<b>(b) Policies:</b>			
(1) Encourage the sustained flow of federal expenditures in Hawai'i that generates long-term government civilian employment.			<b>X</b>
(2) Promote Hawai'i's supportive role in national defense, in a manner consistent with Hawai'i's social, environmental, and cultural goals by building upon dual-use and defense applications to develop thriving ocean engineering, aerospace research and development, and related dual-use technology sectors in Hawai'i's economy.			<b>X</b>
(3) Promote the development of federally supported activities in Hawai'i that respect state-wide economic concerns, are sensitive to community needs, and minimize adverse impacts on Hawai'i's environment.	<b>X</b>		
(4) Increase opportunities for entry and advancement of Hawai'i's people into federal government service.			<b>X</b>

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
(5) <i>Promote federal use of local commodities, services, and facilities available in Hawai'i.</i>			<b>X</b>
(6) <i>Strengthen federal-state-county communication and coordination in all federal activities that affect Hawai'i.</i>	<b>X</b>		
(7) <i>Pursue the return of federally controlled lands in Hawai'i that are not required for either the defense of the nation or for other purposes of national importance, and promote the mutually beneficial exchanges of land between federal agencies, the State, and the counties.</i>			<b>X</b>
<b>Discussion:</b> Communication and coordination between federal, State, and County agencies will continue through the implementation of the Master Plan, particularly in managing the natural, cultural, and historic resources at the park. Support from federal agencies and resources are welcome especially when they align with the protection, restoration, and management of the park's varied resources. For example, the representative from the Hawaiian Islands Humpback Whale Marine Sanctuary has offered to support educational efforts at the park by providing materials and installing interpretive displays to further both the park's and Sanctuary's missions of educating the public about endangered and threatened species.			
<b>HRS § 226-10: Objectives and policies for the economy – potential growth and innovative activities.</b>			
<b>(a) Objective:</b> <i>Planning for the State's economy with regard to potential growth and innovative activities shall be directed towards achievement of the objective of development and expansion of potential growth and innovative activities that serve to increase and diversify Hawai'i's economic base.</i>			
<b>(b) Policies:</b>			
(1) <i>Facilitate investment and employment in economic activities that have the potential to expand and diversify Hawai'i's economy, including but not limited to diversified agriculture, aquaculture, renewable energy development, creative media, health care, and science and technology-based sectors.</i>	<b>X</b>		
(2) <i>Facilitate investment in innovative activity that may pose risks or be less labor-intensive than other traditional business activity, but if successful, will generate revenue in Hawai'i through the export of services or products or substitution of imported services or products.</i>			<b>X</b>
(3) <i>Encourage entrepreneurship in innovative activity by academic researchers and instructors who may not have the background, skill, or initial inclination to commercially exploit their discoveries or achievements.</i>	<b>X</b>		
(4) <i>Recognize that innovative activity is not exclusively dependent upon individuals with advanced formal education, but that many self-taught, motivated individuals are able, willing, sufficiently knowledgeable, and equipped with the attitude necessary to undertake innovative activity.</i>	<b>X</b>		
(5) <i>Increase the opportunities for investors in innovative activity and talent engaged in innovative activity to personally meet and interact at cultural, art, entertainment, culinary, athletic, or visitor-oriented events without a business focus.</i>			<b>X</b>
(6) <i>Expand Hawai'i's capacity to attract and service international programs and activities that generate employment for Hawai'i's people.</i>			<b>X</b>
(7) <i>Enhance and promote Hawai'i's role as a center for international relations, trade, finance, services, technology, education, culture, and the arts.</i>	<b>X</b>		
(8) <i>Accelerate research and development of new energy- related industries based on wind, solar, ocean, and underground resources and solid waste.</i>	<b>X</b>		
(9) <i>Promote Hawai'i's geographic, environmental, social, and technological advantages to attract new economic activities into the State.</i>			<b>X</b>
(10) <i>Provide public incentives and encourage private initiative to attract new industries that best support Hawai'i's social, economic, physical, and environmental objectives.</i>			<b>X</b>

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
(11) Increase research and the development of ocean-related economic activities such as mining, food production, and scientific research.			<b>X</b>
(12) Develop, promote, and support research and educational and training programs that will enhance Hawai'i's ability to attract and develop economic activities of benefit to Hawai'i.			<b>X</b>
(13) Foster a broader public recognition and understanding of the potential benefits of new, or innovative growth-oriented industry in Hawai'i.			<b>X</b>
(14) Encourage the development and implementation of joint federal and state initiatives to attract federal programs and projects that will support Hawai'i's social, economic, physical, and environmental objectives.			<b>X</b>
(15) Increase research and development of businesses and services in the telecommunications and information industries.			<b>X</b>
(16) Foster the research and development of nonfossil fuel and energy efficient modes of transportation.	<b>X</b>		
(17) Recognize and promote health care and health care information technology as growth industries.			<b>X</b>
<p><b>Discussion:</b> Innovative technologies such as renewable energy and green design are encouraged in the Master Plan. Since funding for improvements may be limited, the park could support research on these technologies by being a testing ground for similar remote facilities. The proposed shuttles could also be electric vehicles charged with renewable energy resources. The new <del>ECC</del> <u>Welcome Hale</u> and Cultural Gathering Area <u>as well as the entire park itself</u> are also envisioned as centers for learning and places where workshops and other educational programs can be held <u>outdoors within this wahi pana</u>, covering a wide variety of topics such as ecosystem restoration, endangered species, native Hawaiian agriculture and fishery maintenance, ocean and marine resources, renewable energy and innovative technologies, culture and the arts, and water reuse.</p>			
<b>HRS § 226-10.5: Objectives and policies for the economy – information industry</b>			
<b>(a) Objective:</b> Planning for the State's economy with regard to telecommunications and information technology shall be directed toward recognizing that broadband and wireless communication capability and infrastructure are foundations for an innovative economy and positioning Hawai'i as a leader in broadband and wireless communications and applications in the Pacific Region.			
<b>(b) Policies:</b>			
(1) Promote efforts to attain the highest speeds of electronic and wireless communication within Hawai'i and between Hawai'i and the world, and make high speed communication available to all residents and businesses in Hawai'i.	<b>X</b>		
(2) Encourage the continued development and expansion of the telecommunications infrastructure serving Hawai'i to accommodate future growth and innovation in Hawai'i's economy.	<b>X</b>		
(3) Facilitate the development of new or innovative business and service ventures in the information industry which will provide employment opportunities for the people of Hawai'i.			<b>X</b>
(4) Encourage mainland- and foreign-based companies of all sizes, whether information technology-focused or not, to allow their principals, employees, or contractors to live in and work from Hawai'i, using technology to communicate with their headquarters, offices, or customers located out-of-state.			<b>X</b>
(5) Encourage greater cooperation between the public and private sectors in developing and maintaining a well-designed information industry.			<b>X</b>
(6) Ensure that the development of new businesses and services in the industry are in keeping with the social, economic, and physical needs and aspirations of Hawai'i's people.	<b>X</b>		

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
(7) <i>Provide opportunities for Hawai'i's people to obtain job training and education that will allow for upward mobility within the information industry.</i>			<b>X</b>
(8) <i>Foster a recognition of the contribution of the information industry to Hawai'i's economy.</i>			<b>X</b>
(9) <i>Assist in the promotion of Hawai'i as a broker, creator, and processor of information in the Pacific.</i>			<b>X</b>
<b>Discussion:</b> Hā'ena State Park is not directly related to the information technology (IT) industry; therefore, most of the above objective and policies are not applicable. However, State Parks will utilize IT services to disseminate up-to-the-minute information regarding ticket availability, parking and shuttle information, and weather and ocean conditions to the general public as well as in coordination with rescue and emergency services as necessary. Therefore, improved accessibility to reliable wireless communication services at Hā'ena will be critical.			
<b>HRS § 226-11: Objectives and policies for the physical environment – land-based, shoreline, and marine resources.</b>			
<b>(a) Objectives:</b> Planning for the State's physical environment with regard to land-based, shoreline, and marine resources shall be directed towards achievement of the following objectives:			
(1) <i>Prudent use of Hawai'i's land-based, shoreline, and marine resources.</i>	<b>X</b>		
(2) <i>Effective protection of Hawai'i's unique and fragile environmental resources.</i>	<b>X</b>		
<b>(b) Policies:</b>			
(1) <i>Exercise an overall conservation ethic in the use of Hawai'i's natural resources.</i>	<b>X</b>		
(2) <i>Ensure compatibility between land-based and water-based activities and natural resources and ecological systems.</i>	<b>X</b>		
(3) <i>Take into account the physical attributes of areas when planning and designing activities and facilities.</i>	<b>X</b>		
(4) <i>Manage natural resources and environs to encourage their beneficial and multiple use without generating costly or irreparable environmental damage.</i>	<b>X</b>		
(5) <i>Consider multiple uses in watershed areas, provided such uses do not detrimentally affect water quality and recharge functions.</i>	<b>X</b>		
(6) <i>Encourage the protection of rare or endangered plant and animal species and habitats native to Hawai'i.</i>	<b>X</b>		
(7) <i>Provide public incentives that encourage private actions to protect significant natural resources from degradation or unnecessary depletion.</i>			<b>X</b>
(8) <i>Pursue compatible relationships among activities, facilities, and natural resources.</i>	<b>X</b>		
(9) <i>Promote increased accessibility and prudent use of inland and shoreline areas for public recreational, educational, and scientific purposes.</i>	<b>X</b>		
<b>Discussion:</b> In general, the Master Plan improvements will improve the protection of the park's unique and sensitive environmental resources over existing conditions. The proposed visitor limit of <del>900 people per day</del> is less than half of the current number of visitors per day. Additionally, it is recommended that all visitors <del>attend an educational session</del> <u>receive visitor orientation information prior to park entry</u> that would provide an overview of the park's natural and cultural resources and instruct visitors of the appropriate activities and behaviors allowed at the park.			
The Master Plan includes potential measures to minimize polluted runoff to protect marine species from the land-based pollution to which they are sensitive. Relocating the bulk of general visitor parking to the entrance will reduce the number of motor vehicles driving the			

HAWAII STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
<p>length of Kūhiō Highway and idling and turning around at Kē‘ē Beach. Pollution of marine resources is proposed to be further minimized by secondary treatment (or higher) of effluent at comfort stations. The quality of nearshore waters is critical to the recreational value of the park. Efforts to protect water quality will primarily focus on best management practices during construction and green design of facilities, such as bioswales and pervious paving in the parking lots, to reduce and filter the runoff of contaminants before they enter streams and coastal waters and an integrated water/wastewater/drainage system (Section 2.5.3.1) to better manage water needs and resources and mitigate runoff. <u>All discharges related to the construction and operation of the proposed project will comply with the State’s Water Quality requirements contained in Chapters 11-54 and 11-55, HAR.</u></p> <p>Hā‘ena’s biological resources, along with mitigation measures are discussed in greater detail in Sections 3.5-3.9. The USFWS provided a Technical Assistance letter in response to the pre-consultation process (see Section 11.0). The letter confirms that there is no federally designated critical habitat within the park. The letter identifies species in the area that are protected under the Act and recommends that surveys of the park’s flora and fauna be conducted to document the presence of listed species. As the Master Plan is a programmatic project, State Parks will coordinate with the USFWS as recommended in their letter to determine if any proposed actions will adversely impact federally-listed species.</p>			
<b>HRS § 226-12: Objective and policies for the physical environment – scenic, natural beauty, and historic resources.</b>			
<b>(a) Objective:</b> <i>Planning for the State’s physical environment shall be directed towards achievement of the objective of enhancement of Hawai‘i’s scenic assets, natural beauty, and multi-cultural/historical resources.</i>			
<b>(b) Policies:</b>			
(1) <i>Promote the preservation and restoration of significant natural and historic resources.</i>	X		
(2) <i>Provide incentives to maintain and enhance historic, cultural, and scenic amenities.</i>			X
(3) <i>Promote the preservation of views and vistas to enhance the visual and aesthetic enjoyment of mountains, ocean, scenic landscapes, and other natural features.</i>	X		
(4) <i>Protect those special areas, structures, and elements that are an integral and functional part of Hawai‘i’s ethnic and cultural heritage.</i>	X		
(5) <i>Encourage the design of developments and activities that complement the natural beauty of the islands.</i>	X		
<p><b>Discussion:</b> One of the main objectives of the Master Plan is to provide opportunities for quality outdoor recreation, with sensitivity to the park’s natural and cultural resources. While continuing its commitment to offer outdoor recreational activities at Hā‘ena State Park, the State will employ both programmatic as well as physical mitigation measures to avoid and minimize impacts to archaeological and historic resources and prioritize the cultural heritage of the park. The primary programmatic action to mitigate impacts to archaeological resources will be to establish a Cultural Advisory Group, whose input will improve interpretation of the park’s cultural, archaeological, and historic resources and to help guide all aspects of park management, educational and interpretive programs, and Master Plan implementation. The Master Plan also recommends the restoration of the park’s archaeological and historic resources, specifically, the dune system, Hula Complex, and</p>			

HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	S	N/S	N/A
<p>Agricultural Complex (including the 'auwai if feasible). New park facilities will be limited to areas of previous disturbance so that its potential impact to archaeological resources is minimized. More detail on the archaeological and historic resources of the park can be found in Section 4.1.</p> <p>The Master Plan will protect, restore, and improve the scenic views and vistas that provide the visual and aesthetic enjoyment of the park's mountains, ocean, scenic landscapes, and other natural features. Various measures in the Master Plan are anticipated to improve visual access such as the <del>Interpretive</del> <u>Pedestrian</u> Path which will open up new views of the Agricultural Complex, Makana, <u>lo'i</u>, and the Hau Tunnel. The Master Plan identifies proposed view corridors and lookouts (Figure 28). More detail on the scenic and open space resources of the park can be found in Section 4.6.</p>			
<b>HRS § 226-13: Objectives and policies for the physical environment – land, air, and water quality.</b>			
<b>(a) Objectives:</b> <i>Planning for the State's physical environment with regard to land, air, and water quality shall be directed towards achievement of the following objectives:</i>			
(1) <i>Maintenance and pursuit of improved quality in Hawai'i's land, air, and water resources.</i>	X		
(2) <i>Greater public awareness and appreciation of Hawai'i's environmental resources.</i>	X		
<b>(b) Policies:</b>			
(1) <i>Foster educational activities that promote a better understanding of Hawai'i's limited environmental resources.</i>	X		
(2) <i>Promote the proper management of Hawai'i's land and water resources.</i>	X		
(3) <i>Promote effective measures to achieve desired quality in Hawai'i's surface, ground, and coastal waters.</i>	X		
(4) <i>Encourage actions to maintain or improve aural and air quality levels to enhance the health and well-being of Hawai'i's people.</i>	X		
(5) <i>Reduce the threat to life and property from erosion, flooding, tsunamis, hurricanes, earthquakes, volcanic eruptions, and other natural or man-induced hazards and disasters.</i>	X		
(6) <i>Encourage design and construction practices that enhance the physical qualities of Hawai'i's communities.</i>	X		
(7) <i>Encourage urban developments in close proximity to existing services and facilities.</i>			X
(8) <i>Foster recognition of the importance and value of the land, air, and water resources to Hawai'i's people, their cultures and visitors.</i>	X		
<p><b>Discussion:</b> The Master Plan improvements seek to improve Hawai'i's land, air, and water resources while also creating greater public awareness and appreciation of Hawai'i's environmental resources. They include the restoration and improved maintenance of the park's dune system, Agricultural Complex, wetlands, native forests, and stream environment. Green building design for all facilities including maximizing energy efficiency, <u>improving wastewater treatment, water reuse and water quality</u>, and using renewable energy sources to power the remaining demand is recommended in the plan. Expanded interpretive programs, displays, and materials will help educate visitors of the importance and value of the natural and cultural resources at the park. The <del>required</del> visitor education and orientation <del>sessions</del> <u>information</u> will provide a brief overview of the park's extensive and sensitive natural and cultural resources, instruct visitors of the appropriate</p>			

HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
activities and behaviors allowed at the park so that long-term maintenance of the resources can be supported.			
<p>The proposed 900 persons per day visitor limit <u>during peak visitor hours</u> <del>and controlled entry point</del> will also help reduce the human impact on the park and its natural resources. It will also allow State Parks to better manage visitors in concert with conservation values and safety concerns. Efforts to protect water quality will include best management practices during construction to control sedimentation, erosion, and dust, and green design of the facilities, such as installing bioswales and pervious paving in the parking lots to collect and filter runoff. Pollution of marine resources is proposed to be further minimized by secondary treatment of effluent at comfort stations and developing an integrated water/wastewater/drainage system to increase the efficiency of water use, improve effluent water quality, and increase reuse and use of available nonpotable water resources. <u>All discharges related to the construction and operation of the proposed project will comply with the State's Water Quality requirements contained in Chapters 11-54 and 11-55, HAR.</u> It is expected that the reduction in the number of vehicles traversing the highway through the park and at Kē'ē will result in less automobile noise, exhaust fumes, and dust within the park. Additional descriptions of the proposed Master Plan and management strategies are provided in Section 2.5 and in full in <u>the master plan report available on the State Parks website (<a href="http://dlnr.hawaii.gov/dsp/parks/kauai/haena-state-park/">http://dlnr.hawaii.gov/dsp/parks/kauai/haena-state-park/</a>).</u> <del>Appendix I.</del></p> <p>Due to the remote location of the park and the potential for hazardous conditions, an emergency evacuation plan and rescue plans should be developed. Coordination and regular drills should be held annually at a minimum with State Civil Defense and the Kaua'i Fire and Police Departments to ensure readiness. Currently, there are no State Civil Defense sirens in the park and no tsunami evacuation signs on Kūhiō Highway within the park. The land area required for a new siren can be accommodated in the park, most likely in the main parking area. <u>A subsequent letter from the Office of State Emergency Management/Civil Defense noted that siren coverage exists for the project site, but requested the existing siren to be upgraded to a 121db(c) omni-directional siren. State Parks will work with the Hawai'i Emergency Management Agency to ensure adequate siren coverage at the park.</u> To facilitate evacuations in the event they are necessary, the helicopter landing pad is proposed to be retained with the Master Plan improvements. Emergency evacuation routes should also be planned and indicated on wayfinding signs installed at the park and printed in visitor brochures and materials. <del>The orientation session in which all visitors must participate information</del> <u>should also include information directions</u> on what to do during evacuations and emergency situations. <del>, as well as</del> <u>In addition,</u> up-to-the-minute weather and ocean conditions <u>can be sent out via text, email, or the website</u> to help educate visitors on the coastal hazards that they may encounter while visiting the park.</p>			

HAWAII STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)		S	N/S	N/A
<b>HRS § 226-14: Objective and policies for facility systems – in general.</b>				
<i>(a) Objective: Planning for the State's facility systems in general shall be directed towards achievement of the objective of water, transportation, waste disposal, and energy and telecommunication systems that support statewide social, economic, and physical objectives.</i>				
<b>(b) Policies:</b>				
<i>(1) Accommodate the needs of Hawai'i's people through coordination of facility systems and capital improvement priorities in consonance with state and county plans.</i>				X
<i>(2) Encourage flexibility in the design and development of facility systems to promote prudent use of resources and accommodate changing public demands and priorities.</i>				X
<i>(3) Ensure that required facility systems can be supported within resource capacities and at reasonable cost to the user.</i>				X
<i>(4) Pursue alternative methods of financing programs and projects and cost-saving techniques in the planning, construction, and maintenance of facility systems.</i>				X
<b>Discussion:</b> The proposed Master Plan does not involve planning for the State's facility systems; therefore, this objective and these policies are not applicable.				
<b>HRS § 226-15: Objectives and policies for facility systems – solid and liquid wastes.</b>				
<i>(a) Objectives: Planning for the State's facility systems with regard to solid and liquid wastes shall be directed towards the achievement of the following objectives:</i>				
<i>(1) Maintenance of basic public health and sanitation standards relating to treatment and disposal of solid and liquid wastes.</i>		X		
<i>(2) Provision of adequate sewerage facilities for physical and economic activities that alleviate problems in housing, employment, mobility, and other areas.</i>				X
<b>(b) Policies:</b>				
<i>(1) Encourage the adequate development of sewerage facilities that complement planned growth.</i>		X		
<i>(2) Promote re-use and recycling to reduce solid and liquid wastes and employ a conservation ethic.</i>		X		
<i>(3) Promote research to develop more efficient and economical treatment and disposal of solid and liquid wastes.</i>		X		
<b>Discussion:</b> The Master Plan recommends that an integrated water/wastewater/drainage system be developed for the park. It includes increasing the level of wastewater treatment to improve sanitation and to allow the effluent to be reused at the park for irrigation, toilet flushing, and other needs where nonpotable water can safely be used (Section 2.5.3.1). <del>The system should be appropriately designed to serve the full buildout of the Master Plan, and to allow for phasing and incremental sizing if appropriate to support the Near Term Plan initially and help reduce capital costs.</del>  For solid wastes, recycling will be encouraged and visitors will be asked to carry out whatever they bring into the park. State Parks should also regularly maintain an appropriate number of trash and recycling receptacles to encourage the appropriate placement of solid wastes and to reduce the amount of plastic and other waste that is blown or washed into the ocean. All trash and recycling receptacles should have fitted lids to discourage foraging by invasive animals such as cats, rats, and dogs. Regular maintenance of solid and liquid waste facilities is also recommended to reduce potential impacts to the natural, cultural, and scenic resources of the park.				

<b>HAWAII STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
<b>HRS § 226-16: Objective and policies for facility systems – water.</b>			
<i>(a) Objective: Planning for the State's facility systems with regard to water shall be directed towards achievement of the objective of the provision of water to adequately accommodate domestic, agricultural, commercial, industrial, recreational, and other needs within resource capacities.</i>			
<b>(b) Policies:</b>			
<i>(1) Coordinate development of land use activities with existing and potential water supply.</i>	<b>X</b>		
<i>(2) Support research and development of alternative methods to meet future water requirements well in advance of anticipated needs.</i>	<b>X</b>		
<i>(3) Reclaim and encourage the productive use of runoff water and wastewater discharges.</i>	<b>X</b>		
<i>(4) Assist in improving the quality, efficiency, service, and storage capabilities of water systems for domestic and agricultural use.</i>	<b>X</b>		
<i>(5) Support water supply services to areas experiencing critical water problems.</i>			<b>X</b>
<i>(6) Promote water conservation programs and practices in government, private industry, and the general public to help ensure adequate water to meet long-term needs.</i>	<b>X</b>		
<b>Discussion:</b> As noted above, an integrated water/wastewater/drainage system is recommended for the park to increase efficient use and reuse of water resources. The reduction in the number of visitors will also reduce the human impacts due to water demand and wastewater generation. However, as more areas of the Agricultural Complex are restored and brought back into production, water demands for agriculture will increase. Therefore, the Master Plan recommends restoring the 'auwai system wherever possible to allow surface waters to irrigate the Agricultural Complex. Rainwater catchment is also recommended at all the new facilities and the use of nonpotable water for toilet flushing and irrigation is encouraged to reduce overall potable water demand (see Section 2.5.3.1).			
<b>HRS § 226-17: Objectives and policies for facility systems – transportation.</b>			
<i>(a) Objective: Planning for the State's facility systems with regard to energy shall be directed toward the achievement of the following objectives:</i>			
<i>(1) An integrated multi-modal transportation system that services statewide needs and promotes the efficient, economical, safe, and convenient movement of people and goods.</i>			<b>X</b>
<i>(2) A statewide transportation system that is consistent with and will accommodate planned growth objectives throughout the State.</i>			<b>X</b>
<b>(b) Policies:</b>			
<i>(1) Design, program, and develop a multi-modal system in conformance with desired growth and physical development as stated in this chapter;</i>	<b>X</b>		
<i>(2) Coordinate state, county, federal, and private transportation activities and programs toward the achievement of statewide objectives;</i>			<b>X</b>
<i>(3) Encourage a reasonable distribution of financial responsibilities for transportation among participating governmental and private parties;</i>	<b>X</b>		
<i>(4) Provide for improved accessibility to shipping, docking, and storage facilities;</i>			<b>X</b>
<i>(5) Promote a reasonable level and variety of mass transportation services that adequately meet statewide and community needs;</i>	<b>X</b>		
<i>(6) Encourage transportation systems that serve to accommodate present and future development needs of communities;</i>	<b>X</b>		
<i>(7) Encourage a variety of carriers to offer increased opportunities and advantages to interisland movement of people and goods;</i>			<b>X</b>
<i>(8) Increase the capacities of airport and harbor systems and support facilities to effectively accommodate transshipment and storage needs;</i>			<b>X</b>

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
(9) <i>Encourage the development of transportation systems and programs which would assist statewide economic growth and diversification;</i>	<b>X</b>		
(10) <i>Encourage the design and development of transportation systems sensitive to the needs of affected communities and the quality of Hawai'i's natural environment;</i>	<b>X</b>		
(11) <i>Encourage safe and convenient use of low-cost, energy-efficient, non-polluting means of transportation;</i>	<b>X</b>		
(12) <i>Coordinate intergovernmental land use and transportation planning activities to ensure the timely delivery of supporting transportation infrastructure in order to accommodate planned growth objectives; and</i>	<b>X</b>		
(13) <i>Encourage diversification of transportation modes and infrastructure to promote alternate fuels and energy efficiency.</i>			<b>X</b>
<b>Discussion:</b> The preferred scenario of having the bulk of visitors travel to and from the park via a shuttle service from Princeville is a multimodal solution that encourages the reduction of personal vehicle use and traffic congestion as well as a reduction in consumption of fossil fuel. For the shuttles, green vehicles such as electric vehicles that can be charged with renewable energy sources such as solar PV or vehicles that use alternative fuels and have low or no emissions are recommended. It is not clear whether the shuttle service would be provided by a private or public entity; however, State Parks is supportive of encouraging riders to and from the park should the County decide to extend its service on the North Shore. There is also the option for State Parks to offer a concession to potential shuttle service providers. The shuttle is recommended to be implemented in Phase I to encourage more efficient transportation to and from the park with the potential added benefit of providing visitor education and interpretive programs during the shuttle rides.			
<b>HRS § 226-18: Objectives and policies for facility systems – energy.</b>			
<b>(a) Objectives:</b> <i>Planning for the State's facility systems with regard to energy shall be directed toward the achievement of the following objectives, giving due consideration to all:</i>			
(1) <i>Dependable, efficient, and economical statewide energy systems capable of supporting the needs of the people;</i>			<b>X</b>
(2) <i>Increased energy self-sufficiency where the ratio of indigenous to imported energy use is increased;</i>	<b>X</b>		
(3) <i>Greater energy security in the face of threats to Hawai'i's energy supplies and systems; and</i>	<b>X</b>		
(4) <i>Reduction, avoidance, or sequestration of greenhouse gas emissions from energy supply and use.</i>			<b>X</b>
<b>(b) To achieve the energy objectives, it shall be the policy of this State to ensure the short- and long-term provision of adequate, reasonably priced, and dependable energy services to accommodate demand.</b>			<b>X</b>
<b>(c) Other Policies:</b>			
(1) <i>Support research and development as well as promote the use of renewable energy sources;</i>	<b>X</b>		
(2) <i>Ensure that the combination of energy supplies and energy-saving systems is sufficient to support the demands of growth;</i>	<b>X</b>		
(3) <i>Base decisions of least-cost supply-side and demand-side energy resource options on a comparison of their total costs and benefits when a least-cost is determined by a reasonably comprehensive, quantitative, and qualitative accounting of their long-term, direct and indirect economic, environmental, social, cultural, and public health costs and benefits;</i>	<b>X</b>		
(4) <i>Promote all cost-effective conservation of power and fuel supplies through measures including:</i>			

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
(A) Development of cost-effective demand-side management programs;			<b>X</b>
(B) Education; and	<b>X</b>		
(C) Adoption of energy-efficient practices and technologies;	<b>X</b>		
(5) Ensure, to the extent that new supply-side resources are needed, that the development or expansion of energy systems uses the least-cost energy supply option and maximizes efficient technologies;	<b>X</b>		
(6) Support research, development, demonstration, and use of energy efficiency, load management, and other demand-side management programs, practices, and technologies;	<b>X</b>		
(7) Promote alternate fuels and transportation energy efficiency;	<b>X</b>		
(8) Support actions that reduce, avoid, or sequester greenhouse gases in utility, transportation, and industrial sector applications; and	<b>X</b>		
(9) Support actions that reduce, avoid, or sequester Hawai'i's greenhouse gas emissions through agriculture and forestry initiatives.	<b>X</b>		
(10) Provide priority handling and processing for all state and county permits required for renewable energy projects; and			<b>X</b>
(11) Promote the development of indigenous geothermal energy resources that are located on public trust land as an affordable and reliable source of firm power for Hawai'i.			<b>X</b>
<b>Discussion:</b> Due to the park's limited access to infrastructure and the dispersed locations of some of the proposed facilities, all facilities requiring power are recommended to be designed to be as energy efficient as possible and to use renewable energy resources to fill the remaining demand wherever feasible. The shuttle system is encouraged to use low or no emission vehicles and to use green vehicles such as electric vehicles that can be charged with renewable energy sources such as solar PV or vehicles that use alternative fuels. The restoration of the Agricultural Complex, native forest areas, and other garden areas are actions that have the potential to sequester greenhouse gas emissions.			
<b>HRS § 226-18.5: Objectives and policies for facility systems – telecommunications.</b>			
<b>(a) Objective:</b> Planning for the State's telecommunications facility systems shall be directed towards the achievement of dependable, efficient, and economical statewide telecommunications systems capable of supporting the needs of the people.			
<b>(b) To achieve the telecommunications objective, it shall be the policy of this State to ensure the provision of adequate, reasonably priced, and dependable telecommunications services to accommodate demand.</b>			
<b>(c) Other Policies:</b>			
(1) Facilitate research and development of telecommunications systems and resources;			<b>X</b>
(2) Encourage public and private sector efforts to develop means for adequate, ongoing telecommunications planning;			<b>X</b>
(3) Promote efficient management and use of existing telecommunications systems and services; and	<b>X</b>		
(4) Facilitate the development of education and training of telecommunications personnel.			<b>X</b>
<b>Discussion:</b> Coordination with the various communication companies will be undertaken and the current hardline telephone line at the park will be maintained. However State Parks is not involved with the planning of the State's telecommunications facility systems. Therefore, many of these objectives and policies are not applicable.			
<b>HRS § 226-19: Objectives and policies for socio-cultural advancement – housing.</b>			
<b>(a) Objectives:</b> Planning for the State's socio-cultural advancement with regard to housing shall be directed toward the achievement of the following objectives:			

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
(1) Greater opportunities for Hawai'i's people to secure reasonably priced, safe, sanitary, and livable homes, located in suitable environments that satisfactorily accommodate the needs and desires of families and individuals, through collaboration and cooperation between government and nonprofit and for-profit developers to ensure that more affordable housing is made available to very low-, low- and moderate-income segments of Hawai'i's population.			<b>X</b>
(2) The orderly development of residential areas sensitive to community needs and other land uses.			<b>X</b>
(3) The development and provision of affordable rental housing by the State to meet the housing needs of Hawai'i's people.			<b>X</b>
<b>(b) Policies:</b>			
(1) Effectively accommodate the housing needs of Hawai'i's people.			<b>X</b>
(2) Stimulate and promote feasible approaches that increase housing choices for low-income, moderate-income, and gap-group households.			<b>X</b>
(3) Increase homeownership and rental opportunities and choices in terms of quality, location, cost, densities, style, and size of housing.			<b>X</b>
(4) Promote appropriate improvement, rehabilitation, and maintenance of existing housing units and residential areas.			<b>X</b>
(5) Promote design and location of housing developments taking into account the physical setting, accessibility to public facilities and services, and other concerns of existing communities and surrounding areas.			<b>X</b>
(6) Facilitate the use of available vacant, developable, and underutilized urban lands for housing.			<b>X</b>
(7) Foster a variety of lifestyles traditional to Hawai'i through the design and maintenance of neighborhoods that reflect the culture and values of the community.			<b>X</b>
(8) Promote research and development of methods to reduce the cost of housing construction in Hawai'i.			<b>X</b>
<b>Discussion:</b> The proposed Hā'ena State Park Master Plan does not <del>include</del> <u>add</u> any housing except for the Caretaker's Cottage; therefore the above objectives and policies do not apply to the project.			
<b>HRS § 226-20: Objectives and policies for socio-cultural advancement – health</b>			
<b>(a) Objectives:</b> Planning for the State's socio-cultural advancement with regard to health shall be directed towards achievement of the following objectives:			
(1) Fulfillment of basic individual health needs of the general public.			<b>X</b>
(2) Maintenance of sanitary and environmentally healthful conditions in Hawai'i's communities.	<b>X</b>		
(3) Elimination of health disparities by identifying and addressing social determinants of health.			<b>X</b>
<b>(b) Policies:</b>			
(1) Provide adequate and accessible services and facilities for prevention and treatment of physical and mental health problems, including substance abuse.			<b>X</b>
(2) Encourage improved cooperation among public and private sectors in the provision of health care to accommodate the total health needs of individuals throughout the State.			<b>X</b>
(3) Encourage public and private efforts to develop and promote statewide and local strategies to reduce health care and related insurance costs.			<b>X</b>
(4) Foster an awareness of the need for personal health maintenance and preventive health care through education and other measures.			<b>X</b>
(5) Provide programs, services, and activities that ensure environmentally healthful and sanitary conditions.	<b>X</b>		
(6) Improve the State's capabilities in preventing contamination by pesticides and other potentially hazardous substances through increased coordination, education,	<b>X</b>		

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
<i>monitoring, and enforcement.</i>			
(7) <i>Prioritize programs, services, interventions, and activities that address identified social determinants of health to improve native Hawaiian health and well-being consistent with the United States Congress' declaration of policy as codified in title 42 United States Code section 11702, and to reduce health disparities of disproportionately affected demographics, including native Hawaiians, other Pacific Islanders, and Filipinos. The prioritization of affected demographic groups other than native Hawaiians may be reviewed every ten years and revised based on the best available epidemiological and public health data.</i>			<b>X</b>
<b>Discussion:</b> The proposed Master Plan supports health policies primarily by restoring the native ecosystems including the dunes, wetlands, loko, and riparian environments, improving maintenance of the park, and recommending <u>aerobic wastewater treatment with at minimum R-2 water quality for wastewater treatment so that the effluent can be reused for non-potable uses. The Master Plan also recommends utilizing non-chemical maintenance techniques and minimizing the use of chemical fertilizers and pesticides wherever feasible and the use environmentally-safe soaps that contain plant nutrients and biocompatible cleaners.</u>			
<b>HRS § 226-21: Objective and policies for socio-cultural advancement – education.</b>			
<b>(a) Objectives:</b> <i>Planning for the State's socio-cultural advancement with regard to education shall be directed towards achievement of the objective of the provision of a variety of educational opportunities to enable individuals to fulfill their needs, responsibilities, and aspirations.</i>			
<b>(b) Policies:</b>			
(1) <i>Support educational programs and activities that enhance personal development, physical fitness, recreation, and cultural pursuits of all groups.</i>	<b>X</b>		
(2) <i>Ensure the provision of adequate and accessible educational services and facilities that are designed to meet individual and community needs.</i>	<b>X</b>		
(3) <i>Provide appropriate educational opportunities for groups with special needs.</i>	<b>X</b>		
(4) <i>Promote educational programs which enhance understanding of Hawai'i's cultural heritage.</i>	<b>X</b>		
(5) <i>Provide higher educational opportunities that enable Hawai'i's people to adapt to changing employment demands.</i>			<b>X</b>
(6) <i>Assist individuals, especially those experiencing critical employment problems or barriers, or undergoing employment transitions, by providing appropriate employment training programs and other related educational opportunities.</i>			<b>X</b>
(7) <i>Promote programs and activities that facilitate the acquisition of basic skills, such as reading, writing, computing, listening, speaking, and reasoning.</i>			<b>X</b>
(8) <i>Emphasize quality educational programs in Hawai'i's institutions to promote academic excellence.</i>			<b>X</b>
(9) <i>Support research programs and activities that enhance the education programs of the State.</i>	<b>X</b>		
<b>Discussion:</b> The proposed Master Plan recommends the expansion of the educational and interpretive facilities and programs at Hā'ena State Park, including the Welcome Pavilion/ECC-Hale, <del>Interpretive Pedestrian</del> Path and various interpretive displays. All visitors will be <del>required to attend an orientation session</del> <u>provided with visitor orientation information prior to park entry</u> to increase sensitivity and awareness of the park's varied natural, cultural, and historic resources as well as appropriate behavior and protocols respecting active cultural uses. <del>Chapter 5 Appendix M</del> of the Master Plan report ( <del>Appendix I</del> <u>available at <a href="http://dlnr.hawaii.gov/dsp/parks/kauai/haena-state-park/">http://dlnr.hawaii.gov/dsp/parks/kauai/haena-state-park/</a></u> ) details the proposed			

HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
interpretive and educational programs that will be developed at the park. It is anticipated that the park and all its varied environments could become places of active research and should be envisioned as outdoor classrooms, providing learning opportunities for all visitors, including out-of-state and international visitors, Kaua'i and Hawai'i residents, school groups from preschool to college, field schools, families and interest groups/organizations, cultural practitioners and scientific researchers.			
<b>HRS § 226-22: Objective and policies for socio-cultural advancement – social services.</b>			
<i>(a) Objective: Planning for the State's socio-cultural advancement with regard to social services shall be directed towards the achievement of the objective of improved public and private social services and activities that enable individuals, families, and groups to become more self-reliant and confident to improve their well-being.</i>			
<b>(b) Policies:</b>			
(1) <i>Assist individuals, especially those in need of attaining a minimally adequate standard of living and those confronted by social and economic hardship conditions, through social services and activities within the State's fiscal capacities.</i>			X
(2) <i>Promote coordination and integrative approaches among public and private agencies and programs to jointly address social problems that will enable individuals, families, and groups to deal effectively with social problems and to enhance their participation in society.</i>			X
(3) <i>Facilitate the adjustment of new residents, especially recently arrived immigrants, into Hawai'i's communities.</i>			X
(4) <i>Promote alternatives to institutional care in the provision of long-term care for elder and disabled populations.</i>			X
(5) <i>Support public and private efforts to prevent domestic abuse and child molestation, and assist victims of abuse and neglect.</i>			X
(6) <i>Promote programs which assist people in need of family planning services to enable them to meet their needs.</i>			X
<b>Discussion:</b> The Hā'ena State Park Master Plan does not involve social services and therefore the social services objective and policies do not apply to the project.			
<b>HRS § 226-23: Objective and policies for socio-cultural advancement – leisure.</b>			
<i>(a) Objective: Planning for the State's socio-cultural advancement with regard to leisure shall be directed towards the achievement of the objective of the adequate provision of resources to accommodate diverse cultural, artistic, and recreational needs for present and future generations.</i>			
<b>(b) Policies:</b>			
(1) <i>Foster and preserve Hawai'i's multi-cultural heritage through supportive cultural, artistic, recreational, and humanities-oriented programs and activities.</i>	X		
(2) <i>Provide a wide range of activities and facilities to fulfill the cultural, artistic, and recreational needs of all diverse and special groups effectively and efficiently.</i>	X		
(3) <i>Enhance the enjoyment of recreational experiences through safety and security measures, educational opportunities, and improved facility design and maintenance.</i>	X		
(4) <i>Promote the recreational and educational potential of natural resources having scenic, open space, cultural, historical, geological, or biological values while ensuring that their inherent values are preserved.</i>	X		
(5) <i>Ensure opportunities for everyone to use and enjoy Hawai'i's recreational resources.</i>	X		
(6) <i>Assure the availability of sufficient resources to provide for future cultural, artistic, and recreational needs.</i>	X		
(7) <i>Provide adequate and accessible physical fitness programs to promote the physical and mental well-being of Hawai'i's people.</i>	X		

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
(8) <i>Increase opportunities for appreciation and participation in the creative arts, including the literary, theatrical, visual, musical, folk, and traditional art forms.</i>			<b>X</b>
(9) <i>Encourage the development of creative expression in the artistic disciplines to enable all segments of Hawai'i's population to participate in the creative arts.</i>			<b>X</b>
(10) <i>Assure adequate access to significant natural and cultural resources in public ownership.</i>	<b>X</b>		
<p><b>Discussion:</b> As noted earlier, one of the main objectives of the Master Plan is to provide opportunities for quality outdoor recreation, with sensitivity to the park's natural and cultural resources. The Master Plan recommends the preservation and restoration of the park's rich cultural, historic, and natural resources and supports the enrichment of visitor experience through a range of educational programs and opportunities that will span cultural, historical, geological, and biological topics and values. The park's facilities will be designed to be accessible to the greatest extent possible and the continued recreational activities that will be permitted (Table 9) will support the community's continued mental and physical health. Although the number of daily visitors would be <del>limited to less than what is currently permitted</del> <u>reduced</u>, there will still be opportunity for the public to access this publicly-owned resource. Advanced planning may be required due to the demand. However, in order to improve the health and conditions of the park itself, the proposed visitor limit will be an initial limit that may be adjusted up or down in the future should studies show that the inherent scenic, open space, cultural, historical, geological, or biological values are able to be preserved or need further remediation.</p>			
<b>HRS § 226-24: Objective and policies for socio-cultural advancement – individual rights and personal well-being.</b>			
<i>(a) Objective: Planning for the State's socio-cultural advancement with regard to individual rights and personal well-being shall be directed towards achievement of the objective of increased opportunities and protection of individual rights to enable individuals to fulfill their socio-economic needs and aspirations.</i>			
<b>(b) Policies:</b>			
(1) <i>Provide effective services and activities that protect individuals from criminal acts and unfair practices and that alleviate the consequences of criminal acts in order to foster a safe and secure environment.</i>	<b>X</b>		
(2) <i>Uphold and protect the national and state constitutional rights of every individual.</i>			<b>X</b>
(3) <i>Assure access to, and availability of, legal assistance, consumer protection, and other public services which strive to attain social justice.</i>			<b>X</b>
(4) <i>Ensure equal opportunities for individual participation in society.</i>			<b>X</b>
<p><b>Discussion:</b> While incidences may still occur, the proposed increases in security and oversight of the park including the controlled entry <u>and</u> increased staff, <del>and on-site caretaker</del> are anticipated to help deter criminal acts such as vandalism and car break-ins that currently occur in the park's parking areas. Installation of the gates at the entrance will also help deter illegal activities such as rave parties that sometimes occur during overnight hours.</p>			
<b>HRS § 226-25: Objective and policies for socio-cultural advancement – culture.</b>			
<i>(a) Objective: Planning for the State's socio-cultural advancement with regard to culture shall be directed toward the achievement of the objective of enhancement of cultural identities, traditions, values, customs, and arts of Hawai'i's people.</i>			

HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
<b>(b) Policies:</b>			
(1) Foster increased knowledge and understanding of Hawai'i's ethnic and cultural heritages and the history of Hawai'i.	X		
(2) Support activities and conditions that promote cultural values, customs, and arts that enrich the lifestyles of Hawai'i's people and which are sensitive and responsive to family and community needs.	X		
(3) Encourage increased awareness of the effects of proposed public and private actions on the integrity and quality of cultural and community lifestyles in Hawai'i.	X		
(4) Encourage the essence of the aloha spirit in people's daily activities to promote harmonious relationships among Hawai'i's people and visitors.	X		
<p><b>Discussion:</b> The State will employ both programmatic as well as physical mitigation measures to avoid and minimize impacts to the rich cultural, archaeological, and historic resources and prioritize the cultural heritage of the park. The primary programmatic actions to mitigate impacts to archaeological resources will be to establish a Cultural Advisory Group, whose input will improve interpretation of the park's cultural, archaeological, and historic resources and to help guide all aspects of park management and Master Plan implementation. All visitors will be <del>required to attend an orientation session provided with</del> visitor orientation information prior to park entry to increase sensitivity and awareness of the park's varied cultural, archaeological, and historic resources as well as appropriate behavior and protocols respecting active cultural uses.</p> <p>The Master Plan also recommends the restoration of the park's cultural, archaeological, natural, and historic resources, specifically, the dune system, Hula Complex, and Agricultural Complex (including the 'auwai if feasible). New park facilities will be limited to areas of previous disturbance so that its potential impact to archaeological resources is minimized. More discussion on the archaeological, historic, and cultural resources of the park can be found in Sections 4.1 and 4.2.</p>			
<b>HRS § 226-26: Objectives and policies for socio-cultural advancement – public safety.</b>			
<b>Objectives:</b> Planning for the State's socio-cultural advancement with regard to public safety shall be directed towards the achievement of the following objectives:			
(1) Assurance of public safety and adequate protection of life and property for all people.	X		
(2) Optimum organizational readiness and capability in all phases of emergency management to maintain the strength, resources, and social and economic well-being of the community in the event of civil disruptions, wars, natural disasters, and other major disturbances.	X		
(3) Promotion of a sense of community responsibility for the welfare and safety of Hawai'i's people.	X		
<b>(b) Policies related to public safety:</b>			
(1) Ensure that public safety programs are effective and responsive to community needs.	X		
(2) Encourage increased community awareness and participation in public safety programs.	X		
<b>(c) Policies related to criminal justice:</b>			
(1) Support criminal justice programs aimed at preventing and curtailing criminal activities.			X
(2) Develop a coordinated, systematic approach to criminal justice administration among all criminal justice agencies.			X
(3) Provide a range of correctional resources which may include facilities and			X

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
<i>alternatives to traditional incarceration in order to address the varied security needs of the community and successfully reintegrate offenders into the community.</i>			
<b>(d) Policies related to emergency management:</b>			
(1) <i>Ensure that responsible organizations are in a proper state of readiness to respond to major war-related, natural, or technological disasters and civil disturbances at all times.</i>	<b>X</b>		
(2) <i>Enhance the coordination between emergency management programs throughout the State.</i>	<b>X</b>		
<p><b>Discussion:</b> With regards to public safety, the proposed Master Plan recommends that emergency evacuation plans and rescue plans should be developed for all potential natural hazards (Section 2.5.2). Coordination and regular drills should be held annually at a minimum with State Civil Defense and the Kaua'i Fire and Police Departments to ensure readiness. Currently, there are no State Civil Defense sirens in the park and no tsunami evacuation signs on Kūhiō Highway within the park. However, the land area required for a new siren can be accommodated in the park, most likely in the main parking area. <u>A subsequent letter from the Office of State Emergency Management/Civil Defense noted that siren coverage exists for the project site, but requested the existing siren to be upgraded to a 121db(c) omni-directional siren. State Parks will work with the Hawai'i Emergency Management Agency to ensure adequate siren coverage at the park.</u> To facilitate evacuations in the event they are necessary, the helicopter landing pad is proposed to be retained with the Master Plan improvements. Emergency evacuation routes should also be planned and indicated on wayfinding signs installed at the park and printed in visitor brochures and materials. The orientation <del>session in</del> <u>information</u> which all visitors <del>must participate will receive</del> should also include <del>information</del> <u>directions</u> on what to do during evacuations and emergency situations, as well as up-to-the-minute weather and ocean conditions to help educate visitors on the coastal hazards that they may encounter while visiting the park.</p>			
<b>HRS § 226-27: Objectives and policies for socio-cultural advancement – government.</b>			
<b>(a) Objectives:</b> <i>Planning the State's socio-cultural advancement with regard to government shall be directed towards the achievement of the following objectives:</i>			
(1) <i>Efficient, effective, and responsive government services at all levels in the State.</i>	<b>X</b>		
(2) <i>Fiscal integrity, responsibility, and efficiency in the state government and county governments.</i>	<b>X</b>		
<b>(b) Policies:</b>			
(4) <i>Provide for necessary public goods and services not assumed by the private sector.</i>	<b>X</b>		
(5) <i>Pursue an openness and responsiveness in government that permits the flow of public information, interaction, and response.</i>	<b>X</b>		
(6) <i>Minimize the size of government to that necessary to be effective.</i>	<b>X</b>		
(7) <i>Stimulate the responsibility in citizens to productively participate in government for a better Hawai'i.</i>	<b>X</b>		
(8) <i>Assure that government attitudes, actions, and services are sensitive to community needs and concerns.</i>	<b>X</b>		
(9) <i>Provide for a balanced fiscal budget.</i>	<b>X</b>		
(10) <i>Improve the fiscal budgeting and management system of the State.</i>			<b>X</b>
(11) <i>Promote the consolidation of state and county governmental functions to increase the effective and efficient delivery of government programs and services and to eliminate duplicative services wherever feasible.</i>			<b>X</b>

HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART I. OVERALL THEME, GOALS, OBJECTIVES AND POLICIES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
<p><b>Discussion:</b> Because Hā'ena State Park is one of the State's most popular parks as well as a place of extreme cultural sensitivity and importance, the Master Plan proposes a variety of improvements and management strategies to better serve the varied communities who use the park as well as protect the natural, cultural, and historic resources. State Parks has reached out to a wide-range of stakeholders including community members, Hā'ena families and kūpuna, cultural and scientific experts, and federal, State, and County government agencies in the development of this Master Plan and incorporated their input. State Parks will also continue communicating and coordinating with relevant government agencies and community and cultural advisory committees as they move forward with implementation of the plan and ongoing maintenance and operation of the park.</p> <p>While the Master Plan proposes to potentially increase the number of people staffed at the park, many feel that the current level of staffing is inadequate to effectively protect and maintain the resources and therefore an increase is warranted. State Parks is considering options to have a third-party operator manage the park who as part of their responsibilities would be to operate the park in a fiscally responsible way and independent of State funding as much as possible.</p> <p>The educational session all visitors must attend will help encourage appropriate behavior and protocol at the park and engender a sense of responsibility and care for the varied and sensitive natural, cultural, and historic resources as well as any active cultural practices they may encounter at the park.</p>			

#### 5.3.4.2 Part III: Priority Guidelines

The purpose of this part of the Hawai'i State Plan is to establish overall priority guidelines to address areas of statewide concern. The Hawai'i State Plan notes that the State shall strive to improve the quality of life for Hawai'i's present and future population through the pursuit of desirable courses of action in five major areas of statewide concern which merit priority attention: 1) economic development; 2) population growth and land resource management; 3) affordable housing; 4) crime and criminal justice; and 5) quality education (§226-102). The priority guidelines applicable to the proposed Master Plan are discussed below.

HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
<b>HRS § 226-101: Purpose.</b> <i>The purpose of this part is to establish overall priority guidelines to address areas of statewide concern.</i>			
<b>HRS § 226-102: Overall direction.</b> <i>The State shall strive to improve the quality of life for Hawai'i's present and future present and future population through the pursuit of desirable courses of action in five major areas of statewide concern which merit priority attention: economic development, population growth and land resource management, affordable housing, crime and criminal justice, quality education, principles of sustainability, and climate change adaptation.</i>			
<b>HRS § 226-103: Economic priority guidelines.</b>			
<i>(a) Priority guidelines to stimulate economic growth and encourage business expansion and development</i>			

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
<b><i>to provide needed jobs for Hawai'i's people and achieve a stable and diversified economy:</i></b>			
(1) <i>Seek a variety of means to increase the availability of investment capital for new and expanding enterprises.</i>			<b>X</b>
(A) <i>Encourage investments which:</i>			
(i) <i>Reflect long term commitments to the State;</i>			<b>X</b>
(ii) <i>Rely on economic linkages within the local economy;</i>	<b>X</b>		
(iii) <i>Diversify the economy;</i>	<b>X</b>		
(iv) <i>Reinvest in the local economy;</i>	<b>X</b>		
(v) <i>Are sensitive to community needs and priorities; and</i>	<b>X</b>		
(vi) <i>Demonstrate a commitment to provide management opportunities to Hawai'i residents; and</i>	<b>X</b>		
(B) <i>Encourage investments in innovative activities that have a nexus to the State, such as:</i>			
(i) <i>Present or former residents acting as entrepreneurs or principals;</i>	<b>X</b>		
(ii) <i>Academic support from an institution of higher education in Hawai'i;</i>	<b>X</b>		
(iii) <i>Investment interest from Hawai'i residents;</i>	<b>X</b>		
(iv) <i>Resources unique to Hawai'i that are required for innovative activity; and</i>	<b>X</b>		
(v) <i>Complementary or supportive industries or government programs or projects.</i>	<b>X</b>		
(2) <i>Encourage the expansion of technological research to assist industry development and support the development and commercialization of technological advancements.</i>			<b>X</b>
(3) <i>Improve the quality, accessibility, and range of services provided by government to business, including data and reference services and assistance in complying with governmental regulations.</i>			<b>X</b>
(4) <i>Seek to ensure that state business tax and labor laws and administrative policies are equitable, rational, and predictable.</i>			<b>X</b>
(5) <i>Streamline the processes for building and development permit and review and telecommunication infrastructure installation approval and eliminate or consolidate other burdensome or duplicative governmental requirements imposed on business, where scientific evidence indicates that public health, safety, and welfare would not be adversely affected.</i>			<b>X</b>
(6) <i>Encourage the formation of cooperatives and other favorable marketing or distribution arrangements at the regional or local level to assist Hawai'i's small-scale producers, manufacturers, and distributors.</i>			<b>X</b>
(7) <i>Continue to seek legislation to protect Hawai'i from transportation interruptions between Hawai'i and the continental United States.</i>			<b>X</b>
(8) <i>Provide public incentives and encourage private initiative to develop and attract industries which promise long-term growth potentials and which have the following characteristics:</i>			<b>X</b>
(A) <i>An industry that can take advantage of Hawai'i's unique location and available physical and human resources.</i>			<b>X</b>
(B) <i>A clean industry that would have minimal adverse effects on Hawai'i's environment.</i>			<b>X</b>
(C) <i>An industry that is willing to hire and train Hawai'i's people to meet the industry's labor needs at all levels of employment.</i>			<b>X</b>
(D) <i>An industry that would provide reasonable income and steady employment.</i>			<b>X</b>
(9) <i>Support and encourage, through educational and technical assistance programs and other means, expanded opportunities for employee ownership and participation in Hawai'i business.</i>			<b>X</b>
(10) <i>Enhance the quality of Hawai'i's labor force and develop and maintain career opportunities for Hawai'i's people through the following actions:</i>			

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
(A) <i>Expand vocational training in diversified agriculture, aquaculture, information industry, and other areas where growth is desired and feasible.</i>	<b>X</b>		
(B) <i>Encourage more effective career counseling and guidance in high schools and post-secondary institutions to inform students of present and future career opportunities.</i>			<b>X</b>
(C) <i>Allocate educational resources to career areas where high employment is expected and where growth of new industries is desired.</i>			<b>X</b>
(D) <i>Promote career opportunities in all industries for Hawai'i's people by encouraging firms doing business in the State to hire residents.</i>	<b>X</b>		
(E) <i>Promote greater public and private sector cooperation in determining industrial training needs and in developing relevant curricula and on-the-job training opportunities.</i>			<b>X</b>
(F) <i>Provide retraining programs and other support services to assist entry of displaced workers into alternative employment.</i>			<b>X</b>
<b>(b) Priority guidelines to promote the economic health and quality of the visitor industry:</b>			
(1) <i>Promote visitor satisfaction by fostering an environment which enhances the Aloha Spirit and minimizes inconveniences to Hawai'i's residents and visitors.</i>	<b>X</b>		
(2) <i>Encourage the development and maintenance of well-designed, adequately serviced hotels and resort destination areas which are sensitive to neighboring communities and activities and which provide for adequate shoreline setbacks and beach access.</i>			<b>X</b>
(3) <i>Support appropriate capital improvements to enhance the quality of existing resort destination areas and provide incentives to encourage investment in upgrading, repair, and maintenance of visitor facilities.</i>			<b>X</b>
(4) <i>Encourage visitor industry practices and activities which respect, preserve, and enhance Hawai'i's significant natural, scenic, historic, and cultural resources.</i>	<b>X</b>		
(5) <i>Develop and maintain career opportunities in the visitor industry for Hawai'i's people, with emphasis on managerial positions.</i>			<b>X</b>
(6) <i>Support and coordinate tourism promotion abroad to enhance Hawai'i's share of existing and potential visitor markets.</i>			<b>X</b>
(7) <i>Maintain and encourage a more favorable resort investment climate consistent with the objectives of this chapter.</i>			<b>X</b>
(8) <i>Support law enforcement activities that provide a safer environment for both visitors and residents alike.</i>	<b>X</b>		
(9) <i>Coordinate visitor industry activities and promotions to business visitors through the state network of advanced data communication techniques.</i>	<b>X</b>		
<b>(c) Priority guidelines to promote the continued viability of the sugar and pineapple industries:</b>			
(1) <i>Provide adequate agricultural lands to support the economic viability of the sugar and pineapple industries.</i>			<b>X</b>
(2) <i>Continue efforts to maintain federal support to provide stable sugar prices high enough to allow profitable operations in Hawai'i.</i>			<b>X</b>
(3) <i>Support research and development, as appropriate, to improve the quality and production of sugar and pineapple crops.</i>			<b>X</b>
<b>(d) Priority guidelines to promote the growth and development of diversified agriculture and aquaculture:</b>			
(1) <i>Identify, conserve, and protect agricultural and aquacultural lands of importance and initiate affirmative and comprehensive programs to promote economically productive agricultural and aquacultural uses of such lands.</i>			<b>X</b>
(2) <i>Assist in providing adequate, reasonably priced water for agricultural activities.</i>			<b>X</b>
(3) <i>Encourage public and private investment to increase water supply and to improve transmission, storage, and irrigation facilities in support of diversified agriculture and aquaculture.</i>			<b>X</b>
(4) <i>Assist in the formation and operation of production and marketing associations and cooperatives to reduce production and marketing costs.</i>			<b>X</b>
(5) <i>Encourage and assist with the development of a waterborne and airborne freight and cargo system capable of meeting the needs of Hawai'i's agricultural community.</i>			<b>X</b>

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
(6) <i>Seek favorable freight rates for Hawai'i's agricultural products from interisland and overseas transportation operators.</i>			<b>X</b>
(7) <i>Encourage the development and expansion of agricultural and aquacultural activities which offer long-term economic growth potential and employment opportunities.</i>			<b>X</b>
(8) <i>Continue the development of agricultural parks and other programs to assist small independent farmers in securing agricultural lands and loans.</i>			<b>X</b>
(9) <i>Require agricultural uses in agricultural subdivisions and closely monitor the uses in these subdivisions.</i>			<b>X</b>
(10) <i>Support the continuation of land currently in use for diversified agriculture.</i>			<b>X</b>
(11) <i>Encourage residents and visitors to support Hawai'i's farmers by purchasing locally grown food and food products.</i>			<b>X</b>
<b>(e) Priority guidelines for water use and development:</b>			
(1) <i>Maintain and improve water conservation programs to reduce the overall water consumption rate.</i>	<b>X</b>		
(2) <i>Encourage the improvement of irrigation technology and promote the use of nonpotable water for agricultural and landscaping purposes.</i>	<b>X</b>		
(3) <i>Increase the support for research and development of economically feasible alternative water sources.</i>	<b>X</b>		
(4) <i>Explore alternative funding sources and approaches to support future water development programs and water system improvements.</i>			<b>X</b>
<b>(f) Priority guidelines for energy use and development:</b>			
(1) <i>Encourage the development, demonstration, and commercialization of renewable energy sources.</i>	<b>X</b>		
(2) <i>Initiate, maintain, and improve energy conservation programs aimed at reducing energy waste and increasing public awareness of the need to conserve energy.</i>	<b>X</b>		
(3) <i>Provide incentives to encourage the use of energy conserving technology in residential, industrial, and other buildings.</i>			<b>X</b>
(4) <i>Encourage the development and use of energy conserving and cost-efficient transportation systems.</i>	<b>X</b>		
<b>(g) Priority guidelines to promote the development of the information industry:</b>			
(1) <i>Establish an information network, with an emphasis on broadband and wireless infrastructure and capability, that will serve as the foundation of and catalyst for overall economic growth and diversification in Hawai'i.</i>			<b>X</b>
(2) <i>Encourage the development of services such as financial data processing, a products and services exchange, foreign language translations, telemarketing, teleconferencing, a twenty-four-hour international stock exchange, international banking, and a Pacific Rim management center.</i>			<b>X</b>
(3) <i>Encourage the development of small businesses in the information field such as software development, the development of new information systems, peripherals, and applications; data conversion and data entry services; and home or cottage services such as computer programming, secretarial, and accounting services.</i>			<b>X</b>
(4) <i>Encourage the development or expansion of educational and training opportunities for residents in the information and telecommunications fields.</i>			<b>X</b>
(5) <i>Encourage research activities, including legal research in the information and telecommunications fields.</i>			<b>X</b>
(6) <i>Support promotional activities to market Hawai'i's information industry services.</i>			<b>X</b>
(7) <i>Encourage the location or co-location of telecommunication or wireless information relay facilities in the community, including public areas, where scientific evidence indicates that the public health, safety, and welfare would not be adversely affected.</i>			<b>X</b>
<b>Discussion:</b> All of the proposed improvements and management strategies are part of a Master Plan that lays the foundation and direction for future investment to help restore and manage a significant public asset that has multiple natural, cultural, historic, and educational values. The recommendation to have a third-party management hui with local			

HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
<p>knowledge and cultural expertise be the primary park management entity seeks to provide management opportunities for Hawai'i residents. Collaboration with local schools and the university on various educational programs and opportunities also support innovative activities which have a nexus to the State and allow the rich and varied cultural, natural, and historic resources of the park to support programs of interest to residents and visitors alike. Restoration of the Hula and Agricultural Complexes and the development of the Cultural Gathering Area also create places where culturally-based training can occur and the park provides the opportunity to share this knowledge among a wide audience.</p>			
<p>While the reduced number of daily visitors at the park may be an inconvenience at first to residents and visitors alike, it will require people to plan their visits in advance and will help to better maintain the sensitive natural, cultural, and historic resources at the park. Prior to instituting the <u>proposed</u> visitor limits, a significant public information campaign must be made for both residents and the visitor industry far in advance so people are able to plan their visit to the park and for the proposed changes. Social media, the Internet, and other information technologies <u>and news/media outlets</u> will also be used to disseminate information about the park and any park closures to minimize inconveniences to residents and visitors. Interpretive materials and the orientation <del>sessions</del> <u>information</u> will help educate visitors of the sensitive and varied resources at the park, of the behaviors and activities that are appropriate, and to respect cultural activities that may be occurring within the park.</p>			
<p>The integrated water/wastewater/drainage system proposed for the park will ensure the most efficient use of water resources and encourage reuse of catchment and recycled water for nonpotable uses such as irrigation, <u>dust control</u>, and toilet flushing. In addition, due to the remoteness of the park, all facilities will be designed to be as energy efficient as possible and to supply the remaining energy needs with renewable resources such as solar, microwind, and microhydropower. Access to the park will also encourage shuttle use and carpooling and energy-efficient technologies are encouraged for the shuttle system as part of the Master Plan.</p>			
<b>HRS § 226-104: Population growth and land resources priority guidelines.</b>			
<b>(a) <i>Priority guidelines to effect desired statewide growth and distribution:</i></b>			
(1) <i>Encourage planning and resource management to insure that population growth rates throughout the State are consistent with available and planned resource capacities and reflect the needs and desires of Hawai'i's people.</i>			<b>X</b>
(2) <i>Manage a growth rate for Hawai'i's economy that will parallel future employment needs for Hawai'i's people.</i>			<b>X</b>
(3) <i>Ensure that adequate support services and facilities are provided to accommodate the desired distribution of future growth throughout the State.</i>			<b>X</b>
(4) <i>Encourage major state and federal investments and services to promote economic development and private investment to the neighbor islands, as appropriate.</i>	<b>X</b>		
(5) <i>Explore the possibility of making available urban land, low-interest loans, and housing subsidies to encourage the provision of housing to support selective economic and population growth on the neighbor islands.</i>			<b>X</b>
(6) <i>Seek federal funds and other funding sources outside the State for research, program development, and training to provide future employment opportunities on the</i>			<b>X</b>

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
<i>neighbor islands.</i>			
(7) <i>Support the development of high technology parks on the neighbor islands.</i>			<b>X</b>
<b>(b) Priority guidelines for regional growth distribution and land resource utilization:</b>			
(1) <i>Encourage urban growth primarily to existing urban areas where adequate public facilities are already available or can be provided with reasonable public expenditures, and away from areas where other important benefits are present, such as protection of important agricultural land or preservation of lifestyles.</i>			<b>X</b>
(2) <i>Make available marginal or nonessential agricultural lands for appropriate urban uses while maintaining agricultural lands of importance in the agricultural district.</i>			<b>X</b>
(3) <i>Restrict development when drafting of water would result in exceeding the sustainable yield or in significantly diminishing the recharge capacity of any groundwater area.</i>			<b>X</b>
(4) <i>Encourage restriction of new urban development in areas where water is insufficient from any source for both agricultural and domestic use.</i>			<b>X</b>
(5) <i>In order to preserve green belts, give priority to state capital-improvement funds which encourage location of urban development within existing urban areas except where compelling public interest dictates development of a noncontiguous new urban core.</i>			<b>X</b>
(6) <i>Seek participation from the private sector for the cost of building infrastructure and utilities, and maintaining open spaces.</i>			<b>X</b>
(7) <i>Pursue rehabilitation of appropriate urban areas.</i>			<b>X</b>
(8) <i>Support the redevelopment of Kaka'ako into a viable residential, industrial, and commercial community.</i>			<b>X</b>
(9) <i>Direct future urban development away from critical environmental areas or impose mitigating measures so that negative impacts on the environment would be minimized.</i>			<b>X</b>
(10) <i>Identify critical environmental areas in Hawai'i to include but not be limited to the following: watershed and recharge areas; wildlife habitats (on land and in the ocean); areas with endangered species of plants and wildlife; natural streams and water bodies; scenic and recreational shoreline resources; open space and natural areas; historic and cultural sites; areas particularly sensitive to reduction in water and air quality; and scenic resources.</i>	<b>X</b>		
(11) <i>Identify all areas where priority should be given to preserving rural character and lifestyle.</i>			<b>X</b>
(12) <i>Utilize Hawai'i's limited land resources wisely, providing adequate land to accommodate projected population and economic growth needs while ensuring the protection of the environment and the availability of the shoreline, conservation lands, and other limited resources for future generations.</i>	<b>X</b>		
(13) <i>Protect and enhance Hawai'i's shoreline, open spaces, and scenic resources.</i>	<b>X</b>		
<b>Discussion:</b> As one of the most popular and well-known State Parks, State investment in Hā'ena State Park will support a major resident as well as visitor resource on a neighbor island, Kaua'i. The park is rich in natural, cultural, scenic, recreational, and open space resources as discussed above. The Master Plan seeks to protect and restore these resources and to improve or reduce impacts on these resources as discussed above in Chapters 3.0 and 4.0.			
<b>HRS § 226-105: Crime and criminal justice.</b>			
<b>Priority guidelines in the area of crime and criminal justice:</b>			
(1) <i>Support law enforcement activities and other criminal justice efforts that are directed to provide a safer environment.</i>	<b>X</b>		
(2) <i>Target state and local resources on efforts to reduce the incidence of violent crime and on programs relating to the apprehension and prosecution of repeat offenders.</i>			<b>X</b>
(3) <i>Support community and neighborhood program initiatives that enable residents to assist law enforcement agencies in preventing criminal activities.</i>	<b>X</b>		
(4) <i>Reduce overcrowding or substandard conditions in correctional facilities through a</i>			<b>X</b>

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
<i>comprehensive approach among all criminal justice agencies which may include sentencing law revisions and use of alternative sanctions other than incarceration for persons who pose no danger to their community.</i>			
(5) <i>Provide a range of appropriate sanctions for juvenile offenders, including community-based programs and other alternative sanctions.</i>			<b>X</b>
(6) <i>Increase public and private efforts to assist witnesses and victims of crimes and to minimize the costs of victimization.</i>			<b>X</b>
<b>Discussion:</b> Other than improving and increasing security and law enforcement at the park to deter illegal activities, the priority guidelines for crime and criminal justice are not applicable to the proposed Master Plan. Installation of the gates at the entrance will also help deter illegal activities such as rave parties that sometimes occur during overnight hours.			
<b>HRS § 226-106: Affordable housing.</b>			
<b>Priority guidelines for the provision of affordable housing:</b>			
(1) <i>Seek to use marginal or nonessential agricultural land and public land to meet housing needs of low- and moderate-income and gap-group households.</i>			<b>X</b>
(2) <i>Encourage the use of alternative construction and development methods as a means of reducing production costs.</i>			<b>X</b>
(3) <i>Improve information and analysis relative to land availability and suitability for housing.</i>			<b>X</b>
(4) <i>Create incentives for development which would increase home ownership and rental opportunities for Hawai'i's low- and moderate-income households, gap-group households, and residents with special needs.</i>			<b>X</b>
(5) <i>Encourage continued support for government or private housing programs that provide low interest mortgages to Hawai'i's people for the purchase of initial owner-occupied housing.</i>			<b>X</b>
(6) <i>Encourage public and private sector cooperation in the development of rental housing alternatives.</i>			<b>X</b>
(7) <i>Encourage improved coordination between various agencies and levels of government to deal with housing policies and regulations.</i>			<b>X</b>
(8) <i>Give higher priority to the provision of quality housing that is affordable for Hawai'i's residents and less priority to development of housing intended primarily for individuals outside of Hawai'i.</i>			<b>X</b>
<b>Discussion:</b> The proposed Master Plan does not <del>include</del> <u>add</u> any housing <del>except for the Caretaker's Cottage since it concerns a State park;</del> therefore none of the housing priority guidelines apply to the project.			
<b>HRS § 226-107: Quality education.</b>			
<b>Priority guidelines to promote quality education:</b>			
(1) <i>Pursue effective programs which reflect the varied district, school, and student needs to strengthen basic skills achievement;</i>	<b>X</b>		
(2) <i>Continue emphasis on general education "core" requirements to provide common background to students and essential support to other university programs;</i>			<b>X</b>
(3) <i>Initiate efforts to improve the quality of education by improving the capabilities of the education work force;</i>			<b>X</b>
(4) <i>Promote increased opportunities for greater autonomy and flexibility of educational institutions in their decision-making responsibilities;</i>			<b>X</b>
(5) <i>Increase and improve the use of information technology in education by the availability of telecommunications equipment for:</i>			<b>X</b>
(A) <i>The electronic exchange of information;</i>			<b>X</b>
(B) <i>Statewide electronic mail; and</i>			<b>X</b>
(C) <i>Access to the Internet.</i>			<b>X</b>

<b>HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	<b>S</b>	<b>N/S</b>	<b>N/A</b>
<i>Encourage programs that increase the public's awareness and understanding of the impact of information technologies on our lives;</i>	<b>X</b>		
<i>(6) Pursue the establishment of Hawai'i's public and private universities and colleges as research and training centers of the Pacific;</i>	<b>X</b>		
<i>(7) Develop resources and programs for early childhood education;</i>	<b>X</b>		
<i>(8) Explore alternatives for funding and delivery of educational services to improve the overall quality of education; and</i>			<b>X</b>
<i>(9) Strengthen and expand educational programs and services for students with special needs.</i>			<b>X</b>
<b>Discussion:</b> Chapter 5 Appendix M of the Master Plan report ( <del>Appendix I</del> available at <a href="http://dlnr.hawaii.gov/dsp/parks/kauai/haena-state-park/">http://dlnr.hawaii.gov/dsp/parks/kauai/haena-state-park/</a> ) details the proposed interpretive and educational programs that will be developed at the park. It is anticipated that the park and all its varied environments could become places of active research and should be envisioned as outdoor classrooms, providing learning opportunities for all visitors, including out-of-state and international visitors, Kaua'i and Hawai'i residents, school groups from preschool to college, field schools, families and interest groups/organizations, cultural practitioners and scientific researchers.			
<b>HRS § 226-108: Sustainability.</b>			
<b>Priority guidelines and principles to promote sustainability shall include:</b>			
<i>(1) Encouraging balanced economic, social, community, and environmental priorities;</i>	<b>X</b>		
<i>(2) Encouraging planning that respects and promotes living within the natural resources and limits of the State;</i>	<b>X</b>		
<i>(3) Promoting a diversified and dynamic economy;</i>			<b>X</b>
<i>(4) Encouraging respect for the host culture;</i>	<b>X</b>		
<i>(5) Promoting decisions based on meeting the needs of the present without compromising the needs of future generations</i>	<b>X</b>		
<i>(6) Considering the principles of the ahupua'a system; and</i>	<b>X</b>		
<i>(7) Emphasizing that everyone, including individuals, families, communities, businesses, and government, has the responsibility for achieving a sustainable Hawai'i.</i>	<b>X</b>		
<b>Discussion:</b> One of the main objectives of the Master Plan is to provide opportunities for quality outdoor recreation, with sensitivity to the park's natural and cultural resources. The Master Plan improvements seek to improve Hawai'i's land, air, and water resources while also creating greater public awareness and appreciation of Hawai'i's environmental resources. They include the restoration and improved maintenance of the park's dune system, Agricultural Complex, wetlands, native forests, and stream environment. Green building design for all facilities including maximizing energy efficiency and using renewable energy sources to power the remaining demand is recommended in the plan. Expanded interpretive programs, displays, and materials will help educate visitors of the importance and value of the natural and cultural resources at the park. The <del>required</del> visitor <del>education and orientation sessions information</del> will provide a brief overview of the park's extensive and sensitive natural and cultural resources, instruct visitors of the appropriate activities and behaviors allowed at the park so that long-term maintenance of the resources can be supported and respect accorded to active cultural uses that may be occurring at the park. The Cultural Advisory Group will also help advise State Parks so that the proposed improvements, management strategies, and education and interpretive programs respect the			

HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES	S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)			
<p>host culture. The proposed 900 persons per day visitor limit <u>during peak visitor hours</u> <del>and controlled entry point</del> will also help reduce the human impact on the park and its natural resources. It will also allow State Parks to better manage visitors in concert with conservation values and safety concerns.</p>			
<b>HRS § 226-109: Climate change adaptation priority guidelines.</b>			
<p><i>Priority guidelines to prepare the State to address the impacts of climate change, including impacts to the areas of agriculture; conservation lands; coastal and nearshore marine areas; natural and cultural resources; education; energy; higher education; health; historic preservation; water resources; the built environment, such as housing, recreation, transportation; and the economy shall:</i></p>			
(1) <i>Ensure that Hawai'i's people are educated, informed, and aware of the impacts climate change may have on their communities;</i>	X		
(2) <i>Encourage community stewardship groups and local stakeholders to participate in planning and implementation of climate change policies;</i>	X		
(3) <i>Invest in continued monitoring and research of Hawai'i's climate and the impacts of climate change on the State;</i>	X		
(4) <i>Consider native Hawaiian traditional knowledge and practices in planning for the impacts of climate change;</i>	X		
(5) <i>Encourage the preservation and restoration of natural landscape features, such as coral reefs, beaches and dunes, forests, streams, floodplains, and wetlands, that have the inherent capacity to avoid, minimize, or mitigate the impacts of climate change;</i>	X		
(6) <i>Explore adaptation strategies that moderate harm or exploit beneficial opportunities in response to actual or expected climate change impacts to the natural and built environments;</i>	X		
(7) <i>Promote sector resilience in areas such as water, roads, airports, and public health, by encouraging the identification of climate change threats, assessment of potential consequences, and evaluation of adaptation options;</i>	X		
(8) <i>Foster cross-jurisdictional collaboration between county, state, and federal agencies and partnerships between government and private entities and other nongovernmental entities, including nonprofit entities;</i>	X		
(9) <i>Use management and implementation approaches that encourage the continual collection, evaluation, and integration of new information and strategies into new and existing practices, policies, and plans; and</i>	X		
(10) <i>Encourage planning and management of the natural and built environments that effectively integrate climate change policy.</i>	X		
<p><b>Discussion:</b> There are many aspects of the proposed Master Plan that support the State's goals related to climate change. Due to the remote location of the park and the potential for hazardous conditions and the potential for climate change to exacerbate those hazards, an emergency evacuation plan and rescue plans are recommended to be developed with coordination and regular drills held annually at a minimum with State Civil Defense and the Kaua'i Fire and Police Departments to ensure readiness. Currently, there are no State Civil Defense sirens in the park and no tsunami evacuation signs on Kūhiō Highway within the park. However, the land area required for a new siren can be accommodated in the park, most likely in the main parking area. <u>A subsequent letter from the Office of State Emergency Management/Civil Defense noted that siren coverage exists for the project site, but requested the existing siren to be upgraded to a 121db(c) omni-directional siren. State Parks will work with the Hawai'i Emergency Management Agency to ensure adequate siren coverage at the park.</u> To facilitate evacuations in the event they are necessary, the helicopter</p>			

HAWAI'I STATE PLAN, CHAPTER 226, HRS – PART III. PRIORITY GUIDELINES (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	S	N/S	N/A
<p>landing pad is proposed to be retained with the Master Plan improvements. Emergency evacuation routes should also be planned and indicated on wayfinding signs installed at the park and printed in visitor brochures and materials. The orientation <del>session</del> <u>in information</u> which all visitors <del>must participate</del> <u>will receive</u> should also include <del>information</del> <u>directions</u> on what to do during evacuations and emergency situations, as well as up-to-the-minute weather and ocean conditions to help educate visitors on the coastal hazards that they may encounter while visiting the park.</p> <p>The new proposed facilities are recommended to be located away from flood and tsunami inundation areas and designed to be as energy efficient as possible and to use renewable energy resources to fill the remaining demand wherever feasible. The integrated water/wastewater/drainage system will also encourage efficient use of available on-site water resources. These will allow the facilities to be self-sufficient or nearly so should the park be isolated due to climate change impacts. The proposed dune restoration in the first phase of improvements could also help reduce coastal erosion if carefully planted and help protect the park against the impacts of climate change, particularly sea level rise.</p>			

### 5.3.5 STATE FUNCTIONAL PLANS

The Hawai'i State Plan directs State agencies to prepare functional plans for their respective program areas. There are 14 state functional plans that serve as the primary implementing vehicle for the goals, objectives, and policies of the Hawai'i State Plan. The functional plans applicability to the proposed Master Plan, along with each plan's applicable objectives, policies, and actions, are discussed in the matrix below.

HAWAI'I STATE FUNCTIONAL PLANS (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	S	N/S	N/A
<b>AGRICULTURE FUNCTIONAL PLAN</b>			
<b>Objective A:</b> <i>Achievement of increased agricultural production and growth through cultural and management practices.</i>	X		
<b>Objective B:</b> <i>Achievement of an orderly agricultural marketing system through product promotion and industry organization.</i>			X
<b>Objective C:</b> <i>Achievement of increased consumption of and demand for Hawaii's agricultural products through consumer education and product quality.</i>			X
<b>Objective D:</b> <i>Achievement of optimal contribution by agriculture to the State's economy.</i>			X
<b>Objective E:</b> <i>Achievement of adequate capital, and knowledge of its proper management, for agricultural development.</i>			X
<b>Objective F:</b> <i>Achievement of increased agricultural production and growth through pest and disease controls.</i>			X
<b>Objective G:</b> <i>Achievement of effective protection and improved quality of Hawaii's land, water, and air.</i>	X		
<b>Objective H:</b> <i>Achievement of productive agricultural use of lands most suitable and needed for agriculture.</i>			X

<b>HAWAII STATE FUNCTIONAL PLANS</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)		<b>S</b>	<b>N/S</b>	<b>N/A</b>
<b>Objective I:</b>	<i>Achievement of efficient and equitable provision of adequate water for agricultural use.</i>	<b>X</b>		
<b>Objective J:</b>	<i>Achievement of maximum degree of public understanding and support of agriculture in Hawaii.</i>	<b>X</b>		
<b>Objective K:</b>	<i>Achievement of adequate supply of properly trained labor for agricultural needs.</i>			<b>X</b>
<b>Objective L:</b>	<i>Achievement of adequate transportation services and facilities to meet agricultural needs.</i>			<b>X</b>
<b>Objective M:</b>	<i>Achievement of adequate support services and infrastructure to meet agricultural needs.</i>			<b>X</b>
<p><b>Discussion:</b> The proposed Master Plan concerns a State Park and therefore does not directly relate to agriculture in terms of economic development or resources and does not reduce the inventory of agriculturally significant lands. However, the plan is supportive in the continued culturally-based restoration of the park's historic Agricultural Complex and the expanded knowledge that can be gained and shared through its experience. It also promotes the improvement of the health of the park's air, water, and land-based resources through the proposed improvements and management strategies. Restoration of the 'auwai and the integrated water/wastewater/drainage system proposed in the plan will also help improve efficient use of on-site water resources and the educational and interpretive programs will support increased knowledge of the park's unique Agricultural Complex.</p>				
<b>CONSERVATION LANDS FUNCTIONAL PLAN</b>				
<b>Objective IA:</b>	<i>Establishment of data bases for inventories of existing lands and resources.</i>			<b>X</b>
<b>Objective IB:</b>	<i>Establishment of criteria for management of land and natural resources.</i>	<b>X</b>		
<b>Objective IIA:</b>	<i>Establishment of plans for natural resources and land management.</i>	<b>X</b>		
<b>Objective IIB:</b>	<i>Protection of fragile or rare natural resources.</i>	<b>X</b>		
<b>Objective IIC:</b>	<i>Enhancement of natural resources.</i>	<b>X</b>		
<b>Objective IID:</b>	<i>Appropriate development of natural resources.</i>	<b>X</b>		
<b>Objective IIE:</b>	<i>Promotion and marketing of appropriate natural resources designated for commercial development.</i>			<b>X</b>
<b>Objective IIF:</b>	<i>Increase enforcement of land and natural resource use laws and regulations.</i>	<b>X</b>		
<b>Objective IIIA:</b>	<i>Develop and implement conservation education programs for the general public and visitors.</i>	<b>X</b>		
<b>Objective IIIB:</b>	<i>Increase access to land and natural resource data by the public and increase cooperation between agencies by making access to land and natural resource information more efficient.</i>			<b>X</b>
<p><b>Discussion:</b> Hā'ena State Park is located on State conservation land and the proposed Master Plan improvements and management strategies will help improve the protection of the park's unique and sensitive environmental resources over existing conditions. They include the restoration and improved maintenance of the park's dune system, Agricultural Complex, wetlands, native forests, and stream environment. The additional staff and oversight of the park will improve enforcement and protection of the park's natural resources as visitors will be instructed on appropriate behavior, protocols, and activity at the park.</p>				

HAWAII STATE FUNCTIONAL PLANS (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)	S	N/S	N/A
<p>The proposed Master Plan also recommends the expansion of the educational and interpretive <del>facilities</del> <u>opportunities</u> and programs at Hā'ena State Park, including the <del>Welcome Pavilion/ECC</del>, Interpretive <u>Pedestrian</u> Path and various interpretive displays. All visitors will be <del>required to attend an orientation session</del> <u>provided with visitor orientation information prior to park entry</u> to increase sensitivity <u>to</u> and awareness of the park's varied natural, cultural, and historic resources. <del>Chapter 5</del> <u>Appendix M</u> of the Master Plan report (<del>Appendix I</del> <u>available at <a href="http://dlnr.hawaii.gov/dsp/parks/kauai/haena-state-park/">http://dlnr.hawaii.gov/dsp/parks/kauai/haena-state-park/</a></u>) details the proposed interpretive and educational programs that will be developed at the park. It is anticipated that the park and all its varied environments could become places of active research and should be envisioned as outdoor classrooms, providing learning opportunities for all visitors, including out-of-state and international visitors, Kaua'i and Hawai'i residents, school groups from preschool to college, families and interest groups/organizations, cultural practitioners and scientific researchers. Input from the Cultural Advisory Group will also help ensure that educational programs and management of the park's resources are steeped in culturally-based protocols and knowledge.</p>			
<b>EDUCATION FUNCTIONAL PLAN</b>			
<b>Objective A(1): Academic Excellence.</b> <i>Emphasize quality educational programs in Hawai'i's institutions to promote academic excellence.</i>	X		
<b>Objective A(2): Basic Skills.</b> <i>Promote programs and activities that facilitate the acquisition of basic skills, such as reading, writing, computing, listening, speaking, and reasoning. Pursue effective programs which reflect the varied district, school, and student needs to strengthen basic skills achievement.</i>			X
<b>Objective A(3): Education Workforce.</b> <i>Initiate efforts to improve the quality of education by improving the capabilities of the education workforce.</i>	X		
<b>Objective A(4): Services and Facilities.</b> <i>Ensure the provision of adequate and accessible educational services and facilities that are designed to meet individual and community needs.</i>	X		
<b>Objective B(1): Alternatives for Funding and Delivery.</b> <i>Explore alternatives for funding and delivery of educational services to improve the overall quality of education.</i>	X		
<b>Objective B(2): Autonomy and flexibility.</b> <i>Promote increased opportunities for greater autonomy and flexibility of educational institutions in their decision-making responsibilities.</i>			X
<b>Objective B(3): Increased Use of Technology.</b> <i>Increase and improve the use information technology in education and encourage programs which increase the public's awareness and understanding of the impact of information technologies on our lives.</i>			X
<b>Objective B(4): Personal Development.</b> <i>Support education programs and activities that enhance personal development, physical fitness, recreation, and cultural pursuits of all groups.</i>	X		
<b>Objective B(5): Students with Special Needs.</b> <i>Provide appropriate educational opportunities for groups with special needs.</i>	X		
<b>Objective C(1): Early Childhood Education.</b> <i>Develop resources and programs for early childhood education.</i>	X		
<b>Objective C(2): Hawai'i's Cultural Heritage.</b> <i>Promote educational programs which enhance understanding of Hawaii's cultural heritage.</i>	X		

<b>HAWAII STATE FUNCTIONAL PLANS</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)		<b>S</b>	<b>N/S</b>	<b>N/A</b>
<b>Objective C(3): Research Programs and [Communication] Activities.</b> <i>Support research programs and activities that enhance the education programs of the State.</i>		<b>X</b>		
<b>Discussion:</b> As noted above, the Master Plan recommends that the park and all its varied environments become places of active research and should be envisioned as outdoor classrooms, providing educational opportunities for all visitors, including out-of-state and international visitors, Kaua'i and Hawai'i residents, school groups from preschool to college, families and interest groups/organizations, cultural practitioners and scientific researchers. The park will remain a recreational, educational, cultural, and open space resource for the benefit of residents and visitors and the proposed Master Plan seeks to do this in a culturally-based manner accessible to all ages and abilities. The Master Plan recommends the preservation and restoration of the park's rich cultural, historic, and natural resources and supports the enrichment of visitor experience through a range of educational programs and opportunities that will span cultural, historical, geological, and biological topics and values. The park's facilities will be designed to be accessible to the greatest extent possible and the continued recreational activities that will be permitted (Table 9) will support the community's continued mental and physical health.				
<b>EMPLOYMENT FUNCTIONAL PLAN</b>				
<b>Objective A:</b> <i>Improve the qualifications of entry-level workers and their transition to employment.</i>				<b>X</b>
<b>Objective B:</b> <i>Develop and deliver education, training and related services to ensure and maintain a quality and competitive workforce.</i>				<b>X</b>
<b>Objective C:</b> <i>Improve labor exchange.</i>				<b>X</b>
<b>Objective D:</b> <i>Improve the quality of life for workers and families.</i>				<b>X</b>
<b>Objective E:</b> <i>Improve planning of economic development, employment and training activities</i>				<b>X</b>
<b>Discussion:</b> The proposed Master Plan does not involve labor training or job placement activities. Therefore the Employment Functional Plan is not relevant to the proposed project.				
<b>ENERGY FUNCTIONAL PLAN</b>				
<b>Objective A:</b> <i>Moderate the growth in energy demand through conservation and energy efficiency.</i>		<b>X</b>		
<b>Objective B:</b> <i>Displace oil and fossil fuels through alternate and renewable energy resources.</i>		<b>X</b>		
<b>Objective C:</b> <i>Promote energy education and legislation.</i>		<b>X</b>		
<b>Objective D:</b> <i>Support and develop an integrated approach to energy development and management.</i>		<b>X</b>		
<b>Objective E:</b> <i>Ensure State's abilities to implement energy emergency actions immediately in event of fuel supply disruptions. Ensure essential public services are maintained and provisions are made to alleviate economic and personal hardships which may arise.</i>		<b>X</b>		
<b>Discussion:</b> Due to the park's limited access to infrastructure and the dispersed locations of some of the proposed facilities, all facilities requiring power are recommended to be designed to be as energy efficient as possible and to use renewable energy resources to fill the remaining demand wherever feasible. The shuttle system is encouraged to use low or no				

<b>HAWAII STATE FUNCTIONAL PLANS</b>		<b>S</b>	<b>N/S</b>	<b>N/A</b>
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)				
emission vehicles and to use green vehicles such as electric vehicles that can be charged with renewable energy sources such as solar PV or vehicles that use alternative fuels. By designing energy independent facilities, the park will be less impacted by disruptions to electricity service or fuel supply or sudden increases in either of their costs.				
<b>HEALTH FUNCTIONAL PLAN</b>				
<b>Objective 1:</b>	<i>Health promotion and disease prevention. Reduction in the incidence, morbidity and mortality associated with preventable and controllable conditions.</i>			<b>X</b>
<b>Objective 2:</b>	<i>Prevention and control of communicable diseases. Reduction in the incidence, morbidity, and mortality associated with infectious and communicable diseases.</i>			<b>X</b>
<b>Objective 3:</b>	<i>Health needs of special populations with impaired access to health care. Increased availability and accessibility of health services for groups with impaired access to health care programs.</i>			<b>X</b>
<b>Objective 4:</b>	<i>Community hospitals system. Development of a community hospital system which is innovative, responsive and supplies high quality care to the constituencies it serves.</i>			<b>X</b>
<b>Objective 5:</b>	<i>Environmental programs to protect and enhance the environment. Continued development of new environmental protection and health services programs to protect, monitor, and enhance the quality of life in Hawai'i.</i>	<b>X</b>		
<b>Objective 6:</b>	<i>DOH leadership. To improve the Department of Health's ability to meet the public health need of the State of Hawai'i in the most appropriate, beneficial and economical way possible.</i>			<b>X</b>
<b>Discussion:</b> The proposed Master Plan does not include the creation of medical or health programs; therefore, the majority of the Health Functional Plan is not applicable. However, the Master Plan does seek to protect, enhance, and improve the environmental aspects of the park including the restoration of the dunes, wetlands, loko, native forests, and riparian ecosystems. The recommended educational and interpretive programs and <del>required</del> visitor <del>orientation</del> information provided prior to park entry supports the objective of enhancing the quality of life by enriching the visitor experience at the park.				
<b>HIGHER EDUCATION FUNCTIONAL PLAN</b>				
<b>Objective A:</b>	<i>A number and variety of postsecondary education institutions sufficient to provide the diverse range of programs required to satisfy individual and societal needs and interests.</i>			<b>X</b>
<b>Objective B:</b>	<i>The highest level of quality, commensurate with its mission and objectives, of each educational, research, and public service program offered in Hawai'i by an institution of higher education.</i>			<b>X</b>
<b>Objective C:</b>	<i>Provide appropriate educational opportunities for all who are willing and able to benefit from postsecondary education.</i>			<b>X</b>
<b>Objective D:</b>	<i>Provide financing for postsecondary education programs sufficient to ensure adequate diversity, high quality, and wide accessibility.</i>			<b>X</b>
<b>Objective E:</b>	<i>Increase program effectiveness and efficiency through better coordination of educational resources.</i>	<b>X</b>		

HAWAII STATE FUNCTIONAL PLANS (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)		S	N/S	N/A
<p><b>Discussion:</b> The proposed Master Plan supports a variety of educational programs at all levels of education, including higher education. It is anticipated that the park and all its varied environments could become places of active research and should be envisioned as outdoor classrooms, providing learning opportunities for all visitors, including out-of-state and international visitors, Kaua‘i and Hawai‘i residents, school groups, field schools, and research groups, families and interest groups/organizations, cultural practitioners and scientific researchers. The proposed <del>ECC</del> and Cultural Gathering Area <u>and restoration of cultural and natural resource sites</u> also provide formal learning spaces that support the hands-on educational programs that occur in the field.</p>				
HISTORIC PRESERVATION FUNCTIONAL PLAN				
<b>Objective A:</b>	<i>Identification of historic properties.</i>	X		
<b>Objective B:</b>	<i>Protection of historic properties.</i>	X		
<b>Objective C:</b>	<i>Management and treatment of historic properties.</i>	X		
<b>Objective D:</b>	<i>Provision of adequate facilities to preserve historic resources.</i>	X		
<b>Objective E:</b>	<i>The establishment of programs to collect and conserve historic records, artifacts, and oral histories and to document and perpetuate traditional arts, skills, and culture.</i>	X		
<b>Objective F:</b>	<i>Provision of better access to historic information.</i>	X		
<b>Objective G:</b>	<i>Enhancement of skills and knowledge needed to preserve historical resources.</i>	X		
<p><b>Discussion:</b> The proposed Master Plan supports all objectives of the Historic Preservation Functional Plan through programmatic as well as physical measures to improve the protection and management of the park’s archaeological and historic resources and prioritize the cultural heritage of the park. The primary programmatic action to mitigate impacts to archaeological resources will be to establish a Cultural Advisory Group, whose input will improve interpretation of the park’s cultural, archaeological, and historic resources and to help guide all aspects of park management, educational and interpretive programs, and Master Plan implementation. The <del>required</del> <u>information provided prior to park entry</u> will increase visitor knowledge of the park’s extensive and sensitive archaeological and cultural resources and instruct visitors of the appropriate activities and behaviors allowed at the park so that long-term maintenance of the resources can be supported. The Master Plan also recommends the restoration of the park’s archaeological and historic resources, specifically, the dune system, Hula Complex, and Agricultural Complex (including the ‘auwai if feasible). New park facilities will be limited to areas of previous disturbance so that its potential impact to archaeological resources is minimized and additional surveys and monitoring will occur during the detailed design and construction phases of implementation to avoid and minimize impacts to historic resources. The restoration of the Hula and Agricultural Complexes and other archaeological and cultural sites and the development of the Cultural Gathering Area and Hālau Wa‘a and the active cultural use and education that will occur in these spaces will enhance the skills and knowledge needed to support preservation of similar historic resources.</p>				

<b>HAWAII STATE FUNCTIONAL PLANS</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)		<b>S</b>	<b>N/S</b>	<b>N/A</b>
<b>HOUSING FUNCTIONAL PLAN</b>				
<b>Objective A:</b>	<del>Homeownership for at least sixty percent, or roughly 248,500 households by the year 2000. Increase and sustain the supply of permanent rental housing that is affordable and accessible to Hawaii residents, particularly those with incomes at or below 80% AMI. Attain the legislative goal of 22,500 rental housing units by 2026.</del>			<b>X</b>
<b>Objective B:</b>	<del>Sufficient amount of affordable rental housing units by the year 2000 so as to increase the State's rental vacancy rate to at least 3%, with priority given to increasing the supply of units affordable to very low and lower income households. Increase the homeownership rate.</del>			<b>X</b>
<b>Objective C:</b>	<del>Increased development of rental housing units for the elderly and other special need groups to afford them an equal access to housing. Address barriers to residential development.</del>			<b>X</b>
<b>Objective D:</b>	<del>Preservation of existing public and private housing stock.</del>			<b>X</b>
<b>Objective E:</b>	<del>Acquire and designate land suitable for housing development in sufficient amount to locate the deficit in housing units by the year 2000.</del>			<b>X</b>
<b>Objective F:</b>	Maintain a statewide housing data system for use by public and private agencies engaged in the provision of housing.			<b>X</b>
<b>Discussion:</b> Since it concerns a State park, the proposed Master Plan does not <del>include</del> add any housing <del>except for the park's Caretaker's Cottage</del> ; therefore none of the housing objectives apply to the project.				
<b>HUMAN SERVICES FUNCTIONAL PLAN</b>				
<b>Objective A:</b>	To sustain and improve current elder abuse and neglect services.			<b>X</b>
<b>Objective B:</b>	To increase cost-effective, high quality home and community based services.			<b>X</b>
<b>Objective C:</b>	To increase home-based services to keep children in their homes and to increase placement resources for those children who must be temporarily or permanently removed from their homes, due to abuse or neglect.			<b>X</b>
<b>Objective D:</b>	To address factors that contribute to child abuse and other forms of family violence.			<b>X</b>
<b>Objective E:</b>	To provide affordable, accessible, and quality child care.			<b>X</b>
<b>Objective G:</b>	To provide AFDC recipients with a viable opportunity to become independent of the welfare system.			<b>X</b>
<b>Objective H:</b>	To facilitate client access to human services.			<b>X</b>
<b>Objective I:</b>	To eliminate organizational barriers which limit client access to human services.			<b>X</b>
<b>Discussion:</b> The proposed Master Plan does not include the creation or distribution of human service programs; therefore, the Human Services Functional Plan is not applicable.				
<b>RECREATION FUNCTIONAL PLAN</b>				
<b>Objective I.A:</b>	Address the problem of saturation of the capacity of beach parks and nearshore waters.	<b>X</b>		
<b>Objective I.B:</b>	Reduce the incidence of ocean recreation accidents.	<b>X</b>		
<b>Objective I.C:</b>	Resolve conflicts between different activities at heavily used ocean recreation areas.	<b>X</b>		
<b>Objective I.D:</b>	Provide adequate boating facilities. Balance the demand for boating facilities against the need to protect the marine environment from potential adverse impacts.			<b>X</b>
<b>Objective II.A:</b>	Plan, develop, and promote recreational activities and facilities in mauka and other areas to provide a wide range of alternatives.	<b>X</b>		

<b>HAWAI'I STATE FUNCTIONAL PLANS</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)		<b>S</b>	<b>N/S</b>	<b>N/A</b>
<b>Objective II.B:</b>	<i>Meet special recreation needs of the elderly, the disabled, woman, single-parent families, immigrants, and other groups.</i>	<b>X</b>		
<b>Objective II.C:</b>	<i>Improve and expand the provision of recreation facilities in urban areas and local communities.</i>			<b>X</b>
<b>Objective III.A:</b>	<i>Prevent the loss of access to shoreline and upland recreation areas due to new developments.</i>			<b>X</b>
<b>Objective III.B:</b>	<i>Resolve the problem of landowner liability that seriously hampers public access over private lands.</i>			<b>X</b>
<b>Objective III.C:</b>	<i>Increase access to State Forest Reserve lands over federal property, leased State lands, and other government lands.</i>			<b>X</b>
<b>Objective III.D:</b>	<i>Acquire, develop, and manage additional public accessways.</i>			<b>X</b>
<b>Objective IV.A:</b>	<i>Promote a conservation ethic in the use of Hawai'i's recreational resources.</i>	<b>X</b>		
<b>Objective IV.B:</b>	<i>Prevent degradation of the marine environment.</i>	<b>X</b>		
<b>Objective IV.C:</b>	<i>Improve the State's enforcement capabilities.</i>	<b>X</b>		
<b>Objective IV.D:</b>	<i>Mitigate adverse impacts of tour helicopters on the quality of recreational experiences in wilderness areas.</i>			<b>X</b>
<b>Objective V.A:</b>	<i>Properly maintain existing parks and recreation areas.</i>	<b>X</b>		
<b>Objective V.B:</b>	<i>Promote interagency coordination and cooperation to facilitate sharing of resources, joint development efforts, clarification of responsibilities and jurisdictions, and improvements in enforcement capabilities.</i>	<b>X</b>		
<b>Objective V.C:</b>	<i>Assure adequate support for priority outdoor recreation programs and facilities.</i>	<b>X</b>		
<b>Objective VI.A:</b>	<i>Increase recreational access and opportunities in Hawai'i's wetlands.</i>	<b>X</b>		
<b>Objective VI.B:</b>	<i>Develop an adequate information base to assist the County planning departments and other regulatory agencies in make decisions regarding wetlands.</i>	<b>X</b>		
<b>Objective VI.C:</b>	<i>Assure the protection of the most valuable wetlands in the state.</i>	<b>X</b>		
<p><b>Discussion:</b> The proposed Master Plan takes a conservation ethic in its approach while attempting to balance recreational uses as mandated in the LWCF requirements. The proposed visitor limit of 900 people per day <u>on average during peak hours</u> directly supports the objective to address the problem of saturation of beach parks and nearshore waters. It is an initial daily visitor limit that will be reassessed to see if the conditions at the park improve. The reduction in daily visitors as well as the <del>required</del> <u>required</u> visitor <del>education</del> <u>education information provided</u> prior to park entry may help reduce the number of accidents and conflicts in ocean recreational areas of the park as there will be fewer people in these areas and they will be better educated about the sensitive resources, mix of activities, and potential hazards. The mix of recreational activities proposed to continue at the park as shown in Table 9 will provide a variety of recreational opportunities for people of all ages and abilities and includes the preservation of access to upland areas via the Kalalau Trail and the Nāpali Coast State Wilderness Park.</p> <p>Many of the recommendations for managing water/wastewater/drainage impacts and improved visitor education will help mitigate degradation to the marine environment (Sections 2.5.3.1, 4.7, 3.6, and 0). Increased staffing, visitor education, and instituting entry control points will improve the State's enforcement capabilities at the park. A major</p>				

HAWAI'I STATE FUNCTIONAL PLANS		S	N/S	N/A
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)				
<p>component of the Master Plan is improved maintenance and management strategies of the park and its varied natural, cultural, scenic, and historic resources. The plan recommends ongoing coordination with the County and other State agencies on various aspects of the plan such as transfer of the highway (DOT), management of the heiau (various County agencies), wetlands (US Army Corps of Engineers), wildlife (US Fish and Wildlife Service, State Division of Forestry and Wildlife), visitor information (Hawai'i Tourism Authority), and public safety and enforcement (DOCARE, DAR, Civil Defense, County Fire and Police Departments), among others Chapter 7 of the Master Plan report provides more detail on coordination with other agencies.</p> <p>The Master Plan also recommends delineation and restoration of the park's wetlands and loko to ensure the proposed improvements do not impact them negatively and either improve them as potential wildlife habitat or take action to return them to agricultural use (Section 3.5). The proposed <del>Interpretive</del> <u>Pedestrian</u> Path will provide an opportunity for visitors to traverse the area and learn about the wetlands and loko via interpretive materials. Educational programs and special studies could also be performed to increase general knowledge about wetlands restoration and protection.</p>				
TOURISM FUNCTIONAL PLAN				
<b>Objective I.A:</b>	<i>Development, implementation and maintenance of policies and actions which support the steady and balanced growth of the visitor industry.</i>			X
<b>Objective II.A:</b>	<i>Development and maintenance of well-designed visitor facilities and related developments which are sensitive to the environment, sensitive to neighboring communities and activities, and adequately serviced by infrastructure and support services.</i>	X		
<b>Objective III.A:</b>	<i>Enhancement of respect and regard for the fragile resources which comprise Hawai'i's natural and cultural environment. Increased preservation and maintenance efforts.</i>	X		
<b>Objective IV.A:</b>	<i>Support of Hawai'i's diverse range of lifestyles and natural environment.</i>	X		
<b>Objective IV.B:</b>	<i>Achievement of mutual appreciation among residents, visitors, and the visitor industry.</i>	X		
<b>Objective V.A:</b>	<i>Development of a productive workforce to maintain a high quality visitor industry.</i>			X
<b>Objective V.B:</b>	<i>Enhancement of career and employment opportunities in the visitor industry.</i>			X
<b>Objective VI.A:</b>	<i>Maintenance of a high customer awareness of Hawai'i as a visitor destination in specific desired market segments.</i>			X
<p><b>Discussion:</b> As one of the most popular visitor destinations on the island, Hā'ena State Park had become a victim of its success, becoming overcrowded and impacting the varied resources at the park. The <del>new facilities</del>, educational and interpretive materials and programs, and changes in management and maintenance will improve the conditions at the park, while protecting and caring for the natural, cultural, historic, and scenic resources that are its most valued features. All visitors <del>attending the</del> <u>will receive orientation session information prior to entering the park and</u> will learn about the park's unique and sensitive resources, appropriate behavior, and protocols that will result in an increased understanding</p>				

<b>HAWAII STATE FUNCTIONAL PLANS</b>		<b>S</b>	<b>N/S</b>	<b>N/A</b>
(Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)				
and greater respect and aloha for the area. The proposed educational programs and interpretive materials will also enrich the visitor experience as they learn about the varied and multilayered resources of this storied place. The range of recreational activities will also support the diverse range of lifestyles and enjoyment of varied natural environments of the park.				
<b>TRANSPORTATION FUNCTIONAL PLAN</b>				
<b>Objective I.A:</b>	<i>Expansion of the transportation system.</i>			<b>X</b>
<b>Objective I.B:</b>	<i>Reduction of travel demand through zoning and decentralization initiatives.</i>			<b>X</b>
<b>Objective I.C:</b>	<i>Management of existing transportation systems through a program of transportation systems management (TSM).</i>	<b>X</b>		
<b>Objective I.D:</b>	<i>Identification and reservation of lands and rights-of-way required for future transportation improvements.</i>			<b>X</b>
<b>Objective I.E:</b>	<i>Planning and designing State highways to enhance inter-regional mobility.</i>			<b>X</b>
<b>Objective I.F:</b>	<i>Improving and enhancing transportation safety.</i>	<b>X</b>		
<b>Objective I.G:</b>	<i>Improved transportation maintenance programs.</i>	<b>X</b>		
<b>Objective I.H:</b>	<i>Ensure that transportation facilities are accessible to people with disabilities.</i>	<b>X</b>		
<b>Objective II.A:</b>	<i>Development of a transportation infrastructure that supports economic development initiatives.</i>	<b>X</b>		
<b>Objective III.B:</b>	<i>Expansion of revenue bases for transportation improvements.</i>	<b>X</b>		
<b>Objective IV.A:</b>	<i>Providing educational programs.</i>	<b>X</b>		
<p><b>Discussion:</b> Hā'ena State Park is located at the end of Kūhiō Highway, creating a unique condition for the State highway. Currently, pedestrians, bicyclists, and vehicles travel on the narrow highway all the way to Kē'ē with both legal and illegal parking occurring on both sides further exacerbating congestion and potential conflicts. The proposed Master Plan encourages the development of a shuttle system to serve visitor access to the park and reduce congestion and traffic on the existing highway. Due to the potential for rockfalls and to increase safety, general through traffic will be terminated at entry turnaround and a separate pedestrian and bicycle path has been designated makai of the highway via the <u>Interpretive Pedestrian Path</u>.</p> <p>The proposed shuttle system will also increase accessibility to the park since those who are not able to drive will be able to take the shuttle to and from the park. Educational programs can be offered during the shuttle ride to the park and the need for the shuttle could open up economic opportunities for shuttle providers.</p>				
<b>WATER RESOURCES DEVELOPMENT FUNCTIONAL PLAN</b>				
<b>Objective A:</b>	<i>Enunciate State water policy and improve management framework.</i>			<b>X</b>
<b>Objective B:</b>	<i>Maintain the long-term availability of freshwater supplies, giving consideration to the accommodation of important environmental values.</i>	<b>X</b>		
<b>Objective C:</b>	<i>Improve management of floodplains.</i>	<b>X</b>		
<b>Objective D:</b>	<i>Assure adequate municipal water supplies for planned urban growth.</i>			<b>X</b>
<b>Objective E:</b>	<i>Assure the availability of adequate water for agriculture.</i>	<b>X</b>		

<b>HAWAI'I STATE FUNCTIONAL PLANS</b> (Key: S = Supportive, N/S = Not Supportive, N/A = Not Applicable)		<b>S</b>	<b>N/S</b>	<b>N/A</b>
<b>Objective F:</b>	<i>Encourage and coordinate with other water programs the development of self-supplied industrial water and the production of water-based energy.</i>	<b>X</b>		
<b>Objective G:</b>	<i>Provide for the protection and enhancement of Hawai'i's freshwater and estuarine environment.</i>	<b>X</b>		
<b>Objective H:</b>	<i>Improve State grant and loan procedures for water program and projects.</i>			<b>X</b>
<b>Objective I:</b>	<i>Pursue water resources data collection and research to meet changing needs.</i>			<b>X</b>
<p><b>Discussion:</b> The proposed Master Plan supports many of the objectives of the Water Resources Functional Plan. The integrated water/wastewater/drainage system will ensure that on-site water resources will be utilized as efficiently as possible and the proposed facilities will be designed to be as water efficient as possible. <u>All discharges related to the construction and operation of the proposed project will comply with the State's Water Quality requirements contained in Chapters 11-54 and 11-55, HAR. None of the proposed new facilities are located in the known AE or VE floodplains as designated by FEMA. Restoration of the 'auwai and utilization of nonpotable water for irrigation is also recommended to ensure sufficient water supply is available for the restored Agricultural Complex and landscaped areas. Microhydropower is recommended for consideration to help power the proposed facilities. <u>To minimize the impacts of microhydropower systems on native Hawai'i amphidromous biota, the diversion intakes must be designed to have low-velocity intakes placed subsurface in relatively deep pool in the center of the stream in order to minimize entrainment of larval or post-larval stream animals. Also, as a potential in-stream use, any microhydropower system should be integrated with a public trust use such as the taro lo'i production should it be pursued.</u> Restoration of the park's riparian and marine environments and improved maintenance of these areas are also major recommendations of the proposed plan.</u></p>				

## 5.4 COUNTY OF KAUA'I

### 5.4.1 KAUA'I GENERAL PLAN

The General Plan (GP) of the County of Kaua'i is a policy document that fulfills legal mandates of State law and the Charter of the County of Kaua'i. It is intended to help guide long-range development for the enhancement and improvement of life on Kaua'i, advancement of the County's vision for Kaua'i, and the establishment of strategies to help achieve that vision including recommended land uses. The most recent GP is currently undergoing another update was adopted in March 2018. However, it was last adopted in 2000 and It designates the park as "Parks and Recreation" on the North Shore Land Use Map (Figure 32). The GP North Shore Planning District Heritage Resources Map identifies the park as a conservation area - "State & County Park" and notes that heiau cultural sites and traditional cultivation areas are located within the park and a regulated fishing area and coral reefs are located offshore fronting the park (Figure 33).

