

SOUTH MAUI COMMUNITY WILDFIRE PROTECTION PLAN

ISLAND OF MAUI, COUNTY OF MAUI, HAWAII

ORIGINAL PLAN: 2016

This document represents the collective efforts of community members, agencies, and stakeholders to reduce wildfire risks and enhance resilience. Originally developed in 2016, the CWPP established a comprehensive framework for wildfire hazard assessment, community values, and recommended strategies for risk reduction.

PRIORITY PROJECTS UPDATED: 2024

In 2024, the plan was updated to include a detailed list of priority projects, making it a dynamic, living plan that evolves with the community's needs and priorities. The CWPP remains a cornerstone for wildfire risk mitigation, project planning, and funding, ensuring a collaborative and proactive approach to wildfire resilience.

Coordinated and developed by Hawai'i Wildfire Management Organization, in partnership with Hawai'i Department of Land and Natural Resources, Division of Forestry and Wildlife. Funded by the USDA Forest Service.

PLEASE READ BEFORE CONTINUING

Introduction to the Community Wildfire Protection Plan (CWPP) and Updates

The Community Wildfire Protection Plan (CWPP) is a vital tool for guiding communities, agencies, and stakeholders in reducing wildfire risks and enhancing resilience across our landscapes. Since its inception, the CWPP has provided a comprehensive foundation for understanding wildfire hazards, the characteristics of our landscapes, the values at risk, and the community and agency concerns that shape our wildfire mitigation strategies. The CWPP has always been designed to serve as a dynamic, living document that remains relevant and actionable over time.

Foundational Elements of the CWPP

The foundational elements of the CWPP were established during the original completion of the CWPP document. These remain steadfast and include:

- Detailed assessments of wildfire hazards and risks.
- Descriptions of the local and regional landscape.
- Identification of community values at risk, including natural resources, homes, infrastructure, and cultural heritage.
- Documentation of community and agency concerns regarding wildfire impacts.
- General recommended next steps and strategies to address wildfire risk.

When there are significant changes in risk, values, emergency operations, or similar, an entirely new CWPP document will be developed. Until such time, these core components ensure that the CWPP continues to provide a reliable, broad-based framework for understanding and addressing wildfire challenges.

The Evolution of the CWPP: Annual Priority Projects and Actions Updates

To ensure that the CWPP remains an actively utilized tool for project planning and funding, we have adopted a system of annual updates to the appendix. These updates focus specifically on identifying and prioritizing shovel-ready projects that align with the overarching goals of the CWPP. This approach allows us to:

- Keep the CWPP alive and relevant by incorporating evolving community needs and priorities.
- Enhance its utility as a foundational resource for securing funding and implementing wildfire mitigation projects.
- Ensure that project lists remain current, specific, and actionable.

While the foundational elements of the CWPP persist as written, the priority projects and actions list naturally shift and evolve over time. This flexibility ensures that the CWPP remains both a strategic guide and a practical resource for action.

Mutual Agreement Signature Page

The following three entities mutually agree to the final contents of this Community Wildfire Protection Plan and the subsequent List of Priority Projects and Actions: State of Hawaii Department of Land and Natural Resources, Division of Forestry and Wildlife; Maui Fire Department; and Maui Emergency Management Agency.

This plan:

- Was collaboratively developed by agencies, entities, community members, and individuals with interest or jurisdiction within the CWPP area.
- Describes wildfire hazards in the natural and built environment.
- Provides the concerns, recommended actions, and priorities of those who live and work in the area to better reduce wildfire threats, mitigate hazards, improve public safety, and protect natural resources from the impacts of wildfire.
- Is written to appropriately begin and inform wildfire mitigation action planning at the local level, and is not regulatory or binding.
- Includes both foundational information and updated lists of projects.

Pursuant to the 2003 Healthy Forest Restoration Act (HFRA), the following signatures represent mutual agreement of the contents of this CWPP.

Acknowledgment of the 2024 Update

This 2024 update represents the latest step in the CWPP's evolution. It includes a brand-new list of priority projects and actions, each identified with detailed specifications to guide implementation.

By signing this document, we affirm our collective commitment to the CWPP's foundational principles and to the ongoing process of refining and advancing our wildfire mitigation project priorities and implementation efforts.

INTRODUCTION

SOUTH MAUI COMMUNITY WILDFIRE PROTECTION PLAN

GOALS AND OBJECTIVES

This Community Wildfire Protection Plan (CWPP) was developed by the Hawai'i Wildfire Management Organization (HWMO) with guidance and support from federal, state, and county agencies and representatives, private resource management entities, community members, and decision makers concerned about wildfire issues in South Maui. State of Hawai'i Department of Land and Natural Resources- Division of Forestry and Wildlife (DLNR-DOFAW) was the primary partner in developing this plan.

This plan includes elements of fire protection, hazard assessment, wildfire mitigation priorities, and community outreach and education. The process used to develop this plan engaged a diversity of agencies and individuals concerned with the at-risk area, following the guidelines and requirements of federal programs such as the Federal Emergency Management Agency (FEMA) Pre-Disaster Mitigation program and the National Fire Plan (NFP).

The goals and objectives of this plan follow the intent and requirements of the *Healthy Forests Restoration Act (HFRA) of 2003 – HR 1904*, which describes a CWPP as a fire mitigation and planning tool for an at-risk community that:

- Is developed within the context of the collaborative agreements and the guidance established by the Wildland Fire Leadership Council and agreed to by the applicable local government, local fire department, and State agency responsible for forest management, in consultation with interested parties and the federal land management agencies managing land in the vicinity of the at-risk community.
- Identifies and prioritizes areas for hazardous fuel reduction treatments and recommends the types and methods of treatment on federal and non-federal land that will protect one or more at-risk communities and essential infrastructure.
- Recommends measures to reduce structural ignitability throughout the at-risk community.¹

Stakeholder participants in the development of this plan agree that wildfire threats are imminent and can have widespread damage to South Maui watersheds, natural resources, and human communities. The danger of fire is related to high numbers of human-caused fires, dry conditions, strong winds, and high fire potential of vegetation. In the last decade, numerous areas of South Maui have burned. The CWPP is a first step toward increased public-private collaboration toward wildfire preparedness and protection.

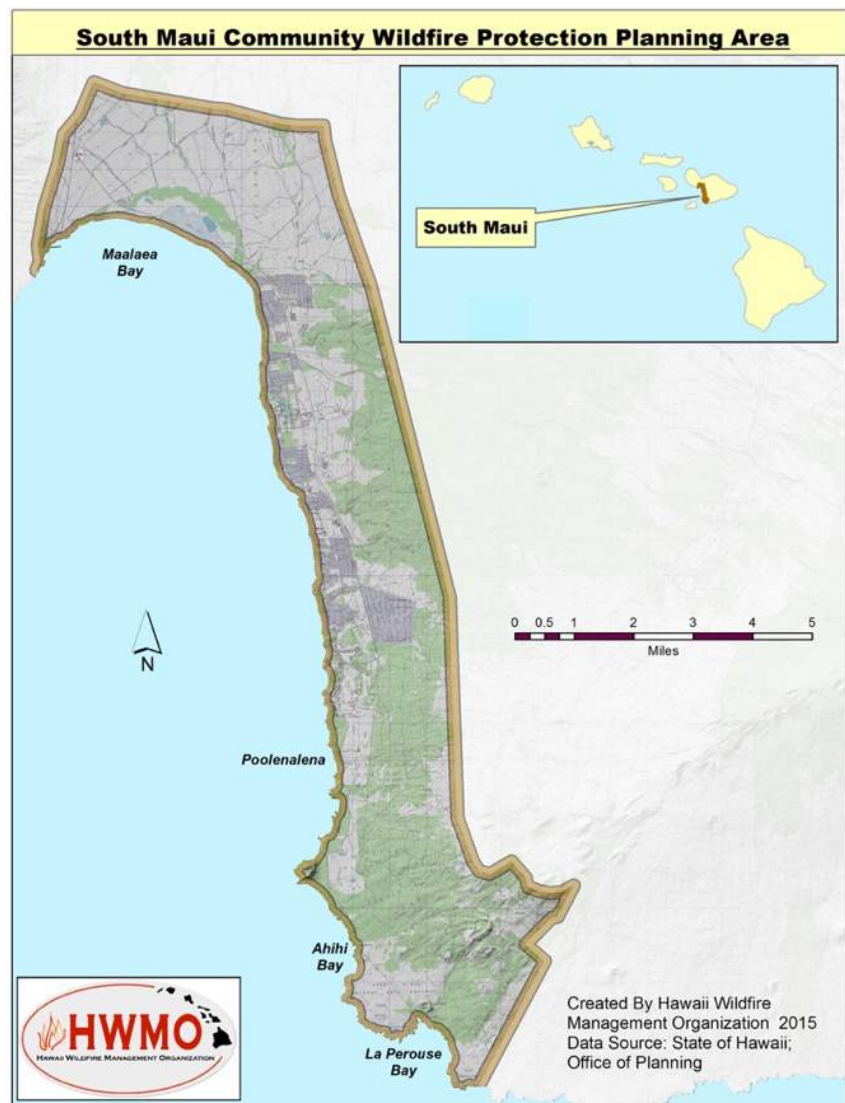

PLANNING AREA BOUNDARIES

The South Maui CWPP planning area covers the central-southwestern coastal area of Maui commonly referred to as South Maui, Hawai'i. The planning area spans the community and landscape areas from Mā'alaea to Ahihi-Kinau (See Maps 1 and 11). The plan includes federal, state, county and privately owned lands. The South Maui area was chosen through stakeholder meetings and addresses one of Maui's most fire prone regions.

The South Maui CWPP is part of a series of CWPPs in Maui County. The South Maui CWPP planning boundaries connect to other Maui-based CWPP boundaries, comprehensively defining the entire island of Maui as a wildland-urban interface (WUI) at-risk area. The concurrent WUI and CWPP planning designation includes communities and their surrounding lands to ensure adequate protection of natural areas and associated human communities from the threat of wildfire. The South Maui planning boundaries were chosen through stakeholder meetings and addresses one of the Maui County's fire prone regions.

CWPPs exist for Western Maui, Upcountry Maui, Kahikinui, and Molokai'i. Additional CWPPs may be developed as communities gain interest in wildfire preparedness planning and as funds become available to complete the planning process. The South Maui CWPP planning area boundaries are demonstrated in Map 1.

Map 1. (Right). South Maui CWPP Planning Area Map.

PLANNING PROCESS, METHODS, AND PARTICIPANTS

CWPP PROCESS AND METHODS

The process of developing a CWPP helps to clarify and refine priorities for the protection of life, property, and critical infrastructure in the WUI areas. Local residents, landowners, fire suppression agencies, and community leaders have participated in valuable discussions regarding wildfire history, resources at risk, areas of concern, and priority mitigation actions. The methods used to create this CWPP followed the guidelines established by the HFRA, which requires the following actions during the planning process:

- Contact Decision Makers
- Involve Federal Agencies
- Involve State and Local Agencies
- Engage Interested parties

This CWPP followed these guidelines and additionally satisfies the requirements of the FEMA Pre-Disaster Mitigation program and the NFP.

PARTICIPANTS

State and Local Agencies

The representatives of the State of Hawai'i and local agencies that have jurisdictional responsibilities in the vicinity of the South Maui CWPP planning area, and who have been involved in the development of the South Maui CWPP are:

Agency	Representative(s)
Maui Fire Department	Jeffrey Murray Fire Chief
Hawai'i Department of Land and Natural Resources- Division of Forestry and Wildlife	Lance De Silva, Forest Management Supervisor I David G. Smith, Administrator Robert Hauff, State Protection Forester
County of Maui Civil Defense	Anna Foust

Table 1. CWPP Participants: State and Local Agencies.

Federal Agencies

The following federal agencies were consulted for area-specific and regional fire and environmental information and expertise:

Agency	Representative(s)
US Fish and Wildlife Service	Dawn Bruns, Acting Assistant Field Supervisor Section 7 & Habitat Conservation Plans Andrew Kikuta, Fire Management Specialist, Hawai'i and Pacific Islands

Table 2. CWPP Participants: Federal Agencies.

Decision Makers

The decision-makers contacted for input and involvement in the development of the South Maui CWPP are represented in the following table. Neither provided specific input, however Councilperson Baisa responded with support for both the CWPP effort and for increasing wildfire response and preparedness capacity in the area.

Local Government	Name	Representing
Maui County Council	Don Couch, Council Chair	South Maui
	Gladys Baisa, WR Chair	Pukalani-Kula- Ulupalakua

Table 3. CWPP Participants: Decision Makers.

Interested Parties

The parties from our community that have shown interest in forest/fire management and contributed input into the South Maui CWPP are:

Interested Parties	Affiliation
Local Associations and Large Landowners	Leeward Haleakala Watershed Partnership
Private Citizens	General Public

Table 4. CWPP Participants: Interested Parties.

\

WILDFIRES IN SOUTH MAUI BACKGROUND

The South Maui landscape is characterized by residential areas surrounded by highly ignitable fire prone grasses on its upland side and the Pacific Ocean on its coastal boundary. Overgrown vegetation close to homes, pockets of open space within subdivisions, and an increase of non-native high fire-intensity plants around developed areas pose increasing threats to commercial, community, environmental, and residential resources. Unmanaged fire prone vegetation, periods of high winds, warm weather, recurring drought conditions, and a history of human-caused fires create the fire environment that puts South Maui at risk of wildfire. This section discusses those factors in detail.

FIRE ENVIRONMENT

CLIMATE

Wildfire occurrence in South Maui is tied to broad climate patterns, in that more and larger fires typically occur in the drier areas or areas affected by drought conditions. South Maui is typically warm (January average 82° F, July average 88°F) and dry. Rainfall in South Maui is generally very low (less than 10 inches of rain per year, see Map 4), leading to highly hazardous conditions. The likelihood of large wildfires during drought further increases wildfire risk. Additionally, precipitation events tend to increase the quantity of available vegetative fuels, which can increase both fire risk and the frequency that mitigation measures such as firebreaks and fuels reduction projects need to be maintained. Daily weather patterns also influence fire risk. Key factors indicating high fire danger in Hawai'i are low relative humidity (RH), high temperature, and high wind speeds.

TOPOGRAPHY

The South Maui CWPP planning area is characterized by a combination of residential, agricultural, and wildland areas. It stretches along a coastal region of the downslope edge of two volcanic mountain areas and the saddle between them: Haleakalā, the 10,023-foot shield volcano that comprises much of the Island of Maui, the West Maui Mountains to the northwest, and the central plains connecting the two.

Topography plays a key role in wildfire behavior and post-fire impacts in South Maui and its surrounding (and contributing) environs. Wildfires spread more quickly as they progress upslope and burn at higher intensity. Following wildfires, surface water from rain quickly travels downslope and increases soil erosion, causing downslope flooding and adding sediment to nearshore waters. These post-fire impacts can affect traffic and transportation routes, tourism and economic activities, and harm natural resources by way of runoff that smothers coral reefs and reduces water quality.

Additionally, fires can travel from community edges and roads upslope to agricultural and forested areas that are difficult to access for fire suppression due to often inaccessible terrain (see Map 6). Once wildfires spread into steep, upland areas, the difficult terrain and lack of roads frequently limit fire response to costly aerial operations (i.e., bucket drops by helicopters). Preventing ignitions generated in the South Maui region is of high priority to protect the nearby residential and commercial areas, as well as to protect upslope lands and resources.

VEGETATION AND NATURAL RESOURCES

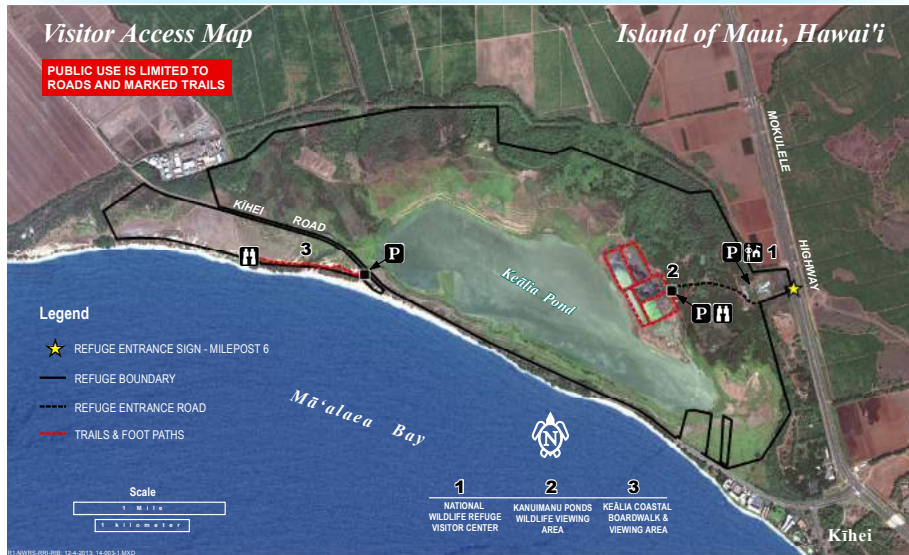

The South Maui CWPP region has areas that are residential, agricultural, wetlands, and nonnative grasslands and shrublands, and mixed and native forests (Map 7). The widespread establishment of nonnative grasslands and shrublands is a leading cause of increased fire risk in South Maui. Nonnative grasslands and shrublands often act as uninterrupted ‘wicks’ that allow fires to spread from communities and roads (where ignition risk is highest) into areas that have contiguous fuels and more challenging access for firefighting efforts. Grass fires can also become canopy fires when fire travels into treetops via low hanging tree branches. This increases the difficulty of firefighting efforts, as canopy fires can spread quickly due to increased exposure to wind. The nonnative, fire prone species provide abundant fine fuels that cure rapidly in dry conditions, are easily ignitable even in humid conditions, and allow fires to spread rapidly which create dangerous conditions for fire responders.

There are two highly managed protected natural resource areas within the South Maui CWPP region—Keālia Pond National Wildlife Refuge (Map 2) and ‘Āhihi-Kīna‘u Natural Area Reserve (Map 3):

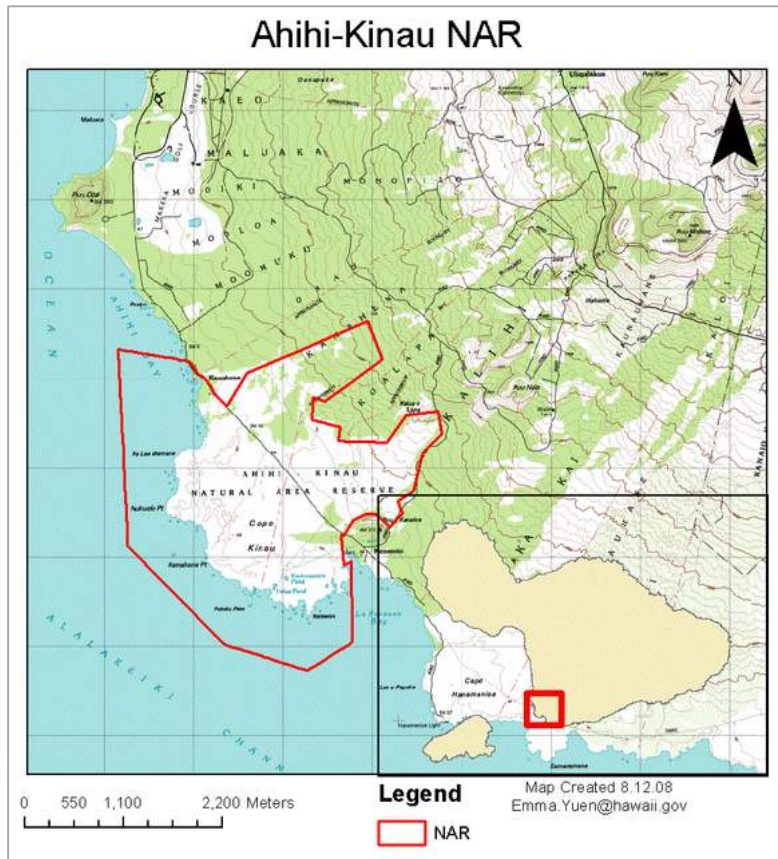

Keālia Pond National Wildlife Refuge is operated by the US Fish and Wildlife Service (USFWS). It is a coastal salt marsh along the south-central coast of the Hawaiian Island of Maui. The refuge is located between the towns of Kīhei and Mā‘alaea, spanning across both sides of North Kihei Road, Route 31. The wetland is also a 691-acre (2.80 km²) bird sanctuary, home to 30 species of waterfowl, shorebirds, and migratory ducks, including the ‘auku‘u (black-crowned night heron, *Nycticorax nycticorax hoactli*) and the endangered āe‘o (Hawaiian stilt, *Himantopus mexicanus knudseni*) and ‘alae kea (Hawaiian coot, *Fulica alai*). There is a 2,200-foot boardwalk and kiosk with self-guided interpretive exhibits that was designed to provide visitors an opportunity to learn about the many native and visiting birds that visit the wetlands. This wetland sits in the middle of dry, fire prone kiawe forest and grasslands with agricultural operations nearby.² It is bounded on the north by transmission lines from the local utility. In 2004, an escaped cane fire crossed over onto refuge property and consumed 47 acres.

Keālia Pond

National Wildlife Refuge

Map 2. Keālia Pond National Wildlife Refuge. Source: U.S. Fish and Wildlife Service.

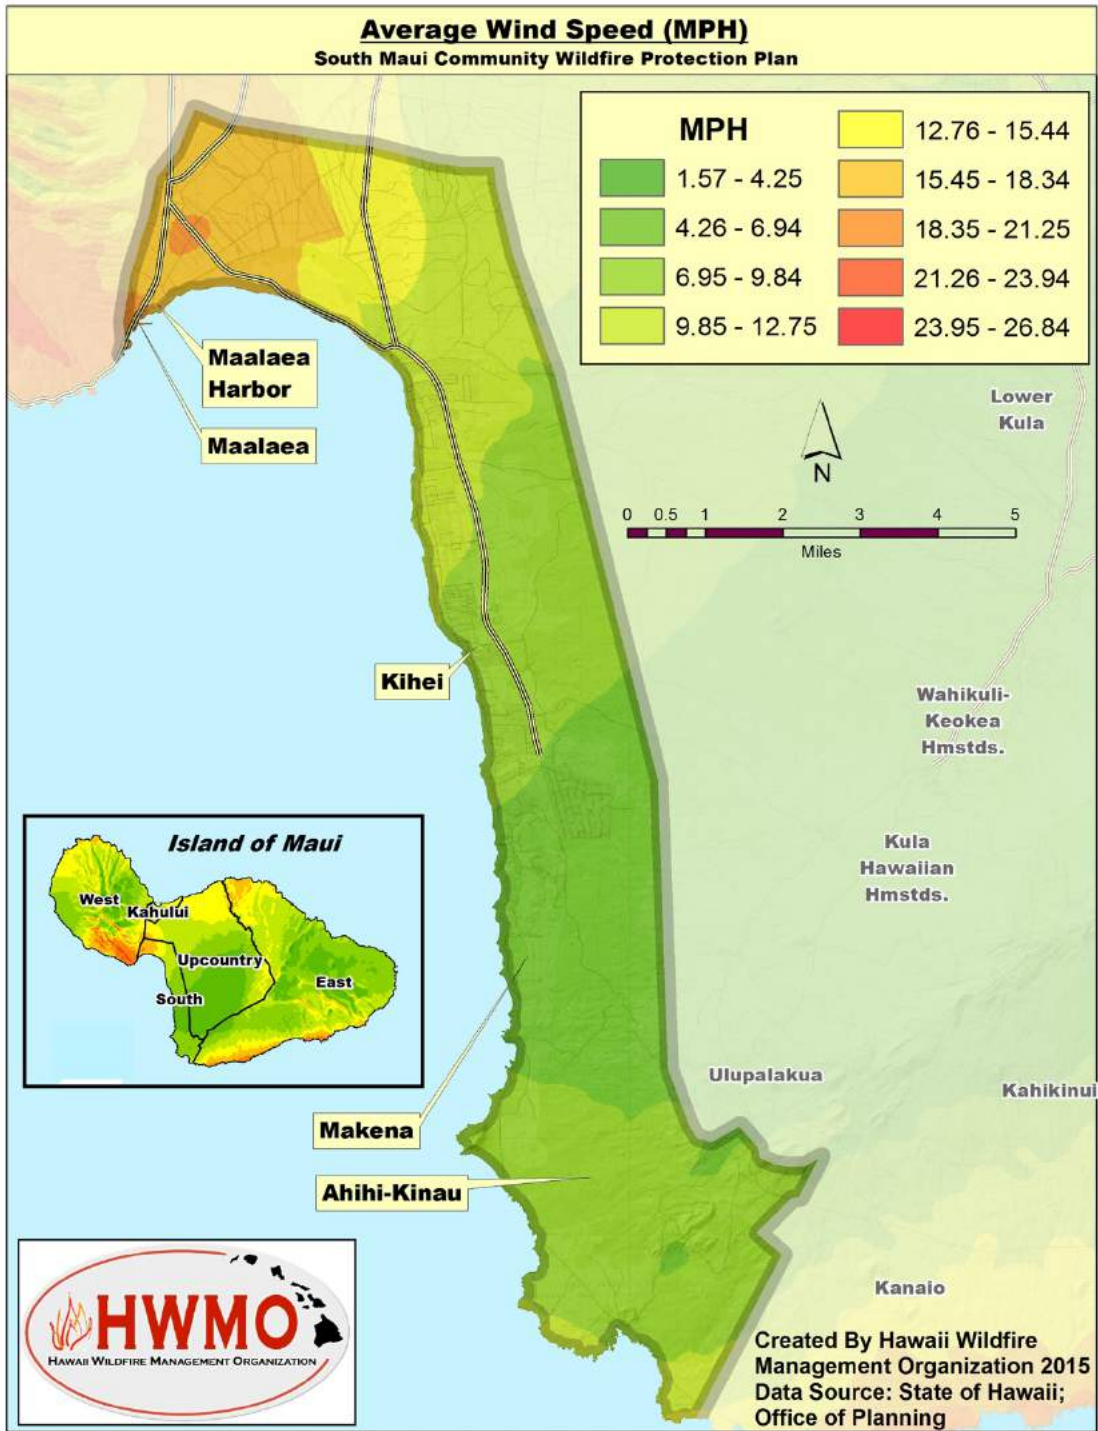

Map 3. 'Āhihi-Kīna'u Natural Area Reserve. Map source: DLNR

The 'Āhihi-Kīna'u Natural Area Reserve (NAR) is part of the DLNR-DOFAW Natural Area Reserve system, and includes a coastal lava field and surrounding waters on the southwest coast of the island of Maui, Hawaii. The reserve is located at the end of Makena Road, south of Makena State Park and north of La Perouse Bay. It consists of 1,238 acres (501 ha) on land and 807 acres (327 ha) of ocean along 3 miles (4.8 km) of the southwestern coastline of the CWPP area. The reserve includes many land-based cultural and geologic sites, rare and fragile anchialine ponds, lava fields from the last eruption of Haleakala 200-500 years ago, and unlike other NARS, a protected marine component. Native plant communities exist in kipuka (pockets) and include naio, wiliwili and native cotton. However, these are severely imperiled by the encroachment of weeds, feral ungulates such as goats, and wildfire. Preserving the integrity of the anchialine pools is also a major management focus. Main threats to these wetlands include non-native invasives such as fish or prawns, algal mat formations, and human disturbance. The surrounding coral reef systems shelter a complex assemblage of organisms, most of them endemic to the Hawaiian archipelago.³ Both nearshore and offshore resources are at risk of the effects of fire, which can perpetuate and spread invasive species, and post-fire erosion, which contributes to land-based pollution and sedimentation of anchialine and nearshore waters.

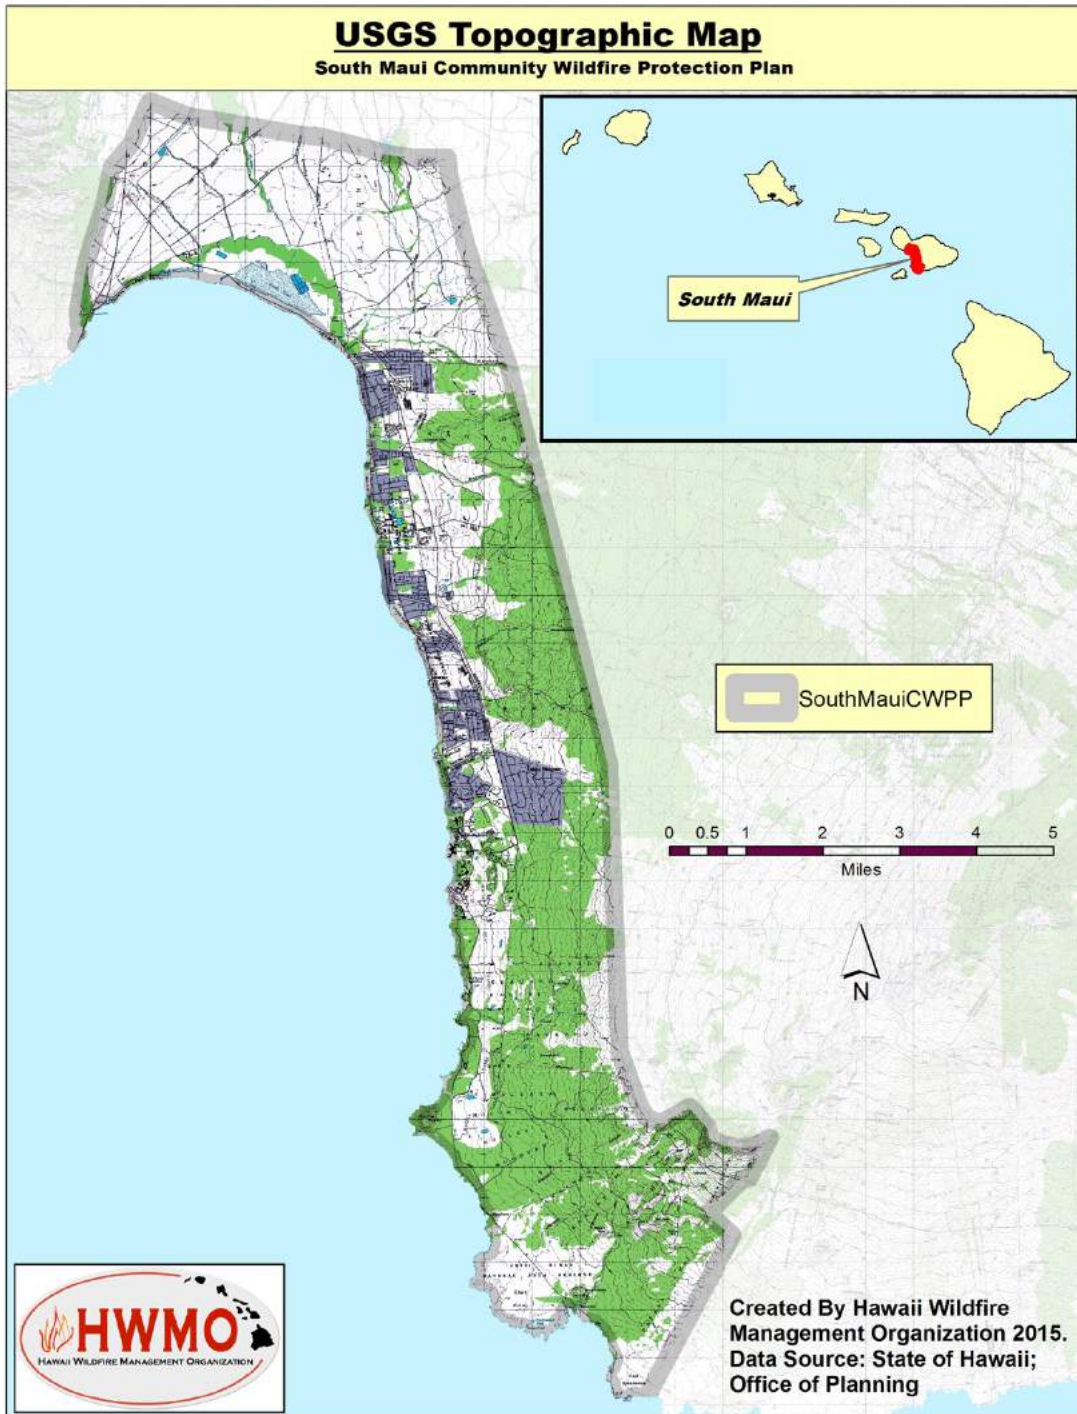

Maps 4- 10 demonstrate various components of the South Maui fire environment, to include climate, topographic, and natural resource variables.