~~Various policies in the GP cover parks, some with specific reference to Hā'ena State Park.~~

The GP identifies “sharing of recreation resources with visitors” as an issue and opportunity:  
~~Many visitors travel to the North Shore to enjoy its beaches and unique natural areas. The impact is especially great in the Hanalei-Hā‘ena region which has a large share of visitor attractions. Heavy visitor use can displace residents or significantly change the quality of the experience, especially at beaches and parks. Residents need to work with business people and parks agencies to identify: (1) parks and natural areas where visitors will be welcomed and accommodated, with levels of use based on parking or other easily managed limits; and (2) parks and natural areas where it is important to more strictly limit access in order to preserve the resources and/or the quality of the recreation experience (Sec. 6.1.3).~~

GP policies related to Kaua‘i’s parks and natural areas (both County and State) include:  
~~Encourage the development of public-private partnerships involving the County and the Department of Land and Natural Resources in order to manage and improve Kaua‘i’s valuable parks and open spaces (4.2.8.3(a)).~~

~~Manage beach parks, resource parks, rivers, beaches and other natural areas according to the following policies in order of priority: (1) Conserve resources. (2) Provide for use by the general public—i.e., individuals, families, ohana. (3) Allow for group use (including commercial tours and equipment rentals) within conservation limits (4.2.8.3(e)).~~

~~To enhance the visitor’s experience of Kaua‘i and to provide meaningful jobs and income to Kaua‘i residents, the County shall develop or support development of the following programs by Federal, State or private agencies: (1) Regional visitor centers. (2) First person interpretation of natural areas, historic and archaeological sites, traditional agricultural and cultural practices, towns and communities. (3) Study and practice of Native Hawaiian and other ethnic cultural traditions and languages, including the development of cultural learning centers (4.2.8.3(d)).~~

~~Improve facilities, maintenance, and management of activities at State and County parks. Specific actions include: (1) Commit the necessary resources to ensure adequate levels of park maintenance, repair and hygiene and to improve signage and interpretation of natural and cultural features. (2) In resource parks that receive heavy visitation, such as... Hā‘ena, ... plan and improve specific areas to support larger numbers of visitors; manage other areas for moderate or low use, based on conservation objectives. Prepare and update Master Plans for major parks. ... (4.2.8.3(e)).~~

Relevant sections of the GP involve discussions related to improving transportation to the park and support of the State's effort to implement the master plan for the park and provide adequate funding for maintenance and staffing.

Section 2.4.6 of the GP notes the following policy opportunity for the North Shore:

*Integrating Transit: The integration of consolidated parking and transit facilities was a common discussion thread throughout the North Shore communities. Participants considered ways that pools of public parking and transit stops could be integrated into town centers, establishing “park-once” facilities and providing convenient transfer points for tourists accessing Kīlauea Lighthouse and Hā‘ena State Park, with the goal of mitigating the impact of tourist traffic on the Kūhiō Highway and parking facilities at existing visitor destinations. (SSFM 2018)*

Section 3.IV focuses on the economy and actions to support key industries. Under the "Tourism" Subsection, "1.3 Improving the Visitor Experience and Impacts on Communities," the GP states, "Managing visitor impacts also includes improving visitor facilities and parking at both County and State parks, and ocean safety at beaches. Given that impacts disproportionately affect certain areas of the island, particularly the North Shore and South Kāua‘i districts, shuttle efforts, parking improvements, and other solutions should be focused there." (SSFM 2018)

Section 3.V.4 summarizes the actions for Kauai's State Parks and recognizes this master plan effort for Hā‘ena State Park. It also notes:

*In addition to traffic and parking issues, Hā‘ena State Park, Kōke‘e State Park, and Waimea Canyon State Park are underfunded relative to the demands placed on them. For example, limited parking at Hā‘ena State Park has led to illegal parking and frustration for visitors and residents seeking to visit the many attractions nearby. An unmanaged parking situation has contributed to high rates of theft and vandalism at the parking lot. (SSFM 2018)*

It also identifies the following relevant "Partnership Needs:"

1. Implement the Waimea Canyon, Kōke‘e, and Hā‘ena State Park Master Plans.
3. Support adequate funding and staffing for capital improvements, including maintenance and enforcement for public parks, trails, and recreation areas.
4. Improve and coordinate infrastructure and transportation to reduce visitor impacts.

The GP also identifies the North Shore Shuttle running from Kīlauea Lighthouse to Kē‘ē Beach as a "Priority Transit Capacity Project" in its Table 5-2 and Figure 5.37.

**Discussion:** The master planning of parks, such as Hā‘ena State Park, and the appropriate management, maintenance, staffing, funding, and enforcement of the parks including "limit[ing] access in order to preserve the resources and/or the quality of the recreation experience" (Sec. 6.1.3) is prioritizing parking and transportation improvements for the North Shore are clearly supported by the County's GP. The GP recognizes the need for management measures to balance visitor demand and conservation needs. ~~It identifies the conservation of resources as the first priority in the management of beach parks (Sec. 4.2.8.3(e)).~~ Further, the Plan identifies the need for adequate funding to implement management, interpretation, and maintenance of park facilities.

The proposed Master Plan seeks to address the issues and opportunities relating to the visitor experience on Kaua‘i’s North Shore. Community sentiment throughout the Master Planning process has been that the park’s cultural and ecological resources are overwhelmed by visitor volume and use. The purpose of the Master Plan is to help temper the volume of visitors and encourage interaction with the resources without being a detriment to them. As such, the proposed Master Plan is consistent with the GP policies to improve park facilities, conserve natural and cultural resources, protect public safety and improve hygiene to find a balance with public use. It also supports the development of the North Shore Shuttle to help mitigate traffic to the park.

### 5.4.2 NORTH SHORE DEVELOPMENT PLAN

The North Shore Development Plan (DP) designates Hā‘ena State Park and surrounding lands as “Open” (Figure 34). The DP provides a framework for guidelines to direct the physical locations and relationships of major improvements, buildings and landscape within the North Shore Special Planning Area. Relevant North Shore Planning Area goals include:

- *Goal A: To preserve the unique natural beauty of the North Shore Planning Area.*
- *Goal E: To preserve the wildlife and flora of the North Shore, recognizing man’s dependence upon this preservation for his own health and welfare.*
- *Goal F: To insure the preservation of the historic-archaeological sites in the North Shore Planning Area.*
- *Goal H: To provide for recreational opportunities that are compatible with the unique qualities and natural features of the North Shore.*

More specific DP recommendations that relate to natural resources and outdoor recreation and are applicable to the Master Plan are as follows:

*Only basic supportive facilities should be provided at outdoor recreation areas selected for widespread public use in order to enhance the experience.*

*Multiple activity recreation areas must be managed to avoid hazardous conflicts between recreators and allow maximum use of resources.*

*Although public access is obtained to recreational resource areas, publicity should be minimized unless the appropriate agency can assure adequate management and security measures. In this manner, local residents would be allowed to continue traditional patterns of resource use.*

**Discussion:** The Master Plan and supporting management actions address the recommendations of this County planning document. As one of the most popular visitor destinations on the island, Hā‘ena State Park had become a victim of its success, becoming overcrowded and experiencing conflicts between the varied recreational and cultural uses of the park. The new facilities, educational and interpretive materials and programs, and changes in management and maintenance will improve the conditions at the park, better

protecting and caring for the natural, cultural, historic, and scenic resources. The orientation session all visitors must attend will help educate visitors on the unique and sensitive resources at the park and appropriate behavior, protocols, and activities which will in turn engender a greater sense of respect and aloha visitors have while at the park. The proposed educational programs and interpretive materials will also enrich the visitor experience as they learn about the varied and multilayered resources of this storied place.

The proposed Master Plan also encourages the development of a shuttle system to serve visitor access to the park and reduce congestion and traffic on the existing highway. Due to the potential for rockfalls and to increase safety, general through traffic will be terminated at entry turnaround and a separate pedestrian and bicycle path has been designated makai of the highway ~~via the Interpretive Path~~.

### 5.4.3 COUNTY ZONING

The park is not zoned by the County of Kauaʻi. Applicable land use regulations are those associated with the State Conservation District, as previously discussed in Section 5.3.2.

### 5.4.4 SPECIAL MANAGEMENT AREA

The SMA was established to protect coastal resources in areas extending inland of the shoreline. The park is within the SMA (see Figure 35).

**Discussion:** Upon acceptance of a Final EIS, Special Management Area Permits will be required for specific park improvements from the County of Kauaʻi. An SMA permit was obtained for the constructed wetlands that were recently completed for the renovated comfort station at Kēʻē.

### 5.4.5 COUNTY SHORELINE SETBACK

Ordinance 979, adopted December 5, 2014, sets forth a procedure for establishing building shoreline setbacks for the County of Kauaʻi (Section 8-27.3, KCC). The shoreline setback requirements are applicable to the park since it abuts the shoreline (Section 8-27.1, KCC). The determination of the shoreline setback is based on a lot's average depth and historic rates of shoreline change as shown in SOEST's Kauaʻi Coastal Erosion Study as shown in Figure 17 for the park. For lots with an average depth that is greater than 220 feet, the greater setback of the following shall apply:

- (A) Forty feet plus seventy times the annual coastal erosion rate as measured from the certified shoreline. In addition, ...for all applicable lots subject to the Kauaʻi Coastal Erosion Study a mandatory twenty foot additional safety buffer shall be added to the setback area for episodic coastal events, sea level rise and other hazards; or
- (B) A shoreline setback line of one hundred feet from the certified shoreline.

**Discussion:** The average depth of the park's shoreline parcel TMK: 5-9-08: 001 is approximately 1,000 feet. Even at its narrowest point, it is roughly 750 feet deep. The erosion rate ranges from zero to one foot per year along the park's shoreline. Therefore, at most the shoreline setback would be 130 feet from the certified shoreline where the erosion

rate is one foot per year. At minimum it would be 100 feet from the certified shoreline where the erosion rate is zero. A Shoreline Setback Determination will be required by the County of Kauaʻi for implementation of physical building aspects of the plan. However, with exception of the relocated lifeguard tower and dune restoration activities, State Parks will locate any proposed permanent structures described in the Master Plan outside of the shoreline setback area wherever practical.

#### 5.4.6 COUNTY FLOOD PLAIN MANAGEMENT ORDINANCE

County of Kauaʻi Ordinance 831 pertains to development in the floodplain and coastal high hazard areas (tsunami zone). The majority of the park elements are proposed to be outside mapped flood and tsunami hazard areas. The lifeguard stand is proposed to be moved to within the coastal high hazard area. Thus, this action should be coordinated with the County's Flood Plain Coordinator to ensure that it is done in compliance with all County requirements. The Master Plan suggests that the lifeguard stand be built upon the dune rather than excavated into the sand to avoid negative effects to the ecosystem and to minimize disturbance to subsurface resources should they exist.

### 5.5 REQUIRED APPROVALS AND PERMITS

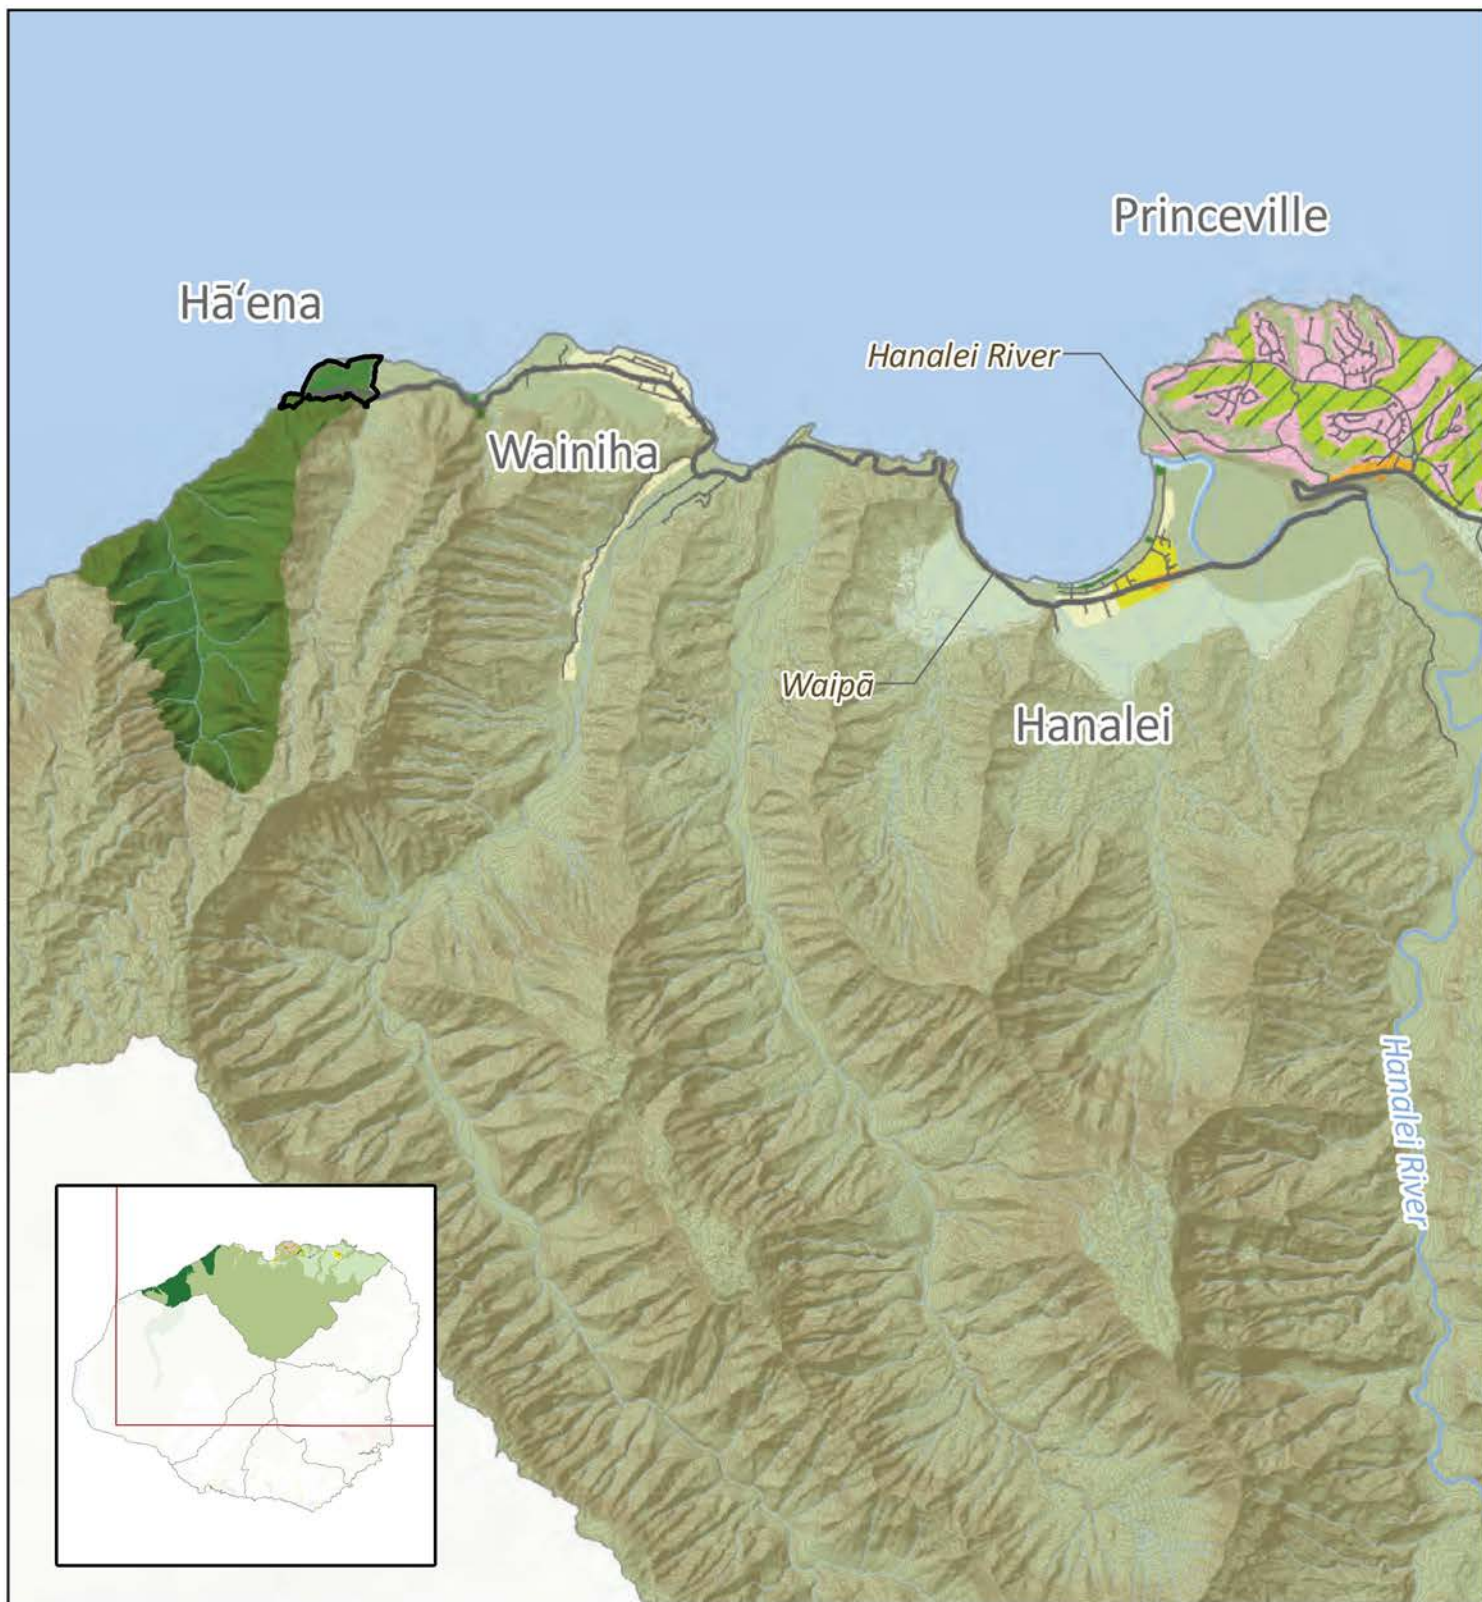

The permits and/or approvals anticipated to be required for implementation of the proposed site improvements are listed in Table 10.

**TABLE 10: REQUIRED APPROVALS AND PERMITS**

PERMIT/APPROVAL	AUTHORITY	STATUS
Compliance with Chapter 343 HRS	Office of Environmental Quality Control	In process
Compliance with Chapter 6E, HRS (Historic Preservation)	State Historic Preservation Division	Required for construction
<u>Site Plan Approval, Conservation District Use Application</u>	State DLNR, Office of Conservation and Coastal Lands	Required for implementation
Special Management Area Permit	County of Kauaʻi Planning Commission	Required for implementation
Shoreline Setback Determination	County of Kauaʻi Planning Department/State of Hawaiʻi Department of Accounting and General Services, State Survey Office	Required for construction
Wetland Delineation Study and Determination	US Army Corps of Engineers	May be required if wetland areas are near proposed improvements. <u>Other Department of the Army permits may be required based on determination.</u>
<u>Form 7480-1 Notice of Landing Area Proposal</u>	<u>Federal Aviation Administration</u>	<u>Required for the helipad</u>

PERMIT/APPROVAL	AUTHORITY	STATUS
National Pollution Discharge Elimination System (NPDES) Permit	State Department of Health, Clean Water Branch	Required for construction
Noise Permit	State Department of Health, Indoor and Radiological Health Branch	May be required for construction
Stream Channel Alteration Permit; Stream Diversion Works Permit; and/or Petition to Amend Interim Instream Flow Standards	DLNR, Commission on Water Resource Management	May be required for micro-hydropower system; riparian restoration (depending on extent of instream activities)
Permit to Perform Work within a State Right-of-Way	State of Hawai'i Department of Transportation (DOT)	Required for work with the State Highway
Land Transfer of State Highway from DOT to State Parks	State of Hawai'i Department of Transportation	Required for road closure from park entry to Kē'ē Beach
Grading and Grubbing Permits	County of Kaua'i Department of Public Works	Required for construction
Building Permits	County of Kaua'i Department of Public Works	Required for construction

## 6.0 ALTERNATIVES TO THE PROPOSED MASTER PLAN

Under HAR Title 11, DOH, Chapter 200, Environmental Impact Statement Rules, Section 11-200-17(F), a Draft EIS must contain a section discussing alternatives that could attain the project objectives regardless of cost, and in sufficient detail to explain why the specific alternative was rejected. This chapter describes alternatives to the Hā‘ena State Park Master Plan, along with reasons why each alternative was rejected. As stated in Section 2.1.3 of this EIS:

*“The goals and vision for the Hā‘ena State Park Master Plan were developed with State Parks staff and the MPAC during the initial meetings held in April and May 2010. There are five main goals that have guided the development of the Master Plan and the proposed management strategies. They are:*

- Recognize that the entire park is culturally significant.*
- Restore Hā‘ena State Park as a living place... cleanse, restore and revive cultural practices again.*
- Involve the original families and reconnect the local community to the place.*
- Uphold State Parks’ responsibility for the public’s safety, access, and welfare.*
- Balance the provision of recreational opportunities with the preservation of the significant natural and cultural resources.”*

### 6.1 BACKGROUND

In 1994, The Keith Companies (TKC) was awarded the contract to develop the Hā‘ena State Park Master Plan. After several years of research, community meetings and interviews, The Keith Companies-Hawai‘i, Inc. and Earthplan Planning and Design prepared a draft report entitled, *Hā‘ena State Park Master Plan and Draft Environmental Impact Statement* for State Parks. The last known revision was a hand-edited copy completed in 2001. It included extensive background information as well as the development and evaluation of four master plan alternatives. The effort culminated in a “community preferred master plan” that is referred to throughout this report as the 2001 draft plan. While the plan was never completed or adopted nor was the Draft EIS filed with OEQC, they contain valuable information and are the starting point for this effort.

In 2008, State Parks contracted with PBR HAWAII to complete the master plan and environmental impact statement (EIS) for Hā‘ena State Park. PBR HAWAII was tasked to work with the community through an advisory committee to refine the 2001 draft plan with an emphasis on the cultural and historic significance of Hā‘ena and to develop alternatives for transportation and parking.

The following discussion of alternatives includes the no action alternative, a summary of the 2001 draft plan alternatives, and the alternatives developed for the current effort.

## 6.2 NO ACTION ALTERNATIVE

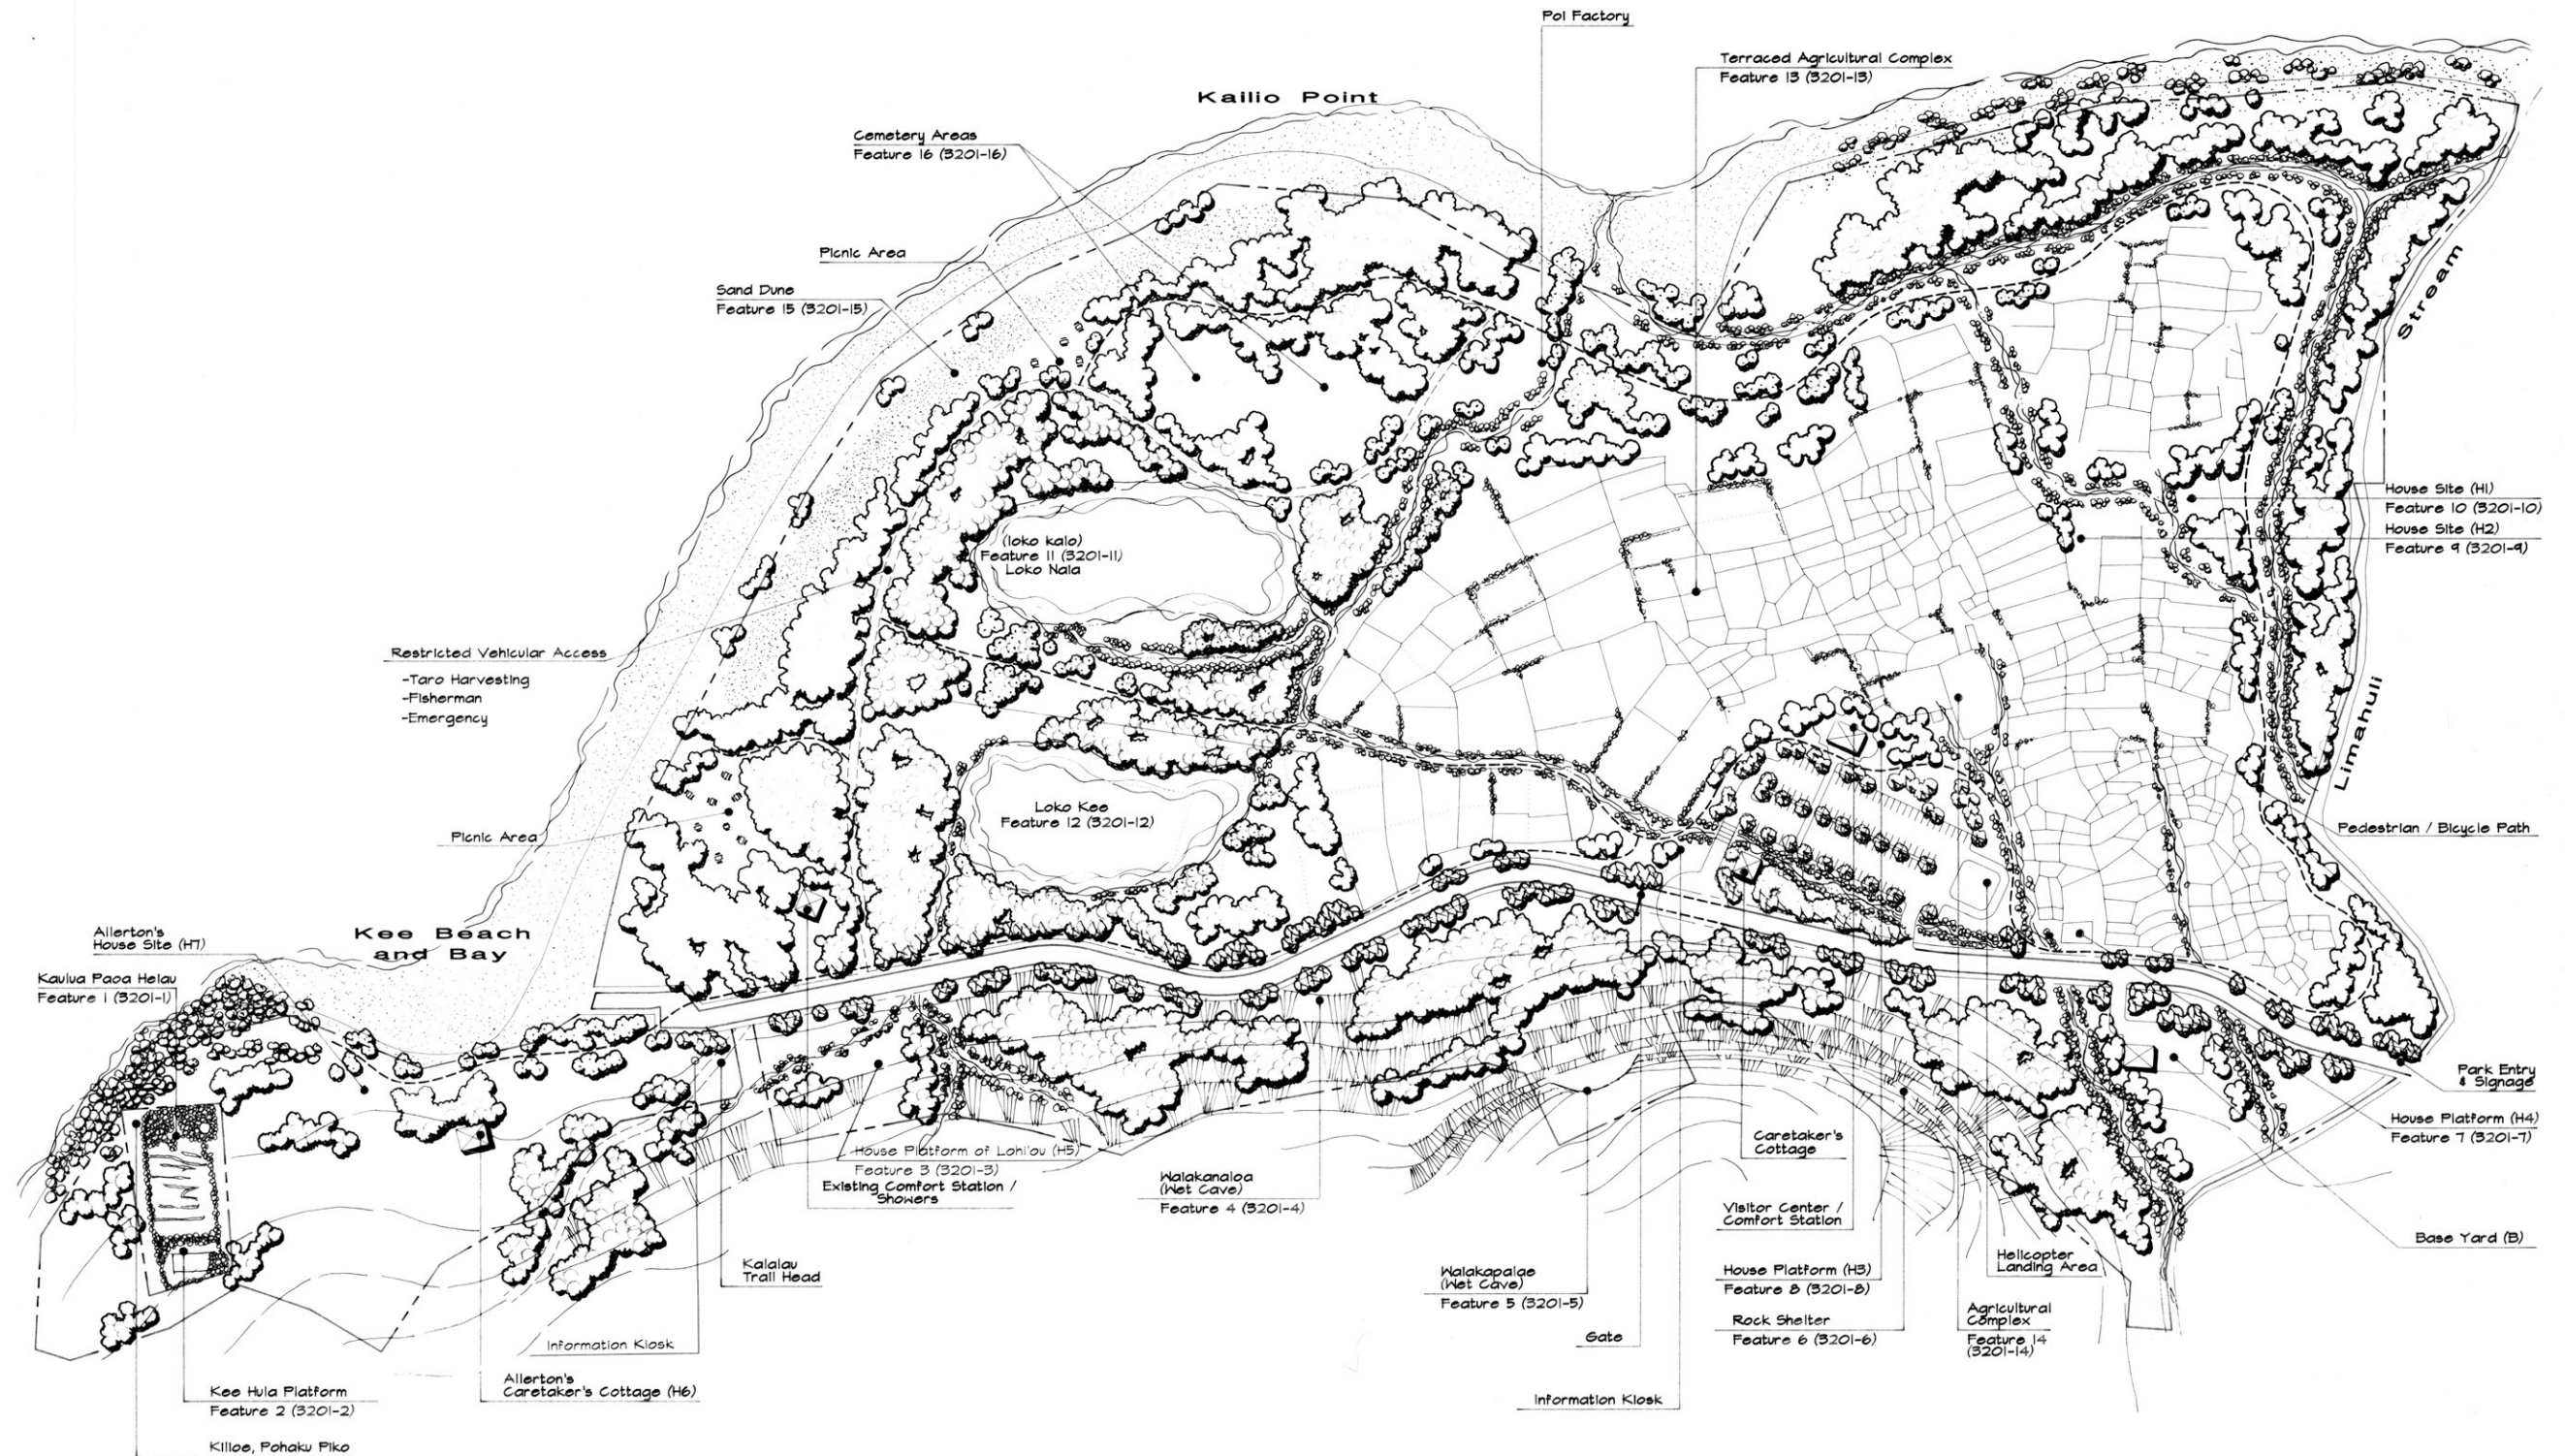

The “No Action Alternative” would involve the status quo, that is the physical and management improvements proposed as part of the Master Plan would not be implemented. If the proposed Master Plan improvements are not implemented, long-term impacts from continuing current use and management practices include:

- Unlimited numbers of visitors have the potential to damage natural, archaeological, and cultural resources, to expose themselves to hazardous conditions, or to offend or come into conflict with other park users because of the lack of oversight and education on the appropriate activities and behaviors at the park.
- Motorized vehicles continue to clog Kūhiō Highway and back up along the highway outside of the park due to the unlimited visitors that are allowed in the park. The parking, both legal and illegal, along Kūhiō Highway will continue to occur causing traffic congestion, which in turn creates increased air pollution and hazardous conditions for pedestrians walking along the highway. Vehicle congestion could also hamper evacuation of the park if there is an emergency or need to evacuate the area;
- The countless number of hikers who are not tracked and are using Kalalau Trail are of concern when hikers are hurt and require assistance or are stranded at Hanakāpīʻai Stream during flood conditions;
- There will be continued visitor exposure to potential rockfall hazards as the main visitor path to Kēʻē is maintained along the highway where there are Class A rockfall hazards, or areas with a high risk estimated for potential rockfalls.
- The continued degradation to natural, cultural, archaeological, and scenic resources due to invasive species overgrowth, overcrowded conditions, and inadequate infrastructure improvements and facilities to support unlimited visitor use.

The “no change” (or No Action) alternative was rejected outright due to: 1) the potential for continued degradation of cultural and natural resources and the worsening traffic and parking congestion that would occur if nothing were done; 2) potential risk of rockfalls and threats to public safety; and 3) the five main goals or objectives that have guided the development of the Hāʻena State Park Master Plan and the proposed management strategies would not be met.

## 6.3 THE 2001 DRAFT PLAN ALTERNATIVES

As noted earlier, The Keith Companies (TKC) prepared a draft report entitled, *Hāʻena State Park Master Plan and Draft Environmental Impact Statement* for State Parks. TKC worked with local community groups and other relevant stakeholders to develop four alternative master plans. Community members preferred the first alternative that proposed to have the least amount of exposure to the park’s natural, cultural, and historic features. The plan included constructing a visitor center, caretaker’s cottage, pedestrian and bicycle pathways, and interpretive signage and is shown in Figure 36.

Department of Land and Natural Resources  
North

Island of Kaua'i

PBR HAWAII

The second and third alternatives focused on increasing the amount of infrastructure improvements to the park. However, residents voiced concern over the improvements potential negative impact on existing natural and cultural aspects of the park. The last alternative was a ‘no action,’ alternative which focused on a hands-off approach to allow the existing conditions of the park to continue.

The 2001 draft plan alternative, however, needed refinement and was therefore rejected. The plan recommended distributing recreational uses throughout the park which could potentially impact cultural resources along the shoreline. It also located picnic facilities along the dunes, active beach recreation at Ka‘ilio Point, and bicycle trails along the ‘auwai and Limahuli Stream. Such uses have been deemed by many members of the MPAC, as undesirable because of the impacts to the cultural, archaeological, and natural resources and the dispersal of those impacts. It also increases the need for water safety personnel beyond Kē‘ē Beach and the potential for visitors to impact the surrounding environment due to the lack of comfort stations in the area. The 2001 draft plan, however, did include physical improvements that would help in managing human use of the park, such as a Visitor Center, Caretaker’s Cottage, and baseyard at the main entry, a gate near the main parking area, and another gate restricting vehicular access from the dunes at Kē‘ē. Many of these concepts were used to inform the development of the preferred alternative.

## **6.4 THE 2015 MASTER PLAN ALTERNATIVES**

### **6.4.1 JULY 2010 ALTERNATIVE**

In the current master planning effort, various alternatives were developed in the attempt to manage multiple issues both physical and operational in nature. Initial versions explored the use of the highway for an Interpretive Corridor, creating a turnaround and shuttle stop in the same area as the 2001 draft plan and closing off the highway to through traffic beyond this point so only pedestrians and bicyclists would be permitted with the exception of special access and ADA vehicles. The first public review draft from July 2010 is shown in Figure 37. The Visitor Center and Caretaker’s Cottage were shifted to provide better oversight at the new entry point and gates would be installed to control traffic along the highway. It also identified the area around the heiau as the Hula Complex and created the Cultural Gathering Area with a Hale Wa‘a in the area between the lo‘i and the Loko Naia. The lifeguard stand is relocated from the end of the highway to a cleared area fifty feet north of the pavement. It also employed green design concepts such as bioswales around the parking areas and rainwater catchment for the new facilities and the picnic areas were removed from the dunes.

Subsequently, State Parks commissioned AECOM under a separate contract to perform additional detailed analysis of the potential rockfall hazards at the park in 2012. Their findings required a rethinking of the master plan since the proposed Interpretive Corridor and Visitor Center were located in areas of potential rockfall hazards. The MPAC reconvened to discuss various rockfall mitigation alternatives proposed by the engineer. The MPAC voiced strong opposition to any alternative that required affixing containment structures, fencing, or rock scaling along Nā Pali o Makana, the cliffs that run along the highway at the base of Makana, due to the cultural and aesthetic impacts, the costs, and the temporary nature of the

solutions. In addition, the public would still be traversing through a potential rockfall zone at a much slower rate since only pedestrians and bicycles would be permitted on the highway. Therefore, the proposal to shift the major flow of visitors and vehicles outside of the modeled rockfall hazard zone became the basis of the preferred Master Plan. Although this would require that the main flow of visitors would now be cutting through the area of the existing restored lo‘i, members of the MPAC noted that this portion of the lo‘i is actually less productive than the lo‘i further makai due to the limited sunlight that reaches the area at the base of Makana. The idea to make this area a hands-on visitor learning opportunity while the Hui continued restoration efforts further makai arose and was also incorporated into the preferred Master Plan.

The July 2010 alternative was therefore rejected due to the potential public safety hazards of locating the major flow of visitor traffic in a potential rockfall hazard area in favor of the preferred Master Plan.

#### **6.4.2 TRANSPORTATION AND PARKING ALTERNATIVES**

During the meetings with the project team, MPAC and community members, a wide variety of management concepts were discussed regarding park access and transportation modes to the park, parking management, and fee options. Because they all relate to some of the biggest problems at the park, including the sense of overcrowding, traffic congestion and parking problems both within the park and on the highway, various suggestions were made including encouraging and even requiring that visitors arrive at the park by different modes of transportation to help reduce traffic. The primary modes discussed included shuttles, bicycles and pedestrian as well as different ideas on how to manage personal vehicle access. A preliminary shuttle study was completed as part of the draft Master Plan. Other modes of transportation by air or water were eliminated from the discussion as most felt they were inappropriate for the park and that it would be difficult to manage multiple entry points particularly for ocean-based access. The following sections describe the three main scenarios explored with the MPAC.

##### ***6.4.2.1 Scenario 1: Princeville-based Park Entry***

One of the concepts introduced by members of the MPAC involved having all visitors except those with special access passes or lifetime passes to access the park via a Princeville-based entry facility and parking lot with shuttle service to the park. The site for this facility is described as the “Alternative Princeville Site” in the preliminary shuttle study (Appendix C of the Master Plan report). The shuttle bus would travel from the Princeville entry facility to Hā‘ena State Park, making several stops along the way. Park visitors with entry wristbands could exit and re-board the shuttle along the way; and other people (both residents and tourists) could board and exit the bus along the way, using the shuttle as a local bus service. The bus service could either be operated by, or in formal coordination with, the County’s Kaua‘i Bus, thereby allowing it to be subsidized to the same extent that the remainder of the Kaua‘i Bus system is subsidized. The shuttle should be implemented in Phase I so a smaller parking lot or no parking lot would be needed. No walk-in or bike-in access would be allowed as people may be encouraged to park in nearby neighborhoods and walk or bike to the park. This would also mean that no one could access the park unless they arrive on the

shuttle, including those who live between Princeville and Hā'ena. If they wanted to enter the park, they would either have to jump on the shuttle at one of the interim stops, or drive back to the Princeville-based entry point, park, and then take the shuttle in to Hā'ena. This would greatly reduce traffic to the park except for those wishing to drive till the end of the highway and turn around. However, it would also cause some inconvenience to those wishing to go to the park who live the closest to the park.

#### ***6.4.2.2 Scenario 2: Combination On-site Parking and Princeville Entry Facility***

The potential Princeville site described above currently has widespread support. With an estimated potential of 200+ stalls, it would be large enough to serve the park with a 900 daily visitor limit at the current ratio of 2.5 riders per vehicle if the stalls turn over at least once per day. However, the site may also be used to serve the parking needs for other nearby uses, especially if it is acquired by another entity, in which case the Princeville-based parking lot may not be sufficient for the park. The proposed Master Plan (Figure 1) shows a smaller parking lot labeled as Phase I to supplement the parking in Princeville as needed and the size of the parking lot should be adjusted appropriately so as not to discourage use of the shuttle. The stalls at the park should be made available via a reservation system similar to what will be required for park entry tickets. This will encourage visitors to plan ahead and the parking stalls could be offered at premium prices to encourage use of the shuttle and carpooling. Controls should also be instituted to limit the number of parking reservations individuals are able to make and different options for half-day or full-day parking passes could be considered to encourage turnover of the stalls.

#### ***6.4.2.3 Scenario 3: On-site Parking Only***

If no shuttle or transit service is available to the park, the full 100-stall parking lot will need to be built in order to minimize impacts to surrounding neighborhoods. Visitors will need to carpool more than they currently do, which is roughly 2.5 riders per vehicle, or find other means to the park, such as taxis or bicycling and walking. A daily visitor limit set at 900, and a 100-stall parking lot that is estimated to turn over at least once a day would require the average vehicle to carry 4.5 people to the park. Or, if the stalls turn over two times a day, that would require roughly 3 people to ride per vehicle.

#### ***6.4.2.4 Preferred Vehicular Access Scenario***

The preferred scenario is to implement the shuttle from the Princeville facility at the start of Phase I, minimizing the need for visitor parking in the parking lot in the park. However, the Master Plan includes space to accommodate a parking lot for up to 100 vehicles. The design and materials of the parking lot would allow its size to be adjusted as the master plan is implemented. It could be reduced to accommodate as few as zero vehicles if the shuttle bus service is fully implemented and meets all needs, or expanded to accommodate up to 100 vehicles to address the possibility that the shuttle service might not be implemented on schedule or to accommodate special needs that could only be met by additional on-site parking (for example, the need for after-hours on-site parking, or additional parking for special events, cultural practitioners, kūpuna, subsistence fishermen or ~~handicapped~~ visitors requiring ADA accessibility). In addition, the parking stalls would be separated into a fee-

paying and non-fee paying sections, which can be adaptively managed daily or even hourly depending on visitor arrivals.

Regardless of which scenario is implemented, strict parking enforcement along the highway will be required to discourage illegal parking, traffic hazards, and safety issues. Also, a widespread public information campaign should be held months in advance to inform the public and the visitor industry of any changes to park access and State Parks expects that adjustments will be necessary in order to best accommodate visitor access to the park over time.

### **6.4.3 JULY 2015 MASTER PLAN PRESENTED IN THE DRAFT EIS**

The July 2015 version of the master plan that was presented in the Draft EIS has been greatly simplified based on the input received during the public comment and review process. Many in the community felt that the plan included too many facilities that were not needed and distracted from the natural beauty of the park. They also noted that they seemed to cater to tourists rather than residents. These facilities were the Education and Cultural Center (ECC) and the Caretaker's Cottage located near the main parking lot. Both of these facilities have been removed from the current version of the master plan. There was also a loop trail that connected Kē'e Beach with the Cultural Gathering Area and the ECC to allow for guided educational tours and additional evacuation routes. However, many in the community felt they were too intrusive. Therefore, they have also been removed. The picnic area near the ECC has also been removed as well as the interpretive displays along the coastal trail. The near-term plan has also been eliminated since the overall master plan has been simplified. The July 2015 version of the master plan is provided in Figure 38.

Some of the key management concepts have also been revised since the Draft EIS. The proposed 900-person daily visitor limit has also been adjusted to apply only during peak visitor hours and will be based on an average over the course of a month rather than a strict daily limit. The limit is also set as an initial number that will be adaptively managed and adjusted over time based on visitor satisfaction and observed impacts to the park's varied natural, cultural, and historic resources. The full discussion is included in Section 2.5.4.3.

The required visitor orientation session has also been eliminated and replaced with providing visitor information prior to park entry and made available on State Park's website. The full description is provided in Section 2.5.4.5.

## 7.0 CONTEXTUAL ISSUES

This chapter presents key issues within the context of Hā'ena State Park.

### 7.1 RELATIONSHIP BETWEEN THE SHORT-TERM USES OF THE ENVIRONMENT AND MAINTENANCE AND ENHANCEMENT OF LONG-TERM PRODUCTIVITY

Short-term uses and long-term productivity of the proposed Master Plan involve short-term impacts during construction and the adjustment period once access to the park is limited to 900 people per day on average during peak hours and the long-term benefits after the Master Plan is completed and visitors adjust to the new protocols required to visit the park.

Short-term impacts during construction may include temporary noise and air impacts due to the construction equipment that may be used. Contractors are required to adhere to DOH regulations and to ensure the use of proper equipment and regular vehicle maintenance. Equipment mufflers or other noise attenuating equipment may also be employed as additional mitigation. Traffic may also be impacted when materials and equipment are transported to the site. Groundwork will disturb soils. However, the proposed facilities are located in previously disturbed areas to minimize the potential of impacting subsurface archaeology and cultural artifacts. Best practices to minimize soil erosion, sediment runoff, and dust such as installation of dust screens and silt fences/bales and careful dewatering practices will be implemented. Construction will be limited to daylight hours to minimize impacts to wildlife. Archaeological surveying prior to construction and archaeological monitoring during construction are recommended. To further help mitigate the impacts during construction, the Cultural Advisory Group and Community Advisory Group should be established before any design and construction contracts are awarded so they can advise State Parks during those phases and help avoid potential issues that may arise. Construction activities will also generate employment opportunities and excise tax revenues from purchasing and design activities.

Visitors to the park may also be impacted initially by the change in access policies and the daily visitor limit of 900 people per day on average during peak visitor hours, including day hikers on the Kalalau Trail. The daily visitor limit does not include cultural practitioners, special user groups such as hālau, lo'i workgroups, cemetery caretakers, or school groups. It also does not include the 60 hikers who obtain valid camping permits for the Kalalau Trail or the 30 hunters who obtain valid hunting permits for the Nāpali Coast State Wilderness Park Hunting Unit G. Prior to instituting the proposed visitor limits, a public information campaign must be made far in advance for both residents and the visitor industry so people are able to plan their visit to the park. The entry and parking policies as well as any fees should be included as part of the campaign. While this may cause a temporary inconvenience for visitors and may cause temporary impacts such as congestion and secondary impacts to surrounding recreational uses and communities due to the displacement of those who would otherwise visit the park, it will allow State Parks to better manage the park's varied natural,

cultural, historic, and scenic resources in the long-term. Visitors will be forced to plan their trips to the park in advance and park staff will be able to better anticipate the needs for park operations and maintenance.

Over the long-term, implementation of the proposed Master Plan improvements and management strategies are expected to outweigh the short-term uses of the environment and impacts. As discussed in Chapters 3.0 and 4.0, the long-term benefits include the restoration of the natural, cultural, historic, and scenic resources; removal of visitor traffic from a potential rockfall hazard area; improved facilities using renewable energy resources and an integrated water/wastewater/drainage system; reduced traffic and congestion; improved circulation and shuttle service; increased public education and awareness of the park's sensitive resources and cultural values; reduced user conflicts and criminal activity; increased public awareness of ocean safety and natural hazards and better preparation and coordination between public agencies during emergencies; and improved management and oversight of the park. Negative long-term impacts are anticipated to be minimal and would be mitigated as discussed. For example, the new facilities would increase the amount of impervious surfaces at the park. However this impact would be mitigated by the installation of rainwater catchment cisterns that would help capture rooftop runoff so it could be used for irrigation or toilet flushing. Bioswales and rain gardens landscaped with native plants would also be installed around the facilities and parking lots to detain and filter runoff before percolating into the ground. There would also be potentially fewer visitors to the park due to the ~~daily-proposed~~ visitor limits during peak hours, which could be considered a negative impact. However, the improved condition of the natural, cultural, and scenic environment of the park itself and the ability of visitors to plan their trips to the park in advance would also ensure that the experience visitors have at the park are enriched and enjoyable rather than wasted looking for parking and encountering potentially hazardous conditions along the highway.

## 7.2 CUMULATIVE IMPACTS

Cumulative impacts are those that result from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions. Because the proposed Master Plan is for an existing state park and does not recommend a change in its use, the plan does not compound or change the mix of uses in this rural and remote corner of Kaua'i. The proposed reduction in the number of visitors, visitor orientation sessions, and restoration of the park's natural, cultural, historic, and scenic resources are anticipated to reduce traffic, to improve public sensitivity and awareness, and to build upon similar restoration efforts initiated at nearby Limahuli Gardens by NTBG, further supporting the health and condition of those resources and expanding the areas along the North Shore where native ecological and Native Hawaiian cultural environments are reestablished and activated again.

## 7.3 SECONDARY IMPACTS

Secondary impacts, or indirect impacts, include those that are caused by the action and are later in time or are farther removed in distance, but are still reasonably foreseeable. They

could include increased pressure at and use of surrounding recreational and shoreline areas, especially Hā'ena Beach Park and Makua, due to the proposed visitor limits and reduced parking at the park. State Parks will encourage all visitors to plan their trips to the park in advance and a significant public information campaign will be required well in advance of instituting the visitor limits. Every effort will be made to use a variety of social media, the Internet, and media and visitor information outlets to inform the public about any changes to park access protocols. The HSPCAC is also working with State Parks and other public agencies such as the County and USFWS ~~will also coordinate on~~-transportation, parking, and area circulation improvements ~~with other public agencies such as the County and USFWS~~ to come up with solutions that benefit the North Shore communities. In addition, if the North Shore shuttle is established, a mitigation measure may be to include a stop at Hā'ena Beach Park and other points of interest along the North Shore to help alleviate regional traffic and parking congestion.

Water quality of ocean and surface waters are anticipated to improve with implementation of the integrated water/wastewater/drainage system, secondary wastewater treatment (at a minimum), installation of rainwater catchment cisterns, rain gardens, and bioswales, and the use of non-chemical disinfectants and cleaning products and environmentally-safe soaps that contain plant nutrients and biocompatible cleaners as well as the avoidance of pesticide or herbicide use as discussed in Sections 3.4, 3.5, 3.6, and 0 as these will mitigate any runoff that runs to these waters. This in turn will have the beneficial secondary impact of improving the health of the marine and riparian ecosystems and the species that inhabit these waters.

Similarly, the clearing of invasive species and the restoration of the native forests, wetlands, loko, and dune system and the elimination of nighttime light pollution at park facilities may support and encourage the use of the park by native wildlife as discussed in Sections 0, 3.8, and 3.9.

The ~~mandatory~~ visitor ~~educational sessions~~ orientation information will also help to minimize impacts to the park's varied natural, cultural, historic, and scenic resources as visitors will learn about appropriate behavior, protocol, and activities permitted in the park, having the beneficial secondary effect of better protection of those resources and reduced user conflicts which will in turn improve mutual understanding, respect, and the feeling of aloha shared by all who visit the park.

The proposed facilities, restored natural, cultural, and historic resources, better overall maintenance of the park, and expanded educational programs will also have the beneficial secondary impact of enriching all levels of educational research and activities that could develop. It is anticipated that the park and all its varied environments could become places of active research and should be envisioned as outdoor classrooms, providing learning opportunities for all visitors, including out-of-state and international visitors, Kaua'i and Hawai'i residents, school groups from preschool to college, field schools, families and interest groups/organizations, cultural practitioners and scientific researchers. Restoration of the Hula and Agricultural Complexes and the development of the Cultural Gathering Area

also create places where culturally-based training can occur and the park provides the opportunity to share this knowledge among a wide audience.

#### **7.4 IRREVERSIBLE AND IRRETRIEVABLE COMMITMENTS OF RESOURCES**

The construction of the proposed facilities will require the irreversible and irretrievable commitments of resources. Because the construction of the new proposed facilities will require the irreversible and irretrievable commitment of natural resources, efforts will be made to minimize all large-scale grading, grubbing, and stockpiling of soil and limited to the dry season whenever possible. These impacts will be temporary and will serve the greater cause of creating a better park with improved facilities to serve the public and help State Parks better care for the varied natural, cultural, and historic resources. There will also be an increased demand for electricity for the new facilities and potentially water to irrigate the restored Agricultural Complex. However, green design will be implemented in the design of the proposed park facilities to help mitigate those impacts. The facilities will be designed to maximize water and energy efficiency and the use of renewable energy resources such as solar, microwind, and microhydropower are recommended to fill the remaining energy needs. However, if pursued hydropower may also have negative effects on fauna depending upon the design and placement of the intake structure. These potential impacts include decreased water quality, loss of habitat, and entrainment and impingement and associated mortality of migratory fishes, such as native Hawaiian amphidromous stream fauna made up of goby fishes (‘o‘opu), prawns or shrimp (‘ōpae) and snails (hīhīwai and hapawai). As a potential in-stream use, any microhydropower system should also be integrated with a public trust use such as the taro lo‘i production if pursued. The integrated water/wastewater/drainage system and the restoration of the ‘auwai will also help mitigate any increased water demand by reusing on-site water resources to the maximum extent possible before additional municipal water resources are required. The reduction in the number of visitors to less than half of the current summertime levels during peak visitor hours will also help reduce overall demand for potable water. Therefore, no upsizing of the park’s municipal water connection is required.

The impacts represented by the commitment of resources should be weighed against the significant positive and recurring benefits that will derive from the implementation of the proposed Master Plan, versus the consequences of taking no action or the implementation of a less beneficial plan for the park.

#### **7.5 PROBABLE ADVERSE ENVIRONMENTAL EFFECTS THAT CANNOT BE AVOIDED**

There will continue to be some human impact on the environment at the park. However, as discussed in Chapters 3.0 and 4.0, the proposed Master Plan seeks to minimize the adverse impacts of that use by reducing the number of people who visit the park during peak visitor hours, reducing traffic and congestion along the highway, improving wastewater treatment and reducing potable water use, reducing solid waste and preventing pollution, reducing the quantity and improving the quality of surface runoff, and improving visitor education. Two

of the potential sources of renewable energy could also have adverse impacts to biota depending on the technology selected. Therefore, less harmful technologies such as microwind or windbelts and microhydropower are discussed in Section 2.5.3.2. The Master Plan also seeks to reverse other adverse impacts via restoration of the park's varied natural, cultural, and historic resources including the dunes, stream, loko, wetlands, and forest areas as well as the Hula and Agricultural Complexes and other cultural and archaeological sites scattered throughout the park.

### **7.5.1 RATIONALE FOR PROCEEDING WITH THE MASTER PLAN NOTWITHSTANDING UNAVOIDABLE EFFECTS**

The main reasons for proceeding with the proposed Master Plan include protection and restoration of the park's sensitive and unique natural, cultural, historic, and scenic resources; improvement of the environmental conditions such as surface and marine water quality; removal of alien species and restoration of native ecosystems; improving public safety; increasing knowledge and sensitivity of the cultural values and activities that occur within the park; providing outdoor and indoor educational opportunities as well as recreational opportunities for residents and visitors alike; reducing negative impacts to native flora and fauna; and reducing illegal parking and traffic congestion above current conditions.

## **7.6 UNRESOLVED ISSUES**

The main unresolved issues involve the shuttle service and the timing of implementation. For the preferred shuttle service described in Section 6.4.2.4, it is not clear ~~whether the third-party operator currently who would be providing the shuttle service to the park will continue or if State Parks or some other government agency such as the County or USFWS either puts out a concession agreement or runs a similar service that can serve the park from the remote Princeville parking area.~~ There may also be multiple shuttle providers if it proves to be successful. There is currently some momentum from the County's efforts and there may be a way for multiple agencies to cooperate on a transit system to serve the North Shore. Because of the uncertainty of the shuttle service, the ultimate parking requirements and shuttle stop design for the park are not known at this time. However, this can be mitigated through implementation of various operational strategies and adjusting those operations over time if they fail as discussed in more detail in Sections ~~2.5.1.3~~ 2.5.1.2 and 6.4.2.

The timing of implementation of the proposed Master Plan is subject to CIP budget requests submitted by State Parks and approvals granted by the State Legislature. Therefore, it is not clear exactly when the proposed improvements will be made. ~~Therefore, the Near Term Plan described in Section 2.5.1 will help State Parks implement some of the key management strategies with less funding, while funding is sought for the more extensive long-term improvements.~~

## 8.0 CONSULTATION

### 8.1 PRE-CONSULTATION

At the outset of the project, State Parks initiated public and agency outreach for the development of the Hā‘ena State Park Master Plan through letters and meetings requesting input prior to and during the development of the plan. Pre-consultation contacts are listed below and copies of the comments and responses are provided in Section 11.0. A list of all community and stakeholder meetings is included in Table 2 and meeting notes from the public meetings are attached in Appendix A.

#### ***FEDERAL AGENCIES***

### **8.3.2! DRAFT EIS CONSULTATION**

The Draft EIS has been distributed to the following agencies, individuals, and organizations. This distribution list was approved by OEQC on May 5, 2015 (OEQC File No. 15-052 Hā‘ena State Park I-0128). Additional DLNR divisions and DOH branches were added to the list following OEQC’s distribution list approval as they were forwarded the Draft EIS by DLNR Land Division and DOH EDO, respectively, as noted. The Draft EIS was also sent to various libraries and media outlets to provide availability to the public. Comment letters received for the Draft EIS ~~will be~~ have been incorporated ~~and included~~ in the Final EIS and are attached with their corresponding response letters in Section 13.0 as required by Section 343-5, HRS.

#### **8.3.3! DRAFT EIS PUBLIC MEETING**

A public meeting to incorporate community concerns in the EIS ~~will be~~ was held on August 19, 2015 during the Draft EIS public comment period. Oral comments and questions were fielded during the meeting. Comment cards were distributed to the attendees who were given the option to fill them out and turn them in that evening or mail them to PBR Hawaii. Attendees were also encouraged to distribute the comment cards to those who were not able to attend the meeting and submit them to PBR Hawaii. Email addresses where attendees could submit comments were also shared at the end of the PowerPoint presentation. Substantive written and oral comments received during the meeting will be incorporated into the EIS are summarized below. Written comments that included a mailing address were sent written responses and both

are included in Section 13.0 of the EIS. Written comments that did not include a mailing address were also responded to but not mailed and are included in Section 13.0.

The following summarizes the oral and written comments received and collected during the August 19, 2015 public meeting. They are organized by topic and are individually responded to in Section 13.0.

### **Facilities:**

- The large visitor center is not desired. Seems to cater to tourists and not for locals.
- Like the education center/build a community education "building" to inform people about the land
- No gates blocking the view down the highway.
- No commercial vendors or gift shops.
- No caretaker's cottage. No types of building at Kē'ē (no permanent structures, no pavement at all, no new bathrooms). No fences. No boardwalk. No gates. No bridges.
- Like the integration of natural hazard avoidance, reduced threats by locating boardwalk outside of rockfall area; cultural practices; preservation of important historic and cultural sites; encouraging revitalization of sites; outdoor recreation; education; local advisory committee; scaled-down outdoor recreation impacts and footprint
- Supports the cultural and rehabilitation/restoration of lo'i aspects
- Move the entrance further down the road, do not make the stream the entrance so that locals can still use Cold Pond and stream
- Hope it doesn't desecrate loved one's grave sites
- Limahuli Gardens has a visitor center that explains local history/culture

### **Park Access and Proposed Visitor Limits:**

- Concern regarding limiting access to only 900 people per day. What happens if the 900<sup>th</sup> guest is reached but splits a family or group of friends? Can the limit apply to tourists and not locals?/limit should be set at 500 tourists per day/no limit for locals
- Concern over the limited parking at the park and having the traffic and cars spill over into the County park, along the highway, and down to Makua
- Perhaps one day a week can be closed to non-residences, or provide privileges for Hawaiian organizations
- Concern over limited access during early morning or late afternoons
- Would like to see online ticketing, permit, entry access with set number for visitors and set number for residents
- Require limited permits for tourists/unlimited access for locals and guests
- Do not count walkers and bikers in the daily count (should be free)
- There is fishing at night/allow beach access to walk on at all hours of day for all the people
- Limiting local access is not helping the problem is the number of people visiting Kaua'i
- Keep the white people out
- Applaud the proposed exemption of fishermen and hunters from the visitor limit
- No priority to hunters and fisherman

- No access fees for locals/residents
- No gate guard
- State parks are to be enjoyed by the people, especially residents. Do not discriminate against taxpaying residents to the benefit of cultural practitioners, hunters, and fisherman
- Visitors should have to apply for a day pass to visit the park, but residents should be able to obtain passes valid for one year or longer
- Allow foot and bike access
- Put gates at the start of the actual park to regulate the 500 limit; but allow volunteers/locals with permits (sticker) to enter; second gate at Kumu road, limiting the traffic to all of the land past Hanalei to 1,500 per day, plus local residents
- Threatens access rights by closing areas
- The plan smacks of localism/ detests the twisting of the definition of volunteer to accommodate Hā'ena locals; park belongs to ALL, not just North Shore residents/shame on you for blaming tourists

### **Parking and Shuttle:**

- Is there way to discriminate against rental cars?
- Limit parking and force paid shuttle rides/parking by permit only (with a fee)/50 parking stalls with permits, 50 without
- Force tourists to use the shuttle and get permits, not kama'aina
- Much planning should go into the shuttle aspect of the plan- communication and networking with resorts is critical
- Provide pamphlets for those riding the shuttle explaining cultural significance and environmental sensitivities
- Subsidize shuttle
- Require hotels and time share hotels to provide shuttle service; shuttles paid for by businesses/tourists; require Hawai'i Visitors Bureau to contribute funds to finance shuttle and shuttle infrastructure
- Concerns about parking and whether people, and/or cars will be limited
- All permanent residents get a resident car sticker for access
- Bring back the shuttle
- All North Shore beaches roadside parking need to be policed and ticketed accordingly.
- Stop all traffic in Princeville and supply regular shuttles from before sunrise until after sunset is a better plan and only allow Hawaii residents to drive over Hanalei River Bridge
- Shuttles are a good idea but should incorporate Hanalei into the scheduled service so tourists can stop for food and shopping/shuttles should start at Princeville
- Limit truck/car traffic to 500 per day
- Have shuttles run every 15 minutes, from 8 am- 5 pm; charge parking fees of \$20-30 to park (Hawai'i residents exempt); would result in 90% of current traffic to opt to take shuttle, even residents would
- State or federal money should fund the shuttle system to get people past Hanalei. Tourists staying in Princeville should be shuttled to Kē'ē, Tunnels, Lumahai, and

Hanalei; North Shore hotels and condos should provide transportation from airport to North Shore, then shuttles should move tourists around North Shore

### **Park Management and Visitor Education:**

- Explore specifics of organizations to manage plan.
- Address how monies should be used.
- Information about issues of Kē'ē should be given to visitors in a non-aggressive way before they arrive/educate tourists before they reach Lumahai
- Proposes a day or half day of rest for the park
- Note: you have defined the limits of acceptable change (do not use the term carrying capacity)
- No halau own Kē'ē, all kumu must respect Hā'ena tradition
- Do not allow any plants to be touched
- Waiakapala'e is for women
- No new age practitioners should be considered as cultural religious practitioners
- Overly controlled by the State, removes the natural joy of the area
- Community should be informed before plan is implemented
- Continue community advisory committee permanently

### **Natural Resources:**

- Above and beyond parking concerns are the conservation considerations (i.e. a struggling, environmentally compromised coral reef area)
- Threatens wildlife, burial sites, and deface mountain/goes against all conservation purposes
- Bad area for tsunami zone

### **General Comments:**

- Do not support/approve the plan.
- In support of the plan/For the most part like the plan/in total support of the plan.
- Master plan for the whole region is needed/EIS needed for whole region
- Anti-government sentiment/consult lawful Hawaiian government/no federal government involvement
- Interested in volunteering/think volunteer provision is really important
- Restore the damage that has already occurred
- Unsure if the plan will work
- Proposes more police activity/patrolling
- Get with all Hā'ena families and get responses and ideas in the plan
- There were both positives and negatives with this plan
- Maintain an area that is truly allowed to run wild (Aldo Leopold-style)
- Request more time to respond
- Stop rampant promoting and advertising of the area/capping the visitor count through HTA and Kaua'i Visitor Bureau should be considered, even at the risk of diminished tourism revenue

- Something has to be done-see the extreme number of cars and people and damage to the trail and ocean; plan can be fine-tuned later
- Likes that there are options and that the plan is adaptive
- Mahalo for helping protect this beautiful island/ appreciate the hard work that has gone into planning

## **9.0 LIST OF PREPARERS AND CONSULTANT REPORTS**

The Draft EIS was prepared by PBR HAWAII and Associates, Inc. with offices located at 1001 Bishop Street, Suite 650, Honolulu, HI 96813.

Several key technical consultants were contracted to provide specific assessments and recommendations related to the proposed Master Plan. These consultants and their specialties are listed below:

- AECOM/Special Civil Engineering Services – Rockfall Hazards
- Austin Tsutsumi and Associates, Inc. – Traffic Engineering
- Geometrician Associates, LLC – Biological Survey
- SWCA Environmental Consultants – Marine Resources
- Maria Kaimi Orr/Kaimipono Consulting Services, LLC – Cultural Impact
- Kennedy/Jenks Consultants – Civil Engineering

State Park’s archaeologists and staff assisted in the preparation of the archaeological sections of the EIS and Master Plan report as well as the interpretive and educational opportunities section of the Master Plan report.

## 11.0 PRE-CONSULTATION COMMENTS AND RESPONSES

The request for input at the beginning of the project was sent to the following agencies, organizations, and individuals indicated in the table below with a check mark (√). Comments and input were collected from August 11, 2008 to October 22, 2008 with one follow up letter dated November 10, 2011. If comments were received, the date of the comment is indicated in the table next to the respective agency, organization, or individual's name. Copies of the comment letters and the respective responses are attached. The letter from the NPS was sent in response to State Park's request for review of an earlier draft of the Master Plan (August 2013) for consistency with LWCF requirements and not part of the EIS pre-consultation request. It is included at the end of the pre-consultation letters for reference.

Re: Pre-consultation for the Department of Land and Natural Resources  
(DLNR) proposed Ha'ena State Park Master Plan and Environmental  
Impact Statement, Ha'ena, Kauai, Hawaii

In response to your pre-consultation notice dated August 11, 2008, thank you for the early opportunity to provide comments on the proposed master plan and environmental impact statement for the Ha'ena State Park, Kauai. The project is comprised of 64 acres within the park and adjacent near shore water and Ke'e Beach.

We would like to call your attention to: (1) State energy conservation goals; and, (2) energy and resource efficiency and renewable energy and resource development.

- 1. State energy conservation goals.** Project buildings, activities, and site grounds should be designed and/or retrofitted with energy saving considerations. The mandate for such consideration is found in Chapter 344, HRS ("State Environmental Policy") and Chapter 226 ("Hawaii State Planning Act"). In particular, we would like to call to your attention HRS 226 18(c) (4) which includes a State objective of promoting all cost-effective energy conservation through adoption of energy-efficient practices and technologies.
- 2. Energy and resource efficiency and renewable energy and resource development.** We recommend that the planning and preliminary design for the project be conducted following sustainable development principles and guidelines and OEQC 1999 Planner's Checklist. We suggest that the plan look for opportunities for off-grid energy such as photovoltaic systems for lighting.

PBR Hawaii & Associates, Inc.  
August 25, 2008  
Page 2

Our website (<http://www.hawaii.gov/dbedt/info/>) provides detailed information on guidelines, directives and statutes, as well as studies and reports on aspects of energy efficiency and renewable energy. Please also do not hesitate to contact Carilyn Shon, Energy Efficiency Branch Manager, at telephone number (808) 587-3810, for additional information on LEED, energy efficiency, and renewable energy resources.

Sincerely,

  
Elizabeth Corbin  
Acting Administrator

**SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE  
PARK MASTER PLAN AND ENVIRONMENTAL IMPACT  
STATEMENT, HĀ'ENA, KAUA'I, HAWAII**

Dear Mr. Glick,

Thank you for your agency's letter dated August 27, 2008 regarding the above referenced pre-consultation request. As the planning consultant for the applicant, State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the comments from the Energy Division, providing information regarding State energy conservation goals and resource efficiency. The proposed master plan includes several recommendations for resource conservation and explores opportunities for use of solar and micro-hydro to help power proposed facilities.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

Dear Ms. Yuen:

Pre-Consultation for Proposed Ha'ena State Park Master Plan,  
Environmental Impact Statement, Ha'ena, Kaua'i, Hawai'i

Thank you for the opportunity to comment on this project. After review of your letter and the accompanying map of this project, we recommend that a 25 sq. ft. area be set aside for possible future siren installation. Beyond that, we have no further comments to make at this time.

We anticipate reviewing the draft Environmental Impact Statement when it is completed, and will make any other appropriate recommendations at that time. If you have any questions, please call Mr. Richard Stercho, Hazard Mitigation Planner, at (808) 733-4300, ext. 583.

Sincerely,

  
EDWARD T. TEIXEIRA  
Vice Director of Civil Defense

Honolulu, HI 96813-3484

**SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII**

Dear Mr. Mayne,

Thank you for your agency's letter dated August 26, 2008 regarding the above referenced pre-consultation request. As the planning consultant for the applicant, State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the comments from State Civil Defense (SCD), requesting that a 25-foot square area be set aside for possible future siren installation. We have accommodated this request in the master plan, noting that the area near the main parking area can accommodate a 25-foot area for possible pole installation should it be deemed necessary by SCD.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Assessment and subsequent Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

Dear Ms. Yuen:

Proposed Haena State Park Master Plan and  
Environmental Impact Statement, Haena, Kauai  
TMKs: (4) 5-9-001:022 (por.) and 025 and (4) 5-9-8:001

Reference is made to your August 11, 2008, letter requesting comments as to whether the proposed project will have any impacts on the Commission on Water Resource Management's (Commission) existing or proposed projects, plans, policies and programs.

The Commission on Water Resource Management (Commission), Stream Protection and Management Branch, has the responsibility to protect stream channels from alteration whenever practicable to provide for fishery, wildlife, recreational, aesthetic, scenic, and other beneficial instream uses in the State of Hawaii under the authorization of the State Water Code (Code), Chapter 174C, Hawaii Revised Statutes, and Chapter 13-169, Hawaii Administrative Rules (Protection of Instream Uses of Water).

Limahuli Stream flows through the National Tropical Botanical Garden (NTBG) and Haena State Park. In 1977, the Commission approved NTBG's application to construct a new stream diversion and petition to amend the interim instream flow standard (PAIIFS) to divert approximately 150 gallons per minute (GPM) at the 320-foot elevation and to restore approximately 200 GPM at the 180-foot elevation of Limahuli Stream. The approved diversion is used to irrigate the upper grounds of Limahuli Garden and an existing kalo loi.

Any new or increased diversion of water from Limahuli Stream will require one or more of the following permits from the Commission:

- Stream Channel Alteration Permit (SCAP)
- Stream Diversions Works Permit (SDWP)
- Petition to Amend Interim Instream Flow Standard (PAIIFS)

Should you have any questions, please contact Robert Chong of the Stream Protection and Management Branch at 587-0266, or by email at: robert.k.chong@hawaii.gov.

Sincerely,

KEN C. KAWAHARA, P.E.  
Deputy Director

February 22, 2015

William M. Tam, Deputy Director  
Commission on Water Resource Management  
1151 Punchbowl St. Rm. 227  
Honolulu, HI 96813

**SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HĀ ENA STATE PARK  
MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT,  
HĀ ENA, KAUA I, HAWAII I**

Dear Mr. Tam,

Thank you for your agency's letter dated August 25, 2008 regarding the above referenced pre-consultation request. As the planning consultant for the applicant, State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the comments from the Commission's Stream Protection and Management Branch indicating that any new or increased diversion of water from Limahuli Stream will require one or more of the following permits: Stream Channel Alteration Permit; Stream Diversion Works Permit; and/or Petition to Amend Interim Instream Flow Standards.

While the master plan does not propose any specific stream alterations, two suggested elements may involve Limahuli's stream waters or its riparian area. First, riparian restoration work is identified as potentially beneficial to the stream and its aquatic life. Specific restoration plans have not been prepared at this time. However, it is anticipated that this work will not involve instream activities and would more likely involve activities such as removal of alien trees and replanting appropriate natives for the location.

The master plan also suggests that alternative sources of energy be considered to supply power to the site facilities. One potential alternative energy source may be micro-hydro power. We acknowledge that water use for this purpose may require a permit(s) from the Commission.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

Re: Pre-Consultation for the proposed Ha'ena State Park Master Plan and Environmental Impact Statement, Ha'ena, Kauai, Hawai'i.

We received a copy of the pre-consultation letter dated August 11, 2008 from Ms. Andrea Erichsen, DLNR-DOFAW Kauai Seabird Habitat Conservation Plan Coordinator on August 27, 2008.

We provide the following comments on the proposed project:

1. Federal and State listed threatened and endangered waterfowl species such as Hawaiian coot (*Fulica alai*), Hawaiian gallinule (*Gallinula chloropus*), Hawaiian stilt (*Himantopus mexicanus*) and Hawaiian duck (*Anas wyvilliana*) are known to use the wetland areas for feeding and possibly nesting. The Hawaiian goose (*Nesochen sandvicensis*), although not documented in the park proper, may occasionally visit the area for feeding. Care must be taken not to disturb nesting sites during planned development projects near the wetlands.
2. Federal and State listed T-E seabirds species are not known to exist in the proposed project area, however, the threatened Newell's shearwater (*Puffinus newelli*), the endangered Hawaiian dark-rumped petrel (*Pterodroma phaeopygia*), and candidate species, Band-rumped storm petrel (*Oceanodroma castro*) are known to transit these areas at night to and from their mountain nesting areas and the sea. Because of their nocturnal habit, and their known attraction to man-made lights, it is recommended that seabird safe lights be installed where lighting may be needed. As much as possible, artificial lights including parking lights and facility lights should be minimized or reduced during the fledging season of September to December. Please consult with Ms. Andrea Erichsen for seabird friendly lighting information at [Andrea.L.Erichsen@hawaii.gov](mailto:Andrea.L.Erichsen@hawaii.gov) or call her at 808-245-9160.

3. The federally endangered Hawaiian hoary bat (*Lasiurus cinereus*) may transit the area at night, but are not likely to be impacted by the proposed project.
4. We recommend to strategically placing educational signage to inform the general public of native wildlife in the area.
5. We recommend that night time construction activities using overhead construction lights be avoided as much as possible during the period of September to December due to the Kauai seabird light attraction problem.
6. The Na Pali Coast trail at the end of the road near Ke'e beach is an important public hunter access route to the Na Pali Coast State Park. The Na Pali Coast State Park-Unit G is open to year-round, daily archery hunting for feral pig and feral goat. Because of the year-round hunting, the trail should be kept open so that hunters may enter and exit the park. It is not uncommon for hunters to start their trek at 4:00 a.m. and return after dark. Because vehicle parking has been an issue in the park, it is important that the proposed plan designate at least 2 parking stalls for public hunters near the Na Pali Coast trailhead. The reason for this is because hunters returning for the NPC are packing out harvested game and having their vehicles near the trailhead will allow them to quickly store the game in their vehicle out of view from the non-hunting public.

If you have any questions, please feel free to contact me at 274-3433. Please place my email address on your list. Mahalo. [thomas.j.kaiakapu@hawaii.gov](mailto:thomas.j.kaiakapu@hawaii.gov).

Thomas Ka'iakapu, Kauai Wildlife Manager  
DOFAW, Kaua'i District  
3060 Eiwa Street, Room 306  
Lihue, HI 96766

**SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HÄ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HÄ'ENA, KAUA'I, HAWAII**

Dear Mr. Ka'iakapu,

Thank you for your letter dated August 28, 2008 regarding the above referenced pre-consultation request. As the planning consultant for the applicant, State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge DOFAW's comments.

We acknowledge that federal and state listed threatened and endangered species may utilize the site. In preparation for the master plan, a flora and fauna survey was conducted by Geometric Associates, LLC in 2009. The survey included a physical survey of flora and fauna; a review of previous surveys of the area; report of the results describing plant communities and habitats; and, discussion of potential effects from increased recreation on wildland resources.

Thirteen species of birds were observed during the 2009 survey including the endangered Hawaiian Duck (Koloa Maoli, *Anas wyvilliana*), two indigenous shorebirds (Kolea, *Pluvialis fulva* and 'Ulili, *Heteroscelus incanus*) and an indigenous seabird (Koa'e Kea, *Phaethon lepturus dorotheae*). All other birds sighted were non-native introductions.

Additional species of seabirds, waterbirds, shorebirds and forest birds that are federally listed as endangered or threatened may use the park. The wetlands may also provide feeding and nesting areas to the indigenous Black-crowned Night-heron ('Auku'u; *Nycticorax nycticorax hoactli*).

We acknowledge that seabirds, including the threatened Newell's shearwater, endangered Hawaiian petrel and species of concern, the band-rumped storm petrel may fly over the site. Further, we acknowledge that seabirds are attracted to artificial lights, flying around the light source until they collide with objects or collapse from exhaustion, making them vulnerable to predators once on the ground. To avoid any impact to seabirds, the master plan does not include any parking lot lighting. Any security lighting that is deemed necessary at the ECC will be shielded downward to avoid any impacts to seabirds.

Thomas Ka'iakapu

**PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII**

Page 2 of 2

Other federally endangered waterbirds that would likely use the wetlands are the Black-necked Stilt (Ae'o; *Himantopus mexicanus knudseni*), Hawaiian Coot ('Alae ke'oke'o; *Fulica alae*), Hawaiian Moorhen ('Alae'ula; *Gallinula chloropus sandvicensis*), and Nēnē (*Branta sandvicensis*). To avoid impacts to waterbirds no physical changes or new activities are proposed for the site's wetlands. However, there has been interest on the part of some community members to restore the wetlands (which are believed to be former Hawaiian fishponds or used for wet cultivation of taro) for ecological or cultural use. The master plan recommends that before any wetland restoration activities occur, that an analysis of the costs, benefits and liabilities associated with intentionally creating habitat for endangered waterbirds be conducted.

The 2009 biological survey also reports that although not sighted during the survey, the endangered Hawaiian hoary bat (*Lasiurus cinereus semotus*), probably utilizes Hā'ena State Park as it has been observed in the Hanalei and Princeville areas. To avoid any impacts to the endangered Hawaiian hoary bat, no large woody shrubs or trees over 15 feet in height will be removed during the bat pupping months.

We also acknowledge your suggestion to strategically place educational signage to inform the general public of the area's wildlife. Master plan recommendations include expanding the interpretive programming in the park, including interpretive signage and a required stop in the proposed Education & Cultural Center to gain a greater understanding of the park's many resources – ecological, cultural and archaeological.

We further acknowledge the information provided in your letter relating to the importance of the Nāpali trailhead as a hunter access for year-round archery hunting of feral pig and goat. Recommendations of the master plan include limiting access to the parking area nearest Kē'ē beach to those requiring special access, including ADA, lifeguards and cultural practitioners (to include fishermen/women and hunters).

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Assessment and subsequent Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

LOG NO: 2008.3780  
DOC NO: 0808NM48  
Archaeology

Dear Ms. Yuen:

**SUBJECT: Chapter 6E-8 - Historic Preservation Review – Preconsultation on Haena State Park Master Plan and EIS**  
**Haena Ahupua'a, Hanalei Districts, Island of Kaua'i**  
**TMK: [4] 5-9-001: 22, 5-9-008: 001**

The aforementioned is regarding the Master Plan and EIS for Haena State Park. There are several significant historic sites in Haena State Park as your letter of August 11, 2008 clearly points out, in addition, there is a lo'i complex with lokos, which still need more archaeological mitigation (i.e., monitoring plan, burial treatment plan, data recovery plan, preservation plan) shall be submitted for review and approval.

We look forward to reviewing a more refined plan than the latest draft, at which point we can then give you some better comments. If you have any questions please call me at 692-8021.

Aloha,

Nancy McMahon, Deputy Administrator  
State Historic Preservation Division

Alan Downer, Administrator  
State Historic Preservation Office  
Kakuhihewa Building, Room 555  
601 Kamokila Blvd.  
Kapolei, HI 96707

**SUBJECT: SHPD LOG NO: 2008.3780; DOC NO: 0808NM48, PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII**

Dear Mr. Downer,

Thank you for your agency's letter dated August 31, 2008 (LOG No. 2008.3780, DOC No. 0808NM48) regarding the above referenced pre-consultation request. As the planning consultant for the applicant, State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the comments from SHPD, indicating that additional archaeological mitigation will be required for the park's agricultural complex.

In preparing the Master Plan, State Parks archaeology staff assisted in compiling previous studies and identified gaps in archaeological research. According to State Parks archaeology staff, most of the park has been the subject of systematic archaeological surveys beginning in the early 1970's when the park was first acquired and subsequent surveys have been conducted for various projects or initiatives. Only a few gaps remain. Extensive archaeological excavations were conducted within the coastal sand dunes and inland irrigated lo'i system. One house site was also excavated. More recent archaeological work augmented early efforts to document the area's most noted sites, particularly the heiau, Lohiau's house site, and the caves, and to portray their traditional and cultural significance. Most recently, archaeological testing was conducted in the vicinity of the comfort station prior to recent improvements to the individual waste water system. The traditional significance of the park as a whole, as well as that of individual features within or immediately adjacent to the park, can be drawn from published and unpublished materials and an overview of the park's recorded traditions commissioned by State Parks soon after the park was acquired. State Parks archaeological staff has concluded that when combined, existing information is sufficient to characterize the basic distribution pattern of archaeological sites and other historic property types in the park.

For the preparation of the master plan, State Parks' archaeology staff utilized these previous studies to develop an archaeological sensitivity map and help guide proposed development to areas which have been previously disturbed and away from known areas of sensitivity. Impacts to archaeological resources will further be avoided through archaeological testing and monitoring prior to all earth disturbing activities, regardless of location within the park. The master plan and the accompanying EIS are being prepared primarily as a planning tool and will address development projects only in concept. If any of the projects contemplated are eventually funded and designed, they would be subject to the historic preservation project review process at that time and to other applicable state and county review requirements.

REF:OCCL:DH

Ms. Kimi Yuen  
PBR Hawaii  
ASB Tower 1001 Bishop Street, Suite 650  
Honolulu, Hawaii 96813

Dear Ms. Yuen:

SUBJECT: Request for Comments Regarding Proposed Haena State Park Master Plan and Environmental Impact Statement, Haena District, Island of Kauai, Subject Parcels TMK's: (4) 5-9-001:022, 5-9-008:001, and 5-9-001:025

The Department of Land and Natural Resources (DLNR), Office of Conservation and Coastal Lands (OCCL) is in receipt of your letter dated, August 11, 2008, for a request for comments regarding the proposed Haena State Park Master Plan and Environmental Impact Statement (EIS), Haena District, Island of Kauai, Subject Parcel TMK: (4) 5-9-001:022 and 5-9-008:001.

The OCCL notes subject parcels TMK's (4) 5-9-001:001 and 5-9-001:025 are located in the State Land Use (SLU) Conservation District, Resource subzone; subject parcel TMK: (4) 5-9-001:022 is located in the Conservation District, Resource and Protective subzones.

The OCCL notes Conservation District Use Application (CDUA) KA-1373 was approved by the Board of Land and Natural Resources (BLNR) on March 12, 1982 for the Division of State Parks (DSP). The OCCL is unsure at this time whether further CDUA actions are required until the Master Plan and EIS components are conceptualized. However, the OCCL notes you should contact the following community organizations: Hui Ho'omalu I Ka'aina (Maka'ala Ka'aoomona at [makaala@hawaiian.net](mailto:makaala@hawaiian.net)), Hui Maka'ainana o Makana (Jeff Chandler at [Lohiau2@hotmail.com](mailto:Lohiau2@hotmail.com), National Tropical Botanical Gardens Limahuli Garden and Preserve (Kawika Winter at [kwinter@ntbg.org](mailto:kwinter@ntbg.org)), and Community Conservation Network (Atta Chandler-Forest 808-826-6118), and the DLNR Haena Stewardship Management Group (Megan Juran at 808-635-1633) that may contribute comments to the Master Plan and EIS. Should you have any questions please call Dawn Hegger of the Office of Conservation and Coastal Lands at 808-587-0380.

Sincerely,

Samuel J. Lemmo, Administrator  
Office of Conservation and Coastal Lands

SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HĀ'ENA, KAUAI, HAWAII

Dear Mr. Lemmo,

Thank you for your letter dated September 15, 2008 regarding the above referenced pre-consultation request. As the planning consultant for the applicant, State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the comments from the Office of Conservation and Coastal Lands, indicating that the subject parcels, TMK (4) 5-9-009:001 & 5-9-001:025 are in the Conservation District, Resource subzone and that TMK (4) 5-9-001:022 is in the Resource and Protective subzones.

We further acknowledge that in 1982, a Conservation District Use Application was approved by the Board of Land and Natural Resources (CDUA KA-1373). We also acknowledge that at the time of pre-consultation for the master plan, the OCCL did not have enough information to determine whether further CDUA actions are required. To that end, your agency will be provided a copy of the Environmental Assessment and any subsequent Environmental Impact Statements for review and comment.

Finally, we acknowledge OCCL's referrals to persons representing local community organizations. The master planning process included sustained public outreach, including formation of a 32-member Master Plan Community Advisory Committee (MPAC). The individuals identified in your letter are either members of the MPAC or otherwise contributed to the development of the plan as State Park staff. Notes from the MPAC meetings as well as general community meetings will be included as an appendix to the environmental documents.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

Dear Ms. Yuen:

Subject: Haena State Park Master Plan  
Environmental Impact Statement – Early Consultation

Thank you for requesting the Department of Transportation's (DOT) review of the subject project.

DOT's initial comments are as follows:

1. The subject project will impact traffic on Kuhio Highway (Route 560) in the vicinity of the state park.
2. The DOT understands that a Master Plan (MP) and a Draft Environmental Impact Statement (DEIS) will be prepared for the subject project. The DEIS should include a traffic assessment or traffic impact analysis report (TIAR), which covers both project impacts and mitigation measures attributable to the project.
3. The DOT Highways Division is particularly concerned with parking within Haena State Park. The MP & DEIS should address this and other concerns including, but not limited to, increase in traffic resulting from bicyclists, hikers & campers, drainage and surface runoff, varying park hours, overnight camping, etc.

Ms. Kimi Mikami Yuen  
Page 2  
September 4, 2008

STP 8.2979

The DOT will provide additional comments upon receipt of the Master Plan and DEIS. DOT requests four (4) copies of these documents.

Very truly yours,

BRENNON T. MORIOKA, PH.D., P.E.  
Director of Transportation

Ford Fuchigami, Director  
State Department of Transportation  
869 Punchbowl Street  
Honolulu, HI 96813-5097

**SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII**

Dear Director Fuchigami,

Thank you for your agency's letter dated September 4, 2008 regarding the above referenced pre-consultation request. As the planning consultant for the applicant, State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the comments from the Department of Transportation indicating that the project will impact traffic on Kūhiō Highway (Route 560) in the vicinity of the park. We also acknowledge DOT's concerns about parking inside the park itself. We further acknowledge that the DOT recommends a Traffic Impact Assessment Report (TIAR) addressing project impacts and mitigation measures; and that the master plan should address other impacts such as parking impacts and impacts from increases in bicyclists, hikers and campers as well as drainage and surface runoff, varying park hours, overnight campers, etc.

The master plan recognizes that there are serious traffic and parking issues inside and outside Hā'ena State Park. The park is accessed by Kūhiō Highway, a two lane roadway with gravel and asphalt concrete pavement shoulders. The highway enters into the park over Limahuli stream by a single lane bridge measuring 10-foot wide by 12-foot long. Once in the park, the highway resumes to two lanes, measuring approximately 24 feet in width. The highway within the park has no pedestrian or bicycle amenities and illegal parking on both sides of the highway forces pedestrians to compete with moving vehicles.

Within the park, there are two designated parking areas, one approximately 800 feet from the park entrance and one at the terminus of the highway near Kē'ē beach. The parking lot nearest the park entrance is dirt and gravel and measures approximately 30,000 square feet in area, it is unsigned and unstriped. Parking patterns are inefficient and haphazard. The parking area near Kē'ē beach is hard-packed dirt on each side of the highway. Two paved ADA accessible spaces are paved, striped and signed.

GLENN OKIMOTO

PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII

Page 2 of 2

Because traffic and parking is of such great concern, a sub-committee of the Master Plan Community Advisory Committee was convened to look at various parking and traffic mitigation measures. The sub-committee meetings included attendance by DOT-Kaua'i Staff, County transit agency staff as well as the project's traffic engineer, Austin, Tsutsumi & Associates, Inc. (ATA). The outcome of the discussions with the community is a master plan that includes an alternative to establish a limit on the number of visitors to the park per day and/or institute a shuttle bus system to serve the majority of park visitors.

A Traffic Impact Analysis Report (TIAR) was prepared by ATA to help inform the master plan process and address mitigation measures. The TIAR includes vehicle counts, discussion of existing traffic operating conditions, parking conditions, projected traffic impacts for the proposed master plan and traffic/parking management options, including a shuttle. These issues along with the proposed mitigation measures will be discussed in the Environmental Impact Statement (EIS).

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

Dear Ms. Yuen:

Thank you for the opportunity to comment on the proposed Hā'ena State Park Master Plan and Environmental Impact Statement for Hā'ena, Kaua'i, Hawai'i.

As you may know, the "Hawai'i Tourism Strategic Plan: 2005-2015" (TSP) includes nine strategic initiatives identified as critical to working towards the vision for Hawai'i's visitor industry future. One of those initiatives relates to the need to "respect, enhance and perpetuate Hawai'i's natural resources to ensure a high level of satisfaction for residents and visitors."

In our efforts to support work in this area, the Hawai'i Tourism Authority (HTA) has provided funding to both the Hawai'i State Department of Land and Natural Resources, to mitigate immediate needs at Hā'ena State Park, and the County of Kaua'i, to address needs at the County Park at Hā'ena. Both of these parks were identified as priority sites in the Natural Resources Assessment conducted on behalf of the HTA in December 2003.

These resources are invaluable from multiple perspectives. They support Hawai'i's residents' quality of life, provide recreational opportunities for residents and visitors, and add to Hawai'i's allure as a visitor destination. From both a visitor perspective and, more importantly, from a "protect the resource" perspective, careful planning that "balances the needs of public usage of the park's recreation resources with the protection and preservation of the significant cultural, natural and scenic resources" is critical and in line with the TSP and HTA's current efforts.

If you have any questions, please do not hesitate to contact me or Muriel Anderson at 973-2269.

Sincerely,

Rex D. Johnson  
President and Chief Executive Officer

**SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII**

Dear Mr. Williams,

Thank you for your agency's letter dated September 2, 2008 regarding the above referenced pre-consultation request. As the planning consultant for the applicant, State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the comments from HTA indicating that the Hawai'i Tourism Strategic Plan 2005-2015 includes an initiative to, "respect, enhance and perpetuate Hawai'i's natural resources to ensure a high level of satisfaction for residents and visitors". Additionally, we acknowledge that the HTA Natural Resources Assessment identified Hā'ena State Park as a priority site and that the HTA has provided funding to State Parks to address needs at the park.

Recognizing the importance of Hā'ena to Hawaiian history and culture along with the many known archaeological and ecological resources in the park, the Master Plan endeavors to elevate consideration for these resources in both site design and management actions. A copy of the proposed master plan will be provided to you with the environmental documents.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

**RE: Pre-consultation request for the proposed Hā'ena State Park Master Plan and Environmental Assessment, Hā'ena, Kaua'i, TMKS: 5-9-01: por. 22 and 5-9-08:1.**

Aloha e Kimi Mikami Yuen,

The Office of Hawaiian Affairs (OHA) is in receipt of the above-mentioned letter dated August 11, 2008. The state Department of Land and Natural Resources Division of State Parks has commissioned the development of a master plan and environmental impact statement (EIS) for the 64-acre Hā'ena State Park. The new master plan will refine a previous plan for the area, and the EIS will balance public usage of the park with the protection of the area's cultural, natural and scenic resources. OHA has reviewed the project and offers the following comments.

OHA asks that the Ceded Lands status of all parcels affected by the project be clearly indicated in both the master plan and the EIS to assist the public review process of these documents. Ceded Lands hold a considerable amount of sentimental, historical and legal significance for Native Hawaiians and OHA. These lands were illegally taken from the Hawaiian Kingdom after the 1893 overthrow and later transferred ("ceded") by the United States government to the State of Hawai'i upon statehood. Today, the state holds the Ceded Lands corpus in trust for Native Hawaiians and the general public.

In accordance with Chapter 343 of the Hawaii Revised Statutes (HRS), the applicant must complete a Cultural Impact Assessment (CIA) for the project. The CIA shall include information relating to the practices and beliefs of the Native Hawaiians who once inhabited this area, and it is recommended that the community be involved in this assessment, in accordance with Act 50, Session Laws of Hawaii 2000.

Kimi Mikami Yuen  
August 27, 2008  
Page 2

In addition, OHA requests that a comprehensive archaeological inventory survey for the project area be conducted and submitted to the Department of Land and Natural Resources – Historic Preservation Division for review and approval. OHA should be allowed the opportunity to comment on the criteria assigned to any cultural or archaeological sites identified within the archaeological inventory survey. Consideration must also be afforded to any individuals accessing the project area for constitutionally protected traditional and customary purposes, in accordance with the Hawai'i State Constitution, Article XII, section 7.

Thank you for the opportunity to comment. If you have further questions, please contact Sterling Wong by phone at (808) 594-1816 or e-mail him at [sterlingw@oha.org](mailto:sterlingw@oha.org).

'O wau iho nō me ka 'oia 'i'o,

Clyde W. Nāmu'o  
Administrator

February 22, 2015

Dr. Kamana'opono Crabbe, CEO  
Office of Hawaiian Affairs  
560 N. Nimitz Highway, #200  
Honolulu, HI 96817

**SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA  
STATE PARK MASTER PLAN AND ENVIRONMENTAL  
IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII**

Dear Dr. Crabbe,

Thank you for your agency's letter dated August 28, 2008 regarding the above referenced pre-consultation request. As the planning consultant for the applicant, State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the comments from OHA, requesting that the Ceded Lands status of all parcels affected by the project be indicated on the plan and in the EIS; that a Cultural Impact Assessment be prepared and that an Archaeological Inventory Survey (AIS) be conducted and submitted to the State Historic Preservation Division (SHPD).

Recognizing the importance of Hā'ena to Hawaiian history and culture along with the many known archaeological and ecological resources in Hā'ena State park, the Master Plan endeavors to elevate consideration for these resources in both site design and management actions. In an effort to listen and expand understanding of Hā'ena's importance to the community, a 32-member Master Plan Community Advisory Committee (MPAC) was formed. This group has convened on several occasions to work together with State Parks in development of a plan that balances outdoor recreation with safety and respect for the park's many layered resources. We acknowledge with appreciation that the MPAC includes OHA representation. MPAC and general community meeting notes are included within the appendices of the Environmental Assessment.

As a result of the MPAC discussions, a key Master Plan recommendation is that a Cultural Advisory Group be formed and consulted on park management actions, construction projects as well as the park's interpretive programs. The enhanced oversight is expected to result in improved interpretation of the park's cultural, ecological and archaeological resources, and as a result, a visiting public that is more aware and sensitive to the importance and fragility of these resources.

With respect to ceded lands, to our knowledge the master plan area does not contain any ceded lands. Title research conducted for the master plan is summarized in the Environmental Assessment and its supporting Cultural Impact Assessment (CIA).

Kamana'opono Crabbe

**PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER  
PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII**  
Page 2 of 2

With regard to archaeological resources, State Parks relied on the many previous studies conducted throughout the park to help inform the master plan. State Parks' archaeology staff assisted in compiling previous studies and identified gaps in archaeological research. Additionally, State Parks' archaeology staff utilized these previous studies to develop an archaeological sensitivity map that helped to guide proposed new development activities to areas which have been previously disturbed and away from known areas of sensitivity. The master plan and its accompanying EIS are being prepared primarily as planning tools and will address development projects only in concept. If any of the projects contemplated are eventually funded and designed, they would be subject to the historic preservation project review process at that time and to other applicable state and county review requirements. Impacts to archaeological resources will further be avoided through archaeological testing and monitoring prior to all earth disturbing activities, regardless of location within the park.

Thank you for OHA's contributions to the Master Plan Community Advisory Committee and to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

Subject: Technical Assistance Regarding the Proposed Haena State Park Master Plan and  
Draft Environmental Impact Statement, Kauai, Hawaii

Dear Ms. Yuen:

Thank you for your letter, received August 12, 2008, providing the opportunity for input on the development of a master plan and draft Environmental Impact Statement for Haena State Park. You requested comments as to whether the development of a master plan could have an impact on any existing or proposed U.S. Fish and Wildlife Service (Service) projects, plans, policies or programs.

The Service contributed funding to the development and implementation of a Community Based Marine Management Area (CMMA) for the Haena region, including waters off of Haena State Park. The intent of the CMMA is to engage the local community in Haena in marine conservation practices and to assist them in planning, managing and monitoring a community-based marine managed area. Project goals include establishing the Marine Management Area with effective rules and active management and the establishment of effective monitoring approaches to track the progress of the CMMA. The boundaries of the marine area, which are established in State regulations, include the waters in front of the park. The proposed Master Plan for Haena State Park should be compatible with the goals and community involvement established by the CMMA. We recommend community members involved in the CMMA be involved in the development of the proposed Master Plan.

We searched our databases, including data compiled by the Hawaii Biodiversity and Mapping Program, in order to identify species in the proposed project area that are protected under the Endangered Species Act (ESA) of 1973 [16 U.S.C. 1531-1544], as amended. There is no designated critical habitat in project area. One endangered plant species (*Peucedanum sandwicense*) is reported from the area, and three bird species collectively referred to as seabirds, may fly over the area: the threatened Newell's shearwater (*Puffinus auricularis newelli*); the endangered Hawaiian petrel (*Pterodroma phaeopygia sandwichensis*); and a species of concern,

Ms. Kimi Mikami Yuen

2

the band-rumped storm petrel (*Oceanodroma castro*). Seabirds are attracted to artificial lights and they fly around the light source until they either collide with a tall object such as an adjacent building, light pole, wire, or fall to the ground from exhaustion. Once grounded, they are vulnerable to predators or often struck by vehicles along roadways.

To assist you in developing your project to minimize impacts to species listed under the ESA, we provide the following guidance. We recommend that surveys be conducted by a biologist familiar with Kauai's flora and fauna to document the presence of listed species in the proposed project area. To minimize impacts to listed seabirds, we recommend that all existing and additional lighting be downshielded and that motion detectors and timers be installed on all light fixtures.

The proposed Haena State Park Master Plan and EIS are programmatic in nature and are planning documents. If, as project planning progresses, you determine actions that may adversely impact federally listed species or critical habitats, please contact our office for further assistance. If you have questions regarding these comments, please contact Megan Laut, Fish and Wildlife Biologist, Consultation and Technical Assistance Program (phone: 808-792-9400, fax: 808-792-9581).

Sincerely,

Christa Russell

**SUBJECT: USFWS FILE: 2008-TA-0305  
PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA  
STATE PARK MASTER PLAN AND ENVIRONMENTAL  
IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII**

Dear Ms. Thorson,

Thank you for your agency's letter dated August 29, 2008 (2008-TA-0305) regarding the above referenced pre-consultation request. As the planning consultant for the applicant, State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the information pertaining to the Service's involvement with the Community-Based Marine Management Area (CMMA) (also referred to as the Hā'ena Community-Based Subsistence Fishery). We further acknowledge the recommendation that the master plan be compatible with the CMMA and that community members involved in the CMMA be involved in the development of the Master Plan.

In an effort to develop a plan that balances outdoor recreation with safety and respect for the park's ecological, cultural and archaeological resources, a 32-member Master Plan Community Advisory Committee (MPAC) was formed. This group includes individuals involved with the CMMA. The MPAC has convened on several occasions to work together with State Parks in development of a plan. MPAC and general community meeting notes will be included in Environmental Impact Statement documents. The MPAC members involved with the CMMA provided insights to the master plan physical layout and management recommendations so that the plan does not interfere with the goals of the CMMA.

We further acknowledge that in your agency's letter, one endangered plant species (*Peucedanum sandwicense*) is reported from the area and your agency recommends that a biological survey be conducted for the site. In preparation for the master plan, a flora and fauna survey was conducted by Geometrician Associates, LLC in 2009.

USFWS FILE: 2008-TA-0305

PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII

Page 2 of 3

The survey included a physical survey of flora and fauna; a review of previous surveys of the area; report of the results describing plant communities and habitats; and, discussion of potential effects from increased recreation on wildland resources. The survey suggests that human disturbance for agriculture and habitation over the last centuries probably changed the vegetation within the park and that the present vegetation is a haphazard collection of natives, cultivated plants and a variety of alien plants. The biological survey report identifies eleven vegetation zones in the park and documents the zones in a map. The survey report also includes a table of plants identified in and near the park. *Peucedanum sandwicense* is not listed among those identified plants.

With regard to faunal resources, we acknowledge that seabirds, including the threatened Newell's shearwater, endangered Hawaiian petrel and a species of concern, the band-rumped storm petrel may fly over the site. Further, we acknowledge that seabirds are attracted to artificial lights, flying around the light source until they collide with objects or collapse from exhaustion, making them vulnerable to predators once on the ground. To avoid any impact to seabirds, the master plan does not include any parking lot lighting. Any security lighting that is deemed necessary at the park will be shielded downward to avoid any impacts to seabirds.

Thirteen species of birds were observed during the 2009 survey including the endangered Hawaiian Duck (Koloa Maoli, *Anas wyvilliana*), two indigenous shorebirds (Kolea, *Pluvialis fulva* and 'Ulili, *Heteroscelus incanous*) and an indigenous seabird (Koa'e Kea, *Phaethon lepturus dorotheae*). All other birds sighted were non-native introductions.

Additional species of seabirds, waterbirds, shorebirds and forest birds that are federally listed as endangered or threatened may use the park. The wetlands may also provide feeding and nesting areas to the indigenous Black-crowned Night-heron ('Auku'u; *Nycticorax nycticorax hoactli*). Other federally endangered waterbirds that would likely use the wetlands are the Black-necked Stilt (Ae'o; *Himantopus mexicanus knudseni*), Hawaiian Coot ('Alae ke'oke'o; *Fulica alae*), Hawaiian Moorhen ('Alae'ula; *Gallinulae chloropus sandwicensis*), and Nēnē (*Branta sandwicensis*). To avoid impacts to waterbirds no physical changes or new activities are proposed for the site's wetlands. However, there has been interest on the part of some community members to restore the wetlands (which are believed to be former Hawaiian fishponds or used for wet cultivation of taro) for ecological or cultural use. The master plan recommends that before any wetland restoration activities occur, that an analysis of the costs, benefits and liabilities associated with intentionally creating habitat for endangered waterbirds be conducted.

The biological survey also reports that although not sighted during the survey, the endangered Hawaiian hoary bat (*Lasiurus cinereus semotus*), probably utilizes Hā'ena State Park as it has been observed in the Hanalei and Princeville areas. To avoid any impacts to the endangered Hawaiian hoary bat, no large woody shrubs or trees over 15 feet in height will be removed during the bat pupping season. Our most recent discussions with Fish and Wildlife biologists have informed us that the breeding season is now considered to be June 1<sup>st</sup> through September 15<sup>th</sup>.

Finally, we acknowledge that when your agency's letter was written in 2008, it stated that there is no designated critical habitat in the area. We further acknowledge that in 2010, new Critical

USFWS FILE: 2008-TA-0305

Page 3 of 3

Habitat ecosystems were designated for the Island of Kaua'i. A review of Geographic Information Systems (GIS) data found that no new Critical Habitats have been designated for the Master Plan area.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

SUBJECT: Pre-Consultation for the Proposed Hā'ena State Park Master Plan and Environmental Impact Statement, Hā'ena, Kaua'i, Hawaii

Dear Ms. Yuen:

We received your letter dated August 11, 2008 with a requested response date of August 29, 2008, however due to inadequate information regarding the proposed project, we are unable to respond appropriately.

I have tasked Mr. Kalani Vierra, Water Safety Supervising Officer of the Kaua'i Fire Department's Ocean Safety Bureau to contact you for more detailed information regarding this matter.

The Kaua'i Fire Department has many concerns and interest in the area as we maintain ocean safety at Ke'e Beach and any project would have an impact on the County of Kaua'i.

Please contact Kalani Vierra at (808) 241-4984 should you have any questions or require additional information regarding this matter.

Sincerely,

Robert F. Westerman  
Fire Chief

**SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII**

Dear Chief Westerman,

Thank you for your letter dated August 25, 2008 regarding the above referenced pre-consultation request. As the planning consultant for the applicant, State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the comments from KFD, indicating that Water Safety Supervisor Kalani Vierra, was tasked with contacting us for more information. Since 2008, a new lifeguard tower was installed at Kē'ē Beach, and based on information received from Water Safety staff and the community, the Master Plan includes a recommendation to move the tower to afford lifeguards greater visibility of Kē'ē Lagoon. Other master plan recommendations that may assist water safety staff may include limiting the total number of visitors accessing the park each day and requiring all visitors to view an educational video discussing Hā'ena's many resources and associated hazards.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

Dear Ms. Kimi Yuen,

This is in response to your letter dated August 11, 2008 requesting our comments for the proposed State Park Master Plan and Environmental Impact Statements for the captioned properties. We wish to inform you that are comments are similar to those previously commented on April 1, 2008 in regards to the pre-consultation request to construct wetlands as an alternative secondary treatment facility for waste associated with the proposed park's comfort station. A copy of our letter is enclosed for your information and use.

We also recommend comments be solicited from our Parks and Recreation Department and from our Flood Plain Coordinator.

Thank you for this opportunity to provide our comments. We wish to remain on your mailing list in receiving a copy of the draft EIS. Should you have questions, please contact me at (808) 241-4981.

Very truly yours,

SUBJECT: PRECONSULTATION FOR THE DEPARTMENT OF LAND AND NATURAL  
RESOURCES HA'ENA STATE PARK COMFORT STATION  
CONSTRUCTED WETLANDS DRAFT ENVIRONMENTAL ASSESSMENT  
PW3.08.116

Gentlemen,

We reviewed the subject pre-consultation request to construct wetlands as an alternative secondary treatment facility for the waste water associated with the proposed park's comfort station. We offer the following comments:

1. Based on Panel no. 80 E of the FIRM (Federal Insurance Rate Maps) dated September 16, 2005, the subject property along the coastal reaches are susceptible to flooding from the Pacific Ocean. The flood zoning is a Zone VE, or Coastal High Hazard Area, or Tsunami Zone. The Coastal High Hazard Area is subject to high velocity waters, including but not limited to coastal and tidal inundation or tsunami. We recommend comments be solicited from our Flood Plain Coordinator for building within a flood zone.
2. Our Flood Plain Management Ordinance No. 831 prohibits filling for structural support and manmade alteration of sand dunes and mangrove stands are prohibited.
3. A grading permit can be exempted for the wetland constructions since the work will be within a self contained government controlled area. However, we expect the State to be responsible for implementing Best Management Practices (BMP's) at all times to the maximum extent practicable to prevent damage by sedimentation, erosion, or dust to streams, watercourses, and natural areas and the property of others and to monitoring the grading activities. The grading exemption does not exempt the sites receiving the excess wasted excavated material or the borrow site if the site requires embankment. A separate grading permit may be required for the disposal sites and/or borrow sites.

Lihu'e, HI 96766-1340

SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HA'ENA STATE PARK  
MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT,  
HA'ENA, KAUAI, HAWAII

Dear Mr. Dill,

Thank you for your agency's letter dated August 27, 2008 regarding the above referenced pre-consultation request. As the planning consultant for the applicant, State of Hawaii'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the comments from Public Works which reference previous comments made for the Ha'ena State Park Comfort Station Constructed Wetlands Environmental Assessment Process, which relate to the floodplain, the County's Flood Plain Management Ordinance No. 831, grading permit exemptions and referral to the Army Corps.

The Environmental Impact Statement documents will include information relating to the location of flood hazard areas as well as previously documented wetland areas and the relationship between these resources and park elements proposed by the master plan. Further, we acknowledge that the Flood Plain Ordinance No. 831 prohibits filling for structural support and that in the Coastal High Hazard Zone (VE Zone), manmade alterations of sand dunes and mangrove stands are prohibited.

We further acknowledge that while grading permits may be exempted within a self-contained government controlled area, best management practices (bmps) for erosion control and sediment is expected. Additionally, we acknowledge that the grading exemption does not exempt off-site borrow or receiving sites from permits. With regard to Federal Permits, we have also consulted with the Army Corps of Engineers to assess and document their requirements.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

Dear Ms. Yuen:

Subject: Pre-Consultation for the Proposed Haena State Park Master Plan and Environmental Impact Statement TMK: 5-9-01:022 and TMK: 5-9-08:001, Kuhio Highway, Haena, Kaua'i, Hawaii

This is in regard to your letter dated August 11, 2008. The following are the Department of Water (DOW) comments to the proposed Haena State Park Master Plan and Environmental Impact Statement.

The proposed development has not been identified in your letter. The following are general comments of the DOW:

- Any actual subdivision or development of this area will be dependent on the adequacy of the source, storage, and transmission facilities existing at that time.
- The Department's water system ends near the Limahuli Stream along Kuhio Highway.
- Water service to TMK: 5-9-08:001 will be limited to the existing water meter serving the parcel until adequate water system facilities are available.

If you have any questions, please contact Mr. Keith Aoki at (808) 245-5418.

Sincerely,

Gregg Fujikawa  
Chief of Water Resource and Planning Division

Keith Aoki  
Department of Water, County of Kaua'i  
PO Box 1706  
Lihue, Hawaii 96766

**SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT (TMK: 5-9-01:022 & 5-9-08:001), KŪHIŌ HIGHWAY, HĀ'ENA, KAUAI**

Dear Mr. Aoki,

This letter is a follow up to our earlier pre-consultation request and your department's response dated August 22, 2008 (enclosed). Over the course of the last three years, we have assisted State Parks and the community in developing a draft master plan for Hā'ena State Park.

At this time, we would like to update our pre-consultation request to the Department of Water, providing you with the enclosed plan for your evaluation and response.

Generally, we seek your updated input on the project and any comments as to whether the project may have an impact on your department's existing or proposed projects, plans, policies or programs and if there are any specific issues that should be addressed in the project's Environmental Impact Statement.

More specifically, it would be helpful for planning purposes to know the expected Department of Water requirements for the following:

- On- and off-site improvements to serve the proposed park facilities with potable water. New proposed facilities include:
  - Caretaker's cottage (Legend Item K)
  - Cultural and Education Center (Legend Item O)
  - Hale Wa'a (Legend Item U)
- Fire suppression requirements, including expected hydrant needs and expected water storage requirements, and whether opportunities for alternative fire water demand may be explored.

Mr. Keith Aoki

PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT (TMK: 5-9-01:022 & 5-9-08:001), KŪHIŌ HIGHWAY, HĀ'ENA, KAUAI

9/15/2011

Page 2 of 2

Please send us any comments you may have by **October 16, 2011**. If you have any questions or require additional information, please feel free to contact me.

Sincerely,  
PBR HAWAII

Dear Ms. Yuen:

Subject: Pre-Consultation for the Proposed Haena State Park Master Plan and Environmental Impact Statement TMK: 5-9-01:022 and TMK: 5-9-08:001, Kuhio Highway, Haena, Kaua'i, Hawaii

This is in regard to your letter dated August 11, 2008. The following are the Department of Water (DOW) comments to the proposed Haena State Park Master Plan and Environmental Impact Statement.

The proposed development has not been identified in your letter. The following are general comments of the DOW:

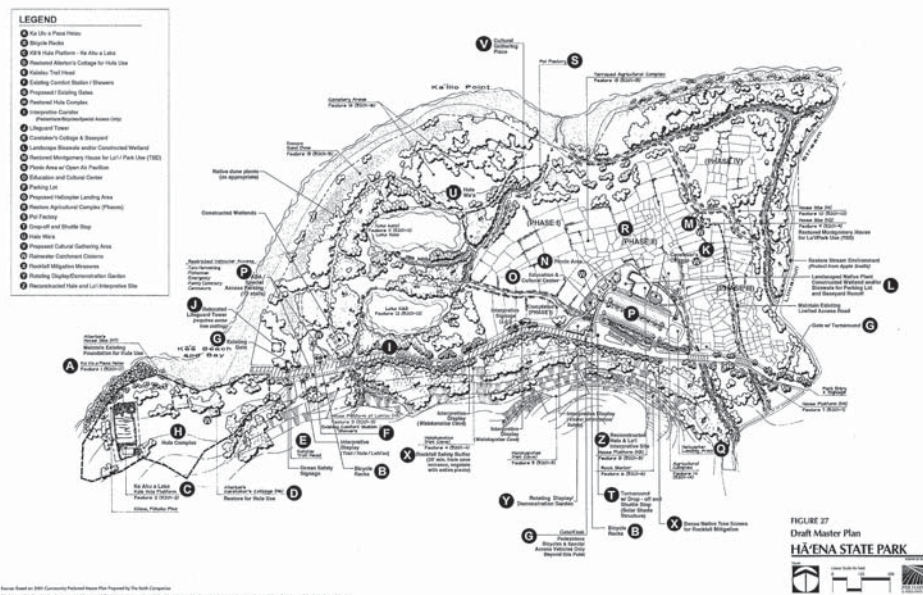

- Any actual subdivision or development of this area will be dependent on the adequacy of the source, storage, and transmission facilities existing at that time.
- The Department's water system ends near the Limahuli Stream along Kuhio Highway.
- Water service to TMK: 5-9-08:001 will be limited to the existing water meter serving the parcel until adequate water system facilities are available.

If you have any questions, please contact Mr. Keith Aoki at (808) 245-5418.

Sincerely,

Gregg Fujikawa  
Chief of Water Resource and Planning Division

Ms. Catie Cullison, AICP  
PBR Hawaii & Associates, Inc.  
1001 Bishop Street, Suite 650  
Honolulu, HI 96813-3484

Dear Ms. Cullison:

Subject: Pre-consultation for the proposed Haena State park Master Plan and Environmental Impact Statement, TMK: 5-9-01:022 and TMK: 5-9-08:001, Kuhio Highway, Haena, Kauai

This is in regard to your letter dated September 15, 2011. The following are the Department of Water's (DOW) comments to the proposed Haena State Park Master Plan and Environmental Impact Statement:

- a) Any actual subdivision or development of this area will be dependent on the adequacy of the source, storage, and transmission facilities existing at that time. At the present time, the existing storage facilities are operating at capacity and the DOW is limiting water service to three 5/8-inch water meters or three single family dwellings per existing lot of record. The existing source facilities are nearing capacity. The Department's water system ends near the Limahuli Stream along Kuhio Highway. Adequacy of the existing transmission facilities will be dependent on the required domestic and fireflow demands of the proposed project (i.e. fire flow requirement may depend on the actual land use or zoning designation of the proposed development).
- b) Water service for TMK: 5-9-08:001 will be limited to the existing water meter serving the parcel until adequate water system facilities are available.
- c) Submit a formal request for water service for our review and approval. Include detailed water demand (both domestic and irrigation) calculations along with the proposed water meter size. Water demand calculations submitted by your engineer or architect should also include fixture count and water meter sizing worksheets. The Department's comments will be dependent on the approved water demand calculations.

It is recommended that request for water service, along with pertinent information, should be made to the Department, as soon as possible.

If you have any questions, please contact Mr. Edward Doi at (808) 245-5417.

Sincerely,

Gregg Fujikawa

SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HÄ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HÄ'ENA, KAUA'I, HAWAII

Dear Mr. Fujikawa,

Thank you for your letters dated August 22, 2008 and November 10, 2011 regarding the above referenced pre-consultation request. As the planning consultant for the applicant, State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the comments from the Department of Water, indicating:

- a) Any actual subdivision or development of the area will be dependent on the adequacy of the source, storage, and transmission facilities existing at that time. At the present time, the existing storage facilities are operating at capacity and the DOW is limiting water service to three 5/8-inch water meters or three single family dwellings per existing lot of record. The existing source facilities are nearing capacity. The Department's water system ends near the Limahuli Stream along Kūhiō Highway. Adequacy of the existing transmission facilities will be dependent on the required domestic and fireflow demands of the proposed project (i.e. fire flow requirement may depend on the actual land use or zoning designation of the proposed development).
- b) Water service for TMK: 5-9-008:001 will be limited to the existing water meter serving the parcel until adequate water system facilities are available.
- c) Submit a formal request for water service for our review and approval. Include detailed water demand (both domestic and irrigation) calculations along with the proposed water meter size. Water demand calculations submitted by your engineer or architect should also include fixture count and water meter sizing worksheets. The Department's comments will be dependent on the approved water demand calculations.

We acknowledge that development will be dependent on the adequacy of water facilities and that until adequate water system facilities are available, development will be limited to the existing water meter.

Gregg Fujikawa  
PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND  
ENVIRONMENTAL IMPACT STATEMENT, HĀ'ENA, KAUAI, HAWAII  
PAGE 2 OF 2

As detailed design progresses, State Parks will continue to interface with the Department of Water to determine adequacy of water facilities. Prior to construction, a formal request for water service will be submitted for your Department's review and approval.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Assessment and subsequent Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

MEMORANDUM

**DATE:** September 9, 2008  
**TO:** Kimi Yuen, LEED AP  
**FROM:** Kauai Historic Preservation Review Commission   
**SUBJECT:** Pre-Consultation-Haena State Park Master Plan/Draft EIS,  
Department of Land & Natural Resources

---

The Kauai Historic Preservation Review Commission (KHPRC) met on September 4, 2008 to review your letter requesting input to be considered in the preparation of a draft Environmental Impact Statement and master plan for the Haena State Park.

The KHPRC deferred this matter until more information about the project could be made available to the members. Prior to their deferral, there was some general discussion which is reflected in the minutes attached.

We look forward to meeting with you on this important North Shore project in the near future.

Please feel free to call us should you require any further assistance regarding this matter.

Aloha.

KAUAI COUNTY HISTORIC PRESERVATION REVIEW COMMISSION  
Lihue Civic Center, Moikeha Building, Meeting Room 2A/2B

MINUTES

A regular meeting of the Kaua'i County Historic Preservation Commission (KHPRC) was held on September 4, 2008 in the Lihue Civic Center, Moikeha Building, Meeting Room 2A/2B.

The following Commissioners were present: Dennis Alkire, Chairperson, Patsy Sheehan, Vice Chairperson, Alan Faye, Jr., Kehaulani Kekua, and Randy Wichman.

The following Commissioners were absent: Annette Manaday, Molly Summers and Dr. John Lydgate.

CALL TO ORDER

Chairperson Alkire called the meeting to order at 3:03 p.m.

APPROVAL OF THE AGENDA

The agenda was approved as circulated however the Commission began with Unfinished Business Matters first, then discussed Communications and Announcements & General Business Matters.

APPROVAL OF THE MINUTES

The July 3, 2008 and August 7, 2008 minutes were approved as circulated.

ANNOUNCEMENTS AND GENERAL BUSINESS MATTERS

COMMUNICATIONS

**Re: Letter (8/11/08) from Kimi Mikami Yuen, LEED AP, Associate, PBR Hawaii & Associates, Inc. requesting pre-consultation for the State of Hawaii Department of Land and Natural Resources Division of State Parks to prepare a master plan and environmental impact statement for the Haena State Park, Kauai.**

**Chair:** Lets go back Communications, the 3 letters that are attached to our packets. B.I. letter from Kimi Mikami Yuen, LEED, AP, Associate, PBR Hawaii on the master plan and EIS for the Haena State Park. Rick?

**Mr. Wichman:** Ricky the County has no kuleana at the very end of the road or where is the idea that Kaulaulapaoa and the heiau are within in County?

**Staff:** There is a portion that is County property.

**Mr. Wichman:** And those metes and bounds?

**Staff:** There should be. I don't know if it surveyed but I know the County does own a parcel.

**Mr. Wichman:** Within the precinct itself?

**Staff:** I think the project area.

**Mr. Wichman:** Ok so the County is a definite player in this master plan.

**Staff:** And I believe they have identified that in their project. So I don't know what arrangement currently exists between the County and the State or the curators or...

**Mr. Wichman:** And how is this, since we don't have the master plan itself and I don't know how I defer it from the later, the earlier master plans that's been over the 60s, 70s, 80s, 90s there have been master plans coming out left and right out of there right. How is this one different from the rest?

**Staff:** I really don't know so I was wondering whether, since Kimi could not make it today, whether it seems like they identified the main archeological or cultural resources whether you might want to just reserve comments pending the actual draft EA and just see where they are going with that and we can make comments at that time.

**Mr. Wichman:** There would be a couple things for me personally in making sure that the lohiau house site itself is a little bit further away then what its currently cars are coming up to. So those are a little bit of details to. Also should the actual heiau itself fall within County property I think we need to know exactly where in the footprint County falls in.

**Staff:** I believe those items will more clearly addressed in the draft EA.

**Mr. Wichman:** And also the historical preamble also as I am fully aware of many excavations and reports that came out especially through the bathroom building and renovations and moving numerous burials and things have come up as a result of it. So we have a good idea where that is so we need kind of a little bit of an overlay master plan look see before we can actually be helpful in this matter.

**Ms. Sheehan:** Do you read the second paragraph as if the County does in fact own all of it? It says contains the heiau and the... it sounds like its all in there. No?

**Chair:** There is an exhibit 1 that's attached to the letter that shows, indicates the County owning a small on the extreme left hand end.

Ms. Sheehan: It doesn't tell you what that is.

Chair: No it doesn't.

Mr. Wichman: It contains...

Ms. Kekua: It gives you an idea of where it is.

Chair: I think it's the heiau because the road ends and then it shows...

Mr. Faye: It says it includes the platform...

Ms. Sheehan: The verbiage is kind of misleading to me and this picture is even worst.

Staff: It looks like the County owns this piece.

Mr. Wichman: That's the heiau itself right. It's on County property.

Staff: Again there is some kind of informal agreement between the County and SHPD.

Mr. Wichman: I think part of our responsibility is to define the relationship of County within State parks in regards to the heiau. If we want to we can examine the history of it and to see if...

Ms. Sheehan: Why would they have it? Why would the County have it?

Mr. Wichman: Francis Li Brown had it prior to that it could have always been in the County inventory.

Mr. Faye: I thought Allerton had that house?

Mr. Wichman: Later on but it was Francis Li Brown who actually built it.

Mr. Faye: Is that the same property that Allerton, there was 2 houses there.

Mr. Wichman: Later on Allerton.

Mr. Faye: That's what I mean later. That's the one we are talking about the 2 houses right?

Ms. Sheehan: Yes. No, no I can't tell by the map but I guess I was under the impression that when it burned down those houses burned down it was because of the State profile not a County profile.

Mr. Wichman: My understanding County has really had no involvement with the actual decision making in regards to the activities over the last 20 years over there on the heiau grounds itself.

Ms. Sheehan: So this deadline, August 29<sup>th</sup>?

Chair: That's come and gone hasn't it?

Ms. Sheehan: Yes I know. So we are too late for it anyway.

Chair: Well Ricky says we're still waiting for a draft EA although in the letter they are talking about an EIS. So I am confused.

Staff: Well unless they made a decision to skip the EA and go into an EIS, a full EIS, which means they would be a draft EIS and the entire process with the draft EIS. So I am sure, I think this is at this point a preconsultation.

Chair: I agree that we can wait to see the draft document. There is not enough here to really comment on.

Mr. Wichman: Yes especially the locations of the parking lots. The proximity, well anyway we all know what the problems are out there but as soon as we have something concrete.

Staff: I will give Kimi a call and just review the timelines and see where the draft EIS.

Mr. Wichman: How about a motion to defer until next meeting and request that DLNR, well we are looking at these guys right here PBR as we see it as a preconsultation, we would like this preconsultation to occur as it is nonbinding to either party at this point. It's just information seeking. So motion to defer the preconsultation until next meeting.

Ms. Sheehan: Second. I mean I think that's enough to say but if there is any information that's going to be a lot if we could get it sooner. It would be good to get this packet a little earlier so we can read.

Mr. Faye: Mail it when you get it.

Ms. Sheehan: Yes if you get something you can mail it out cause the minutes alone take us a long to read.

Mr. Faye: Yes if you have a package next week.

Ms. Sheehan: If it turns out thick send it to us.

Ms. Kekua: Her letter is only dated on August 11<sup>th</sup> and I don't know the exactly situation her except in a previous conversation that I had with Kimi sometime ago and it was a very brief conversation, they are basically being contracted by the DLNR to complete work that got dropped by the ball, I mean the ball got dropped by a previous consultant. And so I think they are coming in on a clean slate and almost kind of starting over.

Chair: That could be a good thing.

Ms. Sheehan: She still doesn't give us much time.

Ms. Kekua: Right, right so I am not really sure.

Mr. Faye: She doesn't know when we meet either.

Mr. Wichman: I think to better understand the historic ramifications I am taking it that an informal agreement between State and County regards to the heiau means nothing is in writing.

Staff: I would think so.

Mr. Wichman: Ok but just to double check to make sure that that discussion in order to understand the perimeters of the County during that particular time of the agreement. If we can take a look on the inside that would help us, that would help us ensure should the County's historic objective with this particular piece of land are met.

Staff: Just a question if in fact there is a lot of times we deal with this and if we are able to get information by the next meeting is it ok if we, if it's not ready by the next meeting can we bring it back by the first earliest meeting we can get the consultants to come and whatever materials...

Mr. Wichman: Do you want me to amend the motion to reflect that?

Staff: As long as it's ok with you guys.

Mr. Wichman: Ok.

Chair: I believe there is a motion on the floor we have a second, motion to defer. All those in favor? (Unanimous.) Ok motion carries.

COUNTY OF KAUAI  
PLANNING DEPARTMENT  
4444 RICE STREET, SUITE A473  
LIHUE, KAUAI, HAWAII 96766-1326

## MEMORANDUM

**DATE:** October 22, 2008  
**TO:** PBR Hawaii & Associates, Inc.  
Attn. Kimi Yuen, LEED AP, Associate  
**FROM:** Kauai Historic Preservation Review Commission   
**SUBJECT:** Pre-Consultation-Haena State Park Master Plan/Draft EIS,  
Department of Land & Natural Resources

Thank you for attending the Kauai Historic Preservation Review Commission's October 2, 2008 meeting. Your presentation regarding the project background, scope and status was very informative.

It is the KHPRC's understanding that input is being solicited at this time to identify issues and concerns to be considered in the preparation of a draft Environmental Impact Statement and master plan for the Haena State Park. As such, there will be ample future opportunity over the next two years to review and comment on the project as these documents are refined during this informational/developmental stage. The following are some of the areas of interest were raised by the KHPRC: consider nominating the complex to the National/State Register, relationship of trails with respect to cultural resources and practices, fishing zones, interpretive program, maintenance and management/overlapping jurisdictions, mapping and buffers of specific resource preserves within the overall complex preserve. An excerpt of the KHPRC's meeting minutes is attached and provides a more comprehensive and detailed record of the discussions on this matter.

We look forward to meeting with you again as more information and details become available on the master plan for this important North Shore cultural and recreational resource.

Please feel free to call us should you require any further assistance regarding this matter.

Aloha.

Attach.

Page 2

UNFINISHED BUSINESS

**Re: Serikawa Hotel (Hanapepe Hotel, LLC)**

Chair: We have a letter from the architect for Serikawa hotel.

Mr. Faye: That was nice. He wrote a nice letter.

Staff: Mr. Wilson is here today.

Mr. Faye: Are you the architect?

Mr. Juan Wilson: Yes I am.

Chair: Juan Wilson welcome to the Historic Preservation Review Commission.

Mr. Wilson: Well do you want me to speak to it?

Chair: Please.

Mr. Wilson: Ok. I really don't have a contest really with the recommendations that your commission has made. The only issue that seemed concern to me was the pitch of the lanai roof. The original roof was shown as 3 and 2/3 to 12 and reducing it to 3 to 12 which should be recommended for that type of the roof would bring it close to where you are looking down to the hip but it's still on the lower foot of that hip and I have a drawing I could show you what that might look like.

If it gets showers in that I am a little bit worried about 2 things one is recommended pitch with that kind of construction and secondly there are 2 plumbing vents that are right at the break that would occur where these 2 vents would meet it would be a difficult detail to keep waterproof with the flashing. So we stay a little bit above that point and having the plumbing vents clearly one side of the break in the roof would be helpful. Getting below that break would cause problems for that roof. I think the profile continuing in the back of the building is not visible from the street. I think if we have it would be acceptable, I hope, to the commission. I have got some drawings

Chair: Can you remind us again what the material is for the lanai roof?

Mr. Wilson: The original building had an unusual roofing material which was metal shingles and over the years many of them have rusted away on the back side of the building. The front of the building still has metal shingles on it. The back of the building has gone through a couple of repairs over time and now has relatively and well conditioned corrugated roof. We were going

to match that. In other words the new roof that was going to be on the back of the building to the lanai would butt into the existing corrugated roof. It would be in the same material.

Chair: And the roof on the front of the building is still the metal shingles and so is the 2 hips on the sides.

Dr. Lydgate: Was there an issue?

Mr. Wilson: Excuse me let me just add that the owner tried very exhaustibly to find the manufacturer for metal shingles and was not able to find one. It's kind of like tin roofs are not readily available. So anyway I have got a couple of drawings here that show and I think it also addresses the other points French doors, picket fence, all the points that are in your.

Chair: If you would like to pass them around.

Staff: Chair is it alright if we just post it up here?

Chair: That would be good actually. Let's give it an eyeball and see.

Mr. Wilson: This is what was originally shown. This is 3 – 12. We are putting French doors in here instead of sliders. There is a correction up here. There was a stair that came off that shed roof here and this is showing the picket fence (inaudible).

Dr. Lydgate: What is a French door?

Mr. Wichman: Double door.

Mr. Wilson: They are actually sliding French doors they look like French doors but they actually slide. These would be swinging wood doors so all the doors where wood doors.

Ms. Sheehan: (Inaudible) that you can't find that metal shingle.

Mr. Wilson: (Inaudible).

Ms. Sheehan: I was just wondering how old it was.

Mr. Wilson: I think it was probably the 30s.

Ms. Sheehan: I was just curious as to how it got all the way over here. Maybe they should make it again.

Mr. Wilson: It almost looks like its stainless steel, but it almost looks like.

Chair: We have the owner here. Donna would you like to say a few words about your beautiful building?

Ms. Donna Holevoet: Yes it is beautiful and (inaudible) we absolutely love the building and we love Hanapepe. We are trying to be really good citizens of the town and to maybe, fortunately, for the building we don't have a large amount of money so we are not about to come in and change it too dramatically. You know we have had it since about 2001. We just slowly worked on it and do a little modifications to it.

Ms. Sheehan: You have done a great job.

Dr. Lydgate: (Inaudible).

Ms. Holevoet: I really think you could tear that building down and try to rebuild it and it would never look quite the same.

Chair: That is certainly true. You are both to be commended for your efforts toward the preservation of that important building.

Mr. Wichman: Do we need to finish with the motion.

Chair: We should in response to the letter that Juan wrote.

Mr. Faye: Well basically the motion would be that we acknowledge all of your changes we have recommended that you have come back and said to us that these are ok. The only question is that the roof pitch, did we have a motion on that? Did we say something about the roof pitch?

Chair: We did.

Mr. Wilson: You said you wanted to bring as shallow as it was practical to try and meet the hips on the sides. It's about a foot higher and it's around the back of the building.

Mr. Faye: As far as the motion is concerned that we should agree with that.

Chair: I think you just made the motion.

Ms. Manaday: Second.

Chair: We are happy to see the changes. They are consistent with our recommendations. We thank you for listening and for responding in a positive way. It's very gratifying to see that. We understand the technical issues with the shed roof over the new lanai and 3 and 12 is acceptable. We are not going to push that issue of cause additional problems that might occur with going below the minimum recommended pitch for that materials, therefore everything we see looks great.

Mr. Faye: Looks very nice. Thanks for the letter.

Chair: Thank you both for coming. Good job. We should finish the motion though.

Mr. Faye: It was seconded. You just didn't call for the vote.

Chair: All in favor of the motion? (Unanimous voice vote.) Any opposed? (None.) Motion is carried unanimously.

**Re: Letter (8/11/08) from Kimi Mikami Yuen, LEED AP, Associate, PBR Hawaii & Associates, Inc. requesting pre-consultation for the State of Hawaii Department of Land and Natural Resources Division of State Parks to prepare a master plan and environmental impact statement for the Haena State Park, Kauai.**

Chair: Hello Kimi Yuen, AP, Associate, PBR. Tell us all about Haena State Park master plan.

Ms. Kimi: Ok thank you, all of you, for having me here to talk about the project and I apologize I wasn't able to make your earlier meeting last month but Ricky and Shan called and said just come out so I am here basically to give you an overview of where we are at. That letter we sent you was a pre consultation letter and I apologize with the due date because for the most typical agency we want a quick turn around on any concerns they may have with our potential project. But I understand for an organization like you that it will take more time than that and so disregard that due that obviously since its way past anyway.

What we are doing out there is that the State Parks contracted us to finish up the master plan and do an EIS for the state park and it doesn't include the trail. It just goes up to the trail heads and then the State property right by Kee lagoon and then all the way back I think there is, I don't know how familiar some of you are, but there is taro loi and also along the state highway. So what I have with me is back in the mid to late '90s there was an original effort to do a master plan for the state park and I think I was reading in the minutes that, yes she was saying that there was a previous effort and so this, what I have today, is the result of that effort. It was a community preferred master plan that never got formally accepted and approved.

Mr. Wichman: It was 90% done.

Ms. Yuen: 90% done.

Mr. Wichman: And the woman was hapai and then it ended right?

Ms. Yuen: Yes I don't know the whole story but somewhere the ball got dropped and so what we are doing is finishing that up so that the State can actually move ahead with improvements and whatever needs to get done at the park and obviously a lot of people that go there. There is a lot of concerns with traffic you know public safety in terms of rock fall issues because of heavy rains.

There is a lot of different issues that have come up and another big concern that State Park has voiced to us and we fully agree is that this previous effort maybe didn't consider cultural historic issues as much as it should have and so that is going to be a big part of it and I welcome your comments that pre-consult letter is basically something to invite you to the process.

There is a small County parcel where the heiau and the hula mound is and so we realize that I don't and we don't know what the County and SHPD and Start Parks is. So that is 1 element if it is under Ricky's or whatever that...

Mr. Wichman: We can discuss 3 different options or 4 that the County may want to consider with it.

Ms. Yuen: Yes so whatever that is you know you don't have to make any decisions now this is just the initial introduction of the project to you folks to get you involved very early in the process to see where the County may want to stand on that kind of maintenance issues of that site. It is a County parcel and you know what let me, is it ok Ricky if I just kind of talk, basically what we have suggested to the State in terms of a process is that we don't start from scratch because we have been talking with a lot of community folks there is a lot of energy and effort and a lot of actually some agreement that came out and generated this plan. It's just a matter of fine tuning it incorporating the cultural and historic aspects into the plan and from my perspective to me the plan should be driven by those things actually.

To me this park is more than just something at the end of the road. It's not something where tourist just drive just to drive. There is so much more there that really needs to be recognized in the master plan and those things need to drive all the proposed improvements or proposed use of the park. There is a lot of issues and history behind it but at the same time I think if we take that perspective that history and culture should be at the forefront and what drives the master plan I think we will come up with a plan that you know everybody will be happy with. To me it's an opportunity to do something really amazing. If it's a partnership with the County, State, you know the tourist industry because of how popular this site is. People just go to go because it's the end of the road and you know to me it's so much more than that and to make a real statement about the cultural/history of the place would be fantastic and what I think should be driving the master plan.

Like I said we are still very early in this process but we do intend to have public meetings in some form or fashion. We are still talking with the community about what is most effective because we already have this community preferred plan and there is a lot of things that already have been implied to us that maybe not be good things in this plan so don't look at this like this is set in stone in any way but we welcome your thoughts. This is very early like is said there is no necessarily time line for your comments you know how involved you want to be throughout the process. We estimate you know it's going to be 2 years because we are going the full EIS route so the master plan we want to make sure we get enough public input that we get all the background studies done.

We have several consultants on board on this contract including geologist, rock fall specialist, cultural specialist, marine, we have flora fauna wild lands specialist, we have traffic consultant so this is a full blown effort. We want to make sure we do this right. We get everything involved and you know just basically finish up the master plan, the EIS so the State can really take care of this place.

Mr. Faye: Is that helicopter pad for just emergency?

Mr. Wichman: Yes.

Mr. Yuen: Yes.

Mr. Wichman: That's moving out or that's up for negotiation to another place to have an actual heli drop and also with other things having to do with the parking which is not necessarily under our provision to actually tell you about but there are parking issues and the (inaudible).

Mr. Wichman: If you want I will start.

Chair: Please.

Mr. Wichman: We will take the first issue that you brought up which is the fact that the heiau itself is on County property. Our understanding is that no memorandum of agreement has been made between the County and DLNR over it. That's option one, a MOU and then an MOA right with the County that would be option number 1. Number 2 would be the trade. The County can trade that with the State. Say for example something next to Kaneouluma if that is something that's on that could be considered there is a trade. So therefore the lands will come under pure State Parks jurisdiction because it's already State parks around it except of the heiau. C, the County could retain the heiau portion and that should anything be to arise culturally that needs to be settled down would be within the Commission to deal with the other particular issues. So those are 3 ways of looking at it. I know it depends on what the County wants to do and it wants to deal with it. So it would add some sort of idea which way they would want to go.

Dr. Lydgate: Who manages it best? State or County?

Mr. Wichman: Neither.

Dr. Lydgate: Surely it's been a State DLNR thing.

Mr. Wichman: But there are been some exceptions there has been some mismanagement issues in Haena over the last 10 plus years, serious ones. So it all depends on the long term philosophy of the County.

Dr. Lydgate: Do have input?

Ms. Yuen: You mean in terms of the...

Dr. Lydgate: What you would like in this plan have you been talking with the County people?

Ms. Yuen: You know I have spoken actually, I think when I was trying to figure out who was managing or what the agreement was I did end up speaking with Mel Nishihara at Parks and think that is technically where it had fallen once at one time. Even then it was a little loose, you know what I mean nobody really claimed responsibility of it per say and I think it just ended up falling under SHPD as kind of a default and State Parks but there is actually I mean it's a very active site. I mean there are people I mean halau and all that going there very frequently. So it's just been this understanding of a community that's been out there to help make those things happen. So a lot of it like Mr. Wichman has said it is what it is. People realize it, they respect it. They still, it is an important site so they take care of it on their own but there isn't any format.

Mr. Wichman: As far the title to the piece of property now if the State wants to make it into 1 piece then they need to negotiate with the County and they may want to consider a trade cause they own some of the lands boarding the complex on the south side. But then it could be anything or if not you know I am just throwing that out there.

The second one is to preserves within preserves within preserves by isolating the real sensitive areas. The first one a pretty good size circle needs to be drawn around the Lohiau house site. That's right there on the road you have got cars coming down and people are not aware of what is going on with that nor it's significance and then we will deal with interpretive later on cause it's all part of it. So the Lohiau house site because of it's proximity to the parking and the road itself has to have a pretty good sized buffer and special attention to that site, the stabilization and then maybe not very little restoration if any on that.

The second one is the burial grounds which clearly came up when they built the bathrooms. It's sitting right on top of it right? Several so you have this, this is all house site. The hale and burial my guess is it continues further out however we know within this and then here is the other the one right there around Lohiau's house site. There have been issues over and over the years but because of the Haena community they stopped the actual bulldozing of the house sites and stuff like that. The bulldozers were right there but then as we identify those particular areas another one was the development of the particular Taylor camp beach area.

We know that here along Limahuli stream it's also, Bishop Museum has pulled canoes out of there so the Bishop Museum contains quite a bit of artifacts that were actually pulled out of this sector. The locals I think are going to have to worry about it. The taro loi right there is under Hui Makaainanaomakana and over the years they are doing a better and better job and that intends to expand further out. But the idea was the development, the pathways through the parking lots that lead to this beach and around however I think most of the area is to be concentrated but because the parking lot is so far very few people actually make the walk right, or willing to make that walk. So there is still some larger issues about getting the ADA stuff close to the end. There is all kinds of alternatives parking right there by the Makas and Mahuikis but that all becomes you know seriously problematic.

There is also the element of the fishing stones over there it's actually an area that has developed out of the Haena Wainiha fisherman now have. It could be a preserve also within the marine sanctuary within the reefs right? There are 5 different overlaps of government right? Cause isn't it the ocean itself is what department? And then the near shore reefs is another department, the beach itself a department. So there is and County is in the middle of this so the idea was to consolidate that all into one particular so the permitting process in the long run is going to be a lot easier in order to do this historical overlay right. As you incorporate that into one, there is a term for it. Chipper knows what it is cause we talked about it a couple of weeks ago. So I think the idea of facilitating the different branches of government who has all the various jurisdictions here at the end of the road.

Ms. Yuen: Yes I know that DLNR within themselves have been coordinating with all the different branches.

Mr. Wichman: You can bring it all down together into one comprehensive decision maker and I think in the long term of the historic preservation will be a lot better if it was under one. And then the interpretive are coming I know my father is working on giving you a chronology or timeline of all the various interpretive parts of it. So for us that's a no brainer but it's really where all the people are going to be expansion on the parking lots. The trails as they move through certain areas as they get close but not through em. So there is as we get down to the actual foot print we can walk the trails itself right. As long as it doesn't go over a wall we can walk the trail itself right? As long as it doesn't go through a wall we can go around it you know as you actually put the footprint of that and then the additional bathrooms too but you still have quite a bit of a...

Chair: Have you developed other drawings beyond this?

Ms. Yuen: No like I said we are still really early. We are still having our consultants do their baseline study at this point. We are still having our consultants do their base line studies at this point. We are just taking off. So any kind of formulation of what all that means is going to be several months out.

Ms. Sheehan: I have to go back to square one because I don't even know, how big of a piece is this?

Ms. Yuen: It's about 64 acres.

Ms. Sheehan: 64 acres and then when this community was so that those things that is on this map are where it's going or as is?

Ms. Yuen: No, no this is the community preferred master plan. So this isn't an existing site plan.

Ms. Sheehan: The cemeteries are where they are.

Ms. Yuen: Some of the elements are definitely there.

Mr. Wichman: Yes the parking and the element and the helipad is there already. Maybe not as big as this but actually the footprint is still there for this parking lot.

Ms. Yuen: Yes the parking lot is pretty close to what is there now. They had recently expanded it.

Ms. Sheehan: So most of the descriptions or places are actually what exists it may not be developed like the cemetery that's there and identified. So like the poi factory is that an identified something?

Mr. Wichman: The platform the poi factory is still there. We have good 1920 photos of the poi factory.

Ms. Sheehan: So most everything on here is not what you are putting on the land it's what there. I just needed to know the difference between where you are, where the plan is and what exists. So this is pretty much what exists.

Ms. Yuen: It's pretty close to what exists. But things like the picnic area they have out on the coast is you know restricted vehicular access that's been gated off.

Ms. Sheehan: Yes I just couldn't tell the difference between what you have found like it says terraced agricultural complex that's been discovered that is there.

Ms. Yuen: Yes.

Ms. Sheehan: Ok so this is what you have discovered as cultural things on this. Ok so right now the plan is not to disturb. I mean if you take the road and you take where the bathrooms are now and where you take the footpath is I mean it's not disturbing what you have, what exists.

Ms. Yuen: If you look by the larger parking lot there is that caretaker's cottage that is not, visitors center you know those kinds of...

Mr. Faye: You got a whole lot of footpaths and things like that. You have these little rows of trees are those supposed to be footpaths too? That dotted line that says bike lane.

Ms. Yuen: Yes so those if you can see there is this restricted vehicular access that may have been there at one time but that's necessarily something that we may keep you know. Yes this one I was talking about this. So that...

Mr. Faye: So all of this is going to be new right?

Ms. Yuen: That goes proposed in this plan.

Mr. Faye: That's part of the plan and then new vegetation along this.

Ms. Yuen: That was part of this plan.

Mr. Faye: Is that still a part of this plan?

Ms. Yuen: No that is why I am saying this is where they ended in 1999. We are starting from here seeing like maybe that path does not make sense so...

Mr. Faye: This is a draft I take it?

Ms. Yuen: Yes this was the community proposal that came out of that Keith Company's effort in the late 90s right.

Ms. Sheehan: But in this plan you have, I don't know you where satisfied or you know that all the cultural things that you need to know about have been identified.

Mr. Wichman: No.

Ms. Yuen: Not necessarily.

Ms. Sheehan: Ok.

Mr. Wichman: You are which I think part of the recommendations was to continue the mapping. You already have really good mapping of the Huimakaaianana area. I don't think you have a really good map of the Lohiau area or the subsequent post holes that they have found during excavations.

Ms. Yuen: The archeologist within State Parks is supposed to be helping us do that.

Mr. Wichman: Yes so better mapping of the Lohiau complex area especially. You don't have to worry about the heiau because Kekahuna did that in 1953. No need we already have a really good map. The other one too is that it is under an archeological preserve all the complexes. It is my understanding is not on the State or National Registry.

Ms. Yuen: There is and we are trying to track that down, there is some kind of Haena...

Mr. Wichman: It is an archeological preserve but I am not sure whether it's at, cause all the sites have been grouped but whether its actually on the registry which is another one which might be a recommendation coming out of here is that you actually place the entire Haena archeological complex on the State and Federal Registry.

Ms. Yuen: You know there were and I didn't bring my list but there where 3 potential sites or places that were either on the State or historic. One is the highway the belt road and there was a listing for archeological complex and that is what I am trying to figure out exactly. That is we are trying to get the nomination paper to see what that involved. And then there was a third

which escapes me at this point in time. So we are trying to track those down definitely to make sure we take care of that and if it does then expand it or add it. Something we will look at yes.

Chair: What is the schedule for the draft EIS?

Ms. Yuen: The draft EIS is going to come at the tail end. We are hoping the master plan we can get through pretty good version for public comment and we are kind of overlapping so that feedback from the EIS process can get invoked before we finalized the plan. So we are hoping master plan you know mid to late '09 and then the EIS would be in 2010 and then the finalized by the mid.

Mr. Wichman: Yes there are other parts of this plan that will not be handled by us. The concession issue for the end of the road is not us. The toll booth issue is not us right just like Kokee they wanted a toll booth Haena right there as you get across Limahuli Stream right there. That's also right up there on the radar.

Ms. Sheehan: So what is your time table to do all the mapping? Do you even have a timeline that says you are going to go back and take this, what you know now and do more cultural studies for 9 months or do you have a timeline?

Ms. Yuen: It's all kind of rolling in together. We had a preliminary deadline for all the background research to be done by mid next year so hopefully at that point we are generating a cleaned up master plan.

Mr. Wichman: It's a tentative time line. You guys are down the road already. (Inaudible) has actually taken over that particular portion of the plan. Laura Thielen when she was down there a couple of months ago with you right?

Ms. Yuen: I think right around the time that we did a site visit yes.

Mr. Wichman: And so what has happen because Laura Thielen has placed this number 1 on the plan. To get things done so she is pushing it personally and watching it personally. So my guess is Laura is not going to let this thing sit around and percolate like it has before she needs to see it done. And her particular perspective is the way all of the different science and disciplines come together here at the end of the road. Multidisciplinary so you have culture, fishing and many different levels going on here. I know DLNR especially Laura Thielen wants to see this; she has a personal stake in it now.

Ms. Sheehan: I am just asking that you would maybe come back in front of us with a lot of information in the middle of next year.

Ms. Yuen: Sure exactly. We will be happy to see a presentation of the next iteration of the master plan.

Mr. Wichman: We can do a tentative recommendation right now and then that would help you.

Ms. Yuen: Yes anything, either way.

Mr. Wichman: Yes cause we are still here on the pre-consultation right? Nothing is official right now so this is pre-consultation.

Ms. Sheehan: Do you have to make a statement with a pre-consultation?

Staff: I am wondering if a copy of this meeting will be satisfactory for you or if you wanted to make a motion.

Ms. Yuen: Either way. What ever you are comfortable with submitting to us.

Mr. Wichman: There are certain no brainers at this particular point you know but there will be positions taken up and there are still... and it helps to for example if we make the motion the first would be that you would enter in with the County with some sort of discussion in regards to an MOU to and MOA in regards to those lands. So that I give you the marching orders to make the appointment with the County and the State. You will have to find out where the State really wants to go on that. The sooner we end up with a little bit more clear idea of how that piece of property is going to be handled in the State and the County.

So whether you need that or not I doubt it, you know you could probably start that already without motions anyways. The other motions would be that for now the preserves within the preserves would be the Lohiau house sites and the known burial areas are treated extra special for now within the plans. And that the sites, especially the Lohiau complex has a good map done now and a report generated as to its condition.

Dr. Lydgate: Didn't you mention the bathrooms being on a site?

Mr. Wichman: Yes it's over burials and over house sites. It's actually over...

Ms. Yuen: There is a separate CIP project and I think there is an agreement between the County and State...

Mr. Wichman: Let's not touch the bathroom yet we will get to that the next time we see you. Right now they know we know.

Ms. Yuen: It would be, basically there is an existing comfort station and they are basically updating that and there was an agreement with the community and the State to do some mediation and try not to impact those as much as they can. So that's where they are at right now.

Mr. Wichman: And then in the mean time the Commission would also want you to continue investigating the State and National Registry just exactly how it is listed. It's kind of shocking that I haven't been able to find it and put my hands on it right away right? Haena not on the State and National Registry, where is it? So we need to settle down with that one. Just exactly

how the status of it over it now and just whether it has all the State and Federal protection measures for it to go on the registry is a standard operation procedures. Its part of it right? It's going to help the site that it is a National Historic Landmark or a district. It's already preserved but those we can discuss at a further and then we would be, we can help you with the actual nomination process if you need it. If it was on the registry we would have known about it already. But there is something different in the arrangement that they have out there.

Dr. Lydgate: Tell us what the word Haena means.

Mr. Wichman: Haena. It's actually Ha is the breath and ena – hot. The other one is Kee means that it's a very twisty, windy road but the end result is far worth the effort. That's what Kee means so Kokee same thing right. Anybody else, for now I think that will help you and it kind of lays out the County position to it at a specific point.

Dr. Lydgate: I am horrified that Parks and Recs (inaudible).

Ms. Yuen: No don't get Mel, there is a deeper story and so I just (inaudible).

Mr. Wichman: There is the County park right there in Kee also. That's County right there in front of the dry cave. That's a County park.

Ms. Yuen: Yes don't give Mel a hard time. He told me some stories about what was going on and it was hard for them. They tried. It's just one of those things that got a little bigger you know what I mean.

Mr. Wichman: Since this land was confiscated by the...

Ms. Yuen: Yes so I think part of what is going to come out of this plan is a bit of a management. You understand that they are going to be things driving this that will hopefully help the State to better manage.

Mr. Wichman: And you have room for different volunteer groups that could develop in there not just Huimakaaainana cause you have the whole maritime aspect of a group that has plenty room in there. You also have marine biology.

Ms. Yuen: Yes there is a fishery going on. There is a lot going on to help coordinate all that energy and get it focused in the right direction.

Mr. Wichman: I don't think you need a motion.

Ms. Sheehan: You have got a lot.

Chair: It's all in the minutes. Thank you very much for coming.

Mr. Wichman: This is a 1940s photo you have probably seen it.

Ms. Yuen: I haven't.

Mr. Wichman: That's just a zerox but the photograph is absolutely clear.

Ms. Yuen: That was one thing that shocked me to when we saw historic photos of the site it was such an open kind of space.

Mr. Wichman: These taro complexes are intense.

Ms. Yuen: It's such a different landscape. Thank you.

**Re: Letter (8/25/08) from Jim Niermann, AICP, Senior Planner – addendum to the Draft Environmental Assessment (EA) for proposed Nawiliwili – Ahukini Shared-Use Path Project, County of Kauai Job No. CMAQ-0700(57), TMK: (4)(por)3-2plats: 02, 03, 04, 06, 07; 3-3-03:3-5-plats 01, 02; 3-6-plats 02, 08; 3-7-02, Lihue District, County of Kauai, Hawaii.**

Chair: Welcome to the KHPRC.

Mr. Doug Haigh: I am Doug Haigh with the Department of Public Works. I am here to present and provide information cause Ricky told me to be here. We have just published the draft environmental assessment for the Nawiliwili to Ahukini bike and pedestrian path. We have submitted cultural survey and our archeological report to the State Historic Preservation Division and right now analyzing all of our responses from the various agencies and concerned people. So I guess what I would like to do is kind of give you an overview of what the project is and then maybe point out a couple of historic properties/issues that we have identified that may be near or may possibly be affecting. So if Randy wants to relinquish (laughter in the background).

Ok we have been to you folks before on the Ahukini to Lydgate project so this project is the last phase that we are working on but actually we have not come to you on the Kuna Bay to Anahola project because our first meeting in Anahola scared us. It's been 2 years and we are so scared but we will return to Anahola and hopefully after the election we will get underway. But any how we're here and the key of this phase is to go from Nawiliwili to Ahukini to make the final connection for the project going from Nawiliwili to Anahola.

I will start from the Ahukini side just because that's kind of easier for me and it (inaudible) of this parcel here which is primarily privately owned but I just got formal notice that the developer is doing the environmental assessment adding density in this area and they are planning on giving this land to the County. So we already have an easement for fishing access but it's in the process that this entire parcel, some of this is State parcels but the major portion of this land is private and is in the process of being donated to the County.

Our goal is to have a coastal path here. In our community meetings we have had 2 community meetings. There was mixed feelings about being along the coast but our feeling is to go along the coast. There are some historic properties (inaudible) a wall in this area in Ninini Point that could have been part of the heiau. We may be near that but clearly we would not touch it. We will potentially do an inventory survey in this area. I am trying to have a meeting with SHPD. My feeling is its not necessary because of the type of improvements we are doing we are not doing much disturbance and really its when we put our path in that we have an archeologist on board in the sensitive areas. But if SHPD feels that it is important for us to do a survey we move toward a survey.

So you come around Ninini Point and then there is a pedestrian path that the developer is doing that we will tie into for pedestrian that will actually go around the coast here and come up to the elevator and then you can get down and go along Kalapaki. But the bike/pedestrian path will come from here and use existing easements to get up to Kapule Highway. The developer for these projects is putting in a traffic signal so that (inaudible). Our goal is to make a connection to the Civic Center and the community of Lihue so that we can both provide recreational access to the community and provide work access for people in the community working at the resort area. We are working closely with the resort were area looking at a path so how we get up to the community we haven't finalized. Kaana Street right now we have developed Kaana Street up to the Police Station shared building. We are not sure we are meeting with Grove Farm to try to see if it's realistic to do a share use path or maybe there is a shared use path. So we need to make that connection preferably at Wilcox Elementary School will be a destination where you want to have a safe pedestrian access.

There really no historical issues in that. The developer is providing us a way to come down into their property in this manner. This is the limo road the carriage road and then coming around getting down to Kalapaki/Nawiliwili. In Nawiliwili there is the historic bridge crossing Nawiliwili Stream is the first historic property that we will affect if we go over the bridge. Of course we will be working to restore the historic character and will certainly come back here with designs for that.

And then when we come into Nawiliwili Park and that's the end of the major path. The major path is coming along like this and then coming back to coastal connection. This is a spur going into Lihue. We are also looking at a spur to go from Nawiliwili Park all the way to Niumalu Park and part of that is to provide a connection to the harbor and connection to the park. There is a historic bridge I believe its right here, an historic one way bridge that it would be part of. I can assure you that we will not be tearing down that bridge as part of this project. We are looking at a shared use road so basically we are going to just put signs on the road from the Harbor toward Niumalu Park so minor improvements for the bike/pedestrian path. So that's pretty much a quick summary of the project we are looking at.

Dr. Lydgate: Question is the airport Federal, State or County?

Mr. Haigh: The airport is State owned and the comments we got back from the airport, really their only concern is they have a navigation aide somewhere over here and we have to be at least

300 feet away from it. We are looking at a potential comfort station at Ninini Point and that we have to be sensitive of the navigational. There is a historic light house I am sorry I should have mentioned that of course the archeological they don't acknowledge that as being historical. That's funny you know it's not mentioned on their maps, wait, wait, 11-100 actually they are referring to the stone wall over there. They didn't even pick up the light house. Our goal of course would be to provide informational signage that would tell the story of the light house cause we are looking at that as being the trail head area because there is vehicular access easily access to that point. So we will be looking at some parking in the light house area and the comfort station.

Dr. Lydgate: How big is the comfort station?

Mr. Haigh: It would be a small one probably similar to the one at the Lihī Park or Kealia Kai. Just a small one, it's you know people use these things. There is a function and along these trails it's good to have places periodically where people can you know. We have had some comment from the public or at least one comment where they weren't happy with the idea of doing any kind of improvement.

Mr. Wichman: Sierra Club right?

Mr. Haigh: Yes and of all of these certainly is to try to treat it in a manner that is not a, in fact I even talked to consultant that might be an area we could do partially underground. I don't know how much elevation we have there but we are going to try to look at a creative way of doing a comfort station without having to have an impact.

Mr. Wichman: You have a leach field system that goes in right there.

Mr. Haigh: Yes we would have to put in a septic tank system.

Mr. Faye: Is this a, you know last time you showed some down town shared paths is that part of this whole plan?

Mr. Haigh: Ok we have, we are looking at a lot of options. Basically we were looking at one spur that gets to down town. And we were looking at going down Kaana Street as the primary. That's the primary one we are looking at but we need to meet with Grove Farm, Planning Department, go over Grove Farm's future plans in that area cause they are moving quite rapidly for developing that area and make sure we are putting that into the right place. And the key is to provide safe access use so that you will let your 10 year old 8 year old children ride their bike down to the light house to the beach and if you are coming to Lihue Town how can we create a path that's going to allow parents to feel that degree of comfort.

Chair: The new light you are referring to would be the light at the intersection of the road with no name by Vidiniha Stadium?

Mr. Haigh: Yes.

Chair: Why doesn't that road have a name?

Mr. Haigh: Because it's actually a driveway at this point I suppose. It's a stadium driveway.

Ms. Sheehan: Can I ask when you start at Ahukini if you wanted to sort of drive there and start are you, I can't see that far, is it where the road already goes to Ahukini and then you park your car and get on your bike and do that?

Mr. Haigh: Yes in the previous phase Ahukini to Lydgate we discuss the development of a trail head there at Ahukini Point. We work closely with State Parks and so we need to provide a comfort station and striping of the parking lot.

Ms. Sheehan: Is there anything historic about Ahukini?

Mr. Wichman: Oh yes.

Ms. Sheehan: So is that trail head there?

Mr. Wichman: Where the trail head is right now is where the existing gate is now right?

Mr. Haigh: Well the plan is for the trail head would be at Ahukini Park by the piers because there is already a big parking lot area there and it is a popular fishing area and the historic Ahukini Pier is there and so we are working closely with State Parks because that's their facility and we would build a comfort station there. They were concerns about impacts to traffic so our agreement was we'd stripe that parking lot so that you know you could delineate where the parking is and make sure you get adequate parking cause something I hear it gets very popular during certain fishing times.

Mr. Wichman: If you want I will go through some. This we have all the blue prints from the development of Ahukini and all its World War II function. Right here is the old camp, the Hanamaulu Mill Camp so you have one of the old camps and then we still have people who are researching it right there. As you go along here there really isn't all that much to worry about because my guess they are following the old footprint of the road, the cane road that is still there right? You are still drive it right?

Mr. Haigh: We are looking at pushing closer to the coast.

Mr. Wichman: How much off the road?

Mr. Haigh: We are trying to get as close to the coast as we can and still be outside of the shoreline setback.

Mr. Wichman: Yes there is some engineering problems but let's not get into that.

Mr. Haigh: Yea but see we didn't want to because we are leaving the road separately for safety reasons for fisherman access and so we don't want to interfere with that and we also don't want to have a joint use because then you would have vehicles in.

Mr. Wichman: (Inaudible) your path through here.

Mr. Haigh: I mean that's part of when we get farther along with the actual design. That's where that map was an earlier one and it doesn't show the actual roof.

Mr. Wichman: They may not be there, you will see the certain rock alignments but then we need to get some other people to take a hard look at that. There are some things but nothing really heavy so far as we know till you get here. Need to know exactly where the footprint of the comfort stations is going to be in relationship to the light house and the Ninini Heiau. I would need to see that, the footprint.

Mr. Haigh: We are actually going to need the guidance to help. I mean that is part of the design requirements to make sure that we are sensitive to the existing.

Mr. Wichman: It's compounded by you having to stay away 300 feet from that particular, that I need to see. I think that will compound it. It forces you into a specific area. But Ninini I am suspecting that the heiau is still underneath the construction cause actually when you look at it and we have all the photographs when you are ready I can bring them over to you. The whole sequence of the lighthouse but that retaining wall was built and then it was filled in for the upper main platform that the lighthouse is sitting on. The road area was also filled in because it was undulating on that side. Chances are part of the heiau is still underneath the road, portions of it could be underneath the road itself.

So there could be and we will walk it out and I will show you why and then you look at it and you make up your own mind. I haven't been able to, those walls that are going off of course I have looked at them really carefully for the last 6 months I have been out there a dozens times already but also within the photographs they don't show up so they are very late historic. Go figure that one and I will show you that through the sequence of photographs cause it took me a long time to figure out the walls are this tall right?

Mr. Haigh: So then it's probably, they probably weren't part of the heiau then?

Mr. Wichman: No however it was also part of Hanamaulu off loading certain things like they did in Kilauea off the rail so there is a period also that they may have off loaded certain things early, early plantation activity. As you get into the Coast Guard Station and the lighthouse that in its own way is quite historic as its own particular bid right there so it's exactly where you are going to be putting the comfort station is going to make all the difference in the world and before I go any further I need to see the exact footprint.

Mr. Haigh: And I can tell you we don't have one at this point.

Mr. Wichman: Yes but we would love to be able to go out there with you and spend, I don't think it will take you more than a half an hour or forty five minutes to get the gist of the way and then from then on you can now probably maneuver around those things right?

Mr. Haigh: What I will probably do is when our planning consultants are back on I will try to see if I can get in touch with you and see if we can set some kind of...

Mr. Wichman: Yes like I said it won't take long cause then after that after you have seen the photographs and the actual physical then you guys will make up your minds.

Ms. Sheehan: Are you constrained by having a comfort station every 5 or 6 miles?

Mr. Haigh: There is no set standard for how often you are supposed to have a comfort station.

Ms. Sheehan: So if you moved it around the corner or something...

Mr. Haigh: Yes there is actually a comfort station being put in by the developer on the other side of you know where Sharkys used to be on the other side over there. But it's really not conveniently located for the path cause that's not part of the bicycle path.

Ms. Sheehan: What's the mileage from the Ahukini start to the lighthouse?

Mr. Haigh: It's, I am not sure I would have to, there is a scale. Yes ok it's almost 2 miles then. And that's a, it would be very beneficial if we could get a comfort station somewhere in that area.

Mr. Wichman: I think so. If you could arrange it because you can develop that area into something that special but it will have everything to do with the exact footprint you choose. Not too close, not too far away and then it all depends on where you, the County property is right? Cause where you want to locate it may not be on County land. So I am not sure, we have to walk that.

Mr. Haigh: Yes unfortunately I don't think we are going to, with these neighboring landowners we have good relationships with all of them so it should be, if it becomes such that we need to acquire a little bit off of one of the lands and its feasible then that would not be a big stumbling block I don't think.

Mr. Wichman: The lighthouse is a beautiful area to hang out.

Mr. Faye: What's the schedule on the funding?

Mr. Haigh: The schedule we don't, right now we are completely in this environmental assessment. We hope to publish the final EA in January or end of this year early next year. Right now this phase is not on the statewide transportation improvement plan. It's too far out in the future. Our goal is to get the planning done so as the developer does things in this area we

can get them to you know at least make sure they allow room for us and prefer to have them do a lot of the improvements as part of their development. So it's really hard to say. Now federal funding right now especially federal highway funding is fairly questionable. So it's hard to know what's going to be happening in the future.

Mr. Wichman: So also this plan is actually encompassing 6 ahupuaa. I don't know if you are aware of that.

Mr. Haigh: In just this little area?

Mr. Wichman: Yes it's the most concentrated portion on Kauai where we have as many as 6 coming down. You have the Hanamaulu line that is coming through here right there. Then you have the Kalapaki and then you have Nawiliwili, then you have Haiku and then you have Niumalu, then you have Kipu. So there is actually, this encompasses 6 ahupuaa your plan. So we'll get to that later being able to divide it up. Also this whole sector right here as we look into the really, really old aerial photographs to see what was there as early as we can get no big flags come up in that sector. So that is why we are not even at this particular point there is no particular need to go there right? There is any big flags like you have at Ninini. I think at this particular point the camp and the Ninini but even the camp you know most of that is buried under rubbish anyways or dirt.

Mr. Haigh: Yes we also have an old dump that we are looking at going by and we are going to try to work with the State and hopefully by the time we are ready to go they will have already restored the dump, stabilized it so we can go over it rather than have to go around it.

Mr. Wichman: Hanamaulu is the most polluted bay in the nation supposedly.

Mr. Faye: It doesn't look polluted looks nice and crispy.

Mr. Haigh: I love to go snorkeling. It's gorgeous when the winds are light.

Staff: Randy didn't we have the Harbor Master's House site on the Ahukini side?

Mr. Wichman: Yes that's the one we reviewed and got moved over to Kealia right?

Staff: And I thin an archeological survey was done for Ninini Point or portions of it in one of the earlier Marriott or Westin.

Mr. Haigh: There have been a lot of surveys done in this area in the report and that's why the reason I am question a need to do another one. So we will be meeting with SHPD and going over that.

Dr. Lydgate: (Inaudible).

Mr. Haigh: Well it's the Kauai Lagoon owners. I am not sure, my guess it would be about 60 acres.

Mr. Faye: So they are going to build on the Mokihana Golf Course.

Mr. Haigh: They have got I believe 3 different sites within their development that are getting added density based on, cause what they are doing they are getting 22 building site density, 22 unit density by dedicating this land to the County of Kauai. That's what they are proposing.

Mr. Wichman: The other one too is the light house probably eligible for the State and National Registry so that's another consideration but that is something that you can work with the Commission to do.

Mr. Haigh: There is an opportunity too for any restoration work or appropriate work for the light house. Funds that we are using for the project are also used for lighthouse work. So we could if there was a group that was interested in doing some enhancements in preserving it or if there is stuff that needs to be done it could possibly be incorporated.

Mr. Wichman: And then there is also a vegetation plan you got going but I think you can review that later after we see the footprint or as you have developed your landscaping plan right?

Mr. Haigh: I mean right now would probably be minimal landscaping improvements cause if anything it would be when we finally get into design maybe around the light house but it's such a harsh environment you know so I wouldn't want to try to create that hotel resort environment there.

Ms. Sheehan: So actually the path is how wide?

Mr. Haigh: In that area probably about 10 to 12 feet wide.

Ms. Sheehan: And it's paved?

Mr. Haigh: It's paved.

Mr. Wichman: Yes cemented. Usually they go down to about 10 inches.

Mr. Haigh: 6 inches of concrete.

Mr. Wichman: So they are actually digging in 10 inches to 12 inches I think.

Mr. Haigh: Well we don't necessarily in a lot of places we just do the 6 inches so in fact I am trying to think any place I can't think of any part of the path where we put base course to actually build below the concrete cause the concrete is 6 inches thick so it's pretty self sustainable.

Mr. Wichman: Chances are they are really no burial issues along here not like they were in Wailua.

Mr. Haigh: Yes it's not a sandy area.

Chair: Thank you Doug.

Mr. Faye: I hope you get the money.

Mr. Wichman: Get Anahola done.

Mr. Haigh: My goal is in my career at least get from Lydgate Park to Kuna Bay.

Mr. Wichman: Talk to Kane, just go right to him.

Mr. Haigh: We'll be there, I mean Anahola I think is we have made a lot of we let Department of Hawaiian Homes Land do a lot of ground work for us so I think there is a solution there that we will find.

Chair: Thank you for coming by.

Mr. Faye: Very good.

#### SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HĀ ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HĀ ENA, KAUA I, HAWAII

Dear Chair & Commission Members,

Thank you for your letter dated September 9, 2008 responding to our request for pre-consultation comments and your letter dated October 22, 2008 following discussion of the above referenced project at your October 2, 2008 meeting.

As the planning consultant for the applicant, State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the comments from the Commission. We acknowledge your comments that areas of interest discussed at the Commission's October 2, 2008 meeting include: *"consider nominating the complex to the National/State Register, relationship of trails with respect to cultural resources and practices, fishing zones, interpretive program, maintenance and management/overlapping jurisdictions, mapping and buffers of specific resource preserves within the overall complex preserve"*.

The master plan addresses these areas of interest. Recognizing the importance of Hā'ena to Hawaiian history and culture along with the many known archaeological and ecological resources in Hā'ena State park, the Master Plan endeavors to elevate consideration for the Park's cultural and ecological resources in both site design and management recommendations.

In an effort to listen and expand understanding of Hā'ena's importance to the community, a 32-member Master Plan Community Advisory Committee (MPAC) was formed. This group has convened on several occasions to work together with State Parks in development of a plan that balances outdoor recreation with safety and respect for the park's many layered resources.

With respect to your comment regarding the National and State Registers of Historic Places, we note that the Hā'ena Archaeological Complex is on the National and State Registers of Historic Places (Site # 50-30-02-1600). We also note that Kūhiō Highway, within and adjacent to the park, is also listed in the National Register (Site #30-02-9346). The State Historic Preservation Department has been consulted as part of the Master Planning and environmental documentation process.

Kaua'i Historic Preservation Review Commission

PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND  
ENVIRONMENTAL IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII  
PAGE 2 OF 3

With respect to trails and their proximity to cultural resources and practices, the Master Plan documents existing trails within the park, while recommending that the majority of park visitors utilize Kūhiō Highway to access the Park's outdoor recreational activities. Within the Park, the Master Plan limits vehicle access on Kūhiō Highway and anticipates that the road will serve as an Interpretive Corridor, accommodating most park visitors on foot. Trails through the restored lo'i are recommended to serve operations functions for restoration and maintenance of the agricultural complex. Trails leading to the Ka Ulu a Paoa heiau and Ke Ahu a Laka hula platform are recommended to remain in place for use by cultural practitioners.

With respect to an interpretive plan, a key Master Plan recommendation is that a Cultural Advisory Group be formed and consulted on park management actions, construction projects as well as the park's interpretive programs. The enhanced oversight is expected to result in improved interpretation of the park's cultural, ecological and archaeological resources, and as a result, a visiting public that is more aware and sensitive to the importance and fragility of these resources.

The Master Plan also identifies several alternatives for management of the Park's resources, including a variety of cooperative arrangements between the State and community groups. Please note that the Master Plan's physical improvements and management recommendations seek to provide the visiting public with greater understanding of the Park's resources, without restricting any areas within the park as a preserve. Limiting access to culturally sensitive areas was discussed at length at MPAC meetings, however, excluding classes of individuals from areas within the Park may potentially create a conflict with commitments that the State made when it accepted federal monies for the development of the park through the National Park administered Land and Water Conservation Fund (LWCF). Thus, the Master Plan includes development of an Education and Cultural Center (ECC) near the park entry which all visitors must pass through. The accompanying management recommendation is to require visitors to view a video that informs guests of the many sensitive resources within the Park. Visitors are then directed toward outdoor recreation areas such as Kē'ē Beach and the Kalalau trailhead via an Interpretive Corridor. Throughout the park, interpretive signage is proposed to educate visitors to their surroundings and advise on appropriate behavior. Specific details relating to interpretive content are recommended to be developed in consultation with the Cultural Advisory Group formed for the Park.

The Master Plan defers management of fishery resources to the Hā'ena Community-Based Subsistence Fishery, which has been an on-going community effort. The Master Plan anticipates special access parking for fishermen/women within the existing parking area at Kē'ē.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

Subject: Pre-consultation for the Proposed Haena State Park Master Plan & EIS  
Attn: Kimi M kami Yuen

Hawaiian Tel com has a pay phone and an emergency phone at Kee Beach. Both phones are serviced from a DLNR owned 6 pair cable running parallel to Kūhiō Hwy on the makai side of the road, originating from Limahuli Stream. Any proposed projects in the area should consider the possible impact to this State owned telephone cable.

Thank you for the opportunity to comment on the subject plan. Call or email should you have any questions.

KAUA'I PLANNING & ACTION ALLIANCE

August 29, 2008

Kimi Mikami Yuen  
Associate  
PBR Hawaii & Associates, Inc.  
1001 Bishop Street, ASP Tower Suite 650  
Honolulu, HI 96813-3484

Dear Kimi:

I am delighted to see that the contract to prepare a master plan and EIS for Hā'ena State Park is moving forward. Further, I am pleased to see that the project is building upon the extensive work already done, which included substantial input from the community. I fully support that approach.

Kaua'i Planning & Action Alliance (KPAA) has secured a grant in aid to improve the first two miles of the Napali Coast Wilderness State Park trail, which is adjacent to your project site. I am uncertain when that work will begin, as the contract is not yet completed. However, we are hoping to start planning and design work before the end of this year and construction will take approximately another 15 months. We are working through the Division of State Parks on the project.

Please keep me informed of your project events and meetings. You can reach me at 808-632-2005 or [dzachary@kauainetwork.org](mailto:dzachary@kauainetwork.org).

Best regards,

Diane Zachary

Subject: Ha'ena State Park

To Kimi Mikami Yuen  
PBR Hawaii & Associates, Ltd.

Re: Ha'ena State Park

The area covered by the Ha'ena State Park is rich with ancient Hawaiian place names, sites, legends and uses. I would like very much to enter into a dialogue with you concerning these. Meanwhile, here are preliminary thoughts:

1. The upper wet cave is an ancient sacred site and should be respected as such. There is also a room called "Blue Grotto" which can only be accessed by swimming through a water-filled tunnel and is therefore dangerous to a poor swimmer. The road leading up to the cave has already moved a named boulder, which, if possible, should be found and restored to its place.

2. Makana peak is the site of one of two "fireworks" cliffs. The last performance of this spectacle took place in 1912. Perhaps a plaque could illustrate this, as I doubt that anyone today could duplicate the fireworks display.

3. The lower cave used to have a flat-bottomed scow that took the curious deep into the darkness, up to the point where the cave splits into two. Curious stay out.