FIRE HISTORY

IGNITIONS

The WUI— the wildland-urban interface along which developed areas, roads, and community infrastructure abut undeveloped land— is where the majority of wildfire ignitions occur in all of Hawai'i. The South Maui CWPP planning area is no exception. Because of this, WUI areas often experience the greatest risk of loss of property, life, and natural resource function due to wildfire. The majority of wildfires on Maui are caused by human error or arson, especially near developments, power line right of ways, and along roadsides. Additionally, sprawling dry nonnative grasslands surround many communities. These unmanaged fire fuels create a significant hazard in South Maui. Once ignited along the interface, wildfire can spread rapidly through and around residential areas, threatening both property and life. Wildfires in lesser developed areas and fallow lands, can spread to higher elevations and threaten natural areas, and the native and protected species they may contain.

FIRE INCIDENT MAP

The South Maui Wildfire Incident Map (Map 11) displays results from an HWMO-led effort to compile wildfire records from fire suppression agencies across the state, which resulted in a statewide wildfire database, as well as region-specific wildfire incident maps. Included on the map are MFD's documented responses to wildfires between January 2000 and January 2011 and wildfire ignition points recorded by DLNR-DOFAW from 1998-2012. The map displays ignition points, and does not indicate the final perimeter of burned areas.

Ignitions are important for understanding trends and patterns of fires. Map 11 demonstrates that WUI, roadside, and human access area fire starts are important trends across Maui. While larger fires tend to occur in the drier areas with unmanaged vegetative fuels, the high frequency of ignitions along every WUI is of concern. As drought conditions become more frequent (and they are predicted to increase), there are concerns that large fires in dense unmanaged vegetation will correspondingly increase.

Map 11. South Maui Wildfire Incident Map. Incidents recorded from 1998-2012. Note: points displayed are ignition sites only and do not indicate perimeter boundaries of burned areas.

SIGNIFICANT FIRES

Numerous large wildfires (over 100 acres) have taken place in the South Maui region. Detailed records are scant before 2000, but many since that time have received media attention or been noted for their significant impacts. Table 5 highlights the fires on record that were significant in terms of size, media coverage, or impact.

Incident Name	Location	Date Started	Acres	Cause	Property/ Vegetation	Notes
Mā'alaea Powerline	Mā'alaea - Honoapiilani Highway and North Kihei Road - Between Waikapu Valley and Manawaipueo Gulch	June 6, 2010 (6:34 a.m. - first alarm)	6,200	Heat from power equipment	Property Type: Open land or field Vegetation: Buffel grass, kiawe	HDF Cost: \$25,001-25,000 Damage Costs: \$2,500 Structures/Homes Lost: 1 (700 meters enclosure fence was damaged)
Mā'alaea '06 or Pali '06	Mā'alaea - Honoapiilani Highway, mile marker 7-10 - Ukumehameha Unencumbered State Land - Mā'alaea/Lahaina Pali Trail	August 20, 2006 (10:05 a.m. - first alarm)	3,973	Undetermined	Property Type: Open land or field Vegetation: Buffel grass, kiawe	HDF Cost: \$55,000 Damage Costs: \$794,600 Structures/Homes Lost: 2 homes, 8 other structures
Kihei-Maui Meadows	Maui Meadows Subdivision (adjacent to it) - 300 Kilohana Drive	August 23, 2008 (4:25 p.m. - first alarm)	300	Incendiary	Property Type: Open land or field Vegetation: Buffel grass, kiawe	HDF Cost: \$10,001-15,000 Damage Costs: \$90,000 Structures/Homes Lost: 1
Kihei May 2003	Kihei (near Kihei Regional Park) - Halekuai St.	May 23, 2003 (2:45 p.m. - first alarm)	60	undetermined	Property Type: Open land or field Vegetation: Brush or brush-and-grass mixture	
Kihei October 2003	Ohukai Street	October 4, 2003 (2:32 p.m. - first alarm)	40	Intentional - flame/torch	Property Type: Open land or field Vegetation: Brush or brush-and-grass mixture	
Kihei May 2006	Kilohana St.	May 12, 2006 (12:18 p.m. - first alarm)	30	Accidental spark, ember, or flame from operating equipment	Vegetation: Open land or field; brush or brush-and-grass mixture	
Kihei August 2008	On Piilani Highway	August 25, 2008 (2:28 p.m. - first alarm)	25	Undetermined	Vegetation: Open land or field; brush or brush-and-grass mixture	
Kihei October 2005	2542 Omiko Place	October 13, 2005 (11:22 a.m. - first alarm)	15	Undetermined	Vegetation: Open land or field; brush or brush-and-grass mixture	

Kihei November 2012	On Mokulele	November 27, 2012 (10:34 a.m. - first alarm)	12	Accidental spark, ember, or flame from operating equipment	Vegetation: Open land or field; brush or brush-and-grass mixture	
Kihei May 2009	543 Kaiolohia	May 31, 2009 (12:27 p.m. - first alarm)	10	Undetermined	Vegetation: Open land or field; brush or brush-and-grass mixture	
Kihei July 2010	2701 Mokulele	July 31, 2010 (10:29 a.m. - first alarm)	10	Accidental; heat spread from another fire	Vegetation: Open land or field; forest, woods, undeveloped	
Kihei Arson October 2015	End of Kaiwahine Street, next to Hale Pi'ilani Park	October 20, 2015 (2:35 a.m. - fire crews on scene)	2	Arson	Vegetation: Open land or field; grass	Came within 100 feet of nearest homes

Table 5. South Maui Large and Significant Wildfires.

Narrative accounts first published by local media and published photos of some notable fires in South Maui are provided below:

Mā'alaea Powerline Fire^{4, 5, 6, 7}

On the morning of June 6, 2010, Mā'alaea residents awoke to a brush fire that would end up consuming over 6,200 acres of land— the largest wildfire in South Maui between January 2000 and December 2012. The wildfire threatened neighboring communities, forcing about 100 people to evacuate including residents, shoreline campers, scenic lookout visitors, and Kaheawa Wind Farm employees. A stretch of Honoapi'ilani Highway was also closed due to the fire, which started from power equipment on the mauka side of the highway between the Waikapu Valley and Manawaipueo Gulch. Nearly 700 meters of enclosure fencing was damaged, but no homes or structures were lost. Large plumes of smoke reduced air quality significantly, while post-fire run-off and erosion muddied nearshore waters.

The fire was a reminder of the threat wildfires pose in Maui, where the mountain ridges abut the coast. Unmanaged grass and brush along with steep hillsides created a recipe for a dangerous fire that

Photo 1. Mā'alaea Fire on June 10, 2010. Photo Credit: Wendy Osher/Maui Now

Photo 2. Upslope smoke viewed from the highway below. Photo credit: Joni DeMello/Maui Now.

was difficult to manage and control. Although the magnitude of the fire made it stand out and gain national attention, the area has experienced several wildfire incidents that have almost all been human-caused. Since the 2010 fire, buffelgrass, kiawe and other fire-prone invasive plants have grown back and have ignited numerous times off the busy highway, especially near the scenic lookout pull-out.

Mā'alaea '06/ Pali '06 Fire 8, 9, 10

Four years prior to the Mā'alaea Powerline fire, the same slopes along the Pali section of the Honoapiilani Highway burned in a wildfire that scorched 3,973 acres. This was the second largest fire in South Maui between January 2000 and December 2012. Two homes and numerous structures were destroyed. No injuries or lives were lost. The destructive fire surrounded the then-newly built Kaheawa Wind Farm, but did not affect the twenty turbines.

The wildfire clogged the major transportation route between West Maui and the rest of the island and disrupted air traffic. Maui News reported that tourists trying to get to the Kahului Airport from the resort areas in West Maui and emergency vehicles attempting to travel to and from Maui Memorial Hospital and the west side of the island were prevented from doing so during the fire. Several commercial airline flight crews were airlifted to the airport by helicopter to make their departures.

Photo 4 (above left). The 2006 Ma'alaea/Pali fire burned 3,973 acres. Photo credit: County of Maui.

Photo 5 (above right). Firefighters dowsed flames with water bucket drops. Photo credit: County of Maui.

Kihei-Maui Meadows Fire 11, 12, 13, 14

Kihei's largest fire between January 2000 and December 2012 started on August 23, 2008 and eventually burned around 300 acres of buffel grass and kiawe trees. The wildfire threatened several homes in Maui Meadows, preventing homeowners from returning to their homes. Embers from the fire caused minor damage to a home downslope of the fire. Fire suppression efforts ran into a few challenges, including an injured firefighter and damage to six vehicles when the fire came close to Wailea Fire Station's parking lot fence.

Photo 6. The wall of flames was visible from Pi'ilani Highway.
Photo credit: Maui News.

On August 27th, residents were forced to evacuate for a second time.

"Our crews did a really great job in protecting the homes in the area," said then-Deputy Fire Chief Robert Shimada. "We appreciate the help of the heavy equipment crews from the Department of Public Works and Goodfellow Brothers and are especially grateful to those in Maui Meadows (who) allowed our firefighters to use their swimming pools for quick and safe night access to water so that our air operations could continue." The fire was ruled an arson fire after Maui police arrested a 15-year-old Kihei boy who admitted to starting the fire with a lighter.

WILDFIRE IMPACTS

Many of the community, economic, natural, and cultural resources in South Maui are exposed to wildfire impacts. These impacts are compounded by the fact that land-based, aquatic, and marine-based natural and cultural resources all lie within close proximity across the region.

IMPACTS TO NATURAL RESOURCES

Across Hawai'i, recurrent wildfires result in the conversion of both native and nonnative forested areas to fire-adapted grasslands and shrublands – and are one of the reasons these fire-prone ecosystems are expanding in many parts of the state. Wildfire is a major cause of the loss and degradation of native forest and other habitat. Most of the plant and animal species within native ecosystems in Hawai'i do not survive and/or recover from wildfires. More generally, the conversion of forest from fire and the conversion of active agriculture into fallow unmanaged weed fields increases the potential for future and larger fires by expanding the availability of fine fuels.

Wildfire also increases the potential for erosion and sediment delivery from upland to coastal and nearshore areas. The immediate loss of vegetation after a wildfire directly exposes soils to rainfall, which can dramatically increase erosion. Wildfire can also alter the physical and chemical properties of soils, making them more prone to surface run-off which can increase downstream flooding and sediment delivery. Forest conversion to grassland due to recurrent wildfires over the long-term also alters water cycling. The replacement of deep-rooted trees by shallow, matted root systems of grasses results in a higher water table and reduces the ability of rainfall to infiltrate into the soil. This causes an increase in surface runoff during rainfall events and thus increases the risk of flooding and sediment delivery downstream.

Forest loss and increased downstream sediment delivery to nearshore reefs have important implications for cultural and civic resources, as well, in terms of tourism, recreation, food resources, and cultural practices. Sediment loading destroys reefs and impacts nearshore fisheries which are critical subsistence resources to many Maui families. Burned areas can remain closed to the public for days to months due to landslide and tree-fall danger, limiting access to areas for hiking, hunting, gathering plants, and tending cultural sites. Even when nearby fires do not have immediate or direct impacts on these resources, there are often indirect or longer term impacts. For example, suppression efforts, such as the use of bulldozers, can damage important landscape features and alter water flow patterns. Frequent fires also impact powerlines, communication infrastructure, and can lead to road closures – exacerbating already congested traffic areas.

IMPACTS TO COMMUNITIES AND MUNICIPAL ACTIVITIES

Wildfires threaten lives, homes, and human health in several ways. Many neighborhoods have unmanaged/untended fire fuels interspersed within developed areas, promoting fire spread through communities and into surrounding areas. This creates an increased hazard to lives and homes in the area. Air quality is greatly reduced from smoke during fires and for months to years after fire due to high levels of wind-born dust. This dust is due to fire-caused changes to soil that leaves it water-repellant, and therefore easily lifted into the air.

Wildfires also impact economic and municipal infrastructure and activities. Burned soil from wildfires decreases groundwater recharge, which can affect drinking water supplies. As noted above, post-fire rain events cause erosion that damages nearshore resources (coral reefs, fisheries), which can have effects on one of the area's primary economic bases— coastal and marine-based tourism, as well as resident and visitor recreational activities. Traffic and road closures during fire events and post-fire flooding can block access routes and keep people from their homes and work, and are costly to local government.

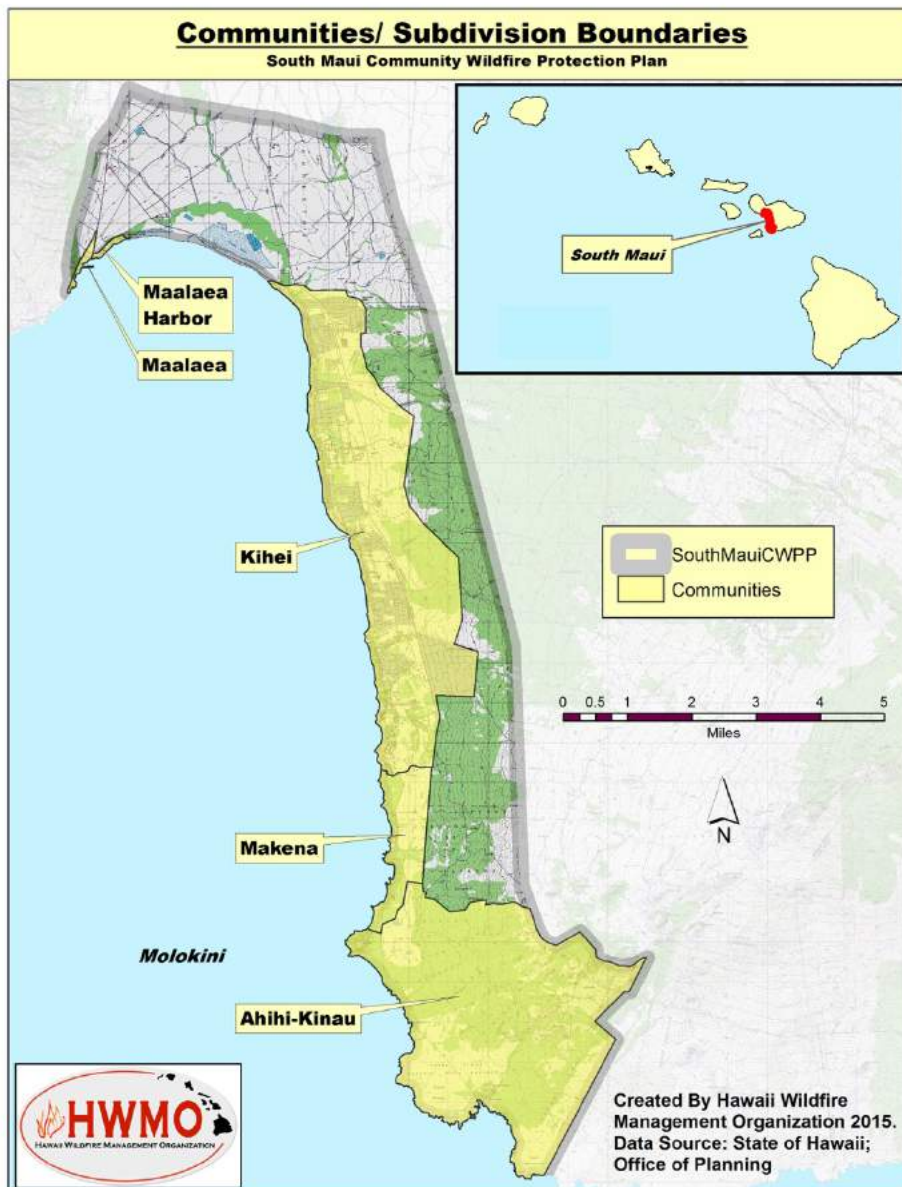

GENERAL OVERVIEW OF CWPP PLANNING AREA SOUTH MAUI

The area comprising South Maui, as defined in this plan, includes federal, state, county, and privately owned lands (Map 12). The CWPP planning boundaries also simultaneously define this region's WUI boundaries. It is delineated to include communities and their surrounding lands to ensure adequate protection of both natural areas and human communities. The CWPP boundaries were chosen through stakeholder meetings and addresses one of Maui's priority fire prone regions.

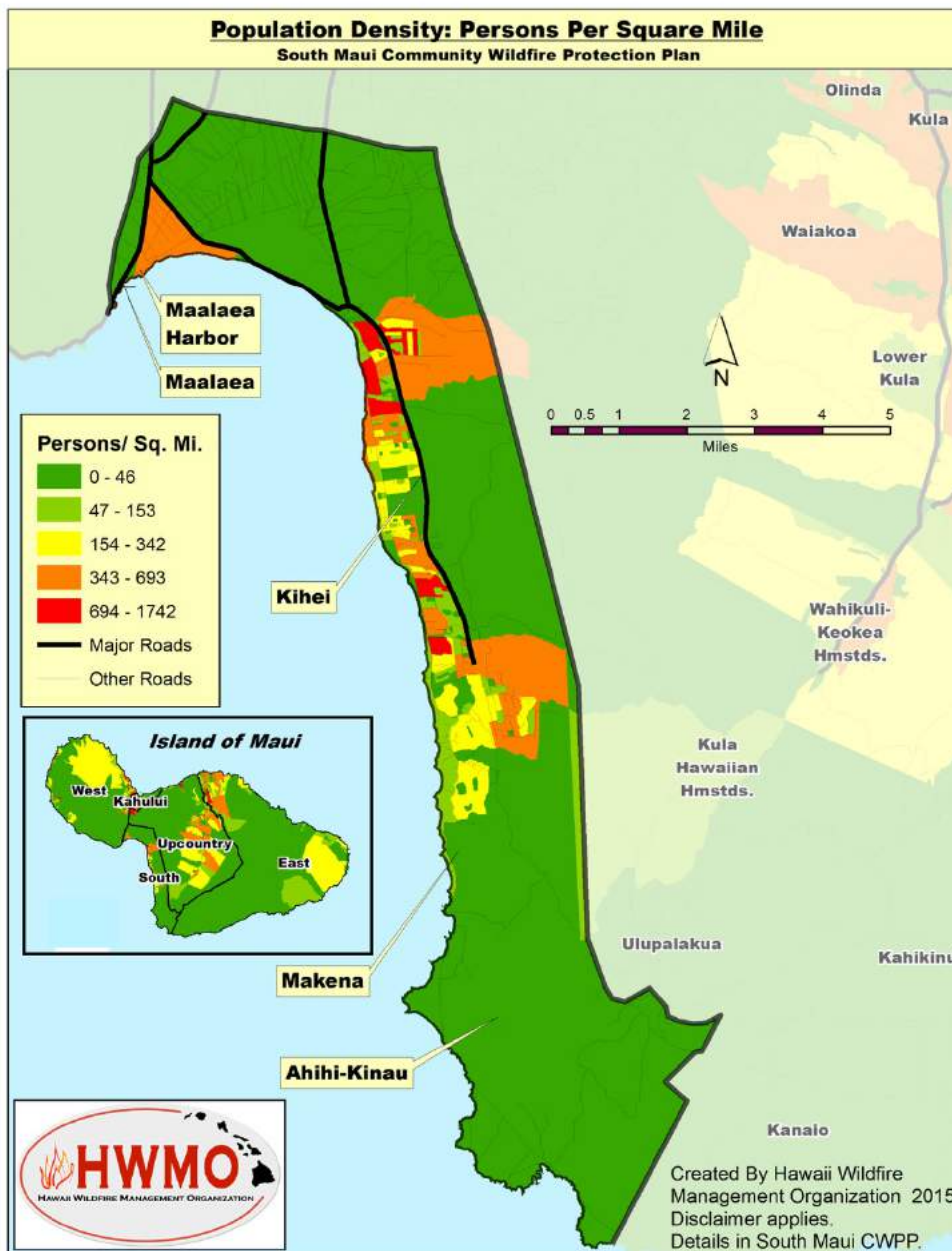

Map 12. Land Ownership Map for South Maui CWPP planning area.

For the purposes of assessing hazards and wildfire threats to resources, residential areas within the South Maui CWPP planning area were simplified into fifteen “communities” (see Map 13). The boundaries depict the areas determined by DLNR-DOFAW to have similar features in terms of wildfire hazard characteristics and have long been the boundaries used in the DLNR-DOFAW’s Communities at Risk from Wildfire maps, which are updated every few years to assess and depict wildfire threats to developed areas and communities. See next section, *Communities at Risk from Wildfires*, for more information and hazard assessment summary maps.

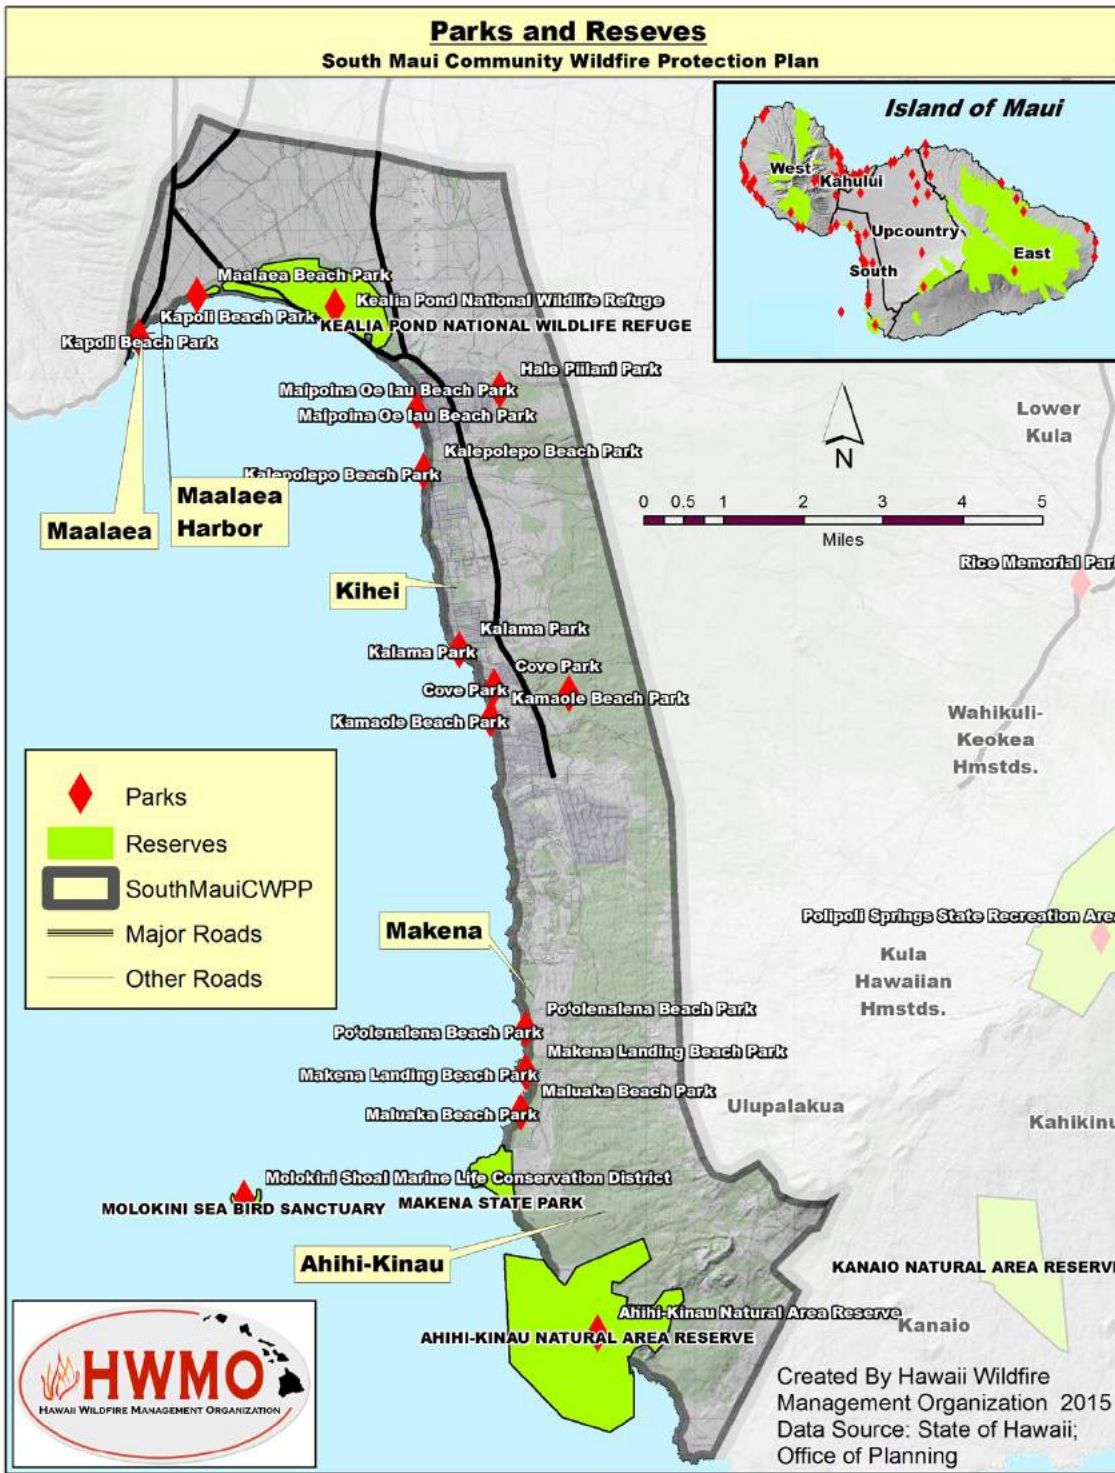

Map 13. Simplified community delineations used within the South Maui CWPP planning area.

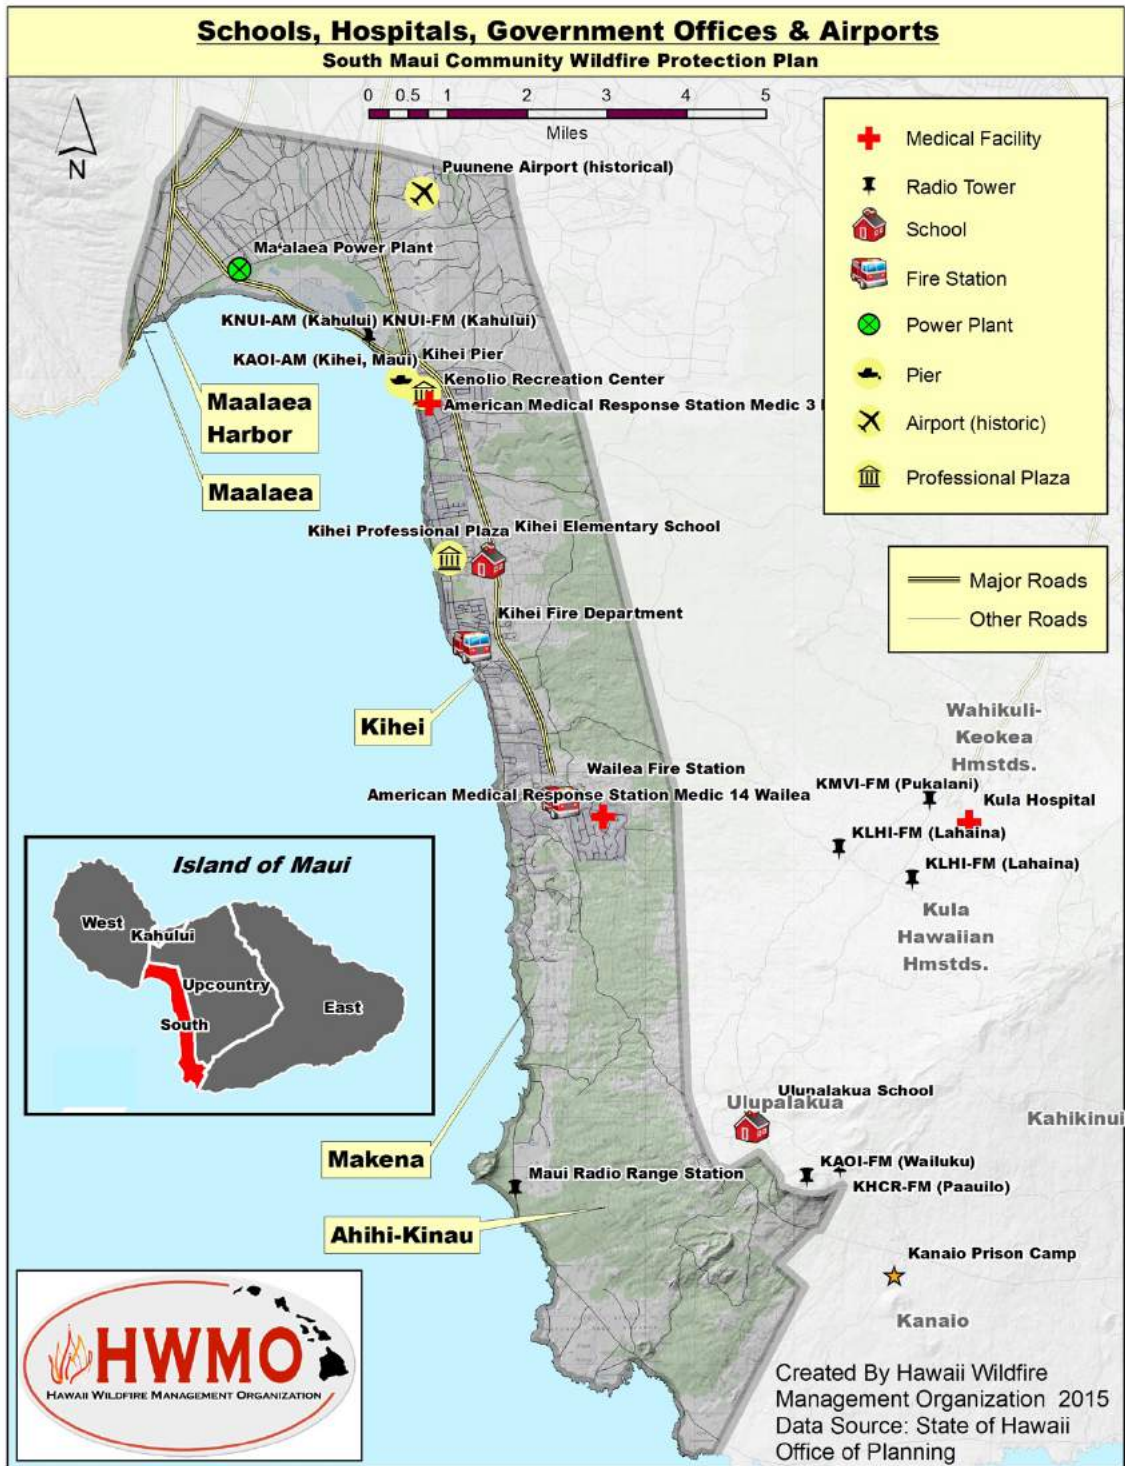

South Maui exemplifies a WUI, in that it contains both undeveloped fire prone wildland areas adjacent to populated subdivisions and developed areas (Map 14). There are numerous assets, resources, and infrastructural features at risk of wildfire in South Maui, to include community, economic, medical, educational, recreational, and environmental features. These are depicted on Maps 15-18. These features are both directly threatened by wildfire, as well as subject to the broader impacts of wildfire, such as changes in water quality and availability, post-fire erosion and mudslides, smoke and dust, changes in access, traffic, and more.

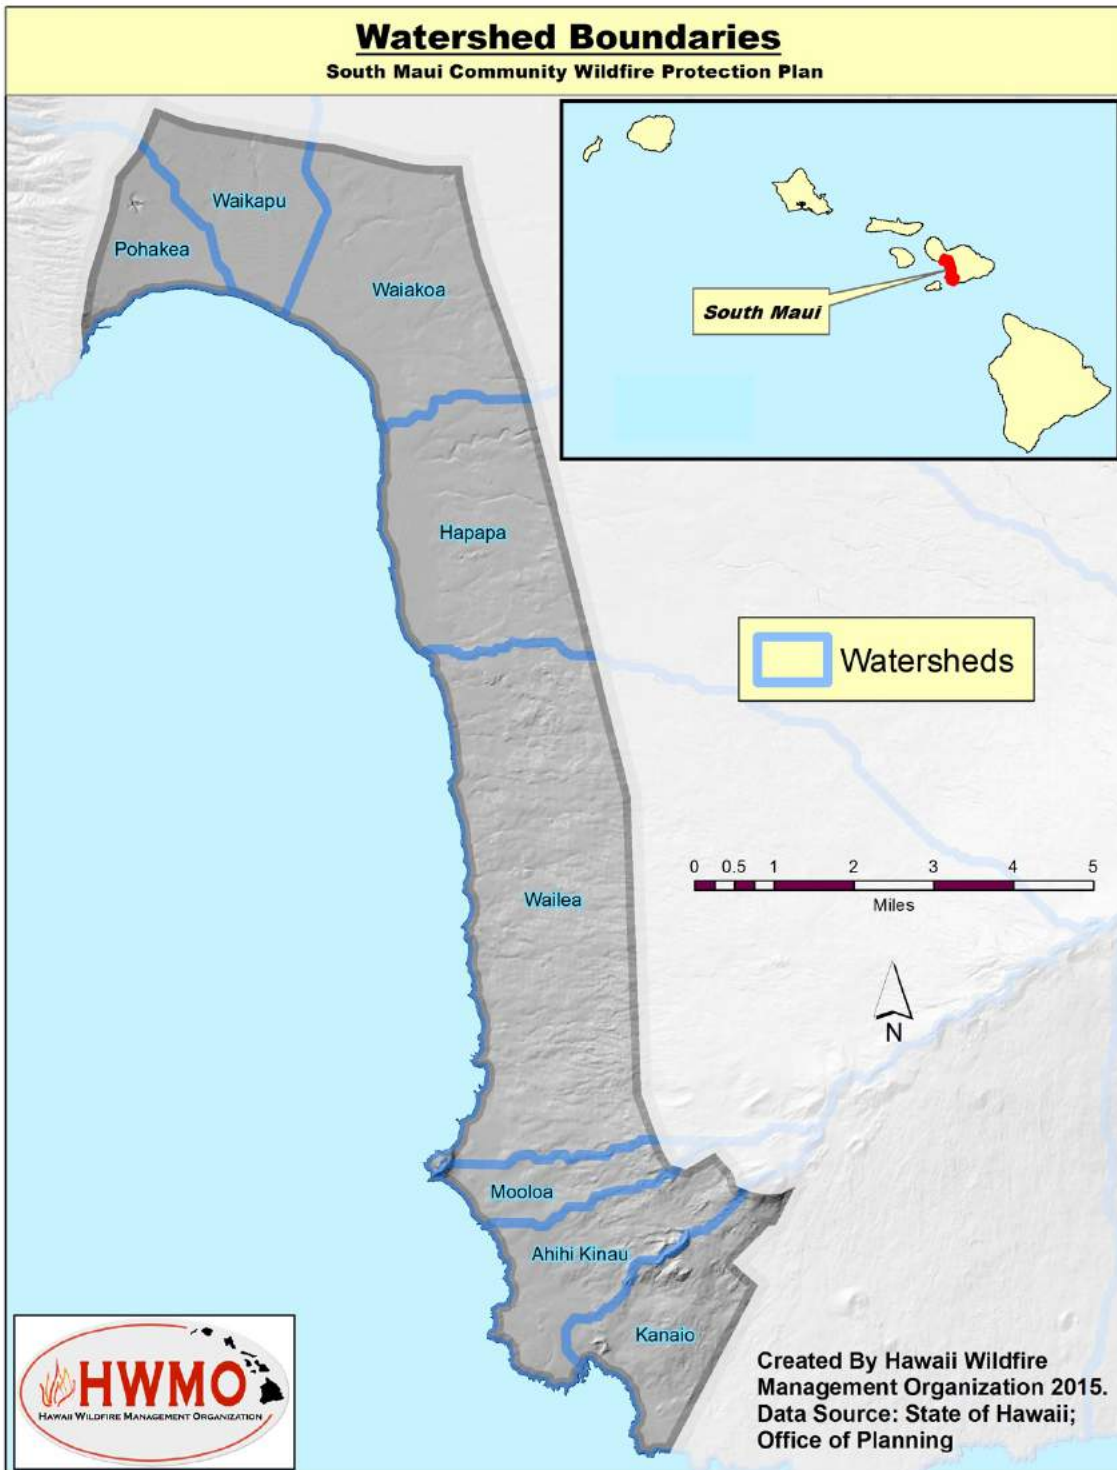

Map 14. South Maui Population Density Map.

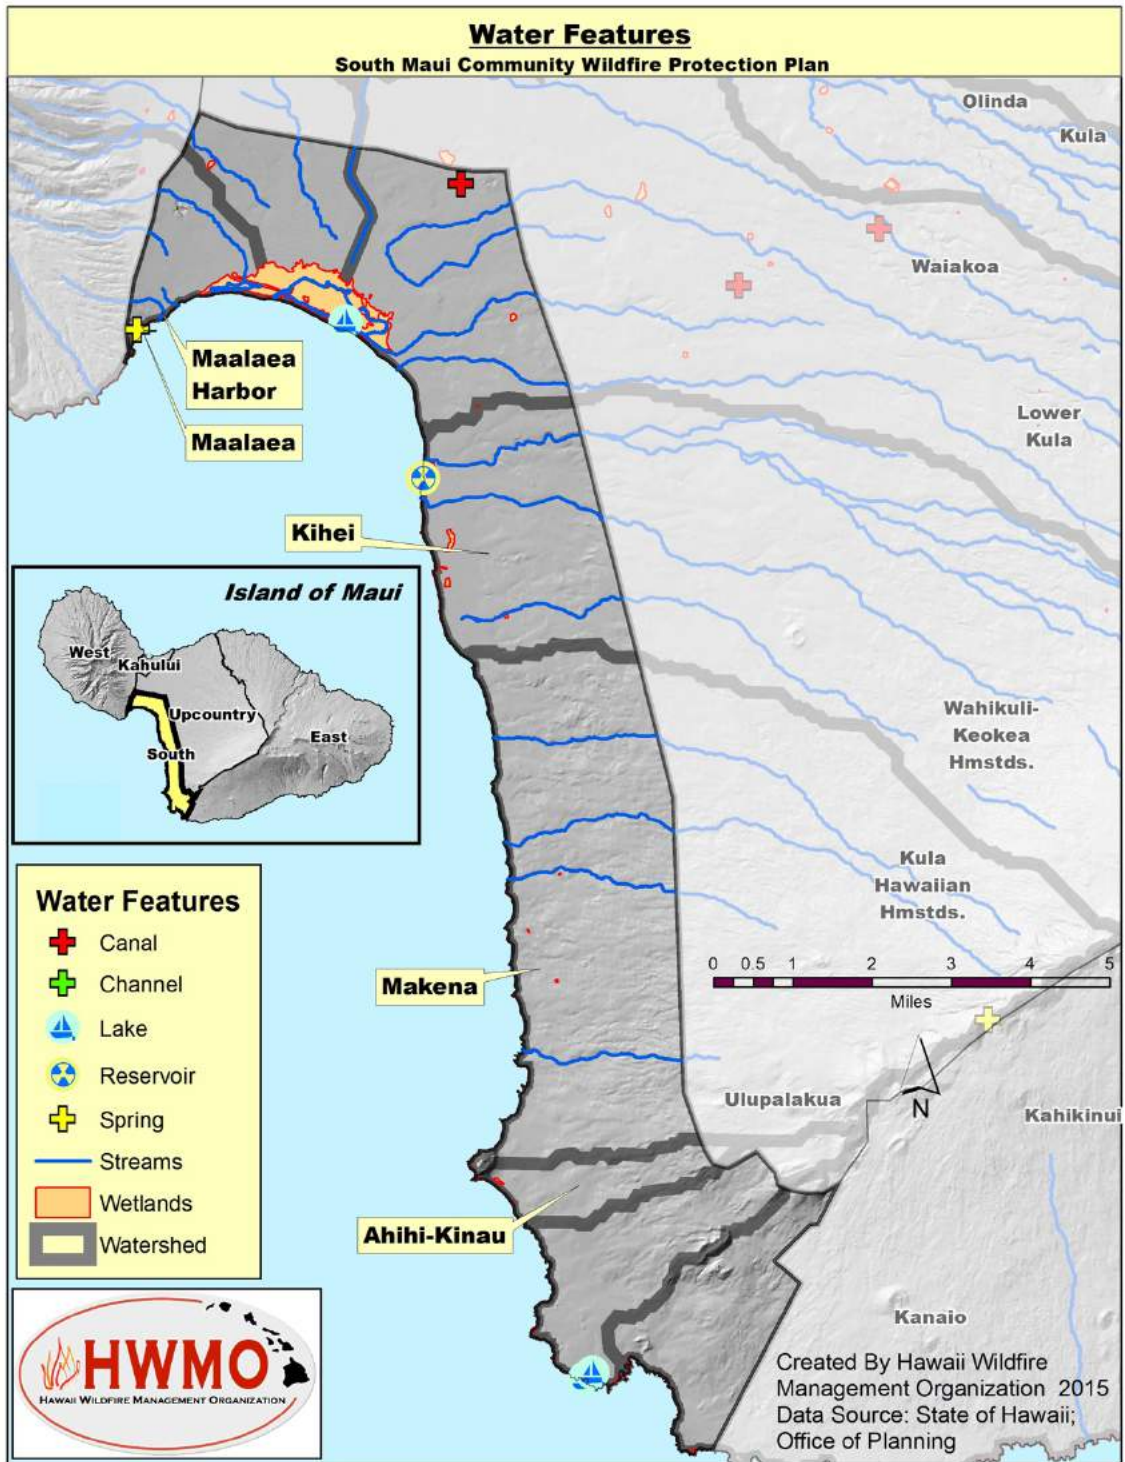

Map 15. Parks and Reserves in South Maui CWPP planning area.

Map 16. Community/government service features in the South Maui CWPP planning area.

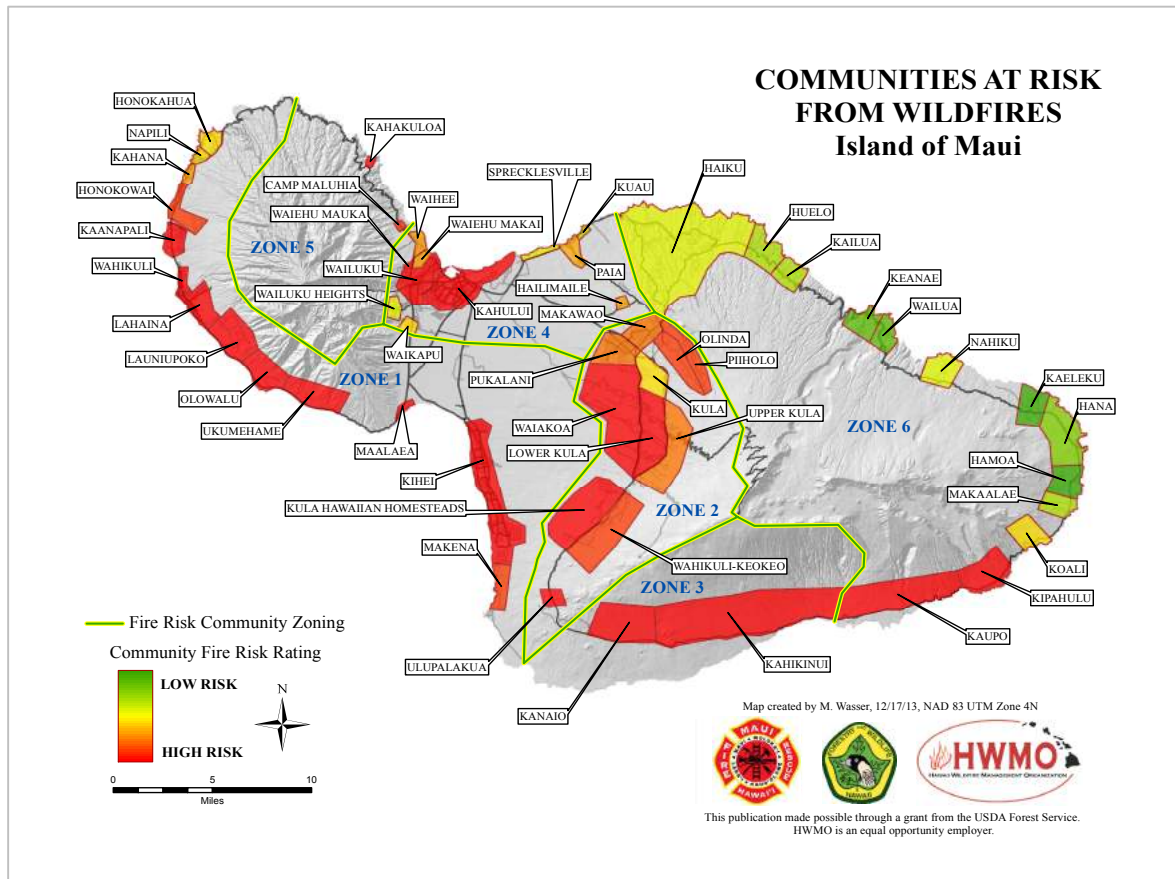

Map 17. Watershed areas within the South Maui CWPP planning area.

Map 18. Water features in the South Maui CWPP planning area.

COMMUNITIES AT RISK FROM WILDFIRE

Nationally, Communities at Risk from Wildfires (CARW) maps delineate communities that share similar environmental conditions, land use characteristics, fuel types, hazards, and general wildfire issues, and provide ratings to characterize generalized hazards in each area. DLNR-DOFAW has been developing Hawai'i CARW maps for more than a decade, and has developed streamlined community boundaries for the purposes of the Hawai'i CARW map. In 2013, HWMO partnered with DLNR-DOFAW and the county fire departments across Hawai'i to update the statewide CARW maps. The original community boundaries were replicated in the 2013 map update, with changes made to reflect current hazards and subdivision expansions. Map 19 provides the Island of Maui's overall CARW map for context. Map 20 depicts the hazard ratings for South Maui's developed areas. It is important to note that many factors were weighed into developing the hazard level, so areas with like environmental conditions may be rated differently based on other hazard or protection factors, like ingress/egress, community Firewise activities, etc.

Map 19. Island of Maui 2013 Communities at Risk from Wildfires Map.

Map 20. South Maui Communities at Risk from Wildfires Map- Hazard ratings for developed areas.

WILDFIRE RISK ASSESSMENT

PURPOSE AND METHODS

The purpose of the required community risk assessment is to:

- Provide site-specific information to the public to promote wildfire awareness.
- Help identify and prioritize areas for treatment.
- Determine the highest priority uses for available financial and human resources.

The methods for this plan's community wildfire risk assessment followed the guidelines established by the HFRA, which requires the following actions:

- Establish a Community Base Map (Maps 15-18 and 26).
- Develop a Community Hazard Assessment (see *Wildfire Hazard Assessment* section, Maps 21-25, and Appendix B).
- Identify Overall Community Priorities (see *Hazard Reduction Priorities* section and Figures 2, 3, and 5-9).

The wildfire risk assessment also follows the guidelines and requirements of the FEMA Pre-Disaster Mitigation program and the NFP. Locally, we have opted to name the effort *Wildfire Hazard Assessment*, rather than *Wildfire Risk Assessment*.

WILDFIRE HAZARD ASSESSMENT

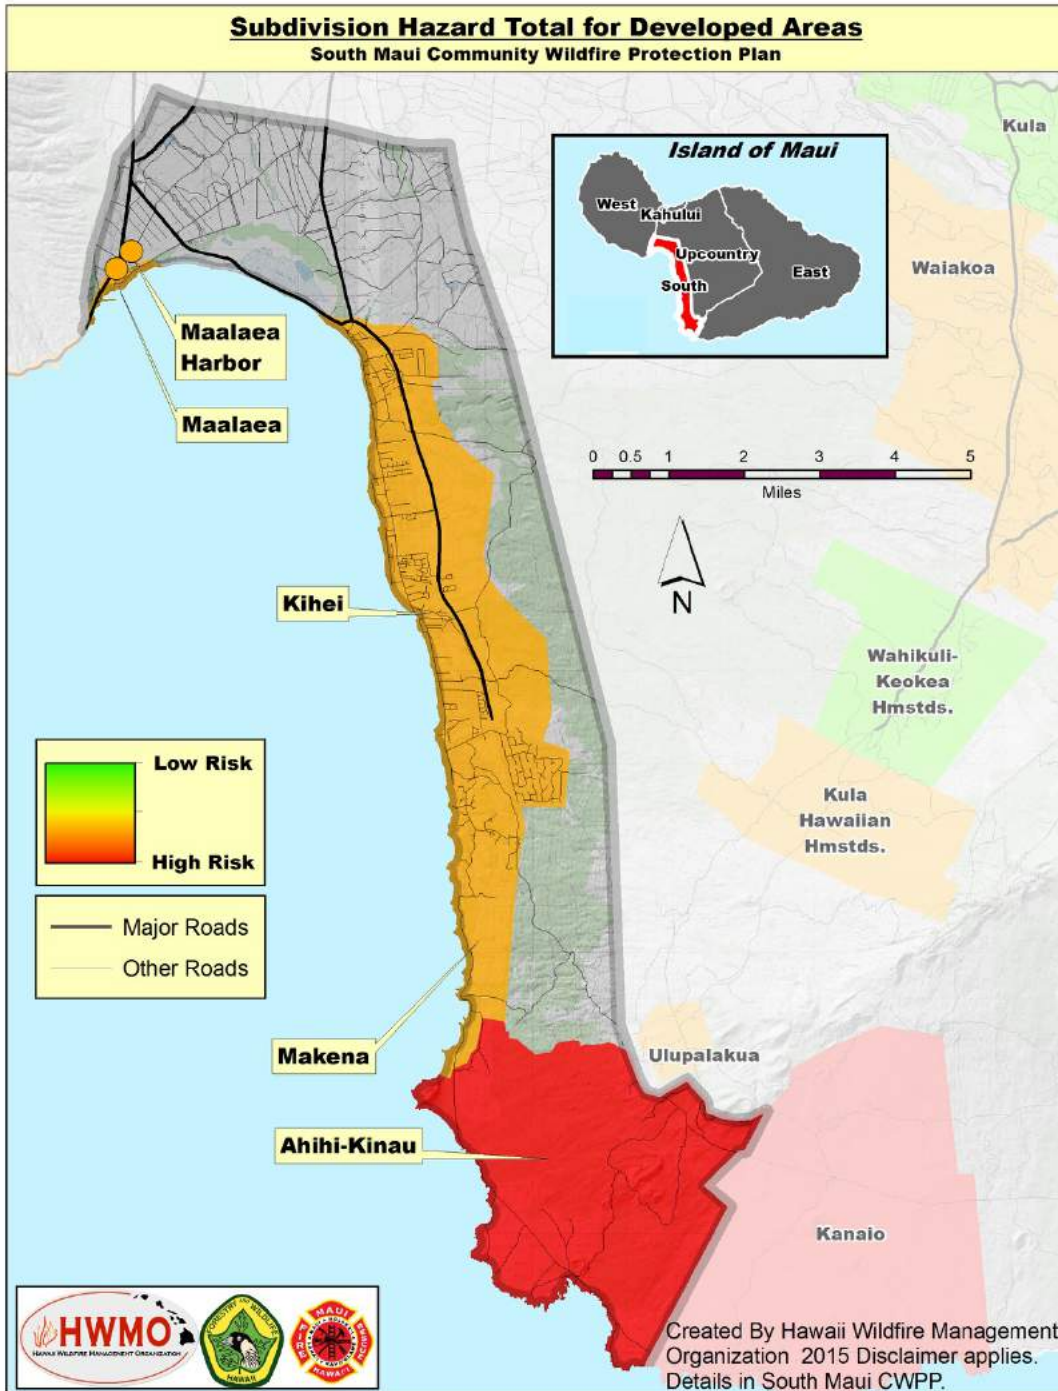

In partnership with DLNR-DOFAW and MFD, HWMO assessed the communities within South Maui for 36 wildfire hazard characteristics, which have been further grouped into 5 categories. As described in detail above, community delineations for the assessment followed those for the CARW map. The five categories assessed for wildfire hazard are as follows.

- Subdivision Hazard
- Vegetation Hazard
- Building Hazard
- Fire Environment Hazard
- Fire Protection Hazard

Maps are provided for each of the five categories, and demonstrate the total hazard per category based on a weighted calculation of that category's individual hazards, as detailed in Table 6.

Hazard Category (See Maps 21-25)	Individual Hazards Assessed (Maps for each individual hazard included in Appendix B)
Subdivision Hazard Total	<ul style="list-style-type: none"> • Fire Service Access • Home Setbacks • Ingress/Egress • Private Landowner Firewise landscaping & Defensible Space • Proximity of Subdivision to Wildland Areas • All Season Road Condition • Road Maintenance • Road Width • Street Signs • Structure Density • Unmanaged, Untended, Undeveloped Lands
Vegetation Hazard Total	<ul style="list-style-type: none"> • Defensible Space: Fuels Reduction Around Homes & Structures • Fuel Loading • Fuel Structure & Arrangement • Proximity of Flammable Fuels Around Subdivision • Vegetation Within 300' of Homes
Building Hazard Total	<ul style="list-style-type: none"> • Siding/Soffits • Roofing Assembly • Structural Ignitability • Under skirting Around Decks, Lanais, Post & Pier Structures • Utilities Placement; Gas & Electric
Fire Environment Hazard Total	<ul style="list-style-type: none"> • Average Rainfall • Prevailing Wind Speeds & Direction • Slope • Topographic Features that Adversely Affect Wildland Fire Behavior • Seasonal or Periodic High Hazard Conditions • Ignition Risk
Fire Protection Hazard Total	<ul style="list-style-type: none"> • Response Time • Community Planning Practices & Ordinances • Community Fire Safe Efforts & Programs Already in Place • Fire Department Structural Training & Expertise • Local Emergency Operations Group or Citizen Group • Proximity to Fire Stations • Water Source Availability • Wildland Firefighting Capacity of Initial Response Agency • Interagency Cooperation

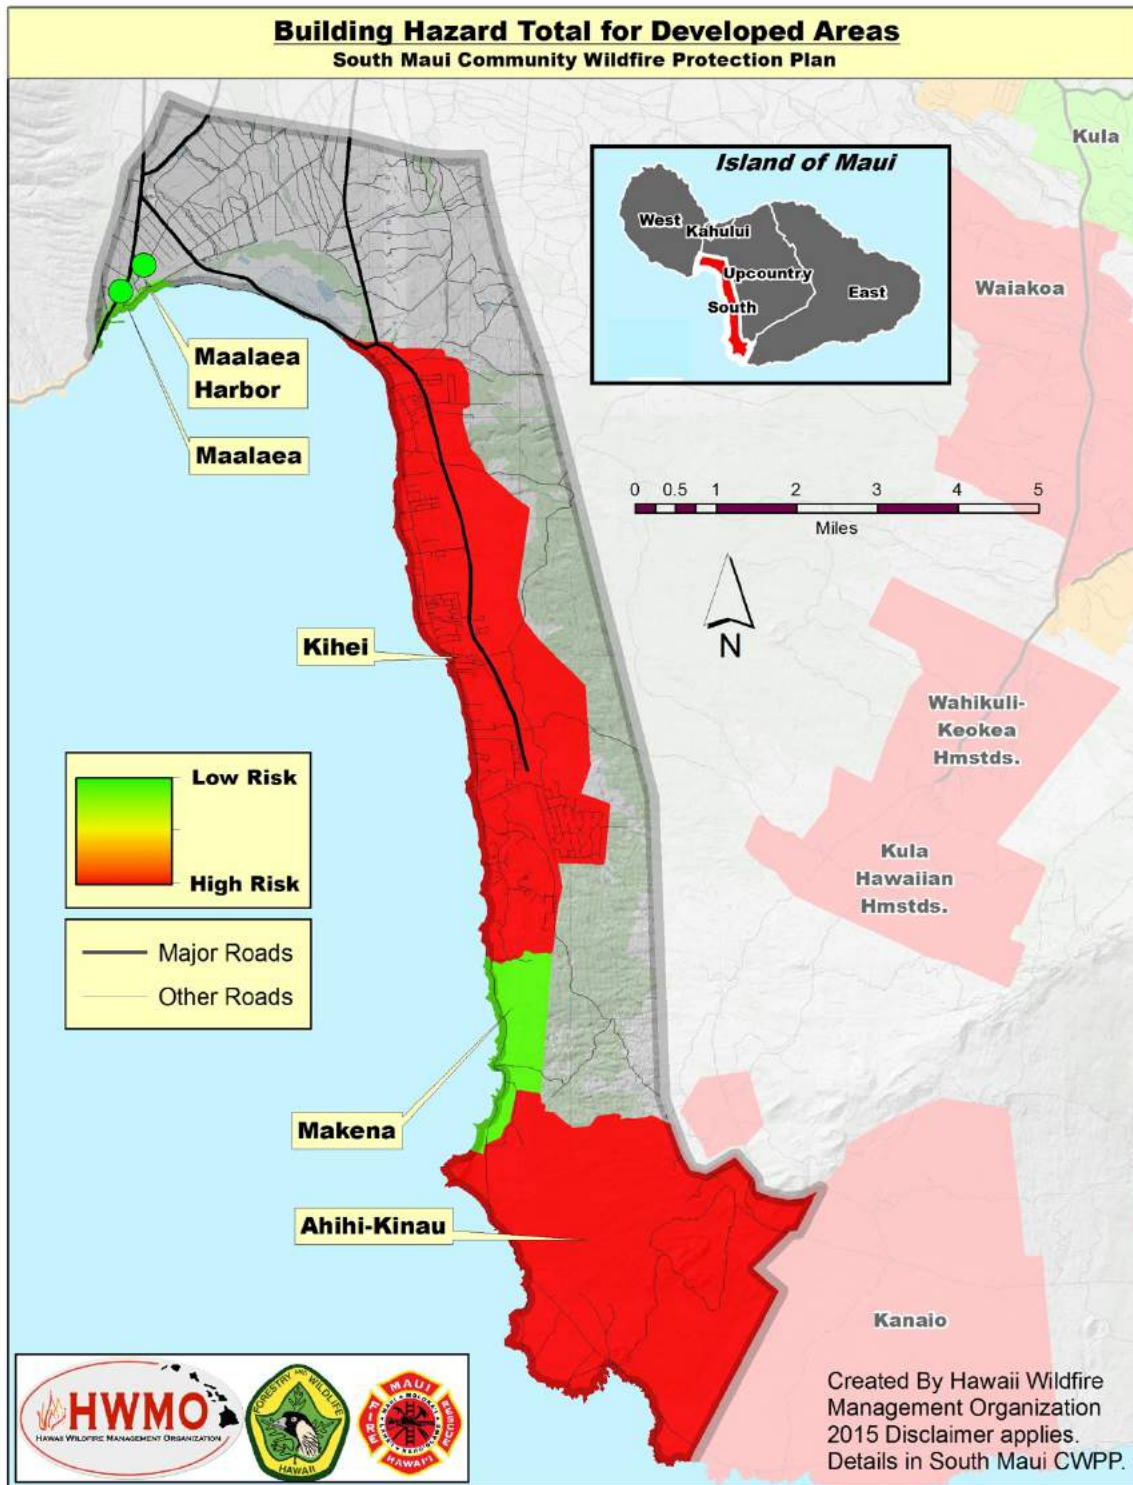

Table 6. Overview of hazard assessment categories and the individual hazards that comprise them.