4. Lohiau's house site is now pretty well overgrown, but it should be preserved in its entirety. My mother, Juliet Rice Wichman, saved it from destruction when highway builders wished to take its rocks for road building. She stood between it and a bulldozer for several hours before the project was called off. This wall should date to at least the 1300s.

5. The restoration of the fishponds (loko) and taro fields (lo'i), already begun, should continue and be expanded. Indeed, the whole park should be aimed at reestablishing as many of its former uses as possible.

6. There are known burial sites within the park, one of which is being actively maintained by the 'ohana concerned. I would like to see this continued. There is an early photograph of the family that could be used in a memorial stele.

FW Ha'ena State Park.txt[6/12/2015 12:44:56 AM]

7. Parking should be confined at the site of the helicopter landing opposite the upper wet cave. There is no need for the congestion now occurring at the beach. As for the feasibility of asking people to walk a quarter mile, look to the park at Iao Valley on Maui, where a steep, narrow path of a quarter mile must be negotiated before seeing the needle itself.

8. There are petroglyphs within the park which are totally unprotected now. They should be properly studied and rubbings taken.

9. I would suggest that someone on your staff should familiarize themselves with the pertinent legends and history indicated within all six of my books. The Kauai Historical Society is another source of information.

As I say, these are preliminary thoughts. I would like to be added to your list and I can be contacted at fwichman@aloha.net.

Thank you,

Frederick B. Wichman

**SUBJECT: PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA  
STATE PARK MASTER PLAN AND ENVIRONMENTAL  
IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII**

Dear Mr. Wichman,

As the planning consultant for the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we thank you for your email comments dated August 25, 2008 in response to our pre-consultation request referenced above. Additionally, it is with gratitude we thank you for taking the time to share your mana'o by participating in the Cultural Impact Assessment interview process, conducted by Maria Orr (Ka'imipono Consulting).

The information provided in your email, interview and body of published writing contributed to a greater understanding of the park's cultural and archaeological resources, ultimately translating into recommendations for master plan physical improvements and management actions.

Recognizing the importance of Hā'ena to Hawaiian history and culture, the Master Plan endeavors to elevate consideration for these resources in both site design and management actions. In an effort to listen and expand understanding of Hā'ena's importance to the community, a 32-member Master Plan Community Advisory Committee (MPAC) was formed. This group has convened on several occasions to work together with State Parks in development of a plan that balances outdoor recreation with safety and respect for the park's many layered resources. MPAC and general community meeting notes are included within the appendices of the Environmental Assessment.

As a result of the MPAC discussions, and the Cultural Impact Assessment process, a key Master Plan recommendation is that a Cultural Advisory Group be formed and consulted on park management actions, construction projects as well as interpretive programs. The enhanced oversight is expected to result in improved interpretation of the park's cultural, ecological and archaeological resources, and as a result, a visiting public that is more aware and sensitive to the importance and fragility of these resources.

Frederick B. Wichman

**PRE-CONSULTATION FOR THE PROPOSED HĀ'ENA STATE PARK MASTER  
PLAN AND ENVIRONMENTAL IMPACT STATEMENT, HĀ'ENA, KAUA'I, HAWAII**

Page 2 of 2

Mahalo for your contribution to the development of the master plan and the supporting environmental documents. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

IN REPLY REFER TO:  
L32 (PWR-PPR)  
15-00061

June 6, 2014

Mr. Daniel Quinn, Administrator  
Division of State Parks  
Department of Land and Natural Resources  
1151 Punchbowl Street, Room 310  
Honolulu, HI 96813

Dear Mr. Quinn:

As you know, since 1965 the Land and Water Conservation Fund (LWCF) State grant program has provided almost \$3.7 billion in financial assistance to States, Territories, the District of Columbia and local units of government for the acquisition and development of public outdoor recreation areas and facilities. This has amounted to over 40,000 grants to state and local governments. Hawai'i has received more than \$38 million in grants in LWCF assistance since 1965.

The State's commitment under the LWCF program is reflected in each grant agreement it executes with NPS in which the State agrees to perpetually preserve, protect and increase the quality and quantity of public outdoor recreation facilities and resources, consistent with the intent of the LWCF Act.

Signed in 1972, LWCF grant 15-00061 helped Hawaii create Ha'ena State Park as a public beach park offering swimming, fishing, picnicking, camping and other beach-oriented recreation opportunities. This popular State Park was inspected as recently as December 2012 to ensure compliance with the grant sponsor's perpetual stewardship requirements under section 6(f)3 of the LWCF Act.

I am aware that discussions occurred as long ago as 1995 between your Department of State Parks and NPS which eventually led to my predecessor's request to review the park's draft master plan. I am also aware that in recent years there has been controversy about an area within the park's interior (but not within the park's coastal recreational areas). Specifically, I understand that this central area is used by local citizens to grow traditional agricultural products consistent with their cultural heritage (kalo or taro). The management of the site is a community garden format. Although a community garden is somewhat unusual in a State Park, it is my understanding that the

State views such agricultural practices at Hā'ena State Park as a means of restoring the cultural landscape and an element of the park's interpretive and educational program. It is my understanding that the size of the area has provoked concern and discussion, as has the possibility of creating an "exclusive use" area within the park that could be out of compliance with LWCF program requirements.

#### Appropriateness of community gardens within LWCF-protected parks

The draft master plan for the park forwarded to me in August 2013 shows some changes to the park's use reflect contemporary sensitivities to cultural resources and the sensitive shoreline ecosystem. Table 7 (page 3-22) and Figure 30 of the master plan draft indicate outdoor recreation uses now and proposed in the future. The recreation opportunities include a variety of ocean recreation, walking, picnicking, nature viewing, sight-seeing, and interpretive exhibits with the potential for camping and bicycling. These provide assurance that the "public beach park" qualities that make this a valuable LWCF park are planned for the future.

The master plan draft also shows that the park will encompass a significant community gardening area with the proposed restoration of the lo'i kalo (wetlands). Although such an area is unusual within a state park and more common in local parks, such areas are not out of compliance with LWCF requirements. Community gardens are allowed in LWCF-protected parks with the understanding that they are accessible to the general public in an equitable manner and are not intended for any private or commercial use.

To be specific, Page 3-2 of the 2008 LWCF Manual (Chapter 3 Section C.4.k.), clearly calls out the eligibility of LWCF funding for community gardens and, thereby, their acceptability with the 6(f)2 boundary even if not funded by LWCF:

**"k. Community gardens.** LWCF assistance may be available for land preparation, perimeter fencing, storage bins and sheds, irrigation systems, benches, walkways, parking areas and restrooms related to a community garden. In such a project, community gardening must be clearly identified in the SCORP as a needed outdoor recreation activity and must be accessible to the general public in an equitable manner. Furthermore, LWCF assistance is not available for fertilizer, seeds, tools, water hoses, nor gardens planned as commercial enterprises."

In this case, the state is not asking for LWCF funding for community gardens, and therefore SCORP compliance is less of a guiding factor. This is an important point because community gardens are not mentioned prominently in the 2008 SCORP, although they are certainly allowed by the LWCF program in general. Instead, I am focusing on the local community's clear desire to continue a traditional agricultural practice within terraces on site used to grow *kalo* (taro) for several centuries.

Maintaining such a practice with an interpretive/ educational component is clearly consistent with several goals within the 2008 SCORP, as is the provision of a range of outdoor recreation opportunities for all ages and abilities broadly throughout the state. To that end, it is advisable to include trails and interpretive opportunities to ensure that all members of the public -- including visitors from afar and anyone not engaged in the community garden activities -- can still understand what is happening there, the cultural significance, and generally not feel excluded from this public place.

Naturally, any agricultural goods harvested within the community garden areas should be generally for park programs and personal use and not part of a formal commercial or for-profit farming operation.

#### Limits to daily visitation within LWCF-protected parks

It is my understanding that there may be concern about limiting access to park areas either to protect sensitive natural resources or to ensure appropriate management of recreation resources, including the community gardening area. The LWCF program allows grant sponsors to put reasonable limits on the size and frequency of park visitors. Page 8-2 of the 2008 LWCF Manual (Chapter 8, Section C.4. Reasonable use limitations) states:

**4. Reasonable use limitations.** Project sponsors may impose reasonable limits on the type and extent of use of areas and facilities acquired and/or developed with Fund assistance when such a limitation is necessary for maintenance or preservation. Thus, limitations may be imposed on the numbers of person using an area or facility or the type of users, such as "hunters only" or "hikers only." All limitations shall be in accord with the applicable grant agreement and amendments.

It is important that the management of the park not create an "exclusive use" situation that could provoke a conversion. As long as access to the park is managed by a reasonable standard, it will be in compliance with the LWCF program.

Please note that this is not really an "approval" because there is nothing to "approve". My review of the file indicates that Hawai'i has not submitted an official packet composed of LWCF Amendments, 424's, DNFs, new 6(f)3 maps, PD/ESF, EA/EIS, etc. for NPS evaluation. Therefore, no federal action has been initiated, NEPA and S.106 compliance have not been triggered.

I hope this clarifies the situation in a satisfactory manner. I look forward to continuing to be in discussion with one another as new questions come up. Please do not hesitate to contact me if you have further questions.

## 12.0 EISPN COMMENTS AND RESPONSES

The EISPN was sent to the following agencies, organizations, and individuals indicated in the table below with a check mark (✓) or as noted. If an agency or individual were sent the EISPN multiple times it is also noted. The EISPN was also available on the OEQC website and published in the February 23, 2015 edition of *The Environmental Notice*. The public comment period was from February 23, 2015 to March 25, 2015. If comments were received on the EISPN, the date of the comment is indicated in the table next to the respective agency, organization, or individual's name. Copies of the comment letters and the respective responses are attached.

Ref. No. P-14681

March 18, 2015

Ms. Catie Cullison, AICP  
Project Manager/Associate  
PBR HAWAII & Associates, Inc.  
1001 Bishop Street, Suite 650  
Honolulu, Hawaii 96813

Dear Ms. Cullison:

Subject: Environmental Impact Statement Preparation Notice for the Haena State Park Master Plan, Hanalei, Kauai;  
TMK: (4) 5-6-008:001, (4) 5-9-001:025, (4) 5-9-001:022 (por)

Thank you for the opportunity to provide comments on the Environmental Impact Statement Preparation Notice (EISP) for the Haena State Park Master Plan. The review material was transmitted to our office by letter, dated February 22, 2015.

It is our understanding that this master plan calls for a number of foundational and cultural improvements that will affect the long-term future of this state park. These improvements include the creation of a Welcome Pavilion, the construction of an Education and Cultural Center, increased public comfort stations, outdoor event space, and an information desk. The master plan calls for dedicated areas for interpretive displays, exhibits, picnic areas, and bicycle parking. In the short-term, a central island turnaround will feature a large hala tree or native tree significant to Haena. In the long-term, a new main gate is proposed which will have a large turnaround and entry kiosk which will control the gates to the main parking lot.

A refurbished vehicle parking area will utilize permeable pavement or structural grass to reduce runoff and soil erosion. An interpretive path will be situated makai of the highway and will connect the Welcome Pavilion to Kee Beach and the rest of the pathways that run throughout the park. Interpretive displays and directional signage will be incorporated in this pathway. Finally, a caretaker cottage, helipad, baseyard/staging area, a hula complex, a new lifeguard tower, sand dune restoration, wetland restoration, stream restoration, and an agricultural complex are some of the many recommendations called for in the master plan.

The Office of Planning has reviewed the EISP and has the following comments to offer:

1. The EISP does not include the goals and objectives listed in the Hawaii State Plan, Hawaii Revised Statutes (HRS) Chapter 226. HRS Chapter 226 provides goals,

Ms. Catie Cullison, AICP  
March 18, 2015  
Page 2

objectives, priorities, and priority guidelines for growth, development, and the allocation of resources throughout the State. It contains diverse policies and objectives on topics of state interest including but not limited to, the economy, agriculture, the visitor industry, federal expenditure, the physical environment, facility systems, socio-cultural advancement, climate change adaptation, and sustainability.

The Draft Environmental Impact Statement (Draft EIS) should contain an analysis that addresses whether the proposed project conforms or is in conflict with the objectives, policies, and priority guidelines listed in the Hawaii State Plan.

2. The Draft EIS should provide an analysis on the risk of coastal hazards surrounding the north shore of Kauai and the marine environment adjoining Haena State Park. The Draft EIS should discuss site-specific mitigation measures regarding the risk of coastal hazards, and consider the climate change adaptation priority guidelines set forth in HRS § 226-109, to reduce hazard to life and property from coastal hazards.
3. The EISP does not contain an analysis on the project's conformity with the Coastal Zone Management (CZM) objectives and policies found in HRS § 205A-2. EISP Section 3.2.3, page 3-5, incorrectly concludes that the Coastal Zone Management Act is primarily implemented by the counties through the Special Management Area (SMA) process and the SMA permit will address these policies and objectives.  
  
HRS § 205A-1 defines the entire state as being within the coastal zone management area. Therefore the Draft EIS should include an assessment as to how the proposed project conforms to the CZM objectives and its supporting policies set forth in HRS § 205A-2. Where a conflict or inconsistency exists, the analysis must describe the extent to which the project proponent has reconciled its proposed action with this statute. These objectives and policies include: recreational resources, historic resources, scenic and open space resources, coastal ecosystems, economic uses, coastal hazards, managing development, public participation, beach protection, and marine resources.
4. The SMA guidelines, articulated in HRS § 205A-26, apply specifically to the SMA permit process. If the Environmental Impact Statement (EIS) serves as the primary technical supporting document for the SMA use permit application, we recommend the EIS assess the compliance of the proposed project to the SMA guidelines.
5. The County Shoreline Setback information found in EISP Section 3.3.5, page 3-10, should be updated by referring to Ordinance No. 979, which took effect on December 5, 2014. In the Draft EIS, Table 4 - County Shoreline Setback Requirements, should be updated accordingly. The County of Kauai Planning Department should be consulted for

Ms. Catie Cullison, AICP  
March 18, 2015  
Page 3

the SMA use and shoreline setbacks.

If you have any questions regarding this comment letter, please contact Josh Hekeia of our office at 587-2845.

Sincerely,

Leo R. Asuncion  
Acting Director

**SUBJECT: PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT PREPARATION NOTICE, HĀ'ENA, KAUA'I, HAWAII**

Dear Mr. Asuncion,

Thank you for your agency's letter dated March 18, 2015 (your Reference No. P-14681) regarding the above referenced Environmental Impact Statement (EIS) Preparation Notice (EISP). As the planning consultant for the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we appreciate your comments from the Office of Planning and provide the following responses.

#### Comment #1:

*"The EISP does not include goals and objectives listed in the Hawai'i State Plan, Hawai'i Revised Statutes (HRS) Chapter 226."*

Response: Per §11-200-17(H), Hawai'i Administrative Rules (HAR), the Draft Environmental Impact Statement (DEIS) will contain an analysis that addresses whether the proposed project conforms or is in conflict the relevant objectives, policies and priority guidelines listed in the Hawai'i State Plan. The EISP was issued according to §11-200-11.2, HAR and prepared in accordance with §11-200-9, HAR, which references the content requirements for an Environmental Assessment (§11-200-10, HAR). Section 11-200-10, HAR does not require "a statement of the relationship of the proposed action to land use plans, policies, and controls for the affected area," which is quoted from the content requirements of a DEIS (§11-200-17(H), HAR). However, as noted, we will include this discussion in the forthcoming DEIS. Thank you for the comment.

#### Comment #2:

*"The Draft EIS should provide an analysis on the risk of coastal hazards surrounding the north shore of Kaua'i and the marine environment adjoining Hā'ena State Park."*

Response: The risk of coastal hazards and the marine environment adjoining Hā'ena State Park were discussed in sections 4.11.4 "Shoreline Erosion," Section 4.6 "Marine Environment," and "Section 2.5.11 Dune Restoration" of the EISP. However, references to §226-109, Hawai'i Revised Statutes (HRS) will be made in the appropriate sections of the Draft EIS.

#### Comment #3:

*"The EISP does not contain an analysis on the project's conformity with the Coastal Zone Management (CZM) objectives and policies found in HRS subsection 205A-2. EISP Section 3.2.3, page 3-5, incorrectly concludes that the Coastal Zone Management Act is primarily implemented by the counties through the Special Management Area (SMA) process and the SMA permit will address these policies and objectives."*

*HRS §205A-1 defines the entire state as being within the coastal zone management area.*

...

**Response:** We appreciate your clarification of the CZM and SMA processes. Per §11-200-17(H), HAR, the DEIS will include an assessment as to how the proposed project conforms to the CZM objectives and its supporting policies set forth in §205A-2, HRS. As noted earlier, the EISPN was prepared according to the content requirements for Environmental Assessment (§11-200-10, HAR), which do not require "a statement of the relationship of the proposed action to land use plans, policies, and controls for the affected area" (§11-200-17(H), HAR). However, we will include the clarification that all of the state is included within the coastal zone management area and will include the required §205A-2, HRS discussion in the DEIS.

**Comment #4:**

*"The SMA guidelines, articulated in HRS subsection 205A-26, apply specifically to the SMA permit process. If the Environmental Impact Statement (EIS) serves as the primary technical supporting document for the SMA use permit application, we recommend the EIS assess the compliance of the proposed project to the SMA guidelines."*

**Response:** We appreciate the advice provided. While we would anticipate that at least one or more actions proposed in the Master Plan may require a SMA Use Permit, at this time, it is not anticipated that an application for such a permit will immediately follow the acceptance of the Final EIS. However, the EIS will be written to address the range of actions proposed by the Master Plan and individual SMA permits will be sought as needed in the future.

**Comment #5:**

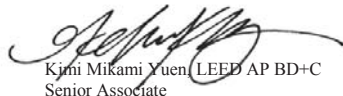

*"The County Shoreline Setback information found in EISPN Section 3.3.5, page 3-10, should be updated by referring to Ordinance No. 979, which took effect on December 5, 2014. In the Draft EIS, Table 4 – County Shoreline Setback Requirements, should be updated accordingly."*

**Response:** We appreciate the information provided, and will provide the updated information in the DEIS.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

  
Kimi Mikami Yuen, LEED AP BD+C  
Senior Associate

Dear Ms. Tanaka:

**SUBJECT: Environmental Impact Statement Preparation Notice (EISPN) for  
Haena State Park Master Plan, Hanalei, Kauai**

The Department of Health (DOH), Environmental Planning Office (EPO), acknowledges receipt of your EISPN to our office on February 22, 2015. Thank you for allowing us to review and comment on the proposed Haena State Park Master Plan available on the OEQC website at:  
[http://oegc.doh.hawaii.gov/Shared%20Documents/EA\\_and\\_EIS\\_Online\\_Library/Kauai/2010s/2015-02-23-KA-5B-EISPN-Haena-State-Park-Master-Plan.pdf](http://oegc.doh.hawaii.gov/Shared%20Documents/EA_and_EIS_Online_Library/Kauai/2010s/2015-02-23-KA-5B-EISPN-Haena-State-Park-Master-Plan.pdf)

The EISPN was routed to the Kauai Department of Health and the Clean Water Branch. The various branches will provide specific comments to you if necessary. EPO recommends that you review the standard comments and available strategies to support sustainable and healthy design provided at:  
<http://health.hawaii.gov/epo/home/landuse-planning-review-program/>. Projects are required to adhere to all applicable standard comments.

We encourage you to examine and utilize the Hawaii Environmental Health Portal. The portal provides links to our e-Permitting Portal, Environmental Health Warehouse, Groundwater Contamination Viewer, Hawaii Emergency Response Exchange, Hawaii State and Local Emission Inventory System, Water Pollution Control Viewer, Water Quality Data, Warnings, Advisories and Postings. The Portal is continually updated. Please visit it regularly at:  
<https://eha-cloud.doh.hawaii.gov>

You may also wish to review the revised Water Quality Standards Maps that have been updated for all islands. The Water Quality Standards Maps can be found at:  
<http://health.hawaii.gov/cwb/site-map/clean-water-branch-home-page/water-quality-standards/>.

We request that you utilize all of this information on your proposed project to increase sustainable, innovative, inspirational, transparent and healthy design.

Mahalo nui loa,

  
Laura Leialoha Phillips McIntyre, AICP  
Program Manager, Environmental Planning Office

**SUBJECT: PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT PREPARATION NOTICE, HĀ'ENA, KAUA'I, HAWAII**

Dear Ms. McIntyre,

Thank you for your Department's letter dated February 25, 2015 (your Reference No. EPO 15-044) regarding the above referenced Environmental Impact Statement (EIS) Preparation Notice (EISPN). As the planning consultant for the State of Hawai'i, Department of Land and Natural Resources (DLNR), Division of State Parks, we have reviewed your comments and provide the following responses.

We reviewed the Environmental Planning Office's (EPO) standard comments relating to Environmental Health programs. We understand that all standard comments specifically applicable to the Hā'ena State Park Master Plan must be adhered to. The organization of this letter follows the list of standard comments on your website.

#### Clean Air Branch

We acknowledge that there is a potential for fugitive dust emissions during all phases of construction and operations. The Draft EIS will address construction-related impacts related to fugitive dust. All construction activities will comply with the provisions of Section 11-60.1-33, Hawai'i Administrative Rules (HAR) related to Fugitive Dust. Adequate measures to control dust during various phases of construction will be required to be implemented by whatever contractor is employed by the DLNR to effect the project's development.

#### Clean Water Branch

We reviewed and understand the standard comments provided by the Clean Water Branch (CWB).

1. **Potential Impacts to State Waters.** The EIS identifies the type and class of State waters off the coast of Hā'ena as "AA." Any potential impacts to these waters caused by the construction and/or operation of the proposed project will meet the provisions of the: a) anti-degradation policy (Chapter 11-54-1.1, HAR); b) designated uses (Chapter 11-54-3, HAR); and c) water quality criteria (Chapter 11-54-4 through 11-54-8, HAR). However, direct discharges of storm water runoff into marine waters are not expected to occur due to best management practices to reduce airborne dust and waterborne silt during construction.
2. **National Pollutant Discharge Elimination System permit coverage.** It is acknowledged that if soil disturbance of any single project exceeds one acre in area or any of the other activities listed, a National Pollutant Discharge Elimination System (NPDES) permit for Storm Water Associated with Construction Activity will be necessary. All relevant rules and requirements will be followed for the construction activities.
3. **Clean Water Act.** Pursuant to the "Clean Water Act," a Section 401 Water Quality Certification from the State Department of Health, Clean Water Branch will be obtained if it is determined that the project may result in any discharge into navigable waters or as otherwise triggered.

Ms. Laura Leialoha Phillips McIntyre, AICP  
May 8, 2015  
Page 2

4. **State Water Quality Standards (Chapter 11-54 and 11-55, HAR).** All discharges related to the construction and operation of the proposed project will comply with the State's Water Quality requirements contained in Chapters 11-54 and 11-55, HAR.
5. **Federal Permits or Approvals.** The following federal agencies were solicited for comments on the EISPN and will be sent the Draft EIS. State Parks will follow up with any agencies should any permit or approval be necessary from the appropriate agency(ies).

- U.S. Army Corps of Engineers, Honolulu District
- U.S. Fish and Wildlife Service
- National Marine Fisheries Service
- Federal Highways Administration
- Department of the Interior USGS Pacific Islands Water Science Center
- Department of the Interior National Park Service
- Department of Agriculture NRCS
- Department of the Navy
- Federal Aviation Administration
- Federal Transit Administration
- U.S. Coast Guard
- Environmental Protection Agency

#### Hazard Evaluation and Emergency Response Office

We understand that the Hazard Evaluation and Emergency Response (HEER) Office provides leadership, support, and partnership in preventing, planning for, responding to, and enforcing environmental laws relating to releases or threats of releases of hazardous substances. There may be hazardous substances, pollutants, or contaminants to be present at the project site, particularly in the areas where there were abandoned vehicles. State Parks will work with the State HEER Office to determine the appropriate actions to comply with the relevant environmental laws.

#### Indoor and Radiological Health (IRH) Branch

As required, the Hā'ena State Park Master Plan project activities will comply with the following HAR:

- Chapter 11-39 Air Conditioning and Ventilation
- Chapter 11-45 Radiation Control
- Chapter 11-46 Community Noise Control
- Chapter 11-501 Asbestos Requirements
- Chapter 11-503 Fees for Asbestos Removal and Certification
- Chapter 11-504 Asbestos Abatement Certification Program

#### Safe Drinking Water Branch

We note that the Safe Drinking Water Branch administers programs to protect drinking water sources from contamination.

1. **Public Water System.** A public water system will not be developed as part of the proposed project. Potable water will continue to be supplied by the County of Kaua'i Department of Water, which serves the Park with a four-inch waterline.
2. **Dual Water System.** If the Park implements dual water systems, it will be carefully designed and operated to prevent the cross-connection of the two systems including backflow prevention. Both systems including any non-potable spigots and irrigated areas will be clearly labeled. The two systems must be physically separated by air gaps or reduced-pressure backflow prevention devices to avoid contaminating the potable water supply. Backflow devices must be tested periodically and will comply with Chapter 11-21, HAR, Cross-Connection and Backflow Control.
3. **Underground Injection Control.** No underground injection wells are proposed.

#### Solid and Hazardous Waste Branch

Although fewer users to the Park will likely result in less trash generated at the park, facilities will be dispersed and new trash receptacles will be necessary at improved areas proposed around the Park so that waste disposal is convenient to park users.

Ms. Laura Leialoha Phillips McIntyre, AICP  
May 8, 2015  
Page 3

All receptacles are proposed to have animal-proof lids to minimize foraging by feral cats, dogs, rats and chickens. Receptacles that support the separation of recyclables from non-recyclable materials are recommended. No additional mitigation measures are anticipated. The implementation of the Hā'ena State Park Master Plan will also comply with the appropriate provisions of Chapters 342H and 342 I, Hawai'i Revised Statutes (HRS). No underground storage tank is anticipated as part of the Master Plan, however, if one is planned in the future, State Parks will comply with Chapter 11-281, HAR.

#### **Wastewater Branch**

In 2011, a subsurface flow-based wastewater treatment system was built at the Park. (A "subsurface" system is one where the constructed wetland is contained within a liner, but the wastewater flows beneath the surface of a gravel medium within the liner so there is no exposed water under normal operating conditions.) Based on strong community preference, the Master Plan proposes that any new wastewater systems include a treatment system that brings wastewater to an "R-2" water quality level. A description and analysis of wastewater alternatives will be provided in an Appendix to the Draft EIS (Wastewater Preliminary Engineering Report). The Wastewater Preliminary Engineering Report provides a Wastewater Alternatives Matrix that will assist in specific system selection at the time of building design. Beyond recommending that secondary treatment be provided, the Master Plan does not prescribe the type of systems to be employed at the future master planned facilities, allowing maximum flexibility for building designers to take advantage of emerging technologies in wastewater management. However, no new cesspools are recommended as part of the Master Plan. If defunct cesspools are located during the construction process, they will be abandoned or removed in accordance with current regulations.

#### **Sustainable and Healthy Design**

We have examined the available resources on strategies to support the sustainable and healthy design of communities and buildings. As such, the following concepts will be incorporated into the development of the proposed project.

- Implement best management practices to reduce pollutant loads.
- Incorporate green building design and renewable energy into all new construction and major renovation projects.
- Develop and deploy operational controls for leak detection including a distribution system audit, leak detection, and repair programs.
- Design integrated water/wastewater/drainage systems to minimize potable water use.
- Design, install, and maintain landscape to reduce potable water use as well as pesticides or herbicides. The proposed bioswales, catchment systems, and restored 'auwai will help collect and direct rainwater to appropriate landscaped areas.

#### **Water Quality Standards Maps**

The June 2014 revised Water Quality Standards Maps have been referenced in the Draft EIS and included as Figure 24.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

PBR Hawaii & Associates, Inc.  
1001 Bishop Street, Suite 650  
Honolulu, Hawaii 96813-3484

Dear Ms. Cullison:

**SUBJECT: Comments on Environmental Impact Statement Preparation Notice (EISP) for Proposed Haena State Park Master Plan  
Kapaa, Island of Kauai, Hawaii**

The Department of Health (DOH), Clean Water Branch (CWB), acknowledges receipt of your letter, dated February 9, 2015, requesting comments on your project. The DOH-CWB has reviewed the subject document and offers these comments. Please note that our review is based solely on the information provided in the subject document and its compliance with the Hawaii Administrative Rules (HAR), Chapters 11-54 and 11-55. You may be responsible for fulfilling additional requirements related to our program. We recommend that you also read our standard comments on our website at: <http://health.hawaii.gov/epo/files/2013/05/Clean-Water-Branch-Std-Comments.pdf>

1. Any project and its potential impacts to State waters must meet the following criteria:
  - a. Antidegradation policy (HAR, Section 11-54-1.1), which requires that the existing uses and the level of water quality necessary to protect the existing uses of the receiving State water be maintained and protected.
  - b. Designated uses (HAR, Section 11-54-3), as determined by the classification of the receiving State waters.
  - c. Water quality criteria (HAR, Sections 11-54-4 through 11-54-8).
2. You may be required to obtain National Pollutant Discharge Elimination System (NPDES) permit coverage for discharges of wastewater, including storm water runoff, into State surface waters (HAR, Chapter 11-55).

For NPDES general permit coverage, a Notice of Intent (NOI) form must be submitted at least 30 calendar days before the commencement of the discharge. An application for a NPDES individual permit must be submitted at least 180 calendar days before the commencement of the discharge. To request NPDES permit coverage, you must submit the applicable form ("CWB Individual NPDES Form" or "CWB NOI Form") through the e-Permitting Portal and the hard copy certification statement with the respective filing fee (\$1,000 for an individual NPDES permit or \$500 for a Notice of General Permit Coverage). Please open the e-Permitting Portal website located at: <https://eha-cloud.doh.hawaii.gov/epermit/>. You will be asked to do a one-time registration to obtain your login and password. After you register, click on the Application Finder tool and locate the appropriate form. Follow the instructions to complete and submit the form.

3. If your project involves work in, over, or under waters of the United States, it is highly recommended that you contact the Army Corp of Engineers, Regulatory Branch (Tel: 835-4303) regarding their permitting requirements.

Pursuant to Federal Water Pollution Control Act [commonly known as the "Clean Water Act" (CWA)], Paragraph 401(a)(1), a Section 401 Water Quality Certification (WQC) is required for "[a]ny applicant for Federal license or permit to conduct any activity including, but not limited to, the construction or operation of facilities, which may **result** in any discharge into the navigable waters..." (emphasis added). The term "discharge" is defined in CWA, Subsections 502(16), 502(12), and 502(6); Title 40 of the Code of Federal Regulations, Section 122.2; and Hawaii Administrative Rules (HAR), Chapter 11-54.

4. Please note that all discharges related to the project construction or operation activities, whether or not NPDES permit coverage and/or Section 401 WQC are required, must comply with the State's Water Quality Standards. Noncompliance with water quality requirements contained in HAR, Chapter 11-54, and/or permitting requirements, specified in HAR, Chapter 11-55, may be subject to penalties of \$25,000 per day per violation.
5. It is the State's position that all projects must reduce, reuse, and recycle to protect, restore, and sustain water quality and beneficial uses of State waters. Project planning should:
- a. Treat storm water as a resource to be protected by integrating it into project planning and permitting. Storm water has long been recognized as a source of irrigation that will not deplete potable water resources. What is often overlooked is that storm water recharges ground water supplies and feeds streams and estuaries; to ensure that these water cycles are not disrupted, storm water cannot be relegated as a waste product of impervious surfaces. Any project planning must recognize storm water as an asset that sustains and protects natural ecosystems and traditional beneficial uses of State waters, like community beautification, beach going, swimming, and fishing. The approaches necessary to do so, including low impact development methods or ecological

bio-engineering of drainage ways must be identified in the planning stages to allow designers opportunity to include those approaches up front, prior to seeking zoning, construction, or building permits.

- b. Clearly articulate the State's position on water quality and the beneficial uses of State waters. The plan should include statements regarding the implementation of methods to conserve natural resources (e.g. minimizing potable water for irrigation, gray water re-use options, energy conservation through smart design) and improve water quality.
- c. Consider storm water Best Management Practice (BMP) approaches that minimize the use of potable water for irrigation through storm water storage and reuse, percolate storm water to recharge groundwater to revitalize natural hydrology, and treat storm water which is to be discharged.
- d. Consider the use of green building practices, such as pervious pavement and landscaping with native vegetation, to improve water quality by reducing excessive runoff and the need for excessive fertilization, respectively.
- e. Identify opportunities for retrofitting or bio-engineering existing storm water infrastructure to restore ecological function while maintaining, or even enhancing, hydraulic capacity. Particular consideration should be given to areas prone to flooding, or where the infrastructure is aged and will need to be rehabilitated.

If you have any questions, please visit our website at: <http://health.hawaii.gov/cwb/>, or contact the Engineering Section, CWB, at (808) 586-4309.

Sincerely,

ALEC WONG, P.E., CHIEF  
Clean Water Branch

May 8, 2015

Mr. Alec Wong, P.E., Chief  
State of Hawai'i  
Department of Health  
Clean Water Branch  
P.O. Box 3378  
Honolulu, Hawai'i 96801-3378

**SUBJECT: PROPOSED HÄ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT PREPARATION NOTICE, HÄ'ENA, KAUA'I, HAWAII**

Dear Mr. Wong,

Thank you for your Department's letter dated March 11, 2015 (your Reference No. 03008PCTM.15) regarding the above referenced Environmental Impact Statement (EIS) Preparation Notice (EISPN). As the planning consultant for the State of Hawai'i, Department of Land and Natural Resources (DLNR), Division of State Parks, we have reviewed your comments and provide the following responses.

We reviewed and understand the standard comments provided on your website. In addition, we have addressed your specific comments below.

1. The EISPN noted that the type and classification of State waters off the coast of Hä'ena State Park is "Class AA". Any potential impacts to these waters caused by the implementation of the Hä'ena State Park Master Plan will meet the provisions of the:
  - a) Anti-degradation policy (Chapter 11-54-1.1, Hawai'i Administrative Rules (HAR));
  - b) Designated uses (Chapter 11-54-3, HAR); and
  - c) Water quality criteria (Chapter 11-54-4 through 11-54-8, HAR).
2. A National Pollutant Discharge Elimination System (NPDES) permit for discharges of storm water runoff into State surface waters (Chapter 11-55, HAR) will be obtained as required. All NPDES permit requirements will be implemented. Thank you for the application information.
3. As recommended, DLNR will consult with the US Army Corps of Engineers (ACOE) for all future plans that may impact the "Waters of the U.S." Pursuant to the "Clean Water Act," a Section 401 Water Quality Certification from the State Department of Health, Clean Water Branch will be obtained as required.
4. All discharges related to the implementation of the Hä'ena State Park Master Plan will comply with the State's Water Quality requirements contained in Chapters 11-54 and 11-55, HAR.
5. We appreciate the information provided regarding possible measures to reduce, reuse and recycle to protect, restore and sustain water quality and beneficial uses of State waters. All of the concepts are included in the design of the Hä'ena State Park Master Plan. For example, the plan recommends that the water, wastewater, and drainage systems be designed as an integrated system to maximize the use of captured rainwater for use onsite and to reduce the use of potable water for irrigation, toilet flushing, and other nonpotable water uses. Bioswales and restored 'auwai are also discussed as possible solutions to irrigate landscaped areas and the lo'i and to increase percolation

COMMISSION ON WATER RESOURCE MANAGEMENT  
P.O. BOX 621  
HONOLULU, HAWAII 96809

March 16, 2015

REF: RFD.4138.2

TO: Russell Tsuji, Administrator  
Land Division

FROM: W. Roy Hardy, Acting Deputy Director  
Commission on Water Resource Management

SUBJECT: Haena State Park Master Plan and EIS

FILE NO.:  
TMK NO.: (4) 5-6-008:001, (4) 5-9-001:025, (4) 5-9-001:002 (portion)

Thank you for the opportunity to review the subject document. The Commission on Water Resource Management (CWRM) is the agency responsible for administering the State Water Code (Code). Under the Code, all waters of the State are held in trust for the benefit of the citizens of the State, therefore, all water use is subject to legally protected water rights. CWRM strongly promotes the efficient use of Hawaii's water resources through conservation measures and appropriate resource management. For more information, please refer to the State Water Code, Chapter 174C, Hawaii Revised Statutes, and Hawaii Administrative Rules, Chapters 13-167 to 13-171. These documents are available via the Internet at <http://www.hawaii.gov/dlnr/cwrn>.

Our comments related to water resources are checked off below.

- ☐ 1. We recommend coordination with the county to incorporate this project into the county's Water Use and Development Plan. Please contact the respective Planning Department and/or Department of Water Supply for further information.
- ☐ 2. We recommend coordination with the Engineering Division of the State Department of Land and Natural Resources to incorporate this project into the State Water Projects Plan.
- ☐ 3. We recommend coordination with the Hawaii Department of Agriculture (HDOA) to incorporate the reclassification of agricultural zoned land and the redistribution of agricultural resources into the State's Agricultural Water Use and Development Plan (AWUDP). Please contact the HDOA for more information.
- ☐ 4. We recommend that water efficient fixtures be installed and water efficient practices implemented throughout the development to reduce the increased demand on the area's freshwater resources. Reducing the water usage of a home or building may earn credit towards Leadership in Energy and Environmental Design (LEED) certification. More information on LEED certification is available at <http://www.usgbc.org/leed>. A listing of fixtures certified by the EPA as having high water efficiency can be found at <http://www.epa.gov/watersense/>.
- ☐ 5. We recommend the use of best management practices (BMP) for stormwater management to minimize the impact of the project to the existing area's hydrology while maintaining on-site infiltration and preventing polluted runoff from storm events. Stormwater management BMPs may earn credit toward LEED certification. More information on stormwater BMPs can be found at <http://hawaii.gov/dbedt/czm/initiative/lid.php>.
- ☐ 6. We recommend the use of alternative water sources, wherever practicable.
- ☐ 7. We recommend participating in the Hawaii Green Business Program, that assists and recognizes businesses that strive to operate in an environmentally and socially responsible manner. The program description can be found online at <http://energy.hawaii.gov/green-business-program>

DRF-IA 03/20/2013

Russell Tsuji, Administrator  
Page 2  
March 16, 2015

- ☐ 8. We recommend adopting landscape irrigation conservation best management practices endorsed by the Landscape Industry Council of Hawaii. These practices can be found online at [http://www.hawaiilandscape.com/wp-content/uploads/2013/04/LICH\\_Irrigation\\_Conservation\\_BMPs.pdf](http://www.hawaiilandscape.com/wp-content/uploads/2013/04/LICH_Irrigation_Conservation_BMPs.pdf)
- ☐ 9. There may be the potential for ground or surface water degradation/contamination and recommend that approvals for this project be conditioned upon a review by the State Department of Health and the developer's acceptance of any resulting requirements related to water quality.

Permits required by CWRM:

Additional information and forms are available at [http://hawaii.gov/dlnr/cwrn/info\\_permits.htm](http://hawaii.gov/dlnr/cwrn/info_permits.htm).

- ☐ 10. The proposed water supply source for the project is located in a designated water management area, and a Water Use Permit is required prior to use of water. The Water Use Permit may be conditioned on the requirement to use dual line water supply systems for new industrial and commercial developments.
- ☐ 11. A Well Construction Permit(s) is (are) required before any well construction work begins.
- ☐ 12. A Pump Installation Permit(s) is (are) required before ground water is developed as a source of supply for the project.
- ☐ 13. There is (are) well(s) located on or adjacent to this project. If wells are not planned to be used and will be affected by any new construction, they must be properly abandoned and sealed. A permit for well abandonment must be obtained.
- ☐ 14. Ground water withdrawals from this project may affect streamflows, which may require an instream flow standard amendment.
- ☐ 15. A Stream Channel Alteration Permit(s) is (are) required before any alteration(s) can be made to the bed and/or banks of a stream channel.
- ☐ 16. A Stream Diversion Works Permit(s) is (are) required before any stream diversion works is (are) constructed or altered.
- ☐ 17. A Petition to Amend the Interim Instream Flow Standard is required for any new or expanded diversion(s) of surface water.
- ☐ 18. The planned source of water for this project has not been identified in this report. Therefore, we cannot determine what permits or petitions are required from our office, or whether there are potential impacts to water resources.
- ☒ OTHER:  
Planning: The DEA should summarize the projected potable and non-potable water needs of the master plan, include the calculations used to derive the projected water needs, and identify water conservation and efficiency measures that will be implemented.

Surface Water: Need more information

If there are any questions, please contact Lenore Ohye of the Planning Branch at 587-0216 or Rebecca Alakai of the Stream Protection and Management Branch at 587-0234.

**SUBJECT: PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT PREPARATION NOTICE, HĀ'ENA, KAUAI, HAWAII**

Dear Mr. Tsuji,

Thank you for your Department's letter dated March 24, 2015 regarding the above referenced Environmental Impact Statement (EIS) Preparation Notice (EISPN). As the planning consultant for the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge receipt of the following memorandums from the: (1) Land Division – Kaua'i District, (2) Division of Boating & Ocean Recreation, (3) Commission on Water Resource Management, and (4) Engineering Division, and provide the following responses.

#### Memorandum from Land Division – Kaua'i District

Comment: "We have no objections."

Response: We acknowledge that Land Division – Kaua'i District has no objections.

#### Memorandum from Division of Boating & Ocean Recreation

Comment: "We have no comments."

Response: We acknowledge that Division of Boating & Ocean Recreation has no comments.

#### Memorandum from Commission on Water Resource Management (REF: RFD.4138.2)

Comment:

"Planning: The DEA should summarize the projected potable and non-potable water needs of the master plan, include the calculations used to derive the projected water needs, and identify water conservation and efficiency measures that will be implemented.

Response: Because the Master Plan is conceptual in nature, the exact number of fixtures which would be needed for the calculations to derive the projected potable water needs is not available at this time. However, the Master Plan recommends a significant reduction in the number of daily visitors to the Park which will in turn reduce potable water use. Therefore, the existing four-inch waterline serving the Park is expected to be sufficient for the proposed Master Plan improvements. On the other hand, while potable water usage may actually decrease with the implementation of the Master Plan, non-potable water needs may increase. As additional lo'i are cleared, there may be more demand for irrigation water. Bioswales and more efficient use of the site's historic 'auwai are recommended to help capture and divert rainfall to desired locations including the lo'i and landscaped areas. The Master Plan also suggests redesigning the Kūhiō Highway culverts so that rainwater that passes beneath it flows more naturally and can be filtered and used in the 'auwai system. To further reduce the need for potable water, the Master Plan recommends installing rainwater catchment cisterns at the new facilities to collect rainwater from the rooftops and filtering and treating the rainwater for reuse for irrigation, toilet flushing, and other nonpotable uses. The Draft EIS will include the above discussion and the integrated

water/wastewater/drainage system proposed for the Park.

Comment:

*"Surface Water: Need more information."*

Response: The Master Plan includes recommendations for the restoration of Limahuli Stream and an integrated water/wastewater/drainage system that will be included and discussed in the Draft EIS.

**Memorandum from Engineering Division**

Comment: "We confirm that the project site, according to the Flood Insurance Rate Map (FIRM), is located in Flood Zones VE, AE, and A. The National Flood Insurance Rate Program regulates developments within Zones VE, AE and A as indicated in the bold letters below."

Response: We appreciate Engineering Division's confirmation of the flood zone designations.

Comment: "Please note that the correct Flood Zone Designation for interior portions of the project site according to the Flood Insurance Rate Map (FIRM) X."

Response: We appreciate Engineering Division's confirmation of the flood zone designations.

Comment: "Please note that the project site must comply with the rules and regulations of the National Flood Insurance Program (NFIP) presented in Title 44 of the Code of Federal Regulations (44CFR), whenever development within a Special Flood Hazard Area is undertaken. If there are any questions, please contact the State NFIP Coordinator, Ms. Carol Tyau-Beam, of the Department of Land and Natural Resources, Engineering Division at (808) 587-0267."

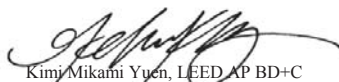

*Please be advised that 44CFR indicates the minimum standards set forth by the NFIP. Your Community's local flood ordinance may prove to be more restrictive and thus take precedence over the minimum NFIP standards. If there are questions regarding the local flood ordinances, please contact the applicable County NFIP Coordinator...Mr. Stanford Iwamoto at (808) 241-4896 of the County of Kaua'i, Department of Public Works."*

Response: We appreciate the information provided regarding the NFIP.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

Dear Ms. Cullison and Ms. Tanaka,

SUBJECT: Environmental Impact Statement Preparation Notice for the Ha'ena State Park Master Plan

Thank you for the opportunity to review and comment on the subject matter. In addition to the comments sent to you dated March 24 and 25, 2015, enclosed are additional comments from the Division of Aquatic Resources on the subject matter. Should you have any questions, please feel free to call Supervising Land Agent Steve Molmen at (808) 587-0439. Thank you.

Sincerely,

  
Russell Y. Tsuji  
Land Administrator

Requested by: Russell Y. Tsuji, Land Administrator

Summary of Proposed Project

Title: EIS Prep Notice for Haena State Park Master Plan

Project by: Department of Land & Natural Resources, Division of State Parks

Location: Haena State Park, Hanalei District, Island of Kauai

**Brief Description:** The applicant is submitting an Environmental Impact Statement Preparation Notice for the Haena State Park Master Plan covering 63.7 acres of shoreline property. The existing uses of the park include beach activities, picnicking, sightseeing, and a hiking trailhead. Other uses include traditional agriculture, fishing, hula, and care of a cemetery. Proposed uses include an education and cultural center; interpretive corridor and associated interpretive devices; caretaker's cottage; baseyard; picnic area; Halau Wa'a; reconfigured parking and access; relocated lifeguard tower; ecosystem and agricultural restoration activities.

**Comments:** We recommend during the construction of the new or improved facilities (comfort stations, parking areas, etc.) the applicant will need to follow BMP's to prevent construction debris, petroleum products and other pollutants from entering near by waterways such as Limahuli Stream which borders the eastern or Hanalei side of the park and coastal waters.

Thank you for providing DAR the opportunity to review and comment on the proposed project. Should there be any changes to the project plans, DAR requests the opportunity to review and comment on those changes.

**SUBJECT: PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT PREPARATION NOTICE, HĀ'ENA, KAUA'I, HAWAII**

Dear Mr. Tsuji,

Thank you for your Department's letter dated March 31, 2015 regarding the above referenced Environmental Impact Statement Preparation Notice. As the planning consultant for the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we appreciate your comments from the Division of Aquatic Resources (DAR), and provide the following responses.

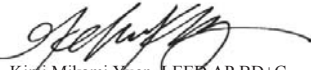

Comment: "We recommend during the construction of the new or improved facilities (comfort stations, parking areas, etc.) the applicant will need to follow BMP's to prevent construction debris, petroleum products and other pollutants from entering nearby waterways such as Limahuli Stream which borders the eastern or Hanalei side of the park and coastal waters."

Response: During construction of park elements, best management practices (BMPs) to control sediment or polluting runoff from flowing into waterways will be employed. Certain construction activities within the Park may trigger the need for a National Pollutant Discharge Elimination System permit and would be required to follow BMPs.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

Comments on Environmental Impact Statement Preparation Notice for the Ha'ena State Park Master Plan, Kaua'i

The Division of Forestry and Wildlife (DOFAW) has received your February 25, 2015 memo and appreciates the opportunity to comment on the Environmental Impact Statement Preparation Notice for the Ha'ena State Park Master Plan (EISP) on the island of Kaua'i. It is our understanding that the proposed project encompasses a 63.7-acre area and includes potential plans for changes to the parking lot, dune restoration, an agricultural complex, loko and wetland restoration, stream restoration, and pedestrian trails among other improvements and infrastructure.

The project components and activities may have the potential to adversely impact several endangered species including but not limited to the Hawaiian hoary bat or 'Ōpe'ape'a (*Lasiurus cinereus semotus*), Hawaiian petrel or 'Ua'u (*Pterodroma sandwichensis*), Newell's shearwater or 'A'o (*Puffinus auricularis newelli*), Band-rumped storm petrel or 'Akē'akē (*Oceanodroma castro*, state-listed endangered), Hawaiian duck or Koloa (*Anas wyvilliana*), Hawaiian stilt or Ae'o (*Himantopus mexicanus knudseni*), Hawaiian moorhen or 'Alae'ula (*Gallinula galeata sandvicensis*), Hawaiian coot or 'Alae'ke'oke'o (*Fulica alai*) and the Hawaiian goose or Nēnē (*Branta sandvicensis*). Additional native species that may be impacted by the project include the White-tailed tropic bird or Koa'e kea (*Phaethon lepturus*) and the Wedge-tailed shearwater or 'Ua'u kani (*Puffinus pacificus*).

The EISP indicates that native bird habitat restoration including wetland restoration and an agricultural complex consisting of lo'i restoration may be initiated. The document further mentions that a safe harbor agreement is being considered with the U.S. Fish and Wildlife Service for the benefit of endangered species that may become attracted to such restoration efforts. Pursuant to Hawai'i Revised Statutes Chapter 195D-22, landowners may also enter into a safe harbor agreement with the state to create, restore, or improve habitats or to maintain currently unoccupied habitats that threatened or endangered species can be reasonably expected to use if the cumulative activities contemplated to be undertaken within the areas covered by the agreement are environmentally

beneficial. DOFAW is concerned that the other activities surrounding the potential areas of restoration may negatively impact the Hawaiian coot, Hawaiian moorhen, Hawaiian stilt, Hawaiian duck and Nēnē, and request that the Division of State Parks (DSP) consult with DOFAW to determine if a safe harbor agreement is appropriate.

DOFAW believes that water features planned for in the EISPN are likely to attract endangered species to the property during the project construction and maintenance period. DOFAW supports increased waterbird habitat especially on state managed lands but is concerned that endangered species may be adversely affected by the potential human wildlife interaction and construction activities. DOFAW recommends surveys by a qualified biologist be conducted to determine if nesting and/or foraging endangered species are present in the areas of planned activities. Furthermore, DOFAW requests DSP consult with us on measures to reduce impacts associated with automobiles and increased pedestrian trails that may result in increased dog use as well as larger populations of cats and rats on the project site due to trash. DOFAW recommends a trapping program be initiated throughout the park to remove non-native mammals that pose a threat to native birds and plants present on the project site. In addition, a visitor orientation with instructions on removing invasive plant seed and animals would reduce the threats to our native plants and animals.

Artificial lighting can adversely impact seabirds causing disorientation which may result in collision with manmade artifacts. In addition, during the fledging period (September – December), young seabirds attracted to artificial lighting may become grounded due to exhaustion from circling these light sources. Unable to take-off these birds become vulnerable to predation from predators such as mongoose, cats, pigs, and dogs. According to the EISPN the use of security lighting is 'likely' to be downcast to avoid negative impacts to seabirds. DOFAW recommends consultation on the use of seabird friendly lighting to ensure it is properly utilized and sufficiently seabird friendly. Furthermore, if the project lighting is determined to be unable to avoid impacts to listed seabirds due to light attraction including lighting used during the construction period, DOFAW recommends a meeting be arranged to determine if and how this project may fit into the Habitat Conservation Program currently in development for the island of Kaua'i.

White-tailed tropic birds and Wedge-tailed shearwaters may nest in habitat close to the shoreline and may utilize the cliff along the road of the project. DOFAW recommends biological surveys be conducted by a qualified biologist prior to each phase of construction to ascertain if these species are nesting in the area. If these species are detected, notification to DOFAW is requested.

Clearing of trees have the potential to negatively impact the Hawaiian hoary bat particularly during the bat pupping season when young bats are unable to flee roosting sites. It is our understanding that trees and shrubs greater than 15 feet in height will not be cut during the bat pupping season of June 1 through September 15. If clearing of vegetation above 15 feet in height is proposed to occur during this time period, DOFAW requests DPS consult with our office.

The project described includes restoration and protection of the dune ecosystem in the area. DOFAW strongly supports these measures and recommends limiting pedestrian use of the dunes and that restoration plans account for increased coastal erosion rates and sea-level rise associated with climate change.

Hawai'i Revised Statute (HRS) Chapter 195D provides for protections of threatened and endangered species under Hawai'i State law. Compliance under HRS Chapter 195D was not addressed in the EISPN document. DOFAW recommends that the DSP consult with DOFAW on potential impacts to the above mentioned species to ensure compliance under HRS 195D.

DOFAW appreciates the opportunity to provide comments on this project and request that Land Division continue to seek input from DOFAW on impacts to wildlife.

If you have any questions, please contact Ms. Afsheen Siddiqi, Conservation Initiatives Coordinator, at 808-587-0010.

**SUBJECT: PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT PREPARATION NOTICE, HĀ'ENA, KAUA'I, HAWAII**

Dear Mr. Tsuji,

Thank you for your Department's letter dated April 7, 2015 regarding the above referenced Environmental Impact Statement (EIS) Preparation Notice (EISPN). As the planning consultant for the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (DSP), we have reviewed the memorandum from the Division of Forestry and Wildlife (DOFAW), and provide the following responses.

Comment: "DOFAW is concerned that the other activities surrounding the potential areas of restoration may negatively impact the Hawaiian coot, Hawaiian moorhen, Hawaiian stilt, Hawaiian duck and Nene, and request that the Division of State Parks (DSP) consult with DOFAW to determine if a safe harbor agreement is appropriate."

Response: As recommended, DSP will consult with DOFAW to determine if a safe harbor agreement is appropriate.

Comment: "DOFAW recommends surveys by a qualified biologist be conducted to determine if nesting and/or foraging endangered species are present in the areas of planned activities."

Response: The findings of Ron Terry and Patrick Hart of Geometric Associates, LLC survey of Hā'ena State Park will be included in the Draft EIS.

Comment: "Furthermore, DOFAW requests DSP consult with us on measures to reduce impacts associated with automobiles and increased pedestrian trails that may result in increased dog use as well as larger populations of cats and rats on the project site due to trash."

Response: As requested, DSP will consult with DOFAW. In addition, one of the Master Plan management recommendations for areas that might attract native waterbirds states:

"Household pets and feral animals such as cats and dogs prey on waterbird eggs and young hatchlings. These animals should not be allowed in taro patches. Dogs especially, should be banned because they chase and harass birds to the point at which the birds will not return to the taro lo'i. Therefore, dogs should be prevented from entering the lo'i at any time through the use of fences and other restraints."

Comment: "DOFAW recommends a trapping program be initiated throughout the park to remove non-native mammals that pose a threat to native birds and plants present on the project site."

Response: We concur with DOFAW's recommendation for a trapping program. As stated on page 4-25 of the EISPN:

"In order to minimize predation of these birds by feral animals, measures to reduce the feral cat and rat population are proposed in the Park. These measures include

Mr. Russell Y. Tsuji  
May 8, 2015  
Page 2

installation of animal-proof garbage receptacles and maintaining cooperation with the Humane Society, which at times had placed traps in the Park for removal of feral cats. Additionally, the Master Plan recommends that, before any wetland restoration activities proceed, that an analysis of the costs, benefits and liabilities associated with intentionally creating habitat for endangered waterbirds be conducted."

Comment: "In addition, a visitor orientation with instructions on removing invasive plant seed and animals would reduce the threats to our native plants and animals."

Response: It is proposed that all visitors attend an educational session upon entering the Park similar to the Hanauma Bay Nature Preserve on O'ahu. The sessions would be held at the Welcome Pavilion in the near term and at the proposed Education and Cultural Center once built. These sessions would provide a brief overview of the Park's extensive and sensitive natural and cultural resources and instruct visitors of the appropriate activities and behaviors allowed at the Park. To reduce the threats to native plants and animals, the sessions would include instructions on removing invasive plant seed and animals. General safety concerns such as ocean safety and rockfall hazards can also be included as well as up-to-the-minute ocean and weather conditions and instructions on what to do in the case of an emergency. Once visitors attend the orientation session, they will be able to enter the Park directly via the Interpretive Path.

Comment: "DOFAW recommends consultation on the use of seabird friendly lighting to ensure it is properly utilized and sufficiently seabird friendly. Furthermore, if the project lighting is determined to be unable to avoid impacts to listed seabirds due to light attraction including lighting used during the construction period, DOFAW recommends a meeting be arranged to determine if and how this project may fit into the Habitat Conservation Program currently in development for the island of Kaua'i."

Response: To address this concern, one of the Master Plan recommendations regarding flora and fauna on page 4-24 reads, "To reduce the potential for interactions between nocturnally flying threatened or endangered seabirds, any external lighting used during construction or installed at the park must be fully-shielded and downward-facing." In addition, the US Fish and Wildlife Service requested the additional requirement that the light shields be completely opaque which will be added to the Draft EIS and Hā'ena State Park Master Plan report. As recommended, DSP will consult with DOFAW before the design and selection of the proposed security lighting.

Comment: "White-tailed tropic birds and Wedge-tailed shearwaters may nest in habitat close to the shoreline and may utilize the cliff along the road of the project. DOFAW recommends biological surveys be conducted by a qualified biologist prior to each phase of construction to ascertain if these species are nesting in the area. If these species are detected, notification to DOFAW is requested."

Response: As recommended, biological surveys will be conducted by a qualified biologist prior to each phase of construction to ascertain if these species are nesting in the area.

Comment: "Clearing of trees have the potential to negatively impact the Hawaiian hoary bat particularly during the bat pupping season when young bats are unable to flee roosting sites. It is our understanding that trees and shrubs greater than 15 feet in height will not be cut during the bat pupping season of June 1 through September 15. If clearing of vegetation above 15 feet in height is proposed to occur during this time period, DOFAW requests DSP consult with our office."

Response: In order to address this concern, one of the Master Plan management recommendations regarding flora and fauna on page 4-24 reads, "In order to prevent impacts to the 'ōpe'ape'a or Hawaiian hoary bat, State Parks should restrict any cutting of large shrubs or trees to periods outside the June 1 through September 15 breeding season." As requested, DSP will consult with DOFAW if clearing of vegetation above 15 feet in height is proposed to occur during the bat

Mr. Russell Y. Tsuji  
May 8, 2015  
Page 3

pupping season of June 1 through September 15.

Comment: "The project described includes restoration and protection of the dune ecosystem in the area. DOFAW strongly supports these measures and recommends limiting pedestrian use of the dunes and that restoration plans account for increased coastal erosion rates and sea-level rise associated with climate change."

Response: We appreciate DOFAW's support for the proposed restoration and protection of the dune ecosystem in Hā'ena State Park. We will also add the recommendation to account for increased coastal erosion rates and sea-level rise associated climate change in the Draft EIS.

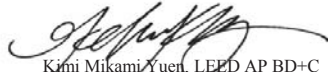

Comment: "Hawai'i Revised Statute (HRS) Chapter 195D provides for protections of threatened and endangered species under Hawai'i State law. Compliance under HRS Chapter 195D was not addressed in the EISPN document. DOFAW recommends that the DSP consult with DOFAW on potential impacts to the above mentioned species to ensure compliance under HRS 195D."

Response: As recommended, DSP will consult with DOFAW on potential impacts to the above mentioned species to ensure compliance under HRS 195D.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN ENVIRONMENTAL  
IMPACT STATEMENT PREPARATION NOTICE (EISPN)  
Ka'ilio Point, Hanalei District, Island of Kaua'i  
TMKs: (4) 5-6-008:001, (4) 5-9-001:025 and (4) 5-9-001:022

The Office of Conservation and Coastal Lands (OCCL) is in receipt of your letter and corresponding documents, dated *February 27, 2015*, which outlines the Division of State Parks Environmental Impact Statement Preparation Notice (EISPN) for the Hā'ena State Park Master Plan. The park is located on the northern coast of the Island of Kaua'i and includes Kē'ē Beach and Bay, and Ka'ilio Point. For reference the subject parcels are located within the State Land Use Conservation District *Resource* and *Limited* Subzones.

The OCCL recognizes that a previous Conservation District Use Application (CDUP) **KA-1373** was provided to the Division of State Parks (SP) to develop Hā'ena State Park in 1983. Based on the supplied EISPN, the SP is proposing to conduct a number of improvements such as, but not limited to: education and cultural center, interpretive corridor and associated interpretive devices, caretaker's cottage, baseyard, picnic area, Hālau Wa'a, reconfigured parking and access, relocated lifeguard tower, and ecosystem and agricultural restoration activities.

Hā'ena State Park is culturally and ecologically significant and its beaches and scenic resources make it a popular visitor attraction. This mix of recreational, cultural and environmental resources gives rise to the need to develop a conscientious and comprehensive master plan in order to balance conservation, recreation, cultural interpretation, and preservation.

At this time the OCCL is requesting that once the draft plan has been established, and all proposed land use elements have been determined, that the management authority (e.g., State Parks) contact this office to determine the appropriate permitting requirements for all master plan elements. Once the proposed land uses have been more thoroughly specified in the Draft EIS, we will provide the appropriate regulatory framework in which to apply through this office to conduct the proposed activities.

Hā'ena State Park - EISPN

COR: KA-15-135

Should you have any questions concerning this correspondence letter, please feel free to contact Alex J. Roy, M.Sc. of our Office of Conservation and Coastal Lands staff at 808-587-0316.

Sincerely,

  
Samuel J. Lemmo, Administrator

**SUBJECT: PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT PREPARATION NOTICE, HĀ'ENA, KAUA'I, HAWAII**

Dear Mr. Tsuji,

Thank you for your Department's letter dated March 25, 2015 regarding the above referenced Environmental Impact Statement Preparation Notice. As the planning consultant for the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge receipt of the letter from the Office of Conservation and Coastal Lands (OCCL), and provide the following responses.

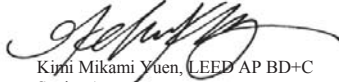

Comment: "At this time the OCCL is requesting that once the draft plan has been established, and all proposed land use elements have been determined, that the management authority (e.g., State Parks) contact this office to determine the appropriate permitting requirements for all master plan elements. Once the proposed land uses have been more thoroughly specified in the Draft EIS, we will provide the appropriate regulatory framework in which to apply through this office to conduct the proposed activities."

Response: By your letter and this response the Division of State Parks has been notified to contact OCCL to determine the appropriate permitting requirements for all master plan elements. We appreciate your comments and willingness to help State Parks navigate the required permits.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

Environmental Impact Statement Preparation Notice (EISPN)  
Haena, Kauai, Hawaii  
TMK: (4) 5-6-008:001

Our Department of Transportation's (DOT) comments on the subject project are as follows:

#### Airports Division

The Department of Land and Natural Resources (DLNR) should file a Federal Aviation Administration (FAA) Form 7480-1 Notice of Landing Area Proposal, for the proposed DLNR Baseyard/Helicopter Landing Area. The form can be accessed at the following website:  
<http://www.faa.gov/forms/>

#### Highways Division

The DOT Highways Division is still conducting its review and has not yet provided comments. The Statewide Transportation Planning Office will inform you of any further DOT comments once received.

**SUBJECT: PROPOSED HÄ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT PREPARATION NOTICE, HÄ'ENA, KAUA'I, HAWAII**

Dear Mr. Fuchigami,

Thank you for your agency's letter dated April 1, 2015 (your Reference No. STP 8.1782) regarding the above referenced Environmental Impact Statement (EIS) Preparation Notice (EISPN). As the planning consultant for the State of Hawai'i, Department of Land and Natural Resources (DLNR), Division of State Parks, we appreciate the comments from the Airports and Highways Divisions and provide the following responses.

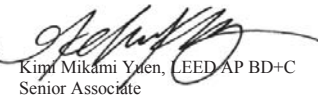

Airports Division Comment: We appreciate the link to FAA Form 7480-1 and by way of this letter, the DLNR Division of State Parks has been notified that it should file the form for the proposed DLNR Helipad.

Highways Division Comment: It is acknowledged that the DOT Highways Division is still conducting its review and that the Statewide Transportation Planning Office may be providing comments in the future.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

Re: Environmental Impact Statement Preparation Notice for Hā'ena State Park Master Plan  
Hā'ena Ahupua'a, Halele'a Moku, Kaua'i Moku  
TMK: (4) 5-6-008:001, (4) 5-9-001:025, (4) 5-9-001:022

Aloha e Lauren Tanaka:

The Office of Hawaiian Affairs (OHA) is in receipt of your February 22, 2015 letter seeking preliminary comments on the above environmental impact statement preparation notice (EISPN) for the goals and vision of the 63.7 acres of the Hā'ena State Park Master Plan (project). The project area is composed of three parcels, two owned by the State of Hawai'i and a small parcel owned by the County of Kaua'i. The county's parcel includes Ka Ulu a Paoa heiau and Ka Ahu a Laka hula platform. The project is entirely within the "Hā'ena Archaeological Complex," which is listed in the Hawai'i and National Register of Historic Places.

In 2008, Department of Land and Natural Resources, Division of State Parks, contracted PBR Hawai'i to complete the project, which began in 2001. Many community meetings were held in Hanalei and Hā'ena, with nā kūpuna and other stakeholders. In 2010, the State Parks staff and the thirty-two member Master Plan Advisory Committee developed the goals and vision of the project and in October of 2010, the community preferred plan was presented to the Board of Land and Natural Resources, requesting that the board accept recommendations proposed in the draft master plan and endorse preparation of an EIS.

Lauren Tanaka  
April 1, 2015  
Page 2

The current master plan, which emphasizes the cultural and historic significance of Hā'ena, utilizes existing and previously prepared data, including updated historic, cultural, and ecological information with continued community input. The five main goals of the project are:

- Recognize that the entire park is culturally significant;
- Restore Hā'ena as a living place – cleanse, restore, and revive cultural practices;
- Reconnect the original families and the community to their wahi pana, celebrated or legendary place;
- Uphold the State Parks' responsibility for the public's safety, access, and welfare; and
- Balance the provision of recreational opportunities with the preservation of the significant natural and cultural resources.

Based on our review of the EISPN and the master planning process that has already occurred, OHA has no comments for the preparation of the EIS. As the project moves forward, we look forward to reviewing the draft EIS. OHA does request assurances that should iwi kupuna or Native Hawaiian cultural deposits be identified during any ground altering activities, all work will immediately cease and the appropriate agencies, including OHA, will be contacted pursuant to applicable law.

Thank you for the opportunity to submit comments on this EISPN. Should you have any questions, please call Kathryn Keala at (808) 594-1848 or [kathyk@oha.org](mailto:kathyk@oha.org).

Subject: EISPN Comments for the Haena State Park Master Plan, Haena, Island of Kauai, Hawaii (UNCLASSIFIED)

Classification: UNCLASSIFIED

Caveats: NONE

Attention: Catie Cullison

The Honolulu District U.S. Army Corps of Engineers Regulatory Office has received your Environmental Impact Statement Preparation Notice for the Haena State Park Master Plan dated February 22, 2015.

You are encouraged to consult directly with the Corps for all future plans that may impact waters of the U.S. at the project site. Waters of the U.S. may include, but are not limited to both natural and manmade streams, anchialine ponds, wetlands, lo'i and the Pacific Ocean. Certain activities such as stream restoration, construction of retaining walls and rock revetments, bank and shoreline stabilization, grading and vegetation removal may result in the placement of fill material into a water of the U.S. In accordance with Section 404 of the Clean Water Act, prior authorization is required from the Corps for any such activities that result in the placement of fill into a water of the U.S. In addition, in accordance with Section 10 of the Rivers & Harbors Act of 1899, prior authorization from the Corps is required for construction activities or structures in, over, under or affecting navigable waters (e.g. Pacific Ocean).

Should your project involve work as described above, please contact this office at 808-835-4303 or via email at [CEPOH-RO@usace.army.mil](mailto:CEPOH-RO@usace.army.mil).

Thank you,  
Jessie

Jessie K Paahana, Regulatory Biologist  
Honolulu District, US Army Corps of Engineers Regulatory Office Ft. Shafter, Bldg. 214  
ph: 808.835.4107

For more information regarding the Regulatory Program at the Honolulu District, please visit our website at <http://www.poh.usace.army.mil/Missions/Regulatory.aspx>.

You are encouraged to provide comments on your experience with the Honolulu District Regulatory Branch by accessing our web-based customer survey form at [http://corpsmapu.usace.army.mil/cm\\_apex/f?p=136:4:0](http://corpsmapu.usace.army.mil/cm_apex/f?p=136:4:0).

**SUBJECT: PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND  
ENVIRONMENTAL IMPACT STATEMENT PREPARATION  
NOTICE, HĀ'ENA, KAUA'I, HAWAII**

Dear Ms. Pa'ahana,

Thank you for your email dated March 13, 2015 regarding the above referenced Environmental Impact Statement (EIS) Preparation Notice (EISPN). As the planning consultant for the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we acknowledge the following comments from the U.S. Army Corps of Engineers (USACOE) and provide the following responses.

#### Comment:

*You are encouraged to consult directly with the Corps for all future plans that may impact waters of the U.S. at the project site. Waters of the U.S. may include, but are not limited to both natural and manmade streams, anchialine ponds, wetlands, lo'i and the Pacific Ocean. Certain activities such as stream restoration, construction of retaining walls and rock revetments, bank and shoreline stabilization, grading and vegetation removal may result in the placement of fill material into a water of the U.S. In accordance with Section 404 of the Clean Water Act, prior authorization is required from the Corps for any such activities that result in the placement of fill into a water of the U.S. In addition, in accordance with Section 10 of the Rivers & Harbors Act of 1899, prior authorization from the Corps is required for construction activities or structures in, over, under or affecting navigable waters (e.g. Pacific Ocean).*

*Should your project involve work as described above, please contact this office at 808-835-4303 or via email at [CEPOH-RO@usace.army.mil](mailto:CEPOH-RO@usace.army.mil).*

**Response:** We greatly appreciate the offer to consult with the USACOE for all future plans that may impact the "Waters of the U.S." State Parks will seek coordination with USACOE on any future activities or improvements that may impact any "Waters of the U.S."

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Subject: Technical Assistance for Haena State Park Master Plan, Kauai

Dear Ms. Cullison:

The U.S. Fish and Wildlife Service (Service) received your letter, dated February 22, 2015, requesting our comments on the Environmental Impact Statement Preparation Notice (EISPN) for the Haena State Park Master Plan on the island of Kauai. The Master Plan includes management and development strategies that balance historic, cultural, and ecological resources with recreational and community uses of the Haena State Park (hereafter referred to as the Park), encompassing approximately 64 acres on the coast.

We provided comments during early development of the Master Plan and draft EIS in August 2008 (Service File 2008-TA-0305). In our letter, we recommended the following to assist you in your project planning: 1) to involve community members involved in the development of the Community Based Marine Management Area (CMMA) in the planning of Master Plan and ensure compatibility with CMMA goals, 2) to conduct surveys for presence of listed flora and fauna species in project area, and 3) shielding of exterior lighting to avoid impacts to the federally threatened Newell's shearwater (*Puffinus auricularis newelli*), the endangered Hawaiian petrel (*Pterodroma sandwichensis*), and a candidate for listing the band-rumped storm-petrel (*Oceanodroma castro*). The Service appreciates the opportunity to continue to provide technical assistance throughout the planning process so that impacts to trust resources can be avoided.

Based on a search of our databases, we confirm that several other federally listed species identified in the EISPN occur in the Park area including: the threatened green sea turtle (*Chelonia mydas*); the endangered Hawaiian monk seal (*Monachus schauinslandi*); Hawaiian hoary bat (*Lasiurus cinereus semotus*); Hawaiian black-necked stilt (*Himantopus mexicanus knudseni*), Hawaiian moohen (*Gallinula chloropus sandvicensis*), Hawaiian coot (*Fulica alai*), and Hawaiian duck (*Anas wyvilliana*) (hereafter collectively referred to as Hawaiian waterbirds); and the Hawaiian goose (*Branta sandvicensis*). Critical habitat for *Peucedanum sandwicense* is located near Haena State Park in the Napali Coast State Wilderness Park. We offer the following

Ms. Catie Cullison

2

comments to assist you in the preparation of the Master Plan and draft EIS under the authorities of the Endangered Species Act of 1973 (ESA), as amended (16 U.S.C 1531 *et seq.*).

According to your letter, the updated draft Master Plan was developed based on input from a 32-member Master Plan Advisory Committee (MPAC) including individuals involved in the CMMA. Draft EIS documents will include MPAC and community meeting notes. We acknowledge your efforts to engage the local community in marine conservation practices.

You state that no *Peucedanum sandwicense* was found in or near the Park during surveys conducted in 2009. To reduce potential human disturbance to botanical resources in the Park, the EISPN states that the number of visitors per day will be limited to 900 (half of the current visitation during summer months), and visitors will be educated on resources and appropriate activities allowed at the Park.

To avoid impacts to seabirds, the EISPN states that the Master Plan will not include parking lot lighting, and that any security lighting deemed necessary for safety will be shielded downward. We recommend that the light shields be completely opaque, sufficiently large, and positioned so that the bulb is only visible from below using the lowest wattage bulb possible.

In addition to potential affects to seabirds, artificial lighting can deter adult sea turtles from nesting on beaches and disorient hatchlings by affecting their ability to find the ocean. We acknowledge the EISPN includes practices to minimize human disturbance to the natural resources such as reduced Park visitation, signage, and education programs. We recommend that the design of lighting plans and management practices address ambient lighting of beach habitats, and recommend that no light from the Park be visible from the beach.

The National Marine Fisheries Service (NMFS) consults on potential impacts to monk seals, both in their on-shore and ocean habitats. Therefore, we did not review the proposed project for potential project impacts to monk seals. We recommend that you contact NMFS regarding the presence of monk seals in the area and potential impacts to the species from the project.

The Hawaiian hoary bat roosts in both exotic and native woody vegetation and, while foraging, will leave young unattended in "nursery" trees and shrubs when they forage. The EISPN states that in order to avoid impacts to bats, clearing of woody vegetation taller than 15 feet will not be conducted during the bat birthing and pup rearing season, between June 1 and September 15.

Hawaiian waterbirds and Hawaiian geese are likely to use the taro fields and wetlands located at the Park. If attracted to sub-optimal habitat, these species may suffer adverse impacts, such as predation and reduced reproductive success. We acknowledge that the Master Plan proposes measures to reduce potential predation of Hawaiian waterbirds and Hawaiian geese by feral cats and rats, including feral cat removal. Additionally, the EISPN states that MPAC is interested in restoring the wetlands areas at the Park to improve habitat for Hawaiian waterbirds. The Master Plan recommends an analysis of the costs, benefits, and liabilities associated with intentionally creating habitat for endangered waterbirds be conducted prior to any wetland restoration activities. We recommend MPAC and State Parks work with our office prior to any wetland restoration activities so that we may assist them in developing measures to avoid impacts to Hawaiian waterbirds and Hawaiian geese.

According to the EISPN, State Parks will evaluate if wetland resources are present in the vicinity of proposed construction and grading activities. Should water, hydric soils, or wetland plant be present, a wetlands delineation study will be conducted to locate boundaries of resource with verification from the U.S. Army Corp of Engineers. We recommend you incorporate the attached best management practices into your project description to avoid and minimize impacts to water resources that have the potential to occur during construction and grading activities.

The draft EIS should address all potential impacts to federally listed species and candidate species, and should outline conservation measures to avoid and minimize these impacts. If it is determined that the proposed project may affect federally listed species, we recommend you contact our office for further technical assistance.

We appreciate your efforts to conserve endangered species. If you have questions regarding our comments, please contact Adam Griesemer, Endangered Species Biologist (phone: 808-285-8261, email: adam\_griesemer@fws.gov).

Sincerely,

3/31/2015

#### U.S. Fish and Wildlife Service Recommended Standard Best Management Practices

The U.S. Fish and Wildlife Service (USFWS) recommends the following measures to be incorporated into project planning to avoid or minimize impacts to fish and wildlife resources. Best Management Practices (BMPs) include the incorporation of procedures or materials that may be used to reduce either direct or indirect negative impacts to aquatic habitats that result from project construction-related activities. These BMPs are recommended in addition to, and do not over-ride any terms, conditions, or other recommendations prepared by the USFWS, other federal, state or local agencies. If you have questions concerning these BMPs, please contact the USFWS Aquatic Ecosystems Conservation Program at 808-792-9400.

1. Authorized dredging and filling-related activities that may result in the temporary or permanent loss of aquatic habitats should be designed to avoid indirect, negative impacts to aquatic habitats beyond the planned project area.
2. Dredging/filling in the marine environment should be scheduled to avoid coral spawning and recruitment periods, and sea turtle nesting and hatching periods. Because these periods are variable throughout the Pacific islands, we recommend contacting the relevant local, state, or federal fish and wildlife resource agency for site specific guidance.
3. Turbidity and siltation from project-related work should be minimized and contained within the project area by silt containment devices and curtailing work during flooding or adverse tidal and weather conditions. BMPs should be maintained for the life of the construction period until turbidity and siltation within the project area is stabilized. All project construction-related debris and sediment containment devices should be removed and disposed of at an approved site.
4. All project construction-related materials and equipment (dredges, vessels, backhoes, silt curtains, etc.) to be placed in an aquatic environment should be inspected for pollutants including, but not limited to; marine fouling organisms, grease, oil, etc., and cleaned to remove pollutants prior to use. Project related activities should not result in any debris disposal, non-native species introductions, or attraction of non-native pests to the affected or adjacent aquatic or terrestrial habitats. Implementing both a litter-control plan and a Hazard Analysis and Critical Control Point plan (HACCP – see <http://www.haccp-nrm.org/Wizard/default.asp>) can help to prevent attraction and introduction of non-native species.
5. Project construction-related materials (fill, revetment rock, pipe, etc.) should not be stockpiled in, or in close proximity to aquatic habitats and should be protected from erosion (e.g., with filter fabric, etc.), to prevent materials from being carried into waters by wind, rain, or high surf.
6. Fueling of project-related vehicles and equipment should take place away from the aquatic environment and a contingency plan to control petroleum products accidentally spilled during the project should be developed. The plan should be retained on site with the person responsible for compliance with the plan. Absorbent pads and containment booms should be stored on-site to facilitate the clean-up of accidental petroleum releases.
7. All deliberately exposed soil or under-layer materials used in the project near water should be protected from erosion and stabilized as soon as possible with geotextile, filter fabric or native or non-invasive vegetation matting, hydro-seeding, etc.

**SUBJECT: PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT PREPARATION NOTICE, HĀ'ENA, KAUA'I, HAWAII**

Dear Ms. Caraway and Mr. Nadig,

Thank you for your letter dated March 31, 2015 (your Reference No. 2015-TA-0180) regarding the above referenced Environmental Impact Statement (EIS) Preparation Notice (EISPN). As the planning consultant for the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we have reviewed your letter and provide the following responses to your comments.

#### Comment:

*"To avoid impacts to seabirds, the EISPN states that the Master Plan will not include parking lot lighting, and that any security lighting deemed necessary for safety will be shielded downward. We recommend that the light shields be completely opaque, sufficiently large, and positioned so that the bulb is only visible from below using the lowest wattage bulb possible."*

**Response:** We greatly appreciate the recommendations in the selection and design of any exterior lighting fixtures and will include your recommendations in the Draft EIS. We will also update the recommendations in the Hā'ena State Park Master Plan report.

#### Comment:

*"We recommend that the design of lighting plans and management practices address ambient lighting of beach habitats, and recommend that no light from the Park be visible from the beach."*

**Response:** To address the potential impact that any proposed security lighting may have on deterring adult sea turtles from nesting on beaches and disorienting hatchlings, the Draft EIS will state that no permanent lighting from the Park be visible from the beach. We will also add this to the recommendations in the Hā'ena State Park Master Plan report.

#### Comment:

*"We recommend that you contact NMFS regarding the presence of monk seals in the area and potential impacts to the species from the project."*

Ms. Caraway and Mr. Nadig  
May 8, 2015  
Page 2

**Response:** As recommended, NMFS will be contacted.

#### Comment:

*"We recommend MPAC and State Parks work with our office prior to any wetland restoration activities so that we may assist them in developing measures to avoid impacts to Hawaiian waterbirds and Hawaiian geese."*

**Response:** As recommended, State Parks will coordinate with both the MPAC and the USFWS prior to any wetland restoration activities.

#### Comment:

*"Should water, hydric soils, or wetland plant be present, a wetlands delineation study will be conducted to locate boundaries of resource with verification from the U.S. Army Corp of Engineers. We recommend you incorporate the attached best management practices into your project description to avoid and minimize impacts to water resources that have the potential to occur during construction and grading activities."*

**Response:** The Draft EIS will note that if any wetland resources are suspected in the vicinity of proposed construction and grading activities, a wetlands delineation study will be conducted to locate boundaries of the wetland(s) with verification from the U.S. Army Corps of Engineers. We appreciate the attachment on best management practices and will cite it in the appropriate section of the Draft EIS and Hā'ena State Park Master Plan report.

#### Comment:

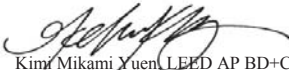

*"The draft EIS should address all potential impacts to federally listed species and candidate species, and should outline conservation measures to avoid and minimize these impacts. If it is determined that the proposed project may affect federally listed species, we recommend you contact our office for further technical assistance."*

**Response:** We appreciate your suggestion and will attempt to address all potential impacts to federally listed species and candidate species, and outline conservation measures to avoid and minimize these impacts in the Draft EIS. Furthermore, the Draft EIS will state that if it is determined that the proposed project may affect federally listed species, the NMFS will be contacted for further technical assistance.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

Dear Ms. Cullison:

The Engineering Division of the Department of Public Works (DPW) received the subject EISPN by transmittal dated February 22, 2015. We appreciate the opportunity to review the EISPN. DPW previously provided comments to PBR Hawaii in a letter dated August 27, 2008. The PBR Hawaii response to these comments is dated February 22, 2015 and a copy of this response is included in the EISPN.

We have no additional comments.

We look forward to receipt of the Draft Environmental Impact Statement. If you have any questions or need additional information, please contact Stanford Iwamoto, Engineering Division at (808) 241-4896 or siwamoto@kauai.gov.

Very truly yours,

April 2, 2015

Ms. Catie Cullison, AICP  
PBR Hawaii & Associates, Inc.  
1001 Bishop Street, Suite 650  
Honolulu, HI 96813-3484

Dear Ms. Cullison:

Subject: Environmental Impact Statement Preparation Notice for the Haena State Park Master Plan, TMK: 5-9-01:025, TMK: 5-9-01:022, and TMK: 5-9-08:001, Kuhio Highway, Haena, Kauai

This is in regard to your letter dated February 22, 2015. The Department of Water (DOW) has no objections to the proposed Environmental Impact Statement. The following are our comments to the Environmental Impact Statement for the Haena State Park Master Plan.

Any actual subdivision or development of this area will be dependent on the adequacy of the source, storage, and transmission facilities existing at that time. At the present time, the existing storage facilities are operating at capacity and the DOW is limiting water service to three 5/8-inch water meters or three single family dwellings per existing lot of record. The existing source facilities are nearing capacity. The Department's water system ends near the Limahuli Stream along Kuhio Highway. Adequacy of the existing transmission facilities will be dependent on the required domestic and fireflow demands of the proposed project (i.e. fire flow requirements may depend on the actual land use or zoning designation of the proposed development).

Prior to the DOW recommending water service or building permit approval, the applicant will be required to:

1. Be made aware that water service to TMK: 5-9-08:001 will be limited to the existing water meter serving the parcel until adequate water system facilities are available.
2. Submit a formal request for water service for our review and approval. Include detailed water demand (both domestic and irrigation) calculations along with the proposed water meter size. Water demand calculations submitted by your engineer or architect should also include fixture count and water meter sizing worksheets. The Department's comments will be dependent on the approved water demand calculations.

All conditions stated above are subject to the Rules and Regulations of the DOW as amended or as will be amended.

If you have any questions, please contact Mr. Joel Bautista at (808) 245-5441.

Sincerely,

*Edward Doi*

Mr. Edward Doi  
Water Resources and Planning Division  
Department of Water  
County of Kauai  
P.O. Box 1706  
Lihue, HI 96766

**SUBJECT: PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT PREPARATION NOTICE, HĀ'ENA, KAUAI, HAWAII**

Dear Mr. Doi,

Thank you for your letter dated April 2, 2015 (your file reference: 5-9-08-001, 5-9-01-025, 5-9-01-022, T-16888, Cullison/JB:loo) regarding the above referenced Environmental Impact Statement Preparation Notice. As the planning consultant for the State of Hawaii, Department of Land and Natural Resources, Division of State Parks, we appreciate your Department's comments and State Parks will work with the County Department of Water during the detailed design phase of the proposed facilities to ensure adequate water supply. The engineers also propose using seawater as is currently done for fire suppression. The last fire hydrant/standpipe is located outside of the park, roughly 75 feet away, and is connected to the County's potable water system.

We also note that your Department provided similar comments in response to our pre-consultation request for the above project on November 10, 2011 (your Department's Reference No. UID#5629) signed by Greg Fujikawa.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

*Kimi Mikami Yuen*

Aloha Catie, In addition to my previous comments on the draft EIS for the Ha'ena State Park master plan, I would also like to tell you that I have been contacted by State Parks folks asking for my participation on a committee to consider the construction of a bridge over Hanakapiai Stream.

This request has come from emergency responders who have had several recent incidents involving people stranded on the western banks of this stream when flooding occurs. Rescuing these folks is costly and has put many in harm's way and responders are asking for a bridge to aide folks leaving the valley on their own.

I am not in support of building this bridge but completely understand the concerns that brought the proposal forward.

I think it is imperative that the EIS and Plan include these concerns and address them with the intended:

- reduction of the number of people hiking into Hanakapiai and beyond
- the park entrance process providing comprehensive safety information
- registration and entrance fees providing accurate number of people on the trail

Aloha Makaala & Friends,

The public comment period on the EIS Prep Notice closes on the 25<sup>th</sup> of March.

Confirming that Kimi has asked me to prepare a revised schedule and that it is on my to do list. Apologies for the delay. I will plan to send it out to the MPAC when it is done.

The hope is to update the EISPN into the Draft EIS as soon as possible after the close of the public comment period. How long that takes will be somewhat dependent on what comments we get to the EISPN.

State Parks would like to have a public meeting when the Draft EIS is published as a way to collect comments to that document. I will work with Lauren Tanaka to get that scheduled once we have a better idea of when the Draft EIS will be published.

In the absence of a schedule to share, I hope this is informative to you.

Mahalo,  
Catie

Aloha, Maka'ala!

Good to hear from you! Hope you are all doing well! I could be a tad less busy but the new year is definitely off to a great start. Hope the same for you too!

I'm including Catie on this email as she is shepherding the EIS through the process. I do know the EIS Prep Notice went out and was published, but I'm not sure of the end date for public comments. Should be soon though. I know Catie was also working out an updated schedule and there is a public meeting to be held for the Draft EIS so Catie, could you help fill in those pukas for me...?

The master plan will get one more revision after the EIS is accepted and will go before the BLNR for final approval.

Catie: maybe after you update the schedule, we can send it out to the MPAC to keep everyone up-to-date as well.

Mahalo!  
Kimi

**SUBJECT: PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT PREPARATION NOTICE, HĀ'ENA, KAUA'I, HAWAII**

Dear Ms. Ka'aumoana,

Thank you for your emails dated March 18, 2015 and March 19, 2015 regarding the above referenced Environmental Impact Statement (EIS) Preparation Notice (EISPN). As the planning consultant for the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we appreciate your comments and provide the following responses.

#### March 18, 2015 Email Comment:

*"...we are concerned about the tsunami evacuation item in the EIS. How will park visitors know where to go?"*

**Response:** Currently, there are no State Civil Defense sirens in the Park and no tsunami evacuation signs on Kūhiō Highway within the Park. The closest siren is located at Hā'ena County Park roughly 3,500 feet to the east. Pre-consultation comments from State Civil Defense suggest that 25 square feet of land area be set aside for "possible future siren installation." The land area required for a siren can be accommodated within the park, most likely in the main parking area, should State Civil Defense deem that it is an appropriate location for a warning siren.

To facilitate evacuations in the event they are necessary, instructions on what to do in such emergencies can be incorporated into the visitor orientation that will be required of all visitors upon entry to the Park. Emergency evacuation scenarios and routes should be planned for both locally generated tsunami and those originating from remote locations. Locally generated tsunami require immediate action while those originating from remote locations allow more time to evacuate. Evacuation instructions and routes should be indicated on all visitor brochures and materials. Where appropriate, signs can be installed along evacuation routes directing visitors to higher ground. Also, with the reduced number of daily visitors, Park staff will be able to assist visitors in the event of an emergency.

In addition, the helicopter landing pad is proposed to be retained with the Master Plan improvements. An emergency phone as well as the existing pay phone are expected to be retained. Additionally, the presence of an on-site caretaker is expected to improve emergency warning communications and evacuation coordination within the Park after hours when necessary. If a shuttle system is implemented, an emergency evacuation plan will need to be developed specifically for the shuttle passengers.

#### March 18, 2015 Email Comment:

*"In addition to my previous comments on the draft EIS for the Hā'ena State Park master plan, I would also like to tell you that I have been contacted by State Parks folks asking for my participation on a committee to consider the construction of a bridge over Hanakāpī'ai Stream.*

*This request has come from emergency responders who have had several recent incidents involving people stranded on the western banks of this stream when flooding occurs. Rescuing these folks is costly and has put many in harm's way and responders are asking for a bridge to aide folks leaving the valley on their own.*

*I am not in support of building this bridge but completely understand the concerns that brought the proposal forward.*

*I think it is imperative that the EIS and Plan include these concerns and address them with the intended:*

- *reduction of the number of people hiking into Hanakāpī'ai and beyond*
- *the park entrance process providing comprehensive safety information*
- *registration and entrance fees providing accurate number of people on the trail"*

**Response:** We appreciate the information provided regarding a proposed bridge over Hanakāpī'ai Stream. As you know, the Master Plan proposes a daily limit on visitors of 900 to Hā'ena State Park that is approximately half of the current number of visitors per day during the summer. Additionally, the Master Plan includes a recommendation that all visitors attend an educational session that would provide a brief overview of the Park's extensive but sensitive natural and cultural resources and instruct visitors of the appropriate activities and behaviors allowed at the Park, as well as you suggest, the potential of hazards hiking the Kalalau Trail.

Since there will be no distinction between park users and Kalalau Trail hikers in paying the entrance fees, your suggestion that Kalalau Trail hikers register at the time they pay the entrance fee is appreciated and will be forwarded to the Division of State Parks.

State Parks is also working closely with the Kaua'i Fire Department on all issues of public safety including public education, which includes improved coordination and communication through new information technology tools such as web and email alerts and smartphone applications, as well as issues that are raised regarding the ongoing management of State Park areas.

Thank you for your continued contributions to the development of this document and to the master plan as a diligent member of our Master Plan Advisory Committee. Your comments will be included in the Environmental Impact Statement documents and incorporated into the final master plan report.

Sincerely,

PBR HAWAII

RE: Hā'ena State Park Master Plan Environmental Impact Statement Preparation Notice.

Aloha Ms. Cullison,

As a member of the MP Advisory Committee, I am very appreciative of PBRs community outreach, meetings, information provided, and response to the various concerns and comments by our Committee. The Draft Plan is very descriptive and explanatory of the various recommendations that are outlined in the document. The additional reports and studies add to the Plan and provide baseline information for current and future reference.

Preservation of the Hā'ena park area should be a high priority for our community, the County of Kaua'i, and the State of Hawai'i. Preservation of the Hā'ena State Park is significant as the entire park area has a historic and cultural history that is significant to preserve for future generations.

I support:

- Reduction in the number of persons that can access the Park area each day.
- Management of the area and education of those visiting the Park
- Restoration of various areas and recognition for those individuals, families, and local community members with historic and cultural ties to the Park area, and revive cultural practices.
- Identification of the areas where the public's safety should be established<sup>1</sup>.
- Decrease and limit of the number of vehicles permitted in the proposed parking area.
- Description and benefits of a shuttle system which would decrease the number of vehicles travelling along Route 560, Kūhiō Highway<sup>2</sup> in the Tsunami Evacuation Zone and encourage the use of a shuttle to the Park.

Mahalo for the opportunity to provide the above comments.

  
Barbara Robeson

<sup>1</sup> Rockfall hazard area, for example.

<sup>2</sup> Route 560 is on the State and National Register of Historic Places. The area from Hanalei to Kē'ē is in the Tsunami Evacuation Zone. During an evacuation, vehicles would travel from Kē'ē, through Hanalei, and up to Princeville, and crossing one-lane bridges and culverts. See Appendix G of the Plan.

**SUBJECT: PROPOSED HĀ'ENA STATE PARK MASTER PLAN AND ENVIRONMENTAL IMPACT STATEMENT PREPARATION NOTICE, HĀ'ENA, KAUA'I, HAWAII**

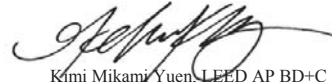

Dear Ms. Robeson,

Thank you for your letter dated March 18, 2015 regarding the above referenced Environmental Impact Statement (EIS) Preparation Notice (EISPN). As the planning consultant for the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks, we want to express our sincere appreciation for your continued participation as a member of the Master Plan Advisory Committee and for your supportive comments.

Thank you for contributing to the development of this document. Your comments will be included in the Environmental Impact Statement documents.

Sincerely,

PBR HAWAII

## **13.0 DEIS COMMENTS AND RESPONSES**

The DEIS was sent to the following agencies, organizations, stakeholders, interested individuals, and elected officials. The final distribution list for the DEIS was verified by OEQC and approved for distribution on July 16, 2015. The DEIS was also sent to various media outlets and libraries including all regional public libraries to provide availability to the public. Comment letters received for the DEIS during the public comment period and corresponding responses are attached. Comment letters received for the DEIS are incorporated and included in the Final EIS as required by Section 343-5, HRS. Please note that the attachments referenced in the response letters are compiled alphabetically by title at the end of this section rather than repeated respectively with each response letter since multiple response letters required the same attachment.

The 45-day public comment period started on July 23, 2015 and closed on September 8, 2016. However, State Parks held a public meeting on August 19, 2015 to gather more input on the DEIS and extended the DEIS public comment period until October 8, 2015. If comments were received on the DEIS, the date of the comment is indicated in the table next to the respective agency, organization, or individual's name. Three letters were received after the close of the extended public comment period. The last one was received on November 4, 2015. All comments received up until that date have been responded to and are included in the EIS. These late comments are indicated in the table below with an asterisk on the date the comment was received. Copies of the comments and the respective response letters are attached. Comment cards received which do not have a return address are included at the end of the comment and response letters but before the attachments.

DEPARTMENT OF THE ARMY  
HONOLULU DISTRICT, U.S. ARMY CORPS OF ENGINEERS  
FORT SHAFTER, HAWAII 96858-5440

October 28, 2015

SUBJECT: Comments on the Draft Environmental Impact Statement for the Hā'ena State Park Master Plan located on Kaua'i, Hawai'i; DA File No. POH-2009-0067

Lauren Tanaka  
Department of Land and Natural Resources  
Division of State Parks  
1151 Punchbowl St., Room 310  
Honolulu, Hawai'i 96813

Dear Ms. Tanaka:

The Honolulu District, U.S. Army Corps of Engineers (Corps), has received your letter dated September 10, 2015 for the Draft Environmental Impact Statement for the Hā'ena State Park Master Plan located on Kaua'i, Hawai'i. Your project has been assigned Department of the Army (DA) file number POH-2009-0067. Please reference this number in all future correspondence.

Please be advised, if the proposed project involves work in waters of the U.S., a DA authorization may be required. Under Section 10 of the Rivers and Harbors Act, structures and/or work in or affecting the course, location, condition, or capacity of navigable waters of the U.S. require DA authorization. Navigable waters of the U.S. are waters subject to the ebb and flow of the tide.