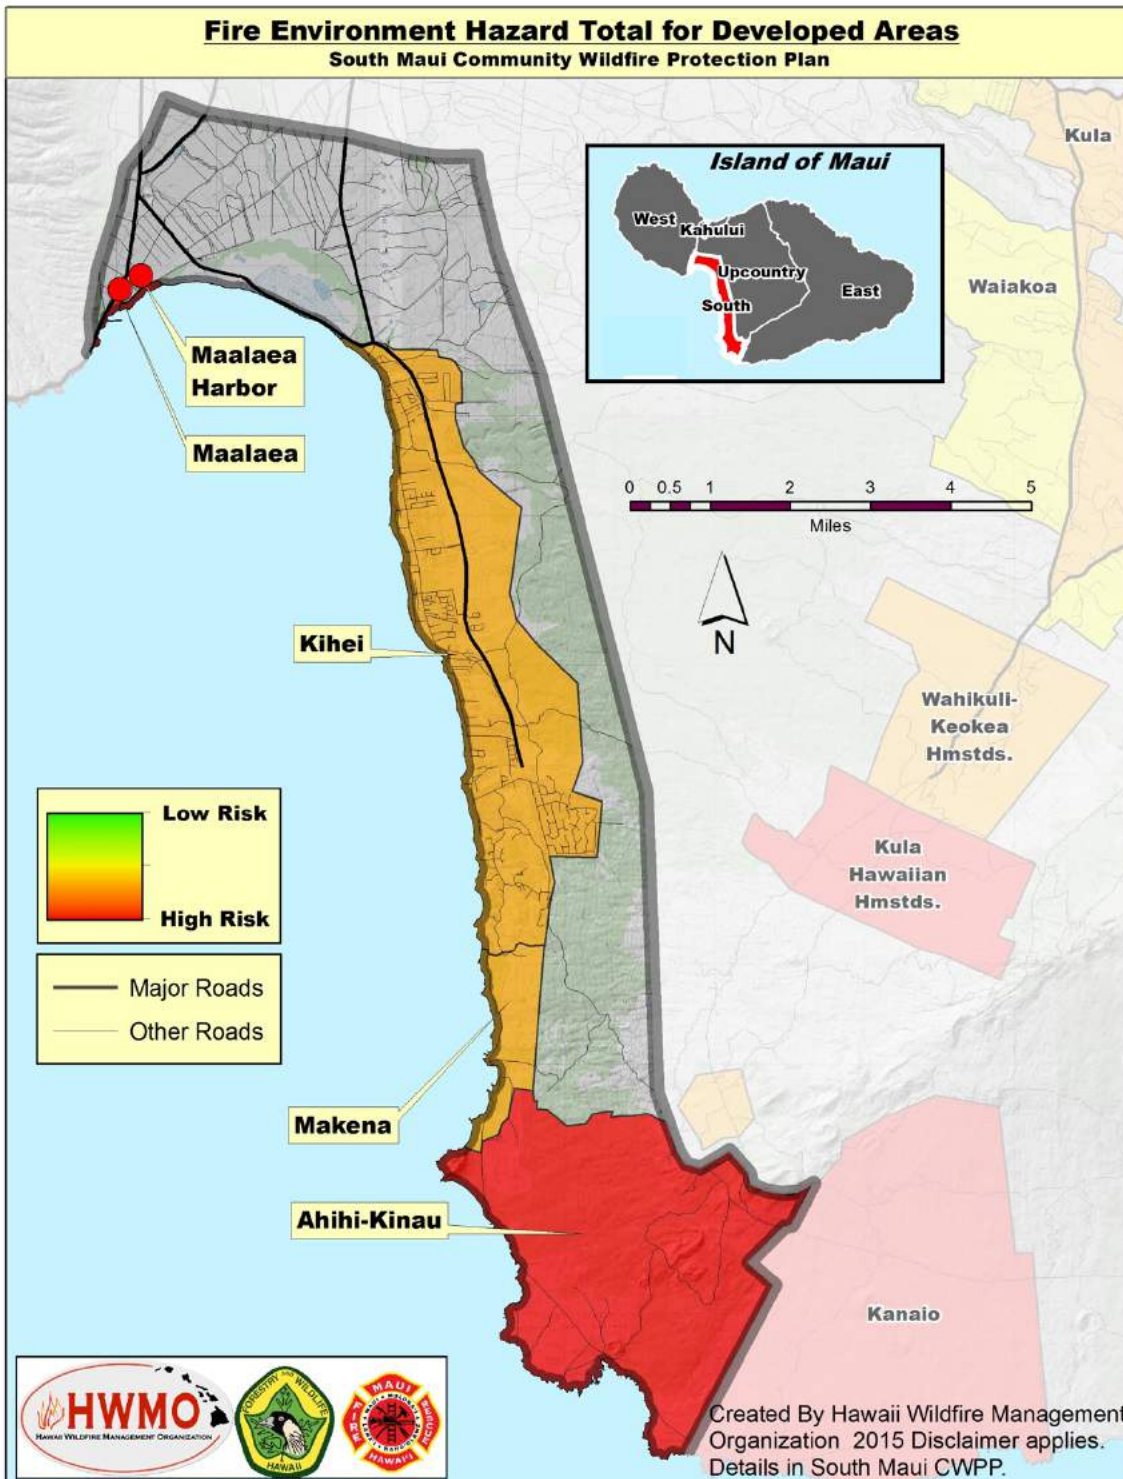

Map 21. Subdivision Hazard Total for Developed Areas of South Maui CWPP planning area. Reflects hazard assessment findings related to the following categories: Fire Service Access; Home Setbacks; Ingress/Egress; Private Landowner Firewise landscaping & Defensible Space; Proximity of Subdivision to Wildland Areas; All Season Road Condition; Road Maintenance; Road Width; Street Signs; Structure Density; and Unmanaged, Untended, Undeveloped Lands.

Map 22. Vegetation Hazard Total for Developed Areas of South Maui CWPP planning area. Reflects hazard assessment findings related to the following categories: Defensible Space: Fuels Reduction Around Homes & Structures; Fuel Loading; Fuel Structure & Arrangement; Proximity of Flammable Fuels Around Subdivision; Vegetation Within 300' of Homes.

Map 23. Building Hazard Total for Developed Areas of South Maui CWPP planning area. Reflects hazard assessment findings related to the following categories: Siding/Soffits; Roofing Assembly; Structural Ignitability; Under skirting Around Decks, Lanais, Post & Pier Structures; and Utilities Placement for Gas & Electric.

Map 24. Fire Environment Hazard Total for Developed Areas of South Maui CWPP planning area. Reflects hazard assessment findings related to the following categories: Average Rainfall; Prevailing Wind Speeds & Direction; Slope; Topographic Features that Adversely Affect Wildland Fire Behavior; and Seasonal or Periodic High Hazard Conditions; and Ignition Risk.

Map 25. Fire Protection Hazard Total for Developed Areas of South Maui CWPP planning area. Reflects hazard assessment findings related to the following categories: Firefighter Response Time; Community Planning Practices & Ordinances; Community Fire Safe Efforts & Programs Already in Place; Fire Department Structural Training & Expertise; Local Emergency Operations Group or Citizen Group; Proximity to Fire Stations; Water Source Availability; and Wildland Firefighting Capacity of Initial Response Agency

COMMUNITY VALUES

Civic, environmental, and cultural value were determined for the South Maui CWPP planning area by stakeholders during input meetings. Map 26 demonstrates the points on the map selected by the public and agency participants during CWPP meetings as high priorities for mitigation and protection. These were based on personal, cultural, and community values and priorities, as well as overall risk of wildfire. Due to the sensitive nature of cultural resources in Hawai'i, participants were not required to name the priority resources, only to share the area or location of the valued resources by marking the map poster with stickers.

Map 26. Stakeholder-determined high value priority resources to protect from wildfire in the South Maui CWPP planning area.

EMERGENCY MANAGEMENT

FIRE SUPPRESSION CAPABILITIES AND RESOURCES

Maui Fire Department (MFD) resources and equipment are spread across all of Maui County and are made available when needed if they are not already in use. MFD has 14 fire stations across the county. There are 10 fire stations on the Island of Maui, two of which are within the CWPP planning area. Table 7 provides location information for South Maui fire stations.

A complete list of MFD apparatus and vehicles is provided in Appendix C. DLNR-DOFAW wildland fire suppression resources that are available for use in the event of a wildfire in the South Maui CWPP planning area are listed in Table 8.

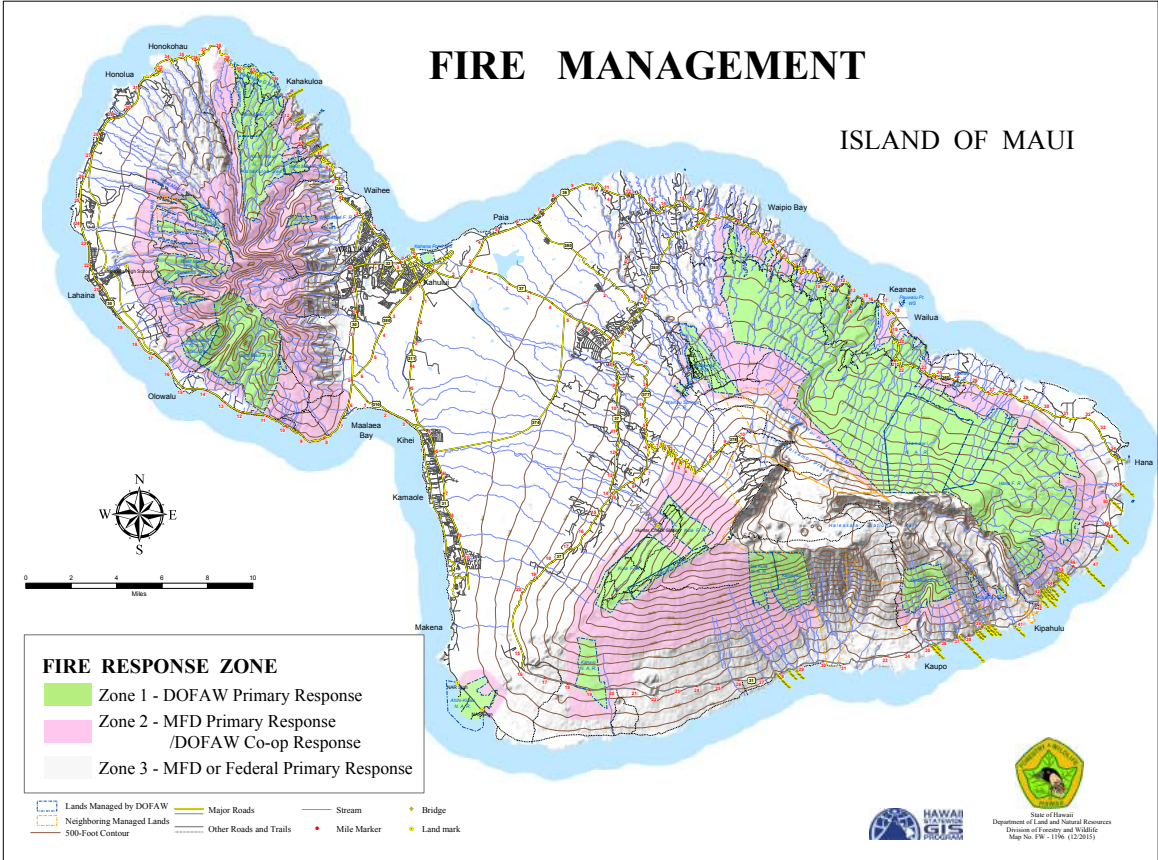

MFD South Maui Fire Stations	
<u>Fire Station Location</u>	<u>Address</u>
Kihei	11 Waimahaihai St., Kihei, Maui, HI 96753
Wailea-Makena	300 Kilohana Dr., Kihei, Maui, HI 96753

Table 7. MFD fire stations within South Maui CWPP area.

Initial response to the majority of wildfires (as well as all medical and other emergencies) is the responsibility of the MFD. DLNR-DOFAW responds to wildfire events on State lands and provides additional wildland firefighting assistance when State lands are threatened and/or mutual aid agreements are invoked. Map 27 was developed by DLNR-DOFAW and demonstrates the independent and shared response zones of each agency in the CWPP planning area.

Department of Land and Natural Resources – Division of Forestry and Wildlife (DLNR – DOFAW) Suppression Resources	
Helicopters (contract services)	Air 1 (MFD) (Type III) Air 2 (Type III) Air 3 (Type III) Huey (Type II) Huey (Type II)
Engines/Tenders/Trucks	1 x 6x6 tender (4000 gal) 1 x M62 engine (500 gal) 1 x M5 CDF engine (450 gal) 3 x Gamma Goat engine (350 gal) 3 x 4WD Trucks (Type 6 - 125 gal to 300 gal capacity) 2 x UTV units (100 gal - high psi)
Other Resources	4 x portable pumps 2 x Helicopter tanks 6' (3000 gal) 3 x Helicopter mop up tanks (300 gal) 1 x D6 dozer 2 x backhoe 1 x T320 bobcat

Table 8. DLNR-DOFAW suppression resources.

Map 27. DLNR-DOFAW fire suppression response zones. (Source: DLNR-DOFAW)

EMERGENCY MANAGEMENT DOCUMENTS AND OTHER PLANS

The CWPP is non-regulatory and cooperative in nature. The plan provides (1) a foundation for increased communication, coordination and collaboration among agencies and the public, (2) identification and prioritization of areas for hazardous fuel reduction projects and wildfire mitigation actions, and (3) assistance meeting federal and state planning requirements and qualifying for assistance programs.¹⁵ The CWPP is designed to work in conjunction with other local, county, and state plans, operational policies, assessments, programs, etc., including but not limited to:

County of Maui:

County of Maui Drought Mitigation Strategies¹⁶

County of Maui Multi-Hazard Mitigation Plan¹⁷ and Hazard Mitigation Plan Update (2015)¹⁸

County of Maui Water Use and Development Plan Draft¹⁹

Maui Island Plan²⁰

State of Hawai'i:

State Drought Plan and the County Drought Mitigation Strategies²¹

State of Hawai'i Multi-Hazard Mitigation Plan²²

Waihou Spring State Forest Reserve Management Plan³

State Division of Forestry and Wildlife Operational Policy for Wildfire Control²³

Hawai'i Statewide Assessment of Forest Conditions and Resource Strategy²⁴

Natural resource protection efforts and management plans in the region:

Leeward Haleakalā Watershed Restoration Partnership²⁵

ʻĀhihi-Kīnaʻu Natural Area Reserve Management Plan²⁶

Keālia Pond U.S. Fish and Wildlife Refuge²

MULTIPLE-AGENCY AGREEMENTS

In Maui County, there is a coordinating group established to deal with and discuss wildfire issues, mitigation, and response. Federal, state, and local fire agencies have organized into the Maui Wildfire Coordinating Group. The Maui Wildfire Coordinating Group coordinates the programs of the participating wildland fire agencies on Maui and provides a forum for leadership, cooperation and the exchange of information. It also improves procedures to rapidly provide the most effective response to wildfires in the island. In coordination with County of Maui Civil Defense Agency, drought and other fire-hazard conditions are constantly monitored and actions such as burning bans and closures are instituted when needed. The public is informed of these restrictions by radio announcements and newspaper notices.

DLNR -DOFAW has established Memorandums of Agreement, Memorandums of Understanding, and/or Mutual Aid Agreements in place with all four county fire departments as well as with federal land management agencies, such as National Park Service, U.S. Fish and Wildlife Service, and U.S. military. According to DLNR -DOFAW²⁷, these, “are the cornerstones by which DLNR -DOFAW’s Fire Management Program is based. These. . . identify the responsibilities of each party as well as other fire management activities such as joint participation in prevention, training, and equipment acquisition.”

EVACUATION PROTOCOLS AND NEEDS

Evacuation protocols for neighborhoods and areas in South Maui have been determined for natural hazards such as tsunamis, and can be found in the documents listed below. However, fire safety zones for all neighborhoods and areas of South Maui are yet to be determined, and are a priority action determined by the public as part of this CWPP process.

The following resources are available for disaster preparedness information:

- County of Maui Civil Defense Agency Website²⁸
- Disaster Preparedness for Maui County: A Citizen’s Guide²⁹
- Hurricane Information and Tips³⁰
- Tsunami maps information, and tips³¹

STATE FIRE CODE

The Hawai’i State Fire Code is the 2012 NFPA 1, Uniform Fire Code, which has both state and county amendments. The state amendments contribute to the State Fire Code. Each county then adopts amendments to the State Fire Code to create the County Fire Code.

Most relevant to the discussion and public input for the South Maui CWPP Update is the chapter on the WUI, which is described in 2012 NFPA 1, Chapter 17.

HAZARD REDUCTION PRIORITIES SOUTH MAUI

PURPOSE AND METHODS

Public and agency participants during the CWPP planning process identified hazard reduction priorities for South Maui. The wildfire-related concerns and actions provided by stakeholders were focused toward enhancing wildfire response capabilities, addressing priority public concerns and wildfire impacts, and reducing risk and hazards through pro-active wildfire mitigation. Public and agency discussion covered the following topics and more:

- Increasing stakeholder knowledge about wildfire risk through education and outreach;
- Encouraging the treatment of structural ignitability;
- Prioritizing fuel reduction projects; and
- Increasing opportunities for collaboration and coordination to implement wildfire mitigation projects.

HFRA guidelines were followed by including community hazard reduction priorities, hazardous fuels reductions, and recommendations to reduce structural ignitability.

STAKEHOLDER CONCERNS AND RECOMMENDED ACTIONS

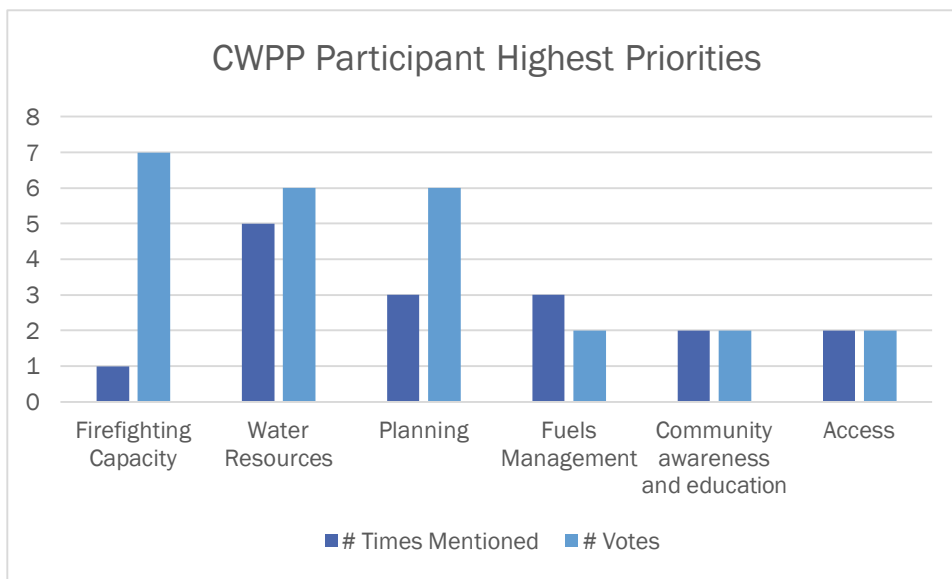

Figure 1. South Maui CWPP Participant Highest Wildfire-Related Priorities.

HWMO held several meetings for the general public and with fire response agencies and natural resource managers to collect input and record wildfire-related concerns and recommended actions. Additional

input was solicited from decision makers, large landowners, and other stakeholders as noted in the Planning Process chapter of this document.

While South Maui CWPP participant input yielded diverse and broad concerns and recommended actions, certain topics came up with greater frequency. All input was aggregated and analyzed to capture an overview of the most frequently raised concerns. Concerns were recorded two ways: 1) number of times it was mentioned as an issue, and 2) number of overall votes it received once participants were asked to vote on the entire set of topics to indicate the highest priorities. Figure 1 displays both. While some topics, such as firefighting capacity did not come up on their own many times, once they were mentioned, participants prioritized increasing firefighting capacity as a top goal. Improving water resources, wildfire-related planning, and fuels management were also top concerns. Finally, increasing community awareness and education and improving firefighting access were also prioritized.

THREE CATEGORIES OF STAKEHOLDER CONCERNS AND RECOMMENDED ACTIONS

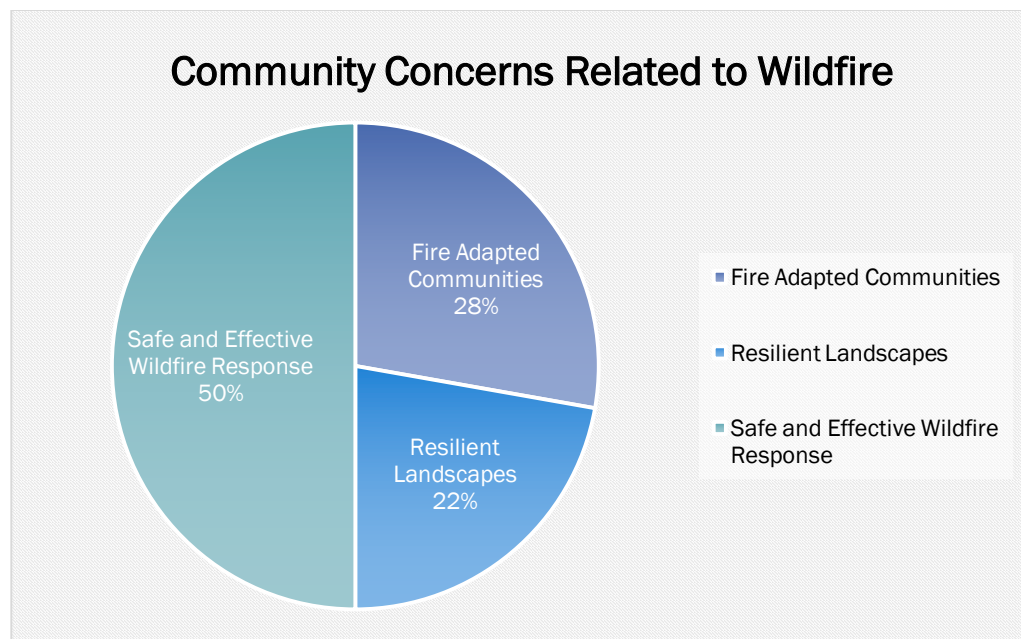

Figure 2. Community Concerns Organized by Cohesive Strategy Categories.

Public and agency input was extensive and has been organized to align with the categories used within the National Cohesive Wildland Fire Management Strategy.³²

The National Cohesive Wildland Fire Management Strategy encourages communities to develop a dynamic approach to planning for, responding to, and recovering from wildland fires. It provides a framework for wildfire-related discussion, efforts, and goals across the United States. The overarching

national strategy is further divided into three regions for tighter collaboration and coordination in each area. Hawai'i falls into the Western Region. Public input details for South Maui are organized according to the following categories so that they fit into the national and regional framework of priorities and funding opportunities.

- Fire-Adapted Communities
- Resilient Landscapes
- Safe and Effective Wildfire Response

Figure 2 indicates how much of the participant concerns for South Maui falls within each category.

Figure 3. Fire-Adapted Communities Infographic.³³ There is a role for everyone when working toward a region becoming Fire-Adapted, as seen in this infographic from the Fire-Adapted Communities website, FireAdapted.org.

FIRE-ADAPTED COMMUNITIES

28% of South Maui CWPP participant input was related to the need to work toward increasing fire awareness, readiness, prevention, and general fire-adaptation by communities and residents. These goals support the concept of Fire-Adapted Communities, defined by the United States Forest Service as "a knowledgeable and engaged community in which the awareness and actions of residents regarding infrastructure, buildings, landscaping, and the surrounding ecosystem lessens the need for extensive

protection actions and enables the community to safely accept fire as a part of the surrounding landscape."³⁴ The Wildland-Urban Interface Mitigation Committee of the National Wildfire Coordinating Group defines a Fire-Adapted Community as "a human community consisting of informed and prepared citizens collaboratively planning and taking action to safely co-exist with wildland fire."³⁵

South Maui Input Related to Fire-Adapted Communities	
High Priority Concern	Community Recommended Action
Lack of proactive residential and commercial involvement in fire preparedness, prevention, and planning.	Increase outreach and motivation through workshops, programs, incentives.
Lack of community awareness - Kihei is very aware of fire problem but not what to do personally.	Maui Meadows (MM) - 900 homes - very active HOA - need community education.
Need increased community awareness for yard waste dumping protocols and options.	Reminders in newspaper, radio, etc.; Chipper days.
There is increasing development of communities/subdivisions near wildland areas.	Input into planning process - Firewise Communities. Conduct peer reviews of development plans.
Lack of fuel break/fire breaks around subdivisions especially mauka of highway (ex. Maui Meadows).	Work with Hale Ranch, Kaomoulu Ranch and homeowners associations on designating possible locations for fuel/fire breaks.
Lack of community capacity.	Maui Meadows and all South Maui communities need help to add in fire planning, vegetation management, and building homeowner preparedness activities.
Lack of proactive planning to reduce wildfire impacts on communities, to include traffic, evacuation, homeowner landscaping, business involvement, etc.	Encourage decision makers to assist in wildfire protection activities, provide workshops and resident trainings, outreach, and green waste removal/chipper programs.

Table 9. Input related to South Maui moving toward the goals of Fire-Adapted Communities.

The primary goal of working toward fire adaptation is that wildfire preparedness and readiness efforts in a community become an ongoing and broadly supported part of living in, working in, and civically managing an area, and that all activities, from roadside fuels management and agriculture to development designs and community activities, work together to consistently and regularly support wildfire protection. This is opposed to the idea that wildfire preparedness is seasonal or can wait until the last minute, or that it is the responsibility of only one party (community association, fire department, etc.) to aid the community in wildfire preparedness. Generally across Hawai'i, wildfires are addressed on an as-needed, reactive basis. With the development of this and other CWPPs across Hawai'i, communities, organizations, and agencies

are coming together to move toward becoming proactive, consistent, and collaborative. These are all aligned with the framework and objectives for Fire-Adapted Communities. Figure 3 depicts the roles and activities of all members of society toward becoming fire-adapted.

This CWPP was developed with a diversity of stakeholders with homes, businesses, personal interests, and jurisdictions in the South Maui CWPP planning area. The wildfire-related concerns and recommended actions demonstrate the range of responsible parties, timelines, and actions that need to be taken toward comprehensive wildfire prevention, preparedness, and protection of South Maui. These are the basic tenets of becoming fire-adapted. South Maui CWPP stakeholder input related to the human side of fire adaptation is presented in Table 9. Managing vegetation and increasing fire suppression capacity are presented individually (See *Resilient Landscapes* and *Safe and Effective Wildfire Response* sections). The following table details the highest voted concerns and recommended actions provided by South Maui CWPP participants related to Fire-Adapted Communities.

RESILIENT LANDSCAPES

The Resilient Landscapes category of CWPP participant input focuses on all input related to restoring, protecting, or maintaining landscapes. For South Maui, this includes the protection of native species and watersheds from wildfire impacts and the management of vegetation to reduce the ignition capacity and spread of wildfire. The concerns and recommended actions are detailed in Table 10.

South Maui participants raised concerns related to the need for increased roadside vegetative fuels management, fuel reduction on the boundaries of large landholdings, and improved community participation of vegetation management within and around residential areas.

South Maui Input Related to Resilient Landscapes	
High Priority Concern	Community Recommended Action
High growth of wildland areas, unmanaged fuels.	Make fuels management the number one priority for the community on all levels from decision makers to residents and landowners. Use grazing, weed whacking, dozer breaks, controlled burns.
Need a dedicated fuelbreak buffers and a commitment to long term maintenance.	Work with county and others to commit to and carry out a fuelbreak buffer projects right away with a maintenance plan.
Kihei needs a buffer to protect from wildland fuels.	Maui Meadows needs a fire break on mauka side (Possibly could tax homes \$100 each to maintain the fire break).
Lack of fuel break/fire breaks around subdivisions - esp. mauka of highway (ex. Maui Meadows).	Work with Hale Ranch, Kaomoulu Ranch and homeowners associations on designating possible locations for fuel/fire breaks.
Lack of community and resident capacity to increase vegetation management for fire protection.	Need decision maker support and funds for vegetation management- landowners don't necessarily have the capacity to manage for public safety reasons even if they want to. Need financial assistance and public funds to protect the community.

Table 10. Input related to South Maui moving toward the goals of Resilient Landscapes.

SAFE AND EFFECTIVE WILDFIRE RESPONSE

Comprehensive and effective wildfire preparedness and protection includes preventing ignitions, minimizing the ability of fire to travel across structures and landscapes, and maximizing the likelihood for fires to be suppressed quickly to keep them as small and minimally impacting as possible. Since the majority of all fires in South Maui (and Hawai'i in general) are human-caused, ignition prevention largely is a matter of community outreach and education (addressed in *Fire-Adapted Communities* section). Minimizing vegetative fuels and structural ignitability can help keep fires from spreading (see *Resilient Landscapes* and *Reducing Structural Ignitability* sections). Once a fire is ignited, however, the responsibility for taking action rests solely on fire suppression and emergency management departments and personnel. While prevention and preparedness are key to reducing the threats and impacts of wildfire, suppression is the final piece of the protection equation that needs to be proficient, equipped, effective, and adequately supported.

South Maui CWPP participants demonstrated an understanding of this and provided their concerns and priorities related to wildfire response. Table 11 details the highest voted concerns and recommended actions provided by South Maui CWPP participants related to Safe and Effective Wildfire Response.

South Maui Input Related to Safe and Effective Wildfire Response	
High Priority Concern	Community Recommended Action
Need more firefighting equipment.	CDF mini trucks for Kihei & Wailea.
Need to maintain access roads by maintaining and managing vegetative fuels.	Dedicated fire breaks that are maintained.
	Do controlled burns to manage fuel.
Lack of water resources (dip tanks & reservoirs in between South Kihei and Upcountry).	Revisit South Haleakala SCD Plan on water catchment infrastructure. Catch excess runoff from up mauka.
	Kaonoulu, Kamiolo Reservoirs to catch run off from rains near gulches. Maintain and use these for fire prevention and suppression activities.
	Coordinated the ability to tap into the Kihei water treatment plant when needed for fire suppression.
	Tap into well system when needed for fire suppression.

Table 11. Input related to South Maui moving toward the goals of Safe and Effective Wildfire Response.

HAZARDOUS FUELS REDUCTION

A CWPP must identify and prioritize areas for hazardous fuel reduction treatments and recommend the types and methods of treatment that will protect one or more at-risk communities and essential infrastructure.

Based on the fuel hazard ratings acquired during the hazard assessment, recommendations for the type and method of vegetative fuels reduction treatments for high fuel hazard areas are listed in Table 12.

Community Resource, Structure, or Value at Risk	Fuel Hazard Rating	Type of Treatment	Treatment Method Options
Mauka forested lands, parks, and reserves	HIGH OR EXTREME IF UNMANAGED	Mechanical, hand labor, chemical, animal, fuels conversion	Utilize well-managed grazing, weed whip, mow, hand-pull, herbicide where appropriate with follow-up vegetation removal. Reforestation and restoration. Fuels conversion and “living” or “shaded” fuelbreaks.
Homes and structures with large lots	MOD-EXTREME	Mechanical, hand labor, chemical, animal, fuels conversion	Firewise home ignition zones. Reduce fuel along property boundaries and roadsides. Convert fuels to drought-tolerant, fire-resistant (preferably native) plants. Reduce ladder fuels.
Densely arranged homes and structures	MOD-EXTREME	Mechanical, hand labor, chemical, fuels conversion	Firewise home ignition zones. Weed whip, mow, hand-pull, and herbicide where appropriate. Convert fuels to drought-tolerant, fire-resistant (preferably native) plants. Reduce ladder fuels.
Historical sites throughout South Maui	MOD-EXTREME	Hand labor, chemical, animal, fuels conversion	Weed whip, mow, hand-pull, well managed grazing, and herbicide where appropriate. Convert fuels to drought-tolerant, fire-resistant plants.
Roadsides	MOD-EXTREME IF UNMANAGED	Mechanical, chemical, animal, fuels conversion	Conduct roadside fuels treatments in accordance with fuel growth (keep low), maximize width of roadside reduction areas. Convert roadside fuels to fire-resistant plants that require little or no maintenance and are less ignitable.
Resorts	LOW-MOD	Mechanical, hand labor, chemical, fuels conversion	Continue regular maintenance and irrigation. Convert fuels to drought-tolerant, fire-resistant plants.
Fallow Agricultural lands	HIGH OR EXTREME IF UNMANAGED	Mechanical, animal, chemical, re-establish active agriculture	Install fuelbreaks along roads and property boundaries, or in lines perpendicular to slope to provide access and minimize erosion. Reduce fuels in patches to create fuel mosaics. Utilize well-managed grazing. Re-establish active agriculture. Initiate reforestation and/or restoration while also maintaining fuels.