Under Section 404 of the Clean Water Act, DA authorization is required for discharges of dredged or fill material into waters of the U.S., including wetlands. Generally, discharges of fill material include materials that change the bottom elevation of a water of the U.S. and includes rock, sand, soil, debris, overburden, etc. Waters of the U.S. include navigable waters of the U.S. and other waters including wetlands, rivers, streams, lakes, and ponds.

Based on our initial review of the information provided, it appears there may be waters of the U.S. on the project site. Depending on the circumstances of your project, a permit may be required from this office prior to commencing proposed work. Accordingly, we recommend the landowner or the authorized agent continue coordination of the development of this project with our office. A pre-application meeting can be scheduled to aid in this process.

- 2 -

Thank you for your cooperation with the Honolulu District Regulatory Program. Please contact this office if you have any questions. You may contact me at 808-835-4306 or via email at [kate.m.bliss@usace.army.mil](mailto:kate.m.bliss@usace.army.mil)

Sincerely,

Kate Bliss  
Project Manager  
Regulatory Office

Subject: Technical Assistance for Haena State Park Master Plan Draft Environmental Impact Statement, Kauai

Dear Ms. Yuen:

The U.S. Fish and Wildlife Service (Service) received your letter, dated July 20, 2015, requesting our comments on the Draft Environmental Impact Statement (EIS) for the Haena State Park Master Plan on the island of Kauai. The Master Plan includes management and development strategies that balance historic, cultural, and ecological resources with recreational and community uses of the Haena State Park (hereafter referred to as the Park), encompassing approximately 64 acres on the coast.

We provided comments during early development of the Master Plan and draft EIS in August 2008 (Service File 2008-TA-0305). In our letter, we recommended the following to assist you in your project planning: 1) to involve community members involved in the development of the Community Based Marine Management Area (CMMMA) in the planning of Master Plan and ensure compatibility with CMMMA goals; 2) to conduct surveys for presence of listed flora and fauna species in project area; and 3) shielding of exterior lighting to avoid impacts to the federally threatened Newell's shearwater (*Puffinus auricularis newelli*), the endangered Hawaiian petrel (*Pterodroma sandwicensis*), and a candidate for listing the band-rumped storm-petrel (*Oceanodroma castro*) (hereafter collectively referred to as seabirds). PBR Hawaii & Associates, Inc., as the planning consultant for the State of Hawaii, Department of Land and Natural Resources, Division of State Parks (State Parks), responded to our comments in a letter in February 2015 and requested our comments on the EIS Preparation Notice (EISPN).

The Service provided comments on the EISPN in March 2015 (Service File 2015-TA-0180). In our letter, we provided the following: 1) further recommendations regarding shielding of exterior lighting for seabirds; 2) recommendations regarding management practices for the federally threatened green sea turtle (*Chelonia mydas*), Hawaiian goose (*Branta sandwicensis*), and Hawaiian waterbirds; and 3) Best Management Practices (BMPs) to avoid and minimize impacts to water resources. PBR Hawaii & Associates, Inc. responded to our comments in a letter in May 2015. The Service appreciates the opportunity to continue to provide technical assistance

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS), HĀ'ENA, KAUAI, HAWAII**

Aloha Ms. Bliss,

Mahalo nui for your letter dated October 28, 2015 (DA File No. POH-2009-0067) regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawaii's Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your comment stating that if the project involves work in the waters of the United States, a Department of the Army authorization may be required including a permit prior to commencing proposed work. As the proposed Pedestrian Path may cross over potential wetlands, State Parks will continue to coordinate with your office and appreciate your offer for a pre-application meeting. State Parks will contact you should it look like any other improvement may impact wetlands as they develop more detailed designs for construction and implementation. We have added the following text under the list of required permits and approvals with reference to wetlands in Sections 1.1, 1.9.4, and 5.5, "Other Department of the Army permits may be required based on determination."

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at: [http://ceq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-06-23-KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://ceq2.doh.hawaii.gov/EA_EIS_Library/2018-06-23-KA-FEIS-Haena-State-Park-Master-Plan.pdf) on June 23, 2018

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

Ms. Kimi Yuen

2

throughout the planning process so that impacts to trust resources can be avoided. We offer the following comments to assist you in the preparation of the Master Plan and final EIS under the authorities of the Endangered Species Act of 1973 (ESA), as amended (16 U.S.C 1531 *et seq.*).

We acknowledge that our recommendations for design of lighting plans and management practices at the Park to avoid impacts to fledgling seabirds as well as nesting adult sea turtles and hatchlings are incorporated in the draft EIS and the draft Master Plan.

According to the draft EIS, some members of the Master Plan Advisory Committee (MPAC) are interested in restoring the wetland areas of the Park which may attract Hawaiian waterbirds and Hawaiian geese. The draft EIS incorporates several measures to reduce potential predation of these species by feral cats, rats, and dogs. The draft EIS also includes measures to address traffic at the Park which may reduce the potential for vehicular collisions with Hawaiian waterbirds and Hawaiian geese, including the construction of a new entry turnaround and a limited access corridor which will be closed to general vehicular traffic and used for special access. According to the draft EIS, State Parks will consult with the Service prior to any wetland restoration activities. The Service has a long history of partnership with State Parks and we look forward to assisting them in developing further measures to avoid impacts to Hawaiian waterbirds and Hawaiian geese and determining the suitability of the wetland area for restoration.

Additionally, we acknowledge the draft EIS states that BMPs to control sediment, erosion, dust, and runoff will be employed during construction and grading activities.

We hope this information assists you in developing a comprehensive and thorough final EIS. We appreciate your efforts to conserve endangered species. If you have questions regarding our comments, please contact Adam Griesemer, Endangered Species Biologist (phone: 808-285-8261, email: adam\_griesemer@fws.gov).

Sincerely,

Aaron Nadig

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUAI, HAWAII**

Aloha Mr. Nadig,

Mahalo nui for your letter dated September 10, 2015 (your Reference No. 2015-TA-0428) regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your statement that the master plan includes management and developmental strategies that balance historic, cultural, and ecological resources with recreational and community uses at the park.

With regards to your comments from the August 2008 letter (Service File 2008-TA-0305), we have included community members involved in the Community Based Marine Management Area (CMMA) in the HSPCAC and they continue to be involved in the refinement and completion of the master plan. The ongoing maintenance of the HSPCAC is a key management recommendation in the master plan and is described in Section 2.4.5.2 of the Final EIS. Their input will help ensure compatibility with CMMA goals as you recommended.

A biological survey for terrestrial flora and fauna was completed for the project and the findings are summarized in Sections 3.8 and 3.9 of the EIS. A copy of the biological survey is attached as Appendix C of the EIS. The marine environment and biological resources are discussed in Sections 3.6 and 3.7 of the EIS and a copy of the Marine Natural Resources and Recreation Assessment is attached as Appendix D to the EIS. A full discussion on listed flora and fauna species is provided in Section 5.1.2 of the EIS and is attached to this letter. All of the listed species in the U.S. Fish and Wildlife Service's (Service) letters have been included in the EIS and master plan report.

With regards to your comments on shielding of exterior lighting for federally threatened and endangered seabirds and reducing impacts of artificial lighting to nesting turtles, the following text was included and edited as noted by the underlined text in Section 3.9 of the EIS:

*...all exterior lights will be fully-shielded (completely opaque) and downward facing full-cut off fixtures with the lowest light level (lumens) possible, sufficiently large, and positioned so that the bulb is only visible from below to minimize distraction and disorientation of wildlife flying over the park. The use of artificial lights should be minimized or reduced as much as possible during the fledging season of September to December. Night time construction also should be avoided. The Master Plan does not include any parking lot lighting. However, if lighting is needed for safety, they can be installed lower to the ground with motion sensors and/or timers to minimize the amount of time they would be lit. The lighting design plan will also ensure that no lights are visible from the beach to minimize impacts to nesting honu and their hatchlings seeking the ocean.*

The underlined text was added in Sections 1.9.2, and 2.5.3.4 of the EIS as well.

The Service mitigation recommendations regarding the Hawaiian goose and Hawaiian waterbirds were also incorporated in the EIS in Sections 1.9.2 and 3.9 with the addition of the "Hawaiian Nēnē" in the text in the Final EIS.

Best Management Practices (BMPs) with regards to minimizing and avoiding impacts to water resources were included in the Draft EIS in Sections 3.3.3 Agricultural Lands of Importance to the State of Hawai'i, 3.4.2 Surface Water, 4.7.3 Drainage, 5.3.3 Coastal Zone Management, 5.3.4 Hawai'i State Plan, and the respective summaries in Section 1.9.2. We appreciate your acknowledgement of their inclusion in the EIS.

Mahalo nui for your technical assistance throughout the planning process and comments offered to assist in the preparation of the master plan and Final EIS. Mahalo for your acknowledgement that the Service's recommendations for design of lighting plans and management practices at the park to avoid impacts to fledgling seabirds as well as nesting adult sea turtles and hatchlings are incorporated in the Draft EIS and draft master plan.

We recognize your comment that the State will consult with the USFWS prior to any wetland restoration activities. The State appreciates and also looks forward to future coordination with the USFWS that continues the long history of partnership between the two agencies in order to develop further measures to avoid impacts to Hawaiian waterbirds, geese, and suitability of wetland areas for restoration.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-06-23-KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-06-23-KA-FEIS-Haena-State-Park-Master-Plan.pdf) on June 23, 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÄ'ENA, KAUAI, HAWAII

Aloha Mr. Kurata,

Mahalo nui for your letter dated August 7, 2015 (your Reference No. (P)1208.5) regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your statement that the State of Hawai'i Department of Accounting and General Services (DAGS) have no comments at this time because the proposed project does not impact any DAGS-related facilities or projects.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-06-23-KA-EIS-Haena-State-Park-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018-06-23-KA-EIS-Haena-State-Park-Master-Plan.pdf) on June 23, 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C

PBR HAWAII

To: Suzanne Case, Chairperson  
Department of Land and Natural Resources

From: Leo R. Asuncion, Acting Director *[Signature]*

Attention: Lauren Tanaka, State Parks

Subject: Draft Environmental Impact Statement for the Haena State Park Master Plan,  
Haena, Hanalei, Island of Kauai;  
Tax Map Key (4) 5-9-008: 001, 5-9-001:025, and 5-9-001:022 (por)

Thank you for the opportunity to provide comments on the Draft Environmental Impact Statement (Draft EIS) for the Haena State Park Master Plan, transmitted to our office by letter dated July 20, 2015.

It is our understanding that the proposed master plan for Haena State Park refines the master plan originally drafted in 2001, but takes a renewed emphasis on the cultural and historic significance of Haena. The Department of Land and Natural Resources (DLNR), State Parks Division acknowledges there are funding limitations for improvements for this State park. The proposed master plan provides a near-term plan for an Entry Complex which includes a controlled entry for the park at a new Welcome Pavilion, an Interpretive Path which will provide access to Kee Beach along an elevated boardwalk, and realignment of the main visitor pathway outside of a potentially dangerous rock fall hazard zone.

The master plan includes key management strategies such as the establishment of a cultural advisory group, a community advisory group, and requires mandatory visitor orientation and education before allowing entry into the park. It recommends that the existing historic State highway that runs through the park be transferred from the State Department of Transportation to DLNR State Parks so that the roadway may be closed to traffic and allow the DLNR to shift the bulk of visitor traffic within the park outside of a potential rock fall hazard zone.

The Office of Planning has reviewed the transmitted material and has the following comments to offer:

1. The Draft EIS addresses all of the concerns listed in our previous pre-consultation letter (Ref No. P-14681), dated March 18, 2015. The Draft EIS has an extensive analysis of

Ms. Suzanne Case, Chairperson  
August 31, 2015  
Page 2

HRS 226 (the Hawaii State Plan) objectives, priorities, and priority guidelines (including both HRS 226-108, the priority guidelines on Sustainability; and HRS 226-109 Climate Change Adaptation). It provides a satisfactory analysis of the Master Plan's consistency with HRS 205A-2 (the enforceable policies of the Hawaii Coastal Zone Management program); site specific mitigation measures regarding the risk of coastal hazards; and it acknowledges that this project will need to obtain both a Special Management Area permit and a shoreline determination from the County of Kauai's Department of Planning.

2. Additionally, the Draft EIS examines hydrological surface water issues such as erosion and sediment control, preservation of the marine environment adjacent to the park; preserving the wetland area and not encroaching on its boundaries; preventing stormwater runoff from damaging the coastal resources using Low-Impact Development mitigation strategies such as bioswales and filtration methods to keep runoff on land and away from nearshore waters; and it proposes collecting runoff for non-potable water use to preserve fresh-water resources.

We appreciate the opportunity to review the Draft EIS. If you have any questions, please contact Josh Hekeka of our office at (808) 587-2845.

/s/ Ms. Kimi Yuen, Senior Associate

SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÄ'ENA, KAUA'I, HAWAII

Aloha Mr. Asuncion,

Mahalo nui for your letter dated August 31, 2015 (your Reference No. P-14888) regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated and simplified based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

As noted above, the master plan has been revised and simplified based on public input and therefore there will no longer be a "Near-Term Plan" for the park. The revised master plan summary from Section 1.9.1 of the EIS and Figure 1 showing the master plan is attached for your reference. State Parks still intends to implement the plan in phases, however, as noted in Section 2.6 of the EIS.

Mahalo for your feedback that the Draft EIS addresses all of the concerns listed in your pre-consultation letter (Reference No. P-14681) and contains an extensive analysis of HRS 226 Hawai'i State Plan objectives, priorities, and priority guidelines including both HRS 226-108, the priority guidelines on Sustainability; and HRS 226-109 Climate Change Adaptation. Mahalo for also noting that the EIS also provides a satisfactory analysis of the master plan's consistency with HRS 206A-2 (the enforceable policies of the Hawai'i Coastal Zone Management program); site specific mitigation regarding the risk of coastal hazards; and acknowledgement of the project's need to obtain both a Special Management Area permit and a shoreline determination from the County of Kaua'i's Department of Planning.

Mahalo for your comments regarding the EIS' examination of hydrological surface water issues such as erosion and sediment control, preservation of the marine environment adjacent to the park, preservation of the wetland area and not encroaching on its boundaries, prevention of stormwater runoff from damaging the coastal resources using Low-Impact Development mitigation strategies such as bioswales and filtration methods to keep runoff on land and away from nearshore waters, and the collection of runoff from non-potable water use to preserve fresh-water resources. Although the master plan has been updated, none of these elements have been revised and will remain as part of the plan.

Dear Ms. Yuen:

Draft Environmental Impact Statement  
Ha'ena State Park Master Plan

Thank you for the opportunity to comment on this proposed project.

After reading the documents provided for the project, we have determined that there is siren coverage for the project area. However, we request that the existing siren be upgraded to a 121 db(c) omni-directional siren.

If you have any questions please call Ms. Havinne Okamura, Hazard Mitigation Planner, at (808) 733-4300, extension 556.

Sincerely,

DOUG MAYNE  
Administrator of Hawaii Emergency Management

SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HA'ENA, KAUAI, HAWAII

Aloha Captain Travis,

Mahalo nui for the letter dated August 14, 2015 from Mr. Doug Mayne, then Administrator of Hawai'i Emergency Management, regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your comments confirming there is adequate siren coverage for the project area. The comment letter we received from State Civil Defense on the EIS Preparation Notice indicated that a new siren is needed in the park. We have added the following text to Sections 1.9.2, 3.10.3, 5.3.3, and 5.3.4 to update this information: "A subsequent letter from the Office of State Emergency Management/Civil Defense noted that siren coverage exists for the project site, but requested the existing siren to be upgraded to a 121db(c) omni-directional siren. State Parks will work with the Hawai'i Emergency Management Agency to ensure adequate siren coverage at the park."

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-06-23-KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018-06-23-KA-FEIS-Haena-State-Park-Master-Plan.pdf) on June 23, 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C

August 11, 2015

Ms. Kimi Yuen, Senior Associate  
PBR Hawaii & Associates, Inc.  
1001 Bishop Street, Suite 650  
Honolulu, Hawaii 96813

Dear Ms. Yuen:

**SUBJECT: Draft Environmental Impact Statement (DEIS) for Haena State Park Master Plan, Kauai**  
**TMK: (4) 5-9-008: 001, 5-9-001: 025, 5-9-001: 022 (portion)**

The Department of Health (DOH), Environmental Planning Office (EPO), acknowledges receipt of your DEIS to our office on July 22, 2015. Thank you for allowing us to review and comment on the proposed project. We appreciate the development of this Master Plan to increase the safety and environment in the park.

Several of the more innovative and progressive ideas expressed in the Master Plan merit comments. If instituted, some of the restoration components discussed could be beneficial for water and air quality. Possible restoration and expansion of the loi already present at the site could improve collection of surface water and limit undesirable water quality impacts to the coastal environment due to heavy rains, flooding, and storm runoff.

Relocating parking to Princeville would be commendable. This could dramatically reduce greenhouse gas emissions from visitors, and be a substantial contribution from State Parks & Recreation in furthering the state's greenhouse gas reduction goals as we recognize that climate change is of urgent consideration in environmental planning. Less drivers on the road would also likely improve: 1) Road safety; 2) Noise pollution in the area surrounding Hanalei; and 3) Reduce runoff polluted by vehicles that affects surface waters, including within Haena State Park.

EPO routed the DEIS electronically to the District Health Office on Kauai, and the Clean Water, Wastewater and Safe Drinking Water Branches via the OEQC website link:  
[http://oeqc.doh.hawaii.gov/Shared%20Documents/EA\\_and\\_EIS\\_Online\\_Library/Kauai/2015-07-23-KA-5B-DEIS-Haena-State-Park\\_Master-Plan.pdf](http://oeqc.doh.hawaii.gov/Shared%20Documents/EA_and_EIS_Online_Library/Kauai/2015-07-23-KA-5B-DEIS-Haena-State-Park_Master-Plan.pdf)

Other branches will provide specific comments to you if necessary. EPO recommends that you review the standard comments and available strategies to support sustainable and healthy design provided at:  
<http://health.hawaii.gov/epo/home/land-use-planning-review-program>. Projects are required to adhere to all applicable standard comments.

EPO offers the following comments:

1. We suggest you review the requirements for the National Pollutant Discharge Elimination System (NPDES) permit. We recommend contacting the Clean Water Branch at (808) 586-4309 or [cleanwaterbranch@doh.hawaii.gov](mailto:cleanwaterbranch@doh.hawaii.gov) after relevant information is reviewed at:
  - a. <http://health.hawaii.gov/cwb>
  - b. <http://health.hawaii.gov/cwb/site-map/clean-water-branch-home-page/standard-npdes-permit-conditions>
  - c. <http://health.hawaii.gov/cwb/site-map/clean-water-branch-home-page/forms>

2. EPO recommends you review the need and/or requirements for a Clean Air Branch permit. The Clean Air Branch can be consulted via e-mail at: [Cab.General@doh.hawaii.gov](mailto:Cab.General@doh.hawaii.gov) or via phone: (808) 586-4200.

3. If noise created during the construction phase of the project may exceed the maximum allowable levels as set forth in Hawaii Administrative Rules, Chapter 11-46, "Community Noise Control". A noise permit may be required and should be obtained before the commencement of work. Please call the Indoor and Radiological Health Branch at (808) 586-4700 and review relevant information online at: <http://health.hawaii.gov/inh/noise>

Please note that all wastewater plans must conform to applicable provisions of the Department of Health's Administrative Rules, Chapter 11-62, "Wastewater Systems". We do reserve the right to review the detailed wastewater plans for conformance to applicable rules. Should you have any questions, please review online guidance at: <http://health.hawaii.gov/wastewater/> and contact the Planning and Design Section of the Wastewater Branch at 586-4294.

We encourage you to examine and utilize the Hawaii Environmental Health Portal. The portal provides links to our e-Permitting Portal, Environmental Health Warehouse, Groundwater Contamination Viewer, Hawaii Emergency Response Exchange, Hawaii State and Local Emission Inventory System, Water Pollution Control Viewer, Water Quality Data, Warnings, Advisories and Postings. The Portal is continually updated. Please visit it regularly at: <https://leha-cloud.doh.hawaii.gov/>

You may also wish to review the revised Water Quality Standards Maps that have been updated for all islands. The Water Quality Standards Maps can be found at: <http://health.hawaii.gov/cwb/site-map/clean-water-branch-home-page/water-quality-standards>

We are pleased to see the improved protection of State resources and request that you utilize all of this information on your proposed project to increase sustainable, innovative, inspirational, transparent and healthy design.

Mahalo nui loa

**SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS), HÄ'ENA, KAUAI, HAWAII**

Aloha Ms. McIntyre,

Mahalo nui for your comment letter dated August 11, 2015 (your Reference No. EPO 15-179) regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the innovative and progressive ideas expressed in the park master plan, including restoration and expansion of the lō'i already present on the site for surface water quality benefits and the reduction of water quality impacts to the coastal environment.

We appreciate your comments regarding the potential parking relocation and the potential beneficial environmental impacts.

We also appreciate you forwarding the Draft EIS to the District Health Office on Kauai, and the Clean Water, Wastewater, and Safe Drinking Water Branches via the OEQC website.

Mahalo for providing the link to standard comments and available strategies to support sustainable and healthy design. We reviewed the Environmental Planning Office's (EPO) standard comments relating to Environmental Health programs. We understand that all standard comments specifically applicable to the Hä'ena State Park Master Plan must be adhered to. The organization of this letter follows the list of standard comments on your website and responses to all applicable standard comments are provided below.

#### Clean Air Branch

**Control of Fugitive Dust:** None of the proposed improvements are near existing residences, businesses, or thoroughfares. However, as noted in Section 4.5 of the EIS, there may be a temporary adverse impact on air quality attributable to dust generated during project construction, maintenance, and removal of invasive plant species particularly during

earthmoving activity. Best management practices that meet DOH's standards are anticipated to be employed as needed to mitigate dust during these activities.

The following text has also been added. "Construction activities will comply with the provisions of Section 11-60.1-33, Hawai'i Administrative Rules (HAR) related to Fugitive Dust. Adequate measures to control dust during various phases of construction will be required to be implemented by any contractor employed by the DLNR to effect the project's development. Example measures to control fugitive dust include: providing adequate water sources at the site prior to start-up of construction activities; minimizing dust from shoulders and access roads; providing adequate dust control measures during non-work hours and prior to daily start-up of construction activities; and controlling dust from debris being hauled to and from the project site." This text has also been inserted into the air quality summary in Section 1.9.2 of the EIS.

#### **Clean Water Branch**

We reviewed the standard comments provided by the Clean Water Branch (CWB) and offer the following responses:

1. **Potential Impacts to State Waters.** The EIS identifies the type and class of State waters off the coast of Hā'ena as "AA." In addition to the reduction in the average daily number of visitors at the park, the EIS states, "A variety of potential management measures are recommended to maintain Class AA coastal water standards and prevent shoreline erosion. They include reduction, detainment, and filtration of stormwater runoff, increased treatment and reuse of wastewater effluent, prevention of soil erosion, and instruction on ocean-friendly visitor behavior. Shoreline erosion can be slowed or even halted by allowing natural tidal, current and wind processes to shape Hā'ena's shoreline. Measures under consideration to accomplish this goal include studying Hā'ena's specific natural dune building processes, restoring or removing vegetation as appropriate, compliance with the County of Kauai's shoreline setback regulations, and prohibition of shoreline hardening structures. These mitigation measures may also help protect the park against the impacts of climate change, particularly sea level rise, in accordance with the climate change adaptation priority guidelines (§226-109, HRS)." The proposed uses also comply with the designated uses as determined by the classification of Class AA State waters, and the proposed improvements are anticipated to improve water quality. The full discussion is provided in Section 3.6 of the EIS.
2. **National Pollutant Discharge Elimination System permit coverage.** It is acknowledged that if soil disturbance of any single project exceeds one acre in area or any of the other activities listed, a National Pollutant Discharge Elimination System (NPDES) permit for Storm Water Associated with Construction Activity will be necessary. NPDES permits are anticipated to be needed for the project and are listed as such in Sections 1.1, 1.9.4, 4.7.3, and 5.5 of the EIS. All applicable requirements will be followed as part of those NPDES applications.
3. **State Water Quality Standards (Chapter 11-54 and 11-55, HAR).** All discharges related to the construction and operation of the proposed project will comply with the State's Water Quality requirements contained in Chapters 11-54 and 11-55, HAR. This statement has been added to Sections 1.9.2, 4.7.3, 5.3.3, 5.3.4, and 5.3.5 of the EIS.

#### **Hazard Evaluation and Emergency Response Office**

We understand that the Hazard Evaluation and Emergency Response (HEER) Office provides leadership, support, and partnership in preventing, planning for, responding to, and enforcing environmental laws relating to releases or threats of releases of hazardous substances.

There may be hazardous substances, pollutants, or contaminants to be present in the soils in the areas where there were abandoned vehicles. However, no work is anticipated in these areas at this time. State Parks will work with the State HEER Office to determine the appropriate actions to comply with the relevant environmental laws if applicable should any work occur in those areas. The above text has been added to Sections 1.9.2 and 4.7.5 of the EIS.

#### **Indoor and Radiological Health (IRRH) Branch**

The proposed project activities will comply with State Department of Health regulations on Community Noise Control and seek a noise permit as required. The EIS has been edited in Sections 1.9.2 and 4.4 of the EIS as noted: "State Parks ~~is anticipated to~~ will work with contractors to ensure adherence to DOH regulations as required under Chapter 11-46, HAR, including obtaining noise permits as required."

#### **Safe Drinking Water Branch**

We note that the Safe Drinking Water Branch administers programs to protect drinking water sources from contamination.

1. **Public Water System.** A public water system will not be developed as part of the proposed project. Potable water will continue to be supplied by the County of Kauai Department of Water.
2. **Dual Water System.** The proposed integrated water system will involve dual water systems, which will be carefully designed and operated to prevent the cross-connection of the two systems including backflow prevention. Both systems including any non-potable spigots and irrigated areas will be clearly labeled. The two systems must be physically separated by air gaps or reduced-pressure backflow prevention devices to avoid contaminating the potable water supply. Backflow devices must be tested periodically and will comply with Chapter 11-21, HAR, Cross-Connection and Backflow Control. This text has been added to Sections 1.9.2 and 4.7.1 of the EIS.
3. **Underground Injection Control.** No underground injection wells are proposed.

#### **Solid and Hazardous Waste Branch**

Section 4.7.5 of the EIS discusses solid waste disposal for the proposed project. The full text of this section is provided in the Solid Waste Attachment.

#### **Wastewater Branch**

No new cesspools will be constructed as part of the proposed project. Section 4.7.2 of the EIS discusses wastewater for the project and the full text and noted edits are provided in the Wastewater Attachment.

#### **EPO Comments**

1. As noted above, NPDES permits are anticipated to be needed for the proposed project. All requirements for obtaining the permits will be adhered to. Mahalo for the web links with the relevant information.
2. A Clean Air Branch (CAB) permit is not anticipated to be needed for the proposed project based on the projected impacts. The full discussion of the potential impacts and mitigation measures related to air quality for the project are provided in Section 4.5 of the EIS and summarized in Section 1.9.2, including the edits made to the EIS noted above. We also spoke with Mr. David Wong from CAB who kindly confirmed no CAB permit is required for fugitive dust during construction and that construction activities need only to comply with HAR 11-60.1-33 with regards to fugitive dust.

3. As noted above, the EIS has been revised in Sections 1.9.2 and 4.4 as shown in the following text, "~~State Parks is anticipated to~~ will work with contractors to ensure adherence to DOH regulations as required under Chapter 11-46, HAR, including obtaining noise permits as required..."

We also acknowledge your comment stating all wastewater plans must conform to applicable provisions of the DOH Administrative Rules Chapter 11-62, "Wastewater Systems" and that the DOH reserves the right to review the detailed wastewater plans for conformance to applicable rules. This statement has been added to Sections 1.9.2 and 4.7.2 of the EIS.

Mahalo for providing the link to the Hawai'i Environmental Health Portal. The site contains easy to use and access environmental information in map-based formats. We have reviewed the information in the Hawai'i Environmental Health Portal and note the following:

- There are no regulated facilities or locations having environmental health impacts identified in the vicinity of the park in the Environmental Health Warehouse.
- The Groundwater Contamination Viewer was not working when checked on May 4, 2018 so the information could not be viewed
- The OEQC viewer shows two published Chapter 343, HRS documents related to the Environmental Assessment completed for the constructed wetlands at Hä'ena State Park, which is referenced in the EIS.
- The Water Pollution Control Viewer does not show any NPDES permits, inspections and enforcement actions in the vicinity of the park.
- The Water Quality Data site could not be accessed when checked on May 4, 2018.
- The Water Quality Warnings, Advisories, and Postings site provides current water quality warnings, advisories and postings provided by Clean Water Branch and listed a brown water advisory for Hanalei Bay when checked. This site could be linked to the State Parks website to provide up-to-the-minute updates on water quality advisories

Mahalo also for providing the link to the revised Water Quality Standards Maps that have been updated for all islands. The Water Quality Standards Map for Kaua'i was included in the EIS as Figure 18 and discussed in Section 3.6.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at: [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-06-23-K-A-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-06-23-K-A-FEIS-Haena-State-Park-Master-Plan.pdf) on June 23, 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

DAVID Y. ICE  
GOVERNOR OF HAWAII

RECEIVED  
AUG 27 2015  
PBR HAWAII

STATE OF HAWAII  
DEPARTMENT OF HEALTH  
P.O. BOX 3378  
HONOLULU, HI 96801-3378

August 25, 2015

Ms. Kimi Yuen, Senior Associate  
PBR Hawaii & Associates, Inc.  
1001 Bishop Street Suite 650  
Honolulu, Hawaii 96813

Dear Ms. Yuen:

Subject: Draft Environmental Impact Statement (DEIS) for  
Haena State Park Master Plan  
Kuhio Highway, Haena, Kauai, 96722  
TMK (4) 5-9-008: 001, 5-9-001: 025, 5-9-001: 022 (portion)

Thank you for allowing us the opportunity to provide comments on the above subject project. We have the following information to offer. The subject project is located in the critical wastewater disposal area as determined by the Kauai County Wastewater Advisory Committee. All proposed wastewater systems shall comply with our Hawaii Administrative Rules, Chapter 11-62, "Wastewater Systems" for projects proposed in the Haena State Park Master Plan. It should be noted the setback requirements to State surface waters, e.g., wetlands, should be considered in the design of the individual wastewater systems. Also, portable toilets may not be used for the permanent or long term disposal of wastewater.

Please be informed that the proposed wastewater systems for the development may have to include design considerations to address any effects associated with the construction of and/or discharges from the wastewater systems to any public trust, Native Hawaiian resources or the exercise of traditional cultural practices. We encourage the developer to work with the County and continue to utilize recycled water for irrigation and other non-potable water purposes such as dust control, open spaces or landscaping areas.

Should you have any questions please contact Mr. Mark Tomomitsu of our office at (808) 586-4294.

Sincerely,

SINA PRUDER, P.E., CHIEF  
Wastewater Branch

SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HA'ENA, KAUAI, HAWAII

Aloha Ms. Pruder,

Mahalo nui for your comment letter dated August 25, 2015 (your Reference No. LUD 4 5 9 008 001 DEIS Haena St Park-ID2399) regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comments stating the project is located in a critical wastewater disposal area as determined by the Kauai County Wastewater Advisory Committee and that all wastewater systems must conform to applicable provisions of Chapter 11-62, Hawai'i Administrative Rules "Wastewater Systems." We also appreciate the note that all individual wastewater systems should be set back as required for State surface waters such as wetlands and that portable toilets may not be used for the permanent or long-term disposal of wastewater. This text has been added to Sections 1.9.2 and 4.7.2 of the EIS as shown in the Wastewater Attachment to this letter.

The text which references "temporary/portable facilities as needed" has been replaced with "innovative wastewater technologies" in Sections 2.5.3.1 and 4.7.2 of the EIS.

Mahalo nui for the guidance that the proposed wastewater systems may have to include design considerations to address any effects associated with the construction of and/or discharges from the wastewater systems to any public trust, Native Hawaiian resources or the exercise of traditional cultural practices. One of the key management recommendations is to establish a cultural advisory group to advise State Parks early and throughout the implementation process so those considerations can be integrated into the design solutions.

Mahalo for the encouragement of utilizing recycled water for irrigation and other non-potable water purposes such as dust control, open spaces or landscaped areas. Dust control has been added throughout the EIS as an additional use for recycled or non-potable water.

Mahalo nui for your input and participation in the environmental review process. Your

MEMORANDUM {DEIS Haena State Park Master Plan} August 4, 2015  
To: JoAnn Kushima  
cc: Anastasia Lytle  
Fm: Don Heacock, Kauai District Aquatic Biologist

**Subject: DEIS for the Haena State Park Master Plan: my review comments/recommendations**

**General Comments:**

The Plan is well written, documented and referenced. The DAR should fully support the Community-Based Management (CBM) approach, and their goals, objectives and recommendations within the Plan. Increased CBM of natural and cultural resources within the Park, and the proposed significant (50%) decrease in visitor daily traffic, and use of facilities and natural resources, will be an essential step in the restoration of the Park's ecological and cultural integrity. The proposed addition of Educational and Cultural Center (ECC) facilities and uses will enhance community stewardship, build community capacity, and will therefore help towards the long-term conservation and sustainable use of natural and cultural resources within the Park.

Generally, all proposed facilities, and where possible existing facilities, should be designed or modified to minimize impervious surfaces, and maximize storm water infiltration. Ideally, the existing hydrological and hydraulic conditions within the Park should be kept in as natural condition as is possible to protect quality of receiving waters, to prevent soil erosion and to promote infiltration to groundwater.

Based upon direct observations, and discussion with Surfrider Foundation, the existing wastewater facility, composed of septic system, constructed wetland and leach field is under designed (too small) and the constructed wetland is inadequately planted with high nutrient removing plants to meet the huge public demands on the system.

Although reducing the total vehicular traffic to 900 cars per day will certainly help the IWS function better. Without enhancement of the existing IWS (e.g., increase numbers and species of wetland plants, increasing size of constructed wetland, etc.) the system will not function properly and nutrient enrichment of the groundwater and nearshore marine environment (Class AA waters) will continue.

**Specific Comments:**

Page 2-3, first goal should read, "Recognize that the entire Park is *ecologically* and culturally significant."

P.2-28, in order to minimize the impacts of microhydropower systems on native Hawaii amphidromous biota, the diversion intakes must be designed to have low-velocity intakes placed subsurface in relatively deep pool in the center of the stream in order to minimize entrainment of larval or post-larval stream animals.

Section 2.5.4.4, under "Artificial light", add to the last bullet: " ...during the seabird fledgling season September to December, and during the sea turtle hatching period July to September, and yellow lighting invisible to honu should be used near the shoreline.

P. 3-34, Potential Impacts to Soils and Mitigation: amend this section to include perhaps the most important Best Management Practice (BMP) with is to "allow all large-scale grading, grubbing and stockpiling of soil only during the summer months (i.e., May 1 thru October 31).

P. 3-46, Table 7: Registered Diversions from Limahuli River:

A water budget study needs to be done to provide baseline data on:

- 1) the total amount of water diverted from each of the six water users:
- 2) document what purpose is the water being diverted (e.g., irrigation of taro, domestic uses, etc.).

Additionally, microhydropower should only be integrated with, and ancillary to, taro lo'i production, since taro lo'i are recognized as a "Public Trust Beneficial Use", therefore they have appurtenant water rights, but hydropower is only recognized as a "beneficial use" without having appurtenant water rights.

P. 3-47, Mitigation measures under consideration should also include the parking lot being surfaced with gravel or other pervious pavements to minimize impacts to the existing hydrological and hydraulic conditions, thereby minimizing stormwater runoff and soil erosion.

Section 3.5, Wetlands. Wetlands have great potential for integration with existing Individual Wastewater Systems (IWSs), particularly with integrated “ecological wastewater aquaculture systems”, using aquatic plants as biofilters that remove nutrients and dissolved solids. Such a system, appropriately designed could significantly increase the effectiveness and efficiency of wastewater treatment, removal and recovery of nutrients, protection of groundwater and nearshore marine quality, and the recovery of high quality R-1 water for reuse.

P. 3-48, The existing comfort station/IWS is currently not functioning properly and nutrients and bacteria are being discharges from the leach field and entering both the groundwater and nearshore marine waters (pers. Observation; pers. comm. with Dr. Carl Berg, Surfrider Foundation). In particular, the constructed wetland is missing most of its plants and cannot adequately remove nutrients.

P. 3-57, The Plan states that, “one management strategy is “to protect the long-term sustainability of the Park’s nearshore marine resources”; this is a goal statement, not a strategy; the strategic plan would sit objectives, timelines, identify person responsible and give details about how and when the goal would be reached.

Additionally, long-term resources monitoring should include: fish catch and effort data, species composition of catch, size (length) of fish caught, number caught, and gear and methods used.

P. 3-59, second to last para., Kido’s estimated 48, 00 m tonnes of plant liter being processed with Limahuli River ecosystem and being exported as organic nutrients into the ocean during floods.” This phenomenon strongly supports the need to restore traditional lo’i kalo within the watershed to help function, as “constructed wetlands” and as the “kidneys of the watershed”, where the lo’i trap and recycle organic

matter and nutrients, improving the productivity of the taro, and also keeping these nutrients out of the oligotrophic reef ecosystem.

P. 4-29, Water. Again, a detailed water budget should be done to quantify total water being diverted from each of the 6 water users, and the diversion structures documented as to type, placement within stream, and intake velocities to assure minimal impacts on migratory native larvae and post-larvae.

P. 4-30, Under Potential Impacts and Mitigation and additional method of water conservation within the Park not mentioned is to design and implement a “grey water system” that directs all potable water used for showers and sinks in facilities, both existing and proposed, to drain through subsurface perforated irrigation pipes to irrigate gardens, taro lo’i and or dryland taro patches, and finally to recharge groundwater; ideally environmentally safe soaps, which contain excellent plant nutrients like Oasis soaps, should be used within the Park. Greywater systems integrated into the Park’s facilities would reduce the amount of water diverted from Limahuli River that is now used for these purposes.

P. 4-31, third para., Wastewater. Again, the existing IWS, with its septic tank, constructed wetland and leach field appears to be malfunctioning because excess nitrogen, nutrients and bacteria are being discharged into the ground water and into nearshore marine waters (pers. comm. Dr. Carl Berg, Surfrider Found.). The cause of this malfunction appears to be lack of adequate wetland plants in the constructed wetland (about 80% are missing, pers. observ.).

P. 4-34, last para., Best Management Practices (BMPs) listed should include that all major grading, grubbing and stockpiling of soil can be done only during summer (May 1 through October 31) months to reduce severe soil erosion that can occur during large winter storms.

P. 7-4, Because the construction of the proposed new facilities will require the irreversible and irretrievable commitment of natural resources, all grading, grubbing and stock-piling of soil should be done only during summer months to minimize impacts to stream and nearby coral reef ecosystems.

printed on recycled paper

Also, it is important to understand that hydropower, depending upon the design and placement of the intake structure, and on the amount of water diverted from the stream, can have significant negative effects (e.g., entrainment and impingement and associated mortality, loss of habitat, decreased water quality) on migratory fishes, for example our native Hawaiian amphidromous stream fauna made up of goby fishes ('o'opu), prawns or shrimp ('opae) and snails (hihiwai and hapawai).

Appendix A, Section E. Wastewater System. It is unclear how placing the IWS absorption bed under the parking lot (which should be covered with gravel or pervious pavement to allow infiltration and minimize stormwater runoff and soil erosion) will provide separation of IWS effluent from groundwater; this needs to be clarified. Because if, as an alternative, a properly designed and sized IWS with a larger than existing constructed wetland that would treat wastewater to R-1 classification, then the R-1 water could be reused for many purposes within the Park.

Sincerely,

Donald E. Heacock, Kauai District Aquatic Biologist

**SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS), HÄ'ENA, KAUAI, HAWAII**

Aloha Mr. Heacock,

Mahalo nui for your letter dated August 4, 2015 regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources (DLNR), Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

#### General Comments:

Mahalo for your statement that the plan is well-written, documented, and referenced. We appreciate your comments that the DLNR Division of Aquatic Resources (DAR) should fully support the community-based management approach (CBM), and the goals, objectives, and recommendations within the plan including the increased CBM of natural and cultural resources, proposed 50 percent decrease in visitor daily traffic, and use of facilities and natural uses as they will be an essential step in the restoration of the park's ecological and cultural integrity. Unfortunately, the Education and Cultural Center has been removed from the proposed plan. However, this does not change the goal and ability of the simplified master plan to support and enhance community stewardship of the park and building community capacity in the long-term conservation and sustainable use of the natural and cultural resources in the park. In fact, many in the community believe leaving the park in a more natural state with fewer structures will strengthen this and State Parks envisions all of the park to be an outdoor classroom where community education can happen. The few new structures that are proposed in the current version of the master plan will provide shelter and interpretive opportunities in key locations such as the Cultural Gathering Area, Welcome Hale and Shuttle stop.

Mahalo for your recommendations to design or modify the facilities to minimize impervious surfaces and maximize stormwater infiltration. Also maintaining the existing hydrological and hydraulic conditions within the park to be in as natural a condition as possible to protect receiving waters to prevent erosion and promote infiltration are key design recommendations discussed throughout the EIS in the description of the master

plan, which includes permeable surfaces for the parking and pedestrian paths and an integrated water/wastewater/drainage system, as well as Section 4.7.3, which describes the proposed drainage for the park.

Mahalo for the comment that the existing wastewater septic system and constructed wetland at Kē'ē are not adequately designed to meet the current public demands on the system. The proposed master plan reduces the average visitor counts to 900 people per day, which is roughly half the current peak number of visitors, and adds a second set of restrooms at the entrance to help alleviate the demand at the Kē'ē restrooms. In addition, the master plan recommends improving all wastewater effluent generated at the park to R-2 and adding aeration to the existing constructed wetlands' primary treatment tanks, powered by a PV system. We have also added the recommendation to "replace the plants at the constructed wetlands to high-nutrient removing plants to improve water quality" in Sections 1.9.2, 2.5.3.1, 3.4.1, 3.7, and 4.7.3 and the first phase of improvements in Table 4.

The average number of daily visitors are recommended to be reduced to 900 per day as opposed to vehicles, but we agree that the reduction will also help the existing individual wastewater system at Kē'ē function better.

Mahalo for the recommendation that the first goal should include the word "ecologically." While we agree with your point, these specific goals were generated and worded by the community advisory group. Therefore, we are not comfortable revising this bullet as this was the primary point they wanted to emphasize. However, the fifth bullet in the list of goals also includes the preservation of natural resources and there is a separate set of "Natural Resources Objectives and Policies" that recognizes this important aspect of the park and emphasizes the restoration and preservation of the natural and ecologically significant resources at the park. Therefore, we believe these support your recommendation.

Mahalo for your comment regarding microhydropower systems. The following text has been added to Sections 1.9.2, 2.5.3.2, 3.4.2, 3.9, 4.7.4, and 5.3.5 of the EIS: "To minimize the impacts of microhydropower systems on native Hawai'i amphidromous biota, the diversion intakes must be designed to have low-velocity intakes placed subsurface in relatively deep pool in the center of the stream in order to minimize entrainment of larval or post-larval stream animals."

The text in now Section 2.5.3.4 has been edited as your recommend as follows, "... seabird fledging season of September to December, and during the sea turtle hatching period July to September, and yellow lighting invisible to honu should be used near the shoreline." This text has also been revised in Sections 1.9.2 and 3.9.

Given recent heavy rain events, we understand the point made regarding soil mitigation. Therefore, we have added the following text to Sections 3.3, 4.7.3, and 1.9.2, "Efforts will be made to minimize all large-scale grading, grubbing, and stockpiling of soil and limit such activity to the dry season whenever possible."

As none of the known diversions from Limahuli Stream are within the park, nor does State Parks control or own any of them, and no new diversion is recommended as part of the proposed master plan, this recommendation seems to be more applicable to the State Commission on Water Resources Management (CWRM) rather than the park master plan and EIS. However, State Parks is supportive of DAR and/or CWRM performing studies within park boundaries if there is any research or monitoring they wish to pursue.

Mahalo for your recommendation to integrate the microhydropower system as an ancillary use to taro lo'i production as it is a recognized "Public Trust Beneficial Use." We have added the following text to Sections 1.9.2, 2.5.3.2, 3.4.2, 4.7.4, 5.3.5, and 7.4 of the EIS: "As a potential in-stream use, any microhydropower system should be integrated with a public trust use such as the taro lo'i production should it be pursued."

The parking lot is being recommended to be paved with permeable surfaces as described in Section 2.5.1.2 of the EIS.

While the integration of wetlands into individual wastewater systems (IWS) may have the stated benefits, State Parks does not want to potentially impact the condition of the existing wetlands as they are recognized Waters of the United States. The master plan recommends treating all wastewater generated onsite to R-2 effluent water quality at a minimum and to pursue innovative wastewater technologies such as constructed wetlands similar to the existing IWS at Kē'ē.

As noted above, we have revised the EIS to include improvements to the constructed wetlands at Kē'ē to "replace the plants at the constructed wetlands to high-nutrient removing plants to improve water quality."

We have replaced the word "strategies" with "goals" in this statement in Section 3.7.

As noted in Section 3.7 of the EIS, "State Parks will also support the rules adopted for the Hā'ena Community-Based Subsistence Fishery Area [HCBFA]." This includes the "Management plan and review" required under §13-60.8-4, HAR that involves the development of a framework to assist the department [DLNR] and the community in monitoring, evaluating, and managing the area." The proposed master plan for the park purposefully defers to the HCBFA and remains silent on specifics of fishery-based management and resources to avoid potential conflicts or duplication of efforts and therefore the recommendation to add long-term monitoring related to fish catch and effort data is not included in the EIS.

We agree with your recommendation to restore the lo'i as they can help reduce nutrient loads in the watershed. The restoration of the lo'i is discussed throughout the EIS and is included as a main proposal of the master plan Section 2.5.1.15, which describes the restoration of the historic Agricultural Complex. Please see the above response regarding the water budget and the fact that no stream diversions exist or are recommended at the park.

Mr. Don Heacock  
SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL  
IMPACT STATEMENT (EIS), HĀ'ENA, KAUA'I, HAWAII  
Month XX, 2018  
Page 4

Although the exact term "grey water" is not used in the EIS, the same recommendation of using recycled water and treated effluent for non-potable uses such as irrigation is mentioned throughout the proposed master plan description and EIS. Please see Section 2.5.3.1, which describes the proposed integrated water/wastewater/drainage system for the park. We have added the following text to Sections 1.9.2, 2.5.3.1, 3.4.1, 3.4.2, 3.7, 4.7.2, 5.3.4, and 7.3, "Use environmentally-safe soaps that contain plant nutrients and biocompatible cleaners." Mahalo for the recommendation.

Please see the above response and revisions to the existing Kē'ē constructed wetlands recommendations.

As noted above, the following text has been added to Section 4.7.3, "Minimize all large-scale grading, grubbing, and stockpiling of soil and limit such activity to the dry season whenever possible" as recommended.

The following text has been added to Section 7.4, "Because the construction of the new proposed facilities will require the irreversible and irretrievable commitment of natural resources, all large-scale grading, grubbing, and stockpiling of soil will be minimized and limited to the dry season whenever possible."

Mahalo for describing the additional concerns related to hydropower. The following has been added to Section 7.4, "However, if pursued hydropower may also have negative effects on fauna depending upon the design and placement of the intake structure. These potential impacts include decreased water quality, loss of habitat, and entrainment and impingement and associated mortality of migratory fishes, such as native Hawaiian amphidromous stream fauna made up of goby fishes ('o'opu), prawns or shrimp (ōpae) and snails (hīhīwai and hapawai)." The potential impacts have also been added to Section 4.7.4 of the EIS. Please note that no water is diverted for a microhydropower system so that impact has been removed from your recommended text.

With regards to your question about locating the IWS absorption bed under the parking lot and providing adequate separation of effluent from groundwater, please note that the Wastewater Preliminary Engineering Report recommends utilizing aerobic treatment systems, with disinfection. For IWS that discharge directly into groundwater, the Department of Health (DOH) requires the use of aerobic treatment units certified by NSF/ANSI 254. System design will require review and approval by DOH. The aerobic treatment can be utilized to support achieving R-2 effluent water quality, which can be used for subsurface irrigation. The EIS also recognizes that if the effluent is treated to R-1 water quality, it could be reused for many more purposes. The specific wastewater treatment technology is not specified in the EIS purposefully to allow more flexibility at the time of implementation as the wastewater technologies and techniques continue to advance and improve. We will add "aerobic treatment" to the descriptions of the recommended IWS in the EIS and the following text has been revised as noted regarding effluent disposal under parking lots in Sections 2.5.3.1 and 4.7.2 of the EIS, "Locate effluent absorption beds under parking lots and driveways if permitted. DOH requires the use of aerobic treatment units certified by NSF/ANSI 245 for systems that discharge directly into the groundwater." As an alternative, vault systems, which are fully contained

Page 5

and can be pumped and treated at an off-site facility are also being considered should effluent reuse not be possible onsite. This statement has been added to Sections 2.5.3.1 and 4.7.2 of the EIS.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 11/15/2018.

Dear Ms. Yuen and Ms. Tanaka,

SUBJECT: Draft Environmental Impact Statement for the Ha'ena State Park Master Plan

Thank you for the opportunity to review and comment on the subject matter. The Department of Land and Natural Resources' (DLNR) Land Division distributed or made available a copy of your report pertaining to the subject matter to DLNR Divisions for their review and comments.

At this time, enclosed are comments from (1) Division of Boating & Ocean Recreation; and (2) Engineering Division. No other comments were received as of our suspense date. Should you have any questions, please feel free to call Supervising Land Agent Steve Molmen at 587-0439. Thank you.

Sincerely,

Russell Y. Tsuji  
Land Administrator

**SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HA'ENA, KAUAI, HAWAII**

Aloha Mr. Tsuji,

Mahalo nui for your comment letter dated September 3, 2015 regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources (DLNR), Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize the DLNR Division of Boating and Ocean Recreation has no comments on the Draft EIS.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-06-23-KA-EIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-06-23-KA-EIS-Haena-State-Park-Master-Plan.pdf) on June 23, 2018.

CORR: KA 16-51  
SEP - 3 2015

**SUBJECT:** Comments on the Draft Environmental Impact Statement for the Hā'ena State Park Master Plan by the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks Located at Hā'ena, Hanalei, Kauai  
Tax Map Key (TMK): (4) 5-9-008-001, 5-9-001:022 (por.) and 025

Dear Ms. Yuen:

The Office of Conservation and Coastal Lands (OCCL) is in receipt of your request for comments on the Draft Environmental Impact Statement (DEIS) for the subject project.

According to the information provided, the Division of State Parks is proposing the following improvements at Hā'ena State Park as outlined in their update master plan:

- An education and cultural center;
- A traditional hale, demonstration gardens, picnic areas and outdoor event space;
- A reconstructed hale and lo'i interpretive site;
- A caretaker's cottage and backyard;
- A Department of Land and Natural Resources (DLNR) helipad and backyard/staging area;
- A limited access corridor;
- A hula complex;
- Dune Restoration;
- Installation of a permanent lifeguard tower;
- A picnic area at Kā'ē;
- Loko and wetland restoration;
- Limahuli Stream restoration;
- A living agricultural complex;
- Rehabilitation of the Montgomery house;
- A cultural gathering place and Hāluu Wa'a;
- Installation of interpretive signage;
- Pedestrian and bicycle facilities;
- Hazard rockfall mitigation measures; and
- Infrastructure improvements (water, wastewater, drainage, electrical, communication, & artificial lighting).

Ms. Kimi Yuen  
PBR Hawai'i & Associates, Inc.

CORR: KA 16-51

In the near term, State Parks would like to initiate the managed access concepts and safety improvements within the park as interim measures until the full build out of the master plan can be achieved. These improvements include construction of a welcome pavilion with restroom and information desk, establishment of an interpretive pedestrian path, rehabilitation of the existing parking area, establishment of a parking entry and turn around area, and installation of safety signage for rockfall hazards.

The OCCL notes that the project area is located within the Conservation District Resource subzone. On April 28, 1978, the Board of Land and Natural Resources (Board) approved Conservation District Use Permit (CDUP) KA-1010 for Public Recreation Use that established the park. In addition, Executive Order 3391, effective September 13, 1988, designated the subject area as Hā'ena State Park.

Therefore, based on the proposed improvements as outlined in the updated Master Plan, we anticipate that the proposed near-term, interim projects will require a Site Plan Approval pursuant to Hawai'i Administrative Rules (HAR) 13-5-22 STRUCTURES, ACCESSORY (B-1) Construction or placement of structures accessory to existing facility or uses. Once the EIS process is complete and planning underway for the long-term master plan concepts, the Division of State Parks should then apply for a Conservation District Use Board Permit pursuant to HAR 13-5-22 PUBLIC PURPOSE USES (D-1) Not for profit land uses undertaken in support of a public service by an agency of the county, state, or federal government, or by an independent non-governmental entity, except that an independent non-governmental regulated public utility may be considered to be engage in a public purpose use. Please note that this letter does not constitute the Department's final decision regarding the level of permitting required for the subject project. We reserve the right to change our decision dependent on the final project description presented to us by the Division of State Parks and/or their consultant when they have submitted their Conservation District Use Application for our review and processing.

Should you have any questions regarding this correspondence, please contact Lauren Yasaka of our Office at (808) 587-0386.

Sincerely,

Samuel J. Lemmo, Administrator  
Office of Conservation and Coastal Lands

IMPACT STATEMENT (EIS), HÄ'ENA, KAUAI, HAWAII  
Month XX, 2018  
Page 2

near-term plan anymore. However, the phasing plan provided in Table 4 remains and has been updated accordingly.

Mahalo for your comments confirming that the project area is located within the Conservation District Resource subzone and that there is an existing Conservation District Use Permit (CDUP) KA-1010 for the park, which was approved on April 28, 1978. We also understand that Executive Order 3391, effective September 13, 1988, designated the subject area as Hä'ena State Park. The following text has been added to Section 2.1.1 of the EIS, "There is an existing Conservation District Use Permit (CDUP) KA-1010 for Public Recreation Use, which was approved on April 28, 1978. Executive Order 3391, effective September 13, 1988, designated the subject area as Hä'ena State Park."

We understand that the master plan's proposed projects will require a Site Plan Approval pursuant to Hawai'i Administrative Rules (HAR) 13-5-22 STRUCTURES, ACCESSORY (B-1) and the Division of State Parks should apply for a Conservation District Use Board Permit pursuant to HAR 13-5-22 PUBLIC PURPOSE USES (D-1) once the EIS process is completed and planning for the long-term master plan concepts is underway. State Parks will continue to coordinate with the Office of Conservation and Coastal Lands (OCCL) as the project progresses and understands the permitting requirements may change based on the actual applications submitted to OCCL. The "Site Plan Approval" has been added to the list of anticipated required permits and approvals in Sections 1.1, 1.9.4, and 5.5 of the EIS.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-06-23-KA-EIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-06-23-KA-EIS-Haena-State-Park-Master-Plan.pdf) on June 23, 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

DEPARTMENT OF LAND AND NATURAL RESOURCES (DLNR)

ATTN: LAUREN TANAKA  
DIVISION OF STATE PARKS

FROM: FORD N. FUCHIGAMI  
DIRECTOR OF TRANSPORTATION

SUBJECT: HAENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (DEIS)  
HAENA, KAUAI, HAWAII  
TMK: (4) 5-9-008-001, 5-9-001-025 and 022 (POR.)

Our Department of Transportation (DOT) previously commented during Early Consultation and Environmental Impact Statement Preparation Notice (EISPN) in our letters STP 8.2979 dated September 4, 2008 (see Section 11 of the DEIS) and STP 8.1782 dated April 1, 2015 (see Section 12 of the DEIS) and now provide the following supplemental comments:

Airports Division (DOT-AIR)

DOT-AIR acknowledges PBR Hawaii & Associates, Inc.'s May 8, 2015 letter in Section 12.0 of the DEIS stating that the DLNR, Division of State Parks has been notified that it should file FAA Form 7480-1 Notice of Landing Area Proposal for the helipad.

Highways Division (DOT-HWY)

1. The Master Plan proposal to limit the number of visitors (by roughly half) will provide relief to the congestion along Kuhio Highway. However, we are concerned that a negative effect may be the distribution of traffic to other facilities on the North Shore. We recommend that visitor use of the surrounding facilities such as the County's Haena Beach Park be monitored to determine if the traffic congestion and parking issues shift from one facility to another.

STP 8.1867

2. The proposed shuttle service to the Park may need to expand the shuttle stop with shelters, benches and informational signage if a shuttle is the primary means of Park entry for local and visitor Park users.
  3. The proposed park improvements should reduce the traffic along Kuhio Highway and improve the parking situation at the Park entrance.
  4. To mitigate the traffic impacts of the proposed project, we recommend DLNR:
    - a. Continue to work with the DOT to satisfactorily address the traffic impacts of the proposed project on the State's highways facilities.
    - b. Fund the planning, design and construction of all traffic improvements required to mitigate local or direct project-generated traffic impacts.
    - c. Fund its share of the planning, design and construction of all traffic improvements required to mitigate regional project-generated related traffic improvements.
- If there are any questions, please contact Mr. Norren Kato of the DOT Statewide Transportation Planning Office at telephone number (808) 831-7976.

Month XX, 2018

Mr. Jade Butay, Director  
Department of Transportation  
State of Hawai'i  
869 Punchbowl Street  
Honolulu, HI 96813-5097

**SUBJECT: COMMENTS ON THE HÅ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÅ'ENA, KAUAI, HAWAII**

Aloha Mr. Butay,

Mahalo nui for the Department of Transportation's comment letter dated October 5, 2015 (Reference No. STP 8.1867) regarding the Hå'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hå'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your supplemental comments as organized in the referenced DOT letter.

Airports Division (DOT-AIR)

Mahalo for acknowledging our letter regarding FAA notification. As previously stated, State Parks will file the Federal Aviation Administration (FAA) Form 7480-1 Notice of Landing Area Proposal for the proposed helipad as required. This form has been added to the list of anticipated approvals and permits required for the project in Sections 1.9.4, and 5.5 of the EIS.

Highways Division (DOT-HWY)

1. We appreciate your comment regarding the alleviation of traffic as a result of the proposed limit on the number of visitors by roughly half. We also recognize that there may be the negative impact of distributing traffic to other facilities on the North Shore as stated in Section 7.3 of the EIS. This is why one of the preferred recommendations by the HSPCAC is the implementation of a shuttle service that serves the larger North Shore community as discussed in Section 4.3.3 of the EIS. Based on recent events that have closed the highway due to mudslides and heavy rainfall events, support for this type of shuttle or transit service is growing and the proposed master plan supports this effort by providing a shuttle stop at the park.

2. We understand your concern regarding expansion of the proposed shuttle stop in the event the shuttle becomes a primary means of entry for park visitors. If the parking demand for vehicles is reduced, the area shown as the main parking lot can be reduced and used to expand the area for shuttle service. This is discussed in Section 2.5.1.2 of the EIS.

3. Mahalo for your comment stating that the proposed park improvements should reduce the traffic along Kūhiō Highway and improve the parking situation at the park entrance.
4. Mahalo for your recommendations to DLNR to mitigate project-related traffic impacts. As State Parks proposes to reduce the average daily number of visitors at the park, traffic is anticipated to be reduced by the proposed master plan. Therefore no project-related traffic impacts are anticipated by the project.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Re: Draft Environmental Impact Statement for Hā'ena State Park Master Plan  
Hā'ena Ahupua'a, Halele'a Moku, Kaua'i Moku

Aloha e Kimi Yuen:

The Office of Hawaiian Affairs (OHA) is in receipt of your July 20, 2015 request for comments on the draft environmental impact statement (DEIS) which has been prepared to support the Hā'ena State Park Master Plan (master plan) on the island of Kaua'i. The DEIS serves to support the use of State land and funds, the use of county lands, and a use of the state historic district as designated in the Hawai'i and national registers of historic places. In 2010, OHA was invited to participate in the development of the Hā'ena State Park Master Plan. The State Parks staff and the thirty-two member Master Plan Advisory Committee developed the goals and vision of this project.

The near-term plan of the EIS includes a controlled entry to the park with a new welcome pavilion and restrooms, an interpretive path that will provide access to Kē'e beach, and an elevated boardwalk through the lo'i. As funding becomes available, the full buildout of the project will include additional facilities, a larger educational and cultural center, and a caretaker's cottage to support a 24-hour presence at the park. As mentioned in the DEIS, the Ka Ulu A Paoa Heiau and the former Allerton property are designated as the Hula Complex and are recognized as extremely significant to hula practitioners worldwide. The master plan prioritizes the restoration of the dune complex, recognizing the multiple benefits of ecological restoration, beach protection, and caring for the many sacred iwi kūpuna whose bones lay interred there.

According to the DEIS, visitors to the park will be impacted by the change in access policies and the daily visitor limit of 900 people per day, including hikers on the Kalalau trail. This daily visitor limit will not impact cultural practitioners, hula hālan, lo'i workgroups, cemetery caretakers, or

Kimi Yuen, Senior Associate  
October 12, 2015  
Page 2

school groups. OHA supports limiting the access to the park to preserve and protect this historic and cultural wahi pana while ensuring that our beneficiaries are still able to practice their constitutionally protected cultural practices.

As stated in the Archaeological and Historic Resources Section 4.1 of the DEIS, "the Hā'ena Archaeological Complex was deemed significant because it represents a large, nearly continuous, and mostly intact complex of archaeological features dating from the early prehistoric period to the recent historic period." (Yent 1983)<sup>1</sup> The report also mentions that in 1978, Dr. Hallett Hammett and his colleagues at the Archaeological Research Center Hawai'i, Inc. performed a series of five excavations along the Hā'ena State Park dunes to characterize the prehistoric use of the area. Based on their findings, they provided a preliminary sequence of human settlement and subsistence beginning with a marine oriented occupation at Kē'e Beach sometime before 1000 A.D. After 1000 A.D., occupation expanded at Kē'e as well as inland utilizing a broader resource base. Further intensification occurred after 1400 A.D. with the construction of the agricultural fields and lo'i.<sup>2</sup>

In the CIA prepared by Maria Ka'imipono Orr and described in Cultural Resources Section 4.2, historic sites include Ka Ulu a Paoa Heiau, Ke Ahu a Laka hula platform, Lohi'au's house site and, Wai a Kanaioa, and Waiakapala'e caves. The whole area of Kē'e and Hā'ena was once part of the original hula hālau connected to Laka and honored by Hā'ena ali'i nui Lohi'au, whose house is located at the base of Pu'u Makana.<sup>3</sup>

OHA appreciates that the DEIS has provide extensive information on significance of this wahi pana. The planning has taken a proactive approach of protecting and restoring the varied natural, cultural, and historic resources, as they are all connected and essential to the cultural values of this place, and requiring visitor education of everyone who enters the park.

Thank you for the opportunity to provide comments on the EIS for the Hā'ena State Park Master Plan project. Should you have any questions, please contact Kathryn Keala at (808) 594-0272 or kathyk@oha.org.

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Dr. Crabbe,

Mahalo nui for your comment letter dated October 12, 2015 (your Reference No. HRDI-5-3774 G) regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. As you know, due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments. We greatly appreciate the Office of Hawaiian Affairs' (OHA) participation on both the original Master Plan Advisory Committee and the HSPCAC and dedication throughout this process.

As mentioned above, the master plan for the park has been revised and greatly simplified based on community feedback. Please note that as a result, the Education and Cultural Center and Caretaker's Cottage have been eliminated, as well as the need for a near-term plan. However, the creation of the Hula Complex and restoration of the ancient Agricultural Complex remain as well as the priority of the dune restoration. In addition, the pedestrian path, Cultural Gathering Place, Hālau Wa'a, and traditional hale for cultural education remain. A Welcome Hale and new restrooms are proposed at the park entry, with the latter providing an alternate comfort station away from sensitive cultural features. Please see the updated Figure 1 Master Plan graphic and the "Master Plan Summary" attachment, which describes the new plan and the shows the verbatim changes from Section 1.9.1 of the Final EIS. A full copy of the updated master plan report is available on the State Parks website for Hā'ena State Park: <http://dlnr.hawaii.gov/dsp/parks/kauai/haena-state-park/>.

Mahalo for your support of the proposed visitor limit, and the recognition that it helps to preserve and protect this historic and cultural wahi pana while ensuring that your beneficiaries are able to practice their constitutionally protected cultural practices.

Mahalo nui for also recognizing the archaeological, historic, and cultural information shared in the EIS, which help to document the significance of this wahi pana. We are humbled by your statement that the planning has taken a proactive approach of protecting and restoring the varied natural, cultural, and historic resources and agree that they are all connected and essential to the cultural values of this place. Visitor education prior to park entry remains a key management recommendation and State Parks and the project team truly appreciate

## DISABILITY AND COMMUNICATION ACCESS BOARD

919 Ala Moana Boulevard, Room 101 • Honolulu, Hawaii 96814  
Ph. (808) 586-8121 (V/TDD) • Fax (808) 586-8129

September 4, 2015

Ms. Lauren Tanaka  
Division of State Parks  
Department of Land and Natural Resources  
PO Box 621  
Honolulu, HI 96809

Regarding: Hå'ena State Park Master Plan

Dear Ms. Tanaka,

The Disability and Communication Access Board (DCAB) would like to thank you for the opportunity to review the Hå'ena State Park Master Plan dated July 2015. The purpose of this review is to ensure that this project will take into account accessibility design requirements for persons with disabilities.

While DCAB is not an approval agency, we recommend the Plan include the general statement below with regards to construction projects that may be developed for Hå'ena State Park:

*"All buildings, facilities, and sites shall conform to applicable federal, state, and county accessibility guidelines and standards. Hawaii Revised Statutes §103-50 requires all State of Hawaii or County government buildings, facilities, and sites to be designed and constructed to conform to the Americans with Disabilities Act Accessibility Guidelines, the Federal Fair Housing Amendments Act, and other applicable design standards as adopted and amended by the Disability and Communication Access Board. The law further requires all plans and specifications prepared for the construction of State of Hawaii or County government buildings, facilities, and sites to be reviewed by the Disability and Communication Access Board for conformance to those guidelines and standards."*

New construction and alterations of buildings and facilities (restrooms, caretaker residence, 'Welcome Pavilion', 'Educational & Cultural Center', Montgomery House rehabilitation, etc.) are required to comply with the Department of Justice's (DOJ) 2010 ADA Standards for Accessible Design (2010 Standards). The standards can be viewed at [http://www.ada.gov/2010ADAStandards\\_index.htm](http://www.ada.gov/2010ADAStandards_index.htm).

Ms. Lauren Tanaka  
Department of Land and Natural Resources  
Division of State Parking  
Regarding: Hā'ena State Park Master Plan  
September 4, 2015

To be consistent with the DOJ's standard, DCAB adopted the 2004 Americans with Disabilities Act Accessibility Guidelines (ADAAG) as of January 1, 2011 and passed interpretive opinions consistent with the 2010 ADA Standards. All of DCAB's Interpretive Opinions can be viewed or downloaded at <http://www.health/hawaii.gov/dcab/facility-access/interpretive-opinions>.

In reviewing the Hā'ena State Park Master Plan there were a few references and items that appear to conflict with the 2010 Standards or are of concern:

- **Parking Areas (Various pages):** The utilization of permeable materials such as grass pavers, turf blocks and gravel for parking surfaces if used for accessible parking will not comply with the 2010 Standards or DCAB Interpretive Opinion 2011-02 Ground and Floor Surfaces. Grass is not considered an accessible surface. Gravel is not considered firm, stable or slip resistant. Grass pavers and turf block are not considered accessible surfaces per DCAB's Interpretive Opinion.
- **Pedestrian Paths:** The Master Plan calls out permeable pavers in a number of areas. Similar to the comment above, grass, gravel, grass pavers and turf blocks are not considered an accessible surface.
- **Princeville Shuttle:** Any new or expanded shuttle service vehicles must be accessible. The drop-off and boarding facilities at both Princeville and Hā'ena State Park are considered passenger-loading areas and must comply with the requirements for an accessible bus loading area.
- **Caretaker's Cottage:** Any new residential facility shall be designed as accessible. Alterations to existing residential facilities are also required to comply with scoping and technical provisions of the 2010 Standards.
- **Bicycle racks:** Where provided, bicycle racks must be connected to an accessible route and provide a wheelchair clear floor space that is firm, stable and slip resistant adjacent to the bike rack.
- **Electric Vehicle Charging Station(s):** Where provided, electric vehicle parking and charging stations must comply with DCAB Interpretive Opinion 2012-01.
- **Restrooms:** New or altered composting toilet facilities and temporary toilet facilities must be accessible and comply with the 2010 Standards.

The Plan describes proposed improvements to provide trails, beach access and areas for camping and overnight stays. DCAB strongly encourages the use of the following accessibility guideline related to outdoor developed areas when newly built or altered as best practice:

Ms. Lauren Tanaka  
Department of Land and Natural Resources  
Division of State Parking  
Regarding: Hā'ena State Park Master Plan  
September 4, 2015

- **Final Guidelines, Architectural Barriers Act Accessibility Guidelines (ABAAG); Outdoor Developed Areas:** published September 26, 2013. These guidelines became effective for federal agencies on November 25, 2013 and provide scoping and technical provisions for accessible trails, picnic and camping areas, viewing areas, beach access routes and other components of outdoor developed areas.

Improvements to existing roadways, access roads, intersections and other areas of the public right-of-way are covered by Hawaii Revised Statutes (HRS) §103-50.

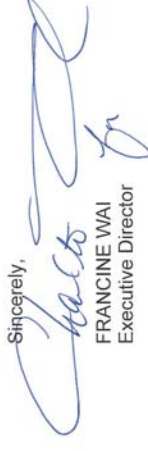

The Master Plan indicates the development of pathways for use by both pedestrians and bicyclists. DCAB recommends the use of the following guidelines that were published by the U.S. Access Board for shared use paths and pedestrian routes. Although they are not yet enforceable by the DOJ under the Americans with Disabilities Act (ADA), nor have they been adopted by state rules under HRS §103-50, these accessibility guidelines provide guidance for a minimal level of accessibility for those elements not addressed by the enforceable ADAAG:

- **Accessibility Guidelines for Pedestrian Facilities in the Public Right-of-Way; Shared Use Paths;** Supplemental Notice of Proposed Rulemaking; published February 13, 2013.
- **Proposed Guidelines for Pedestrian Facilities in the Public Right-of-Way;** published July 26, 2011.

The above comments reflect DCAB's advice and recommendations for the Department of Land and Natural Resources. Please note that the individual Hā'ena State Park projects must still be submitted to DCAB for review per HRS §103-50.

Thank you again for allowing DCAB the opportunity to provide these comments. Should you have any further questions, please feel free to contact Mona Higa, Facility Access Coordinator at 586-8121 or via email at [mona.higa@doh.hawaii.gov](mailto:mona.higa@doh.hawaii.gov).

Ms. Francine Wai  
SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL  
IMPACT STATEMENT (EIS), HĀ'ENA, KAUA'I, HAWAII  
Month XX, 2018  
Page 2

historic structures in order to ensure compliance with required accessibility laws. Mahalo for the link to DCAB's Interpretive Opinions.

In response to your two comments that permeable materials do not comply with 2010 ADA standards for accessible parking surfaces or pedestrian paths, please note that there are new materials available that include ADA-compliant permeable surfaces and pavers. Here are a few examples from the Internet including a structured gravel surface installed in a national park that is ADA compliant:

- <https://www.truegridpaver.com/testimonials/ada-compliant-permeable-paver/>
- <https://unilock.com/products/classic/ada-paver/?region=2>
- <https://www.basallite.com/projects/berkeley-high-school-stadium-permeable-pavers>

The design team will work closely with DCAB to ensure compliance with current requirements.

We also understand that any new or expanded third-party shuttle service vehicles must be accessible. The following statement has been added to Section 5.1.1, "Any new shuttle service must be accessible. The drop-off and boarding facilities at the park and any remote parking are considered passenger loading zone and must comply with the requirements for an accessible bus loading area."

We recognize your comment regarding the caretaker's cottage accessibility. The caretaker's cottage has been removed from the updated master plan.

We appreciate your comment regarding bicycle racks in the master plan. The following statement will be added to Section 5.1.1, "Bicycle racks must connect to an accessible route and a wheelchair clear floor space that is firm, stable, and slip resistant adjacent to the bike racks."

We recognize your comment regarding electric vehicle charging stations. The following text has been added to Sections 2.5.1.2 and 5.1.1 of the EIS, "If electric vehicle parking and charging stations are provided, they must comply with DCAB Interpretive Opinion 2012-01, which states, 'Where EV charging stations are provided, 5%, but not less than one of each type of EV station shall be accessible.'"

We recognize new or altered composting toilet facilities must be accessible and comply with ADA standards. This is included in Section 5.1.1 of the EIS. The temporary toilet facilities have been removed from the EIS.

For improvements to trails, beach access, and areas for camping and overnight stays, we appreciate the reference to the Final Guidelines, Architectural Barriers Act Accessibility Guidelines (ABAAG); Outdoor Developed Areas, published in September 26, 2013. These guidelines have been added to Section 5.1.1 of the EIS and used to guide detailed design of the various outdoor elements.

We also recognize your comment stating improvements to existing roadways, access roads, intersections, and other areas of the public right-of-way must comply with HRS §103-50. This statement also has been added to Section 5.1.1.

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. Wai,

Mahalo nui for your comment letter dated September 4, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your recommendation to include the following statement with regards to construction projects:

*All buildings, facilities, and sites shall conform to applicable federal, state, and county accessibility guidelines and standards. Hawai'i Revised Statutes §103-50 requires all State of Hawai'i or County government buildings, facilities, and sites to be designed and constructed to conform to the Americans with Disabilities Act (ADA) Accessibility Guidelines, the Federal Fair Housing Amendments Act, and other applicable design standards as adopted and amended by the Disability and Communication Access Board. The law further requires all plans and specifications prepared for the construction of State of Hawai'i or County government buildings, facilities, and sites to be reviewed by the Disability and Communication Access Board for conformance to those guidelines and standards.*

It is already included in Section 5.1.1 of the EIS.

We also acknowledge that new construction and alterations of buildings and facilities are required to comply with the Department of Justice's (DOJ) 2010 ADA Standards for Accessible Design. This statement has been added to Section 5.1.1. Mahalo for providing the link to the DOJ's 2010 ADA Standards. Please note that the many of the existing structures such as the Montgomery House, Allerton Caretaker's Cottage, and the interpretive restoration site's foundation are over fifty years old and State Parks will need to balance historic preservation with ADA accessibility. State Parks will consult with the Disability and Communication Access Board (DCAB) as it proceeds with detailed design and implementation of the master plan particularly with regards to restoring any of the

Please note that bicycles will no longer be permitted on the Pedestrian Path so there are no shared-use paths in the proposed master plan. Mahalo for the references. State Parks will reference them should they decide to pursue shared paths in the future.

State Parks also understand that individual projects of the master plan must be submitted to DCAB for review per HRS §103-50. This is noted in Section 5.1.1 of the EIS.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-06-23-KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-06-23-KA-FEIS-Haena-State-Park-Master-Plan.pdf) on June 23, 2018.

**To:** Kimi Yuen; Lauren A. Tanaka@hawaii.gov  
**Subject:** Haena State Park Master Plan

Aloha Kimi and Lauren

I believe Fire Chief Westernman submitted comments regarding this project. I'm not sure exactly what was given. Some comments I have are as follows:

- Project shall comply with the Kauai County Fire Code
- Emergency access via Fire apparatus and ambulance must be considered
- Fire protection by means of water supply for fighting fires, especially for the structures that will be built.
- Helipad must be clear of people and objects that may create a hazard for the chopper. Is this area going to be accessible to the public, or cordoned off?

Please contact me if you have further questions.

Mahalo

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Mr. Date,

Mahalo nui for your emailed comment dated September 15, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

1. With regards to your first two comments, the following text has been added to Sections 1.9.2 and 4.9.1 of the EIS, "State Parks will work with the County Police and Fire Departments to comply with requirements of the Kaua'i County Fire Code including emergency access by fire apparatus, ambulance, and other emergency vehicles as required."

2. Please note that the master plan has been simplified based on community input and many of the larger structures that were originally proposed, such as the Education and Cultural Center and Caretaker's Cottage, have been eliminated from the plan. Please see the updated Figure 1 showing the revised master plan and Master Plan Summary attached for your reference. Because the last fire hydrant/standpipe is located outside of the park, roughly 75 feet away, non-potable water is recommended for fire protection. Collected rainwater via the proposed catchment systems or even ocean water could be used for fire protection in emergencies.

3. The helicopter landing zone closest to the main parking lot will be fenced or separated from the public areas by a hedge (see Figure 1). Also, an alternate landing zone is shown in the lo'i as we understand the Fire Department prefers the open grassy area near the Hui's current shelter for emergency helicopter landings. We also understand that the Fire Department will land wherever they need to as appropriate for the emergency situation.

SUBJECT: Request for Comments on Draft Environmental Impact Statement (EIS) for the Hā'ena State Park Master Plan that has been prepared pursuant to Chapter 343 of the Hawaii Revised Statutes and Administrative Rules, Title 11, Chapter 200

This is to inform you that the Kauai Historic Preservation Review Commission (KHPRC) met on August 6, 2015 to discuss and review on Draft Environmental Impact Statement (EIS) for the Hā'ena State Park Master Plan.

The KHPRC appreciated the opportunity to comment on the project. Based on their review of the KHPRC voted to defer comments on the project until the next scheduled meeting on September 3, 2015 to provide the KHPRC with additional time to review the Draft EIS.

Please feel free to contact us should you have any questions regarding this matter.

MEMORANDUM

TO: Kauai Historic Preservation Review Commission

Fr: Ka'aina Hull  
Deputy Director of Planning

Date: September 24, 2015

RE: Hā'ena State Park Master Plan  
Comments for Draft EIS

On August 6, 2015, the Kauai Historic Preservation Commission (KHPRC) received and reviewed the Draft Environmental Impact Statement for the Hā'ena State Park Master Plan. At the meeting, KHPRC had questions for and discussions with the representative of the Department of Land and Natural Resources (DLNR). In order to allow members of the KHPRC to forward comments to the Department, and for the Department to review and gather the comments together, action for the subject agenda item was deferred to the next KHPRC meeting.

The following are the comments that the Department has received concerning this subject agenda item. The Department is in concurrence with the following comments and recommends adoption so that they can be forwarded to be incorporated into the Comments for the subject Draft EIS.

The KHPRC is charged with "protecting, preserving, perpetuating, promoting, enhancing and developing the historic resources of the County of Kauai." Hā'ena State Park and areas around it contain many such resources, sites of legendary cultural significance where the importance of preservation, protection and perpetuation can hardly be overstated. Yet some of the *wahi pana* at Hā'ena have been abused over time through ignorance, neglect and overuse.

The "Hā'ena State Park Master Plan" recommends important steps toward reversing the cumulative impacts of misuse and creates a blueprint for sound practices going forward, including:

1. The recognition of the entire park as culturally and historically significant.
2. The importance of preserving significant cultural and historic sites.
3. The need for the park to be "a living place" that includes revival of cultural practices.

An Equal Opportunity Employer

prepared on recycled paper

4. The establishment of a county partnership with State Parks to create a Hula Complex, encompassing Ka Ulu a Paoa Heiau and Ke Alu a Laka.
5. The protection of former burial sites and restoration of the dune system.
6. The importance of preserving/restoring/cultivating the traditional agricultural complex.
7. The commitment to locate new facilities "in previously disturbed areas to minimize impacts to archaeologically sensitive areas" (p. 4-9).
8. The intention to rehabilitate two historic houses: the Allerton Caretaker's Cottage and Montgomerly House.
9. The creation and continuing involvement of a cultural advisory group consisting of individuals, families and local community members with historic and cultural ties to Hā'ena, who will assure appropriate interpretation, management practices and uses.
10. The establishment of a community advisory group for "ongoing support and consultation" (p. 2-31) about general & relevant regional issues as well as plan implementation.
11. The exemption of those engaging in cultural practices (e.g., hula, fishing, agriculture, family care of ancestral remains) from total daily visitor count.
12. The requirement of first-time visitors to attend an education and orientation session to enhance sensitivity and understanding of the park's cultural/historic resources.
13. The appointment of caretaker and security staff to deter vandalism and misuse of the park's resources.

Concerns about obstacles that could impede the successful protection, preservation, perpetuation, promotion and enhancement of Hā'ena's cultural and historic resources include:

1. Failure to complete the Hā'ena State Park Master Plan (which in one form or another has already been in process for 21 years) or if adopted, to actively utilize it as a working conceptual and management document.
2. The inability to acquire the many millions of dollars required to achieve the stated end results.
3. The failure to mitigate current stress on the park as a result of increasing overuse.
4. The lack of management capabilities to maintain dynamic cultural and community advisory groups.
5. Pressure to expand recreation uses in the park that undermine protection of cultural/historic resources.
6. The potential that efforts to protect the park's cultural resources will lead to a visual blight of educational structures, signage and walkways, creating more of an outdoor museum experience than a very special "living" place.

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUAI, HAWAII**

Aloha Mr. Hull,

Mahalo nui for your two memorandums dated August 25, 2015 and September 24, 2015, respectively, regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your first memorandum informing us that the Kaua'i Historic Preservation Review Commission (KHPRC) met on August 6, 2015 to review the Draft EIS for Hā'ena State Park and voted to defer comments on the project until the next scheduled meeting on September 3, 2015 to allow the KHPRC time to review the Draft EIS.

Mahalo for the second memorandum, which summarized the above KHPRC meeting actions and included their comments on the Draft EIS with which the County of Kaua'i Planning Department concurred.

We understand that the KHPRC is charged with protecting, preserving, perpetuating, promoting, enhancing, and developing the historic resources of the County of Kaua'i. We recognize and agree with your comments that Hā'ena State Park and areas around it contain many such resources, sites of legendary cultural significance where the importance of preservation, protection and perpetuation can hardly be overstated and that the wahi pana at Hā'ena have been abused over time through ignorance, neglect, and overuse. We appreciate your comment that the Hā'ena State Park Master Plan recommends important steps toward reversing the cumulative impacts of misuse and creates a blueprint for sound practices going forward including 1) the recognition of the entire park as culturally and historically significant, 2) the importance of preserving significant cultural and historic sites, 3) the need for the park to be "a living place" that includes the revival of cultural practices, 4) the establishment of a County partnership with State Parks to create the Hula Complex, encompassing Ka Ulu a Paoa Heiau and Ke Alu a Laka, 5) the protection of former burial sites and restoration of the dune system, 6) the importance of preserving/restoring/cultivating the traditional Agricultural Complex, 7) the commitment to locate new facilities in previously disturbed areas to minimize archaeologically sensitive

areas, 8) the rehabilitation of two historic houses: the Allerton Caretaker's Cottage and Montgomery House, 9) the creation and continuing involvement of a cultural advisory group consisting of individuals, families, and local community members with historic and cultural ties to Hä'ena and who will assure appropriate interpretation, management practices and uses at the park, 10) the establishment of a community advisory group for ongoing support and consultation about general and relevant regional issues as well as plan implementation, and 11) the exemption of those engaging in cultural practices such as hula, fishing, agriculture, family care of ancestral remains from the daily visitor limit.

Please note that the required attendance at an education and orientation session prior to park entry and the onsite caretaker have been eliminated based on community input. However, the plan still includes visitor education and orientation prior to park entry as one of the key recommendations. This could be done via the State Parks website, email, text messages, and/or other means and it could be tied entry ticket distribution. Also, while the onsite caretaker has been eliminated, additional park staffing to supplement the existing park ranger is still recommended to deter vandalism and misuse of the park's resources as well as support visitor education and park management.

In response to the concerns raised about obstacles that could impede the successful protection, preservation, perpetuation, promotion, and enhancement of Hä'ena's cultural and historic resources, we offer the following responses:

1. The Final EIS for Hä'ena State Park based on the revised master plan will be before the Board of Land and Natural Resources (Board) on May 25, 2018. State Parks has been working closely with the Board and understands this a critical step in continuing the progression towards implementation as working conceptual and management documents. If approved, the Final EIS will be submitted to the Governor and the Office of Environmental Quality Control (OEQC) for acceptance and if accepted, State Parks can move forward with implementation of the plan.
2. We understand your concern regarding funding for the initiatives laid out in the master plan. Unfortunately, we cannot predict or guarantee the State Legislature will approve funding for the implementation of the plan. However, completion of the master plan and Chapter 343, HRS processing will enable State Parks to submit funding requests related to the plan and implement those aspects that may not require capital improvement project (CIP) funds. They may also seek funding from other sources such as grants.
3. We recognize your concerns regarding mitigating current stress on the park as a result of increasing overuse. The revised master plan calls for an average daily visitor limit of 900 people per day to be instituted at the park as an initial step towards managing the park's overuse. An adaptive management approach will also be implemented so that those numbers can be adjusted as needed based on the observed impacts to the park and community feedback.
4. State Parks has been building a stronger relationship with the community and are actively involved and open to addressing their concerns with regards to the park. We recognize those dynamics can change over time, but State Parks is currently working well with the HSPC/AC and appreciates the ongoing support and input of this group.

5. The five main goals of the Master Plan stated in Section 2.1.3 of the EIS are driven by the recognition of the cultural and historic significance of the site. One of them specifically states the priority of "balancing the provision of recreational opportunities with the preservation of the significant natural and cultural resources." State Parks recognizes that protection and preservation of the park's natural and cultural features will enrich the experience for all and that outdoor recreation and visitor activities have the potential to undermine the cultural significance of a place if not managed appropriately. They also understand that such activities can also impact a cultural practitioner's ability to access sites of cultural importance or perform their constitutionally protected cultural practice. The Master Plan, therefore, prioritizes the protection and restoration of the varied natural, cultural, and historic resources at the park and managing recreational uses to avoid potential conflicts.

6. Mahalo for voicing your concern regarding the potential visual impacts of educational structures, signage, and walkways and the loss of a very special living place experience. Many others in the community echo your concern and therefore the master plan has been greatly simplified with the removal of the larger structures including the Education and Cultural Center and Caretaker's Cottage. The number of trails and interpretive displays have been reduced and the park is left in a much more natural state. Please see the revised master plan graphic in Figure 1 and the updated master plan summary from the EIS.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. You will also be receiving a copy of the Final EIS under separate cover. Please let us know if you would prefer a different format, or if you would prefer an electronic copy of the Final EIS, it will be available for download on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

**SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HA'ENA, KAUAI, HAWAII**

Aloha Mr. Moule,

Mahalo nui for your comment dated August 14, 2015 (your Reference No. PW 7.15.110) regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your comment confirming the receipt of the Draft EIS. We understand that you have no comments on the Draft EIS.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-06-23-KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-06-23-KA-FEIS-Haena-State-Park-Master-Plan.pdf) on June 23, 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

Water has no substitute..... Conserve it

September 3, 2015

Ms. Lauren Tanaka  
State of Hawaii-DLNR – Division of State Parks  
1151 Punchbowl Street, #310  
Honolulu, HI 96804

Dear Ms. Tanaka:

Subject: Draft Environmental Impact Statement for the Haena State Park Master Plan,  
TMK: 5-9-01:025, TMK: 5-9-01:022, and TMK: 5-9-08:001, Kuhio Highway,  
Haena, Kauai

This is in regard to your letter dated July 20, 2015. The Department of Water (DOW) has no objections to the Draft Environmental Impact Statement (DEIS). The following are our comments to the DEIS for the Haena State Park Master Plan.

Any actual subdivision or development of this area will be dependent on the adequacy of the source, storage, and transmission facilities existing at that time. At the present time, the existing storage facilities are operating at capacity and the DOW is limiting water service to three 5/8-inch water meters or three single family dwellings per existing lot of record. The existing source facilities are nearing capacity. The Department's water system ends near the Limahuli Stream along Kuhio Highway. Adequacy of the existing transmission facilities will be dependent on the required domestic and fireflow demands of the proposed project (i.e. fire flow requirements may depend on the actual land use or zoning designation of the proposed development).

Prior to the DOW recommending water service or building permit approval, the applicant will be required to:

1. Be made aware that water service to TMK: 5-9-08:001 will be limited to the existing water meter serving the parcel until adequate water system facilities are available.
2. Submit detailed water demand (both domestic and irrigation) calculations along with the proposed water meter size for the proposed use for our review and approval. Water demand calculations submitted by your engineer or architect should also include fixture count and water meter sizing worksheets. The Department's comments will be dependent on the approved water demand calculations.
3. Submit a formal request for water service for our review and approval, if necessary.

All conditions stated above are subject to the Rules and Regulations of the DOW as amended or as will be amended.

Ms. Lauren Tanaka  
State of Hawaii-DLNR – Division of State Parks  
Subject: Draft Environmental Impact Statement for the Haena State Park Master Plan, TMK: 5-9-01:025,

Lihue, HI 96766

SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÄ'ENA, KAUA'I, HAWAII

Aloha Mr. Wienand,

Mahalo for the Department of Water's comment letter from Mr. Edward Doi dated September 3, 2015 regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We appreciate your statement that you have no objections to the Draft EIS.

We understand that any subdivision or development of this area will be dependent on the adequacy of the source, storage, and transmission facilities existing at that time. At the time of your letter, the existing storage facilities were operating at capacity and the Department of Water (DOW) was limiting water service to three 5/8-inch water meters or three single family dwellings per existing lot of record. We also understand the existing source facilities were nearly capacity and that the DOW water system ends near Limahuli Stream along Kūhiō Highway. State Parks recognizes that adequacy of the existing transmission facilities will be dependent on the required domestic and fire flow demands of the proposed project.

Please note that the master plan has been greatly simplified and the Education and Cultural Center and Caretaker's Cottage have been eliminated from the plan. However, new restrooms are proposed by the Welcome Hale and will require DOW water service. This would be in addition to the Cultural Gathering Place, restored Montgomery House and Allerton Caretaker's Cottage, and existing comfort station at Kē'e, all of which were described in the Draft EIS. Please see the attached revised "Master Plan Summary" and Figure 1, which shows the updated text and master plan graphic from the EIS. State Parks will work closely with DOW to ensure adequate water supply is available for the proposed facilities prior to implementation.

State Parks also understands:

- That water service to the parcel will be limited to the existing water meter until adequate facilities are available. Based on the preliminary engineering performed for

Subject: DRAFT ENVIRONMENTAL IMPACT STATEMENT FOR THE HA'ENA STATE PARK MASTER PLAN

Dear Mr. Yuen:

Thank you for the opportunity to comment on the Draft Environmental Impact Statement for the Ha'ena State Park Master Plan. Our comment is essentially the same as made in my email related to the Pre-consultation for the Proposed Ha'ena State Park Master Plan dated September 2, 2008, with one minor correction.

Hawaiian Telcom has a pay phone and an emergency phone at Kee Beach. Both phones are serviced from a DLNR owned 11 pair cable (NOT 6 pair as originally mentioned) running parallel to Kuhio Hwy on the makai side of the road, originating from Limahuli Stream. Any proposed projects in the area should consider the possible impact to this State owned telephone cable.

Call me at 808-241-5052 or email [jimmy.sone@hawaiiantel.com](mailto:jimmy.sone@hawaiiantel.com) should you have any questions.

Sincerely,

James 'Jimmy' Sone P.E.

SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HA'ENA, KAUAI, HAWAII

Aloha Mr. Sone,

Mahalo nui for your emailed comment dated August 7, 2015 regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources (DLNR), Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the (HSPCAC). As the planning consultant for State Parks, we offer the following response to your comments.

Mahalo nui for your corrected statement that the existing Hawaiian Telcom pay phone and emergency phone located at Ke'e Beach are both serviced from a DLNR-owned 11 pair cable (as opposed to a 6 pair) running parallel to Kāhīō Highway on the makai side of the road, originating from Limahuli Stream. State Parks understands that any proposed projects in the area should consider the possible impact to this State-owned telephone cable. The following text has been revised in Section 4.7.4 of the EIS, "A 3/4-inch Hawaiian Telcom DLNR-owned 11 pair cable telephone line runs along Kāhīō Highway to the pay phone near the ~~emergency station~~ and emergency phone at Ke'e Beach and parallels the existing three-inch water line." The emergency phone has also been added to the text in Sections 1.9.2 and 2.5.3.3 of the EIS.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-06-23-KA-EIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-06-23-KA-EIS-Haena-State-Park-Master-Plan.pdf) on June 23, 2018.

Aloha,

**Subject:** Haena Park plan

Along with many other concerns on the project, my concern is the State of Hawaii maintenance of the road to Haena. There are at least 16 dangerous areas between Hanalei and Haena that have no guardrails on the Makai side of the road. Tactly approving the operation of a bus or van would open up the State to liability for the unsafe conditions. In addition, the previous operator of the van service picked up riders who parked in the overburdened Princeville Shopping Center parking areas. There is no State facility for parking cars.

There are interim solutions to the issue that could be implemented before resorting to an Oahu model on Kauai.

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha,

Mahalo nui for your emailed comment dated September 12, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your comment concerning the State of Hawai'i's maintenance of the road to Hā'ena State Park. The State Department of Transportation (DOT) currently owns and maintains the stretch of highway you describe. State Parks has no control or jurisdiction over it and this is out of the scope of the project. State Parks' support of a third-party shuttle to the park would not expose the State to any additional liability as the State DOT is already responsible for the conditions of its facilities. Mahalo for the information that the previous operator of the van service picked up riders who parked at the Princeville Shopping Center. The proposed master plan includes an area within the park, which will be large enough to park roughly 100 cars, as well as a special access parking lot at Kē'e.

We appreciate your statement that there are interim solutions to the issue that could be implemented before resorting to an O'ahu model on Kaua'i. As one of the key recommendations of the plan, State Parks will continue to involve the HSPCAC, cultural advisory group, and the broader community in addressing the issues at Hā'ena State Park and adaptively manage any implementation actions or policies as needed based on the feedback.

Mahalo nui for your input and participation in the environmental review process. Your email will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-06-23-KA-FEIS-Haena-State-Parks-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-06-23-KA-FEIS-Haena-State-Parks-Master-Plan.pdf) on June 23, 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

## Nathalie Razo

**From:** Kaimi Hermosura <konohikiokauai@gmail.com>  
**Sent:** Tuesday, September 08, 2015 10:30 PM  
**To:** Kimi Yuen  
**Subject:** Section 106 Consultation Notice  
**Attachments:** Ke'e Master Plan Notice.pdf; Native Hawaiian Consultation Handbook.pdf

To Whom it may concern:

The Ohanas of Kauai, Konohiki of Kauai, and the community of Hale'ena are requesting to enter into a Section 106 Consultation Process with the Department of Land and Natural Resources, Divisions of State Parks regarding the Ha'ena/ Ke'e State Park Master Plan. The Ha'ena/ Ke'e state park is very culturally and historically significant to the ohanas and community of Hale'ena and this proposed undertaking will have negative effects to our community and its resources. Due to the impacts this master plan will cause, the DLNR and all federal agencies funding this master plan must enter into a Section 106 Consultation with Native Hawaiian Organizations Review Process under the National Historic Preservation Act prior to any federal funding. As it says in the handbook, the Section 106 meeting must be set up at a proper time and place that is convenient to the above parties.

Aloha and Mahalo

Month XX, 2018-DRAFT

Mr. Kaimi Hermosura  
Via Email: [konohikiokauai@gmail.com](mailto:konohikiokauai@gmail.com)

**SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HA'ENA, KAUAI, HAWAII**

Aloha Mr. Hermosura,

Mahalo nui for your emailed comment dated September 8, 2015 regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely appreciate your involvement early in the project as a member of the Master Plan Advisory Committee and apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. We hope you have been well. As the planning consultant for State Parks, we offer the following responses to your comments.