Table 12. Hazardous Fuels Treatment Recommendations.

REDUCING STRUCTURAL IGNITABILITY

A CWPP must recommend measures that homeowners and communities can take to reduce the ignitability of structures. Individuals and community associations can reduce structural ignitability throughout their community by taking the following measures recommended by the Firewise, Ready, Set, Go!, and HWMO outreach programs, summarized below. **36, 37, 38**

The following pages are written with the resident in mind, and can be removed and used independently from the CWPP as a general set of guidelines for reducing hazards in the home ignition zone. It is highly recommended that individuals and communities conduct a simple native vegetation assessment and/or consult with appropriate biologists or foresters before clearing trees and significant amounts of vegetation that may be important to protect.

Creating defensible space does not necessarily mean eliminating the presence of greenery on your property. You can still landscape around your home to make it fire-safe without compromising beauty and aesthetics. By planting native, drought-tolerant plants (xeriscaping) around your home, you can:

- Protect your home from wildland fire ignition and spread
- Beautify your property
- Perpetuate an important natural and cultural resource
- Decrease the maintenance needs of your landscaping

For the drier areas of Hawai'i, consider that native dryland plants are specially adapted to local conditions and require less upkeep, water, and fire maintenance, saving yourself a great deal of time, money, and resources. Non-native, lush plants often drop hazardous debris and can become fire-prone in drought conditions.

DEFENSIBLE SPACE ZONES AROUND STRUCTURES

To reduce structural ignitability, it is recommended that residents think in zones around their home, and begin addressing risk reduction activities in Zone 1, working out from there to Zone 2 and beyond.

The following actions are recommended per zone:

Zone One extends 30 feet out from buildings, structures, decks, etc.

- Remove all dead or dying vegetation.
- Remove “ladder fuels” (low-level vegetation that allows the fire to spread from the ground to the tree canopy, see Figure 5). Create at least 6 feet of separation between low-level vegetation and tree branches. This can be done by reducing the height of low-level vegetation and/or trimming low tree branches.
- Create “fire-free” area within 5 feet of home, using non-flammable landscaping materials and/or high-moisture content, drought-resistant vegetation.
- Trim tree canopies regularly to keep their branches a minimum of 10 feet from structures and other trees.
- Remove leaf litter (dry leaves/pine needles) from yard, roof and rain gutters.
- Relocate woodpiles or other combustible materials into Zone Two.
- Remove combustible material and vegetation from around and under decks, lanai, or the entire house if foundation is post-and-pier.
- Remove or prune vegetation near windows.

Zone Two extends 30 to 100 feet out from buildings, structures and decks. You can minimize the chance of fire jumping from plant to plant by removing dead material and removing and/or thinning vegetation. The minimum spacing between vegetation is three times the dimension of the plant.

- Remove “ladder fuels” (see Figure 5).
- Cut or mow annual grass down to a maximum height of 4 inches.
- Trim tree canopies regularly to keep their branches a minimum of 10 feet from other

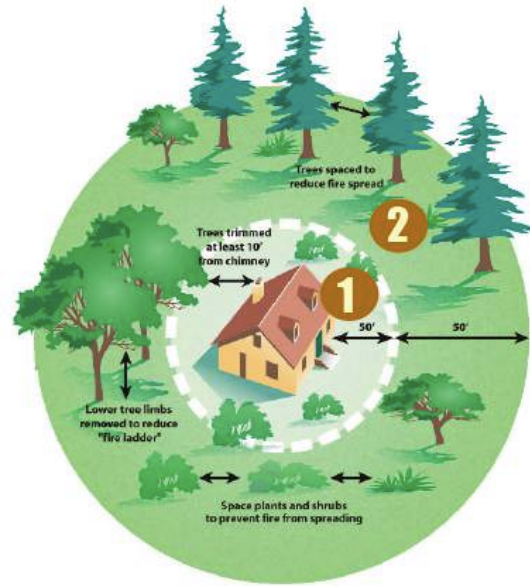

Figure 4. Defensible space zones around structures.²⁸

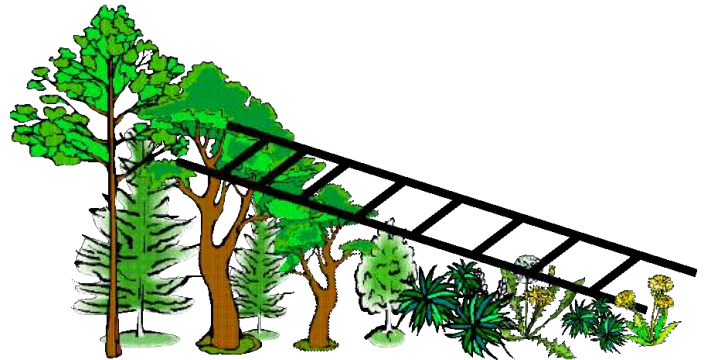

Figure 5. Ladder Fuels Diagram.¹ Ladder fuels form a pathway for ground fires to climb vegetation and become crown fires, which are much more difficult to suppress. It is important to limb low hanging branches and keep ground vegetation short so that vegetation is separated inhibiting fire from easily “climbing” up to canopy where wind is often stronger.

trees/cluster of trees.

- For larger properties, consider areas outside of Zone Two as a third zone to address. Continue reducing ladder fuels, managing fuels, hardening structures, and properly storing combustible materials.

GENERAL DEFENSIBLE SPACE RECOMMENDATIONS

- As stated above, ensure you have at least a 100-foot radius of defensible space (cleared, managed, and maintained vegetation) around your home. Note that even more clearance may be needed for homes in severe hazard areas. This means looking past what you own to determine the impact a common slope or neighbors' yard will have on your property during a wildland fire.
- Cut dry weeds and grass before noon when temperatures are cooler to reduce the chance of sparking a fire.
- Landscape with drought-resistant plants that have a high moisture content and are low-growing.
- Keep woodpiles, propane tanks and combustible materials away from your home and other structures such as garages, barns and sheds.
- Ensure that trees are far away from power lines.
- Weed around the property regularly, especially areas that a lawn mower is not appropriate for (tall dry grasses, rocky terrain, etc.)
- Remove leaf litter and other debris that accumulate around the building, under vegetation, and other collection areas.
- Remove leaf litter, straw and other debris from under and around propane tanks to create 10 feet of clearance around it.
- Eliminate ladder fuels by pruning tree branches on trees around the property to within at least 6 feet of the ground, using a bypass lopper, pruner saw, or long reach/hand pruner.
- Remove flammable materials from underneath the house, decks, porches, and lanai.
- Common flammables include scrap-wood, firewood, and combustible furniture.
- Mow the lawn regularly to keep grasses shorter than 4 inches tall around the home. Do not mow in the heat of the day or when the wind is blowing. Never mow in dry vegetation.
- Non-native trees, such as ironwood constantly drop needles, leaves, branches, and other debris, so it's best to stay on top of removing them from the ground before the pile becomes a major project. Consider reforesting these areas with native trees that don't drop large amounts of debris.
- Invasive grasses such as guinea and fountain grass grow rapidly when un-managed and can dry out very quickly, creating a major fire hazard. Weed them often and consider replanting with low-lying, drought-tolerant, native ground cover.

HARDEN YOUR HOME

Creating defensible space, as detailed above, decreases the likelihood of wildfire spreading through vegetation that surrounds structures on the home site or yard. The second and equally important set of actions to reduce wildfire-caused ignitions of residences and structures is to harden the home or structure with non-combustible building materials and ignition-reducing strategies. The following is a step-by-step list of recommended actions per component of a structure or home. Some of these actions are inexpensive and some are costly. All are important. It is recommended that residents take the simple and easier steps right away, and prioritize hardening the rest of the home or structure as soon as possible. Note: relying on the ability to water the roof when fire is approaching will not necessarily provide adequate structural protection, and it puts you in danger. It also takes water and personnel resources away from firefighters, who need the water and full attention toward firefighting rather than search and rescue for late evacuees. Preparation and early evacuation are key actions recommended by the national Ready, Set, Go! Program. Prepare your home as follows:

Roof: Your roof is the most vulnerable part of your home because it can easily catch fire from wind-blown embers. Homes with wood-shake or shingle roofs are at high risk of being destroyed during a wildland fire. Build your roof or re-roof with fire-resistant materials such as composite, metal, or tile. Block any spaces between roof decking and covering to prevent ember intrusion. Clear leaves and other debris from your roof and gutters. Cut any tree branches within 10 feet of your roof.

Vents: Vents on homes are particularly vulnerable to flying embers. All vent openings should be covered with 1/8-inch or smaller metal mesh. Do not use fiberglass or plastic mesh because they can melt and burn. Attic vents in eaves or cornices should be baffled or

Figure 6. Covering vents with 1/8-inch or smaller metal mesh blocks embers from entering a home or structure.

Figure 7. Keep windows free of vegetation to reduce likelihood of heat-caused breakage that lets embers into your home.

Figure 8. Make sure your eaves are enclosed with non-combustible materials to prevent ember entry.

Figure 9. Rain gutters should have screens to keep leaf debris from accumulating. Maintain gutters to keep them clear and clean.

otherwise protected to prevent ember intrusion (mesh is not enough).

Deck/Patio Cover: Use heavy timber or non-flammable construction material for decks. Enclose the underside of balconies and decks with fire-resistant materials to prevent embers from blowing underneath. Keep your deck clear of combustible items, such as baskets, dried flower arrangements and other debris. The decking surface must be ignition resistant if it's within 10 feet of the home.

Windows: Heat from a wildland fire can cause windows to break even before the home ignites. This allows burning embers to enter and start internal fires. Single-paned and large windows are particularly vulnerable. Install dual-paned windows with the exterior pane of tempered glass to reduce the chance of breakage in a fire. Limit the size and number of windows in your home that face large areas of vegetation.

Non-Combustible Enclosed Eaves: Box in eaves with non-combustible materials to prevent accumulation of embers.

Walls: Wood products, such as boards, panels or shingles, are common siding materials. However, they are combustible and not good choices for fire-prone areas. Build or remodel with fire-resistant building materials, such as plaster, cement, masonry or stucco. Be sure to extend materials from foundation to roof.

Rain Gutters: Screen or enclose rain gutters to prevent accumulation of plant debris.

Chimney: Cover your chimney and stovepipe outlets with a non-flammable screen of 1/4-inch wire mesh or smaller to prevent embers from escaping and igniting a fire. Make sure that your chimney is at least 10 feet away from any tree branches.

Garage: Have a fire extinguisher and tools such as a shovel, rake, bucket and hoe available for fire emergencies. Install a solid door with self-closing hinges between living areas and the garage. Install weather stripping around and under door to prevent ember intrusion. Store all combustibles and flammable liquids away from ignition sources.

Non-Combustible Fencing: Make sure to use non-combustible fencing materials, and to keep combustible fences away from homes. Wooden fences leading straight to the home act as wicks and bring the fire straight to the structure, greatly increasing the likelihood of the home igniting.

Figure 10. Wood fencing can act like a fire wick straight to a home. Use non-combustible materials for all fencing and yard structures.

Driveways and Access Roads: Driveways should be designed to allow fire and emergency vehicles and equipment to reach your house. Access roads should have a minimum 10-foot clearance on either side of the traveled section of the roadway and should allow for two-way traffic. Ensure that all gates open inward and are wide enough to accommodate emergency equipment. Trim trees and shrubs overhanging the road to a minimum of 13 1/2 feet to allow emergency vehicles to pass.

Address: Make sure your address is clearly visible from the road.

Water Supply: Have multiple garden hoses that are long enough to reach any area of your home and other structures on your property. If you have a pool or well, consider getting a pump.

Inside: Keep fire extinguishers on hand and in good working order. Install smoke alarms on each level of your home and near bedrooms. Test them monthly and change the batteries twice a year.

ACTION PLAN SOUTH MAUI COMMUNITY WILDFIRE PROTECTION PLAN

The South Maui CWPP Action Plan follows the guidelines of HFRA, which includes developing an action plan along with an implementation and maintenance strategy, and finalizing the plan.

The South Maui CWPP Action Plan was developed through an analysis of the issues identified in the hazard assessments and overall risk assessment, public and agency meetings, and through a review of other Community Wildfire Protection Plans throughout Hawai'i. Federal, State of Hawai'i, and County of Maui agencies, private entities and landowners, and area residents and homeowners were invited to submit projects that provide protection and reduce risk. Public concerns and input served as the basis for the projects listed below that will guide hazard reduction efforts in the future.

Landowners and agencies are invited to continue to submit projects that provide community protection and mitigate wildfire risk. The Maui Wildfire Coordinating Group and HWMO intend to regularly evaluate progress on projects. Additional projects will be attached as appendices and/or included in updated versions of this plan.

NEAR-TERM ACTION PLAN

The following table details the projects that have been prioritized for the next five years.

Project	Anticipated Cost	When	Lead
Smokey Bear signage – Install and maintain “Smokey Bear, Prevent Wildfire Signs” throughout project area.	\$10,000/year	ASAP	DLNR-DOFAW
Assist interested communities in completing Firewise Communities certification process	\$5,000/community	Ongoing	HWMO
Provide outreach to students at schools in fire prone communities	Varies, part of broader workplan and set of expenses	Ongoing	HWMO
Develop wildfire prevention and drought awareness and preparedness materials	Variable	In Initial Phases	HWMO, DLNR-DOFAW
Launch wildfire and drought awareness campaign	Variable	In Initial Phases	HWMO, MFD, DLNR-DOFAW
Host wildfire preparedness information and materials for residents and decision makers on website	Variable	Ongoing	HWMO, MFD, DLNR-DOFAW
Utilize social media to promote wildfire awareness	Variable	Ongoing	HWMO, MFD, DLNR-DOFAW

Vegetation Management around powerline infrastructure	Variable		MECO
Green waste removal and recycle program	Variable on area and frequency of pickup	ASAP	TBD
Work with large landowners to encourage access management	TBD		TBD, various
Fuel treatment mitigation along major roadways (treatment with foam gels, etc.)			Variable

Table 13. Near-term action plan and projects.

LONGER-TERM ACTION PLAN

In addition to projects that are ongoing or being initiated at the time of writing this CWPP, numerous other longer-term priority projects were proposed by participating agencies and organizations involved in the CWPP planning process. Table 14 details the longer-term proposed projects in no priority order. Projects are to be completed as funding, personnel, and opportunities become available.

Proposed Project	Anticipated Cost	Lead
Improve national reporting of wildfires in Hawai'i	TBD	DLNR-DOFAW, USFS, HWMO
Improve initial attack capacity	Project dependent	TBD
Work to appropriately graze fallow areas where fuels are building, Fund fencing and water troughs to make lease areas more economically feasible to graze	200,000 for fencing multiple areas	TBD
Install water tanks around margins of communities to serve as dip tanks for helicopter fire suppression. Have tanks double as water troughs for ranching and conservation/restoration efforts	\$20-60,000 per diptank	TBD
Increase outreach to community associations	Variable	HWMO, DLNR-DOFAW, MFD
Provide wildfire education for decision makers	TBD	HWMO, DLNR-DOFAW, MFD
Seed collection and storage for post-fire replanting	TBD	DLNR-DOFAW
Work with large landowners to encourage fuels management	TBD	HWMO, DLNR-DOFAW, MFD
Maintain and add RAWS	\$20,000/each	DLNR-DOFAW
Work with partners and residents to garner support for increasing DLNR-DOFAW's budget for fire response	TBD	HWMO, DLNR-DOFAW, MFD, Public
Submit WUI proposals for projects in the CWPP area	TBD	DLNR-DOFAW
Work with state and federal land-owner assistance programs to incorporate wildland fire concerns	TBD	TBD, Possibly DLNR-DOFAW
Work with large landowners to encourage access management	TBD	TBD, various
Fuel treatment mitigation along major roadways (treatment with foam gels, etc.)		Variable

Table 14. Proposed future projects.

CWPP IMPLEMENTATION AND MAINTENANCE

The HFRA requires that the MFD, County of Maui Civil Defense Agency, and DLNR-DOFAW all agree on the final contents of the South Maui CWPP. The plan is signed by each agency in order to meet HFRA and FEMA requirements. Because of the non-regulatory nature of the CWPP, the relevance and effectiveness of the South Maui CWPP will rely heavily upon community initiative and involvement. Expertise, technical support, and implementation assistance will be provided by the appropriate agencies and organizations involved in fire issues in the South Maui area, and area residents are urged to contribute their time and effort to implement the priority residential and community-based actions toward creating defensible space and reducing structural ignitability.

HWMO, in cooperation with the Maui Wildfire Coordinating Group, will provide technical support, identify and coordinate funding when possible, and serve as a centralized resource for wildfire risk reduction efforts in South Maui. Together, representatives will seek to identify sources of funding for projects, document the successes and lessons learned from any implemented projects, and evaluate and update the CWPP as needed and as possible.

HWMO will provide outreach and educational programs to youth and adults through school programs, community events, homeowners/community association programs, and workshops in the coming year to kickstart community involvement in implementing the actions identified in this plan. Additionally, HWMO will be working with interested communities to go through the Firewise certification process, to include forming local Firewise committees and action teams and completing comprehensive hazard assessments and plans specific to their subdivisions.

Many South Maui CWPP action items will require continuing support for wildfire risk mitigation projects. This will involve actively pursuing funding for projects, staying informed and in contact with one another, and updating the CWPP regularly so that it remains a “living” document. Continuing to build community awareness of these issues and actions will assist with fostering individual and community investment in projects.

Note: This page and its information are part of the original plan and have been retained to preserve the record from the base document. The current signatories can be found on the mutual agreement page at the beginning of this plan.

SIGNATORY CONTACT INFORMATION

The following County of Maui and State of Hawai'i representatives have a high level of interest in the protection of the South Maui area from wildfire, and have reviewed and support this CWPP. Contact information for principal government stakeholders is listed below.

Maui Fire Department

Jeffrey Murray, Fire Chief
200 Dairy Road
Wailuku, HI 96793

Civil Defense Agency, County of Maui

Anna M. Foust, Emergency Management Officer
200 S. High Street
Wailuku, HI 96793

State Department of Land and Natural Resources- Division of Forestry and Wildlife

David G. Smith, Administrator
Kalanimoku Building
1151 Punchbowl St. Room 325
Honolulu, HI 96813

The Signature Page presented at the beginning of this document demonstrates the required multi-agency participation and acknowledgement of this plan.

For inquiries related to the development of this plan, to add supplementary action plan projects, or for printed copies, please contact:

SOUTH MAUI COMMUNITY WILDFIRE PROTECTION PLAN
COMMUNITY PHOTOS

The following photos were taken during a visual assessment of South Maui, during which we documented community resources at risk, hazards, and examples of existing protective features in the South Maui CWPP planning area.

Photo assessments were completed for the following areas:

- 'Āhihi-Kina'u
- Kihei
- Wailea-Makena
- Ma'alaea Residential and Harbor

'Ahihi-Kina'u

Road facing Kihei

Haleakalā in background with lava fields in foreground

Makena Road homes

Kanahena Cove with narrow streets

Overgrown roadside residential vegetation need to be managed

Makena Road- narrow with blind spots and roadside fuels

Makena State Park- dry grasses and kiawe trees create ladder fuels

Pu'u above Makena State Park

Makena Staet Park access road has heavy roadside fuels

Vegetation overgrowing powerlines is a high hazard

La Perouse Bay- parking lot with smoke in background from fire in Kahikinui

La Perouse Bay sedimentation in water

Kihei

Park and ride area with continuous fuels right up to cars

Highway 310 near Park and Ride, mowed shoulder on one side

Maui Electric base yard - entrance area with ladder fuels

Kealia Pond with West Maui Mountains in background

Kealia Pond Boardwalk

Market area with ABC Store and farmers market across from Kihei Sands - dense kiawe forest with fuelbreak

Kenolio Park ballfield and structure

Fuelbreak next to road across from Kenolio Park

Apartments across from Kenolio fuelbreak area with tall kiawe

Kihei Wharf canoe area and hotels/condos

Keonoulu St- edge of Maui Lu Resort, hazardous roadside fuels

Kihei Bay Vista- empty lot with hazardous fuels

Keonoulu Street

Several homes use xeriscaping and noncombustible materials

Nohokai St.- ladder fuels with tall kiawe next to parking lot

Roadside fuels and parking behind Longs Drugs and Azeka Mauka

Bulldozed area with tall kiawe and wood piles

Kihei U.S. Post Office

Unmanaged vegetation next to Kihei Elementary School

Kihie Community Center

Lokelani Intermediate School

Unmanaged fuels across from South Maui Community Park

Open field

Roadside fuels on Halehuai Street

Welakahao intersection with main road, heavy fuels and power lines

Kalama Park

Kihei Fire Station

Kihei Public Library

Walaka Street roadside fuels

Kihei Boat Launch with unmanaged vegetation

Auhana St. neighborhood- dry grasses with no shoulder

Kihei wildland-urban interface and Pi'ilani Hwy.

Abandoned lot with unmanaged vegetation

Kaonoulu St neighborhood- example of well kept landscaping

Mahealani St. neighborhood- firebreak

Mahealani St. neighborhood- gulch between homes with tall dry grasses

Wailea-Makena

Keawakapu Beach neighborhood - tall hedge of bougainvillea and other shrubs

Keawakapu Beach neighborhood - row of palms and green lawns on shoulder

Keawakapu Beach

Unmanaged vegetation across from Wailea Kahi

Kai Malu - lawn next to sidewalk bordered by unmanaged vegetation

Poolenalena Beach – grasses and kiawe along walkways

Poolenalena Beach - ekoa and kiawe along roads

Makena Landing – roadside fuels

Makena Landing - homes across from beach with fuels leading up to homes on slope

Keawalani Church neighborhood - homes behind roadside fuels

Makena Alanui (south end) - roadside fuels

Mapu PI neighborhood - WUI

Ma'alaea- Residential and Harbor

Road right off of entrance - row of kiawe

Grass and kiawe ladder fuels on residential road right off of main

Busy Honoapiilani Highway leads right into community

Home nestled in green but dense shrubs and palms with aloe on road

Rush hour traffic headed towards Lahaina

Ma'alaea Harbor- DAR yard palms and tall overhanging branches

Area behind restaurants - some grasses mowed on berms

Between harbor and highway intersect - some roadside fuels management

Highway 30 wide shoulder with mowed grasses

APPENDIX B
SOUTH MAUI COMMUNITY WILDFIRE PROTECTION PLAN
WILDFIRE HAZARD ASSESSMENT MAPS

Hazard Category (Maps provided in CWPP main document)	Individual Hazard Maps (Maps provided below in the following order)
Subdivision Hazard Total	<ul style="list-style-type: none"> • Fire Service Access • Home Setbacks • Ingress/Egress • Private Landowner Firewise Landscaping & Defensible Space • Proximity of Subdivision to Wildland Areas • All Season Road Condition • Road Maintenance • Road Width • Street Signs • Structure Density • Unmanaged, Untended, Undeveloped Lands
Vegetation Hazard Total	<ul style="list-style-type: none"> • Defensible Space: Fuels Reduction Around Homes & Structures • Fuel Loading • Fuel Structure & Arrangement • Proximity of Flammable Fuels Around Subdivision • Vegetation Within 300' Of Homes
Building Hazard Total	<ul style="list-style-type: none"> • Siding/Soffits • Roofing Assembly • Structural Ignitability • Under Skirting Around Decks, Lanais, Post & Pier Structures • Utilities Placement; Gas & Electric
Fire Environment Hazard Total	<ul style="list-style-type: none"> • Average Rainfall • Prevailing Wind Speeds & Direction • Slope • Topographic Features That Adversely Affect Wildland Fire Behavior • Seasonal or Periodic High Hazard Conditions • Ignition Risk
Fire Protection Hazard Total (high capacity and capability= low hazard)	<ul style="list-style-type: none"> • Response Time • Community Planning Practices & Ordinances • Community Fire Safe Efforts & Programs Already In Place • Fire Department Structural Training & Expertise • Local Emergency Operations Group or Citizen Group • Proximity to Fire Stations • Water Source Availability • Wildland Firefighting Capacity of Initial Response Agency • Interagency Cooperation

SUBDIVISION HAZARD FOR DEVELOPED AREAS

Fire Service Access Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

FIRE SERVICE ACCESS		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Adequate turnaround space is available for large fire equipment.	<300' with no turnaround. Short or dead-end streets will become crowded with homeowner's vehicles.	300'+ with no turnaround. Long dead-end streets will become crowded with vehicles. Two-way visibility is an issue.

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Home Setbacks Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

HOME SETBACKS		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Majority (50%+) of homes are set back from property lines and slopes by at least 30 feet.	10-50% of homes have defensible setbacks from property lines and sloped areas.	<10% of homes have defensible setbacks from property lines. Buildings located close to dangerous topographic features such as the tops of slopes.

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Ingress/Egress Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

INGRESS / EGRESS		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Multiple entrances and exits are well equipped for fire trucks with turnarounds.	Limited access routes. Two ways in and two ways out. Moderate grades.	Narrow, dead end roads or one way in, One way out. Steep grades.

Low Risk

High Risk

— Major Roads

— Other Roads

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Private Landowner Actions Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

PRIVATE LANDOWNER FIREWISE LANDSCAPING/ DEFENSIBLE SPACE

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
70% of homes have improved survivable space around property, reduced ignition risk, hardened homes, and no ladder fuels.	30-70% homes have improved survivable space around property and well-maintained landscapes.	<30% of homes have defensible space, hardened home features, or Firewise landscaping

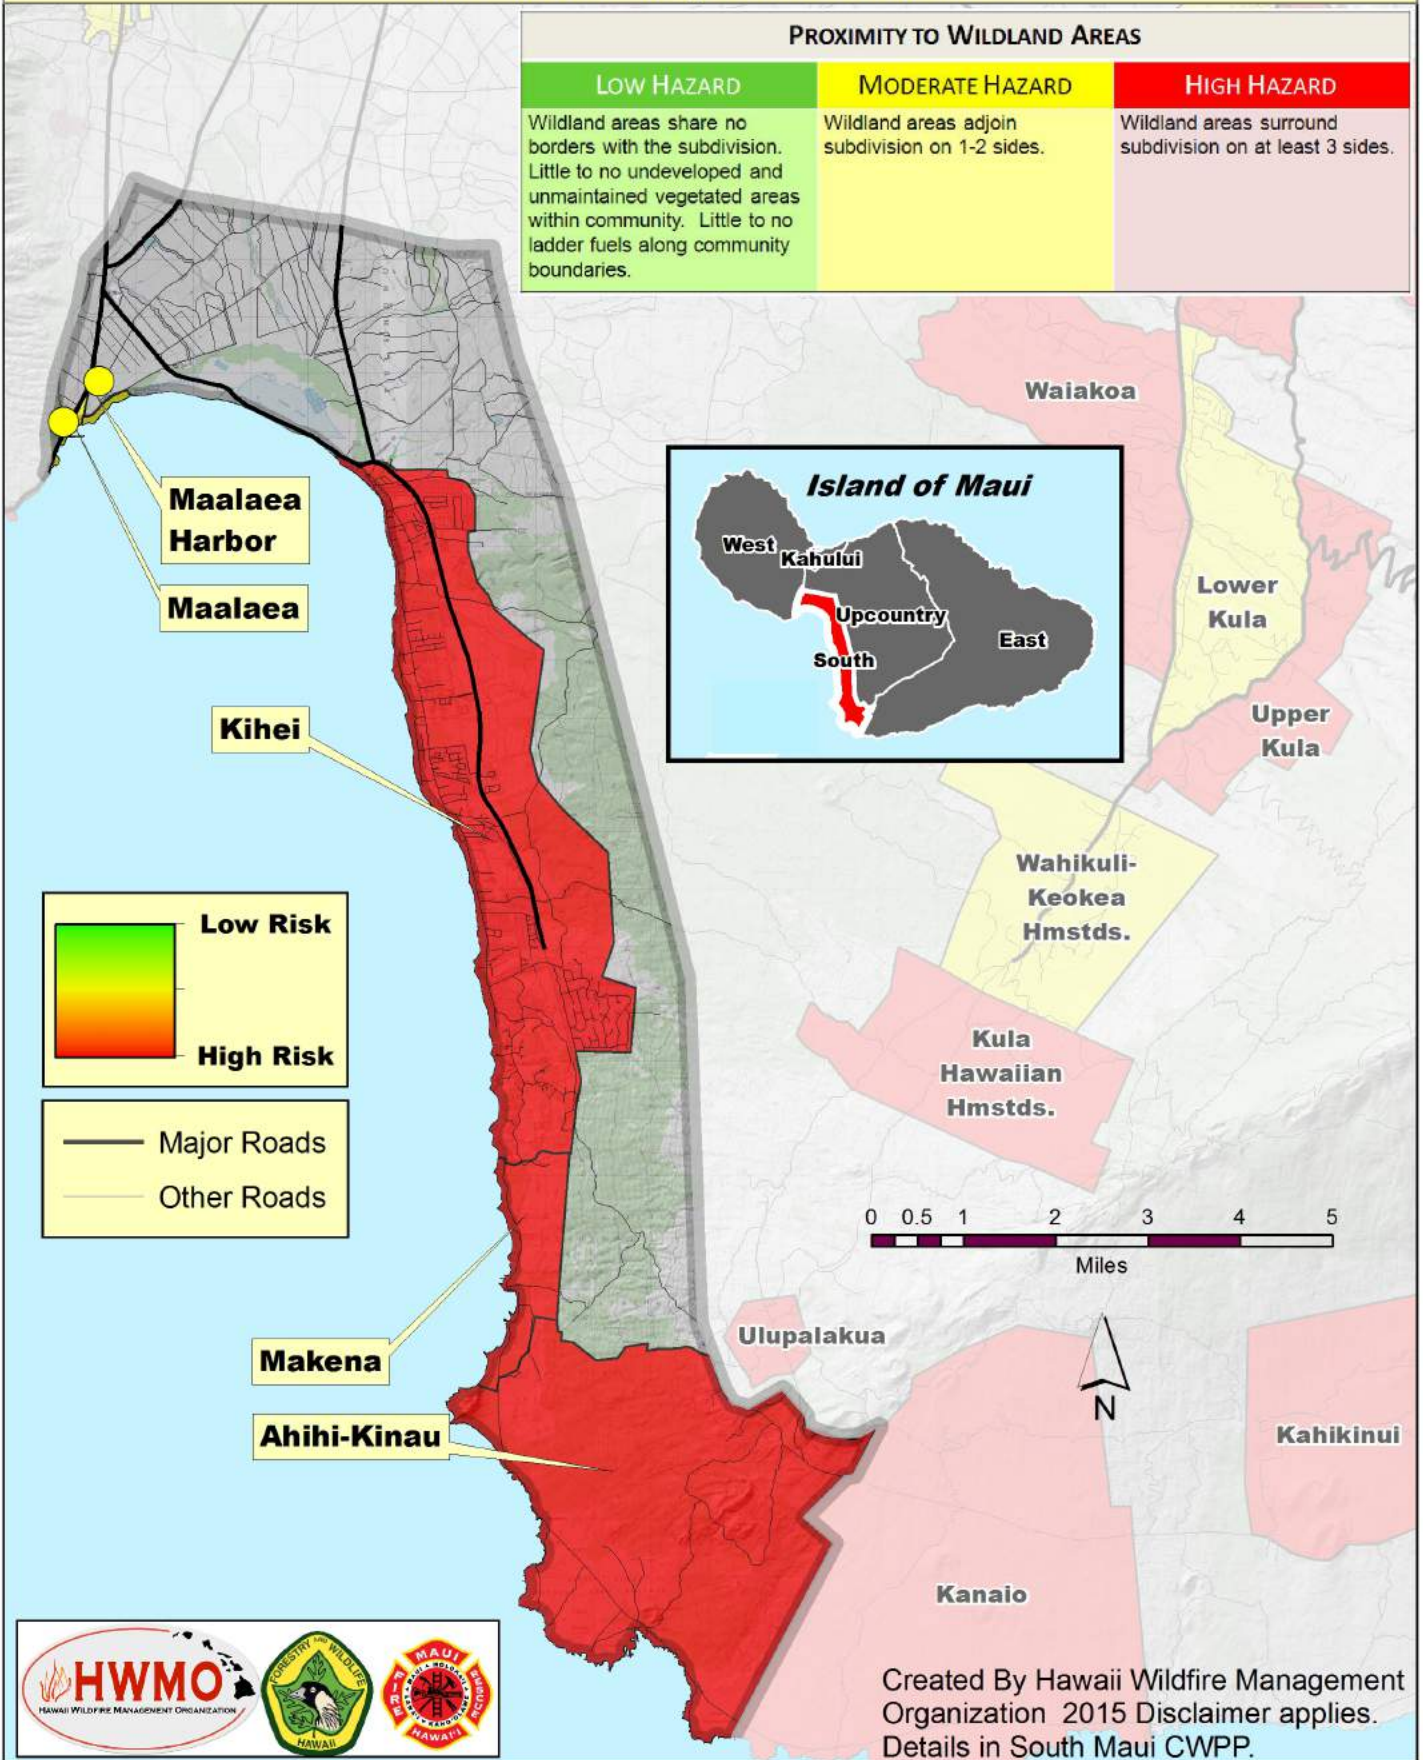

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Proximity of Subdivision To Wildland Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

PROXIMITY TO WILDLAND AREAS

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Wildland areas share no borders with the subdivision. Little to no undeveloped and unmaintained vegetated areas within community. Little to no ladder fuels along community boundaries.	Wildland areas adjoin subdivision on 1-2 sides.	Wildland areas surround subdivision on at least 3 sides.