We acknowledge your comments requesting a Section 106 Consultation Process. We apologize for the confusion. Although Federal Land and Water Conservation Funds (LWCF) were originally received in the past for the park, Section 106 consultation is only sought during the initial application process for an LWCF grant and is therefore not included as part of the current master plan process. Section 106 would only apply if there is a new request for a LWCF grant or if there is a conversion of the park into some other use besides outdoor recreation, neither of which is part of this process.

We appreciate your statement that the Ha'ena State Park and Ke'e are very culturally and historically significant to the ohana and community of Hale'ena and the plan proposed in the Draft EIS would have negative effects on the community and its resources. Please note that due to your and the community's feedback, the master plan has been greatly simplified in order to maintain the natural beauty and openness of this wahi pana. Please see the attached updated master plan graphic in Figure 1 and the master plan summary that have been revised in the EIS. The updated version of the full master plan report can also be downloaded from the State Parks Ha'ena State Park website at <http://dlnr.hawaii.gov/dsp/parks/kaui/haena-state-park/>.

Also, please note that no federal funding is currently being sought for the project. Therefore no Section 106 consultation is being initiated at this time.

Mahalo nui for your input and participation in the master plan and environmental review process. Your email will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-EIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-EIS-Haena-State-Park-Master-Plan.pdf) on 2018

Re: Comments on July 2015 Draft EIS for Ha'ena State Park Master Plan

Aloha Lauren and Kimi,

The Draft Environmental Impact Statement (Draft EIS) comprehensively addresses most of the environmental impacts of the proposed Ha'ena State Park Master Plan (HSPMP). We truly appreciate all of the time and effort that you and your colleagues have put into the HSPMP, the DEIS, and the public processes that led to those documents. We offer the following comments on two areas in which we believe additional information is needed.

#### **Access, Transportation and Parking Management**

We firmly support the recommendation that the number of people in the park be limited to 900 per day, the preferred access scenario of implementing a shuttle from the Princeville facility at the start of Phase I, and transportation and parking Scenario 1 (Princeville-based park entry).

It is disappointing that DLNR/State Parks is "unlikely to initiate its own shuttle service" (page 4-2), as DLNR/State Parks is the entity whose facilities are directly responsible for creating the parking and transportation impacts that need to be mitigated. Even so, DLNR/State Parks does have the means at its disposal, through access and parking management policies, to achieve the objective (stated in Section 2.1.3) of "ensur[ing] that parking and traffic impacts do not spill out from the Park into the neighboring residential communities."

We therefore believe that both the Final EIS and HSPMP should unequivocally commit (in Section 4.3.2 Parking Mitigation Measures, Section 6.4.2.4 Preferred Vehicular Access Scenario and elsewhere) to ensuring that Ha'ena State Park's parking impacts do not spill into the neighboring communities and Ha'ena Beach Park, regardless of which transportation and parking scenario (*Princeville-based Park Entry*, *Combination On-site Parking and Princeville Entry Facility*, or *On-site Parking Only*) materializes. This can be achieved by committing, in the Final EIS and Final HSPMP, to access and parking management policies that include the following:

- All Ha'ena State Park users (except those with special access rights) must obtain entry permits to the park only through an on-line reservation system or a Princeville-based park entry facility (if it exists). No visitor entry permits and no parking permits will be issued at the park itself, as doing so would encourage users to drive to the park in the hope of obtaining entry or parking permits there.
- The precise hours and the durations (number of hours) of permits for the on-site parking lot will be managed and limited as necessary to ensure that there is sufficient turnover, so that the on-site parking lot will be adequate to meet all needs without creating any spillover impacts. The hours and durations of park access permits for users who are granted such on-site parking permits will be similarly limited.

Month XX, 2018-DRAFT

Mr. Carl Imparato  
P.O. Box 1102  
Hanalei, HI 96714

Ms. Maka'ala Ka'aumoana  
P.O. Box 1045  
Hanalei, HI 96714

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUAI, HAWAII**

Aloha Ms. Ka'aumoana and Mr. Imparato,

Mahalo nui for your comment letter dated August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We truly appreciate your participation and dedication as members of the original Master Plan Advisory Committee and reorganized Hā'ena State Park Community Advisory Committee (HSPCAC). We sincerely apologize for the delay in responding. As you know, due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with the HSPCAC to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo nui for your comments that the Draft EIS comprehensively addresses most of the environmental impacts of the proposed master plan. We are humbled by your support of the project team and our collective efforts, including yours as part of the community advisory groups. We could not have developed this master plan without everyone's input and guidance.

#### Access, Transportation and Parking Management

Mahalo for your support of the proposed daily visitor limits, the preferred access scenario of implementing a shuttle from the Princeville facility at the start of Phase I, and transportation and parking Scenario I (Princeville-based park entry).

While State Parks is unlikely to initiate its own shuttle service, several options are identified in the EIS including extending the County public transit service to Kē'e, contracting with a third-party operator to provide the service, or allowing independent private shuttles to stop at the park, or a combination of the above. As you know, recent events with the record rainfall, mudslides, and closure of the highway to Hā'ena have brought a new focus and opportunity to change how transportation operates on the North Shore as a whole. State Parks is actively working with the County and the community to discuss potential solutions and appreciate your involvement in these discussions as well.

We recognize that the reduction in the average daily number of visitors to the park may have the negative impact of shifting people and traffic to Hā'ena Beach Park and areas east of the park. Also, as you know, many local residents voiced the concern over loss of access to the park due to the visitor limits, competition for the limited parking at the park, complicated park entry and parking management rules, and not wanting to drive to

printed on recycled paper

- No overnight parking will be permitted at Hā'ena State Park for users of Hā'ena State Park (with appropriate exceptions for cultural practitioners and subsistence fishermen)
- Napali Coast State Park users and campers will access Napali Coast State Park using similar access management and parking procedures (i.e., there will be no access through Hā'ena State Park into Napali Coast State Park without permits issued on-line).
- No parking will be allowed at Hā'ena State Park for users of Napali Coast State Park.
- Parking lot permit time limits will be strictly enforced, to help ensure the adequacy of the parking lot.

Commitment to the above measures would go a long way towards ensuring that even if a shuttle does not materialize, the 100 space parking lot would be sufficient to fully accommodate the parking needs generated by Hā'ena State Park. Alternatively, if DLNR/State Parks is not willing to make such a commitment in the Final EIS and HSPMP, the Final EIS would need to address the magnitude and mitigation of the impacts of Hā'ena State Park's vehicle spillover into the neighboring communities and Hā'ena Beach Park.

#### Mitigation of Impacts on Police and Fire Protection Services (Section 4.9.1)

As you are aware, discussions are ongoing regarding the possible construction of a bridge over Hanakapiā Stream, because users of both Hā'ena State Park and Napali Coast State Park increasingly hike portions of the Kalalau Trail without adequate preparation, becoming stranded and creating burdens on the Kauai Fire Department's rescue services. As Hā'ena State Park users are major contributors to these burdens, it is imperative that both the Final EIS and Final HSPMP explicitly acknowledge and address this issue.

The proposed 900 person/day visitor limit will of course reduce the magnitude of the problem, but that is nonetheless insufficient mitigation of the problem. DEIS Appendix I, Section 4.6.3 (Napali Trailhead Management) briefly outlines some components of a management strategy, which might include hiker education and "consideration of" check-in/check-out for day hikers as well as overnight campers. But these ideas are also clearly insufficient to address the problem.

Participation by all Kalalau Trail users - both day hikers and overnight campers - in a mandatory orientation program that includes comprehensive safety orientation is a start. But additional mitigation measures need to be incorporated into the FEIS. Please consider including a requirement that users of the Trail pass a trail safety examination, and a requirement that all users of the Trail must sign waivers acknowledging the hazards of the Trail, acknowledging the potential for being stranded on the Trail for one-or-more days, acknowledging state/county non-responsibility for "rescue"/extraction after stream flooding and other normal events, and agreement to personally assume full responsibility for the cost of any rescues in such events.

Thank you again, Lauren and Kimi, for your years of commitment to Hā'ena State Park and for your consideration throughout the entire process.

*Maka'ala Ka'aumoana*

Maka'ala Ka'aumoana  
PO Box 1045  
Hanalei, HI 96714

Princeville in order to catch a shuttle to the park, especially if they live near the park. As you note, access and parking management can mitigate these impacts and mahalo for your hard work as part of the HSPAC to revise the proposed access and parking management options which are now included in the master plan and EIS. This includes instituting the visitor limits only during the peak hours of park use and using 900 daily visitors as an average limit over those peak hours. The proposed parking lot is also now divided into two areas, one for fee payers and another for non-fee payers, and can be adjusted and actively managed to accommodate fluctuations in parking demand as often as needed. Please see the revised EIS text regarding the visitor limits and parking in the respective attachments as well as the updated Figure 1 showing the master plan graphic.

With regards to overnight parking, and given the proposed changes to apply adaptive parking management, we have added the following text to Section 4.3.2 of the EIS, "Overnight parking could also be reduced or restricted and parking lot time limits could be proposed as needed to encourage turnover of the stalls." Please see the attached revisions to Section 4.3.2, which show the verbatim changes to the EIS related to parking.

We agree that Nāpali Coast State Wilderness Park (SWP) users and campers will access the Nāpali Coast SWP through Hā'ena State Park under the same access management and parking procedures as other park users. The only exception is that those with valid camping permits will not be counted against the daily visitor limit as discussed in the EIS.

As noted above, Nāpali Coast State Wilderness Park users will be subject to the same access and parking management rules as many day hikers also use the park.

As noted above, parking lot permit time limits could be proposed if found to help ensure the adequacy of the parking lot. However, adaptive management of the proposed fee-paying and non-fee paying lot will be tried first to see if this works.

**Mitigation of Impacts on Police and Fire Protection Services**

Mahalo for your concerns regarding the safety and lack of preparation of Kalaheo Trail hikers. As you note, Nāpali hikers enter from Hā'ena State Park and Section 4.6.3 of the master plan report includes proposed Nāpali Trailhead Management strategies. Please note the following changes that are currently happening at State Parks that help address your concerns:

- Three (3) new staff positions have been created for the Nāpali Coast SWP in the 2018 legislative session, greatly increasing the management capacity of State Parks to address visitor safety and education, resource protection, and permit compliance within the park.
  - The proposed bridge over Hanakāpī'ai Stream will greatly mitigate the strandings in Hanakāpī'ai and the associated need for extraction by emergency personnel.
- Implementing other measures such as an administering an examination, and mandatory signing of waivers are not in consideration at this time but we thank you for the suggestions.

Mahalo nui to you both for your dedication and commitment to Hā'ena State Park and for your input in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of

**Subject:** Ha'ena State Park Master Plan  
**Attachments:** Hui Hoomalu testimony Ha'ena Master Plan 8-18-15 mk.docx

Aloha all,

I have attached the testimony ( I thought the meeting was a hearing ☺) from Hui Ho'omalu I ka 'Āina. I compliment you all on a good meeting. It was wonderful to see the large turnout!

I have a few suggestions for "next time":

- Be sure you have a good sound system
- Please make the presentation portion shorter, no longer than ½ hour
  - No need to read the slides
  - Skip over the verbiage, use the graphics
- Be sure there are enough comment cards with clear instructions on the cards as to what to do with them

My personal comments on the plan:

I like the plan very much. I am concerned about the need for commitments for the shuttle , without which the plan will fail. The County should be urged to schedule the Kauai bus to the park as well. I think the EIS should include potential impacts on Makua and Ha'ena County Beach Park.

Mahalo one and all, job well done.

Re: Hā'ena State Park Master Plan  
Testimony

Aloha,

Hui Ho'omalu i ka 'Āina has participated in every effort to plan this park since the land was purchased for the purpose of establishing a park. Many of our members come from Hā'ena.

We thank all of those who have been a part of the process in developing this plan and caring for this place. The list is very long and the process has taken over twenty years and we are grateful it has finally come to this point, a hearing where we can say what we think of the plan.

We like this plan. We like it very much.

It protects our rights as kanaka; it protects the place for the future and it begins the process for Kauai of declaring a capacity for a place. This is a very necessary first and the critical part of this plan. We believe that not every person has the right to go every place. This is our place, our kuleana and we must do difficult things to protect it for the future.

It is hard to see change like this, a place that never had rules that now has rules, a place that anyone could go, anytime, that now will have limits. But this is all about this place and this place is in trouble. We are loving it to death. We must do this difficult thing to take care of this place, to practice our kuleana and take care of this place so that our mo'opuna can enjoy this place too.

Every place has a capacity and we should consider that for many other places on Kaua'i. For Ha'ena, this Master Plan addresses the issues of this place and makes many good suggestions on how to take better care of and share this place.

We appreciate the hard work that went into the development of this plan. Mahalo.

Makaala Kaumooana  
Vice Chair

Hui Ho'omalu i ka 'Āina is a taro root organization founded in the early 1980's by traditional practitioners of moku Halele'a to address threats and impacts to the natural and cultural resources of Kaua'i. Founded by farmers and fishermen, weavers and hunters, we seek to provide context for issues related to the ecology of our ahupua'a. The organization is an active advocate for those native things and ways that are disappearing. We are not a nonprofit, we are an activist organization. We do not whine and wait, we act.

**POB 1045, Hanalei, Hawaii 96714**

Month XX, 2018

Mrs. Maka'ala Ka'aumoana, Executive Director  
Hanalei Watershed Hui  
P.O. Box 1285  
Hanalei, HI 96714

**SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÄ'ENA, KAUA'I, HAWAII**

Aloha Mrs. Ka'aumoana,

Mahalo nui for your email dated August 21, 2015 with the attached letter from Hui Ho'omalu i ka 'Aina regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We have separated our responses to your email in two letters. This letter is sent in response to the comments in your cover email and the other will address the comments in the Hui Ho'omalu i ka 'Aina letter. As the planning consultant for State Parks, we offer the following responses to your email.

Our apologies for the misunderstanding with regards to the type of meeting held on August 19, 2015. We appreciate your submitting the testimony from Hui Ho'omalu i ka 'Aina. Mahalo for your suggestions regarding the meeting presentation and materials. We take those to heart and appreciate your guidance on procedures, acoustics, and comment cards and will follow through at subsequent meetings.

With regards to your personal comments, we understand your concern regarding the shuttle commitments and Kaula'i bus service. As you know, with the recent heavy rainfall and road closures, State Parks is working with the County and the community to address transportation and access along the North Shore. We agree that the County should develop transit service to the Park and State Parks will encourage this as best they can. The master plan report has been updated with the reorganized Hä'ena State Park Community Advisory Committee's recommendations for park access and parking and can be downloaded in full at the State Parks website for Hä'ena State Park.  
<http://dlnr.hawaii.gov/dsp/parks/kaui/haena-state-park/>

Mahalo for voicing your concerns regarding overcrowding and overflow to other parks on the North Shore. We recognize the potential negative effects of the master plan may include the distribution of recreational demand to other facilities on the North Shore, especially Hä'ena Beach Park and Makua. Section 7.3 of the EIS discusses the secondary impacts of the plan, which include the potential negative impact of distributing recreational demand and use of surrounding shoreline areas, especially Hä'ena Beach Park. We have revised the text to include Makua. Based on input from the HSPCAC, the following text has been edited in this section of the EIS, "The HSPCAC is also working with State Parks and other public agencies such as the County and USFWS ~~with also coordinate~~ on transportation, parking, and area circulation improvements ~~with other public agencies such as the County and USFWS~~ to come up with solutions that benefit the North Shore communities." While the shuttle is a major part of the proposed solution, the community is actively involved in developing solutions in all aspects of transportation on the North Shore as you know, and State Parks is open to working together on these issues.

SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÄ'ENA, KAUA'I, HAWAII

Aloha Ms. Ka'aumoana,

Mahalo nui for your comment dated August 19, 2015 regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely appreciate all of your effort over the years and mana'o in helping to develop a plan for the park. We are humbled by your kind words and apologize for the delay in responding. As you know, due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo nui loa for your recognition of all those who have participated in this process of developing a plan for the park. We echo that gratitude and also wish to acknowledge all those who came before us over the many years to contribute to the plan and share their thoughts.

We hope you still support the updated plan. We have attached the revised master plan summary and Figure 1 master plan graphic from the EIS for your reference. The full version of the master plan report is available for download from the State Parks Hä'ena State Park website: <http://dlnr.hawaii.gov/dsp/parks/kaui/haena-state-park/>.

Mahalo for your comments that the plan protects your rights as kanaka; and that it protects the place for the future and it begins the process for Kaua'i of declaring a limit of acceptable change for a place. State Parks appreciates your desire to help protect this wahi pana and that difficult things sometimes must be done to protect it for the future including instituting rules where there once were no rules. We agree that the park needs help in better managing and protecting its varied resources for future generations and we appreciate all that you have done over the years to help State Parks develop this master plan.

We appreciate your statement that the master plan for Hä'ena State Park addresses the issues of this place and makes many good suggestions on how to take better care of and share this place. Mahalo for your support and long dedication to this wahi pana.

Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control [website](http://www.oeq.hawaii.gov).

Honolulu, HI 96713

RE: Hā'ena State Park Master Plan & Environmental Impact Statement

Aloha Ms. Yuen,

As a member of the MP Advisory Committee, I am very appreciative of PBR's community outreach, meetings, information provided, and response to the various concerns and comments by our Committee. The Master Plan and EIS are very descriptive and explanatory of the various recommendations outlined and described in the various sections and documents. The additional reports and studies add to the Plan and provide baseline information for current and future reference.

Preservation of the Hā'ena State Park area should be a high priority for our community, the County of Kauai, and the State of Hawai'i. Preservation of the Hā'ena State Park is significant as the entire park area has a historic and cultural history that is significant to preserve for future generations.

I support:

- Reduction in the number of persons that can access the Park area each day.
- Management of the area and education of those visiting the Park
- Restoration of various areas and recognition for those individuals, families, and local community members with historic and cultural ties to the Park area, and revive cultural practices.
- Identification of the areas where the public's safety should be established<sup>1</sup>
- Decrease and limit of the number of vehicles permitted in the proposed parking area.
- Description and benefits of a shuttle system which would decrease the number of vehicles travelling along Route 560, Kūhiō Highway<sup>2</sup> in the Tsunami Evacuation Zone and encourage the use of a shuttle to the Park.

Mahalo for the opportunity to provide the above comments.

  
Barbara Robeson

<sup>1</sup> Rockfall hazard area, for example

<sup>2</sup> Route 560 is on the State and National Register of Historic Places. The area from Hanalei to Ke'e is in the Tsunami Evacuation Zone. During an evacuation, vehicles would travel from Ke'e, through Hanalei, and up to Princeville, and crossing one-lane bridges and culverts. See Appendix G of the Plan.

Month XX, 2018-DRAFT

Ms. Barbara Robeson  
P.O. Box 369  
Hanalei, HI 96713

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUAI, HAWAII

Aloha Ms. Robeson,

Mahalo nui for your comment letter dated August 6, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We truly appreciate your participation in the original Master Plan Advisory Committee (MPAC) and dedication to this effort. We apologize for the delay in responding. As you know, due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your kind words of support of the community outreach, meetings, information provided, and response to the concerns and comments from the MPAC. We appreciate your comments that the master plan report and EIS are very descriptive and explanatory of the various recommendations outlined in the documents and that the additional reports and studies add to the plan and provide baseline information for current and future reference.

We recognize and agree with your comments on the importance of preserving the park and making it a priority for the County of Kauai and State of Hawai'i as the entire area has historic and cultural significance that should be preserved for future generations.

We appreciate your support of the following:

- Reduction in the number of persons that can access the park each day.
- Management of the area and education of those visiting the park.
- Restoration of various areas and recognition for those individuals, families, and local community members with historic and cultural ties to the park area, and revival of cultural practices.
- Identification of the areas where the public's safety should be established such as the rockfall hazard areas.
- Decrease and limit of the number of vehicles permitted in the proposed parking area.
- Description and benefits of a shuttle system which would decrease the number of vehicles travelling along Route 560, Kūhiō Highway in the Tsunami Evacuation Zone and encourage the use of a shuttle to the park.

All of the elements you support have been preserved in the revised plan. We have attached copies of the updated master plan summary and Figure 1 master plan graphic from the EIS

**Attachments:** Kee State Park EIS comments.docx

Aloha Lauren and Kimi,  
Since it sounds like we are still accepting EIS comments I'll add these, they are my own. Mahalo nui to both of you for all your great hard work. Much aloha, M

Comment:

Keep bicycles off of pedestrian path way, so as to keep it smaller in width. Leave the existing road open for bicyclists (mainly local residents ideally) to use at their own risk.

Representation that 900 visitors is less than half visiting the park is based on just two counts of 1900 and 2028 visitors both conducted in the summer. I propose either lowering the allowable visitor figure from 900 OR creating seasonal limits, so that 900 might apply during the high summer season, but 500 (less than half of the visitors counted during non summer seasons) would be more appropriate September – May.

Section 2. 5.2.18

Though encouraged by the federal Funding that initially secured the Haena park, I do not support trails through the agricultural complex, behind the dunes (including current road providing access to cemetery etc.) and between that area and the halau wa'a, as suggested in the plan, UNLESS these areas were accessible by guided tour only. Unguided visitor pedestrian traffic should be restricted to the Interpretive path and board walk. In addition signage and displays should be minimized and limited to the interpretive path. If other areas are only accessible with guides, then there will be no need for signs as a live person can explain the significance of the site instead. I would rather see the money used for signs and infrastructure spent on management and personnel. Signs only will add to the urban, park feel of what is a sacred landscape that should remain as uncluttered with human structures or materials other than plants, rocks, and wood as possible.

Further, I do not feel it is culturally appropriate to identify cemeteries and grave sites in publically available documents such as these out of respect for those graves and the families related to them. Might those sites be removed from the maps with simply a footnote to indicate that plans are designed to avoid and protect them?  
Mai Kaula'i I na iwi I ka lā.

IN GENERAL, ALL Facilities should be as low impact as possible with as low permanent construction materials as possible given the very real threat of sea level rise which could mean all will have to be moved within the half century. Use of metal or concrete or other materials that cannot simply biodegrade back into the landscape should be prevented.

I advise building the educational pavilion as provided in phase I then not building up to the full ECC, in order to save money and imposition of infrastructure and urbanization on the area.

I encourage use of composting toilets, particularly for caretakers house and Montgomery house. Though I appreciate the value of having the caretakers house

close to the entrance, I also suggest considering use of the Montgomery home as a caretakers residence to avoid new building. It should use a composting toilet.

The less introduction of water mixed with waste in this area subject to sea level rise, tsunami, ground water transport to streams and flooding, the better.

Who is Geometrician Associates?

Allow walking and bike access on the old roadway without counting in visitor counts so that locals may access even if parking lot is closed. This would be at your own risk as noted with rock fall hazard signs.

Include more discussion of management options identified by MPAC for park access. These include 20 per year fee for residents and 5 per visit for visitors. Also showing drivers license to access and not pay fee etc. Violate plan? LWSC funding?

No picnic areas in lo'i and agricultural complex. Keep visitor traffic through this area to interpretive corridor. Part of making it possible to give that area up and allow visitor traffic is being able to move further makai so amenities which bring visitors in that way are not acceptable.

No ECC

Smaller caretaker cottage.

Make MPAC a permanent council and make their responsibilities with regards to implementation of plan more explicit. They should have final oversight of plan implementation and final say on when and whether aspects go forward.

IMPACT STATEMENT (EIS), HĀ'ENA, KAUA'I, HAWAII  
Month XX, 2018  
Page 2

We have also eliminated the Caretaker's Cottage and recommended all future wastewater treatment facilities be designed with innovative environmentally-friendly technologies that includes composting toilets. We appreciate your comment to reduce the mixing of water with waste in this sensitive area and encourage State Parks to investigate emerging wastewater treatment systems that are improving effluent quality and to treat wastewater to a minimum of R-2 water quality to minimize environmental impacts due to sea level rise, tsunami, ground water transport to streams, and flooding. Vault systems, which are fully contained and can be pumped and treated at an off-site facility are also being considered.

Please see the revised Figure 1 Master Plan graphic and the "Description of the Master Plan" attachment from Section 2.5 of the Final EIS, which show the verbatim changes.

Geometrician Associates LLC is a Hawai'i-based firm specializing in biological surveys. Headed by Ron Terry, Ph.D., Geometrician has performed more than 150 Environmental Impact Statements (EIS) and Environmental Assessments for county, state, federal and private projects. Geometrician Associates conducted the biological survey report for this project. The survey included a physical survey of flora and fauna; a review of previous surveys of the area; report of the results describing plant communities, and habitats; and, discussion of potential effects from increased recreation on wildland resources. A copy of the entire Geometrician Associates report can be found in Appendix C of the EIS.

Mahalo for your comment regarding allowing pedestrian and bike access to the park along the old highway without counting against the visitor counts. The visitor limits are proposed to only be instituted over the peak visitor hours at the park. Therefore, access will be allowed into the park and parking lot both before and after those hours and will be adjusted as appropriate based on ongoing input from the community. Due to the potential rockfall hazards along the old highway, warning signs will be posted at gate at the old highway to advise visitors who attempt to enter at that point. The gate is envisioned to have an open design that will allow views down towards Kē'e. However, State Parks will not encourage general public access via the highway due to the known rockfall hazards.

The full range of management options identified by the MPAC and refined by the HSPCAC for park access is included in the master plan report, which is available online at the State Parks website: <http://dlnr.hawaii.gov/dsp/parks/kaui/haena-state-park/>. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Currently, entry fees for all state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Similar fees could be instituted at Hā'ena State Park. However, State Parks will continue to work on the different options with the advisory committee and could include a variety of options as long as they do not violate State Parks Administrative Rules, or the Federal Land and Water Conservation Fund rules, which allow charging different fees for residents and nonresidents as long as they are comparable to current fee differences between the two.

Mahalo for your concerns regarding the placement of picnic areas in the lo'i and Agricultural Complex. The revised master plan does not locate any picnic areas within lo'i or the Agricultural Complex. Visitor traffic is directed to the Pedestrian Path through this area as requested.

As noted earlier, the ECC and Caretaker's Cottage have both been removed from the master plan. Please reference the attached Figure 1.

One of the key management recommendations is to establish a permanent Cultural Advisory Group and Community Advisory Committee. These are described in Section 2.5.4.2 of the EIS and the verbatim description of these groups is included in the "Cultural and Community Advisory Groups" attachment.

Mahalo nui for your dedication and input throughout the master plan and environmental review processes. Your letter will be included in the Final EIS. Lauren,

I admire your work and agree in general with what I understand [from what was reported in The Garden Island. I will write a letter so stating. Could you send me the executive summary, please, so that I can be more informed.

I'm quite sure you will once again draw a lot of fire, but would like to support you and State Parks in your effort to bring some sense into the mess at the end of the road.

Dear Kimi Yuen and Lauren Tanaka

I was pleased to read the article in advertiser today about the state taking over Haena Beachpark and controlling the number of visits. As a lifetime resident of Hawaii with deep roots, I have watched the slow destruction of our environment by the multitude of visitors as well as residence overusing the hiking trails and parks. Our environment is Hawaii's most precious resource and it is now time to protect it. This will allow generations of people to enjoy this beautiful natural resource. I live on Windward Oahu and can think of several other places that need protection. Lanikai pillbox, Maunawili falls and the Stairway to heaven are in need of help. I am not suggesting closing them. In fact I would implore maintaining the trails. Controlling access and charging fees may be the only way to do it. The fees should be enough to maintain and improve the trails as well as create employment for our community.

**SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÄ'ENA, KAUAI, HAWAII**

Mr. Frank Hay  
Via Email: kokee@okauai.com

Aloha Mr. Hay,

Mahalo nui for your emailed comment dated July 25, 2015 regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawaii, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Community Advisory Committee to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the Community Advisory Committee. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your kind words of support for the Hä'ena State Park Master Plan as reported in *The Garden Island* newspaper. We appreciate your willingness to voice your support and your concern for the existing conditions. We have attached the updated master plan summary for your reference.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-PEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-PEIS-Haena-State-Park-Master-Plan.pdf) on 7/29/2018.

Aloha,

Aloha Mr. Harpstrite,

Mahalo nui for your emailed comment dated July 25, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Community Advisory Committee to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the Community Advisory Committee. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the Hā'ena State Park Master Plan, including proposals to manage the number of visitors and establish park entry fees. We recognize your concerns with the impact of current conditions on the natural environment and your desire to protect our environment and as you note, allow generations to enjoy it. Mahalo for sharing other places on O'ahu that also need help; many of those locations are also receiving attention as well. We appreciate your comment that closing these areas is not the answer and acknowledge your support for controlling access and charging fees as possible solutions. We also appreciate your suggestion to charge fees that are high enough to maintain and improve the trails as well as create employment for the local community.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 2018

Aloha,

Kimi Mikami Yuen, LEED AP BD+C

Subject: Haena State Park

I am writing you with regard to the Star Advertiser article about proposed changes at Haena State Park.

I can support your proposal to charge reasonable parking fees in order to support and maintain the park and facilities but I strongly oppose limits to park guests and find the idea of an educational and cultural center to be unnecessary.

Visitors to Kauai and the park spend thousands of dollars to enjoy the natural beauty of the island. Attempting to control and limit access not only makes it a less attractive destination but is an elitist proposal seeking to restrict access for the benefit of a few as opposed to the principles of public park resources which are meant to benefit the public at large. Ever since the access at Hanauma Bay was altered and restricted, you have unpredictable access and delays that cause more traffic issues and pollution. I recently visited Hanauma as well and initially the access was coned off but upon doing a u-turn and driving back it was open. What is the point of that? Such issues would be MUCH worse at Haena given the narrow roads and more basic infrastructure.

If anything, you should be opening the park for MORE people to enjoy with better parking lots and roads funded by access / parking fees. A state park is meant for public enjoyment and should not be limited to the privileged few.

KEEP HAENA OPEN!

Thank you

Rodger Elble

SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÄ'ENA, KAUAI, HAWAII

Aloha Mr. Elble,

Mahalo nui for your email dated July 25, 2015 regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the proposal to charge reasonable parking fees in order to maintain the park and facilities. We recognize your concerns regarding potential limitations on the number of visitors, the perception that this may have on Kauai visitors, and your comments on maintaining public access to the park. The problem with the currently unlimited access to the park is the traffic and illegal parking that often blocks the narrow and already congested highway. To allow more visitors would further compound the problem. The revised master plan proposes the 900-person visitor limit as an initial number during peak hours when traffic is the heaviest, and it can be adaptively managed and adjusted as appropriate. If there continue to be issues, State Parks will work with the advisory committees on adjusting the number. Also, by setting a limit, people will be able to plan ahead to see which days will be available to visit and would help reduce unnecessary traffic circling or traveling down the narrow highway unless they have an entry ticket. There is also no other space in the park for additional parking as the historic Agricultural Complex spans most of the flat areas of the park and so expanding the parking or adding more roads is not possible. The park remains open to the public for public enjoyment.

The Education and Cultural Center has been eliminated from the master plan and a simple Welcome Hale has been added in its place.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA-EIS\\_Library/2018--KA-EIS-Haena-State-Park-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA-EIS_Library/2018--KA-EIS-Haena-State-Park-Master-Plan.pdf) on 2018.

**Subject:** Haena State Park preservation, response to public comment 7/25 StarAd

I am in favor of limiting visitors and fee charges to the park. I live on Oahu, third generation resident, and just came back from the Cruise ship visiting the islands. We rented a car to drive to Haena Park only to be disappointed with the overpopulation of visitors. The cars parked must do damage to the land, there was no quiet space to really enjoy the beauty of the Park. I did not dare look into the restroom. We got there at about 11:00 a.m. I should have done more research prior to heading towards Hanalei. I have been going to the park nearly annually, though this time may have been the last time due to the crowds. As with Hanauma Bay it has become too crowded for the locals to enjoy, we might as well make it nice for the tourist (and early riser local), and charge a fee with limited vehicle access. This may also cut back with some of the traffic going through Kapaa. Some thing really has to be done before the place is ruined. Kea Beach is the most beautiful spot with the mountain on one side and beautiful crystal clear reef snorkeling and a heiau to worship. Thank you for your efforts to preserve this spot for generations to come.

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Ms. Sari,

Mahalo nui for your email dated July 26, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the proposed visitor limits and charging fees to the park. We recognize your concern for the existing conditions and the impact on traffic congestion and overcrowding in the park. We appreciate your concern regarding damage from the parked cars, the lack of quiet space to enjoy the park, and concern for the restroom conditions. The proposed visitor limits during the peak hours of park usage will hopefully help encourage visitors to plan their trips to the park prior to arrival and reduce traffic. We appreciate your concern about doing something before the place is ruined and the master plan has been designed to help protect those resources you value, Kē'e Beach, Makama, and Ka Ulu A Paea Heiau.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oese2.doh.hawaii.gov/EA\\_HIS\\_Library/2018-04-04-FEIS-Haena-State-Park-Master-Plan.pdf](http://oese2.doh.hawaii.gov/EA_HIS_Library/2018-04-04-FEIS-Haena-State-Park-Master-Plan.pdf) on 04/04/2018.

RE: Haena State Park Master Plan (HRS 343)

Aloha.

As a Kauai resident unable to visit Haena often due to overcrowding and lack of parking, my comments will consist of thoughts on Hawaii State Residents use and access. Our Islands are promoted by the HTA and loved to death by visitors. In the process residents are competing with ever increasing numbers of visitors for less access to our own prime areas. Many times residents have limited days off or limited time to leave early enough to find parking at our own parks.

I disagree with removing half of the parking at or near Ke'e. It should stay and be available to residents only. Leave it in place for now and allow access to only Hawaii licensed drivers and their Hawaii licensed passengers, driving their Hawaii registered personal vehicle. If the personal vehicle has not more than 2 out of state occupants, allow them in for a charge per each out of state person (up to 2). All other visitors should pay an authorized tram or van to be brought in from a specific parking area at Princeville or Hanalei.

Past a check point or kiosk there should be no visitor rental cars unless their Haena rental has private off street parking, they can show their rental agreement at the access kiosk and continue to their rental's private parking. They can be given a placard to hang from their mirror showing their dates of rental and road access.

Residents should not have to park a mile away from their chosen Haena beach location and walk past rental car after car, parked in NO PARKING zones and which are rarely ticketed.

Mahalo.

SUBJECT: COMMENTS ON THE HAENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HAENA, KAUAI, HAWAII

Aloha Ms. Weiss,

Mahalo nui for your emailed comment dated July 28, 2015 regarding the Haena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the long delay in responding. Due to the feedback received on the Draft EIS, the State of Hawaii's Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Haena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns regarding the current parking and overcrowding issues at Haena State Park, as well as the impact on access for local residents. We also acknowledge your concern with restricting access to the parking areas near Ke'e and your suggestions for exclusive access to this parking area for local residents. The revised master plan proposes limited access to mitigate public exposure to the rock hazard area. However, special users groups from the community, including cultural practitioners and those with ADA parking placards, will continue to have access. Please see the attached revised sections on the Rockfall Hazard, Limited Access Corridor, and Park Entry from the Final EIS.

We acknowledge your comments suggesting parking lots reserved for park visitors with Hawaii's-issued licenses and check points preventing access for rental cars, requiring other visitors to use a shuttle from Princeville or Hanalei. The park entry includes design similar to your suggested check point. While the potential shuttle service is not proposed to be administered by State Parks in the revised master plan, it does include specific elements to support effective implementation with infrastructure design for the proposed park entry and main parking lot to support a recommended shuttle service with shuttle stop structures, as described in Section 2.5.1.1 and Section 2.5.1.2 from the Final EIS, for supporting recommendations for shuttle service similar to your suggested tram or van.

While the main parking area does not have designated areas for residents and nonresidents, it includes improvements for parking enforcement with an entry fee structure. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Currently, entry fees for all state parks are established by Hawaii's Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawaii's residents are exempt from paying park

**Cc:** Kimi Yuen  
**Subject:** Feedback Regarding Haena State Park Plan

I would like to suggest some ideas I have for Haena State Park (particularly the Kee beach area) which would solve many of the current problems. I believe some of the "proposed" ideas are invasive, expensive, and will have a terrible visual impact.

First of all: *Leave the area alone as much as possible!* Do not install an overhead walkway, as this would be far too expensive and ugly. A simple walking path through the woods or shoulder on the side of the road is sufficient.

There is no need to build a building or expensive plaques pertaining to the history or culture of the area. Building things there is expensive and unsightly. A link to the history of the area should be posted so that people can access the cultural, historical, and geological information via the internet. Almost everyone has a "smart phone." A wireless internet connection should be set up in the area so that people can be informed while they are there.

Do not install a gate or park hours, as some enjoy the serenity of the twilight or dusk hours.

Pertaining to the ¼ mile back parking lot for Kee beach: Please fix the lot as it is a mud pit full of rock hazards. Pave it properly with marked parking stalls. All hikers should be required to park in this lot. As it is now, a huge number of the stalls near Kee beach are taken up by hikers/ Kalalau campers for days on end. Beach parking should be only for beach-goers, and overflow should be in the ¼ mile back parking lot only. All parking on the side of the road must be stopped.

To enforce the parking rules, a ranger should be posted at the ¼ mile back parking lot, directing cars to the appropriate area. Clear signs should also be posted, stating that hikers must park at this lot. A police officer should also be in the park issuing citations for illegal and dangerous parking. The revenue from the citations would likely ameliorate some of the expense for the ranger and police officer.

Please do NOT charge to go to the beach. This is not Oahu or the mainland and we like it that way.

Thank You  
Christopher A. Rivera  
Kauai Resident and Kee Beach User  
(808)896-1725

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Mr. Rivera,

Mahalo nui for your emailed comment dated August 1, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comments on preserving the natural state of the park and concerns with the originally proposed walkway and buildings. We also recognize your concern that the proposals would be costly and have a negative visual impact. The revised master plan includes significant changes with minimal physical improvements to preserve the natural beauty of the park as described in the attached **Master Plan Summary**. Most of the proposed buildings, including the visitor center and caretaker's cottage, have been removed in the revised master plan. The boardwalk has been modified in the revised master plan. The new pedestrian pathway follows along the first berm of the lot closest to the highway and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources. The original Educational and Cultural Center (ECC) has been eliminated from the master plan, and only shows a simple, traditional hale at the entrance. The Welcome Hale is envisioned as an "open pavilion without walls", which will provide educational information to the public. Please find the attached **Section 2.5.1.3** and **Section 2.5.1.4** from the Final EIS describing the Welcome Hale and Pedestrian Path.

In response to your comments regarding park hours and access during dusk hours, the proposed limits will be instituted only during peak hours of park use and will allow visitors to enter before and after without being counted against the visitor limit. Therefore, access will be allowed into the park and parking lot outside of those peak hours and will be adjusted as appropriate based on ongoing input from the community. Please reference the attached sections from the Final EIS on **Visitor Limits** for a description of these aspects within the revised master plan.

We acknowledge your concerns with installing a gate, however, the suggested gate design is proposed to allow pedestrian access and envisioned to have an open design that will allow views down towards Kē'e. However, State Parks will not encourage general public access via the highway due to the known rockfall hazards. We also acknowledge your

printed on recycled paper

suggestions for providing educational information online and improvements to the parking lots. The revised plan includes proposals to provide information to all visitors prior to entry as well as availability online, including notices and educational material as suggested in your comments. The new main parking lot improvement is intended to alleviate the strain on current parking demand, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of the proposed shuttle. As noted in your comments, access and parking enforcement will be managed at the proposed entry near the new main parking lot. Please review the sections on **Park Entry**, **Parking**, and **Visitor Orientation** from the Final EIS for more details.

We also acknowledge your suggestions to enforce parking with citations and directing cars to appropriate areas. The revised plan calls for adaptive management as well and includes designated exemptions from park entry fees. The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Currently, entry fees for all state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Similar fees could be instituted at Hā'ena State Park. However, State Parks will continue to work on the different options with the advisory committee and could include a variety of options as long as they do not violate the federal Land and Water Conservation Fund rules, which allow charging different fees for residents and nonresidents as long as they are comparable to current fee differences between the two. A description of parking enforcement improvements and adaptive management proposed is attached in **Sections 2.5.1.2** and **2.5.4.1** from the Final EIS.

We recognize your suggestion to require hikers to use the new main parking lot while beachgoers have access to the smaller lot at Ke'e Beach. Due to the rockfall hazard proximity along the existing road, the Ke'e Beach parking lot and restricted corridor will only be accessible to a limited group of users, such as lifeguards and ADA permitted users. A description of the **Rockfall Hazard** and **Limited Access Corridor** can be found in the attached sections from the Final EIS as well.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-04/EA-FEIS-Haena-State-Parks-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018-04/EA-FEIS-Haena-State-Parks-Master-Plan.pdf) on **Month XX, 2018**.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

Subj: End of the Road

Aloha,

I am writing this to ask for your further help @ doing something for Ke'e (end of the road). Us locals can't even go there anymore. Can't bring our friends and family visiting the island to the beautiful place that it is.

I don't even try to go up there anymore. I know I won't find a parking place; and then the beach is so crowded, it's very disappointing and frustrated.

I'm asking you all to please come up with a plan that can hopefully benefit locals, as well as some tourists.

I LOVE "end of the road". Can't wait to be able to go there & find a parking place...

Mahalo,  
Sharon Turnbull

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. Turnbull,

Mahalo nui for your comment dated August 1, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the Hā'ena State Park Master Plan for doing "something" to address the existing conditions. We recognize your concerns regarding the current parking and overcrowding issues at Hā'ena State Park, as well as the impact on access for local residents. The draft version of the master plan has been revised to reflect feedback received from the community. Please see the attached Master Plan Summary from the Final EIS for reference to review the revisions to the plan.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

Re: Ha'ena State Park  
Lauren A Tanaka to: Heather Huit

08/17/2015 09:21 AM

Thank you Mrs. Huit for your comments. It will be noted in the final EIS.

Although you live on Oahu, if you know of anyone who might be interested in hearing more about the master plan for the park, we are having a public meeting this coming Wednesday, August 19, 2015 from 6 to 8 p.m. at the Hanalei Elementary School Cafeteria.

Heather Huit Hi Lauren, I read with interest the proposal to lim... 08/14/2015 08:17:49 PM

From: Heather Huit <dashcapt@hawaii.rr.com>  
To: Lauren A Tanaka@hawaii.gov,  
Date: 08/14/2015 08:17 PM  
Subject: Ha'ena State Park

Hi Lauren,

I read with interest the proposal to limit parking at Ha'ena State Park.

My husband and I visited the park several years ago, for the first time in over 20 years (we are Oahu residents). I was horrified at the crowds, the mess, and worst of all, the degradation to the heavily used trail.

Even though we started hiking in the later afternoon, we still ran into many people coming back. I would be completely supportive of a limit to the people that can park there, though I wonder how the State would control it, and what a good number would be. Even 900 sounds like an awful lot. Not sure how much more the trail can take without needing complete reconstruction.

Which by the way, my husband and I are heavily involved in here on Oahu!

I hope my opinion helps!

Aloha, Heather Huit

SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HA'ENA, KAUAI, HAWAII

Aloha Ms. Huit,

Mahalo nui for your comment dated August 14, 2015 regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawaii, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns regarding the current parking, trail degradation and overcrowding issues at Ha'ena State Park. We appreciate your support for limiting the number of visitors accessing the park to address these concerns. We also acknowledge your concern for the condition of the hiking trail. While directly refurbishing the hiking trail is beyond the scope of the master plan for Ha'ena State Park, the proposed visitor limits are intended to mitigate the impact on the surrounding area. The proposed visitor limits will be adjusted based on an average number of visitors rather than a set limit per day. We also acknowledge your desire for a lower limit than the proposed number in the master plan. The revised master plan proposes the 900-person visitor limit as an initial number which can be adaptively managed and adjusted as appropriate, especially if there continues to be unwanted impacts at the park. If there continue to be issues, State Parks will work with the advisory committees on adjusting the number. Please find the attached sections from the Final EIS on [Visitor Limits](#).

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 2018.

Subject: Haena State Park plans

We are very supportive of the plan to limit parking at Kee and Haena and to limit the number of people accessing these areas. A charge to use these areas is totally acceptable. Would like to see reduced rates and consideration of residents/locals.

Mahalo!

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Mr. Jolly,

Mahalo nui for your emailed comment dated August 15, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the visitor limit and park entry fee aspects of the master plan. We recognize your concerns regarding the current parking and overcrowding issues at Hā'ena State Park. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The limits will also be instituted only during peak hours of park use and will allow visitors to enter before and after without being counted against the visitor limit. Therefore, access will be allowed into the park and parking lot outside those peak hours and will be adjusted as appropriate based on ongoing input from the community. Please reference the attached **Section 2.5.4.3** and **Section 2.5.4.1** from the Final EIS for more details.

We also acknowledge your support for charging access fees and your interest in reduced fee rates and special consideration for local residents. The new main parking lot improvements are intended to alleviate the strain on current parking demand. The revised plan includes designated exemptions from park entry fees as well, and the main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of the proposed shuttle. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Currently, entry fees for all state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Similar fees could be instituted at Hā'ena State Park, however, State Parks will continue to work on the different options with the advisory committee. The attached section from the Final EIS related to **Parking** provide more information on the revised master plan.

We agree with the proposal to limit the number of visitors to approx. 900 per day and to improve the parking area.  
We also agree with the proposed fees for park entry and/or parking with Hawaii residents being exempt.  
We do not agree with the proposed elevated board walk for entry.

Thank you,

**SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HA'ENA, KAUA'I, HAWAII**

Aloha Mr. and Mrs. Dolan,

Mahalo nui for your emailed comment dated August 18, 2015 regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawaii's Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the park entry fee and visitor limit aspects of the master plan. The revised master plan proposes the 900-person visitor limit as an initial number which can be adaptively managed and adjusted as appropriate, especially if there continues to be unwanted impacts at the park. If there continue to be issues, State Parks will work with the advisory committees on adjusting the number.

The revised master plan also calls for an adaptive management approach for proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The limits will also be instituted only during peak hours of park use and will allow visitors to enter before and after without being counted against the visitor limit. Therefore, access will be allowed into the park and parking lot outside those peak hours and will be adjusted as appropriate based on ongoing input from the community. Please reference the attached sections from the Final EIS on **Visitor Limits** and **Adaptive Management** for a description of these aspects within the revised master plan.

We recognize your concerns with local resident access and the originally proposed elevated boardwalk. The revised plan includes designated exemptions from park entry fees, and the main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Currently, entry fees for all state parks are established by Hawaii's Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawaii's residents are exempt from paying park entry fees if they can show a valid Hawaii's ID. Similar fees could be instituted at Ha'ena State Park. However, State Parks will continue to work on the different options with the advisory committee. Please review the section on **Parking** from the Final EIS for more details.

The boardwalk has been modified in the revised master plan. The new pedestrian pathway follows along the first berm of the lo'i closest to the highway and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources to preserve the natural beauty of the park, as described in the attached **Master Plan Summary**. Please find the attached **Section 2.5.1.4** from the Final EIS describing the modified Pedestrian Path.

Re: Haena State Park Draft EIS

As Residents, we are strongly opposed to the following:

- and ecologically important park! It should remain NATURAL. No artificial structures.
2. Kauai Residents should not be included in the Visitor's cap. Residents, (taxpayers), should be exempt from the cap. Therefore, reduce further your intended cap of 900 visitors to allow residents priority. Reduce visitor cap to 500 which is still excessive.
- We suggest the following:
1. Park entry fees for visitors & residents. However reduced fees for residents only. The fees to be used solely to reduce resources impacts and preserve the integrity & quality of the park.
2. Close the park periodically to allow it to REST & RECOVER from the trampling & over-use. (Mainland parks are often closed periodically to allow them to recover).
- Kauai has about 100,000 visitors per month, about 20,000 on Island all the time, plus 70,000 full time residents.
- You, DLNR, the Kauai Visitors Bureau, & the Tourism Authority, must work together to reduce the huge negative impacts occurring on this little rock that does not have the infrastructure to support so many visitors. This includes the Park. The quality of our lives has been profoundly and negatively affected with the onslaught of out-of-control tourism! We are dreadfully out-of-balance, and our environment is suffering the consequences.

The proposed visitor limits will also be instituted only during peak hours of park use and will allow visitors to enter before and after without being counted against the visitor limit. Therefore, access will be allowed into the park outside those peak hours and will be adjusted as appropriate based on ongoing input from the community. There will also be exemptions from the visitor limit total for permitted special user groups, such as cultural practitioners. Please see the attached Section 2.5.4.3 from the Final EIS on the revised visitor limit proposal.

We also acknowledge your suggestions for park entry fees with reduced fees for residents as well as suggested revenue generation to preserve resources within the park. While there is no distinction between residents and nonresidents in the visitor limits, the main parking lot will be separated into a fee-paying lot and non-fee-paying lot. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Currently, entry fees for all state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Similar fees could be instituted at Hä'ena State Park. However, State Parks will continue to work on the different options with the advisory committee. More information on the proposed fee structure for parking is attached in Section 2.5.1.3 from the Final EIS.

We also recognize your concern with the overall impact of tourism on Kaua'i and suggestions for coordination between State Parks and state tourism agencies. The planning process involved, and will continue to involve, a collaborative approach to support the development of the master plan by consulting various local community groups and individuals, including a thirty-two member Master Plan Advisory Committee (MPAC) consisting of Hä'ena kūpuna and 'ohana members, cultural practitioners and scientific experts, business representatives, State and County agencies, and other North Shore community members to provide recommendations on the physical plan and park management. One of the key management recommendations is to establish a permanent Cultural Advisory Group and Community Advisory Committee. These are described in Section 1.7 and Section 2.5.4.2 of the Final EIS outlining this collaborative approach.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-KA-EIS-Haena-State-Park-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018-KA-EIS-Haena-State-Park-Master-Plan.pdf) on , 2018.

SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÄ'ENA, KAUA'I, HAWAII

Aloha Mr. and Mrs. Dolan,

Mahalo nui for your emailed comment dated September 14, 2015 regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns with the Hä'ena State Park Master Plan from the perspective of local residents. The draft version of the master plan has been revised to reflect feedback received from the community and includes significant changes with minimal physical improvements to preserve the natural beauty of the park. Please see the Master Plan Summary from the Final EIS attached for reference with an overview of the revisions to the plan.

We also acknowledge your concern with creating "Disney Land" aspects within the park concerning the originally proposed elevated boardwalk the boardwalk has been modified in the revised master plan. The new pedestrian pathway follows along the first berm of the lo'i closest to the highway and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources. Please see the attached Section 2.5.1.4 and Figure 1 from the Final EIS detailing the modified pedestrian path.

We also recognize your suggestions to exclude Kaua'i residents from the visitor limit and periodic park closure to "rest and recover". The revised master plan proposes the 900-person visitor limit as an initial number which can be adaptively managed and adjusted as appropriate, especially if there continues to be unwanted impacts at the park. If there continue to be issues, State Parks will work with the advisory committee on adjusting the number. In response to your comments on "rest" for the park, the revised master plan calls for a soft limit approach for the proposed visitor limits, with averaged visitor counts to allow for adjustments for potential park closure days. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well.

**Subject:** Hanalei end of road, park and beach

Greetings,

Limiting the number of visitors goes against the heart of open access to our beaches. This is not a solution to the issue. The island is becoming a haven for multimillionaires, disastrous traffic conditions, and huge berms along the road that limit beach vistas, not to mention free access to our beaches.

I am opposed to building a walkway and pavilion, it would further erode the area and affect the significant natural and cultural resources with unnecessary structures.

Pave the large parking lot so cars may have a decent place to park, and restrict sides of the roadway as no parking. There was great letter to the editor about all this last week in the Garden Island Newspaper. Check it out.

Make the County Council fix our roads and traffic congestion, and tell them to stop permitting more condos, hotels and housing until the infrastructure to handle the increased traffic we have right now has been dealt with.

What we really need are electoral districts for County Council Membership. The idea that this island is too small for districts is ridiculous, I lived in a town of 20,000 in upstate NY and we had 6 districts that were well represented. Better yet, a County Manager, rather than a mayor, would go a long way toward dealing with issues more effectively than they have and are being dealt with currently.

Regards,

Roberta

Month XX, 2018 - DRAFT

Ms. Roberta Griffith  
P.O. Box 223104  
Princeville, HI 96722

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Ms. Griffith,

Mahalo nui for your emailed comment dated August 15, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns regarding limiting the amount of visitors to the park. Recreational aspects of the park will still be on going, as it is a factor for receiving State and Federal funding. However, the amount of visitors and park users must also be balanced and mindful of the capacity and strain upon the park's natural environment and resources. A main objective of the Master Plan is to balance outdoor recreational uses with the protection and preservation of the park's natural and cultural features to enrich the Hā'ena park experience for all. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. Please see the "Visitor Limits" attachment from Section 2.5.4.3 of the Final EIS that shows the verbatim changes from the Draft EIS.

We recognize your comments concerning walkway and pavilion construction, with potential erosion and cultural resource impact concerns. Only a few new structures are proposed, including a revised Welcome Hale that is envisioned as an open traditional Hawaiian hale and located near the improved main parking lot. A new pedestrian-only path that connects the main parking lot with Kē'e Beach through the lo'i is included in the plan. The new pedestrian path would follow along the first berm of the lo'i closest to the highway and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources, but will maintain a low profile just above the berm. Please see the revised Figure 1 Master Plan graphic and the "Master Plan Summary" attachment from Section 1.9.1 of the Final EIS, which show the verbatim changes from the Draft EIS for this section.

Mahalo for your suggestion regarding paving of the parking lot. The revised master plan calls for the current overflow parking area to serve as the main parking lot and be resurfaced with permeable paving.

We recognize your concerns regarding traffic congestion issues at the park. The Master Plan includes a combination of physical improvements and programmatic options that when applied in combination will have a positive impact on existing roadway conditions.

While the Division of State Parks does not have jurisdiction over County Council decisions, the park will continue to communicate with County agencies in order to coordinate potential traffic solutions for the area.

No you may not have my address. And the meeting doesnt do me or half of Kauai's residents any good as its too far to make it there in time after work - I'm guessing that's part of the plan to minimize opposition. How many years did it take to redo the bathrooms/shower there? Based on that debacle I'm guessing this proposal would probably run 5+ years to completion. Tell people to walk or hitch a ride, problem solved.

Cant afford it, dont want it, find something else to do that doesnt involve taxpayer money. Elevated boardwalk? Absurd. Every proposal from you clowns is a thinly veiled attempt to spend a lot of TAXPAYER money solving a problem that doesnt exist. State is broke, your pension system wont exist in 20 years which is only fair given the current crimes being conducted (paving roads that are perfectly fine while ignoring ones that are in genuine need of repair, employing family and friends doing nothing, "protecting" whales and other marine life that have stable populations). You master planners need to give it a rest, or better yet get laid off and live off your actual value to society, which is probably close to zero.

**SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÄ'ENA, KAUAI, HAWAII**

Aloha Mr. Andrew,

Mahalo nui for your emailed comment dated August 17 and August 18, 2015 regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comments regarding the cost of funding the Hä'ena State Park Master Plan. The timing of implementation of the proposed Master Plan is subject to CIP budget requests submitted by State Parks and approvals granted by the State Legislature. The Master Plan itself is an effort by State Parks to improve funding of coastal recreational planning and management. Completion of the plan and Chapter 343, HRS processing will enable State Parks to move forward with capital improvement projects to improve coastal recreation at the park.

We also recognize your concerns regarding an elevated boardwalk. The boardwalk has been modified in the revised master plan. The new pedestrian pathway follows along the first berm of the lo'i closest to the highway and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources. Please see the "Pedestrian Path" attachment from Section 2.5.1.4 of the Final EIS, and the revised Figure 1 Master Plan graphic, that show the verbatim changes from the Draft EIS.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-Haena-State-Park-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018--KA-Haena-State-Park-Master-Plan.pdf) on 8/20/2018.

**From:** Edward Dato <eddato@me.com>  
**Sent:** Thursday, September 03, 2015 1:24 PM  
**To:** Kimi Yuen  
**Subject:** Re: Haena Beach Park

Aloha, Ms. Yuen,

I decided to not try to find you after the meeting as you had more than enough to handle. First of all, congratulations on the professional way that you handled yourself during the meeting. As to be expected, there were a lot of heated opinions about what might happen at the end of the road. I suspect that a lot of people who are unfamiliar with the process that your organization has to follow, didn't understand that this was an EIS and not a clear directive to take specific action. In any event, I have been giving this matter a lot of thought. As a mediator, I believe that any outcome has the greatest chance of success if no one likes the outcome but everyone agrees they can live with it. Then people will adjust their lives and get on with living them.

I have some ideas about possible solutions and in the interest of brevity, I will number them below rather than write a narrative.

1. It seems like the problem of "too many people at any one time" trying to access the "end of the road" at the same time is the problem to solve. And the majority of the volume is from tourists, which is an important revenue stream for Kauai.
2. If there are two thousand people daily, then there must be 2,000 seats for people to sit in to get to the beach.
3. At 2 people per car that is 1,000 cars daily. Shuttles plus 100 parking places are not going to stop the stream of cars that cause wear and tear on the bridges and Kuhio highway, none of which was designed for this density of use. And then there is road and bridge rage, which we are experiencing more and more of it.
4. Fortunately, the road and bridges from the Hanalei bridge to the end of the road are protected on the national registry. Changing them is not an option, thank goodness.
5. As I live nearby on Alanihi Road and occasionally walk to the end of the road, almost 100% of the cars and people are tourists and hikers, permitted or not, who park there for the duration of their hike. Residents are not causing the volume.
6. I understand that you cannot preferentially treat residents as the land is a state park.
7. This problem has been encountered in other areas, both state and federal, and we might benefit from their operations.
8. Muir Woods, north of San Francisco, has a very small parking lot that is accessed by a winding road off of Highway 101, the main north-south corridor. There are electric signs up every weekend (we could have them operational on a daily basis) saying that the parking lot is full and to take the shuttle busses. Over time, people learn to not bother driving to Muir Woods although there is a small parking lot that is used mostly by the handicapped with appropriate handicap signage. By having a finite number of bus seats, that, by definition limits the number of bodies who can gain access to Muir Woods. It is easily scaled to meet variable demand. Alter the number of available shuttles. Also, take a look at the way Yosemite handles it. They have the same problems as we do.
9. In essence, run shuttle busses from Princeville to the drop off turnaround at Kee Beach. That is the way to get to the end of the road unless you want to walk or ride a bike. No motorized vehicles at the end of the road except authorized shuttles unless you have to provide handicap parking. Given the real problem is the number of tourists and hikers who want to go there, you can control the attendance by increasing or decreasing the number of shuttles that are run. Charge \$3 roundtrip for each shuttle seat, credit card only, and have an attendant at the loading station in Princeville. Mobile technology makes this easy. If the airlines can do it with

in flight purchases, so can we. That is a reasonable cost and will help offset the cost of operating shuttles. Parking and tipping at any valet restaurant parking is that amount or more. That small charge won't discourage anyone. There can be no more bodies on the shuttle than there are seats on the shuttle. And yes, sometimes you don't the shuttle you want at the exact time you want it. That is very typical of life in the real world. And there is a first and last shuttle start and stop time and a last shuttle going to Kee. That way you can ensure that you have enough seats to get people out. Miss the last shuttle, you walk.

11. Post a sign at the shuttle site that the trail is open or not. Many people drive to the end of the road only to be disappointed that the trail is closed. And some of them head up anyway. Control that safety risk and rescue exposure at the shuttle point in Princeville.

12. By controlling the number of shuttle seats you, by definition, control the number of visitors to the end of the road. You could consider allowing the local hotels (St. Regis and Westin) to run their own shuttles. I have seen Hanalei Colony resort shuttle people now and then. And all permitted hikers and campers must shuttle. That is their only option.

13. What about all of the road hazards caused by people parking along side of the road and walking in? Experience learned in San Francisco is useful. Each neighborhood has a multiyear parking zone designation that can only be purchased (at a very nominal cost) and issued to legal property owners in that neighborhood. No street parking is allowed in that area without a residential parking sticker. And San Francisco makes a lot of money from the +\$67 tickets that they issue. Helps pay the cost of enforcement and the city's bills. Maybe use 96714 zip code as the area. Install and enforce (current "no parking" is rarely enforced and often ignored) "no off road parking" without a residential sticker starting a Alahimi Road in Haena. If someone can find parking before Alamihi Road and wants to walk the approximate 4 miles round trip to the end of the road, more power to them. Limiting the number of cars will help maintain safety for walkers and residents which is one of your charters and interests.

14. I am not qualified regarding maintaining the environment to comment on whether the proposed additions and changes are environmentally sound and culturally sensitive. There are those who are on your committee.

Don't set up a system to make changes in the size of the parking lot based on some arguable usage figures. You will never get this problem fixed. Define the number of available shuttle seats that support the objective to be culturally and environmentally sensitive and as safe for all visitors. If you do this I believe that you will accomplish your stated goals

Mahalo for reading my ideas.

I own my home in Haena and like to go to the end of the road or HBP from time to time. How do intend to determine who is a local property owner and exempt from this restriction. The logistics of enforcing this proposal seem daunting. Do you have a gate? Police? In Hanalei so people don't waste their time driving to the end of the road after it is full? Where do people turn their cars around if the quota is exceeded?

While this seems on the surface to be an enforcement nightmare, I am hopeful you have details ready for the meeting.

Thank you.

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Mr. Dato,

Mahalo nui for your emailed comments dated August 17 and September 3, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

In regards to your email on August 17, we have the following responses. For your comment regarding identification of local residents, entry fees for state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Similar fees could be instituted at Hā'ena State Park; however, State Parks will continue to work on the different options with the advisory committee. A new vehicle gate is recommended to be installed at the park entry when the highway is transferred to State Parks. Only those with special access to Kē'ē, such as the lifeguards and rescue personnel, those with valid ADA parking placards or plates, park staff, the Hula Complex and other cultural practitioners, will be allowed to drive along the former highway as needed to reduce visitor exposure to the rockfall hazards. A vehicle turnaround is provided just past the park entry and provides separate accesses to and from the main parking lot, as well as the special access parking at Kē'ē, and a separate staging area that could be used for various park purposes. The turnaround is designed to include the shuttle stop and/or bus stop if/when such services become available and allow those dropping off visitors to pull over at the curb without blocking traffic. Please see the "Park Entry" attachment from Section 2.5.1.1 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

Mahalo for your complimentary comments in response to the public meeting held on August 19, 2015. We have addressed the remainder of your comments as you have numbered them in your letter:

1, 2, 3, & 13. We recognize your comments on managing the volume of visitors seeking access to Hā'ena State Park, the resulting impact on the road infrastructure, as well as your concern that the proposed main parking lot expansion and potential shuttle service will not be sufficient. The revised master plan proposes the 900-person visitor limit as an initial number which can be adaptively managed and adjusted as appropriate, especially if there continues to be unwanted impacts at the park. If there continue to be issues, State Parks will work with the advisory committees on adjusting the number. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. The limits will be instituted during peak hours of park use. The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of the proposed shuttle. Please see the "Visitor Limits" attachment from Section 2.5.4.3 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

The Master Plan includes a combination of physical improvements and programmatic options that when applied in combination will have a positive impact on the existing roadway conditions.

Vehicle access beyond the main parking area to Kē'e beach is proposed to be reduced from the currently unrestricted conditions to special access only (ADA, lifeguards, and cultural practitioners). Restricting general vehicular access from the main parking area to Kē'e Beach will effectively eliminate illegal parking along the highway's shoulder, reduce the wear on the historic roadway's macadam surface, and reduce the number of visitors traveling in a potential rockfall hazard area. Please see the "Roadways and Traffic" attachment from Section 4.3.1 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

4. The road and bridges from Hanalei bridge to the end of the road are not part of the scope of the master plan. However, the park will continue to discuss coordination efforts regarding roadways and traffic with the State Department of Transportation where applicable.

5, 6, 7, 8, 9, 12. We also acknowledge your comments regarding the amount of tourists and hikers using the park, and your recognition of the inability to provide preferential access to local residents. Entry fees for state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Similar fees could be instituted at Hā'ena State Park, however, State Parks will continue to work on the different options with the advisory committee. Other categories of fee exempt park users (such as registered volunteers) may be established at a later time.

We recognize your suggested examples for parking and shuttle service options. The new main parking lot improvement is intended to alleviate the strain on current parking demand along with facilities designed to support the recommended shuttle service proposed. The revised plan includes designated exemptions from park entry fees as well, and the main parking lot will be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of the proposed shuttle. The revised plan also proposes notification to be available online, including where potential ticketing is provided. As noted in your comments, access to Kē'e Beach will be restricted with exemptions for special users such as ADA permitted vehicles and the primary access for visitors is proposed for the new main parking lot.

We also acknowledge your comments suggesting shuttle service coordinated with resorts and annual parking zone passes. Parking enforcement and regulation is proposed to be managed from the park entry near the main parking lot. While we recognize your concern for a proposed flexibility in parking lot access and alternative focus on shuttle regulation, adaptive management has been proposed as a key management application to parking provisions in addition to a proposed shuttle service. The proposed third-party shuttle service has been analyzed as a part of the project's traffic impact assessment report, included in the EIS as Appendix F. The preferred scenario is to implement a third-party shuttle from the Princeville facility at the start of Phase I, minimizing the need for visitor parking in the parking lot in the park. Please see the "Parking" and "Shuttle Service" attachments from the Final EIS, which show the verbatim changes from the Draft EIS for these sections.

11. We recognize your comment regarding trail closures and safety risks at the park entry. As stated previously in the letter, a new vehicle gate is recommended to be installed at the park entry when the highway is transferred to State Parks. Only those with special access to Kē'e, such as the lifeguards and rescue personnel, those with valid ADA parking placards or plates, park staff, the Hula Complex and other cultural practitioners, will be allowed to drive along the former highway as needed to reduce visitor exposure to the rockfall hazards.

14. We recognize your comment regarding environmental and cultural sensitivity of the master plan. While there will continue to be some human impact on the environment at the park, the proposed Master Plan seeks to minimize the adverse impacts of that use by reducing the number of people who visit the park during peak visitor hours, reducing traffic and congestion along the highway, improving wastewater treatment and reducing potable water use, reducing solid waste and preventing pollution, reducing the quantity and improving the quality of surface runoff, and improving visitor education. In regards to the involvement of cultural sensitivity, one of the key management recommendations is to establish a permanent Cultural Advisory Group and Community Advisory Committee. These are described in Section 2.5.4.2 of the EIS and the verbatim description of these groups is included in the "Cultural and Community Advisory Group" attachment.

---

only allow cars with the last number or letter K on Mondays and so on ... for visitors.  
that way at least half instead an onslaught . also parking fifteen dollar a day .  
get a grip on gridlock doesn't cost a big deal.

thanks for listening

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Kauilady1@aol.com,

Mahalo nui for your emailed comment dated August 1, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the long delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns regarding parking and limitations on the number of visitors accessing the park, as well as potential parking fee rates. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking. Please see the "Adaptive Management", "Parking", and "Visitor Limits" attachments from the Final EIS which show the verbatim changes from the Draft EIS for these sections.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA-EIS\\_Library/2018--KA-EIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA-EIS_Library/2018--KA-EIS-Haena-State-Park-Master-Plan.pdf) on [Month XX, 2018](#).

Department of Land & Natural Resources  
**FROM:** Love R. Bernheim & Brittany E. Beers  
**SUBJECT:** Concerns regarding the Draft Environmental Impact State (DEIS) &  
Proposed Final Draft Ha'ena State Park Master Plan (MP)

It is apparent that extensive time, effort, and resources went into the creation of this plan, and for that we acknowledge all parties who have been involved over the years and extend our appreciation to those seeking to uphold, protect, and restore the cultural, historical, and ecological significance of Ke'e. Due to the massive size and scope of the MP, the deadline for public comment needs to be extended for a minimum of 60 days. Furthermore, negligence to include Appendix I (Background Research Report) in both the hardcopy of the MP purchased and the electronic version, contributes to the inability for a comprehensive review and comment. Concerns regarding park management, Land and Water Conservation Fund (LWCF) requirements, non-committal language, cost estimates, and the criteria and processes by which committees are established provides great potential for the implementation of a plan that is in direct opposition to what are very respectable goals and visions as laid out in Section 1.3. After extensive, but not exhaustive, review and examination of the DEIS and MP, the following is a list of specific concerns:

1. **Park Management**

"The MPAC [Master Plan Advisory Committee] is aware that they need to develop the capacity within the community to qualify in an open bid process as State Parks would release park management opportunities to the public pursuant to existing procurement requirements.... the management entity has to be financially solvent and able to prepare and execute a solid business plan (4.2)."

Submitting the management of Ha'ena State Park to an open-bid process creates the possibility for an outside management entity, potentially one not even registered or founded on Kaua'i or with little to no Ha'ena community involvement, to be placed in a position that allows and promotes the commodification of living cultural practices via tickets, recreational equipment rentals, food service operations/vendors, and a gift shop retailer.

**Suggestions/Questions:** Rather than subject management of Ha'ena State Park to an open-bid

process, have significant oversight and management occur through a partnership or lease agreement with the lineal descendants of Ha'ena. What are the existing procurement requirements?

## 2. Land and Water Conservation Fund

Creative solutions to circumvent LWCF requirements, such as volunteer and cultural practitioner exclusion in visitor caps, is problematic. The visitor industry could certainly promote "Volunteer Days" and bring vans full of "volunteer" visitors. Additionally, local community members are blended in ethnicity and cultural heritage, so defining who qualifies as a "cultural practitioner" is logistically unfeasible.

Furthermore, in regards to LWCF compliance, National Park Services (NPS) commented in correspondence with the Department of Land and Natural Resources (DLNR) that "...some changes to the park's use reflect contemporary sensitivities to cultural resources and the sensitive shoreline ecosystem..." (2.4.1.2)". This statement, however, is in direct contradiction to the MP's discussion of Community Character wherein it is "not recommending a change in the use of the Park... [and] is not anticipated to have any effect on the rural community character of the area nor impact the population characteristics (1.0)."...

**Suggestions/Questions:** Is the park's use changing or not changing? Is it accurate to claim that the rural community character of the area will remain unaffected? Many voices within the community have expressed opposition to a gate. With no gate, there will be no access limits; parking is, and will continue to be, self-limiting. Given that the Hula Complex is under Kaua'i County jurisdiction, it is unclear how the LWCF requirements impact this area, and if these same requirements apply to Wai a Kanaloa, Waiakapala'e, Lohi'au's house site, and Maniniholo given the County of Kaua'i received these parcels after John Allerton and Paul Rice filed for partition and dissolution of the Ha'ena Hui. There are also questions regarding the potential for the Pacific Tropical Botanical Garden (PTBG) to acquire County lands and specifics to the Allerton title condition and whether the condition was transferred to the County along with the title (4.1).

"The County was tasked with the maintenance and preservation of these sites for the general public. Disregard for this meant automatic transfer of the sites to the [PTBG].

Title to another parcel was given to Allerton with the condition that he maintains and preserves a five-foot wide path for public access to the heiau and hula site. Upon his death or conveyance of property, title would automatically transfer to the County (4.1)."

## 3. Non-Committal Language

"State Park acknowledges that Park access will be an ever-evolving operational issue and will *likely change* over time as new policies are implemented (1.9.1)."

"Initially, State Parks plans to assess an entry fee per person with Hawai'i residents exempt, to enter the park regardless of how they arrive at the park (4.3.5)."

"The following criteria and process are suggested as an appropriate way to select individuals who can serve effectively as cultural advisors to Ha'ena State Park but are *subject to change* (Appendix J)."

These phrases of "will likely change", "initially", and "subject to change" appear to subject the community to implicit approval of any and all future changes.

**Suggestions/Questions:** These statements speak to a larger issue within the document which uses loose language throughout and is lacking in an overall solid foundation, and thus, if several aspects of the plan will "likely change" or are "subject to change", the proposal becomes more of a work in progress than an actual plan. Moreover, should these changes be carried forth, how will these changes be communicated to the community? Are the implementation of these changes the responsibility of the committee members (whose selection process is "subject to change" as well)?

## 4. Cost Estimates

Including contingency fees and expenses for planning and design, the cost of this plan has been estimated at approximately \$10,000,000. Justifications for the implementation of this incredibly expensive plan include overcrowding, traffic congestion, rock fall hazards, and lack of visitor awareness and education.

## A. Overcrowding

Visitorship during off-season months is, at times, half of what the visitor count is during peak season (4.1.2). A 900 per day visitor limit will therefore only reduce visitor impact during the peak summer season. Rather than year-round visitor limits, a parking attendant can be employed during peak season to mitigate parking and traffic congestion.

## B. Traffic

As it stands, the nature of traffic is undeniably congested during peak season. This issue, however, is not exclusive to Ha'ena State Park. The island as a whole is experiencing a growing traffic concern that cannot and will not be solved at the end of the road.

Solutions for this traffic concern are outside the scope and duties of State Parks and to use the issue of traffic as grounds for State Parks funding is illegitimate. The MP will exasperate and subsequently burden neighboring communities as far as Princeville with the onus of overflow. There is an overwhelming consensus for a North Shore shuttle program to assist in the alleviation of traffic concerns.

## C. Rock Fall Hazard

Based on a preliminary analysis of other parks and Department of Transportation rock fall hazard studies nationwide, a 5% risk associated with rock fall is often considered acceptable and is frequently the *goal* of mitigation measures. The MP is aiming for a 0%

rock fall risk, which comes with a hefty \$557,000 price tag due to the suggestion that a 675' interpretive path be constructed (2.7 & 2.5.1.2).

The Rock Fall Hazard Assessment (Appendix B) indicates sections of the road currently in use as having Class A and Class B rock fall risks; in which case, implementation of the MP restricts this section of the road for "limited access only" (lifeguards, hula practitioners, family caretakers, and ADA vehicles 3.2.8) and will therefore still have traffic traversing this "risky" part of the road. It is to be noted that "cultural practitioner" is omitted from this section and is inconsistently integrated in the mentioning of those allowed on the limited access corridor. What then, makes it acceptable to allow these special access vehicles to travel along a rockfall hazard area and not other visitors? Signage indicating "Enter at Your Own Risk" or the implementation of "hold-harmless" liability waivers prior to park entry has the potential to eliminate litigious after-effects.

#### **D. Visitor Awareness/Education**

Cultural and ecological awareness is notably lacking amongst visitors that arrive to the island. Education prior to their arrival at Ke'e is preferred and this can be achieved through videos on planes, brochures at the airport, in hotels, and in the visitor destination area of Princeville. A 2,000sq. ft. \$1,000,000 Educational and Cultural Center (ECC) is beyond what is needed. A sustainably constructed traditional-style hale with interpretive signage is likely to be sufficient.

#### **5. Committees & Sub-Committees**

It is noted that although the formulation of a number of committees (MPAC, the Hui Maka'ainana O Makana, Cultural Advisory Group [CAG], and Selection Committee for CAG) was most likely an attempt by the State to account for cultural perspectives and maximize input, there is a high-rate of overlap between the MPAC, the Hui, and potentially the CAG. More so, the nomination and appointment of CAG members by the Selection Committee convolutes matters further, for who is it that establishes and selects the members for the Selection Committee? Lastly, the suggested criteria and process by which such individuals are selected is also "subject to change". Formulation of these committees is no guarantee that the State or County will heed all and/or any advice.

It seems pertinent to indicate that despite the establishment of these committees to potentially alleviate the burden of power, instill a system of checks and balances, and/or create a greater sense of involvement amongst the community, the State remains the ultimate governing power as they will "train CAG members on duties/responsibilities" (7.1.1) and determine "protocols for holding meetings, meeting schedules, level of commitment, and participation (7.1.1)." Provided the State's tumultuous history with the Kanaka Maoli, it would be wise of these committees to be discerning.

#### **SUMMARY**

Restoration of the land is undeniably needed and we do not stand in opposition to such, given said tasks are approved and executed by the lineal descendants of Ha'ena. With the time constraints provided, our comments do not fully address the positive aspects or possible solutions to the issues of this plan nor do they address the entirety of our concerns, but are more focused on areas of inconsistencies and contradictions, especially where these issues conflict with the implementation of the MP's stated goals and the overall way of life that sustains the community of Ha'ena.

We are particularly concerned with the negative ramifications that will result with the construction of a gate, the exorbitant project cost, the commodification of living cultural practices, development on conservation lands (interpretive path, ECC, and Caretaker's Cottage), and the rippling effect visitor limits will impose on neighboring reefs, beaches, and residential areas that are already functioning at over-capacity levels. It can be said that extension of the public comment period is necessary to allow the community to further examine this dauntingly large document and devise solutions that aspire to be consistent with the sustainable lifestyle practices perpetuated for over a thousand years. More so, it is essential that the restoration and preservation of Ke'e is carried out in such a manner that does not compromise the voice of the Kanaka Maoli.

Thank you for hearing our concerns.

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Ms. Bernheim and Ms. Beers,

Mahalo nui for your emailed letter dated September 6, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We appreciate your kind words regarding the effort that has gone into the plan. We recognize your comment regarding the deadline for public comment for the EIS. The public comment period was extended an additional 30 days until October 8, 2015. We apologize for the missing Background Research Report. It has been uploaded to the State Parks Hā'ena State Park website: <http://dlnr.hawaii.gov/dsp/parks/kaui/haena-state-park/>. The revised master plan has been greatly simplified and the full report is also available for download at this website. We have attached a summary of the updated master plan and Figure 1 showing the master plan graphic from the Final EIS. We recognize your concerns regarding the following issues and have organized our responses to match your letter.

**1. Park Management**

We understand your concerns regarding the open bid process and potential for commodification of the park. The third-party lease of the entire park was a potential option explored by the original Master Plan Advisory Committee (MPAC) for park management. State procurement laws regarding such lease agreements are governed by Chapters 102 and 103D, Hawai'i Revised Statutes (HRS). However, one of the key management recommendations of the master plan will be to establish a Cultural Advisory Group and Community Advisory Committee to advise State Parks as they move forward with implementation of the plan and ongoing management of the park regardless of the future management structure of the park. Lineal descendants would be included in these advisory groups and therefore able to advise State Parks in the ongoing management of the park. In addition, State Parks has entered into additional curatorship agreements with Hui Maka'ānana o Makana (the "Hui") to care for additional areas of the park including expanded lo'i restoration areas and the Allerton Caretaker's Cottage. The County of Kaua'i has also entered into an agreement with the Hui to maintain their property, which contains Ka Ulu A Paoa Heiau.

**2. Land and Water Conservation Fund (LWCF)**

To clarify, the volunteer recommendations and cultural practitioner exceptions would be for the daily visitor limits and not the Land and Water Conservation Fund (LWCF) requirements. State Parks must strictly abide by the LWCF requirements. The County of Kaua'i parcel is not impacted by the LWCF requirements and is owned and managed by the County and we understand that the County has entered into an agreement with the Hui to maintain the site. The surrounding State lands including the area of Wai a Kana'oa, Waiaikapala'e, and Lohi'au's house site are subject to the LWCF requirements. The proposed park uses have been reviewed by the NPS and were found to be in compliance with LWCF requirements as set forth by U.S. Code of Federal Regulations, Title 36, Part 59, Section 6(f) as well as with the original intent of park acquisition, which included the state's commitment to develop opportunities for "swimming, fishing, picnicking, camping, and other beach-oriented recreation opportunities" (LWCF Agreement, 1972). NPS commented in their letter dated June 6, 2014 (EIS Section 11.0) that the draft Master Plan for the park shows:

*"some changes to the Park's use [that] reflect contemporary sensitivities to cultural resources and the sensitive shoreline ecosystem...The recreation opportunities include a variety of ocean recreation, walking, picnicking, nature viewing, sight-seeing, and interpretive exhibits with the potential for camping and bicycling. These provide assurance that the 'public beach park' qualities that make this a valuable LWCF park are planned for the future."*

The NPS letter also describes the restoration of the agricultural terraces as a "community gardening area." In order to remain compliant with LWCF requirements, NPS states:

*"The Master Plan draft also shows that the park will encompass a significant community gardening area with the proposed restoration of the lo'i kalo (wetlands). Although such an area is unusual within a state park and more common in local parks, such areas are not out of compliance with LWCF requirements. Community gardens are allowed in LWCF-protected parks with the understanding that they are accessible to the general public in an equitable manner and are not intended for any private or commercial use...Maintaining such a practice with an interpretive/educational component is clearly consistent with several goals within the 2008 SCORP...It is advisable to include trails and interpretive opportunities to ensure all members of the public – including visitors from afar and anyone not engaged in the community garden activities – can still understand what is happening there, the cultural significance, and generally not feel excluded from this public place...any agricultural goods harvested within the community garden areas should be generally for park programs and personal use and not part of a formal commercial or for-profit farming organization."*

The Pedestrian Path which takes visitors safely through the lo'i and the proposed community work days in the lo'i will ensure consistency with LWCF requirements. The proposed gate at the highway is envisioned to be a low, simple swing gate with an open design to maintain visual connection to Kē'e and maintain the rural feel of the area.

### 3. Non-Committal Language

We appreciate your comment regarding the language and phrasing used in the report. The Hä'ena State Park Master Plan is a long-term planning document for the physical improvements proposed at the park. We recognize that most of the non-committal language you reference is related to the proposed management strategies and operations at the park. This was done to allow State Parks to make changes to management policies as needed based on feedback from the community and to protect natural and cultural resources should impacts arise. One of the key management policies recommended in the revised plan is adaptive management, which will give State Parks the flexibility to change policies that are not working for the community or allowing unwanted impacts. The plan recommends that State Parks inform the community far in advance of any policy changes and to utilize electronic media (social media, the Internet, and other information technologies and news/media outlets) to disseminate information about the park to the public.

### 4. Cost Estimates

We recognize your concern for the estimated cost of the project components. As noted above, the master plan has been revised including the removal of the Education and Cultural Center (ECC) and Caretaker's Cottage and the cost estimates have been updated based on the updated master plan components and current construction cost estimates. Please see our responses to each of your concerns below.

#### a. Overcrowding

Mahalo for your recommendation of employing a parking attendant rather than instituting the visitor limit. Please note that the employment of a parking attendant would actually cost more than implementing the visitor limit, which could be implemented without cost. However, please note that the initial limit of 900 people per day is now recommended as an average daily limit to be implemented only during peak hours. This limit can be adjusted over time based on community feedback. Your note of lower counts during off-peak seasons is appreciated and State Parks will take this under consideration.

#### b. Traffic

We appreciate your comment that the issue of traffic is an island-wide and regional traffic concern that may be outside of the scope of this master plan. The master plan supports the development of a North Shore shuttle to serve the greater region as well as the park and State Parks does not see traffic as a reason to justify the cost of the master plan. The reduction in the number of visitors to the park is proposed to reduce the amount of traffic generated by the park.

#### c. Rock Fall Hazard

We recognize your concerns regarding the Rock Fall Hazard Assessment and the allowance of other user groups to access areas using the portion of the road having higher rock fall hazard risks. The master plan recommends posting signs at the gate on the highway warning all users of the limited access road of the potential for rockfall hazards. It also recommends providing the main access route outside of the projected rockfall hazard to minimize risk to the general public and encourage a safer route to Kā'ē given the known potential for rockfall hazards.

#### d. Visitor Awareness/Education

As noted, the ECC has been removed from the updated master plan. Only a few new

structures are proposed, including a Welcome Hale as you recommend that is envisioned as an open traditional Hawaiian hale and located near the improved main parking lot. Interpretive and informational signage will be posted at the hale, and all visitors will be provided with park rules and information prior to entering the park. The orientation information could be made available on the State Parks website. This is described in Section 2.5.4.5 of the EIS and is included in the "Visitor Orientation" attachment.

### 5. Committees & Subcommittees

We recognize your concerns regarding State coordination with the committees and subcommittees listed in the EIS. One of the key management recommendations is to establish a permanent Cultural Advisory Group and Community Advisory Committee. These are described in Section 2.5.4.2 of the EIS and the updated description of these groups is included in the "Cultural and Community Advisory Groups" attachment.

We appreciate your summary statements and please note that many of the participants on the advisory committees and the currently reorganized HSPCAC include lineal descendants, long-time residents, and caretakers of this wahi pana including members of the Hui who know this place best. We understand your concern with the potential for impacts to affect other locales and this is why adaptive management and the involvement of a cultural advisory group and community advisory committee are key management strategies so State Parks can involve the community and kanaka maoli throughout implementation and make adjustments should there be unwanted impacts.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at: [http://oeqg2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqg2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 11/15/2018.

Hello Ms. Tanaka,  
My name is James Mehling, and I've been a Haena resident for 10 years. I'd just like to write that I am in full support of controlled entry, and a visitor cap (under a thousand seems reasonable? I don't know)  
I'm just not sure about an elevated boardwalk though. I understand the need for safety. But the whole idea is to preserve and protect? I hope to see a sketch of what's proposed at the meeting at Hanalei school. Thank you for bringing it out to the public!!  
No need to write back if you don't want to.

Aloha :-)

**SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HA'ENA, KAUAI, HAWAII**

Aloha Mr. Mehling,

Mahalo nui for your comment dated August 17, 2015 regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawaii, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the controlled entry and visitor limit aspects of the master plan. The revised master plan proposes the 900-person visitor limit as an initial number which can be adaptively managed and adjusted as appropriate, especially if there continues to be unwanted impacts at the park. If there continue to be issues, State Parks will work with the advisory committees on adjusting the number. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Please find the attached sections on **Visitor Limits** from the Final EIS with more details concerning these aspects of the plan.

We recognize your concerns with the originally proposed elevated boardwalk. The boardwalk has been modified in the revised master plan. The new pedestrian pathway follows along the first berm of the lo'i closest to the highway and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources. Please see the attached **Section 2.5.1.4** and **Figure 1** from the Final EIS detailing the new pedestrian path.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-08-18-KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-08-18-KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 08/18/2018.

ALOHA!!!

Thank you for your attention to this issue. We look forward to your solution, whatever it may be. It sure is a mess up there!

my only question is;

WHY ARENT DLNR AND THE KAUAI POLICE DEPARTMENT ENFORCING EXISTING PARKING RESTRICIONS AT THE PARK???

1. There are 'No Parking' signs all along the road and lines of rental cars blatantly ignoring them.
2. Talk about a handy revenue stream! I could've ticketed at least 100 rental cars in violation on my last failed attempt to visit the park. Disobey our laws and fund our municipality....I like it.

all the best. Thank you again.

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Mr. Morelock,

Mahalo nui for your comment dated September 17, 2015 the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the long delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the master plan. We recognize your concern over parking enforcement and also acknowledge your comments on revenue potential through enforcement with parking tickets. As an alternative to your suggested parking enforcement through citations, access is proposed to be managed through a park entry fee structure, and the main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot. As the State has more time to analyze user patterns, other options can be explored over time and State Parks will continue to work with the advisory committee on options, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Please see the attached Section 2.5.1.2 from the Final EIS related to parking.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

**To:** Lauren.A.Tanaka@hawaii.gov; Kimi Yuen  
**Subject:** Haena State Park management plan

Aloha,

I can not attend the meeting at the Hanalei Elementary School cafeteria this Wednesday.

I am writing about the proposed 900-person daily visitor cap part of the Haena State Park management plan. Is it only capping the number of folks that do not live on this island, or does the word "visitor" include everyone that visits Haena State Park?

If the term "visitor" includes folks that live on Kauai, then the folks who live here will not be able to go after work. The cap would unfairly benefit the tourists and be a detriment to the working folks as we'd never be able to get there before the 900-person was reached.

If the term "visitor" includes folks that live on Kauai and visit Haena State Park, I request that the person limit be made smaller and then allow folks that live here to go any time upon showing an ID.

Mahalo,  
Scott Weeks

**SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HA'ENA, KAUAI, HAWAII**

Aloha Mr. Weeks,

Mahalo nui for your emailed comment dated August 17, 2015 regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawaii's Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comment regarding potential visitor limits at the park. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The limits will also be instituted only during peak hours of park use and will allow visitors to enter before 7:30am and after 5:30pm without being counted against the visitor limit. Also, entry fees for state parks are established by Hawaii's Administrative Rules (HAR) 13-146-6, which states that Hawaii's residents are exempt from paying park entry fees if they can show a valid Hawaii ID. Please see the "Adaptive Management" and "Visitor Limits" attachments from the Final EIS which show the verbatim changes from the Draft EIS for these sections.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at <http://oeqc2.doh.hawaii.gov/EA-EIS-Library/2018-KA-FEIS-Haena-State-Park-Master-Plan.pdf> on 11/15/2018.

Subject: Hanalei State Park

As a long time visitor to Kauai, 2016 will be 15 years, we have seen this park slowly turn into mess. One thing that I'm sure you've looked at, is the trail hikers that show up at daylight and take all of the closest spots, and then leave them for 24hrs. or longer.

Having them shuttle down with special buses for them and their gear, would be mandatory, for anyone staying longer than 8 hrs. most beach goers average 3-5 hrs by our experience, and then leave. As a former employee of a local city park and rec.department, with low budgets and personnel shortages, I know how difficult it is to make any one group happy, but to me 30 to 50 trail hikers come in third place for parking, compared to 300 to 500 beach users. Are regular group loves to come every year, and visit your state, and the friends we have made over the years, and love that park, try to get there at least a couple times, and know first hand how hard it has gotten. Good luck in finding a solution.

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUAI, HAWAII

Aloha Mr. and Ms. DeVries,

Mahalo nui for your emailed comment dated August 17, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comments regarding parking concerns and availability at the park based on different types of park user groups. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of a proposed shuttle. Please see the "Adaptive Management" and "Visitor Limits" attachments from the Final EIS that show the verbatim changes from the Draft EIS.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at

**Attachments:** i am from the UK.docx

i am from the UK, I have visited the area many times over the past 10 years and i do agree that the parking has got worse and the number of people has increased, yes it is a wonderful place and that's why visitors to the island go there to relax and enjoy there vacation , visitors who are on short breaks could miss out seeing this wonderful place. i agree with the boardwalk idea and i think you should look at better parking areas, the end of the road does get congested because there is no-one to marshal the traffic , i also agree that some kind of entry fee would be okay but not too excessive,

Tom  
UK.

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUAI, HAWAII**

Aloha Mr. Tonks,

Mahalo nui for your emailed comment dated August 17, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comments regarding parking and increased park visitor concerns. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of the proposed shuttle. Please see the "Adaptive Management" and "Parking" attachments from the Final EIS which show the verbatim changes from the Draft EIS for these sections.

We recognize your comment referring to the previously proposed boardwalk. The boardwalk has been modified in the revised master plan. The new pedestrian pathway follows along the first berm of the lo'i closest to the highway and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources. Please see the "Pedestrian Path" attachment from Section 2.5.1.4 of the Final EIS which shows the verbatim changes from the Draft EIS for this section.

We also recognize your comment regarding the park's entry fee. Entry fees for state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person.

Aloha,

A brief back ground on myself.....

My father came to Kauai in 1937 as a Canadian Merchant Marine cadet. His love of the islands and the orient were instilled in me from an early age. My first trip to the islands was in 1970 and my first time on Kauai was in 1972. I have returned over fifteen times to Kauai since and will be on the island this September and again next June.

I don't own real estate nor a business I simply fell in love with this island before it was developed for how pristine and unspoiled it was.

Now, some forty plus years later the entire island has changed. This was inevitable and predictable but it seems that only now the people of Kauai are looking to change the way it is to something about the way it was. I wish you the greatest of good fortune in your endeavors to fix it but I simply don't see how you can come up with a win-win solution.

The world has become too connected so there really probably isn't an "undiscovered" paradise anymore on the planet.

So how do you monitor and control the influx of tourists and "locals?" Build a bigger port, airport, wider highways, more houses/condos/shopping centers.....where does it stop ?

I feel that I contributed to this as I was always so excited to share my experiences on Kauai with anyone who would listen and encouraged them to go visit...I wish I had kept my mouth shut!

Heena and the Na Pali or only symptomatic of the great issues facing Kauai. Monsanto on the west shore, some "people" messing with stream flows above Secret Falls and the upper Hanalei River. The reefs around the island are dying (dead?) You have the Oahu developer who wants to forever change Hanalei Ridge with mega homes. The new owners of those homes will become "locals" and then they too will complain about tourists etc. Coco Palms...finally the eye sore is getting torn down and it will rebuilt but all the debris has to get shipped off to Oahu. The expansion of the Princeville Center.

I have great misgivings about our trip next summer but it is a family reunion so I will, no doubt, be going but it will be my (sadly) last trip to Kauai.

I know thta you are focusing on the "end-of-the-road" and all I can say is "The best of luck" as I don't see where there is any way to control access out there as it is a public road and only the beach / coast / parking lot is part of the park. Maybe you could put a toll booth someplace out past Hanalei ?

Sad....so sad !

Month XX, 2018 - DRAFT

Ms. Anne Ponohu  
808-755-5806

SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÄ'ENA, KAUA'I, HAWAII

Aloha Ms. Ponohu,

Mahalo nui for your comment card from the community meeting held on August 19, 2015 regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comments regarding cultural preservation in the park master plan. The master plan recommends a Cultural Advisory Group (CAG) be established to advise State Parks on ongoing improvements, educational and interpretive materials, and cultural matters regarding the park. These are described in Section 2.5.4.2 of the EIS and the verbatim description of these groups is included in the "Cultural and Community Advisory Group" attachment.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 2018.

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. Wann,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the Hā'ena State Park Master Plan. We acknowledge your concern with the volume of cars and people accessing the park and the resulting impact on the Kālālau Trail and the ocean. These concerns have been reflected in the revised master plan and can be found in [Section 2.5.1.2](#) and [Section 2.5.4.3](#) of the Final EIS, which are attached for reference. The visitor limits will only be instituted over the peak visitor hours at the park. Therefore, access will be allowed into the park and parking lot outside those peak hours and will be adjusted as appropriate based on ongoing input from the community. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oese2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-06-01-EIS-Haena-State-Park-Master-Plan.pdf](http://oese2.doh.hawaii.gov/EA_EIS_Library/2018-06-01-EIS-Haena-State-Park-Master-Plan.pdf) on 06/01/2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

Ms. Denise Ham Young  
(no address)

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUAI, HAWAII

Aloha Ms. Ham Young,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We acknowledge your concerns with the Hā'ena State Park Master Plan Draft. There have been significant revisions to the master plan in the Final EIS. The draft version of the Master Plan has been revised to reflect feedback received from the community. Please see the attached [Master Plan Summary](#) from the Final EIS for reference to review the revisions to the plan.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018\\_KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018_KA-FEIS-Haena-State-Park-Master-Plan.pdf) on XX, 2018.

Hā'ena State Park Master Plan / Draft EIS Community Meeting / August 19, 2015

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.  
(If you would like a written response letter, please include your mailing address.)

Aloha,

- ① Limit parking and force shuttle rides that are paid rides. (\$50)
- ② Biking by permit only. \$15.00 day pass and a \$20.00 annual pass. Anyone can buy a day pass or annual pass but requiring a pass with help from the visitor industry will limit traffic and encourage use of shuttle. More locals will buy annual pass.
- ③ 50 open stalls that do not require permit and 50 stalls that require permit.
- ④ Need a master plan from princeville to Kēe or cars will just back up to Makua Beach and the Hā'ena beach park.
- ⑤ Walkers and Bikers should not be carted and get in free.

Month XX, 2018 - DRAFT

Mr. Elijah Frank  
P.O. Box 1462  
Hanalei, HI 96714

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Mr. Frank,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comments and suggestions regarding parking, parking fee structure and the proposed shuttle service. The new main parking lot improvements described in **Section 2.5.1.2** are intended to alleviate the strain on current parking demand and includes proposed park entry fees for access, which may incentivize use of the proposed shuttle service. We also recognize your suggestion for coordinating with the visitor industry to encourage shuttle service. The proposed facilities in the revised plan have been designed to support the potential shuttle service recommended.