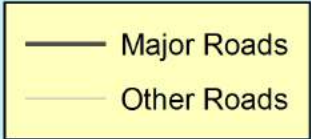

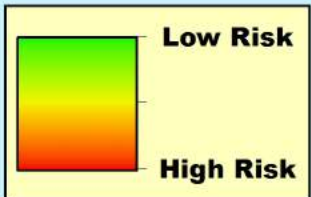

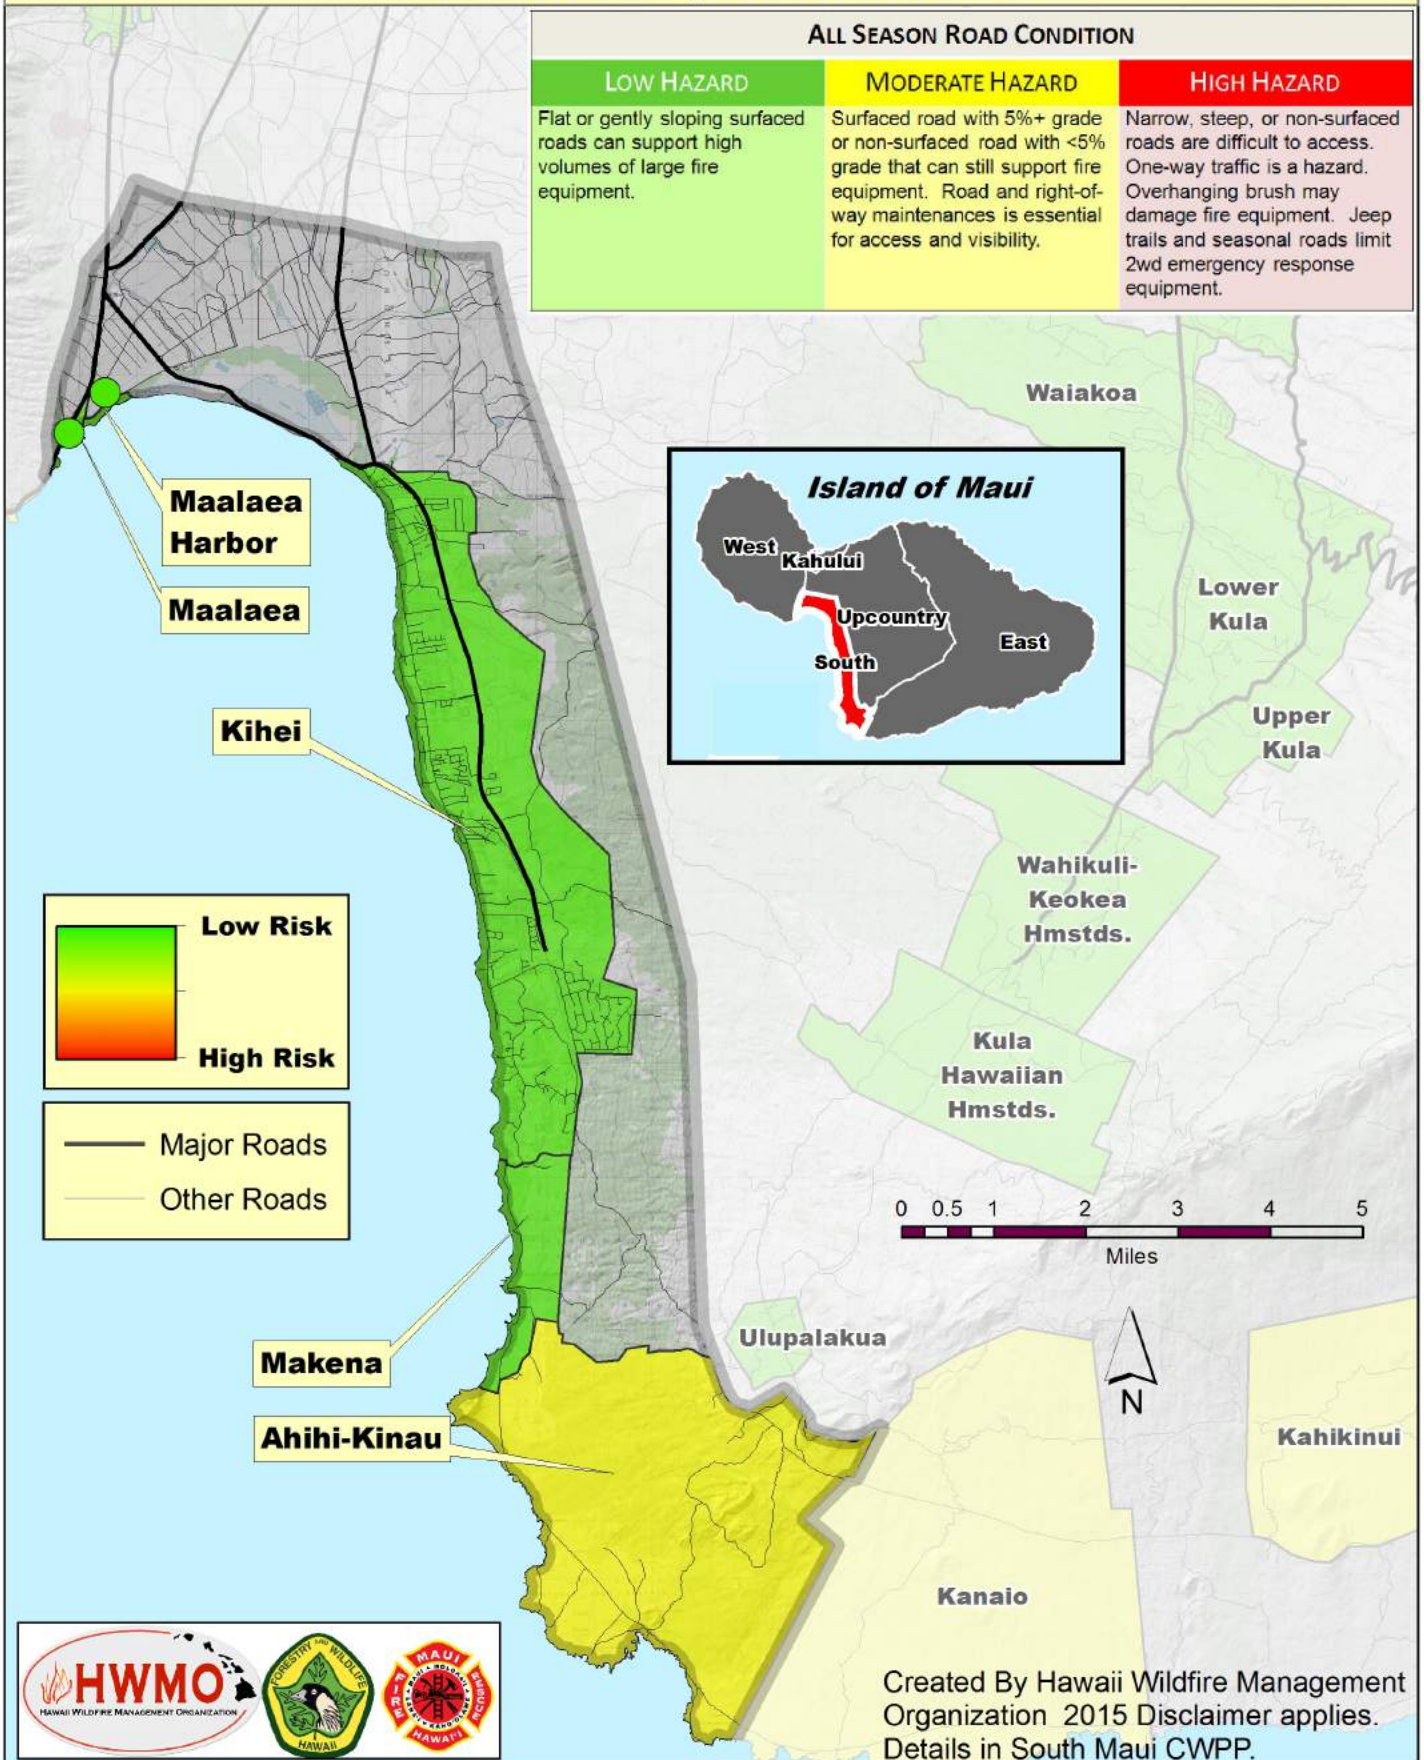

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

All-Season Road Condition Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

ALL SEASON ROAD CONDITION

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Flat or gently sloping surfaced roads can support high volumes of large fire equipment.	Surfaced road with 5%+ grade or non-surfaced road with <5% grade that can still support fire equipment. Road and right-of-way maintenances is essential for access and visibility.	Narrow, steep, or non-surfaced roads are difficult to access. One-way traffic is a hazard. Overhanging brush may damage fire equipment. Jeep trails and seasonal roads limit 2wd emergency response equipment.

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Road Maintenance Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

ROAD MAINTENANCE		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Wide loop roads that are maintained, paved or solid surface with shoulders.	Roads maintained. Some narrow two lane roads with no shoulders.	Narrow and or single lane, minimally maintained, no shoulders.

Low Risk

(Green to Yellow gradient)

High Risk

(Yellow to Red gradient)

— Major Roads

— Other Roads

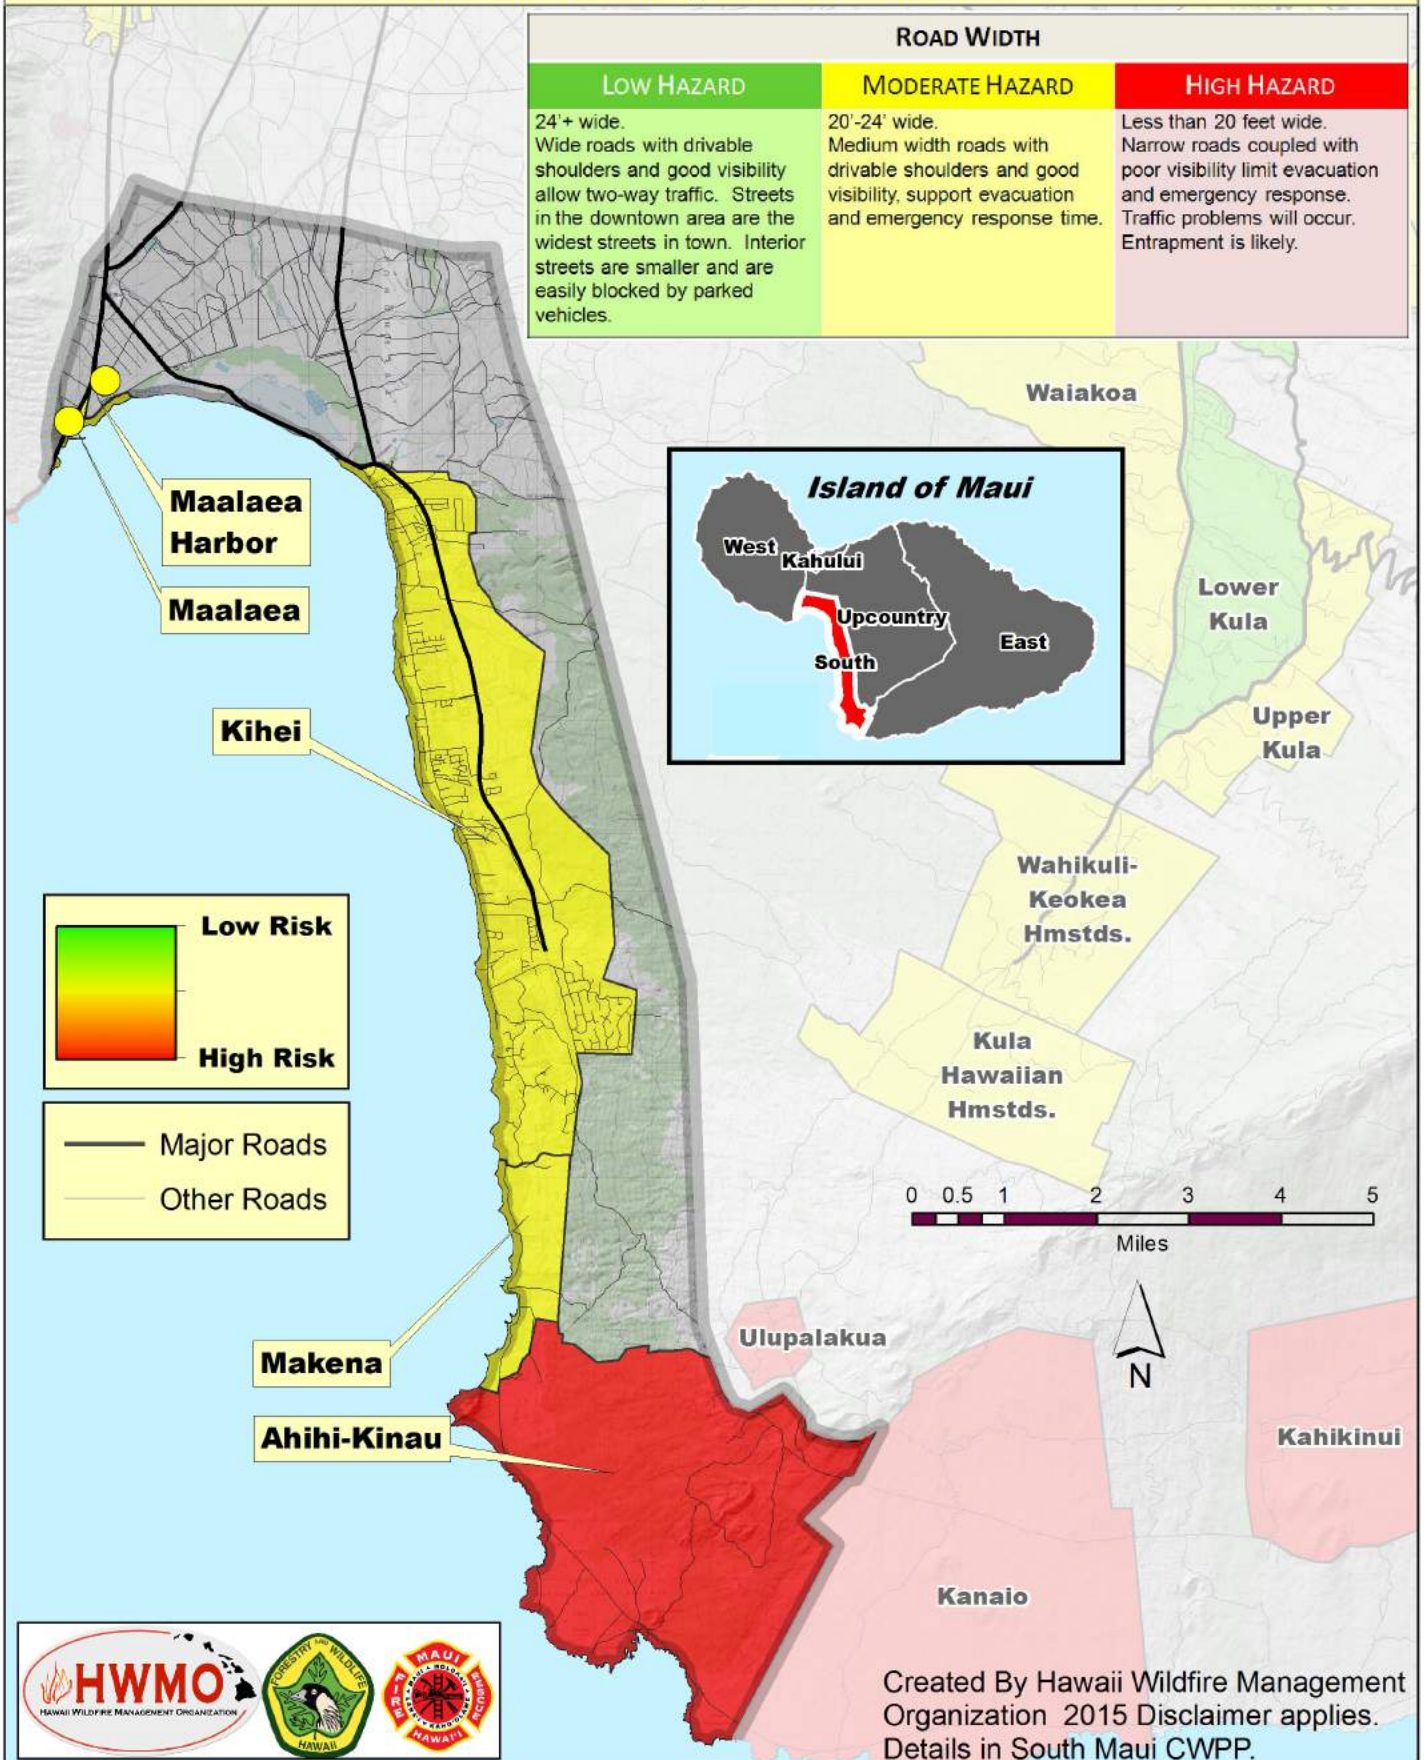

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Road Width Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

ROAD WIDTH		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
24'+ wide. Wide roads with drivable shoulders and good visibility allow two-way traffic. Streets in the downtown area are the widest streets in town. Interior streets are smaller and are easily blocked by parked vehicles.	20'-24' wide. Medium width roads with drivable shoulders and good visibility, support evacuation and emergency response time.	Less than 20 feet wide. Narrow roads coupled with poor visibility limit evacuation and emergency response. Traffic problems will occur. Entrapment is likely.

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Street Signs Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

STREET SIGNS		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Present. Most are at least 4' in size and are reflectorized.	Present and reflectorized with some exceptions.	Not present.

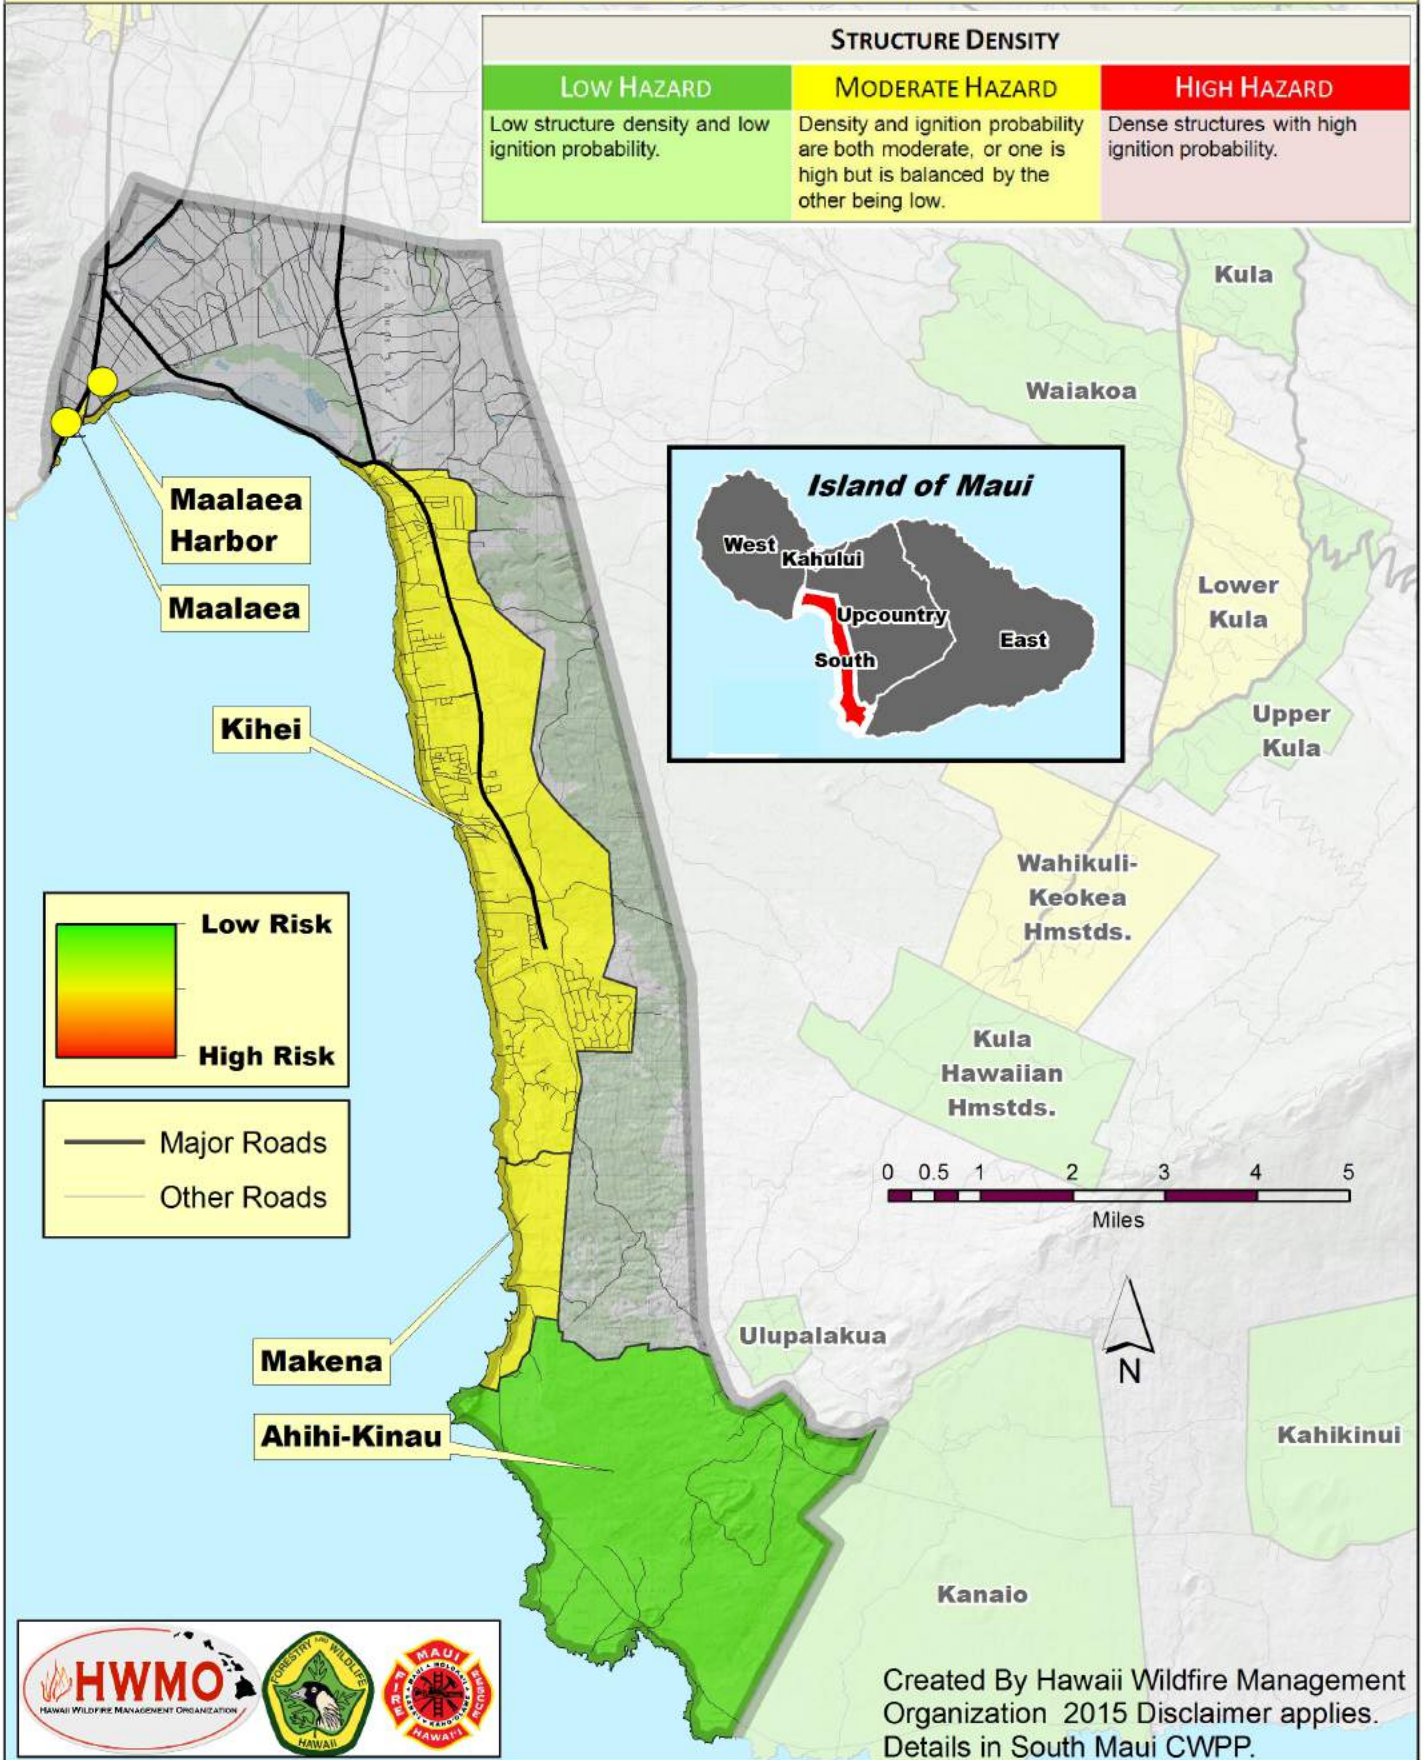

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Structure Density Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

STRUCTURE DENSITY		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Low structure density and low ignition probability.	Density and ignition probability are both moderate, or one is high but is balanced by the other being low.	Dense structures with high ignition probability.