In response to your suggestions on parking permits, day passes and designated exemption parking areas, the revised plan includes similar designated exemptions from park entry fees as well. The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of the proposed shuttle. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Currently, entry fees for all state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Similar fees could be instituted at Hā'ena State Park. However, State Parks will continue to work on the different options with the advisory committee and could include a variety of options as long as they do not violate the federal Land and Water Conservation Fund rules, which allow charging different fees for residents and nonresidents as long as they are comparable to current fee differences between the two. Please review the sections on **Parking** from the Final EIS for more details.

We also acknowledge your comments suggesting a master plan to extend to Princeville for managing traffic congestion. The County of Kauai is in the process of updating the general plan and regional development plans. While the suggestion is beyond the scope of the Hä'ena State Park Master Plan, the revised plan aligns with the corresponding aspects within the existing county plans. Please review the attached [Section 5.4.1](#) and [Section 5.4.2](#) from the Final EIS for more information on the County plans.

We recognize your concerns with the inclusion of pedestrian and bicyclists in the proposed visitor limits as well. The revised master plan proposes the 900-person visitor limit as an initial number which can be adaptively managed and adjusted as appropriate, especially if there continues to be unwanted impacts at the park. If there continue to be issues, State Parks will work with the advisory committees on adjusting the number. The limits will also be instituted only during peak hours of park use and will allow visitors to enter before and after without being counted against the visitor limit. Therefore, access will be allowed into the park and parking lot both before and after those hours and will be adjusted as appropriate based on ongoing input from the community. Please reference the attached sections from the Final EIS on [Visitor Limits](#) for a description of these aspects within the revised master plan.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018\\_KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018_KA-FEIS-Haena-State-Park-Master-Plan.pdf) on [Month XX, 2018](#).

**SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÄ'ENA, KAUA'I, HAWAII**

Aloha Ms. Blair,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We acknowledge your concerns with the Hä'ena State Park Master Plan and appreciate your recognition and concern for the existing conditions in the park. The draft version of the Master Plan has been revised to reflect feedback received from the community. Please see the attached **Master Plan Summary** from the Final EIS for reference to review the revisions to the plan.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-04/FEIS-Haena-State-Park-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018-04/FEIS-Haena-State-Park-Master-Plan.pdf) on 04/18/2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C

*Please share your comments on the Hā'ena State Park Master Plan Draft EIS.  
(If you would like a written response letter, please include your mailing address.)*

My basic reaction is one of acceptance to the plan. This is in large part because it is the clear desire of the Hawaiian community in the area. If the whole area ends up looking like Limahuli Gardens, the future is lucky. I think the "Volunteer" provision is really important to the vitality ~~and~~ of the project and the acceptance of the plan. The need for management is evident. The concern about shifting the impact to Nakuia is important.

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. Cowden,

Mahalo nui for your comment card from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the Hā'ena State Park Master Plan. We appreciate your support of volunteer efforts and organizations to help improve and maintain the park and its facilities. We appreciate your comments regarding the need for management and understand your concern about potentially shifting the impact to Makua. One of the key management recommendations is to employ adaptive management particularly with regards to visitor limits, parking, and access policies. If impacts to Makua and other areas arise, State Parks can adjust and change their policies to help reduce those impacts.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018\\_KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018_KA-FEIS-Haena-State-Park-Master-Plan.pdf) on , 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

**Subject:** Concerns on the proposed final draft Haena State Park Management Plan

September 5, 2015  
To: PBR, Kimi Yuen, Lauren Tanaka  
From: Felicia Cowden, Kilauea, Kauai  
Re: Concerns on the proposed final draft Haena State Park Management Plan

**Please extend the deadline for comments and feedback by at least 60 days.** The plan and the appendices are inches thick and hard to obtain. Providing less than one month for public commentary is unfair and allows for very important challenges to go unnoticed. The community presentation by the PBR consulting team for the Haena State Park Management Plan on 8/19/15 at Hanalei Elementary School outlined a warm vision that had many elements that were pleasing. However, a surface examination of the actual documents lays out the potential and likelihood for a very different outcome. My concern is that Kauai and the Haena community might be saddled with a park that is the exact opposite of what they are expecting as a cultural preservation area. This natural and cultural resource, which is a key poster image of Hawaii for the tourism industry, could be harnessed in the spirit of the defeated Public Land Development Corporation's goal to use conservation land to "exploit for revenue" for the general benefit of the State of Hawaii.

**Strengths of the proposal:**

- The Ke'e Beach area of Haena at the trailhead of the Na Pali Coast is overwhelmed with cars and impacts. There is value in the effort to lower the carrying capacity and particularly the cars that congest the narrow road way.
- The plan allows for the possibility of stewardship by the lineal descendants of the Hawaiian (Kanaka ma'oli) people to care for the land in a manner which is authentic to the continuance of traditional Hawaiian cultural practices and honors the historical significance of the wahipana that define the area.
- There is beauty in the concept of having the whole area from up in Limahuli valley out to the he'au and surrounding area have the authentic landscaping and application of traditional Hawaiian cultural use. This park plan is an opportunity to preempt possible future development of the area that would simply be something like a state camping ground and parking lot which would level the historical significance, as had been suggested in the past. It may reverse the overuse of the area that is currently happening.

**Concerns:**

- Item 4.2 Park Management states the curator agreement with the Hul (o Maka ainana o Makana) has been successful, but they must develop the capacity to qualify in the public open bid process pursuant to existing procurement requirements. The management entity must be financially solvent and able to prepare and execute a solid business plan. The best elements of this plan and partnership are consistently outlined with the words "MAY BE", which experience has shown to our Hawaii community does not mean much. Under the best of circumstances, the Hul O Maka ainana O Makana cannot demonstrate a history of managing a \$10,000,000 budget. Perhaps the National Tropical Botanical Gardens could demonstrate such capacity where Limahuli Gardens can effectively wrap around as a park. This contract could easily go to a provider that is not from this area. OUR beach might then become something like the living history museum at Captain Cook area of Hawaii Island or the Kilauea Point Lighthouse area which is closed off to the community and available essentially to the visitor industry during limited hours. The visitor might find they are paying more than \$50 per carload to enjoy the Ke'e area. The gated environment might feel like an exploited area with food service and beach rentals with merely a genuflection to the culture in a landscape maintained by people of another area working to present a Hawaiian cultural theme.
- The plan provides potential for too much development in the area with a solid structure visitor center, concession and gates. The impact is too high in changing the character of the area as well as the cost of the development. The higher the cost of operation, the greater the requirement for revenue generation on an annual basis.
- The limiting of capacity for this area will force the overflow onto the beaches and bathrooms in close proximity such as Makua, Lualaba and into Hanalei, all of which are also operating in over-capacity in peak seasons. The HSPMP should not be finalized before the Kauai Transportation Plan and the Kauai General Plan. Integration with the other plans is critical.
- Shutting the residents out of the park in favor of the visitors. There is value in having a subset of cultural volunteers that welcome in an uncounted capacity, however that can be exploited. Vacation properties can create volunteer programs that offer a morning cultural experience of participation followed by a "cool-off in the lagoon" that can circumvent the number counts in peak season. Who guards the gate? Who determines who is a cultural practitioner? Is it a bloodline element? Are people carded for being light-skinned with heavier discernment than dark-skin? Do people have to carry cards that say they are more important than the next? etc.
- It should be guaranteed that a walk-through gate is always open. People will be coming off the trail. Access to the beach is supposed to be a public right. It does not take much for the government to declare they have changed the rules and the gate is closed. In Kilauea, they have closed off the crater and the lighthouse point. There is an effort to close the access to the beach

outside of their federal hours of operation. Mission-creep is standard in the control of the land. My fear is a best-case scenario would be the area would be one big NTBG park, worst case Kilauea Point. Limahuli Garden is great and controlled; limited and available for free a few days a month. The valley was not really ever open to everyone whereas we all feel able to be at Ke'e, at least in this lifetime.

**This is not the limit of my concerns** but a reflection of the most striking elements that I have seen in the glancing through of an immense document with referenced appendices that I have been unsuccessful at locating in this short window of time for public review.

#### Suggestions:

- Define a co-stewardship agreement with specific entities from the Haena area and not place the management out to public bid; suggested would be a collaborative partnership between the NTBG Limahuli Gardens team and the Hui O Maka'ana O Makana but one which can expand to emerging efforts that demonstrate criteria to help in alignment with the area vision such as a halau. I include Limahuli Gardens in my suggestion because they have demonstrated the financial capacity to manage this level of cultural restoration with integrity.
- Place reflector sticks along the existing roadway that simply do not allow cars to park in the no-parking areas within the park. Still allow the roadway to be used. The 5% falling rock designation is a questionable limitation based on other park areas in the US.
- Improve the current grass, overflow parking to be level and safe with a gravel or semi-permeable surface. The turn-around roadway access can be created to emphasize this parking area to be the primary choice. Parking to occur only in the grass/gravel parking lot and limit the front lot near the life guard to handicap access and other specified parking such as volume vans, cultural practitioners and encouraged local users, particularly in peak season. Half of the parking lot would be set aside for paid permitted parking. A park staff person would manage this area. Paid daily permits are available on-line in a manner associated with an individual party name to prohibit vacation properties from reserving a block of spaces on a regular basis. Residents who have a planned commitment to be at Ke'e would be wise to pay for a permitted space. The parking permit money goes to the State and the fee amount is determined by the state. Perhaps all non-resident vehicles pay a parking fee whether reserved or not. Concierges at visitor locations can assist this process with their individual guests.
- Put a web-cam on the parking areas, so residents as well as visitor service providers can make responsible choices about driving out to the area. A phone app could be utilized to show if parking is full. Allowing people to know the area is full before attempting to come to the area will help alleviate frustrated overflow into the surrounding areas.
- Work with the visitor industry state-wide to invest in quality short videos that educate visitors on the conservation nature of sacred spaces and help them to understand the necessity of utilizing group transportation, etc. and play the film on the planes. Make a specific video for Ke'e and Haena State Park that comes up high on the search engines that informs visitors of the limited capacity for parking at the end of the road. This film should be placed on the state website and be of a quality that it is on the visitor channel, Hoike and circulated in other ways to the public.
- A traditional hale similar to what is at Limahuli Gardens is built instead of a solid visitor center at the grass or grass-crete parking lot, as well as another bathroom comfort station in the area. Interpretive signage and information is in this area.
- No need for a fence or a gate; the parking would be self-limiting.
- No concession area to add a commercial nature to the park.
- No caretaker cottage that adds cost to the management of the park.
- The cultural management team could determine if they want a boardwalk or path along the embankment of the lot they maintain.
- The cultural management team that is the co-steward of the park with the State can determine a fundraising element for the area. That may come in the form of Hawaii State Tourism Authority Grants, Natural Resources Preservation Maintenance Stewardship grants, planks in the boardwalk with an engraved name, enlisting donations from the wealth of the homeowners of the area or other benefactors, hotel associations, charitable dinners, etc. This private charitable fundraising efforts would be able to utilize the monies solely for the use in the park rather than having the monies go to a general fund of the state coffers. It is the responsibility of the management team to utilize the funds for restoring the cultural elements of the park with their own staff and volunteers. NTBG has demonstrated success in this capacity that can be mentored to other curatorship partners. Group transportation is key. It is too early to give up on the North Shore Shuttle. The importance of a larger transportation plan needs to be emphasized for collaboration with this Haena State Park Master Plan when the area is so heavily utilized by the Hawaii visitor industry as an image to draw people to the state.
- Finalization of regional or specific plans such as this and the Black Pot Park plan in Hanalei will create unintended impacts on other areas of the island, especially when there are no limits on the number of rental cars. We have three proposed hotel sites designated on the east corridor to go under development in the next ten years without corresponding infrastructure improvements. When we protect the areas from over-parking in the most highly advertised areas for the visitor industry we push the visitor overflow and frustration into other areas. A visitor, like any person, gets grumpy and poorly behaved when they feel exploited or disrespected. We need to cultivate happy visitors who continue as welcome guests. When they know in advance they will be coming to these areas in the simplicity of a shuttle bus, they will welcome the opportunity with grace rather than grumbles.

**The assurance that it is the descendants of the Hawaiian Haena community that are given cultural management of the area with the intention to share it with others is central to my support of this plan. Entry to the Na Pali Coast should not be exploited as a commodity for revenue.**

Ms. Felicia Cowden  
SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL  
IMPACT STATEMENT (EIS), HĀ'ENA, KAUA'I, HAWAII  
Month XX, 2018  
Page 2

- Mahalo for your comment regarding too much development and gates and the concern for having to generate more income to maintain operations. Please note there were no concessions proposed in the plan. Also, the plan has been revised to delete the Education and Cultural Center as well as the Caretaker's Cottage and now recommends a much simpler Welcome Hale at the entrance with restrooms for men and women. Please see the attached **Master Plan Summary and Figure 1** which shows the revised master plan graphic, from the Final EIS. The revised master plan includes significant changes and minimal physical improvements to preserve the natural beauty of the park. The gate at the highway is also envisioned to be a simple swing gate that is low with an open design to maintain views towards Kē'ē.
- We acknowledge your concerns that the potential limitations on the number of visitors could possibly impact neighboring communities and beaches. One of the key management recommendations is to adopt adaptive management to allow for changes in order to make improvements on management policies. Should impacts to Makua and other areas along the North Shore occur, State Parks can adjust visitor limits, parking, and access policies to see if they help reduce those impacts. The Kaua'i General Plan was recently adopted in March and State Parks continues to work with the County on potential North Shore transportation solutions as most recognize the traffic is a regional issue and not due to any one use in isolation.
- We recognize your comments on preferential access for tourists over local residents and the potential for volunteer programs to be exploited. However, volunteers are not included in the proposed visitor limits and so would not exclude anyone whether tourist or resident from entering the park. We also acknowledge your questions regarding determination of exempted cultural practitioners and how access at the gate entry will be managed. State Parks cannot prohibit protected cultural practitioners from accessing the parks, which is why they are exempted from the proposed visitor limits. However, revisions to the way the visitor limits are proposed to be managed include applying the visitor limits only to peak hours of park use and averaging the counts over longer periods so the limit is not a hard limit of 900 visitors per day. Please see the revised text from Section 2.5.4.3 of the EIS in the **Visitor Limits** attachment describing the changes in more detail.
- We understand your concerns and fear of not being able to access Kē'ē. As noted above, the visitor limits are now proposed to take effect only during peak park hours of use to help manage the impacts of having hundreds of people at the park at once. The park is proposed to remain open without visitor limits in the early morning and late afternoon hours. People will be allowed to exit the park without limit.

Mahalo nui for your suggestions. We offer the following responses:

- As noted above, State Parks has expanded curatorship agreements with the Hui and the County has also entered into a similar agreement to help maintain and manage their parcel, which contains the heiau.
- The plan recommends closing the highway to general visitor traffic due to the rockfall hazard and will post warning signs at the gate to advise anyone who chooses to traverse that section of the highway of the potential risks. Rocks have fallen and the plan recommends providing the alternative route outside of the modeled rockfall hazard areas for the general public and anyone who prefers to avoid those hazards.

Ms. Felicia Cowden  
4191 Kilauea Road  
Kilauea, HI 96754

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Ms. Cowden,

Mahalo nui for your emailed comments dated September 6, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). As noted in our other response to your comment card received at the August 19, 2015 meeting, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We acknowledge your concern with the public comment period and request for extended time, as well as your overall concern that the implementation of the master plan may not match the expectation to preserve the cultural resources in the park. The public comment period was extended an additional thirty days until October 8, 2015 and all comments received up until November 4, 2015 were taken into consideration and have been incorporated into the Final EIS.

Mahalo for your comments on the strengths of the master plan and support for the aspects of the plan regarding visitor limits and the removal of cars that congest the narrow highway, provisions to support traditional Hawaiian land stewardship, preservation of authentic landscaping, and incorporation of cultural uses. We also appreciate your support for mitigating overuse of the park through restoration of the park from Limahuli Stream to the heiau.

We offer the following responses to your bulleted concerns:

- We recognize your concern that the public open bidding process may award management of the park to an outside entity, and potentially result in unintended development, fees, commercialization, commodification, exploitation, and closure of the park. Please note that the third-party lease option was just one management alternative suggested by the original Master Plan Advisory Committee during the development of the master plan. Since then, State Parks has expanded its curatorship agreement with Hui Maka'ānana O Makana (the "Hui") to restore more areas of the lo'i as well as the Allerton Caretaker's Cottage. They also recently resurfaced the main parking lot although unfortunately, that work was lost in the recent heavy rainfall events. The County of Kauai also similarly entered into an agreement with the Hui to maintain their property which contains Ka Ulu A Paoh Heiau and Kē Ahu A Laka.

- Mahalo for your recommendations on parking management. The main parking lot is proposed to be paved with permeable materials and the special access parking lot at Kē'e will accommodate cultural practitioners and ADA vehicles. State Parks appreciates your recommendations on paid permitted parking, proposed fees, staffing, and concierge service.
- Mahalo also for your recommendation to put a webcam up at the park so that real-time parking availability can be checked by potential visitors. This is a good idea, which could also help with security issues. However, reliable Internet and cellular network access is required to transmit the videos so State Parks will revisit this once established. Real-time information distribution via electronic means, such as text, email, and the Internet, however, are recommendations made in the master plan to help keep the public up-to-date on park access and safety issues.
- State Parks appreciates the recommendations to work with the visitor industry on informational videos and transportation options to help inform tourists. These are all very good ideas.
- The Education and Cultural Center has been removed from the master plan and a simple Welcome Hale with interpretive displays and additional restrooms have been placed at the entry as you recommend. Please see the attached revised Master Plan Summary and Figure 1.
- Mahalo for your recommendation that a gate is not needed. The gate is proposed to limit unauthorized parking, to mitigate the rockfall hazard along that road section, and help deter the late-night parties and activities that have damaged the park. As noted, the gate is envisioned to have an open design and the park will be open for early morning and late afternoon and evening use.
- No concession areas are or were proposed for the park.
- The Caretaker's Cottage has been removed from the plan.
- Members of the Hui were the ones who recommended the path be moved to the first berm of the lo'i so that the main visitor path would be out of the modeled rockfall hazard area.
- Mahalo nui for your recommendations for the various fundraising efforts that could be entertained by the advisory groups. This can be taken into consideration at a future time as desired by the groups.
- The proposed plan and State Parks support all shuttle options to provide access to and from the park. State Parks has been participating in discussions with the County about the North Shore shuttle and is hopeful something can be done.
- Mahalo for sharing your concerns about other area developments. While they are outside of the control of State Parks, we appreciate your concern for impacts to visitors and the community.
- One of the other key recommendations is to establish a Cultural Advisory Group for the park, which will include cultural experts as well as representatives from the Hā'ena families and those who have worked and cared for the land within the park boundaries as described in Section 2.5.4.2 of the Draft EIS. We appreciate your support for their involvement in future management of the park and understand your concern for potential commodification of the park.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available

on the Office of Environmental Quality Control website at  
<http://oeq2.doh.hawaii.gov/EA-EIS-Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf> on 10/10/2018.

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.  
(If you would like a written response letter, please include your mailing address.)

We do not support this plan. I know good intentions were there but limiting local access is not helping the problem stand from the amount of people coming to Kauai. This is the end of the problem - start at the beginning. Where will all the excess go? Hanalei is already over run.

It was a good intentioned idea but with part is not supported by the North Shore community. If somehow just that could be limited it would be better supported. EIS should have more time... not 2 weeks.

SUBJECT: COMMENTS ON THE HÅ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÅ'ENA, KAUA'I, HAWAII

Aloha H. Anakalia,

Mahalo nui for your comment card from the community meeting on August 19, 2015 regarding the Hå'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hå'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comment regarding potentially limiting the number of visitors to the park. The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of the proposed shuttle. Entry fees for state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, which states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Other categories of fee exempt park users (such as registered volunteers) may be established at a later time. Please see the "Visitor Limits" attachment from Section 2.5.4.3 of the Final EIS which shows the verbatim changes from the Draft EIS for this section.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018\\_HA-EIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018_HA-EIS-Haena-State-Park-Master-Plan.pdf) on Month XX, 2018.

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.

(If you would like a written response letter, please include your mailing address.)

Absolutley no gates, ~~no~~ more bridges!

Absolutley nothing to keep the local people out. We don't want nothing of yours.

JUST LOCK THE  
WHITE PEOPLE

OUT!

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Mr. Oliver,

Mahalo nui for your comment card from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comment regarding gates and bridges in the master plan. The revised master plan has less proposed development than previously designed in the draft EIS. Only a few new structures are proposed, including a Welcome Hale that is envisioned as an open traditional Hawaiian hale and located near the improved main parking lot. Please see the revised Figure 1 Master Plan graphic and the "Master Plan Summary" attachment from Section 1.9.1 of the Final EIS, which show the verbatim changes from the Draft EIS for this section.

We also recognize your comment regarding limiting visitor access to the park. The park is a part of the State of Hawai'i Department of Land and Natural Resources, Parks Division. As an agency of the State of Hawai'i, the park will not discriminate or violate civil rights. State Parks will continue to work on the different options with the advisory committee and could include a variety of options as long as they do not violate the federal Land and Water Conservation Fund rules, which allow charging different fees for residents and nonresidents as long as they are comparable to current fee differences between the two.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 11/15/2018.

- ① I like the integration of:
- natural hazard avoidance, reduced threats by locating boardwalk outside of rock fall area
  - cultural practices
  - preservation of important historic & cultural sites
  - encouraging revitalization of local sites
  - outdoor recreation - advisory committee
  - education
- ② Scaled-down outdoor recreation impacts and footprint (hopefully)

- ③ Defined the limits of acceptable change (do not use the term "carrying capacity")

**SUBJECT: COMMENTS ON THE HÄENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS), HÄ'ENA, KAUA'I, HAWAII**

Aloha J. Souza,

Mahalo nui for your comment card from the community meeting held on August 19, 2015 regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support for the Hä'ena State Park Master Plan. We appreciate your support of the master plan's natural hazard mitigation, cultural practices, cultural and historic preservation, outdoor recreation and education, advisory committee, and reduced mitigation and impacts.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018\\_KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018_KA-FEIS-Haena-State-Park-Master-Plan.pdf) on , 2018.

Mr. Jacob Kelii Hoomalu Aiona  
SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL  
IMPACT STATEMENT (EIS), HĀ'ENA, KAUA'I, HAWAII  
Month XX, 2018  
Page 2

We acknowledge your comments on restoring the natural features of the park and concerns with the originally proposed "permanent" buildings and structures. The revised master plan includes significant changes and minimal physical improvements to preserve the natural beauty of the park, as described in the attached **Master Plan Summary** from the Final EIS. Most of the proposed buildings, including the visitor center, and caretaker's cottage, have been removed in the revised master plan. In response to your comments regarding restoration of "disturbed" areas, the revised master plan includes many aspects for restoring and maintaining the natural environment within the park.

We also recognize your comments on limiting federal involvement. The planning process involved a collaborative approach to support the government agencies involved in developing the master plan by consulting various local community groups and individuals, including a thirty-two member Master Plan Advisory Committee (MPAC) consisting of Hā'ena Kūpuna and 'ohana members, cultural practitioners and scientific experts, business representatives, State and County agencies, and other North Shore community members to provide recommendations on the physical plan and park management. Please see the attached **Section 1.7** from the Final EIS describing the **Agency and Community Group Engagement**.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on **Month XX, 2018**.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Mr. Aiona,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns regarding local resident access, potential limitations on the number of visitors and the originally proposed structures in the Draft EIS. We acknowledge your suggestion for unlimited access for locals and a 500 person limit for tourists. While the proposed visitor limits do not distinguish between residents and nonresidents, the revised master plan calls for an adaptive management approach for the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. However, there will be exemptions from the visitor limit total for special user groups from the community. The limits will also be instituted only during peak hours of park use and will allow visitors to enter before and after without being counted against the visitor limit. Therefore, access will be allowed into the park and parking lot outside those peak hours and will be adjusted as appropriate based on ongoing input from the community. Please reference the attached sections from the Final EIS on **Visitor Limits** and **Adaptive Management**.

As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Currently, entry fees for all state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Similar fees could be instituted at Hā'ena State Park. However, State Parks will continue to work on the different options with the advisory committee and could include a variety of options as long as they do not violate the federal Land and Water Conservation Fund rules, which allow charging different fees for residents and nonresidents as long as they are comparable to current fee differences between the two.

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. Ellent,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns regarding access to the beach during the day and potential limitations. The revised master plan calls for proposed visitor limits to be instituted only during peak hours of park use and will allow visitors to enter before and after without being counted against the visitor limit. Therefore, access will be allowed into the park outside those peak hours and will be adjusted as appropriate based on ongoing input from the community. Your comment regarding fishing at night is also not expected to be affected by the revised visitor limits since peak hours are unlikely to extend into night hours. State Parks will continue to work on different options with the advisory committee regarding proposed exemptions for special user groups during the day as well. Please reference the attached sections from the Final EIS on [Visitor Limits](#).

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Mr. Quinn,

Mahalo nui for your comment card from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments, numbered per your letter:

1. & 2. We recognize your concerns regarding the number of visitors to the park. The revised master plan proposes the 900-person visitor limit as an initial number which can be adaptively managed and adjusted as appropriate, especially if there continues to be unwanted impacts at the park. If there continue to be issues, State Parks will work with the advisory committees on adjusting the number. Currently, entry fees for all state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Similar fees could be instituted at Hā'ena State Park. However, State Parks will continue to work on the different options with the advisory committee and could include a variety of options as long as they do not violate the federal Land and Water Conservation Fund rules, which allow charging different fees for residents and nonresidents as long as they are comparable to current fee differences between the two.

3. We recognize your comment regarding consultation with local community groups and government. One of the key management recommendations is to establish a permanent Cultural Advisory Group and Community Advisory Committee. These are described in Section 2.5.4.2 of the EIS and the verbatim description of these groups is included in the "Cultural and Community Advisory Groups" attachment.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://osqe2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-HEIS-Haena-State-Park-Master-Plan.pdf](http://osqe2.doh.hawaii.gov/EA_EIS_Library/2018--KA-HEIS-Haena-State-Park-Master-Plan.pdf) on 2018

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.

(If you would like a written response letter, please include your mailing address.)

I am interested in Volentenna  
For the most part I like the plan

DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. Bonaparte,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the Hā'ena State Park Master Plan. We also appreciate your interest in volunteering as well. The draft version of the Master Plan has been revised to reflect feedback received from the community. Please see the attached Master Plan Summary from the Final EIS for reference to review the revisions to the plan.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018\\_KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018_KA-FEIS-Haena-State-Park-Master-Plan.pdf) on , 2018.

Aloha,

Mr. Kaisen Carrillo  
(no address)  
SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Mr. Carrillo,

Mahalo nui for your comment card from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comment regarding your family's history in Hanalei and your opposition to the previous master plan. The revised master plan has taken community outreach and revised different aspects of the previous plan based on that input. For example, only a few new structures are proposed, including a Welcome Hale that is envisioned as an open traditional Hawaiian hale and located near the improved main parking lot. Interpretive and informational signage will be posted at the hale and two small comfort stations to the side of the main parking lot will provide a second set of facilities to reduce wastewater flows at the existing Kē'e comfort station. The current overflow parking area will serve as the main parking lot and be resurfaced with permeable paving. In addition, a new entry turnaround and shuttle stop, and a new pedestrian-only path that connects the main parking lot with Kē'e Beach through the lo'i are included in the plan. The new pedestrian path would follow along the first berm of the lo'i closest to the highway and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources, but will maintain a low profile just above the berm. Please see the revised Figure 1 Master Plan graphic and the "Master Plan Summary" attachment from Section 1.9.1 of the Final EIS, which show the verbatim changes from the Draft EIS for this section.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Parks-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Parks-Master-Plan.pdf) on 2018.

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.  
(If you would like a written response letter, please include your mailing address.)

This is not a reasonable idea. To make any changes in Hā'ena the entire area must be considered. Where do you think the 500 cars that are turned away will go? TUNNELS. Hā'ena will become UNNAVAGAT-IONABLE!  
You need to support the residents & control ALL tourist traffic to Hā'ena PERIOD.

IMPACT STATEMENT (EIS), HĀ'ENA, KAUA'I, HAWAII  
Month XX, 2018  
Page 2

We recognize negative effects of the master plan may include the distribution of recreational demand to other facilities on the North Shore and island-wide, especially the nearby Hā'ena Beach Park. State Parks should monitor use of Hā'ena County Park to judge if the recreational demand is shifted from one facility to the other. If so, an adjustment to the number of visitors allowed per day to Hā'ena State Park might be considered as a mitigating measure. If a shuttle is employed, a mitigation measure may be to include a stop at Hā'ena Beach Park to alleviate traffic and congestion at the County park as well.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-1KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018-1KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 2018.

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. Sherwood and Mr. Olanolan,

Mahalo nui for your comment card from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns for parking and traffic impacts in the master plan regarding the entire north shore region of Kaua'i. Austin, Tsutsumi and Associates, Inc. (ATA) prepared a Traffic Impact Analysis Report (TIAR) for the Master Plan, which is attached in the EIS as Appendix F. Because of the unique nature of the traffic congestion and circulation issues at the park, ATA took an innovative approach to the TIAR. ATA provided analyses of engineering considerations and potential traffic impacts as well as five example shuttle service scenarios to help inform the direction and design of the preferred Master Plan. They also considered varying amounts of parking spaces at the park and estimated the potential costs and break even requirements for the shuttle.

The preferred scenario is to implement a third party shuttle from the Princeville facility at the start of Phase I, minimizing the need for visitor parking in the parking lot in the park. However, the Master Plan includes space to accommodate a parking lot for up to 100 vehicles if needed. The design and materials of the parking lot would allow its size to be adjusted as the Master Plan is implemented. It could be reduced to accommodate as few as zero vehicles if the shuttle service is fully implemented and meets all needs, or expanded to accommodate up to 100 vehicles to address the possibility that the shuttle service might not be implemented on schedule or to accommodate special needs that could only be met by additional on-site parking (for example, the need for after-hours on-site parking, or additional parking for cultural practitioners, kūpuna, or visitors requiring ADA accessibility). This scenario should significantly reduce traffic in the park and surrounding neighborhoods. By providing visitors an alternative means to get to the park at the outset of the improvements, this will also reduce the potential for "spillover" parking issues in the surrounding neighborhoods that could happen if parking is limited without providing an alternative for visitors to access the park. Please see the "Roadways and Traffic" attachment from Section 4.3.1 of the Final EIS that shows the verbatim changes from the Draft EIS.

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.  
(If you would like a written response letter, please include your mailing address.)

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha McCarthy,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns regarding development of buildings at Ke'e and educating tourists prior to arrival. The revised master plan includes significant changes with minimal physical improvements to preserve the natural beauty of the park as described in the attached **Master Plan Summary** from the Final EIS. Most of the proposed buildings, including the visitor center, and caretaker's cottage, have been removed in the revised master plan. The original Educational and Cultural Center (ECC) has been eliminated from the master plan, and only shows a simple, traditional hale at the entrance. The Welcome Hale is envisioned as an "open pavilion without walls", which will provide educational information to the public. Please find the attached **Section 2.5.1.3** from the Final EIS describing the Welcome Hale.

We acknowledge your concern with constructing new bathrooms, however the proposed facilities are designed with the intention of reducing any impact on the sensitive areas at Ke'e with advanced wastewater treatment systems. More information is attached in **Section 3.4** from the Final EIS. In response to your concern with pavement at the site, the revised master plan includes proposals for permeable pavement or structural grass for the parking lot and pedestrian path as described in the attached **Section 1.9.1** and **Section 2.5.1.2** from the Final EIS. The revised plan also includes proposals to provide information to all visitors prior to entry as well as availability online, including notices and educational material as suggested in your comments. Please see the attached section from the Final EIS on **Visitor Orientation** for more details.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-\\_\\_\\_\\_KA-FEIS-Haena-State-Park-](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-____KA-FEIS-Haena-State-Park-)

Maryjoaustin@hotmail.com  
Much planning should go into the shuttle aspect of it & the communication & networking with the resorts. This is critical. Pamphlet for all riding the shuttle en route - explaining the cultural significance & environmental sensitivities. Subsidized shuttle. Mary Jo Austin 96714.

SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HA'ENA, KAUAI, HAWAII

Aloha Ms. Austin,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawaii, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We acknowledge your comments regarding the need to emphasize a proposal for shuttle service. While the potential shuttle service is not proposed to be administered by State Parks in the revised master plan, it does include specific elements to support effective implementation with infrastructure design for the proposed park entry and main parking lot to support a recommended shuttle service with shuttle stop structures, as described in Section 2.5.1.1 and Section 2.5.1.2 from the Final EIS. Proposed facilities are designed to allow flexibility depending on future demand and the potential use of the proposed shuttle.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018\\_KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018_KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 11/15/2018.

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Ms. Aiona,

Mahalo nui for your comment card from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comments regarding gates, fences, structures, elevated boardwalk, and overall development concerns for Hā'ena State Park. Rather than using fences or walls, landscaping and the use of native and Polynesian-introduced plants will be considered as more natural buffers for the area. The boardwalk has been modified in the revised master plan. The new pedestrian pathway follows along the first berm of the lo'i closest to the highway and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources. Please see the revised Figure 1 Master Plan graphic and the "Master Plan Summary" attachment from Section 1.9.1 of the Final EIS, which show the verbatim changes from the Draft EIS in this section.

The construction of a visitor center in Princeville is not in the scope of this State Park Master Plan. However, a shuttle from Princeville is one of the traffic mitigation solutions proposed in the EIS.

The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Please see the "Visitor Limits" attachment from Section 2.5.4.3 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

Month XX, 2018 - DRAFT

Ms. Mahala Bond  
P.O. Box 23  
Hanalei, HI 96714

**SUBJECT: COMMENTS ON THE HĀENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀENA, KAUAI, HAWAII**

Aloha Ms. Bond,

Mahalo nui for your comment cards received at the public meeting held on August 19, 2015 regarding the Hāena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hāena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

In response to your first comment card, we recognize your concerns regarding parking enforcement and the potential impact on neighboring communities and beaches. The parking improvements, as described in **Section 2.5.1.2**, are intended to alleviate the strain on current parking demand and include regulation through gate installation and a park entry fee structure, rather than police patrols.

In response to your second comment card, we recognize your suggestions for consultation with the Hāena community. The planning process involved a collaborative approach to developing the master plan by consulting various local community groups and individuals, including a thirty-two member Master Plan Advisory Committee (MPAC) consisting of Hāena Kūpuna and 'ohana members, cultural practitioners and scientific experts, business representatives, State and County agencies, and other North Shore community members to provide recommendations on the physical plan and park management. The environmental review process has also included opportunities for public comment throughout the process. In addition, State Parks held a public meeting on August 19, 2015 to gather more input and extended the Draft EIS public comment period to allow more time for feedback from the community before revising the master plan. State Parks will continue to work with the advisory committee to gather more input as the master plan is implemented. Please see the attached **Section 1.6** and **Section 1.7** from the Final EIS describing the environmental review process and engagement with the community.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on **XX, 2018**.

Nicola Barea  
6540 Oloheua Rd.  
Kapaa, HI 96746 although my current address is in the East  
Side, I have lived on the North Shore <sup>almost</sup> my life.

I support the majority of this plan. ~~And~~ Especially the  
cultural aspects and the rehabilitation/restoration of the lō'i.  
My only place of concern is about parking and whether people and  
cars will be limited. However, I applaud the proposed  
exception of fishermen + hunters. And I think it is a good start.  
I like how there is options. And how it is Adaptive.  
Aloha, Nicola Barea.

Month XX, 2018 - DRAFT

Mr. Nicolai Barca  
6540 Olohana Road  
Wapaa, HI 96745

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Mr. Barca,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the cultural aspects of the master plan including the rehabilitation and restoration of the lo'i and other culturally significant aspects of the park as well as the adaptive nature of the proposed management of the park and the options included in the plan. The attached [Section 2.5.1.15](#) from the Final EIS describes the revisions to the master plan pertaining to restoration of the lo'i.

We recognize your concerns regarding parking and potential limitations on the number of visitors. As you noted in your comments, the revised master plan calls for an adaptive management approach for the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The limits will also be instituted only during peak hours of park use and will allow visitors to enter before and after without being counted against the visitor limit. Therefore, access will be allowed into the park outside those peak hours and will be adjusted as appropriate based on ongoing input from the community. State Parks will continue to work with the advisory committee to review options over time. As you note in your comments, there will also be exemptions for permitted hunters and or special user groups. Please reference the attached sections from the Final EIS on [Visitor Limits](#) and [Adaptive Management](#) for a description of these aspects within the revised master plan.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018\\_KA-EIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018_KA-EIS-Haena-State-Park-Master-Plan.pdf) on [Month XX, 2018](#).

IN SUPPORT

Hā'ena State Park Master Plan | Draft EIS Community Meeting | August 16, 2019

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.

(If you would like a written-response letter, please include your mailing address.)

Thank you for your presentation. It was great!  
I am in support of this plan including the educational structure. I hope this will allow me more access to the park as I don't go as often as I used to due to parking constraints. I would like to see an online ticketing/permit/entry access with a set number for visitors and a set number for residents.

Mahalo!

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Ms. Phillips,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the Hā'ena State Park Master Plan, including the educational structure you referenced. However, please note that the "educational structure" has been eliminated from the master plan and a traditional hale, referred to as the "Welcome Hale" in the FEIS, will now provide educational information to the public. The attached **Section 2.5.1.3** from the Final EIS provides a full description of the Welcome Hale.

We recognize your comments favoring the plan for the potential to offer more access with the proposed parking improvements and acknowledge your comments on proposing an online system for managing entry access as well as designated visitor limits distinguishing between residents and tourists. While the visitor limits will not be distinguished between residents and tourists, the revised plan does include proposed online notices for ticket availability, as described in the attached section from the Final EIS on **Visitor Limits**. State Parks will continue to work with the advisory committee and review input from the community on improvements to address parking constraints and assess visitor limits over time.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Parks-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Parks-Master-Plan.pdf) on **Month XX, 2018**.

Nalani K Kaauwai Brun

August 13, 2015

Program Administrator Officer, Office of Economic Development

County of Kauai

4444 Rice Street, Lihue, HI 9676

RECEIVED

AUG 19 2015

County of Kauai  
Office of Economic Development

CC to Mayor Carvahlo

Aloha Kaula e Nalani,

Congratulations are in order to all the fishermen from Haena who worked long and hard to finally have success in the implementation of sustainable fisheries. I understand there is one more hurdle to jump. Hulo! Thank you for opening that door. We too have been working for a long time! What starts out simply, quickly becomes complicated, and the "community" larger.

Thank you for sending me the copy of the "Draft of Haena State Park final Master Plan which includes some of my suggestions. It looks good, but still antiquated for the 21<sup>st</sup> century. There are a few comments and suggestions I feel should be made. But first, I have reviewed some of the newspaper articles and the DLNR, Division of State Parks, Haena State Park Master Plan prepared by The Keith Companies Hawaii, Inc in 1994. Patterns keep repeating themselves and for the wrong reasons. Talk about timing!

The data given in section 2-75, Table 3, "Summary Table of daily visitors" survey taken in 1993 (twice) and again in 1998 is meaningless data. Kauai was recovering from Hurricane Iniki!

You must locate a copy of now retired, Dr. Luciano Minerbi's proposal of Hawaiian Sanctuary Places (or something like that). It includes Haena. That was done in the 80's during former Governor John Waihee's term, when he organized Hawaii 2020 State wide Conference. Unfortunately, both of my papers/documents were loaned out and haven't yet found their way home.

Dr Minerbi lives on Oahu. He is a USA citizen and is a registered Hawaii voter, revealed when he appeared on Hawaii Public Television "Island Issues Program" in July 2015. That program discussed land use, development, natural resources, population, and especially water and space.

There are several things to remember:

1. The sacred Historic Sites cannot be owned by one entity. Those sites belong to the Universe. We can only care for them.
2. All government compliance stuff is tedious and repetitious. It can be easy or difficult dependent upon the intention (power, oppression, and control).
3. Mr. Allerton wanted and believed that the people of Kauai can and would take care of their sacred and historical sites (mauka-makai). That is why he gave the sites to Kauai. He did not want the state to have it because "the state cannot and does not take care of its sites". I too am of that sentiment. There is a need to have people of good character, Akamai with the numbers, science, spiritual humanity, motivation, managerial skills, and all the nuances of the sites/places for their good sustainability. Whoever accepts the guardianship and the maintenance of the integrity of the ancestors and Ke Akua ma must do it with quiet pride and inspirational joy with the International scope of our Mana. It is our time!
4. Never forget the two great Olelo Noeau of na Kupuna.

A. "Not all knowledge is found in one Halau"

B. "In the word there is life/encouragement; in the word there is death/discouragement". Be very aware!

5. The Halau Waa, hula, loi, fishing, and all other cultural customs that will present themselves must take place in the "park" to make it a living "park" rather than a superficial, touristic, recreational park. With Mr. Allerton's house rebuilt, it can be used for a Kahu's residence combined as a museum, story telling, educational reaching out place with a creative, sensitive and skilled team. This must include the Kokua of all of Kauai's people filled with the Aloha and dignity of na Kupuna. One person cannot do it all.

6. It seems as though my work is finished on Kauai. I have given you everything I have learned. The lessons I've had to learn, have been learned. To you, avoid misunderstandings, jealousies, manipulations, lies, and ego out of control. Rejoice in your blessings, gifts, opportunities, challenges, and na Kupuna with Ke Akua ma. Life is good! God is good! They are good!

I have not sent this to the state. Should you want to use any part of this letter, it is O.K. I know it is rather personal.

Mau Kealoha,

*Roselee Flanagan Delichonipua Lindsey Darling*

ADDENDUM TO MY COMMENTS RE: MASTER PLAN FOR HAENA STATE PARK 15 August, 2015

From: Roselle K. Bailey

To: Anyone concerned

The attached is a copy of a Management Plan for Ke'e, Ha'ena we submitted in 1989 to the various people/agencies listed. You will see that it is quite similar to the current Plan prepared for the DLNR by PBR Hawaii. We were disappointed that the DLNR didn't have the courtesy to even respond to our proposal. Two people supported us: JoAnn Yukimura and Bertha Kawakami, however, it was eventually shelved and forgotten.

Eventually, the representatives of DLNR attempted to remove us by appointing a "committee of (off island) Hula Kupuna to oversee the site, none of whom had ever reactivated a sacred temple. We withdrew participation in cleaning, etc. since "they" were going to maintain the site. This plan quickly proved unsuccessful so we resumed our normal volunteering. Another attempt to discredit us was a television production called "The Hawaiians" where it was said, "the people who clean this temple, clean it too clean. The Kia'i has left."

Another attempt to organize hula people to maintain the site involved my asking all Kauai Halau to meet to hui their interest. All recognized the need to respond-even willingly accepting different months for each Halau to malama KeAhuLaka. By the third month, only one Halau continued support. The rest failed to even attend another meeting. Words are easy but action of integrity is not.

My failure to generate any county or state support was not because I didn't try. Our loyal halau/supporters have continued with periodic maintenance and it is used by many Hula "practitioners" from all of Hawaii plus international connections. In the last 4 decades we have volunteered nearly 20,000 hours there. We fulfilled all of Mr. Allerton's wishes, transforming the living jungle to a living place for its original intention.

The goals set in the new management plan are attainable. Only money and time plus a search for qualified participants, knowledgeable in Hawaiian culture, protocol, maintenance skills and not restricted by Kapu's. The "time line" seems ambitious. The state moves slowly-DLNR is short on money. Who will maintain the site in the interim?

*Respectfully,*

*Roselle Flora Keli'ihonipua Lindsey Bailey*

## MANAGEMENT PLAN FOR KĒ'Ē, HĀ'ENA, KAUA'I

April 15, 1989

## STATEMENT OF PURPOSE

KA 'IMI NA'AUAO O HAWAI'I NEI is presenting a management plan developed for the preservation and perpetuation of the former Allerton estate and the Hawaiian historical site complex located at Kē'ē, Hā'ena, Kaua'i. This management plan contains the following details;

- I. DESCRIPTION OF ORGANIZATION
- II. DESCRIPTION OF AREA
- III. MAINTENANCE PROGRAM
- IV. INTERPRETIVE PROGRAM
- V. FUNDING PLAN

KA 'IMI NA'AUAO O HAWAI'I NEI is requesting the *kahu* (curatorship) status from the State of Hawai'i and the County of Kaua'i for the specific areas described therein presently under their jurisdiction. KA 'IMI NA'AUAO O HAWAI'I NEI is also requesting a lease agreement with the State of Hawai'i for the existing buildings and appurtenant ground areas of the former Allerton estate for the purpose of establishing a Kē'ē Living Cultural Resource Center in order to successfully implement this management plan.

Fig. 1. MAP OF THE HAWAIIAN ISLANDS. The location of the Kē'ē area is indicated on the island of Kaua'i, beyond Hanalei Bay.

## I. DESCRIPTION OF ORGANIZATION

KA 'IMI NA'AUAO O HAWAI'I NEI, initially established in 1971 as Kahiko Halapa'i Hula Alapa'i, was granted a nonprofit status in 1977 for the purpose of searching for the truth of the Hawaiian culture; of restoring the Hawaiian culture to its original dignity; of educating the populace for its understanding, enjoyment, and appreciation of the medicine, art, language, crafts, philosophy, history, and religion of the Hawaiian people through the *hula*.

KA 'IMI NA'AUAO O HAWAI'I NEI's previous and existing involvement of the area consists of the following:

1. In 1972-73, visitations to the site complex revealed walls and structures being damaged by extensive growth of Chinese banyan, Java plum, guava, hala, and coconut trees. Infestation of other types of exotic vegetation also contributed to extremely poor visibility of sites. These conditions were the result of neglect for over twenty years.
2. In 1974, John Greg Allerton (former property owner) granted Kahiko Halapa'i Hula Alapa'i permission "to return the place to its original and intended use" with the following conditions: to clean and maintain the area, to have a resident archaeologist for consultation, to avoid burning the rubbish on the sites, and to have an *Uniki* (*hula* graduation) ceremony at the Keahualaka site.
3. Since 1974, a workforce of volunteers of this organization have been doing maintenance work at the Keahualaka, Kaulapa'oa, and Lohi'au sites every 5-6 weeks. Records kept since 1975 to February 1987 show 7,429 man-power hours and 6,046 transit-time hours for a total of 13,477 volunteer hours. Maintenance expenses included costs for supplies, transportation, and equipment. There has also been periodical assistance over the years from other organizations and individuals. As a result of the scheduled maintenance work, there is now visibility and accessibility to the sites. Also, native Hawaiian plant growth has returned to the area.
4. Since 1974, *hula* observances, educational tours and programs, and workshops have been conducted on-site resulting in an awareness and appreciation of the sites and their environs.
5. Since 1983, there has been an annual public *hula* observance and ceremony at the Keahualaka site with participation of *hula* from throughout the State.

## II. DESCRIPTION OF AREA

This management plan concerns the complex of historical and cultural sites and structures in the land division of Kē'ē, within the area known as Hā'ena on the island of Kaua'i. [See Map A]

Situated within the Hā'ena State Park under the jurisdiction of the State of Hawai'i is Lohi'au's house platform and the former Allerton estate [TMK: 5-9-07:12] which includes a guest cottage and residence surrounded by gardens, pathways, and retaining walls of former *auwai* (irrigation ditches) and *lo'i kalo* (taro terraces). Adjacent to this parcel is the property [TMK: 5-9-07:13] dedicated to the County of Kaua'i through the probate of John Greg Allerton. Included on this property are these additional Hawaiian historical and cultural sites of the Kē'ē complex: the *pōhaku piko* of Kilioe, Kauluapā'oa heiau, and the Keahualeka *huia* platform and altar area. [See Maps B & C]

Based upon genealogies and oral traditions recorded, use of these Hawaiian sites and structures of the Kē'ē complex date at least back to the late 12th and early 13th Centuries during the extensive migrations and frequent voyages between the Hawaiian Islands and the South Pacific Islands.

The historical houses and facilities now present on the former Allerton estate were once used by J.G. Allerton as a retreat while the guest cottage was used as a residence by the caretakers of the premises.

Fig. 2. MAP SHOWING THE APPROXIMATE RELATIVE POSITIONS OF SITES AT Kē'ē BAY.  
a. Kilioe (*pōhaku piko*); b. Ka-ulu-a-Pā'oa Heiau; c. Ke-ahu-a-Laka (*huia*).

## III. MAINTENANCE PROGRAM

The maintenance program of this management plan consists of the following four phases:

### 1) PHASE 1: [Time Frame: Continuous]

- \* Cleaning, weeding, and grass cutting of the Keahualeka site and periodic vegetation removal from the Kauluapā'oa and Lohi'au sites through the time, labor, and supplies of the volunteers of KA'IMI NA'AUAO O HAWAII' I NEI.

### 2) PHASE 2: [Time Frame: Within one (1) year of the commencement of Kahu status]

- \* New roofing, termite treatment, repairs, and renovations of the buildings and facilities of the former Allerton estate with the time and funds for labor and material costs provided by KA'IMI NA'AUAO O HAWAII' I NEI.
- \* Construction of a new walkway over the existing path along the makai end of the estate from the road's culdesac to the Kauluapā'oa site by the State of Hawai'i. The present condition of this pathway is considered hazardous due to heavy rains and lack of up-keep since Allerton's death.
- \* Restoration of pathways leading from the Kauluapā'oa site to the Keahualeka and Kilioe sites by the County of Kaua'i.
- \* Reside a caretaker in the guest cottage as a security and preventive measure to vandalism, to administer the Kē'ē Living Cultural Resource Center, to manage the physical and spiritual maintenance of the historical and cultural sites of the Kē'ē complex, and to disseminate information regarding the area to visitors with the salaries and cost paid for by KA'IMI NA'AUAO O HAWAII' I NEI.
- \* Landscaping and caretaking of the pathways and garden area immediately surrounding the premises of the residences through the time, labor, and supplies of the volunteers of KA'IMI NA'AUAO O HAWAII' I NEI.
- \* Installation of electric and telephone lines to the buildings and facilities by the State of Hawai'i.
- \* Start archaeological research and survey of the Kē'ē complex.

- 3) PHASE 3: [Time Frame: Within five (5) years of the commencement of *kahu* status]
- \* Reestablishing of native Hawaiian plants of the area and restoring the *auwai* (irrigation ditches) and *lo'i kalo* (taro terraces) directly *mauka* of the estate through the time, labor, and supplies of volunteers of KA'IMI NA'AUAO O HAWAII'NEI with the assistance of other organizations and governmental agencies.
  - \* The removal and hauling of large debris such as overgrowth of vegetation and exotic trees/brush by the State of Hawaii and/or County of Kauai.
  - \* Installation of watering irrigation lines throughout the garden area from the existing water system on the premises by the State of Hawaii.

- 4) PHASE 4: [Time Frame: Within ten (10) years of the commencement of *kahu* status]
- \* Complete an extensive archaeological study of the Kē'ē site complex under the supervision of an archaeologist to include, but not limited to the following: remapping of sites in present condition, test pits, datings, etc. Then restoration work, stabilization, and reconstruction of sites can proceed where deemed appropriate and necessary.

#### IV. INTERPRETIVE PROGRAM

The interpretive program of this management plan will be done in the following methods:

1. Passive interpretation through the use of signage and/or displays at the various sites.
2. Active interpretation through the dissemination of information by a staff person on the premises during visiting hours. Also, provide guided tours by trained docents with advanced scheduling.
3. Maintain and administer the Kē'ē Living Cultural Resource Center for the purpose of; stimulating and encouraging historical, cultural, and educational interest of the Hā'ena and Nā Pali areas; promoting the preservation and cultural significance of the sites and structures of Kē'ē; perpetuating the Hawaiian protocol, oral, and *hula* traditions associated with area. Exhibits, programs, demonstrations, and/or other activities will be established for the aforementioned purposes.
4. Distribute publications, brochures, and/or pamphlets of the Hā'ena and Nā Pali areas at the Center.

## SUMMARY

KA 'IMI NA'AUAO O HAWAI'I NEI has demonstrated its ability to preserve the historical and cultural sites within the Kē'ē complex through its on-site maintenance work done there since 1974, totaling more than 13,500 volunteer hours. KA 'IMI NA'AUAO O HAWAI'I NEI has also demonstrated its commitment to perpetuate the Hawaiian traditional uses and cultural significance of these Kē'ē sites and environs through its educational activities and hula observances presented there also since 1974.

KA 'IMI NA'AUAO O HAWAI'I NEI has demonstrated its qualifications to be appointed the kahu (curatorship) status by the County of Kaua'i and the State of Hawai'i for the Kē'ē complex. Precedents for appointed curatorships have been established with other nonprofit groups such as Na Kahu Hikinakala at Wailua, Kaua'i.

KA 'IMI NA'AUAO O HAWAI'I NEI has also demonstrated through this management plan that the lease of the existing buildings and facilities on the premises of the former Allerton estate by the State of Hawai'i to this nonprofit organization for the Kē'ē Living Cultural Resource Center would address the maintenance, interpretive, and funding needs for the preservation and perpetuation of the sites and structures within the Kē'ē complex. Examples of similar arrangements have been made between governmental agencies in Hawai'i and other nonprofit groups such as Hui o Lāka at Kōke'e Museum, Kilauea Point Natural History Association at Kilauea Point National Wildlife Refuge, and Volcano Art Center at Volcano National Park.

## V. FUNDING PLAN

Sources of funding for this management plan will be secured and maintained by KA 'IMI NA'AUAO O HAWAI'I NEI as described below. As a result, costs to the County of Kaua'i and the State of Hawai'i for the preservation and perpetuation of the Kē'ē site complex are very minimal being that KA 'IMI NA'AUAO O HAWAI'I NEI will be providing the major portion of the services and finances for this plan.

1. Donations:
  - A donation box will be posted with a sign in the Kē'ē Living Cultural Resource Center informing visitors that the Center is operated in a nonprofit basis and that donations are welcome.
2. Mercantile:
  - The Center will have a small shop which sells an inventory of carefully selected items reflecting the purposes previously established for this Center.
3. Other:
  - KA 'IMI NA'AUAO O HAWAI'I NEI will submit grant applications to several governmental and private foundations to help with operating capital, renovations, and special projects. Also, fund raising projects and activities are an on-going part of the organization.
4. Special Conditions:
  - Exempt from property tax and minimal lease rent.

KA 'IMI NA'AUAO O HAWAI'I NEI has the available income and assets to presently finance the start-up costs to implement this management plan [Financial Income Statement of this organization is available upon request].

Mahalo for sharing, Nalani! We will for sure take this into consideration. Do you know if Kumu Bailey would want this in the EIS or not...? Either way, we will at the very least share this with the project team and incorporate into the revisions. Our work is a bit on hold as our advisory committee regroup and regenerates so there is still time to share this.

Mahalo nui,

Kimi

Hi Kimi,

Comment period may be pau already but I wanted to make sure you got this. I'm not sure if any of her halau had made any comments. This document is from Kumu Roselle Bailey who, with her halau, has cared for Ke Ahu A Laka. I saw her and sent her a copy of the plan as she was asking about what is going on. She reviewed it and send this. I think it's important to at least receive it as she has done so much for the area.

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUAI, HAWAII**

Aloha Kumu Bailey and Ms. Brun,

Mahalo nui, Kumu Bailey, for your comment letter dated August 13, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). Ms. Brun kindly forwarded it to us on November 4, 2015 via email. We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments related to the Draft EIS for Hā'ena State Park.

Mahalo for your concern regarding the visitor numbers presented in Table 3, "Summary Table of Daily Visitor Counts," found in Section 2.0. Please note that the table includes visitor counts beyond just 1993 and 1998, including counts from 1999, 2008, 2010, and 2011. The point of the table is to illustrate how drastically the visitor counts have increased over the years to over 2,000 visitors per day. Many in the community and on the advisory committee feel this is too many people and therefore forms the basis of proposing visitor limits for the park. This number may change over time as State Parks will adaptively manage what is appropriate based on impacts to cultural, natural, and historic resources and community feedback.

Mahalo for your recommendation to seek Dr. Luciano Minerbi's paper on Hawaiian Sanctuary Places. We reached out to Dr. Minerbi and he kindly shared the attached chapter, "Sanctuary, Places of Refuge, and Indigenous Knowledge in Hawai'i," from the book, *Science of Pacific Island Peoples: Land Use and Agriculture*, which may be the paper you cite. It does include a section on hula and references Kē'ē and the importance of protection, management, and access by Native Hawaiians. It mentions the State's Curator Program and kahu management as options to help protect it and prevent desecration of the site. Both are excellent recommendations, which State Parks appreciates. Currently the County has signed a curatorship agreement with the Hui Maka'āinana o Makana (the "Hui") to mālama their property that contains Ka Ulu a Poa Heiau and Ke Ahu A Laka.

Regarding your comments of things to remember, we offer the following responses:

1. We respect your thoughts on sacred historic sites. We fully agree that they must be protected and cared for.
2. We recognize your thoughts that all the government compliance regulations are tedious, but they must be followed. State Parks is committed to working with appropriate cultural and community advisors in managing the park.
3. As noted above, the Hui has been selected by the County in a curatorship agreement for the heiau. State Parks also has similar agreements with the Hui to tend to the lo'i at Hā'ena State Park and Allerton Caretaker's Cottage and support native community groups in caring for wahi pana.
4. Mahalo nui for the olelo noeau. We take that to heart and the master plan has been revised to respond to the concerns raised by the community. The adaptive management strategy will also allow State Parks to revise and adjust any proposed policy after implementation based on feedback.
5. State Parks supports your desire to allow cultural practices to occur at the park in order to make it a living park rather than a superficial tourist park. One of the main goals of the master plan is to "restore Hā'ena State Park as a living place... cleanse, restore and revive cultural practices again." State Parks appreciates all your recommendations and welcomes the kokua of all Kauai's people to help restore and mālama the park.
6. Mahalo nui for all of your sentiments and we appreciate Ms. Brum for sharing your letter with us.

We also greatly appreciate you sending a copy of the Management Plan for Kē'ē. It will be helpful as State Parks moves forward with a more detailed management plan for the Hula Complex. We have included it as part of your letters in the EIS so it will be available for future use and reference by State Parks and the County of Kauai.

We are sincerely sorry to hear of the lack of appreciation for your efforts and dedication to care for the heiau at Kē'ē. There is still much work to do, but we too are hopeful that the master plan for the park can be accomplished. As noted, the Hui is helping State Parks and the County mālama many areas of the park and they are making great strides in restoring the park and bringing living culture back to this place. One of the key management recommendations is to establish a cultural advisory group and a community advisory group composed of knowledgeable individuals to advise State Parks as they implement the plan and make any improvements at the park. Please see the attached description of them from the EIS.

Mahalo nui for your input on the Draft EIS. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at: [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-\\_-KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-_-KA-FEIS-Haena-State-Park-Master-Plan.pdf) on

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

## SANCTUARIES, PLACES OF REFUGE, AND INDIGENOUS KNOWLEDGE IN HAWAII

Luciano Minerbi

The Hawaiian culture is rich and vibrant, but many Native Hawaiians are at the bottom of socioeconomic-health indicators in Hawai'i. Hawaiian sanctuaries and places of refuge are essential to improving the well-being of Native Hawaiians. The exercise of basic human rights, particularly those of indigenous people under pressure by a larger or dominant society, requires sanctuaries and places of refuge which foster their spiritual, traditional, and cultural survival. These rights are expressed in the present and future stewardship by Native Hawaiians of certain programmes and places important to them on each of the Hawaiian Islands. These rights are linked to principles of social justice and ecological vitality.

In their quest for cultural survival and well-being, Native Hawaiians strive to protect and support their life-styles, lands, and special places. The socioeconomic, political, and demographic pressure of the dominant society is so great, however, as either to assimilate or marginalize them. Alternatives to this situation of structural violence can be found by understanding what is happening to Native Hawaiians and by supporting their legitimate efforts to cultural identity and survival as a people and as a nation.

Native Hawaiians on many occasions have requested assistance in the protection of places important to them. This study is a response to those requests. It explores the interrelation of several themes (table 1). Population growth by immigration has resulted in cultural debasement, physical displacement, and political and economic marginalization of many Native Hawaiians, and the assimilation of some of them in

Table 1. The context of Hawaiian sanctuaries and places of refuge

**The Pressure of Population Growth by Immigration**  
Ecological pressure of the multiethnic population and the resulting cornering and displacement of the Native Hawaiians in the islands.

**Structural Violence/Cultural Displacement/Economic Marginalization**

Demographic decline of the Native Hawaiians: diseases  
Privatization of land: land taking  
Loss of land and loss of subsistence base  
Overthrow of the Monarchy: loss of sovereignty  
Loss of language  
Loss of religion  
Loss of cultural identity

**Sanctuaries**

Away from distractions to be able to live the culture

Repair Hawaiian Christian churches

**Hawaiian Rural Way of Life**

Protect the Hawaiian rural way of life, including taro cultivation and fishing to perpetuate the Hawaiian culture

**Protection Measures**

Determine policies that would effect change for new zoning category  
Preserve ancestral land  
Sovereignty, land base, and rights  
Establish Native Hawaiian land trusts

Sources: Kinney 1990, McGregor 1990, Mokuau 1990b, Trask 1990.

mainstream society. This has induced stress and alienation among Native Hawaiians, but has also prompted a Hawaiian renaissance to promote their cultural and physical health. Their survival requires the protection and use of places of refuge and sanctuaries. Their traditional beliefs and spiritual values and cosmology identify nature and many of these places as *ʻāhupāhupū* (sacred places) (Nunes 1990).

This study reviews examples of sanctuaries and places of refuge and related Hawaiian practices (table 2). It also links modern sanctuaries to traditional *puʻuhonua* (places of refuge). It includes interviews with Native Hawaiian leaders. This chapter shows the benefits for Native Hawaiians and for the general public in Hawaiʻi if Native Hawaiians control their own sanctuaries and places of refuge. It also discusses possible ways to manage these places. It looks at the relationships among Native Hawaiian religious beliefs and aspects of health, social services, community-based development, cultural programmes, artistic endeavours, political action and research. The intent is to move away from violence, stress, debasement and displacement toward greater justice, community self-reliance, sociocultural well-being and inter-ethnic understanding.

## STRUCTURAL VIOLENCE AND THE NATIVE HAWAIIANS

### Condition of the Native Hawaiians

Native Hawaiians have endured increasing sociocultural, economic, and ecological pressure and displacement by the dominant society. They need room for their survival as indigenous people. They need a land base, sanctuaries, and places of refuge. An individual with any ancestors who were native of the Hawaiian Islands prior to Western contact in 1778 is a Native Hawaiian (Marsella et al. 1985:4). Native Hawaiians include full-blooded Hawaiians and part-Hawaiians. From a population of 1,000,000 before Cook, they declined to only 40,000 in 1893 (Stannard 1988:45). The 1980 US Census shows that self-defined pure Hawaiians continue to decline in number and that part-Hawaiians have continued to grow and should surpass 200,000 by the year 2,000 (Barringer & O'Hagan 1989:51-2). Five interrelated factors help to explain this rapid decline of Native Hawaiians (Blaisdell 1989:8-14):

- (1) rapid depopulation due to introduced infectious diseases to which the indigenous Hawaiian people did not have immunity;

- (2) foreign exploitation resulting in the introduction of a market economy, taking of land, illegal overthrow of the monarchy in 1893, and annexation to the United States in 1898;
- (3) cultural conflict between Hawaiian values and Western values;
- (4) adoption of harmful foreign ways, particularly in life-style and diet; and
- (5) neglect, insensitivity, and sometimes malice toward Native Hawaiians by those in power.

Although some Native Hawaiians are very well placed at political, economic, and social levels, many are not. The pressure is for assimilation or marginalization. Hawaiian educational levels are quite low with high attrition in high school and college, and under-representation in higher learning institutions. They are under-represented in high prestige and high salary occupations and in business and have a much higher unemployment rate than other ethnic groups. They have much lower personal, family and household incomes than Whites, Japanese, and Filipinos. Approximately 68.6 per cent of Native Hawaiians resided in Hawaiʻi in 1980. About 70 per cent of the Native Hawaiians in the islands resided on Oʻahu. Of the 31.4 per cent on the mainland, about half resided in California. It appears that migration to the mainland has not resulted in better income; in fact, Hawaiian household characteristics in Hawaiʻi are better than those on the mainland. Most Hawaiians resided in metropolitan areas; only 4.6 per cent were classified as rural (Barringer & O'Hagan 1989:51-7).

### Problems in Health and Education

The health of Native Hawaiians is a major problem: they fare worse than other people in the United States regarding the leading causes of death, such as heart disorders, cancer, diabetes mellitus, pneumonia, cerebrovascular, arterial, and other conditions. They fare worse than other people in the state of Hawaiʻi for suicide of young adult and elderly males, child abuse and neglect, alcohol and substance abuse, crime and delinquency, and social and psychological disorders. Their chronic depression is expressed by a sense of despair, and self-doubt. Westernization is often pointed to as the cause of these health problems as it has disenfranchised Native Hawaiians in their own land. The result is loss of culture, erosion of pride, and unhealthy con-

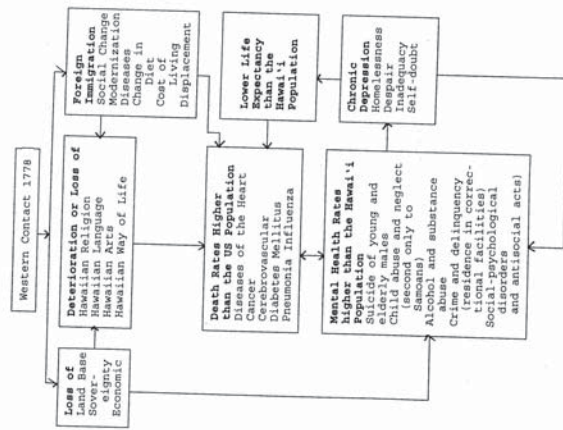

Figure 1. Structural violence and Hawaiians

Sources: Mokuau 1990a, Alu like 1989, E Ola Mau 1985, Kamehameha School/Bernice Pauahi Bishop Estate 1983, Trask 1983.

ditions and stresses (figure 1). These losses in turn are the result of the suppression of the Hawaiian language, religion, values, economic tradition, ruling system, land base, and independence (Alu Like 1989:43, Kamehameha Schools 1983:203-213, Mokuau 1990a:236-238, E Ola Mau 1985:47-61).

Improvements in health practices could include holistic approaches comprising community based services of cultural promotion, self-empowerment and self-determination. This includes 1) focus on native spiritual values where the individual is in unity with nature; 2) group outreach to treat the individual as a member of the group, thus minimizing avoidance and personal risk; and 3) use of an informal personal style (Wegner 1989:152-153). In addition programmes and sites need to be in context and in settings suitable to Native Hawaiians, such as Hawaiian civic clubs, canoe clubs and other social organizations (Wegner 1989:160-161). Studies have proposed a useful ecological framework which sees the educational experience of the Hawaiian child as a set of nested relationships of the self, family, teachers, peers, school board, and broader institutional patterns. The attention is on the systematic changes that affect socioeconomic organization and life-style and on how they effect Hawaiian families and schools (Bronfenbrenner 1979, cited in Kamehameha Schools 1983:5-5).

### Cultural Loss and Stress

Changes at the societal level will produce changes at individual and family level, inducing loss of ethnic identity, alienation, self-doubt, helplessness, and despair (Kamehameha Schools 1983:203). Historical changes have suppressed or distorted Hawaiian practices; nevertheless, many Hawaiian values, beliefs, and behaviours have survived, particularly in the family (Nunes 1990).

Stress, a protective mechanism against harm, when excessive and unresolved evolves into 'chronic stress' affecting both mind and body. Marsella identifies seven areas of culturally induced stress in individuals: value conflicts, social change, acculturation, life events, goal-serving discrepancies, role discrimination of lower status people, and role conflict of individuals assuming conflicting roles (Marsella et al. 1985:208). Cultural stress has negative psycho-social results. Howard has found that those who score low on both Hawaiian and middle-class concepts also tend to score lower on measures of self-esteem and use

concerns, organize themselves, and express *kāhuna* (to build unity) (McGregor 1990).

### Healing Places Within Hawaiian Communities

Native Hawaiian homesteads should include sites of refuge as healing places. They could consist of smaller sites within the homesteads, which act as refuge spaces. Inside these spaces people will *kāhuna* and the two binding elements could be the *ʻohana* and the land. These sites could be tailored to the needs of the specific community and could facilitate activities which require interaction: fish drying, preparation, distribution, net hanging, and net mending could take place in fishing villages. In other sites *hoʻoponopono* (settling things right), *lomiolomi* (massage) and other healing practices could take place. The legitimization of subsistence space to do just that is a common theme for the betterment of Hawaiian homesteads (De Camara 1990). Examples of tailored programmes are:

- 1) services to the *kāpuna* (elderly), such as Hawaiian food, healing practices, and care;
- 2) services such as communal dining and social work provided regularly in certain places; and
- 3) home support, outreach efforts, and legal aid.

Of great interest is the cultural dimension of such programmes. For example communal dining is connected to Hawaiian diet and the availability of growing, cooking, packaging, and serving Hawaiian meals (Sumarnap 1990). This has economic and employment multiplier effects in nearby rural areas. Hawaiian protocol can be used in nutrition and health programmes.

Kinney (1985) in her anthropological study of 30 Native Hawaiian residents of a Hawaiian Homestead community on the Big Island, has found that, although Native Hawaiians live in non-traditional environments and use non-traditional modern tools and technology, they are still traditional in economic beliefs and in family cultural values. There are cultural differences in coping strategies of people under stress. Important caring constructs used by Native Hawaiians were sharing, dreaming, and touching (figure 3). Dreams are important to Native Hawaiians, particularly when they address the *ʻohana* and can be interpreted. Dreams represent direct and continuous means of communication with the *ʻaumākua* (ancestral guardians) and *āhuna* (gods). Kinney's survey

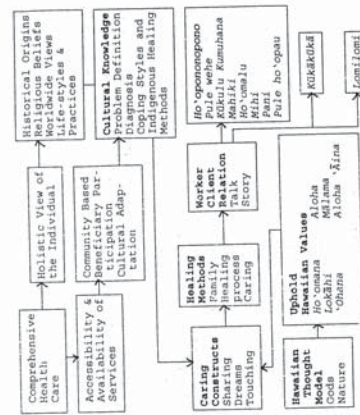

Figure 3. Hawaiian Healing and Caring Approaches. Sources: Kinney 1985, Mokua 1990

indicates that Hawaiians perceive that the diet of fish, pot, stew, Hawaiian medicines, herbs and fruits maintains well-being. A spiritual relationship with God, eating good food and positively interacting with family and friends are valuable activities in achieving a healthy life-style. Hawaiian Christian churches function as sanctuaries, as healing places for Native Hawaiians, but some of them, in Kalaupapa, Kalapana, and on the Kona Coast, have neither ministers nor money for maintenance; they need to be repaired and restored (Trask 1990).

### The Spiritual Connection of the ʻOhana to the ʻĀina: The Symbolism of Taro

Hawaiian thinking is based on a spiritual connection among man, god/gods and nature. *Aloha* and affection to humans is expanded to express love and spiritual connection with the natural environment of the *ʻāina* (land) and *kai* (sea). Native Hawaiians continue to attach great significance to the social and psychic phase of relationships (Lee and Newton 1981:20 in Kinney 1985:14). In fact the *ʻohana* (family) is identified physically and psychically with the *ʻāina*, whose soil has produced the staple of life, *ʻai* (food) made from taro that nourishes the dispersed family (Handy & Pukui 1972:3 in Kinney 1985:17). The taro in turn represents the *ʻohana*, with the *māhū* (parents) as the stem and the *kēle* (the children), as the *ʻāina* (young leaves). Taro propagates itself by means of the *ʻōla* (sprouts). Taro then is a symbol of where Hawaiian people come from, the original parent being Papa and Wākea, for at least one lineage. Taro then represents the strong spiritual connection of the *ʻohana* to the *ʻāina*.

### Modified Hoʻoponopono

The practice of *hoʻoponopono* (meeting to make things right and resolve *ʻohana* problems) is being modified. Migration causes changes in the *ʻohana*. Families become divided among islands and between the mainland and Hawai'i. Some elders have been left without immediate relatives. Now a modified *hoʻoponopono* involving the larger *ʻohana* is acceptable and practised on the Big Island. Elders can now come from different families and the process of healing can reach a broader group of beneficiaries. Four *kāpuna* in Hilo are involved in this activity (Kinney 1990).

## RELIGIOUS BELIEFS, SPIRIT REALMS, SACRED NORMS Sacredness and Spirituality of Nature

In traditional Hawaiian thinking nature and land are considered sacred and animate. The world is a conscious entity and people can communicate with all species in nature and interact in a mutual relationship of rights and responsibilities. The Kumulipo (creation chant) implies that the universe is alive and conscious and that its evolutionary development comes from within. This evolution explains how man is related and is kin to nature (Dudley 1990:8, 45-47). *Āhuna* are conscious spirits; *ʻaumākua* are spirits of the ancestors. These gods already possess or acquire through *hoʻomanamana* (imparting of *mana* by *kāhuna* to the gods) great *mana*. *Āhuna* take animal, plant and other natural forms, even in more than one place at a time. Chiefs were gods who could be seen (Dudley 1990:35, 72, 75; Kepelino 1978:12).

Native Hawaiians therefore perceive nature, plants, animals, and rocks as sentient, divine, and ancestral forms which have extrasensory perception, and interrelate with people as family. This explains *āhuna ʻāina*, the great love that Native Hawaiians have for the land, the *oa* or *ka ʻāina* (life-force of the land) (Dudley 1990:50, 51, 52, 78, 118). Nature is not only conscious, much of it is divine. The presence of gods gives the Hawaiian a constant sense of religious encounter. Sea creatures and land creatures are paired in the Kumulipo and are perceived to accomplish joint purposes (Dudley 1990:82, 89).

### ʻAumākua

*ʻAumākua* are the ancestral deities, spirits and guardian angels of the family. In ancient times *ʻaumākua* were a source of forgiveness; healers countering illness and troubles; providers of increase in food production and fish catches. In Kamaka's time they were perceived more as enemies punishing those disobeying the laws of gods, of the land and of the family. They also took care of family members after death. *ʻAumākua* were related to *ʻaumākua* of the heavens, the ocean, the earth, and the volcano, and could go to and from these places. Only those souls without an *ʻaumākua* realm would wander on the plains of certain places: Kama'omato on Maui, Pū'ukokapolet and Kaupē'a on O'ahu, Uahua for Lāna'i, Maohelaia for Molokai, Mana for Kauai, and

Hahāli, for Niihau. At the *leina-a-le'i-hoane* (sleeping place of souls), such as Kaena and the *uilaui* grove on O'ahu, it was customary to offer prayers for the dead and bunches of *pili* grass. There were *eha-a-ka-tuhua* and *hū-o-lenua* on each island. In these places the spirits were divided to go into one of three realms:

- 1) the realm of the *kūewa* or *anūwana* (homeless, wandering souls) with no place in the *anumakua* realm;
- 2) the realm of the *anumakua* (ancestral spirits), where people related to these *anumakua* had an irrevocable *kūwana* right to go there after death, e.g., the ocean, the Pit of Pele at Kilauea, or some other place. Persons with an *anumakua* realm did not fear death. *Anumakua* would dwell in animals and other natural forms. Pele, the goddess who dwells in Kilauea volcano, appears in her lava form (Dudley 1990:1-2); or
- 3) the *ao o Māui* (realm of Māui), the *pōpau'ole* (endless darkness), the realm of evil (Kamakau 1987: 28-30, 47-49, 51).

## Kapu

There is a hierarchy of *kapu* (royal privileges), those of gods and those of chiefs, and corresponding *kāhāwai* (sacred) laws. A *kapu* place such as a *heiau* was a sacred place which only high chiefs and high priests could enter (Kamakau 1987 11866-18711:10). *Iāmuku* (executive officers) watched over the sacred *kapu* of the chiefs. *Kāhuna* (priests) were the *ilamuku* of the gods (Kamakau 1987:12).

## Kanawai

*Kanawai* are the sacred laws and edicts promulgated by rulers, decreasing life or death. Only this decree could spare individuals, or even the people of an entire *ahupua'a* or *'āina* land section, from death for breaking a *kapu* (Kamakau 1987:11). The *Kāhāwai Waiapaho* *Kōloa* was a decree providing that old people could sleep safely on the highway and that Ena and fishermen had to welcome strangers and feed the hungry on O'ahu. The food of anyone was dedicated and made available to whoever invoked this *kāhāwai*. This *kāhāwai* could be invoked only for just reason, not to rob another of food and provision (Kamakau 1987:11). *Kāhāwai Māmaluhua* was a decree promul-

gated by Kamehameha stating "let old men, old women, and children sleep in safety on the (highway)". It originated from his escape from death when he was beaten by fishermen at Papā in Ke'aua, Puna, and was extended to the whole Hawaiian kingdom (Kamakau 1987:11). This law was a birthright of King Kamehameha and was designed to save lives and fortunes during a time of slaughter (Kamakau 1987:16; 1961:312). The sacred *kāhāwai* of the kings was an absolute edict. *he pū hōhonua ho'ola* (refuge of life). Captives in time of war, numbering in the hundreds or thousands, were no longer slaves if the king placed the sacred *kāhāwai* decree over them (Kamakau 1987:17).

## Religion and Spirituality

Blaisdell (1989) has summarized the cosmology and logic of Hawaiian beliefs which link man, nature and the gods:

Kanaka Maoli believed that the cosmos from the beginning and forever Evolution of species from simple to complex forms Kaku'ai, dedication Great men become chiefs and great chiefs become 'aumākua Acquisition and enhancement of mana Loss of mana leads to misfortune Palua, dualism of complementary opposites in nature Pono, order and harmony Kapu, sacred tabu Lāhāhi unity, interdependence, with ancestors, gods, their kino hau and nature world Self-reliance Death as a reunion with ancestors Kino lau, multiform reincarnation of a god Mau ke ea o ka 'Āina, maintenance of the life of the land Mutual mōlana and sharing of produce Harming others or nature is harming oneself

Native Hawaiians should be able to practise their religion. In the opening lines of the Kumulipo, Native Hawaiians trace their origin to Kumulipo (the dark source) with the mating of Wakea, the sky father, and Papa, the earth mother, from which everything in their cosmos was derived including the *'āina*. Species gradually evolved from simple to

complex forms (Blaisdell 1989:1). All things in the cosmos are thus alive, connected and sibling, and must respect each other to attain *lāhāhi* (harmony in unity) (Blaisdell 1990). The conception of nature as sibling remains of value to many Christian Hawaiians who no longer believe in the *kapu* system.

## SELECTED HAWAIIAN PRACTICES

### Burials, Tapa, and Kūiō

Certain traditional Hawaiian practices such as burial have disappeared. The loss of the traditional religion and language, the abolition of the *kapu* systems, and the subsequent advent of Christianity are remote reasons. The use of Christian mortuaries and cemeteries and Western public health regulations are recent reasons (Kimura 1990). Yet, traditional practices can be quickly revived if the traditional values are still cherished. The recent opposition by Hui Alanui O Mākena to the disintering of more than 900 Hawaiian graves for resort development at Honokahua, Maui, is a case in point. The opposition of the *huli* has not only prompted others to stop such desecration, but has also helped to re-establish Hawaiian protocol for the proper handling of ancestral bones (Adams 1990).

This protocol for reinterment includes wrapping the bones in tapa. A recent effort to make Hawaiian tapa involved participants from other islands who flew to Molokai. An appropriate *heiau* was cleared and prepared for the occasion and many people were on hand to help. These activities have arisen from the determination of a number of Native Hawaiians to treat properly their ancestral graves and bones, by the perpetuation of Hawaiian culture, and by the individual efforts of people such as Pua Kanahale to save and cultivate various Hawaiian plants to make different types of tapa. The plants come from various places, such as 'ao valley, Maui. To the extent that land for growing plants is made available and protected, dedicated Native Hawaiians would be able to produce tapa without having to resort to procuring tapa from the South Pacific. The revival of the tapa manufacture in Hawaii is a possibility. Another Hawaiian practice connected with funerals and burial is *kūiō* (wailing). Wailing shares the burden of grief (Kawoa 1982:23) with inspiring and beautiful poetry (Bailey 1990). Ceremonial *kūiō* was

brought to the public by Kamaki Kanahale during the ceremony for Senator Spark Matsunaga at the Hawai'i State Capitol in April 1990.

## Hula

*Hula* has survived antiquity with its language, poetry, music, dance, genealogy, and religious meaning. *Hula* perpetuates and teaches in Hawaiian language the chronology of a people and its places. It helps Hawaiians to re-establish links with their home and their ancestors. Hawaiian culture and the arts are a good foundation for education of the Hawaiian child as a whole person, so that learning does not take place in compartmentalized ways, but in relation to the child's environment. Children need the outdoors and need to experience nature in many ways, in its meaning, symbolism and aesthetics. Young bodies and young minds can grow together harmoniously through storytelling, play, observation, comprehension, and experience. Contact with nature is needed to move back and forth from group activities to personal and quiet situations (Bailey 1990).

Protection, management and access to ancient *hula* sites such as at Kē'e, Ha'ena on Kauai and at Kā'ana on Molokai is important. This access must be realized through merging various ideas on management of historic and cultural sites, including elements of the State of Hawai'i Curator Program and the *kapu* (guardianship program) envisioned by Hawaiian cultural groups. Proper maintenance and access to these places would benefit not only local *hānau* (groups), but also *hānau* from the mainland which welcome the opportunity to dance on the *hula* temple. They are in touch with the sacred rites of *hula*, the sacredness of the temple ground, its natural beauty and its history. These sacred places have survived, but they need protection. For example, because there is no *kapu* yet on the premises at Kē'e, Ha'ena, various people desecrate the place, leaving inappropriate things behind. The *hānau* Ka Imi Nā'aua O Hawai'i Nei periodically clean and *ho'oponopono* (make right) the place. All this is avoidable with a proper *kapu* in residence (Bailey 1990).

## Religious Aspects of Fishing Practices

Fishing on the open ocean was dangerous, unpredictable and difficult. Safe return and a good catch of fish involved prayer and

magic. Fishing was associated with religious ceremonies and worship of the god of fishing at the *kōwata* and *kōya* (fishing shrines along the shore where the fishermen would assemble in the evening and spend the night in the *imua* (sanctuary), before going to sea. On returning they would assemble around the *kubina* who would perform prayers and make food offerings on the *lāle* (altar). Religious ceremonies, centered especially around the fish *qūqū* and *ālu*, were repeated every fishing season and were part of the Makahiki observances. The *ālu* and the *ālu* *ta* both played crucial roles in the *luakini* temples. In addition sharks and *ālu* were both claimed as *ʻaumakua*. Some *ʻaumakua* (deified spirits). Most sharks who had become *hoʻālo* at *ālu* (supernatural beings) were people who had been changed through an elaborate ritual into forms of their ancestors. They were *kino lala* (direct incarnations of the gods), recognizable by special marks on the cheek or the sides. A relationship of mutual protection existed between an *ʻaumakua* shark and its *kahā*, and even his descendants, provided that its *kāpu* were observed. A *kahā* would feed a shark *ʻala*, pigs, and bananas, and the shark would become his *pūpūia* (defender), help steer the canoe in the right direction, protect him from attack by other sharks by carrying him ashore and lead fish into his net. The people of Maui did not eat shark meat, but worshipped the shark and felt protected by it (Kamakau 1976:373-91). The *kāia* (guardian of all the fishponds were the *mōʻo* (water spirit), the *kāia* *qūqū* (incarnations of the gods) by the Oʻahu. The *mōʻo* would keep the fishpond well stocked with fat fish and pearl oysters, provided that the *konoaho* (land agency) properly honoured the guardian of the fishpond and assisted the poor and fatherless (Kamakau 1987:84).

**SACRED SITES, LOCALITIES, AND STRUCTURES**  
Sacred Localities and Places

Certain areas and places are important because of their sacredness. They have spiritual power because of the presence of the *aktua* and the *'aumakua*. These places have *mana* and are beautiful. The cults of certain gods were prevalent in some localities because that is where the *kino lau* grew or lived.

- 1) Kāne, the god of the creation chant, the life-giving god, is associated with taro, sugar-cane, and bamboo. These plants grow well in the best farming localities where systematic irrigation can be

established. These are the lands of the common people, administered by the *koroniki* for the chief of the *ahupua'a* (land division), the windward coasts and the valleys on the leeward side of Kauai, Oahu, and West Maui, where streams exist and water is available. Kanaloa, the god of the ocean, is associated with banana, squid, and marine life.

- 3) The practice of fishing and god of war, is associated with *coco* (Kū), the patron deity of the Hawaiian Islands. Organized fishing was the prerogative of the *nui* and *ariki* (chiefs) who could presump the best fishing grounds, such as *atū* (fishery) and *Wā'anae*. Fishing shrines along the coast marked Kona, Kū'i, and Wā'anae. Fishing shrines along the coast marked these fishing grounds.
- 4) The practice of being of historical existence, was also the god of Lono, the rain deity, visible on the top of the islands. Lono was also associated with sweet potato and gourd, which were suitable for cultivation in the drier areas of the islands. The cult of Lono was predominant in those areas, such as Kona on Hawai'i and the Uluakapu on Maui, where temples were dedicated to Lono. The Uluakapu was the food of the common people.

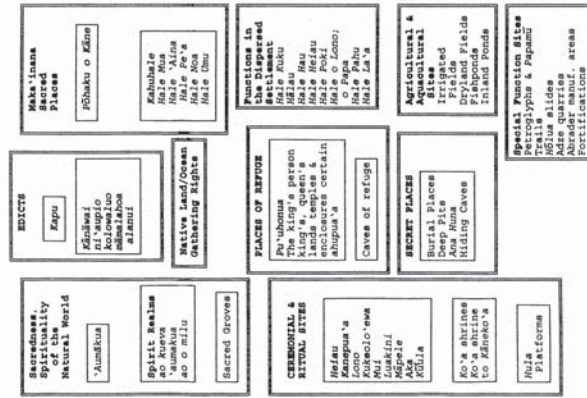

Additional gods would appear and inhabit forests, groves, stones, and *kino lau* in animals, birds, fishes, and natural phenomena. There is a need to recognize the gods and ancestral spirits that legends and traditions associate with sites and localities, establishing their sacredness, and to preserve and protect and archeological significance.

## Sacred Sites and Structures

Sacred sites and structures include the ceremonial and ritual sites of the official religion for chiefs and priests and the sacred places of worship for the common people (figure 4). Sacred sites include groves, lands, caves of refuge, and other places, including Pöhrä o Käine (sacred stones). Sacred structures include temples, *hulla* platforms, and certain stones of the *hainulu* (family compound).

## Heian

The *heiau* is the traditional Hawaiian religious temple. There are many *heiau*, built for different reasons, by paramount chiefs, lesser chiefs, prominent persons, and common people. They varied in size (Bennet 1930). The large ones involved major mobilization of labour. There were *heiau* for the official chiefly religion, agriculture, fishing, and other

[illegible]

### Ko'a Shrines

*Ko'a* shrines were set up to increase the amount of deep sea fish. *Ko'a* shrines to Kāneko'a were set up along the banks of rivers, streams, the coast, and inland ponds to increase 'o'ou (lobster).

## Family Shrines

Family shrines included the *Fukuhaku* or *Ki-no*, which were family shrines of the *mukai* (ancestors) to make offerings and to ask forgiveness and the *Hite Mita*, a miniature house for daily offering and prayer. The stone of *Ki-no* was called *shimada*, a gate to heaven, for each family. The stone of *Ki-no* generation. It was a single stone monument from a family from the same generation. They were placed about. There the *shimada* (stone) with *ti* and other greenery planted about. These families had to obtain relief from illness, death, or misfortune caused by these things that had been irreligious, careless about *kapa*, or had performed defiling actions. They went to the *Fukuhaku* or *Ki-no* to make offerings to their wrongdoing and to pacify the god. Rituals and family purification involved food, pigs, *uma*, *tapa*, and *awa* ceremonies. The stone of *Ki-no* was a stone pointed out by the god in dreams, visions, or by leading someone to the spot. There were many stones of *Ki-no* in an *ahunui* (Kamakau 1987:32-33).

## Hula Platforms

Sacred *bula* platforms include the Hālau Hula at the Kē'ē, Hā'ena, Kāua'i complex and Kē'ana on Molokai.

Many *kubua* are appropriate to build temples for various purposes and for many gods, on hills, ridges, valleys, headlands, level ground and specific island locations and orientations. Throughout the islands there were many *kuabui* (altars) for the many gods and their incarnations: sharks, fish, *mo'o*, thunder, lightning, earthquakes, spirit of the volcano, the sun, the moon, stars, fire, etc. (Kamakau 1976:129-147, Stokes 1991).

There are famous burial places of chiefs who ruled well, high priests and *ahuna*. For example, the bones of *Puao* are buried at Puao-*ka* in Kohala, Hawaii. Graveyards are well known throughout the islands. In the past, the bones of chiefs and nobles were buried in the bones of family and relatives, together with their treasures and possessions. Puhakua is a famous *ahuna* *huna* on O'ahu. Toa is another place at Olopo on Maui. *Ki'a'awa* is a deep pit inside the crater at Haleakala. To fulfil the *mana*, the last will of a loved one, the bones would be transported over long distances, even from one island to another. Sometimes a sick person close to death was secretly taken and buried in an *ahuna* (Kamakau 1987:3, 38). Bowen (1961:72) has identified ten major methods of disposal of the dead employed by Native Hawaiians: exposure; cremation; sea and fresh water; pit or volcanic cave; monument; burial; pits/utens; and house.

Excavation at the pu'uhoua at Hōnaunau, Kona, Hawai'i has revealed artifacts of both uniquely Marquesan form and uniquely Society Island form. These findings support the hypothesis of early arrival in Hawai'i, first from the Marquesas then from the Society Islands. There is also a remarkable uniformity in type of artifacts found in sites on Oahu and at Hōnaunau. Inherent types consist of: 1) monument disposal, platforms or oval stone monuments; and 2) open site, crypt disposal, and cave disposal (Soehren & Tuohy 1987:215, 219-220).

Additional functions in the dispersed settlement with spiritual or religious value included: *bale kuku* (for beating tapa), *bālau* (for canoe), *bula* instruction, meeting house, *bale hau* (for healing the sick)

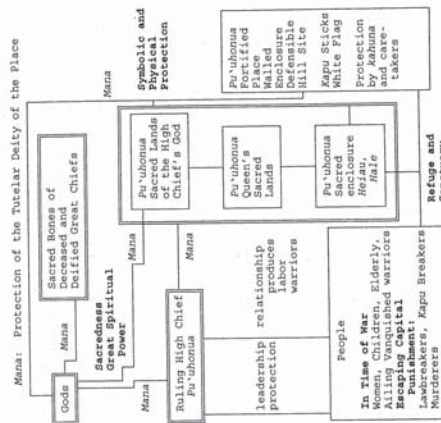

Figure 5. *Pu'ubonua*: Sanctuary and Refuge.

See Kamakau 1961 & 1987 Kelly 1957. Ellis 1969.

*bale betau* (for keeping images), *bale poki* (a shrine where bones of dead chiefs were kept), *bale o Lono* or *Papa* (the respective god), *bale pabu*, drum house, place of refuge; and *bale la'a* (dedicated to a god).

*Pu'ubonua* - the Ruling High Chiefs and Queens

*pu'uho'uwa* were sacrosanct, inviolable places of refuge, where one could be safe from death or capture. The relationship of the ruling high chief (the *pu'uho'uwa* king) to the gods and the people explains the concept of *pu'uho'uwa* as the idea of asylum, the high chief's removal from the people and his subsequent return. The high chief's position was one of authority, productivity, and obedience, and he gave them leadership and protection (Fig. 5). The high chief's position and his accompanying *mana* were inherited from his deified ancestors; his power to spare life and extend mercy regardless of guilt (Kacy 1986:39). The king was called *pu'uho'uwa* because one could run to him and be safe. By him, the king and his very person were *pu'uho'uwa* (Kamakau 1987:17-19). When Liloa, the son of the sacred and ruling high chief Liloa, was 17-19 years old, he was sent to his father's house to help him. He was sent to be speaking to meet his father for the first time, broke the *kapu* by killing the king's *pu'uho'uwa* sticks and jumping over the wooden fence of his father's compound, beyond which commoners were not allowed, he saved himself, and immediately fled by leaping and sitting on Liloa's lap. He was later recognized by Liloa as his son (Kamakau 1961:7). Ka-hakeli, a famous *pu'uho'uwa* chief, was so sacred that whatever touched his body was hallowed. He was so sacred that no one else could use it. Half of his body was taken from his back to feed any person who committed a crime and passed his back side escaped with his life (Kamakau 1961:160).

The king's queen and his gods were sacrosanct; therefore, their grandsons were sacrosanct and were *tina pu'uhoia* (kinsmen of relatives). Ka'ahuana, the favourite wife of King Kamehameha I, was also *tina pu'uhoia* Kamehameha (1787-19). Her body was made *kapa* (X-rayed) by *pu'uhoia* Kamakau (1787-19). Any condemned person could be saved if *pu'uhoia* said good word. All lands of his Queen Ka'ahuana and his god, Kūka'ilimoku, were made *pu'uhoia*. Because of the close association of a *pu'uhoia* with a high chief, *pu'uhoia* of chiefs who lost in war fell in disrepute and were abolished and new ones were established by the victorious ruler such as Kamehameha I. However, when Ellis visited the Big Is-

land of Hawai'i in 1823, two places of refuge had their sacred *hale* still standing and under strict *kapa* in spite of the abolition of the *kapa* in 1819. Ellis was unable to gain access to the site of the *hale* of Rewai in Hawaii, but he did visit the site of the *hale* of Kaula, which was located on the Hawaiian coast, on the way back to the Hale o Liloa and its sacred enclosure in Waipoua Valley of the chief Iliia who reigned fifteen generations before Kamehameha I (Ellis 1979:165-166, 263). On Kaula's *pu'u honua* were probably never abolished because Kamehameha I did not conquer that island and the hereditary chiefs of Kaula had ruled there many generations back (Kamekua 1987:17).

No blood could be shed at a *pu tubonua*. They were open to all: a those who avoided war, women, children, old or ailing people of the neighbouring districts (Ellis 1979:168); b) vanquished warriors escaping their pursuers, and c) lawbreakers and *kapu* violators who were escaping from capital punishment for breaking the law or from the vengeance of the people they offended (Kamakau 1961:312-313). In time of war a white flag was unfurled atop a long spear at each end of the sacred enclosure to mark clearly the *pu tubonua* (Ellis 1969:167).