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Unmanaged, Untended, Undeveloped Lands Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

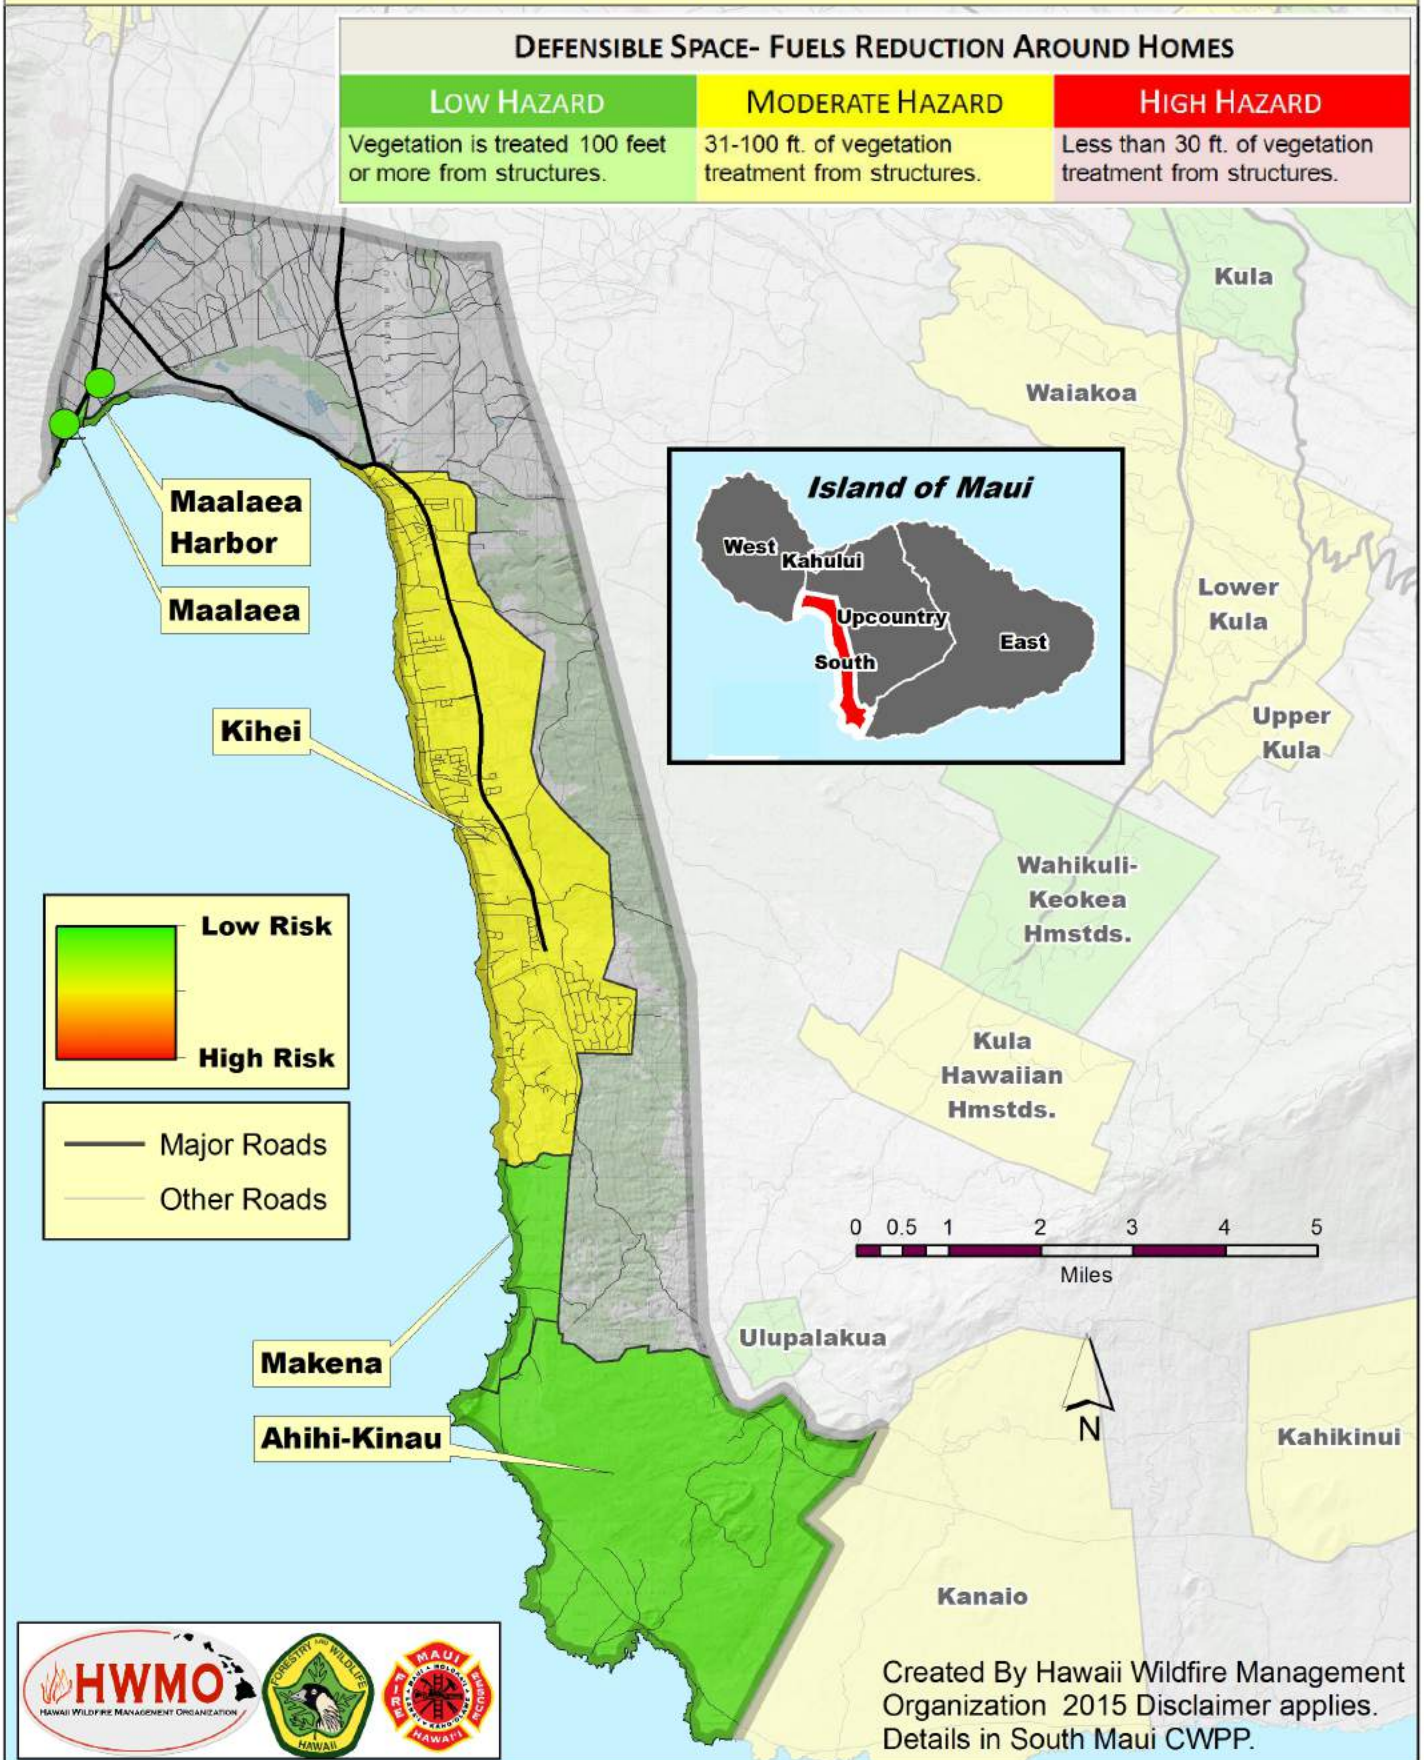

VEGETATION HAZARD FOR DEVELOPED AREAS

Defensible Space/ Fuels Reduction Around Homes and Structures Hazard for Developed Areas
South Maui Community Wildfire Protection Plan

DEFENSIBLE SPACE- FUELS REDUCTION AROUND HOMES

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Vegetation is treated 100 feet or more from structures.	31-100 ft. of vegetation treatment from structures.	Less than 30 ft. of vegetation treatment from structures.

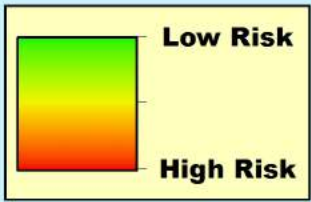

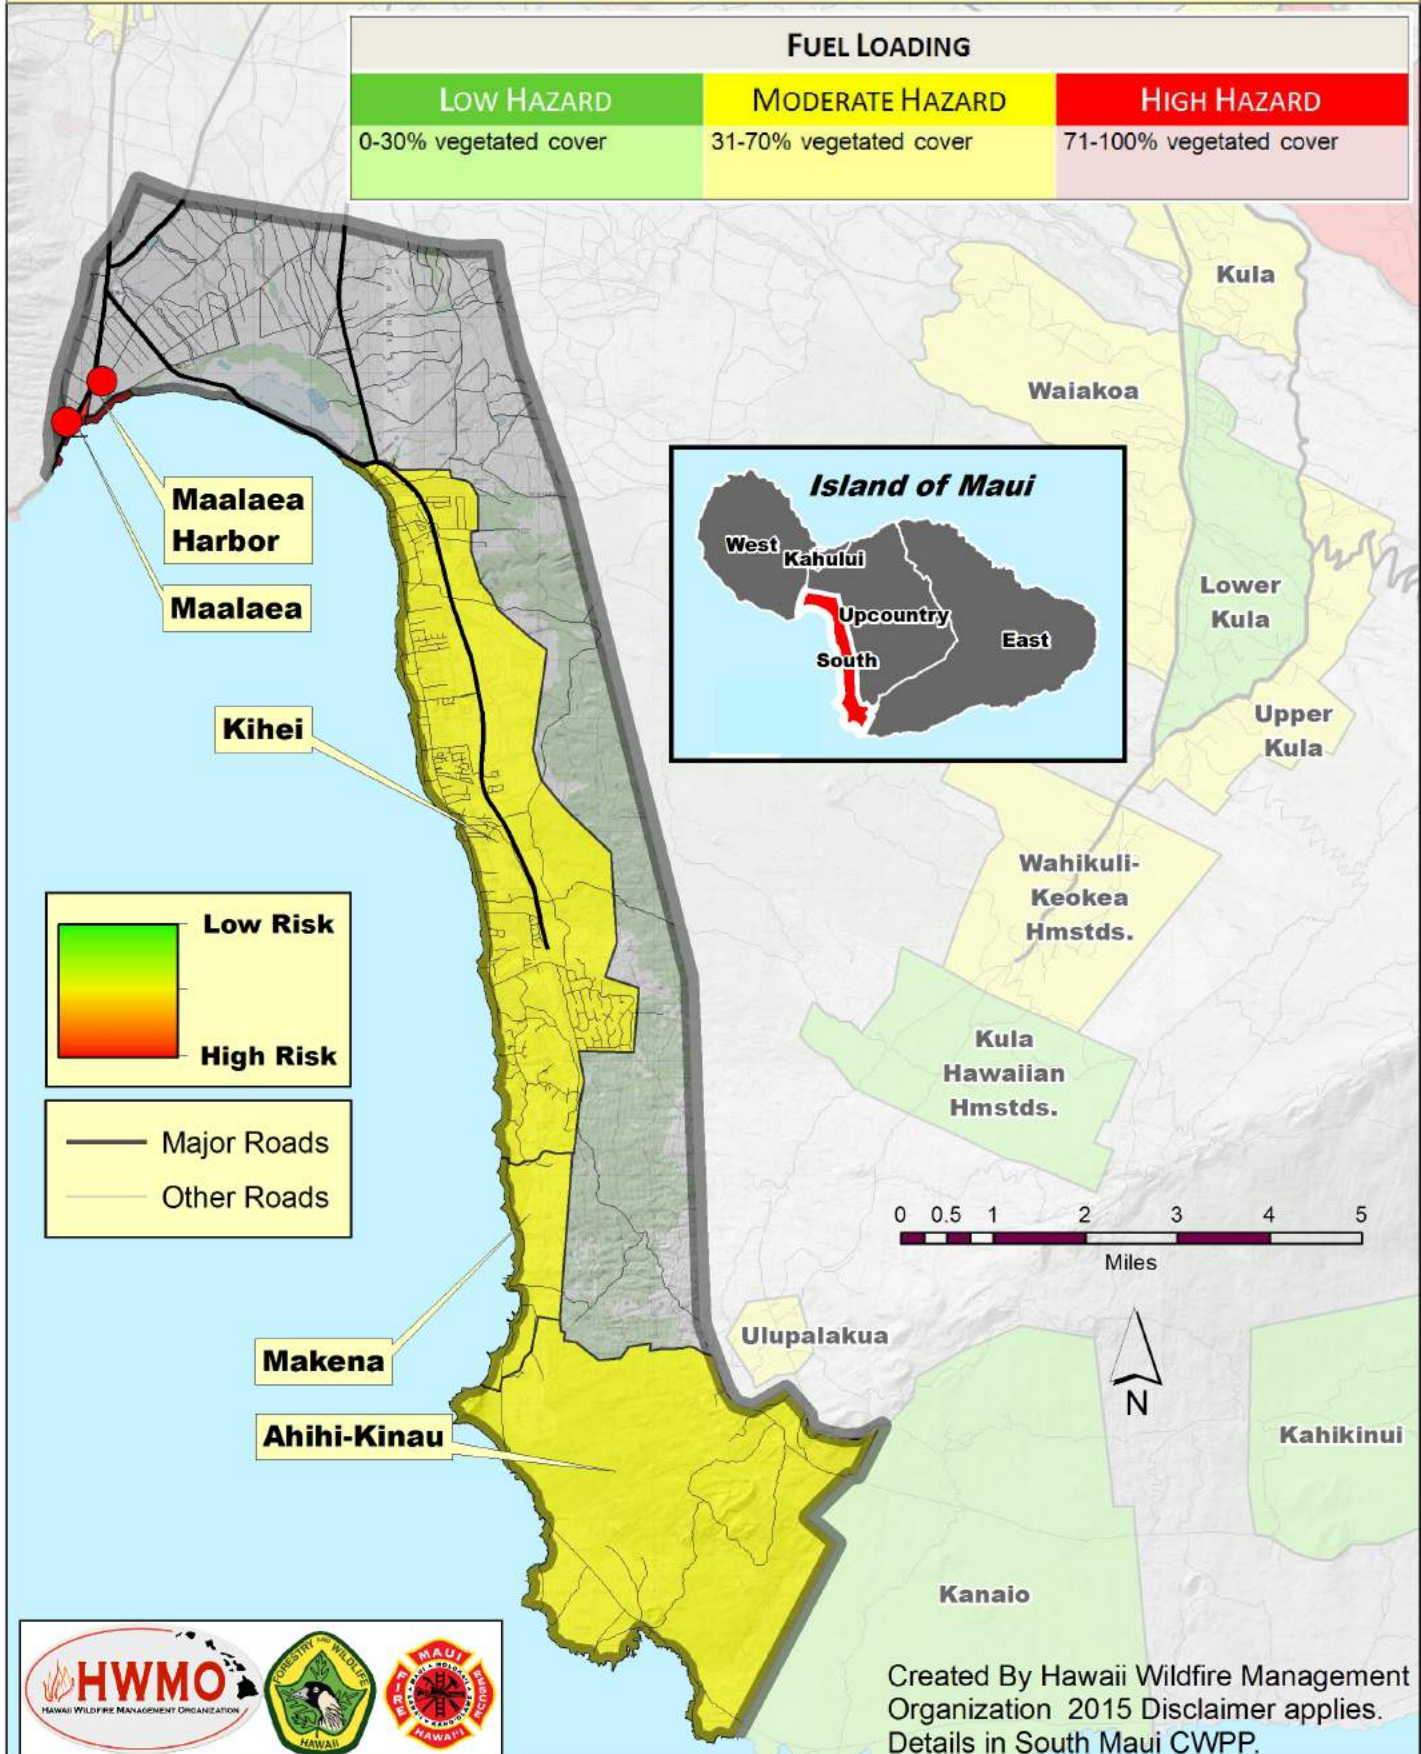

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Fuel Loading Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

FUEL LOADING		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
0-30% vegetated cover	31-70% vegetated cover	71-100% vegetated cover

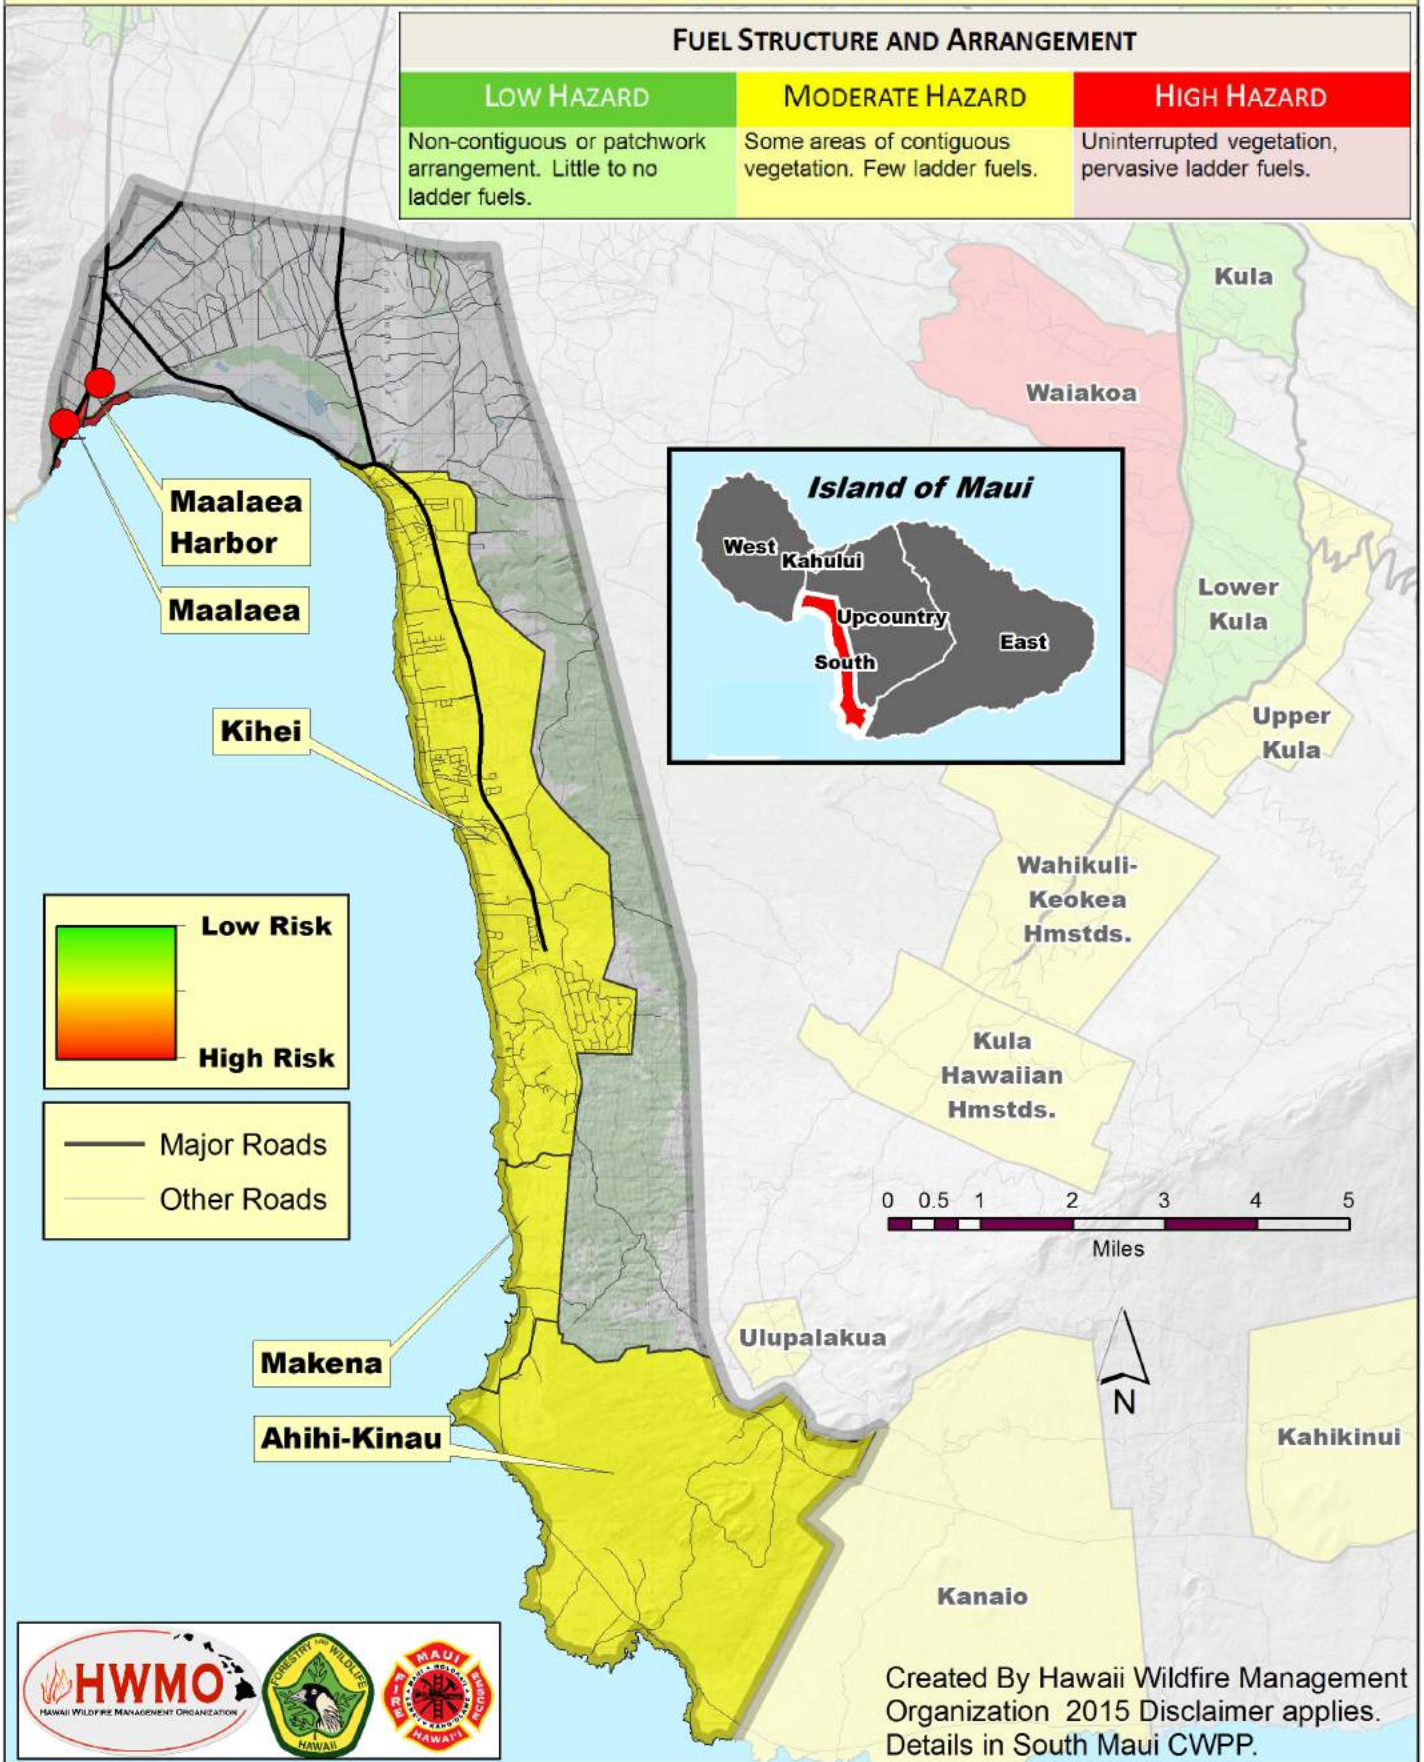

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Fuel Structure and Arrangement Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

FUEL STRUCTURE AND ARRANGEMENT

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Non-contiguous or patchwork arrangement. Little to no ladder fuels.	Some areas of contiguous vegetation. Few ladder fuels.	Uninterrupted vegetation, pervasive ladder fuels.

Low Risk

High Risk

— Major Roads

— Other Roads

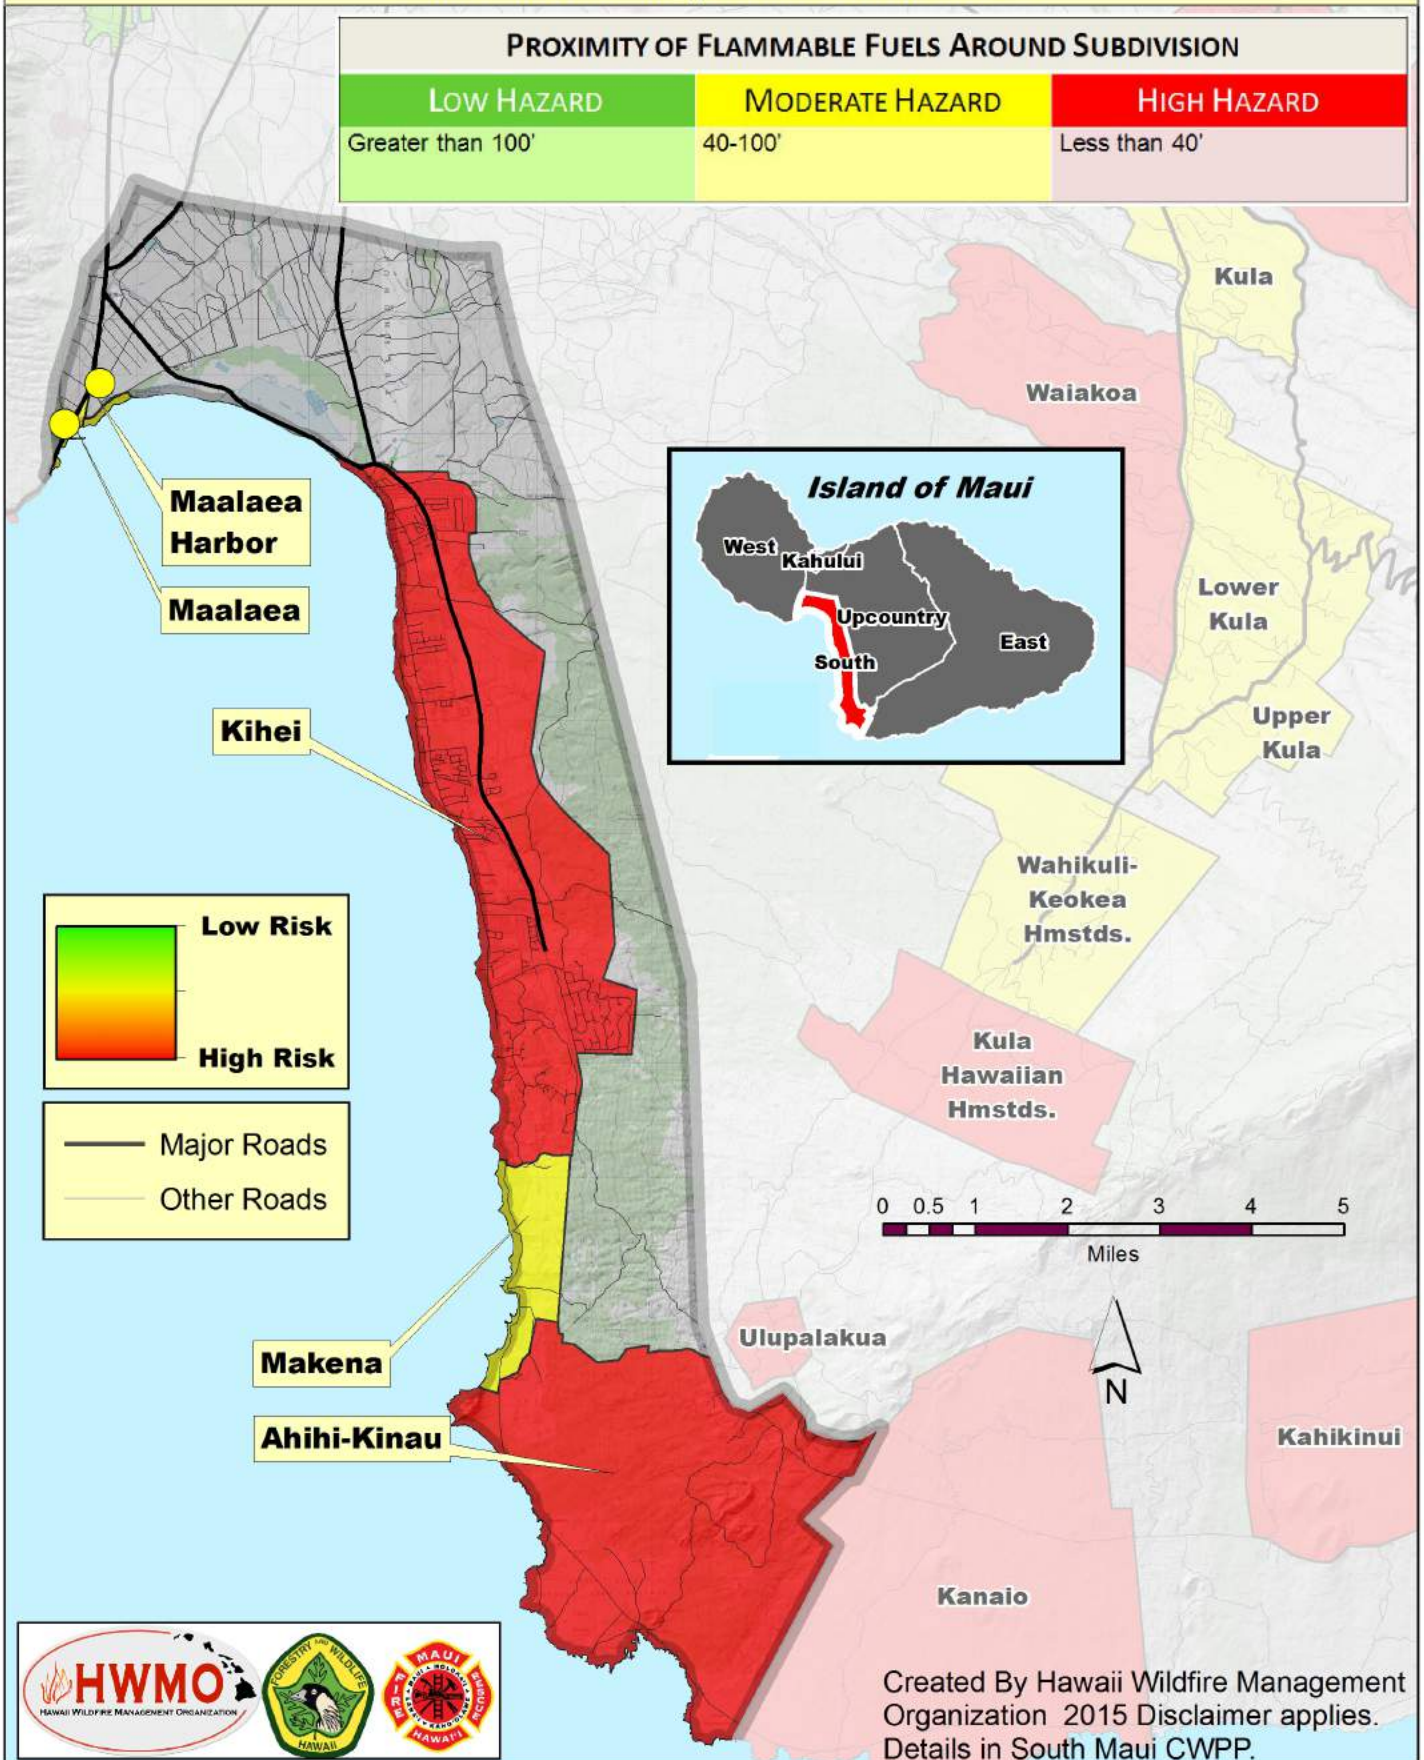

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Proximity of Flammable Fuels Around Subdivision Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

PROXIMITY OF FLAMMABLE FUELS AROUND SUBDIVISION

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Greater than 100'	40-100'	Less than 40'

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Type of Predominant Vegetation Within 300' of Homes Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

VEGETATION TYPE WITHIN 300' OF HOMES

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Grasses less than 6 inches in height. Light leaf litter.	Grasses 6–12 inches in height. Light brush and small trees. Patchy fuels.	Dense grass, brush, timber, and/or hardwoods. Moderate to heavy dead and downed vegetation. Fuels greater than 12 feet tall. Heavy vegetation.