The literal meaning of *pui'uonua, pui'u* (hill and Moles) that may have originated from hill fortresses such as the hill on Molokai that protected the inhabitants from invaders coming from Maui. The heavy walls at Hōnaunau is an indication of this physical protection (Gell 1986:82). Gell measured the enclosure as 715 feet in length and 404 feet wide. The walls were 12 feet high and 15 feet thick and contained three large *baitai*. The priests and their adherents would immediately kill anyone who had the temerity to follow or molest those who were within the enclosure. The *pui'u* was a sacred enclosure under the protection of the tutelary deity of the place (Ellis 1969:168-169). The *pui'uonua* was a portion of the *ahupua'a* (*ahua* district), like Kailua and Waikāne valleys for the *ahupua'a* *o* *kauna* (Molokai 1987:18). That is, the Kōlaupoko district was not only a site of refuge, but also a large portion of the mountain to the sea, where water, food, fiber, etc., could be obtained for people who took refuge there. Other

A key to cultural identification for an individual is a sense of place, a familiar connection with specific geographic areas and sites which have emotive, genealogical, and historic meanings (Flores 1990). Ancestral lands are such places for Native Hawaiians. *Kūlanā* are one type of ancestral land that include *ʻāina* lands, sanctuaries and places of refuge (M. Ryder 1990). Although few and scattered, the *kūlanā* lands remain important and *hānau* (prestigious) fee simple possessions for the Hawaiian family. Ancestors lived and worked on those lands and are buried there, creating a sense of place for a descendant and strong identification with the site. *Kūlanā* lands were usually fertile, well cultivated for generations, good for growing taro and wa abundant

water. Hawaiian artifacts may still be found there: irrigation and drainage ditches, *lo'i* (irrigated taro patches), house sites, burial grounds, family shrines, and sacred stones. Because Hawaiians liked fruits and shade, old giant trees such as mango may be on the site. The *kūlanā* lands are beautiful places, great family assets which need to be protected from alienation to non-Hawaiians. They need to be restored and put into uses compatible with the Hawaiian culture (K. Ryder 1990).

Originally, the *kūlanā* were awarded by the kingdom only to 9,337 commoners (one per cent of the people) who were able to prove they were already cultivating the fields at the time of the 1850 Kūlanā land act. Fewer than 30,000 acres were actually awarded, in parcels smaller than five acres. Many *kūlanā* lands were subsequently lost by the Hawaiian aristocrats or their heirs for several reasons. *Kūlanā* were abandoned because they were too small to sustain a family when the rights to gather, to pasture, and to grow crops on nearby idle land were not allowed, and when access to water, or to the parcel itself, was cut off by neighbours. Other *kūlanā* were lost when large landowners paid the taxes and took adverse possession of them after 20 years (Kelly 1980). Today *kūlanā* owners face interlocking problems: diversion of water, inappropriate zoning, high taxation, unknown heirs, multiple owners, difficulties in the identification of boundaries, and lack of access (Senate Bill No. 2057-82, Relating to Kūlanā Land).

A number of steps need to be undertaken to protect the remaining *kūlanā*: a) a study to identify these lands, their heirs, and impediments to their use; b) legislative protection of *kūlanā* as inalienable ancestral land so that they will not be sold to non-Hawaiians; c) descendants and heirs should be assisted to form a *hui*, or *'ohana* trust, to keep the property in the family; d) a relative should be encouraged to act as *kāhu* to live and work on the site; and e) members of the *'ohana* retain access to the site for reunions, festivities, parties, short-term visits. They can also participate and share periodically in the cultural and productive activities connected with the site, such as harvesting and planting taro. If this is not possible, at least it should be ensured that the *kūlanā* are sold to Hawaiian relatives or to Native Hawaiians who can farm them, so that they remain in Hawaiian hands.

Because of their beautiful setting, taro cultivation, ancestral burial grounds, and sacred places, restored *kūlanā* are ideal for visits and retreats. School programmes for children need access to the ocean and the land, the *kūpana* programmes need to be presented in a setting not

limited to the classroom. In fact some *kūlanā* have been opened successfully to outside visits. School children have been involved in many aspects of the Hawaiian culture, such as gathering *limu* (seaweed), cultivating taro, going on streamwalk and maintaining the graveyards. If proper *hānai* are built on the lands, additional programmes, such as *hula* and *kīpuna*, can also take place there. For the *kīpuna*, the elderly Native Hawaiians, visits to *kūlanā* are especially important as they remind them of familiar settings from their youth. Such an environment helps them to remember the past and share their Hawaiian knowledge with the younger generations (K. Ryder 1990). The *kūlanā* are also economic assets. They can provide affordable home sites, taro cultivation and flower production. Conducting on-site cultural/educational programmes open to children, the elderly and other target groups, would further complement income generation of *kūlanā* owners, as they would be paid for by the appropriate Hawaiian service agencies.

#### COMMUNITY BASED PROJECTS AS THERAPY

Some Native Hawaiians become uncomfortable with their own culture. Because of the outside pressures of the dominant society, they are no longer sure who they really are. The result is alienation, drinking, drug abuse and even violence in their own family and in the community. The perception of some Native Hawaiians, who have always lived in Wai'anae Valley, or who have taken refuge in Wai'anae after being displaced by the development pressure of the growing Honolulu metropolitan area, is that Wai'anae is their last place of refuge. They also feel that they need appropriate economic development options because they are in a depressed area. But 'their backs are to the wall' because most of the local land resources are owned by outsiders or used by the federal government and the state. In addition, development pressure is increasing with the encroachment of the massive West Beach Resort, which is likely to have adverse impact on Wai'anae, with cost of living increases, water shortages, environmental and resource depletion, displacement of people, etc.

Stressed individuals and families have needed assistance in Wai'anae. Particularly they need to learn self-sufficiency skills through community based initiatives which could help avoid welfare or drugs. Unfortunately, the bureaucracy is not set up for such a task. Grass-

roots groups are essentially outside the system. They are practically 'outlaws' because it is quite difficult to secure a land base or government lease, to access water, to build structures, to live on the site as *kāhu* (guardian), to obtain a loan or a grant and so on.

Some community leaders in Wai'anae have acted on two fronts. They have established Hawaiian culturally compatible alternative community based projects to provide needed services and work opportunities to the residents, and they have opposed inappropriate resort development encroaching on the coast. (In the late 1970s a small group of Native Hawaiians seeking to rediscover the Hawaiian culture rooted in the *āina* and *kāi*, started the 'Opelu Project and the Kāala Farm Inc. (Enos 1990).

The 'Opelu project is a culturally based initiative of Hale Ola O Ho'opāhale, a mental health counselling and training programme to help hard-core unemployed young Hawaiians become self-reliant. Young people are taught to catch fish, then sell it to the community. Improvements include an ice/chill house and a small-scale food processing centre, marketing, and fern cultivation. Focus is on the development and distribution of community resources, use of appropriate technology, and protection and restoration of local natural resources. The psychophysical well-being of people and their cultural and economic health are fostered through the appreciation of traditional Hawaiian concepts of *aloha āina*, *lāwāhi* (co-operation), and re-establishing the relationship between people and the *āina* and *kāi*.

The Kāala Farm Inc. started because traditional counselling had limited impact on alienated Hawaiian youth, who have an affinity with the *āina*. Community economic development was to be achieved by the self-sufficient farm and personal growth, and self-reliance through the youth oriented programs. The five-century-old *lo'i* and *'auwai* (old irrigation systems) were cleared by hand then restored, and dry land agricultural acreage was expanded in the upper Wai'anae Valley. Hawaiian younger people have used the farm and the Wai'anae Rap Center, alternative sentencing, youth employment programmes, Queen Lili'uokalani Children Center, and other activities. The farm produces taro, luau leaf, *ti* leaf and watercress.

The Wai'anae Land Use Concern Committee (WLUCC) for many years opposed the resort development project but it finally agreed with the developers. The result was the creation of the Wai'anae Coast Community Alternative Development Corporation (WCCADC), supported by

a grant from the West Beach Estate. The WCCADC is engaged in three projects:

1) A master plan promotes small-scale enterprises to meet community needs.

2) The Backyard Fish Farm Project allows families to grow fish in tanks in their backyards to improve diet and to generate income. Fish increases the nutritional value of families' diet and surplus can be exchanged or sold in the community. Thus families become more self-sufficient, they work for their own livelihood, and some money circulates in the community.

3) The Mānoa Aquafarm Project establishes an integrated aqua and terrestrial farm on 60 acres of land to provide training, employment, fish protein, and culturally and environmentally compatible locally based development.

These bottom-up projects, relying on help from volunteers, act as 'community anchors' that link people to places through work and better access to, and use of, community resources. They are located in places already familiar to people, where they feel comfortable, such as the church, the school, the clinic, etc. These places are also sanctuaries; there is a feeling of trust and people go there for help. They are more than meeting places; they are places to work together, to link up and reconnect people and to generate some income. These projects revolve around work. People need work; work is medicine, part of the process of healing. Through culturally compatible work, people retrieve their roots, become self-confident and self-reliant. There is a need for places, for land, to reconnect with the *āina*, and to rediscover its symbolic meaning: 'ai (to eat); *kāma-āina* (familiar with the land); *hōa-āina* (friend through the land); *kūa-āina* (the common people as back bond of the land) and *maka-āina* (the eye of the land) (Burgess 1990).

In sum, there is a need to empower Hawaiian people enough so that their traditional view of *aloha āina* is somehow re-established through better access to, and use of, local human and natural resources. Some degree of production of goods and services and income generation must be made possible at the rural community level. These programmes have evolved from services for alienated youth to a broader constituency of beneficiaries and families. The programmes themselves, and the sites where they are located, also attract local and international visitors. They are recognized as community based assets and model projects. The need for community based development of a community

the size of the Wai'anae coast, however, cannot be met with the limited level of funding currently provided by the West Beach Estate. Greater public and private support is required.

## MANAGEMENT ISSUES OF HAWAIIAN SANCTUARIES

Native Hawaiians need to be reminded of another Hawai'i, another time, another way. Places, sounds, rituals can bring it back to life (Wong Morrison 1990). Sanctuaries must be available on each district of every island. How many depends on the historic existence of sacred places with *mana*; the quality of the natural environment; size, density and distribution of the Hawaiian population, and the need for such places, so that old ones are restored and new ones put into use. These places, such as Waip'o, Kahana and Waipua require a protocol for entry and use, so that a limited number of people, the *kahua* and workers, could live there. The number should not exceed a few dozen Hawaiian practitioners in each *ahupua'a*.

The protection, restoration, and creation of sanctuaries must be phased in with the demographic realities of a decrease in Hawaiian blood quantum in mind. This should be seen as added incentive to teach the Hawaiian culture to a broader population who can learn that, for Hawaiians, nature is an all-encompassing state of mind. With increased cost of living, overdevelopment, and population pressure, the sanctuaries must remain culturally and economically viable. Remoteness, isolation, single access, entry protocols, and rites of initiation are assets to sanctuaries because they protect them. Although refuge must be easily and quickly reachable, sanctuaries can be more inaccessible. In fact a valley, an *ahupua'a*, could be divided up with decreasing degree of accessibility and increasing status of pristine conditions and sacredness. The idea of sanctuaries should be legitimized within the National Park System, the Department of Lands and Natural Resources and the Department of Hawaiian Home Lands. A State process must be created which would establish a Native Hawaiian Sanctuaries Advisory Committee. Private sanctuaries should be supported and facilitated by local communities to save Hawaiian temples from the encroachment of tourism, such as Pa'a Curatorship in Kauai. The Temple of Lono would like to reclaim the sacred lands at Kula on Oahu. Moreover proposals are being made to reclaim sanctuaries and the places of refuge as key steps

toward Native Hawaiian sovereignty. Hul Nā'uao, a sovereignty coalition of Native Hawaiian groups, has advocated the *pū'uhonua* concept as a spiritual and cultural land base.

The indigenous knowledge of the Hawaiian sanctuaries and places of refuge encompasses a spiritual and evolutionary view of creation; a deep relationship of people, nature and all living things; the importance of an orienting force; spiritual power, sacred laws; deep understanding of the living aspect of ecosystems; and the power of healing and redemption of the sanctuaries. The enduring value of this Hawaiian knowledge includes the belief in self, god and nature, the psychosocial aspect of human relationships, sharing, dreaming, touching, the role of the extended family, healing methods, and a psychic relationship with natural phenomena and the living and nurturing earth.

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Ms. Gardner,

Mahalo nui for your comment card from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments as numbered per your letter:

A. No advertising of the area is proposed as a part of this master plan.

1. We recognize your comment regarding a proposed shuttle service in the master plan. The preferred scenario described in the Master Plan proposes a combination of shuttle service to the park with parking on-site as part of Phase I of implementation. While State Parks is unlikely to initiate its own shuttle service, several options for a shuttle system are identified in the Master Plan including extending the County public transit service to Kē'ē, contracting with a third-party operator to provide the service, or allowing independent private shuttles to stop at the park, or a combination of the above. The Master Plan identifies a shuttle stop in the proposed Master Plan with sheltered seating areas along the turnaround at the entry to the park. The turnaround should be designed to allow other vehicles to pass while shuttles are stopped at the shuttle stop in order to reduce backups and congestion along the highway. In order to encourage ridership, the shuttle service should be initiated in Phase I and the parking lot should be sized appropriately. Various management strategies including parking and entry fees, point of entry tickets are also discussed in the Master Plan report to provide a range of options to support the shuttle. Please see the "Shuttle Service" attachment from Section 4.3.3 of the Final EIS which shows the verbatim changes from the Draft EIS for this section.

2. We also recognize your comment regarding limiting access to the park by user group. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. Please see the "Visitor Limits" attachment from Section 2.5.4.3 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

Ms. Dina (Satya) Gardner  
SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL  
IMPACT STATEMENT (EIS), HĀ'ENA, KAUA'I, HAWAII  
Month XX, 2018  
Page 2

3. We recognize your comment regarding the funding of a proposed shuttle service. The funding of a proposed third-party shuttle service is not part of the State's park budget. Future third party shuttle services will need to produce their own private funding sources.
4. We also recognize your comment regarding the route of a proposed shuttle service. Please see our response to your comment 1 for additional information regarding proposed shuttle service routes.
5. We recognize your comment regarding the park entry fee. Entry fees for state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Other categories of fee exempt park users (such as registered volunteers) may be established at a later time. State Parks will continue to work on the different options with the advisory committee and could include a variety of options as long as they do not violate the federal Land and Water Conservation Fund rules, which allow charging different fees for residents and nonresidents as long as they are comparable to current fee differences between the two.
6. Advertising the park on television is not included as a part of this master plan.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at: [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-Park-Master-Plan.pdf) on 11/15/2018.

We also acknowledge your comments suggesting an EIS to address comprehensive parking concerns extending from Ke'e Beach to Hanalet. The County of Kaua'i is in the process of updating the general plan and regional development plans. While the suggestion is beyond the scope of the Hā'ena State Park Master Plan, the revised plan aligns with the corresponding aspects within the existing County plans. Please see the attached Section 5.4.1 and Section 5.4.2 from the Final EIS describing the corresponding County plans.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. Krieger,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support for the aspects of the master plan for regulating vehicle access. We recognize your concerns regarding potential limitations to local resident access. The revised master plan calls for an adaptive management approach for the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The limits will also be instituted only during peak hours of park use and will allow visitors to enter before and after without being counted against the visitor limit. Therefore, access will be allowed into the park outside those peak hours and will be adjusted as appropriate based on ongoing input from the community. There will also be exemptions from the visitor limit total for special user groups from the community. Please review the attached Section 2.5.4.1 and Section 2.5.4.3 from the Final EIS describing the visitor limits and adaptive management approach.

In response to your comments supporting requirements for vehicle permits, the revised master plan includes a park entry fee structure. While there isn't distinction exempting local residents from the proposed visitor limits, the revised plan includes designated exemptions from park entry fees with a proposed parking separation into a fee-paying lot and non-fee-paying lot. Entry fees for state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Similar fees could be instituted at Hā'ena State Park, however, State Parks will continue to work on the different options with the advisory committee. More details on parking can be found in the attached Section 2.5.1.1. In response to your comments on a visitor shuttle system, the new main park entry improvements described in Section 2.5.1.1 of the Final EIS include facilities with shuttle stops designed to support the recommended shuttle service proposed.

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.  
(If you would like a written response letter, please include your mailing address.)

Day or half day of rest for park?

Maintain an area that truly is allowed to run wild...

P.O. Box 223884  
Princeville, HI 96722  
SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. Ferrato,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comments and suggestions regarding periodic rest for the park and preserving the natural features. The revised master plan includes significant changes and minimal physical improvements to preserve the natural beauty of the park as described in Section 1.9.1 of the Final EIS, attached for reference. The master plan includes many aspects to restore the natural environment of the park as well as designated preservation areas.

In response to your comments on "rest" for the park, the revised master plan calls for a soft limit approach for the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The soft limit with averaged visitor counts will allow for adjustments for potential park closure days. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Please see the attached sections on Visitor Limits from the Final EIS with more details on plan revisions.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Parks-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Parks-Master-Plan.pdf) on 2018.

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.

(If you would like a written response letter, please include your mailing address.)

This is not good for the island or the local residents.

The state needs to show irrefutable proof that Hawaii is a state of USA.

Illegal occupation.

My name is Steve McMenamin. I think access should be limited to preserve the reef. Unfortunately the planet is getting crowded and everyone wants to touch the beauty of the park. That access must be managed. Once the reef is gone, no one, even natives will have any rights of preferred access. We all mourn the loss of traditional Hawaiian spirit in some cases. In this case access to the park should be restricted for the benefit of future generations. Locals and tourists will get used to the limitations and the process. In 18 months everybody won't remember what it was like before. This issue is a generational imperative

W. Megeso Denis  
P.O. Box 201  
Kapaa, HI 96746

**SUBJECT: COMMENTS ON THE HÄ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÄ'ENA, KAUA'I, HAWAII**

Aloha W. Megeso Denis,

Mahalo nui for your comment card received at the public meeting held on August 19, 2015 regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns with the Hä'ena State Park Master Plan from the perspective of local residents. The draft version of the Master Plan has been revised to reflect feedback received from the community. Please see the attached **Master Plan Summary** from the Final EIS for reference to review the revisions to the plan.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018\\_KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018_KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 8/27/2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

Month XX, 2018 - DRAFT

Mr. Steve McMenamin  
5-7130 Kuhio Highway, Unit J-4  
Hanalei, HI 96714

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Mr. McMenamin,

Mahalo nui for your emailed comment dated August 20, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the visitor limit aspects of the master plan to manage access to the park. We recognize your concern with preserving the reef and comments in favor of restricting access to maintain the natural qualities of the park. The revised master plan proposes the 900-person visitor limit as an initial number which can be adaptively managed and adjusted as appropriate, especially if there continues to be unwanted impacts at the park. If there continue to be issues, State Parks will work with the advisory committees on adjusting the number. Please find the attached section from the Final EIS describing the proposed Visitor Limits.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://ceq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-KA-EIS-Haena-State-Park-Master-Plan.pdf](http://ceq2.doh.hawaii.gov/EA_EIS_Library/2018-KA-EIS-Haena-State-Park-Master-Plan.pdf) on 2018.

To: lauren.a.tanaka@hawaii.gov  
Date: 08/21/2015 04:55 PM  
Subject: Less is more: Haena State Park

---

dear Lauren Tanaka,

Less is more, a famous quote that is useful in thinking about Haena State Park.

No gate, no moving the road, no board walk, no cultural center. Yes, fewer tourists.

Too many tourists is a big problem everywhere past the Hanalei Bridge. We cannot absorb all the people who are coming, or show them the culture of Hawaii or the way of aloha. There are too many of them and Kauai is small and fragile.

We are longtime residents, one of us from a family here for many generations. We live about a mile from the park. For us to go to the end of the road, we must go there and leave before 7am or arrive after 4:30pm, before most of the tourists come and after they leave.

Haena State Park was always a favorite park for local families -- swimming, fishing, family picnics and camping and hiking. Local families like camping and the beach and all that it involves; meeting at the end of the road for a family activity or gathering of friends to watch the sunset was part of our way of life. But, for the past 12 years or so, the state's emphasis on building ever larger numbers of visitors has resulted in changes that are restricting our access to and enjoyment of the park.

Far too many visitors have been encouraged to come here and they have taken the park from us. We deserve to be able to use our park; we want it back. We cannot support a plan that includes putting up a gate and making it more difficult for us to enjoy our neighborhood. This proposed plan is not an inevitable solution to the problem the state and county have created.

Save money, don't move the road. Rocks don't fall on your head or car, they roll down the hillside. I ride my bike to the end of the road every morning and have never seen a rock fall from above onto the road, and have never seen a rock in the area in front of the wet cave where access is blocked and multiple ugly signs say "rock zone." This is not true, no rocks, not one.

The state park does not need a board walk or a cultural center and we don't either. Please, think low impact on the environment. Don't build, don't put signs, don't have classes. The place speaks for itself, and it's voice is

eloquent.

If any of your advisory board members live in our neighborhood, or even this side of the Hanalei Bridge, they can tell you our parks are overflowing, bulging at the seams. Visitors barred from the state park cannot go to Haena Beach or Lumahai or Hanalei, as your plan suggests, because those parks are filled far past capacity. Bathrooms are overused and closed daily. Portable toilets are added — permanently. Our parks are dirty. People camp on the beach without permits and use the beach as a bathroom.

We are concerned that preserving traditional resident use of Haena State Park and the surrounding areas does not receive a level of attention and concern similar to that given to tourism, and that mention of local resident use seems an afterthought.

Let's take care of what we have and not build anything. We ask you to remember less is more.

sincerely

*Carol & David Kuraoka*

Ms. Carol and Mr. David Kuraoka  
SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL  
IMPACT STATEMENT (EIS), HĀ'ENA, KAUA'I, HAWAII  
Month XX, 2018  
Page 2

The master plan has been revised and does not include a cultural center. Only a few new structures are proposed, including a Welcome Hale that is envisioned as an open traditional Hawaiian hale and located near the improved main parking lot. The boardwalk has been modified in the revised master plan. The new pedestrian pathway follows along the first berm of the lo'i closest to the highway and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources. Please see the revised Figure 1 Master Plan graphic and the "Pedestrian Path" attachment from Section 2.5.1.4 of the Final EIS which show the verbatim changes from the Draft EIS.

We recognize your concerns regarding overcrowding and overflow to other parks in the north shore area. We recognize negative effects of the master plan may include the distribution of recreational demand to other facilities on the North Shore and island-wide, especially the nearby Hā'ena Beach Park. State Parks should monitor use of Hā'ena County Park to judge if the recreational demand is shifted from one facility to the other. If so, an adjustment to the number of visitors allowed per day to Hā'ena State Park might be considered as a mitigating measure. If a shuttle is employed, a mitigation measure may be to include a stop at Hā'ena Beach Park to alleviate traffic and congestion at the County park as well.

We recognize your concerns regarding bathroom capacity at the park. As a part of the master plan, new public restrooms are proposed outside of the hale near the main parking lot. This second set of restrooms will help reduce the use of the Kē'ē comfort station, which is located near sensitive archaeological sites.

We recognize your comment expressing your desire not to build anything at the park. The "no change" (or No Action) alternative was discussed in the EIS, but rejected outright due to: 1) the potential for continued degradation of cultural and natural resources and the worsening traffic and parking congestion that would occur if nothing were done; 2) potential risk of rockfalls and threats to public safety; and 3) the five main goals or objectives that have guided the development of the Hā'ena State Park Master Plan and the proposed management strategies would not be met.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 11/15/2018.

Hanalei, HI 96714

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. and Mr. Kuraoka,

Mahalo nui for your emailed comment dated August 24, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns regarding the number of visitors to the park and the impact that has on park users, traffic, and local residents. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. State Parks will continue to work on the different options with the advisory committee and could include a variety of options as long as they do not violate the federal Land and Water Conservation Fund rules, which allow charging different fees for residents and nonresidents as long as they are comparable to current fee differences between the two. Please see the "Visitor Limits" attachment from Section 2.5.4.3 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

We recognize your comments regarding gates, access, and the relevance of rockfall hazards. Safety of the public is an essential requirement for any public facility. A new main gate is recommended to be installed when the highway is closed to general vehicle traffic to reduce visitor exposure to the rockfall hazards. The health and safety impacts of rockfalls are proposed to be mitigated by siting all of the major visitor facilities and paths, including the Pedestrian Path to Kē'ē, outside of the 0% chance of modeled rockfalls as mapped by AECOM in their Rockfall Hazard Assessment report (EIS Appendix B). Specifically, the Welcome Hale, Pedestrian Path, highway closure with signage and gates, and the main parking lot/shuttle improvements should be considered elements of rockfall mitigation and therefore prioritized in capital improvement project funding as they will shift the park's major visitor traffic away from the area of potential rockfall hazard. In addition, warning signs should be installed at appropriate locations at both ends of the highway and between the turnaround and Kē'ē. Safety warnings should also be given during the visitor orientation session prior to park entry.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

**Subject:** DRAFT MASTER PLAN, EIS FOR HAENA STATE PARK

Thank you for the opportunity to express an opinion.

Please do not assume there is parking available near the Princeville Center for people going to Haena State Park on a shuttle. Decades ago, the Kauai County Council prohibited expansion of parking space at the Princeville Center. Now, the Princeville Center has inadequate parking for the current businesses and volume of customers.

Parking is so limited that the Center management has narrowed parking spaces to extremes, where it is now dangerous to park there, if one can find a parking spot. First Hawaiian Bank has tow signs up in their tiny lot for people not on bank business. People parking at the center to catch the bus to Kapaa / Lihue increase the problem.

Fortunately, the short lived shuttle service never caught on and is now gone. 1000 passengers per month is a bit more than 30 per day and I question there was that volume. Those shuttles were often running with 1 or 2 passengers if running at all. A casual observer could see it was not working and the financial support provided by the County of Kauai was a waste of money.

The Princeville Library has tow signs up for anyone parking there for non-library business. The surrounding neighborhood is private property with people who don't want extra cars or traffic.

Please don't think you can have parking at or nearby the Princeville Center during the day for Haena shuttle service. It just is not a practical alternative.

Suggestion - in Hanalei the State has a road maintenance yard - approximately 1 acre where there is very little activity and a maybe a couple of sheds. If you want a public parking area for shuttle service, that is the place to start, not in Princeville.

DRAFT MASTER PLAN EIS FOR HAENA STATE PARK - DSI.docx

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Mr. Taylor,

Mahalo nui for your emailed comment dated August 21, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns with parking availability in Princeville for a potential shuttle service as well as your suggestion for an alternative shuttle service parking lot near Hanalei. We acknowledge your suggestions; however, external parking areas were removed from the revised master plan and consideration for sites in Hanalei were dismissed due to its location within flood zones. While the recommended external shuttle service sites were removed from the revised plan, the proposed main parking lot facilities in the park are designed with shuttle stops at the park entry turnaround to support the potential for shuttle service as described in the attached [Section 2.5.1.1](#) and [Section 2.5.1.2](#) from the Final EIS.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oexq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-KA-EIS-Haena-State-Park-Master-Plan.pdf](http://oexq2.doh.hawaii.gov/EA_EIS_Library/2018-KA-EIS-Haena-State-Park-Master-Plan.pdf) on [Month XX, 2018](#).

**Subject:**

Hi Lauren,

I am a marine biologist living in Hanalei and I have been studying the dying coral reefs in Ha'ena for ten years along with UH, NOAA and the USGS. I also work with a Kauai non profit, Reef Guardians Hawaii, Reef Check and the State Eyes Of The Reef program.

I have over 1,000 hours of underwater experience, surveys and video of the dying coral reefs along the Ha'ena coastline.

I support the project to limit tourist into the area as there are currently damaging the environment and sacred places. I also support turning the area back into a functional ahupua'a.

Is there a reef restoration project within this new Ha'ena management plan? If not I would be happy to help develop one with the non profit Reef Guardians Hawaii.

I have over 3,000 hours of HD underwater video from 10 different countries and lots of experience with reef restoration projects that could work in Kauai.

We have a huge problem with the US Military killing our corals and marine life in Ha'ena but the area was recently declared "critical habitat" for the Hawaiian Monk Seal so we may now be able to limit the military activities and help save the few remaining healthy corals we have.

A restoration project is going to be needed at Ke'e, Tunnels, Limahuli and other Ha'ena reefs.

I have videos of each reef and here is the link to my Ke'e video I did recently.

Month XX, 2018 - DRAFT

Ms. Terry Lilley  
P.O. Box 1560  
Hanalei, HI 96714

**SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HA'ENA, KAUAI, HAWAII**

Aloha Ms. Lilley,

Mahalo nui for your emailed comment dated August 21, 2015 regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawaii, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support for the master plan's goal of protecting and restoring the park's sensitive and unique natural, cultural, historic, and scenic resources through responsible visitor limits.

We recognize your concerns regarding the coral reefs in the vicinity of the park. There currently is not a reef restoration component associated with the master plan, but the State is open to coordination with community groups such as Reef Guardians Hawaii. Human disturbance in the water can also cause harm to marine resources, including coral, fishes, and honu. It is recommended that all visitors receive educational materials that would provide a brief overview of the park's extensive but sensitive natural and cultural resources and instruct visitors of the appropriate activities and behaviors allowed at the park, such as no reef walking or harassing marine life, especially endangered and threatened species. Please see the "Visitor Orientation" attachment from Section 2.5.4.5 of the Final EIS, which shows the verbatim changes to this section from the Draft EIS.

We recognize your comment regarding the critical habitat for the Hawaiian Monk Seal. In August 2015, the National Marine Fisheries Service (NMFS) issued a final rule revising the critical habitat for the Hawaiian monk seals to include the marine habitat fronting Ha'ena State Park from the 200-meter depth contour line, including the seafloor, through the water's edge and 5 meters into the terrestrial environment from the shoreline (50 Code of Federal Regulations Part 226). Therefore, any changes in these areas will require consultation with the NMFS. Also, if habitats are created within the park specifically for endangered or threatened wildlife, additional permits and approvals may be required such as a Habitat Conservation Plan.

Please share your comments on the Hä'ena State Park Master Plan Draft EIS.

(If you would like a written response letter, please include your mailing address.)

I THINK VISITORS SHOULD HAVE TO APPLY FOR A DAY PASS (PERMIT) TO VISIT THE PARK, BUT RESIDENTS SHOULD BE ABLE TO OBTAIN PASSES VALID FOR ONE YEAR OR LONGER, SOME OF THE PARKING SPACES SHOULD ALSO BE ALLOCATED FOR RESIDENTS WITH PARK PASSES (OWN STICKERS). SHUTTLES ARE ALSO A GOOD IDEA BUT SHOULD INCORPORATE HAWAIIAN INTO THE SCHEDULED SERVICE SO THAT TOURISTS CAN STOP THERE FOR FOOD/SHOPPING.

Month XX, 2018 - DRAFT

Mr. Brad Lanotte  
P.O. Box 1349  
Hanalei, HI 96714

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Mr. Lanotte,

Mahalo nui for your comment card received on August 24, 2015 in response to the public meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns with resident access and your suggestion distinguishing day passes for nonresidents and annual passes for residents. While there is not a distinction based on residential status for time-based passes, the revised plan proposes similar park entry fees. The proposals also designate exemptions from park entry fees, and the main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Currently, entry fees for all state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Similar fees could be instituted at Hā'ena State Park. A description of parking improvements proposed is attached in Section 2.5.1.2 from the Final EIS.

We also acknowledge your comments on scheduled shuttle service to incorporate Hanalei. While the potential shuttle service is not proposed to be administered by State Parks in the revised master plan, it does include specific elements to support effective implementation with infrastructure design for the proposed park entry and main parking lot to support a recommended shuttle service with shuttle stop structures, as described in Section 2.5.1.1 and Section 2.5.1.2 from the Final EIS.

### Please share your comments on the Hā'ena State Park Master Plan Draft EIS.

(If you would like a written response letter, please include your mailing address.)

Limiting access to Ke'e will not eliminate the traffic and parking issues with N. Shore beaches. You will create more illegal parking along the road side before you reach the park entrance, Haena Beach park, and Lānāhāi beach. All of these beaches roadside parking issued need to be policed and ticketed accordingly. Stopping all traffic in P. Ville and supplying regular shuttles before sunrise to after sunset is a better plan and only allowing Haenā residents to drive past our beautiful river bridge. This is only 1 of many of my concerns. I do not support your Master Plan

fwy

Month XX, 2018 - DRAFT

Joe Shannon, Heather Joll, and Family  
P.O. Box 1474  
Hanalei, HI 96714

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Mr. Shannon, Heather Joll, and Family,

Mahalo nui for your comment card dated August 24, 2015 from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comment regarding traffic and parking issues in the master plan. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The limits will also be instituted only during peak hours of park use and will allow visitors to enter before after peak hours without being counted against the visitor limit. The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of a proposed shuttle. Please see the "Parking", and "Visitor Limits" attachments from the Final EIS which show the verbatim changes from the Draft EIS for these sections.

We also thank you for your recommendation regarding proposed third-party shuttles from Princeville. The preferred scenario described in the Master Plan proposes a combination of shuttle service to the park with parking on-site as part of Phase I of implementation. While State Parks is unlikely to initiate its own shuttle service, several options for a shuttle system are identified in the Master Plan including extending the County public transit service to Kē'e, contracting with a third-party operator to provide the service, or allowing independent private shuttles to stop at the park, or a combination of the above. The Master Plan identifies a shuttle stop in the proposed Master Plan with sheltered seating areas along the turnaround at the entry to the park. The turnaround should be designed to allow other vehicles to pass while shuttles are stopped at the shuttle stop in order to reduce backups and congestion along the highway. In order to encourage ridership, the shuttle service should be initiated in Phase I and the parking lot should be sized appropriately. Various management strategies including parking and entry fees, point of entry tickets are also discussed in the Master Plan report to provide a range of options to support the shuttle. Please see the "Shuttle Service" attachment from Section 4.3.3 of the Final EIS which shows the verbatim changes from the Draft EIS for this section.

We also recognize your concerns regarding resident access to the park. Entry fees for state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, which states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Other categories of fee exempt park users (such as registered volunteers) may be established at a later time.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018\\_KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018_KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 2018.

Aloha,

— NO TO THIS PLAN — Please fix it.

Please share your comments on the Hä'ena State Park Master Plan Draft EIS.  
(If you would like a written response letter, please include your mailing address.)

- ① REJECT FEDERAL MONEY FOR THE "STATE PARK"
- ② NEVER - LIMIT "LOCAL RESIDENT" USE OF STATE PARK
- ③ SIMPLIFY AND DEFINE - "GOALS" - BETTER.  
IS IT DAY USE OR NIGHT USE THAT'S THE CONCERN?
- ④ LIMIT STREET PARKING TO RESIDENTS - VISITORS  
PARK IN PARKING LOT. ENCOURAGE SHUTTLES.
- ⑤ NO - PRIORITY TO HUNTERS + FISHERMAN!
- ⑥ NO 'GATE GUARD'.
- \* IF - YOU LIMIT THE NUMBER OF VISITORS —  
THEY WILL GO TO TUNNELS (MAKUA BAY)  
THINK ABOUT THIS FOLLY PEOPLE —  
GET REAL FOLKS ON THE ADVISORY BOARD

Month XX, 2018 - DRAFT

Mr. Mike Dennis  
P.O. Box 106  
Hanalei, HI 96714

**SUBJECT: COMMENTS ON THE HÄENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HÄENA, KAUA'I, HAWAII**

Aloha Mr. Dennis,

Mahalo nui for your comment card dated August 24, 2015 from the community meeting held on August 19, 2015 regarding the Häena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Häena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

1. We recognize your comment regarding federal funding for the park. Häena State Park is under the jurisdiction of the State of Hawai'i parks system. The Master Plan itself is an effort by State Parks to improve funding of coastal recreational planning and management. Completion of the plan and Chapter 343, HRS processing will enable State Parks to move forward with capital improvement projects to improve coastal recreation at the park. The timing of implementation of the proposed Master Plan is subject to CIP budget requests submitted by State Parks and approvals granted by the State Legislature.

2. We recognize your comment regarding excluding residents from park visitor limits. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. As the State has more time to analyze user patterns, other options can be explored over time, and they are actively engaged in discussions regarding parking enforcement and increased fines along the roadway outside of the park as well. Currently, entry fees for all state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Similar fees could be instituted at Häena State Park. However, State Parks will continue to work on the different options with the advisory committee and could include a variety of options as long as they do not violate the federal Land and Water Conservation Fund rules, which allow charging different fees for residents and nonresidents as long as they are comparable to current fee differences between the two. Please see the "Visitor Limits" attachment from the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

3. We recognize your comment regarding the definition of the master plan's goals. The goals and vision for the Hä'ena State Park Master Plan were developed with State Parks staff and the Master Plan Advisory Committee. There are five main goals that have guided the development of the Master Plan and the proposed management strategies. They are:
  - Recognize that the entire park is culturally significant.
  - Restore Hä'ena State Park as a living place... cleanse, restore and revive cultural practices again.
  - Involve the original families and reconnect the local community to the place.
  - Uphold State Parks' responsibility for the public's safety, access, and welfare.
  - Balance the provision of recreational opportunities with the preservation of the significant natural and cultural resources.
4. We recognize your comment regarding limiting parking for the park. As a part of the previously described adaptive management approach, the main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of a proposed shuttle. Please see the "Parking" attachment from Section 2.5.1.2 of the Final EIS, which show the verbatim changes from the Draft EIS for this section.
5. We recognize your concerns regarding different types of user groups having access to the park. Initial exemptions to the proposed daily visitor limit include overnight campers or hunters with valid permits, members of the Hui, cemetery caretakers, kīpuna who have cultural or ancestral ties to the area, or attendees at special educational or cultural events such as volunteer workdays or events at the Hula Complex. This will encourage visitors to plan ahead and an informational system via the internet, text messages, and email could be developed to distribute real-time information on park access, ticket availability, special events, and weather, ocean and any hazardous conditions at the park. The Master Plan acknowledges that park access will be an ever-evolving operational issue and will likely change over time as new policies are implemented. However, the goal is to study the impacts of these proposed policies and to adjust them as appropriate to improve the long-term management of the park and visitor satisfaction.
6. We recognize your concern regarding the presence of a gate guard at the park. The revised master plan includes a vehicle turnaround provided just past the park entry that provides separate accesses to and from the main parking lot, as well as the special access parking at Kē'e, and a separate staging area that could be used for various park purposes. Those who do not have valid park parking access may continue around the turnaround and exit the park without blocking traffic. Please see the "Park Entry" attachment from Section 2.5.1.1 of the Final EIS, which show the verbatim changes from the Draft EIS for this section.

We also recognize your comment regarding the overspill of visitors that are unable to enter Hä'ena State Park into other parks in the region. The previously mentioned adaptive management approach will analyze the effectiveness of the limits throughout the year, and coordination with other State and County agencies, including the County of Kaua'i Parks and Recreation Department, will be on-going in order to determine the best way to serve the community's needs.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on , 2018

No to this plan.

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.

(If you would like a written response letter, please include your mailing address.)

Aloha Committee, I do not support this plan. This is my Aina as well. State Parks are to be enjoyed by the people, especially residents. This is the most contentious part of your Draft. Permits are available to cultural practitioners (Maui Hanaui, HBS), hunters and fishermen. Discontinuing taxpaying residents.

1. Select Federal money for the "State Park" 2. Never limit "local Resident" use of the Park, 3. Define Simply Concerns.
4. Visitors can have Rd. Parking ~~near~~ like on the ~~Island~~ - local free of charge and street parking. 5. No Gates 6. No limits People will still come - if you bypass handle town and business small business owners will suffer.

6. Bring back the north shore shuttle for everyone. Please rethink!

5. A new main gate is recommended to be installed to reduce visitor exposure to the rockfall hazards. As a public safety concern, this gate should be prioritized in capital improvement project funding as it will shift the park's major visitor traffic away from the area of potential rockfall hazard. Please see the "Park Entry," attachment from Section 2.5.1.1 of the Final EIS, which show the verbatim changes from the Draft EIS for this section.
6. A proposed third party shuttle service has been analyzed as a part of the project's traffic impact assessment report, included in the EIS as Appendix F. The preferred scenario is to implement a third party shuttle from the Princeville facility at the start of Phase I, minimizing the need for visitor parking in the parking lot in the park. Please see the "Shuttle Service" attachment from Section 4.3.3 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. Conklin,

Mahalo nui for your comment card dated August 24, 2015 from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comment regarding resident access to the park. The revised master plan calls for an adaptive management approach for visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The limits will also be instituted only during peak hours of park use and will allow visitors to enter before and after peak hours without being counted against the visitor limit. The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of a proposed shuttle. Please see the "Parking" and "Visitor Limits" attachments from the Final EIS which show the verbatim changes from the Draft EIS for these sections.

We also recognize your comments as numbered below:

1. Hā'ena State Park is part of the State of Hawai'i parks system, and is under state jurisdiction. The Master Plan itself is an effort by State Parks to improve funding of coastal recreational planning and management. Completion of the plan and Chapter 343, HRS processing will enable State Parks to move forward with capital improvement projects to improve coastal recreation at the park. The timing of implementation of the proposed Master Plan is subject to CIP budget requests submitted by State Parks and approvals granted by the State Legislature.
2. As stated earlier in this letter, visitor limits will be a part of the master plan's adaptive management plan, which will be adjusted based on an average number of visitors rather than a set limit per day.
3. Define simply concerns?
4. As stated earlier in this letter, parking will be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand.

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.  
(If you would like a written response letter, please include your mailing address.)

Hope it doesn't desecrate.  
Our love one Grave site!!!  
Stop by!!! Limiting passengers  
from the airport. It will help.  
We as Native to Kēe, should be free  
from all others. Do the right thing.

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL  
IMPACT STATEMENT (EIS), HĀ'ENA, KAUA'I, HAWAII  
Month XX, 2018  
Page 2

We recognize your concerns regarding community input and outreach in the master plan process. The updated draft Master Plan for Hā'ena State Park includes management and development strategies that bring the significant historic, cultural and ecological resources of the park to the forefront and balance the protection of those resources with recreational and community uses. The current Master Plan utilizes new and previously prepared data, including updated historic, cultural and ecological information where necessary, along with continued community input. Collaboration with the community was a critical and vital element throughout the planning process and will continue to be required to help ensure the success of and support for implementation of the plan and ongoing management of the park.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-04-KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018-04-KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 04/20/2018.

Ms. Taylor Lowe  
SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL  
IMPACT STATEMENT (EIS), HĀ'ENA, KAUA'I, HAWAII  
Month XX, 2018  
Page 2

We also acknowledge your comments on shuttle service from Princeville. The potential shuttle service is not proposed to be administered by State Parks in the revised master plan, however, it does include specific elements to support effective implementation with infrastructure design for the proposed park entry and main parking lot. The improvements include facilities designed to support the proposed shuttle with shuttle stop structures near the main parking lot, as described in Section 2.5.1.1 and Section 2.5.1.2 from the Final EIS.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-04/EA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018-04/EA-FEIS-Haena-State-Park-Master-Plan.pdf) on 4/20/2018.

Month XX, 2018 - DRAFT  
Ms. Taylor Lowe  
P.O. Box 774  
Hanalei, HI 96714  
SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. Lowe,

Mahalo nui for your emailed comments received on August 24, 2015 in response to the public meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support for the visitor limits and educational aspects of the master plan. We recognize your suggestions on limiting access for a specific number of vehicles and allowing pedestrian and bike access, however, the revised master plan proposes the visitor limit base on individuals and not vehicles. If there continue to be issues, State Parks will work with the advisory committees on adjusting the visitor limit number. While there are not proposed permits specifically for local resident exemption as you describe in your comments, there will be exemptions for community groups such as cultural practitioners. Please see the attached section from the Final EIS on "Visitor Limits" for more information.

While we appreciate your support for an education "building" to provide public information, please note that the originally proposed structure has been eliminated from the master plan and a traditional hale, referred to as the "Welcome Hale" in the FEIS, will now provide educational information. The attached Section 2.5.1.3 from the Final EIS provides a full description of the Welcome Hale.

We recognize your comments and suggestions on installing multiple gates to manage access and daily fees for entry past Hanalei. The revised plan calls for gate installation at the park entry turnaround, however, managing access at Hanalei is beyond the scope of the revised master plan. While the suggestion is beyond the scope of the Hā'ena State Park Master Plan, the revised plan aligns with corresponding aspects within the existing county plans. The County of Kaua'i is in the process of updating the general plan and regional development plans applicable to your comments. Please review Section 2.5.1.1 attached for more information on park entry and proposed gate as well as Section 5.4.1 and Section 5.4.2 describing the county plans.

I AM A 42 YEAR RESIDENT OF HAENA!  
WE NEED A BETTER PLAN PEOPLE AGREE UPON  
THIS IS A FORM OF ANNEXATION.  
Please share your comments on the Ha'ena State Park Master Plan Draft EIS.

(If you would like a written response letter, please include your mailing address.)

I ABSOLUTELY OPPOSE THIS PLAN! LOCAL  
HAWAIIANS A VERY UPSET! IT IS DIVIDING OUR  
COMMUNITY. WILL RESULT IN MASSIVE TRAFFIC JAMS.  
AND WILL ANGER THE TOURIST INDUSTRY. GOES AGAINST  
ALL CONSERVATION PURPOSES. BAD AREA FOR  
TUSSEMI ZONE. WASTED MONEY! WILL OVER FILL  
ALL RESTROOMS AT HAENA BEACH PARK. THEATERS OUR  
ACCESS RITES BY CLOSING AREAS. DESIGNATES A  
PRECIOUS AREA WITH LARGE STATUES GATES  
AND BAD AND EVIL INTENTIONS TO CONTROL AND  
USE AS A WAY OF MAKING DIRT MONEY  
THREATENS WILD LIFE, BURIAL SITES AND DEFEAT  
MAIKAWA MOUNTAIN.

Mr. David LaCock  
SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL  
IMPACT STATEMENT (EIS), HĀ'ENA, KAUA'I, HAWAII  
Month XX, 2018  
Page 2

and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources, but will maintain a low profile just above the berm. Please see the revised Figure 1 Master Plan graphic and the "Master Plan Summary" attachment from Section 1.9.1 of the Final EIS, which show the verbatim changes from the Draft EIS in this section.

We recognize your comment regarding concerns with the park and tsunami zones. While Hā'ena has been struck by tsunami waves multiple times in recorded history, the master plan includes a section on natural hazard mitigation. Staff training and visitor education sessions, as well as ongoing coordination, communication, and annual park emergency evacuation drills with the County Fire and Police Departments are recommended management strategies proposed in the Master Plan to help improve emergency readiness and public safety.

We recognize your comment regarding restroom capacity at the park. Based on strong community preference, the Master Plan proposes that any new wastewater systems include a treatment system that brings wastewater to an R-2 water quality level at a minimum and to reuse the effluent as much as possible to minimize impacts to the sensitive natural and cultural resources at the park.

We recognize your comment regarding your feeling that your access to the park is being threatened, and your comment regarding resident access to the park. The Master Plan's proposed adaptive management approach will work to ensure all the diverse park users in the community have their opportunity to utilize and enjoy the park. There also will be exemptions for special user groups, such as hunters and cultural practitioners. Entry fees for state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, which states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Other categories of exempt users, such as registered volunteers, may be established at a later time. Please see the "Adaptive Management" attachment from Section 2.5.4.1 of the Final EIS, which shows the verbatim changes from the Draft EIS in this section.

We recognize your comments regarding structures, gates, and protection of the park's natural and cultural resources. The main reasons for proceeding with the proposed Master Plan include protection and restoration of the park's sensitive and unique natural, cultural, historic, and scenic resources; improvement of the environmental conditions such as surface and marine water quality; removal of alien species and restoration of native ecosystems; improving public safety; increasing knowledge and sensitivity of the cultural values and activities that occur within the park; providing outdoor educational opportunities as well as recreational opportunities for residents and visitors alike; and reducing negative impacts to native flora and fauna.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

**To:** lauren.a.tanaka@hawaii.gov; Kimi Yuen  
**Subject:** Feedback on plan for Haena State Park

To whom it may concern,

I am writing to express grave concern regarding the proposed plans for Haena State Park, particularly in regard to Kee beach.

As a resident and frequent user of Kee beach, I feel the proposed plan is not practical and detracts from the natural beauty of the area.

Here are my suggestions:

- 1) Restrict parking to current parking lots only. Strictly enforce parking rules.
- 2) Do not exempt hikers from regulations. The hiker cars are the majority of the reason the parking lots fill up. Hikers leave their cars for days at a time. Even if you arrive to Kee at 6 am, you find the parking lot nearly full, but no one is on the beach. Hikers should be required to park at the far parking lot, leaving the beach parking for those using the beach.
- 3) Do not build anything in this beautiful place! No gate, no walkway, no cultural center.
- 4) DO NOT CHARGE!!!

If you have not walked along Kee beach at sunrise toward Princeville then paused to look down the Na Pali coast, please do so. God did an amazing job creating this slice of heaven. Your so-called improvements are not needed or wanted.

Thank you,

Dr. Amithea Love

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Dr. Love,

Mahalo nui for your emailed comment dated August 25, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns regarding parking issues at the park. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of a proposed shuttle. Please see the "Parking" and "Visitor Limits" attachments from the Final EIS, which show the verbatim changes from the Draft EIS for these sections.

We recognize your comment regarding hikers and parking availability. The revised master plan simplifies and better organizes parking by limiting it to two lots; the main one at the entrance and the special access parking lot at Ke'e. Non special needs users such as hikers would be designated to use the main parking area away from the beach.

We recognize your concerns regarding built construction at the park. Only a few new structures are proposed, including a Welcome Hale that is envisioned as an open traditional Hawaiian hale and located near the improved main parking lot. The boardwalk has been modified in the revised master plan. The new pedestrian pathway follows along the first berm of the lo'i closest to the highway and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources. A new main gate is recommended to be installed when the highway is closed to general vehicle traffic to reduce visitor exposure to the rockfall hazards. Only those with special access to Ke'e, such as the lifeguards and rescue personnel, those with valid ADA parking placards or plates, park staff, the Hula Complex and other cultural practitioners will be allowed along the limited access portion of the highway. It will have a separate entry off the turnaround.

Please see the revised Figure 1 Master Plan graphic and the "Master Plan Summary" attachment from Section 1.9.1 of the Final EIS, which show the verbatim changes to this section.

We recognize your comment regarding charging an entry fee for the park. Entry fees for state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Other categories of fee exempt park users, such as registered volunteers may be established at a later time.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeqc2.doh.hawaii.gov/EA\\_EIS\\_Library/2018\\_KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeqc2.doh.hawaii.gov/EA_EIS_Library/2018_KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 11/15/2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

Feedback on plan for Haena State Park - JSI.docx

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.  
(If you would like a written response letter, please include your mailing address.)

I am Against the proposals. There is no data supporting the proposed changes. The plan smacks of localism! Why have other members of the kaula community not been invited to participate? Why add more buildings? How will traffic be handled when over 100 bikers decide to come out of kaula at once? Who is parking in the area? Not tourists - but mostly North Shore locals. I object the twisting of the definition of volunteer to accommodate Haem locals. This park belongs to ALL, not just North shore residents. SHAME on you for blaming bounds

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. Blakemore,

Mahalo nui for your comment card dated August 26, 2015 from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns regarding building additional structures on site as a part of the master plan. Only a few new structures are proposed in this revised master plan, including a Welcome Hale that is envisioned as an open traditional Hawaiian hale and located near the improved main parking lot. The new pedestrian path would follow along the first berm of the lo'i closest to the highway and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources, and will maintain a low profile just above the berm. Please see the revised Figure 1 Master Plan graphic and the "Master Plan Summary" attachment from Section 1.9.1 of the Final EIS, which show the verbatim changes to the Section from the Draft EIS.

We also recognize your concerns regarding traffic and resident usage of the park as a part of the master plan. The Master Plan includes a combination of physical improvements and programmatic options that when applied in combination will have a positive impact on the existing roadway conditions.

Vehicle access beyond the main parking area to Kē'ē beach is proposed to be reduced from the currently unrestricted conditions to special access only (ADA, lifeguards, and cultural practitioners). Restricting general vehicular access from the main parking area to Kē'ē Beach will effectively eliminate illegal parking along the highway's shoulder, reduce the wear on the historic roadway's macadam surface, and reduce the number of visitors traveling in a potential rockfall hazard area.

The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The limits will also be instituted only during peak hours of park use and will allow visitors to enter before and after peak hours without being counted against the visitor limit. The main parking lot is proposed to be separated into a

Too controlled + over-planned

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.  
(If you would like a written response letter, please include your mailing address.)

- ① I Do Not want this overcontrolled
- ② Plan:
- ③ Shuttle service required from hotels + time shares.
- ④ Tourist required to take shuttle.
- ⑤ Stop to transport adviser of  
to area, tv, magazines + tour guide  
book - which has brought so many to  
the area with the increase of  
promoting the area since 2000.
- ⑥ move entrance to be beyond the stream  
can access via still use old road of stream

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Gardner,

Mahalo nui for your comment card from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comments as numbered in your letter:

1. We recognize your opposition to the master plan due to the level of oversight by the State. The Master Plan itself is an effort by State Parks to improve funding of coastal recreational planning and management. Completion of the plan and Chapter 343, HRS processing will enable State Parks to move forward with capital improvement projects to improve the park's programs, as well as the park's efforts to preserve and protect the park's existing cultural and historical resources.

2.&3. We recognize your comment regarding a potential shuttle service to the park. The preferred scenario described in the Master Plan proposes a combination of shuttle service to the park with parking on-site as part of Phase I of implementation. While State Parks is unlikely to initiate its own shuttle service, several options for a shuttle system are identified in the Master Plan including extending the County public transit service to Kē'e, contracting with a third-party operator to provide the service, or allowing independent private shuttles to stop at the park, or a combination of the above. The Master Plan identifies a shuttle stop in the proposed Master Plan with sheltered seating areas along the turnaround at the entry to the park. The turnaround should be designed to allow other vehicles to pass while shuttles are stopped at the shuttle stop in order to reduce backups and congestion along the highway. In order to encourage ridership, the shuttle service should be initiated in Phase I and the parking lot should be sized appropriately. Various management strategies including parking and entry fees, point of entry tickets are also discussed in the Master Plan report to provide a range of options to support the shuttle. Please see the "Shuttle Service" attachment from Section 4.3.3 of the Final EIS which shows the verbatim changes from the Draft EIS for this section.

4. No advertising of the area is proposed as a part of this master plan.

5. We recognize your concerns in regards to changes in the main entry of the park. A new main gate is recommended to be installed when the highway is closed to general vehicle traffic to reduce visitor exposure to the rockfall hazards. Only those with special access to Kē'e, such as the lifeguards and rescue personnel, those with valid ADA parking placards or plates, park staff, the Hula Complex and other cultural practitioners will be allowed along the limited access portion of the highway. It will have a separate entry off the turnaround. Rockfall hazard warning signs will be installed on the gate across the highway and a swing gate on the mauka half of the right-of-way could be automated to open for exiting traffic only.

A vehicle turnaround is provided just past the park entry and provides separate accesses to and from the main parking lot, as well as the special access parking at Kē'e, and a separate staging area that could be used for various park purposes. Those who do not have valid park parking access may continue around the turnaround and exit the park without blocking traffic. Please see attachment "Park Entry" from Section 2.5.1.1 of the Final EIS which shows the verbatim changes from the Draft EIS.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-FEIS-Haena-State-Parks-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018--KA-FEIS-Haena-State-Parks-Master-Plan.pdf) on 11/15/2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

**Subject:** Kee Beach

---

Aloha,

I want to second the motion to keep Kee Beach as unimproved as possible as mentioned in THE GARDEN ISLAND letters today. Here is my suggestion for doing that:

Make all places near Kee Beach 1 hour maximum and place a heavy fine on over parking. AND enforce it. Mark tires with chalk on pass 1 and if still there on pass 2 fine them. Maybe even have a graduated fine such as \$25 for the first hour, \$50 for the second hour, etc....

Place no parking signs along the road and enforce the no parking by

towing away cars. The sign should read, "All roadside areas are tow away zones."

Tow away to Haena Beach with a special area for paying the fine.

Improve and expand the parking facility that is some distance m the beach and place a sign there that says "All hikers must park here. No overnight parking."

When purchasing an overnight hiking permit, hikers should be made aware that they must shuttle to Kee and they must certify that they understand this.

Provide a shuttle with stops at Haena Beach, the parking facility, and turn around at Kee Beach. Improve the parking at Haena Beach to accommodate the need.

A NorthShore shuttle from Princeville would be ineffective because there is no place in Princeville available to leave an automobile. It is unreasonable to expect those of us who wish to shop in Princeville to share parking space that is already overcrowded and funded privately. The shuttle can be a small tram-like shuttle from Haean Beach that makes a 20 or 30 minute round trip every half hour.

The limit on numbers will take care of itself if the parking ordinances are enforced. The expense of the shuttle and the enforcement should be borne by the TAT and we should get our fair share of the TAT from the state TAT revenues.

Marjorie Gifford, Princeville

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Ms. Gifford,

Mahalo nui for your comment card dated August 27, 2015 from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comments regarding keeping Kē'e Beach unimproved. The revised Master Plan does not propose new structures directly adjacent to the beach. Only a few new structures are proposed for the overall Master Plan, including a Welcome Hale that is envisioned as an open traditional Hawaiian hale and located near the improved main parking lot. Please see the revised Figure 1 Master Plan graphic and the "Master Plan Summary" attachment from Section 1.9.1 of the Final EIS, which show the verbatim changes from the Draft EIS in this section.

Also, the rockfall hazard study included in the EIS identified a high-risk area along the highway which is the main visitor corridor to Kē'e Beach. This mix of recreational, cultural and environmental resources gives rise to the need to develop a conscientious and comprehensive master plan in order to balance conservation, preservation, recreation, cultural integrity, and public safety. Please see the "Park Entry" attachment from Section 2.5.1.1 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

We also recognize your comments and suggestions regarding parking concerns. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of a proposed shuttle. Please see the and "Parking" attachments from the Final EIS which shows the verbatim changes from the Draft EIS for this section.

Good SARB! Thank you for taking time to prepare plan. I think the biggest worry for most folks living down here is that they will lose their freedom to visit and enjoy the area. But in my opinion that's like lost w/ so many visitors. Changes that I think would improve plan ① Place Gate at Haena State Park. ② Have stickers for "locals" cars/truck for access ③ Have hotel/county shuttles. ④ - you could make entrance free for residents and very expensive for tourists to park to encourage riding shuttles on bus.

4. We recognize your comment regarding the park entry fee. Entry fees for state parks are established by Hawai'i Administrative Rules (HAR) 13-146-6, at the rate of \$5/car or \$1/person. HAR 13-146-6 also states that Hawai'i residents are exempt from paying park entry fees if they can show a valid Hawai'i ID. Other categories of fee exempt park users (such as registered volunteers) may be established at a later time.

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha A. Whitfield,

Mahalo nui for your comment card dated August 28, 2015 from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments as numbered per your letter:

1. We recognize your comment regarding a gate for the park. A new main gate is recommended to be installed to reduce visitor exposure to the rockfall hazards. Please see the "Park Entry" attachment from Section 2.5.1.1 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.
2. We recognize your comment regarding resident access to the park. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. State Parks will continue to work on the different options with the advisory committee and could include a variety of options as long as they do not violate the federal Land and Water Conservation Fund rules, which allow charging different fees for residents and nonresidents as long as they are comparable to current fee differences between the two. Please see the "Visitor Limits" attachment from Section 2.5.4.3 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.
3. We recognize your comment regarding a proposed shuttle to the park. A proposed third party shuttle service has been analyzed as a part of the project's traffic impact assessment report, included in the EIS as Appendix F. The preferred scenario is to implement a third party shuttle from the Princeville facility at the start of Phase I, minimizing the need for visitor parking in the parking lot in the park. Please see the "Shuttle Service" attachment from Section 4.3.3 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.

(If you would like a written response letter, please include your mailing address.)

I fully support the plan for Hā'ena and  
appreciate all the hard work that's  
gone into planning.

Hä'ena State Park Master Plan | Draft | Environmental Meeting | August 19, 2015

Please share your comments on the Hä'ena State Park Master Plan Draft EIS.  
(If you would like a written response letter, please include your mailing address.)

*This plan is not before house. I should let limit autos from Princeville (w/ parking at Princeville). I a shuttle from Princeville to Ke'e (one auto in at one out). To make this plan 8-4 addressing parking (a BIG issue) is not responsible and will not work.  
→ On the old court house (State owned?) would be the best staging & parking area. It has not been used for anything for @ least 15 years!*

Aloha C. B. Martin,  
Mahalo nui for your comment card dated August 31, 2015 from the community meeting held on August 19, 2015 regarding the Hä'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hä'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your concerns regarding parking issues for the park master plan. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of the proposed shuttle. Please see the "Parking" and "Visitor Limits" attachments from the Final EIS, which show the verbatim changes from the Draft EIS for these sections.

We also appreciate your feedback regarding a proposed shuttle from Princeville. A proposed third-party shuttle service has been analyzed as a part of the project's traffic impact assessment report, included in the EIS as Appendix F. The preferred scenario is to implement a third-party shuttle from the Princeville facility at the start of Phase I, minimizing the need for visitor parking in the parking lot in the park. Please see the "Shuttle Service" attachment from Section 4.3.3 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-EIS-Haena-State-Park-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018--KA-EIS-Haena-State-Park-Master-Plan.pdf) on 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

SUBJECT: *Ha'ena State Park Master Plan 5(b) Draft Environmental Impact Statement (dEIS)*  
*TMK: (4) 5-9-008: 001, (4) 5-9-001: 025 and (4) 5-9-001: 022 (por.)*

Dear Governor Ige, DLNR, PBR Hawaii & Associates, Incorporated:

Aloha! I deeply appreciate the ability to comment on the Ha'ena State Park Master Plan 5(b) Draft Environmental Impact Statement (dEIS). I have been extremely blessed to live in Hawaii Nei for over forty (40) years. Ha'ena is sacred beyond words to the Host People of Hawaii Nei – since time immortal – the Native Hawaiian, as well – the Kanaka Maoli. We believe that this is a premature massive poor decision making by the state of Hawaii and the federal government.

'Ae, the immense vehicular traffic is a BIG problem – to put it mildly... the proposals in the dEIS for the protection of Ha'ena should revisit the most extensive quandary... which is thousands of rent-a-cars. It would behoove the state of Hawaii to have the rent-a-car industry provide a necessary parking lot and shuttle service to return Ha'ena to its peaceful and serene status.

We also believe all permits must be denied: Permits: Compliance with Chapter 343, HRS; Compliance with Chapter 6E, HRS (Historic Preservation); Special Management Area Use Permit; Conservation District Use Permit; Shoreline Setback Determination; Wetland Delineation Study and Determination; National Pollution Discharge Elimination System (NPDES) Permit; Grading and Grubbing Permits; Building Permits; and dependent on extent of instream activities pursued, Stream Channel Alteration Permit; Stream Diversion Works and/or Petition to Amend Instream Flow Standard.

**Just say "No" to the board walk plan – Yes: a cap on visitor vehicles' not residential vehicles**

The Hawaiian people must be allowed access 24/7 – 365-days a year to uphold their religious, customary rights, traditional and cultural rights.

Please keep us abreast via the U.S. Postal Service on ALL future concerns/documents... Hopefully, the decision will be No Action until MORE information and time is made available to the Host People of Hawaii Nei – the Native Hawaiian(s) / Kanaka Maoli and the General Public.

It is sacrilegious that Ha'ena has been desecrated to the way it has been for decades there!  
It's unacceptable that the state of Hawaii and the DLNR has been mis-managing this revered and holy land!

*Ua Mau ke Ea o ka 'Āina i ka Pono*

Mahalo for making sure we are able to receive the documentation of the outcome of this dEIS process!

Sincerely with ALOHA,

Bonnie P. Bator and 'Ohana (Keana'aina, Kaiaokamalie, Keli'ikoa and Kai)

Ms. Bonnie Bator and "Ohana  
SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL  
IMPACT STATEMENT (EIS), HĀ'ENA, KAUA'I, HAWAII  
Month XX, 2018  
Page 2

The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will be adjusted daily to allow flexibility depending on future demand for parking and the potential use of a proposed shuttle. Please see the "Parking" attachment from Section 2.5.1.2 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

The boardwalk has been modified in the revised master plan. The new pedestrian pathway follows along the first berm of the lo'i closest to the highway and is proposed to be slightly elevated so as not to impact the berm or any of the historic resources. Please see the "Pedestrian Path" attachment from Section 2.5.1.4 of the Final EIS, which shows the verbatim changes to this section.

As you noted, practitioners require access for cultural uses, and there will be exemptions for these and other special user groups. Cultural aspects of the master plan include the rehabilitation and restoration of the lo'i and other culturally significant aspects of the park. The master plan will lay the foundation for protecting cultural practices for the state park for decades to come.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.deh.hawaii.gov/EA\\_EIS\\_Library/2018-\\_-KA-FEIS-Haena-State-Park-Master-Plan.pdf](http://oeq2.deh.hawaii.gov/EA_EIS_Library/2018-_-KA-FEIS-Haena-State-Park-Master-Plan.pdf) on 2018.

Aloha,

Kimi Mikami Yuen, LEED AP BD+C  
Principal

SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII

Aloha Ms. Bator and 'Ohana,

Mahalo nui for your comment letter dated September 2, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comments regarding the cultural sacredness of Hā'ena. The Master Plan's goals are to protect the park's sensitive and unique natural, cultural, historic, and scenic resources.

We also recognize your concerns regarding the traffic impacts at Hā'ena. The Master Plan includes a combination of physical improvements and programmatic options that when applied in combination will have a positive impact on the existing roadway conditions.

Vehicle access beyond the main parking area to Kē'ē beach is proposed to be reduced from the currently unrestricted conditions to special access only (ADA, lifeguards, and cultural practitioners). Restricting general vehicular access from the main parking area to Kē'ē Beach will effectively eliminate illegal parking along the highway's shoulder, reduce the wear on the historic roadway's macadam surface, and reduce the number of visitors traveling in a potential rockfall hazard area. Please see the "Roadways and Traffic" attachment from Section 4.3.1 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

A proposed third-party shuttle service has been analyzed as a part of the project's traffic impact assessment report, included in the EIS as Appendix F. The preferred scenario is to implement a third-party shuttle from the Princeville facility at the start of Phase I, minimizing the need for visitor parking in the parking lot in the park. Please see the "Shuttle Service" attachment from Section 4.3.3 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

415 S Beretania St #5, Honolulu, Hawaii'i 96813  
**SUBJECT: Ha'ena State Park Master Plan 5(b) Draft Environmental Impact Statement (dEIS)**  
**TMK: (4) 5-9-008: 001, (4) 5-9-001: 025 and (4) 5-9-001: 022 (por.)**

Dear Governor Ige, PBR Hawaii & Associates, Incorporated and Department of Land & Natural Resources:  
Aloha! We deeply appreciate the ability to comment on the Ha'ena State Park Master Plan 5(b) Draft Environmental Impact Statement (dEIS). It's very good that the 'Public Comment Period' has been extended! Personally, I have been *extremely* blessed to live in Hawaii'i Nei for over forty (40) years. I am mother to a Hawaiian man who is thirty-two (32) years old – He has a 50% blood quantum. I am a grandmother that has five (5) mo' opuna; grandchildren who have Hawaiian blood.

Ha'ena: Wahi Pana is sacrosanct ... a Legendary Place which is Kapu, very, very spiritual – La'a...  
The Creation Chant, *The Kumulipo* captures the immeasurable and incalculable significance of Ha'ena.  
The state of Hawaii's state tourism agency, the Hawaii Tourism Authority (HTA), uses its expertise to develop and implement strategic tourism marketing. Annually, 100 million dollars is spent 'marketing' Hawaii'i Nei.  
**The state of Hawaii, DLNR hires a consultant firm: PBR HAWAII & Associates, Inc – to turn an exceptionally and exceedingly revered holy place to the Hawaiian people and others' whom reverse Ha'ena – into mainland crowded and crass commercialism.**

**All permits must be denied:** [Permits: Compliance with Chapter 343, HRS; Compliance with Chapter 6E, HRS (Historic Preservation); Special Management Area Use Permit; Conservation District Use Permit; Shoreline Setback Determination; Wetland Delineation Study and Determination; National Pollution Discharge Elimination System (NPDES) Permit; Grading and Grubbing Permits; Building Permits; and dependent on extent of instream activities pursued, Stream Channel Alteration Permit; Stream Diversion Works and/or Petition to Amend Instream Flow Standard.] These permits will allow Ha'ena to become a mainland replica.  
Tourism is '*Killing the Goose – that laid the Golden Egg*' – the solution to the dilemma is to severely limit the amount of '*rent-a-cars*'. **The 'Rent-a-Car' companies are making out like bandits. These companies should be part of the 'ticket price' – make them accountable for the traffic situation.** Most tourists come for the essence of Hawaiian culture & tradition: not congestion, parody and fabrication. Nature in its glory – naturally – as evolved – not some convoluted model

The final Environmental Impact Statement (EIS) must address this valid forward-looking advanced manner to fix the traffic torment / anguish / nightmare. Mahalo for inserting this solution into the *EIS*!  
**The 'Rent-a-Car' Industries can work with DLNR, PBR Hawaii & Associates, Incorporated – to devise a plan (it can be a 'tax write-off' somehow) to situate a huge parking lot AWAY from Ha'ena and have numerous shuttles to take visitors / tourists to Ha'ena.**  
*Think of ALL the jobs that that would create.* It would add employment possibilities to our residential population in need of jobs!

– Heiau are liken to a Church, Temple, The Vatican, or Sistine Chapel –  
Ha'ena has been assaulted/trampled/abused. Its 2015 – a paradigm shift is warranted & necessary.  
**Just say "No" to the ill-considered proposed 'Board Walk' proposition – "Yes" to residential vehicles!**  
Aloha Aina  
*Ua Mai ke Ea o ka 'Aina i ka Pono*  
Please keep us, via the U.S. Postal Service mailing list of ANY updates and information on this *EIS* process.

Mahalo nui! Sincerely with ALOHA, Bonnie P. Bator and 'Ohana (Keana'aina, Kaiakamalie, Keli'ikoa & Kai)

Month XX, 2018 - DRAFT

Ms. Bonnie Bator and 'Ohana  
P.O. Box 30848  
Anahola, HI 96703-0848

**SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS), HA'ENA, KAUA'I, HAWAII**

Aloha Ms. Bator and 'Ohana,

Mahalo nui for your comment dated September 11, 2015 regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawaii's Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comments regarding overdevelopment and commercial uses at Ha'ena State Park. The Master Plan's goals do not focus on tourism, advertising, commercial development or commercial uses. The main goals of the master plan are to protect the park's sensitive and unique natural, cultural, historic, and scenic resources.

We also recognize your concerns regarding the impact of traffic and parking at Ha'ena. Because of the unique nature of the traffic congestion and circulation issues at the park, the EIS took an innovative approach to the traffic impact analysis report. The traffic engineer provided analyses of engineering considerations and potential traffic impacts as well as five example shuttle service scenarios to help inform the direction and design of the preferred Master Plan. They also considered varying amounts of parking spaces at the park and estimated the potential costs and break-even requirements for potential shuttle solutions. A proposed third-party shuttle service has been analyzed as a part of the project's traffic impact assessment report, included in the EIS as Appendix F. The preferred scenario is to implement a third-party shuttle from the Princeville facility at the start of Phase I, minimizing the need for visitor parking in the parking lot in the park. **Please see the "Shuttle Service" attachment from Section 4.3.3 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section**

The Master Plan includes a combination of physical improvements and programmatic options that when applied in combination will have a positive impact on the existing roadway conditions.

Please share your comments on the Hā'ena State Park Master Plan Draft EIS.

(If you would like a written response letter, please include your mailing address.)

Would you please explain why to decrease car parking at Kē'ē, a North Shore Shuttle at least a number seasonally has not been throughly considered 90% of cars there are tourists from North Shore - Pāhāhāhā to Hanalei. Have shuttles run every 15 minutes 8am-5pm and charge parking fees at Kē'ē of \$20-30 to park (Hā'ena residents exempt) and 90% of the current traffic will opt to take a shuttle. Even residents would - I would. It does not need an expensive overhaul and construction!

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUAI, HAWAII**

Aloha Ms. Tyler,

Mahalo nui for your comment card dated September 2, 2015 from the community meeting held on August 19, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

We recognize your comment regarding parking and a proposed shuttle service for the park master plan. The revised master plan calls for an adaptive management approach for both the parking and the proposed visitor limits, which will be adjusted based on an average number of visitors rather than a set limit per day. The main parking lot is proposed to be separated into a fee-paying lot and non-fee-paying lot, which will also be adjusted daily to allow flexibility depending on future demand for parking and the potential use of the proposed shuttle. Please see the "Parking" attachment from the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

A proposed third-party shuttle service has been analyzed as a part of the project's traffic impact assessment report, included in the EIS as Appendix F. The preferred scenario is to implement a third-party shuttle from the Princeville facility at the start of Phase I, minimizing the need for visitor parking in the parking lot in the park. Please see the "Shuttle Service" attachment from Section 4.3.3 of the Final EIS, which shows the verbatim changes from the Draft EIS for this section.

We also recognize your concerns regarding construction and overhaul of the park. Only a few new structures are proposed, including a Welcome Hale that is envisioned as an open traditional Hawaiian hale and located near the improved main parking lot. Please see the revised Figure 1 Master Plan graphic and the "Master Plan Summary" attachment from Section 1.9.1 of the Final EIS, which show the verbatim changes from the Draft EIS in this section.

Please share your comments on the Hä'ena State Park Master Plan Draft EIS.  
(If you would like a written response letter, please include your mailing address.)

Holoholo

I understand the need to limit the amount of cars that can park at Ke'e. I think it would be fair to allow bikes and pedestrians access still. That would lower the impact but still give priority to locals to have open access. Mahalo for the info.

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Ms. Shea,

Mahalo nui for your comment card received on September 2, 2015 in response to the public meeting held on August 19, 2015 as well as your emailed comment dated September 8, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

In response to your comment card, we appreciate your recognition of the need to limit the amount of cars at Ke'e. We also acknowledge your comment favoring bicycle and pedestrian access to allow open access to prioritize locals while also mitigating the impact on parking. The proposed visitor limits apply to all visitors regardless of transportation mode; however, the revised master plan proposes the 900-person visitor limit as an initial number which can be adaptively managed and adjusted as appropriate. State Parks will continue to work with the advisory committees for reviewing and potentially adjusting the number.

The revised limits will also be instituted only during peak hours of park use and will allow visitors to enter before and after without being counted against the visitor limit. Therefore, access will be allowed into the park outside those peak hours and will be adjusted as appropriate based on ongoing input from the community. However, the revised plan include proposed facilities to accommodate better access with new bicycle parking at both the Welcome Hale and Ke'e special access parking. Please reference the attached **Section 2.5.4.3** and **Section 2.5.1.3** from the Final EIS with more information on the visitor limits and bicycle facilities proposed.

In response to your emailed comments, we again appreciate your recognition of the need to limit the amount of cars and acknowledge your request to allow open access for bicycles and pedestrians access for local residents as noted previously in this letter. As mentioned earlier, the proposed visitor limits apply to all visitors regardless of transportation mode, but the proposed visitor limits will be adaptively managed and adjusted as appropriate based on input from the community and continued consultation with the advisory committee. There visitor limits will also only apply during peak hours of park use and details on these hours will be determined based on an adaptive management approach. As

noted earlier, more information on visitor limits and new bicycle facilities proposed are attached.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://ceq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018-04-04-FEIS-Haena-State-Park-Master-Plan.pdf](http://ceq2.doh.hawaii.gov/EA_EIS_Library/2018-04-04-FEIS-Haena-State-Park-Master-Plan.pdf) on 04/04/2018.

**Subject:** Feedback: DEIS - Ha'ena State Park Master Plan

Aloha Lauren,

I wanted to provide the following short feedback on the Ha'ena State Park Master Plan DEIS:

- Very comprehensive and well thought out plan
- Strongly support limiting visitors to 900 (or whatever number is deemed appropriate) per day
- Strongly support a "real-time" reservation system to meet the needs of Haena State Park and be expanded to all Kauai visitor sites that need "visitor numbers control"
- Strongly support developing parking facility up in Princeville (makua of highway) and shuttle service to both Hanalei and out to Ha'ena
- Would like to also see this parking facility and shuttle be of service to visitors coming into Princeville thereby reducing automobile congestion in areas like Queen's Bath and Hideaways Beach.

Thank you for giving us a chance to provide feedback.

Regards,

**Rory Enright**

**SUBJECT: COMMENTS ON THE HA'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HA'ENA, KAUAI, HAWAII**

Aloha Mr. Enright,

Mahalo nui for your emailed comment dated September 2, 2015 regarding the Ha'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Ha'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments.

Mahalo for your support of the visitor limit aspects of the master plan. As described in **Section 2.5.4.3** of the Final EIS, the revised master plan proposes the 900-person visitor limit as an initial number which can be adaptively managed and adjusted as appropriate, especially if there continues to be unwanted impacts at the park. If there continue to be issues, State Parks will work with the advisory committees on adjusting the number.

We also acknowledge your comments in support of a "real time" reservation system and the revised master plan includes a proposed online notification system for informing the public on updates to ticketing availability. Please see the attached section on **Visitor Limits** for more details on the proposed notice system.

We also recognize your comments relating to a proposed shuttle service from Princeville. While the potential shuttle service is not proposed to be administered by State Parks in the revised master plan, it does include specific elements to support effective implementation with infrastructure design for the proposed park entry and main parking lot to support a recommended shuttle service with shuttle stop structures, as described in **Section 2.5.1.1** and **Section 2.5.1.2** from the Final EIS.

Mahalo nui for your input and participation in the environmental review process. Your letter will be included in the Final EIS. If you would like a copy of the Final EIS or portions thereof, please let us know. Otherwise, the electronic copy of the Final EIS will be available on the Office of Environmental Quality Control website at [http://oeq2.doh.hawaii.gov/EA\\_EIS\\_Library/2018--KA-EIS-Haena-State-Park-Master-Plan.pdf](http://oeq2.doh.hawaii.gov/EA_EIS_Library/2018--KA-EIS-Haena-State-Park-Master-Plan.pdf) on **9/2/2018**.

**Subject:** The 9/8 Deadline for Comment Should Be Extended

This is to request that the 9/8 deadline for comments re the Haena State Park Master Plan be extended through the end of September.

I have a strong hunch that the following factors would establish that the cut-off period was legally premature or, even if legal, inappropriate under the circumstances. I believe that there are many people who would submit comments if the time period were to be extended.

1. There was only one public meeting held. The meeting was deficient because the lack of a sound amplification system. It is my understanding that questions were not allowed.
2. The timing of the meeting (mid-August) and comment cut-off (day after Labor Day) seemingly was designed to minimize comment.

Out of curiosity, how many written comments were received?

Re: Proposed Haena State Park Master Plan

This is written to express our serious concerns about, and opposition to, the currently-proposed Master Plan for Haena State Park. We have owned our home in Haena for nearly 20 years and were regular visitors in Haena (camping and vacation renting homes) for more than 20 years before that. Hence, we have had a close relationship with Haena and North Shore for the last 40+ years.

We have bicycled, walked and run along the road to Ke'e countless times. Many, many other people – whether residents or vacation renters – enjoy the same routine. We often have gone swimming at Ke'e, typically first thing in the morning. Short visits for sunsets also are part of routine life for us and others in Haena.

We believe that the number of people who come into the park by foot or bicycle on a daily basis is a significant number. There appears to be no reliable census in your materials relating to arrivals on foot or bicycle. It is a huge number of people who may be impacted by your planning who happen to be the least intrusive park visitors.

We don't think anyone can dispute that Haena State Park is sometimes overcrowded. To try to sell your "plan," you seemingly picked the most crowded week of the year – mid-August. Many times throughout the year, however, the use of the park is at a more appropriate level. This week, for example, there have been empty spaces in the parking lot late in the morning at the times we went by.

Here are a number of our concerns:

1. **The "Master Plan":** We downloaded and read large parts of the 1000+ page EIR. To our surprise, the "plan" is only about 20 pages long.<sup>1</sup> It is exceedingly vague and incomplete.

---

<sup>1</sup> Your confusion as to what constitutes a plan is exemplified by an email exchange I had yesterday with Kimi. I stated in my first email that "the proposed plan itself is only about 20 pages long (pages 2-8 to 2-31)." She said I was mistaken: "I believe the detail you are looking for is in the master plan report itself, which is Appendix 1 of the Draft EIS." The comment surprised me and I looked again at that document. I, in turn, responded: "If I look at that document, it seems that the 'master plan' is the 20 pages between pages 3-1 and 4-1. That seems just to be an earlier version of what is now at pp. 2-8 to 2-31 of the main document." Kimi then conceded: "Yes, the 10/14 draft report describes the same master plan that is referenced in the Draft EIS. They are the same version." Thus, my characterization of the "master plan" as being but 20-pages long, vague and incomplete, and totally silent as to key elements is entirely correct.

In the meeting we attended, the presenter mentioned plans that are not to be found in the "plan." It is a hallmark of governmental planning, that before a project be "green lit," a true plan be established first, and then subjected to the processes contemplated by law. As a starter, therefore, we think that any true plan should be fleshed out before being submitted for final approval. As it is written, the "plan" is entirely premature and incomplete. I suspect it is a legally void document.

It also appears to us that public input has been curtailed by the processes utilized to date. To our knowledge, there was one meeting at Hanalei School which was disappointing. No planning was done to provide for use of a sound amplification system which made the meeting tense and difficult to digest. Ultimately, the presented was given a bullhorn and awkwardly presented in that manner. There was no question and answer session as is typically provided in such meetings and, we suspect, required by law before a plan of this magnitude can be adopted.

2. **Imposing a Per-Day Quota:** The "plan" entirely fails to state how the per-day limit would be applied and enforced. Is it based on "first come/first served," so that by a certain time of day access is prohibited for late comers? Will there be a need to make advance reservations? Will there be a lottery for reservations? A limit to how many times you can come into the park during any given month or year? Will the limit apply to people, such as ourselves, who come into the park only or primarily as part of a daily walk or bike ride, for a short swim, or to watch the sunset? Any of these limits would be arbitrary and capricious and undoubtedly completely unacceptable to the people who live in Haena, Hanalei and beyond. You are trying to sell formal approval of a plan which conspicuously omits discussion of this critically essential point.

Kimi acknowledged in her email yesterday that "how the 900 person/day limit will be enforced or applied has yet to be determined. . . . So all of the input we are receiving will help State Parks decide when they implement it." But that is entirely putting the "cart before the horse." One cannot decide on a limit before determining how that limit will affect residents and visitors alike. That is antithetical to the environmental impact study process.

3. **Bicycle Access:** The "plan" very clearly contemplates limiting the access currently enjoyed by people on bikes to get to Ke'e, whether to take in the view for a couple of minutes or to take a swim. The "plan" closes the road to bicyclists, even if they are willing to assume the risk of a rockfall. It requires walking bikes for a significant part of the proposed boardwalk and contemplates the possibility of banning bicycles entirely. Any plan for use of the park should give great encouragement for bicyclist visitors, whether people ride from the neighborhood or from Hanalei, Princeville or beyond. The "plan" seems designed to place a heavy burden on bicyclists.<sup>2</sup>

---

<sup>2</sup> It seems that the plan contemplates a possible alternative that bicyclists with a liability waiver on file could continue to ride the road. At the very least, we urge that this alternative be available. This would be much like the waiver signed to use the 5-mile trail adjacent to the Kilauea miniature golf course.

**Subject:** Re: Haena State Park Plan highlighted language

The language you highlighted suggested a plan re 900 would be adopted and then would be subject to revision? So what is the thinking of the proponents? First come/first served? Reservations? Lottery? Surely there must be some alternative being contemplated?

On Sep 2, 2015, at 6:52 PM, Steve Drapkin <sdrapkin13@gmail.com> wrote:

Thanks.

So, what is proposed to be subject to written public comment, then if adopted, you enter a new phase? It seems so strange to be adopting a 900 person limit with new clue as to how it is to be counted and prioritized. How can there be adoption of a plan without determination of one of the most important terms or even a delineation of the alternatives?

**To:** Kimi Yuen <[kyuen@pbrhawaii.com](mailto:kyuen@pbrhawaii.com)>  
**Subject:** RE: Haena State Park Plan

Kimi, I am more than a little confused. Here are followup questions 1-4.

1. Are you saying that the document, watermarked "draft" and dated 10/14, is the currently proposed Master Plan? If I look at that document, it seems that the "master plan" is the 20 pages between pages 3-1 and 4-1. That seems just to be an earlier version of what is now at pp. 2-8 to 2-31 of the main document. It does not seem to contain an independent proposed Master plan. Yes, the 10/14 draft report describes the same master plan that is referenced in the Draft EIS. They are the same version. Please note that there is a near-term plan and the full build-out plan. Is this perhaps the confusion? I'm not sure what you are referring to as an "independent proposed master plan"? Could you kindly clarify?

1

4. **Parking:** The parking "plan" is virtually non-existent. Yes, you say that there should be room for about 100 cars, but say that perhaps the amount should be lower. The "plan" says nothing about parking for people who don't get a spot in the lot, other than to say they won't be able to park at the end of the road unless they are cultural practitioners or the like.

The idea that the bulk of the parking for Haena State Park users will be in a presently non-existent parking lot in Princeville seems absurd for financial and practical reasons. It is one thing to have shuttle access to crowded venues such as spots within Grand Canyon or Zion, but there the parking for those taking shuttles is very close at hand to the open-only-to-shuttle routes.

A significant improvement in the traffic could be accomplished by having employees with radios monitoring the parking and turning people around at the existing parking lot when the lot is full. The traffic crowding could also be reduced by limiting the parking on the road between Limahuli stream and the parking area and, indeed, enforcing the existing parking restrictions there. There is plenty of possible parking along the road, so long as the cars do not get packed in.

Of course, as noted above, much of the traffic confusion would be alleviated by considering re-establishing the parking area next to the end-of-the-road area.

5. **The Rock Fall Zone:** Much is made about the alleged safety concerns prompted by a geologic study. If the concerns are as great as the report suggests, then shouldn't those concerns be applicable to park users whom the "plan" contemplates would continue to utilize the road? The place where the road is closest to the cliff is adjacent to the cave and lasts for about 100 feet or so. The road could easily be rerouted to move outward from the cliffs (instead of inward as it is now), and constructed on pilings, much like a bridge.

Bottom line: If the existing roadway is dangerous, then it is dangerous to all and special exceptions should not be allowed.

Whereas a more detailed letter could easily be written, the above concerns are more than sufficient to show that the proposed "plan" is no plan at all. The planning should be done first and then presented to the public for true comment.

# ***Hā'ena State Park Final Master Plan Revised Pre-Final Report***

Prepared for:

State of Hawai'i  
Department of Land and Natural Resources  
Division of State Parks

Prepared by:

PBR HAWAII & Associates, Inc.

October 2014

2. Please respond to my earlier question below: "I did not find any place in the document where there was discussion as to how you intend to apply and enforce the 900 person/day limit, such as first come/first served, advance reservation etc.?" Can you confirm there is no such discussion? If I am wrong, can you direct me to where I should be looking."

As I mentioned, how the 900 person/day limit will be enforced or applied has yet to be determined (see highlighted text below). So all of the input we are receiving will help State Parks decide when they implement it.

Where precisely can I find the "pros and cons discussed in matrix form in the master plan report." Chapter 4 contains many matrices of the management options. Please scroll through to see them.

Imposing a limit with no plan as to what that limit exactly means, how it is enforced and the like is critical to understanding one's position as to the merits of the plan.

3. Same with "I did not see any detailed discussion as to alternative proposed parking plans, including the creation of a lot in Princeville, and the use of a shuttle van service. Am I missing something? If I am, can you please tell me where to look."

Section 4.3 discusses access, parking, and transportation alternatives. It also contains the matrices. Appendix C of the 10/14 draft master plan contains the shuttle study that looked at the different shuttle scenarios and offsite parking options.

4. Was there a meeting this (or last) week? Is there a meeting summary? How was that meeting publicized, I never saw it. There was a meeting organized by some members of the community held this past Sunday on 8/30, but it was not organized by us or State Parks so we are not aware of any official meeting summaries.

**Subject:** RE: Haena State Park Plan

2

Aloha, Steve: thank you for your time reviewing the Draft EIS. The initial pages of the Draft EIS as you have noticed provides a summary of the master plan. I believe the detail you are looking for is in the master plan report itself, which is Appendix I of the Draft EIS.

Chapter 4 of the master plan report discusses all the different management alternatives and potential scenarios. However, please note that many of the management policies **including the visitor limit and how that would be implemented are still yet to be determined** and are subject to change, especially if they're not working well to serve the community. Therefore, when you look at the alternatives discussed in the master plan, it's set up much like a menu of alternatives with the pros and cons discussed in matrix form in the master plan report.

Please let me know if you have any further questions.

Mahalo,  
Kimi

**Subject:** Haena State Park Plan

I live in Haena and attend the meeting you had at Hanalei School. Apparently there was another meeting this week (or last week)? Is there any summary of what was said at that meeting?

I have endeavored to review the 1000+ page plan. I have read good portions of it.

As best as I can tell, the proposed plan itself is only about 20 pages long (pages 2-8 to 2-31). Is that correct? If I am wrong, can you please advise as to the other page numbers which reflect the proposed plan (as opposed to the rationale and supporting EIR studies).

I did not find any place in the document where there was discussion as to how you intend to apply and enforce the 900 person/day limit, such as first come/first served, advance reservation etc.? Can you confirm there is no such discussion? If I am wrong, can you direct me to where I should be looking.

I did not see any detailed discussion as to alternative proposed parking plans, including the creation of a lot in Princeville, and the use of a shuttle van service. Am I missing something? If I am, can you please tell me where to look.

Thank you for your anticipated prompt response. I wish to finalize my input to you by tomorrow, if possible.

3

Month XX, 2018 - DRAFT

Mr. Steve Drapkin  
P.O. Box 1197  
Hanalei, HI 96714

**SUBJECT: COMMENTS ON THE HĀ'ENA STATE PARK MASTER PLAN  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (EIS),  
HĀ'ENA, KAUA'I, HAWAII**

Aloha Mr. Drapkin,

Mahalo nui for your emails dated September 2 and 9, 2015 and letter dated September 3, 2015 received via email on September 4, 2015 regarding the Hā'ena State Park Master Plan Draft Environmental Impact Statement (EIS). We sincerely apologize for the delay in responding. Due to the feedback received on the Draft EIS, the State of Hawai'i, Department of Land and Natural Resources, Division of State Parks (State Parks) has worked on revising the master plan with a reorganized Hā'ena State Park Community Advisory Committee (HSPCAC) to address the concerns voiced by the larger community. As a result, the master plan presented in the Final EIS has been updated based on the feedback received from the public meetings, comments received, and subsequent extensive collaboration with the HSPCAC. As the planning consultant for State Parks, we offer the following responses to your comments in reverse order as latter emails compile and repeat information from earlier correspondence.

Mahalo for your suggestion to post the comments on a website from your email dated September 9, 2015. The comments received on the EIS submittals are included in the respective EIS documents posted on the State Office of Environmental Quality Control's (OEQC) website:

[http://oeqc2.doh.hawaii.gov/layers/15/start.aspx#EA\\_EIS\\_Library/Forms/AllItems.aspx](http://oeqc2.doh.hawaii.gov/layers/15/start.aspx#EA_EIS_Library/Forms/AllItems.aspx). They include the EIS Preparation Notice, which was published February 23, 2015 edition of *The Environmental Notice* (TEN) and the Draft EIS, which was published in the July 23, 2015 edition of TEN. All of these comments will be compiled in the Final EIS and posted on the OEQC website as noted below. State Parks has also uploaded the Final EIS at their Hā'ena State Park website which includes all the comments received on the EIS: <http://dlnr.hawaii.gov/dsp/parks/kauai/haena-state-park/>.

With regards to your email dated September 9, 2015, the public comment period for the Draft EIS was extended for another 30 days until October 8, 2015. The original 45-day public comment period started on July 23, 2015 from the day OEQC published the Draft EIS in TEN and the Draft EIS was available to the public as legally required according to Section 343-5, Hawai'i Revised Statutes (HRS). Twenty-four comments from the public were received during the extension; four of which were second comments from individuals or groups who submitted a previous letter or email before the close of the September 8, 2015 public comment period deadline. A total of 157 letters/emails/comment cards were received on the Draft EIS.

Mahalo for your comments regarding the public meeting held on August 19, 2015. The purpose of the meeting was to collect additional comments on the Draft EIS, which was made public on July 23, 2015, and was an optional meeting. The meeting included a presentation of the proposed master plan and breakout groups were held after the

printed on recycled paper

presentation so attendees could fill out comment cards and ask questions of the project team. Section 8.3.3 of the Final EIS summarizes the oral and written comments received at the meeting and is attached as the "Draft EIS Public Meeting" attachment. As noted, the public comment period was extended until October 8, 2015.

In response to your letter dated September 3, 2015, we offer the following responses:

We understand your concerns regarding the master plan proposed in the Draft EIS. The plan has been revised based on the comments received from the public. Please see the attached revised Master Plan Summary and Figure 1 graphic of the master plan from the Final EIS. The full master plan report is available for download at the State Parks website for Hā'ena State Park: <http://dlnr.hawaii.gov/dsp/parks/kaui/haena-state-park/>.

Mahalo for your comments regarding the many visitors who arrive by foot or bicycle in the early mornings and at sunset. The proposed visitor limits would only apply during peak park hours in the middle of the day so you would still be able to enjoy those routines. The visitor limits will also be based on an average number of visitors per day and so if there are days with fewer visitors, more visitors could be allowed during busier days. Please see the text of Section 2.5.4.3 from the EIS which discusses the proposed visitor limits in the "Visitor Limits" attachment. Please also note that the recommendation is to adaptively manage the visitor limits based on feedback from the community and impacts to the park resources and are therefore open to change if there are issues that arise from the initial implementation.

1. Mahalo for your comments regarding the master plan. The master plan describes the proposed physical improvements to the park. The proposed plan has been in development since 2010 with the original Master Plan Advisory Committee and most recently with a reorganized Hā'ena State Park Community Advisory Committee, which has been working on plan revisions since the August 19, 2015 public meeting and conducting community outreach throughout the revisions of the master plan.

As noted above, breakout sessions were held with the attendees after the presentation at the August 19, 2015 meeting and comment cards were distributed to facilitate collecting as many comments and talking with as many attendees as possible given the large number of attendees. The comments received at that meeting as well as other comments that have been mailed in during the public comment period have helped guide the revisions to the master plan, which is the subject of the Final EIS.

The Final EIS is before the Board of Land and Natural Resources for recommendation for submittal to the Governor for acceptance at their May 25, 2018 Board meeting. The Board's approval of the Final Master Plan will follow.

2. Mahalo for your concern about how the visitor limits will be applied. As noted above, the visitor limits are proposed to apply initially during peak hours and will be adjusted and adaptively managed as needed. Section 2.5.4.3 of the Final EIS describes the updated proposal and is attached in the Visitor Limits attachment.

3. With regards to bicycle access, the master plan proposes to add bicycle racks at two locations to support bicyclists. The first is near the Welcome Hale and the other is at Kē'ē as shown on the Figure 1 master plan graphic. While State Parks does not encourage bicyclists to use the limited access roadway, rockfall hazard signs are

recommended to be posted at the gate across the highway to warn visitors of the potential for rockfalls. State Parks appreciates your recommendation to allow bicycle access along the highway with riders signing a liability waiver as is done at the Kilauea miniature golf course and will take that into consideration.

4. We understand your concerns regarding parking. The HSPCAC has worked on a revised parking management concept which does not necessitate the remote Princeville parking lot and the description of the parking has been revised in Sections 2.5.1.2 and 4.3.2 of the Final EIS. Please see the "Parking" attachment for the revised description and discussion in the EIS.

Mahalo nui for your recommendations on staffing the parking lots with people who could tell drivers when the parking lot is full to help manage traffic. When the lot is full, the entrance to the lot can be closed at the turnaround, which allows drivers to continue out of the park without requiring cars to stop and back up into traffic. Mahalo also for your recommendations to restrict and enforce the no parking along the highway. State Parks continues to work with the County on these issues. Mahalo for your recommendation to reestablish parking at the end of the road. The improved main parking lot and turnaround are proposed in the master plan to help reduce the congestion and allow for cars to turn around more easily as you mention.