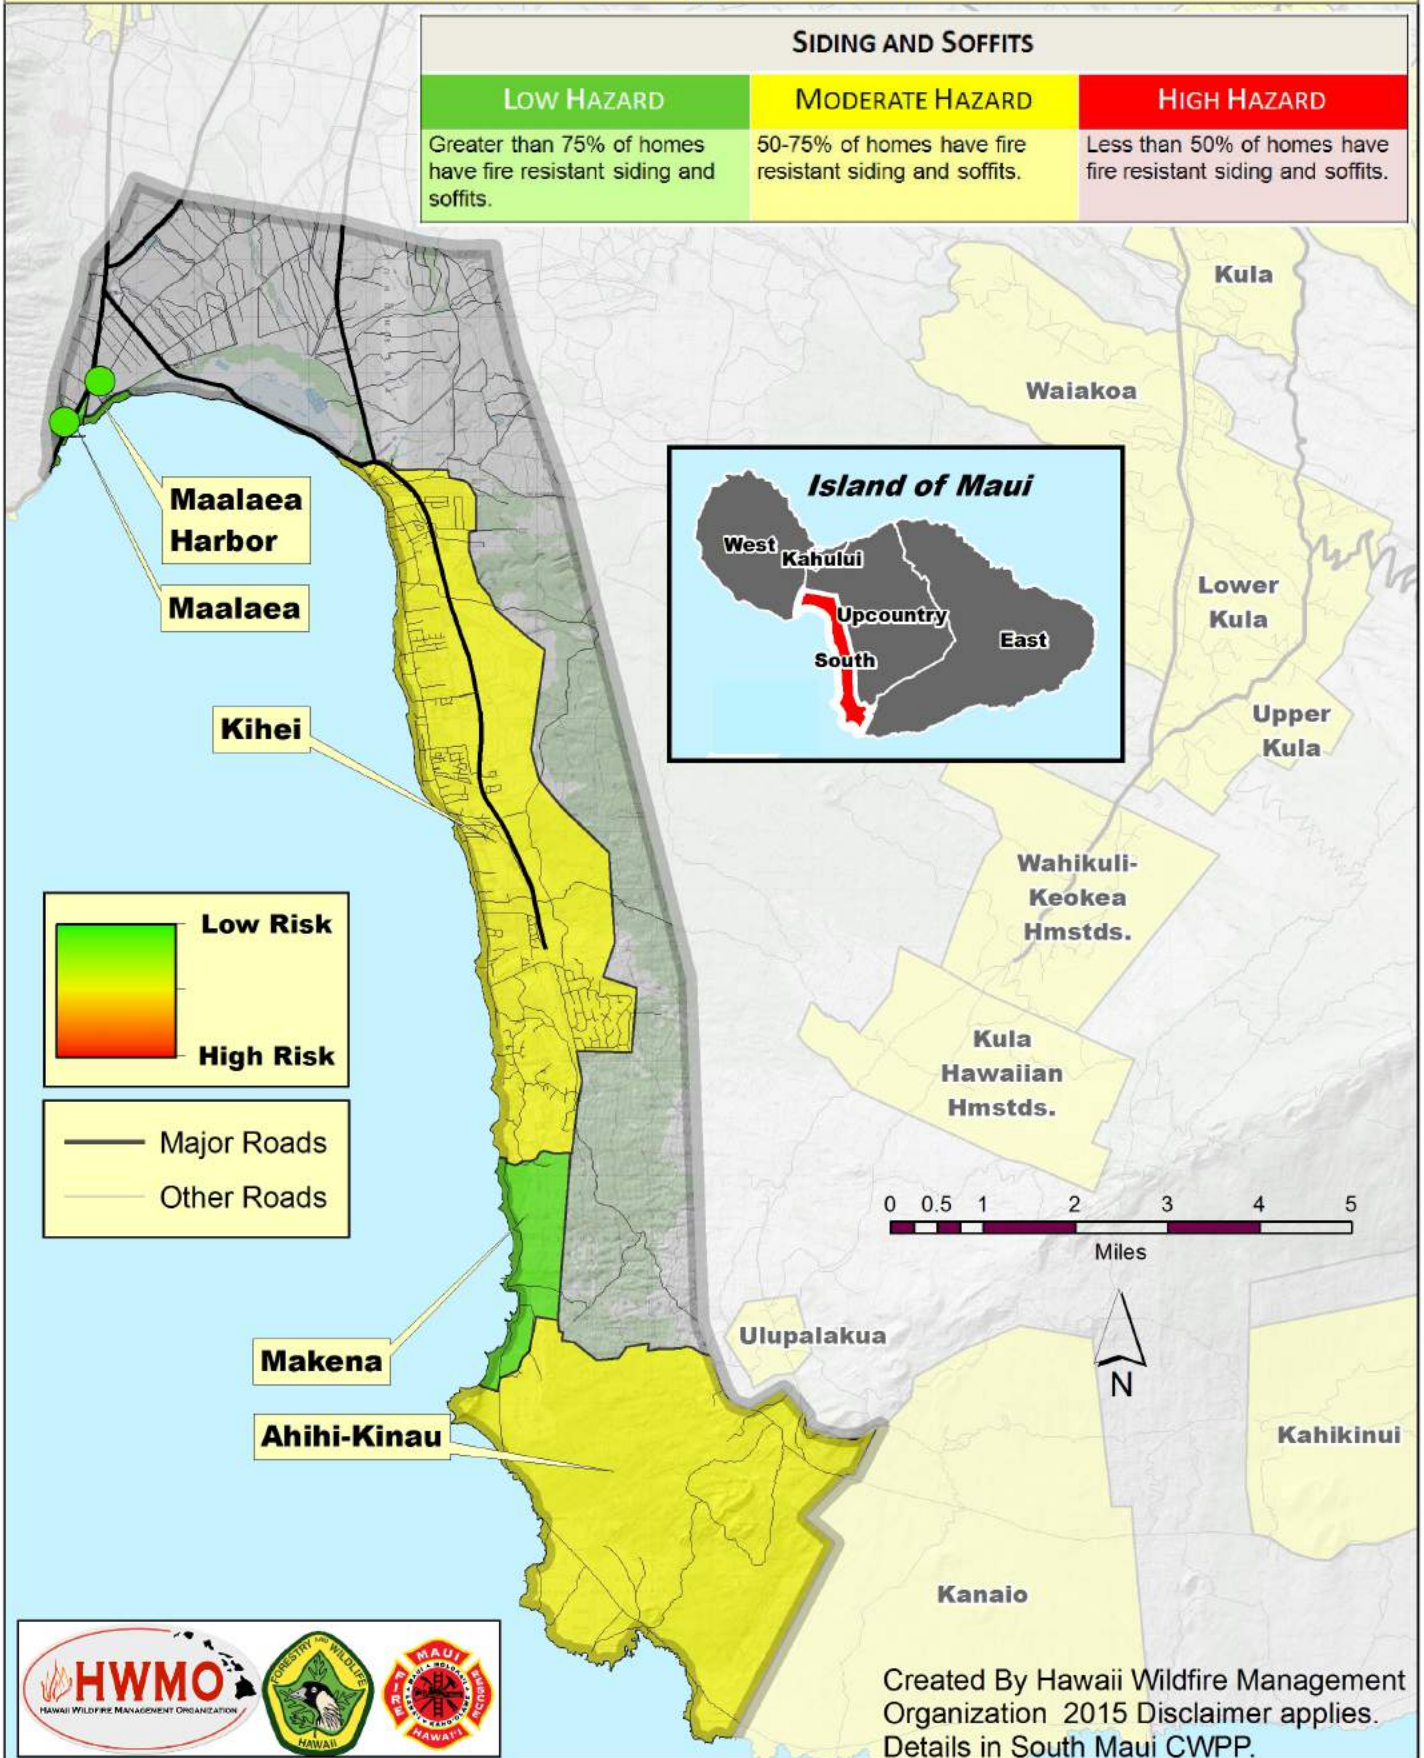

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

BUILDING HAZARD FOR DEVELOPED AREAS

Siding/ Soffits Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

SIDING AND SOFFITS		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Greater than 75% of homes have fire resistant siding and soffits.	50-75% of homes have fire resistant siding and soffits.	Less than 50% of homes have fire resistant siding and soffits.

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Roofing Assembly Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

ROOFING ASSEMBLY		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Greater than 75% of homes have Class A roofs (metal, asphalt, or fiberglass roofing material).	50-75% have Class A roofing.	Less than 50% of homes have Class A roofing.

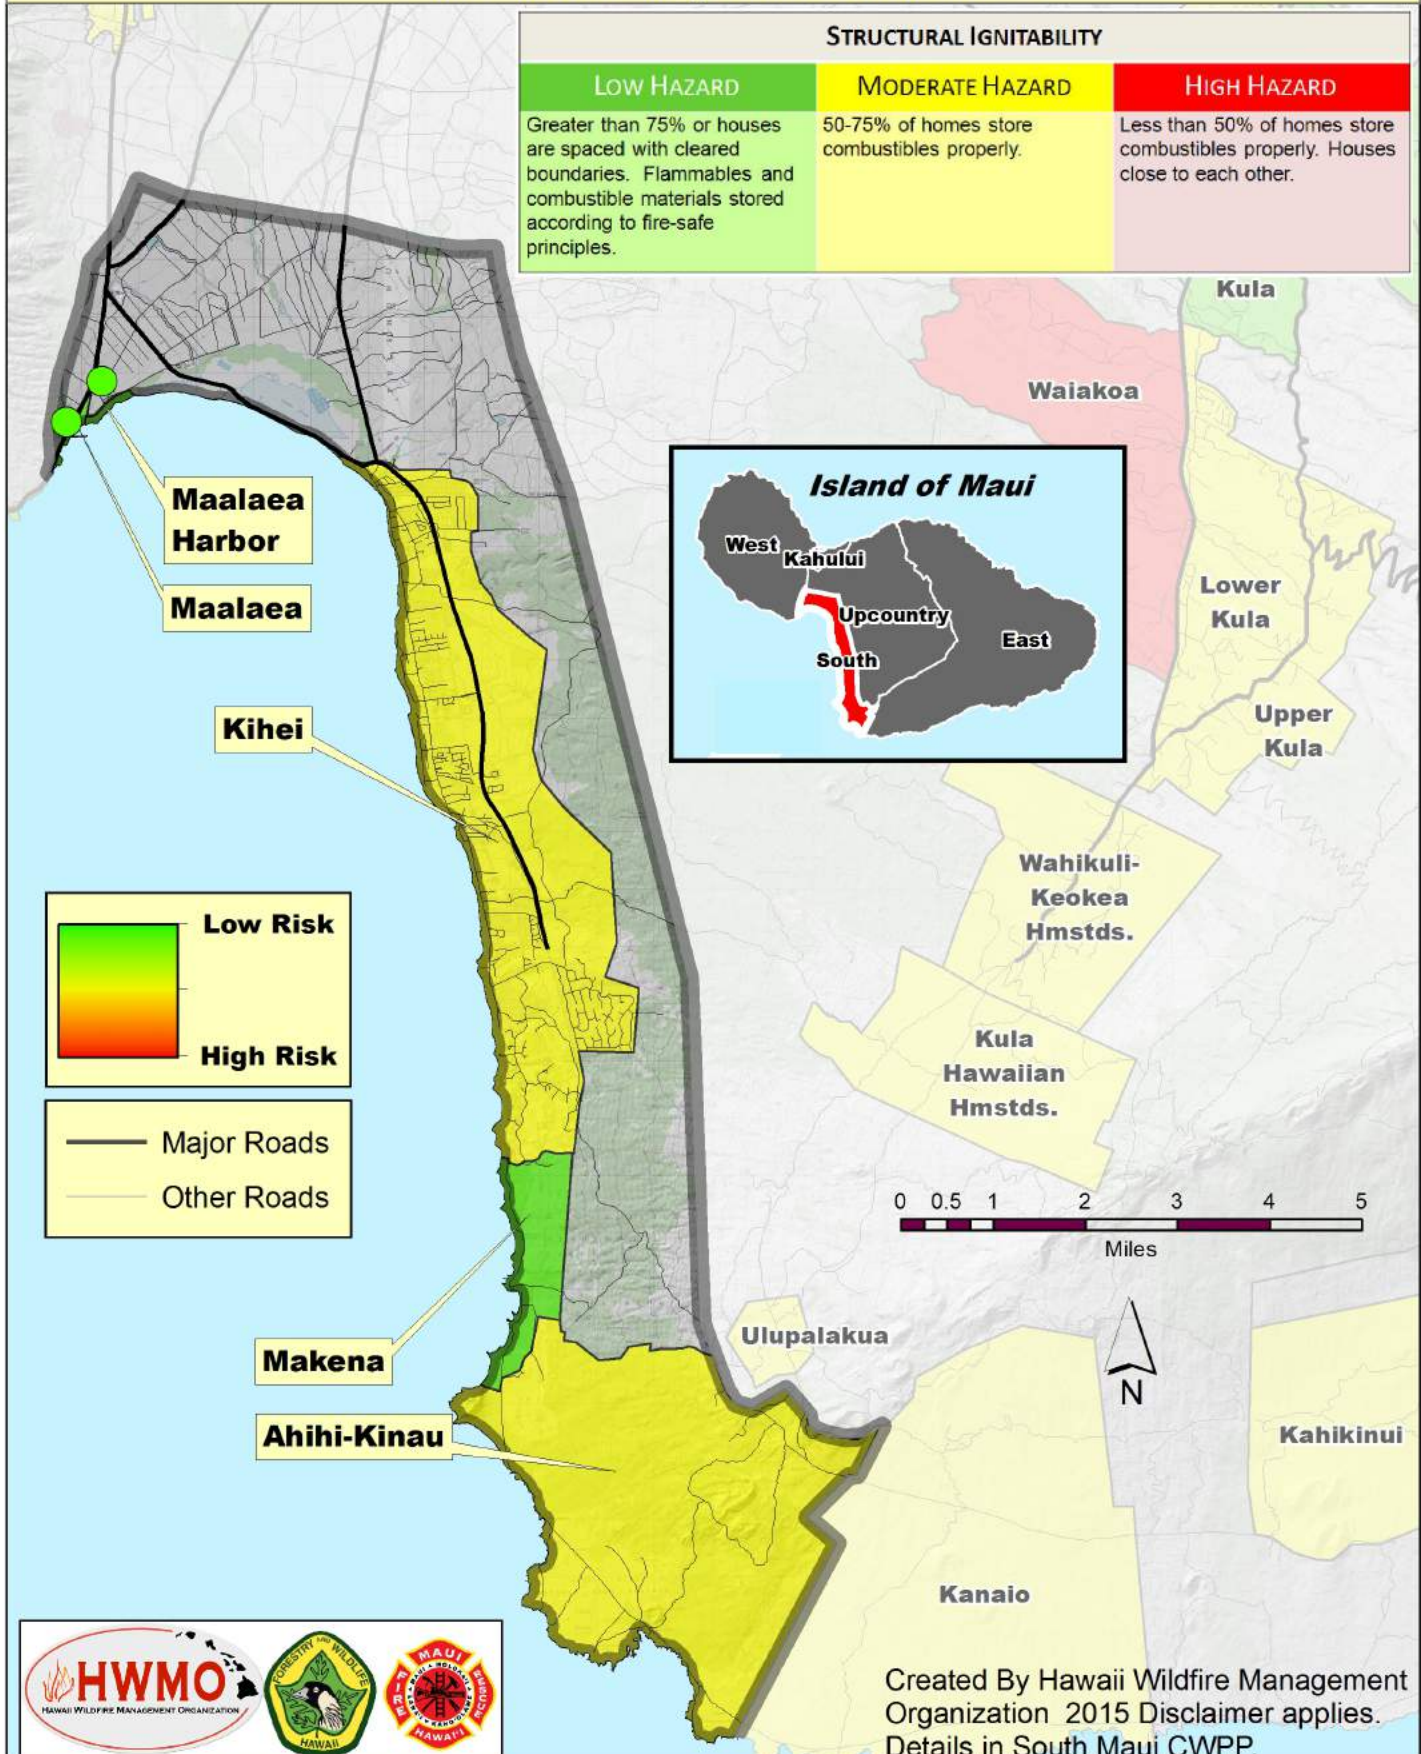

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Structural Ignitability Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

STRUCTURAL IGNITABILITY		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Greater than 75% of houses are spaced with cleared boundaries. Flammables and combustible materials stored according to fire-safe principles.	50-75% of homes store combustibles properly.	Less than 50% of homes store combustibles properly. Houses close to each other.

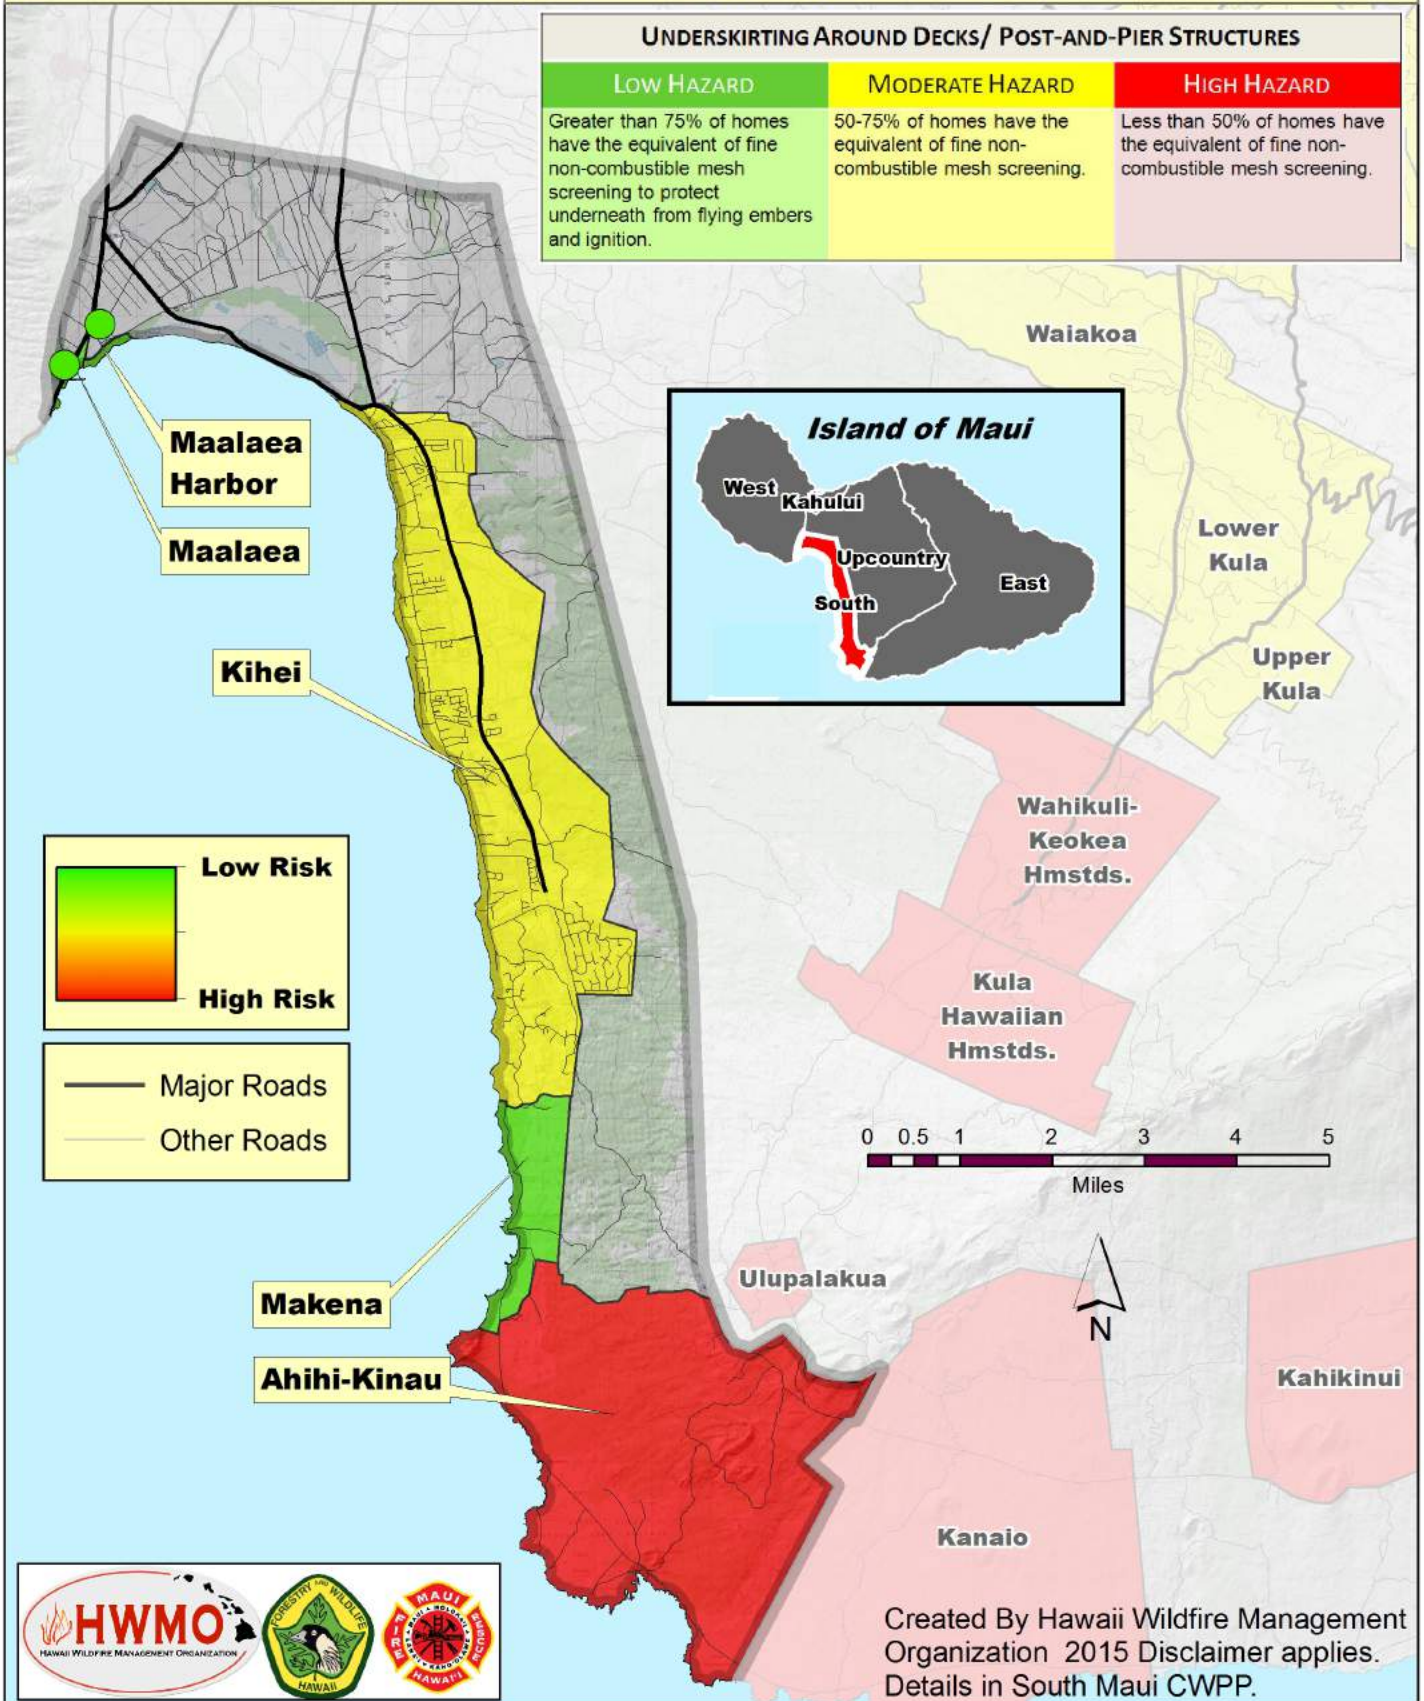

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Underskirting Around Decks, Lanais, Post & Pier Structures Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

UNDERSKIRTING AROUND DECKS/ POST-AND-PIER STRUCTURES

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Greater than 75% of homes have the equivalent of fine non-combustible mesh screening to protect underneath from flying embers and ignition.	50-75% of homes have the equivalent of fine non-combustible mesh screening.	Less than 50% of homes have the equivalent of fine non-combustible mesh screening.

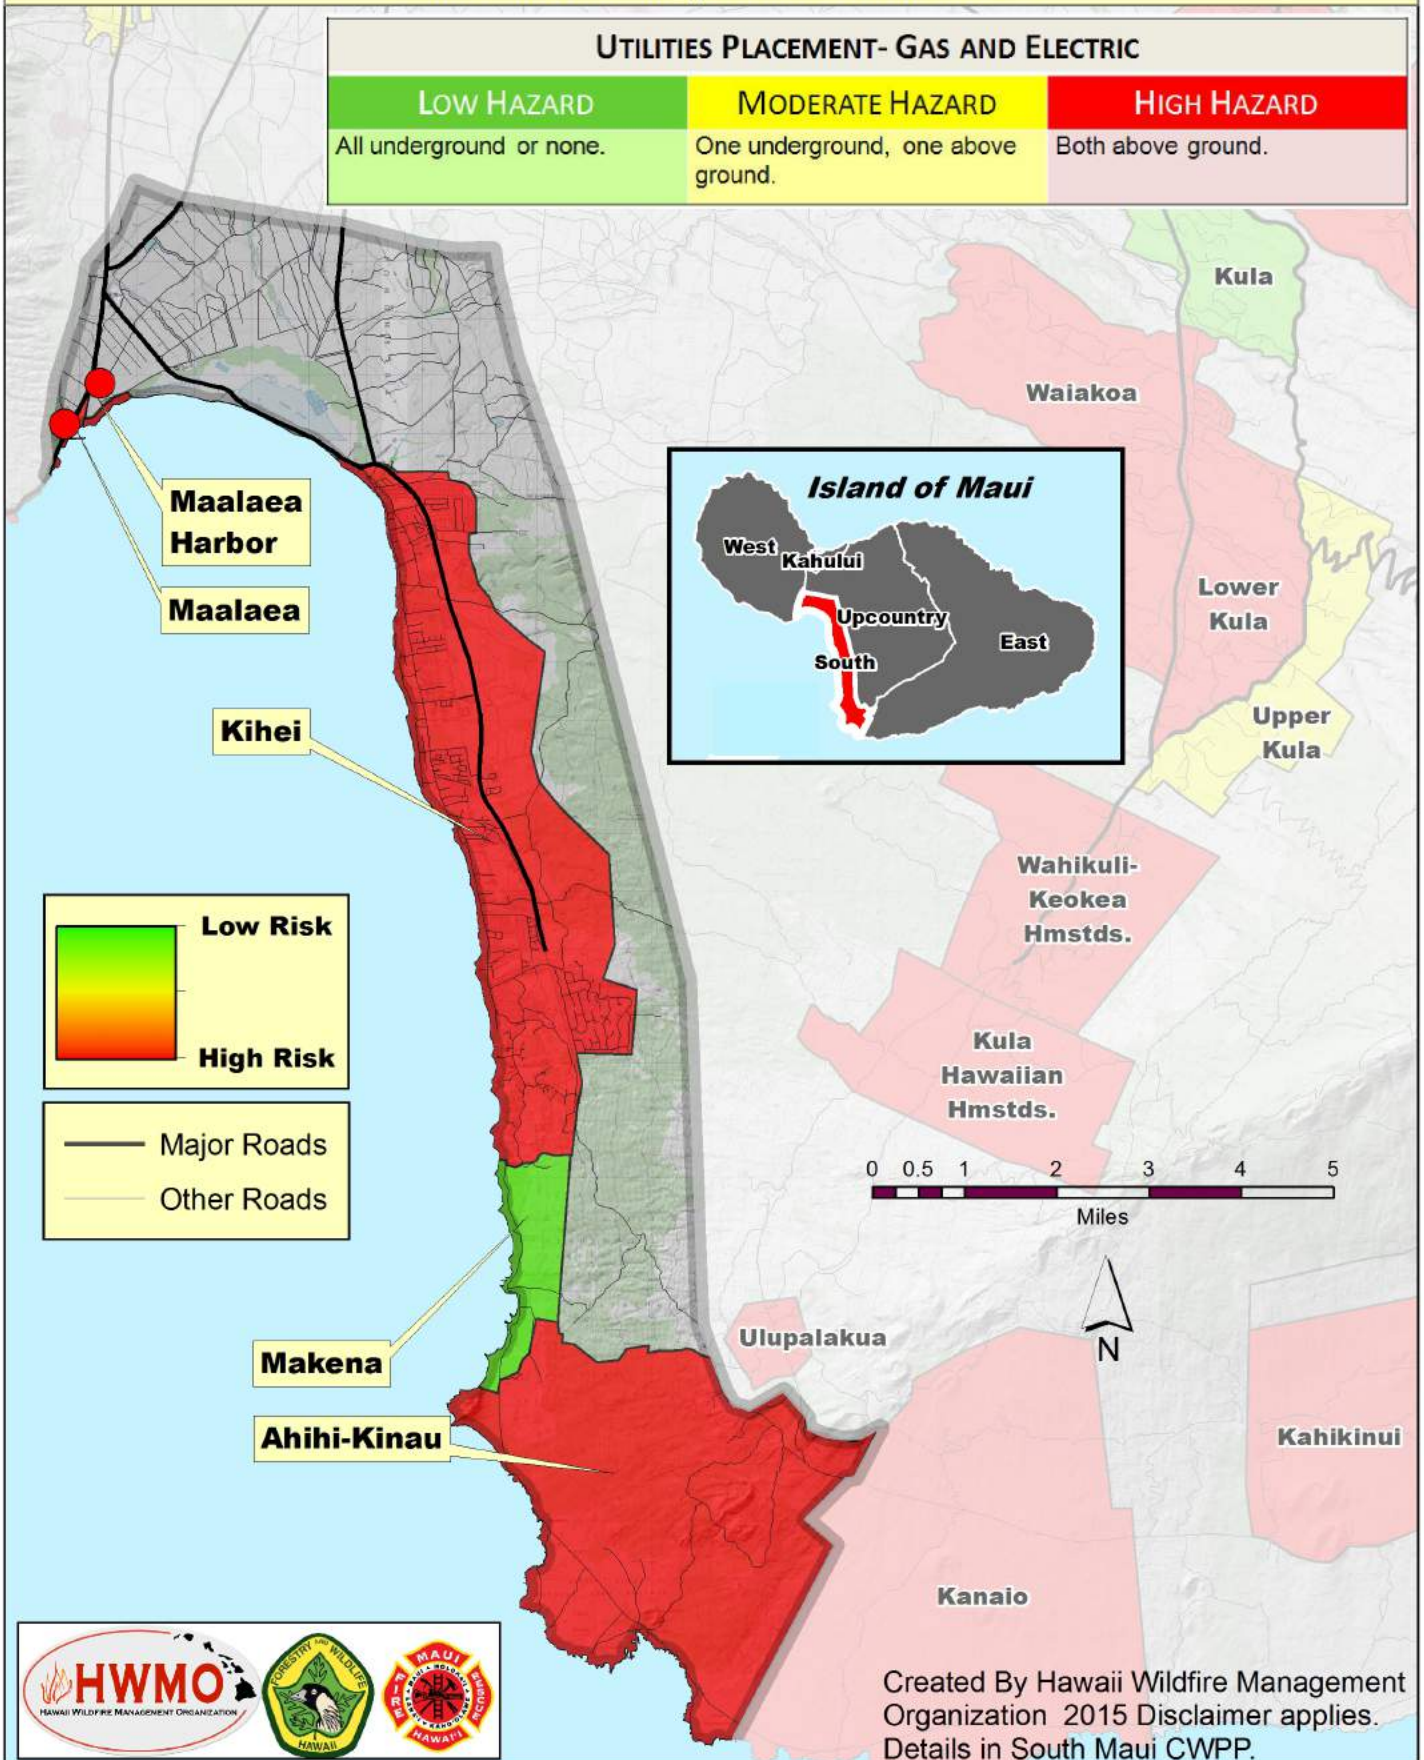

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Utilities Placement: Gas and Electric Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

UTILITIES PLACEMENT- GAS AND ELECTRIC

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
All underground or none.	One underground, one above ground.	Both above ground.

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

FIRE ENVIRONMENT HAZARD FOR DEVELOPED AREAS

Average Rainfall Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

Prevailing Wind Speed and Direction Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

PREVAILING WIND SPEEDS AND DIRECTION

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Wind rarely (less than 10% of time) exceeds 15 mph. Protection from predominant winds.	Wind rarely (less than 10% of time) exceeds 15 mph.	Wind frequently (50% or more of time) exceeds 15 mph or frequent exposure to predominant winds or transitional/converging wind directions.

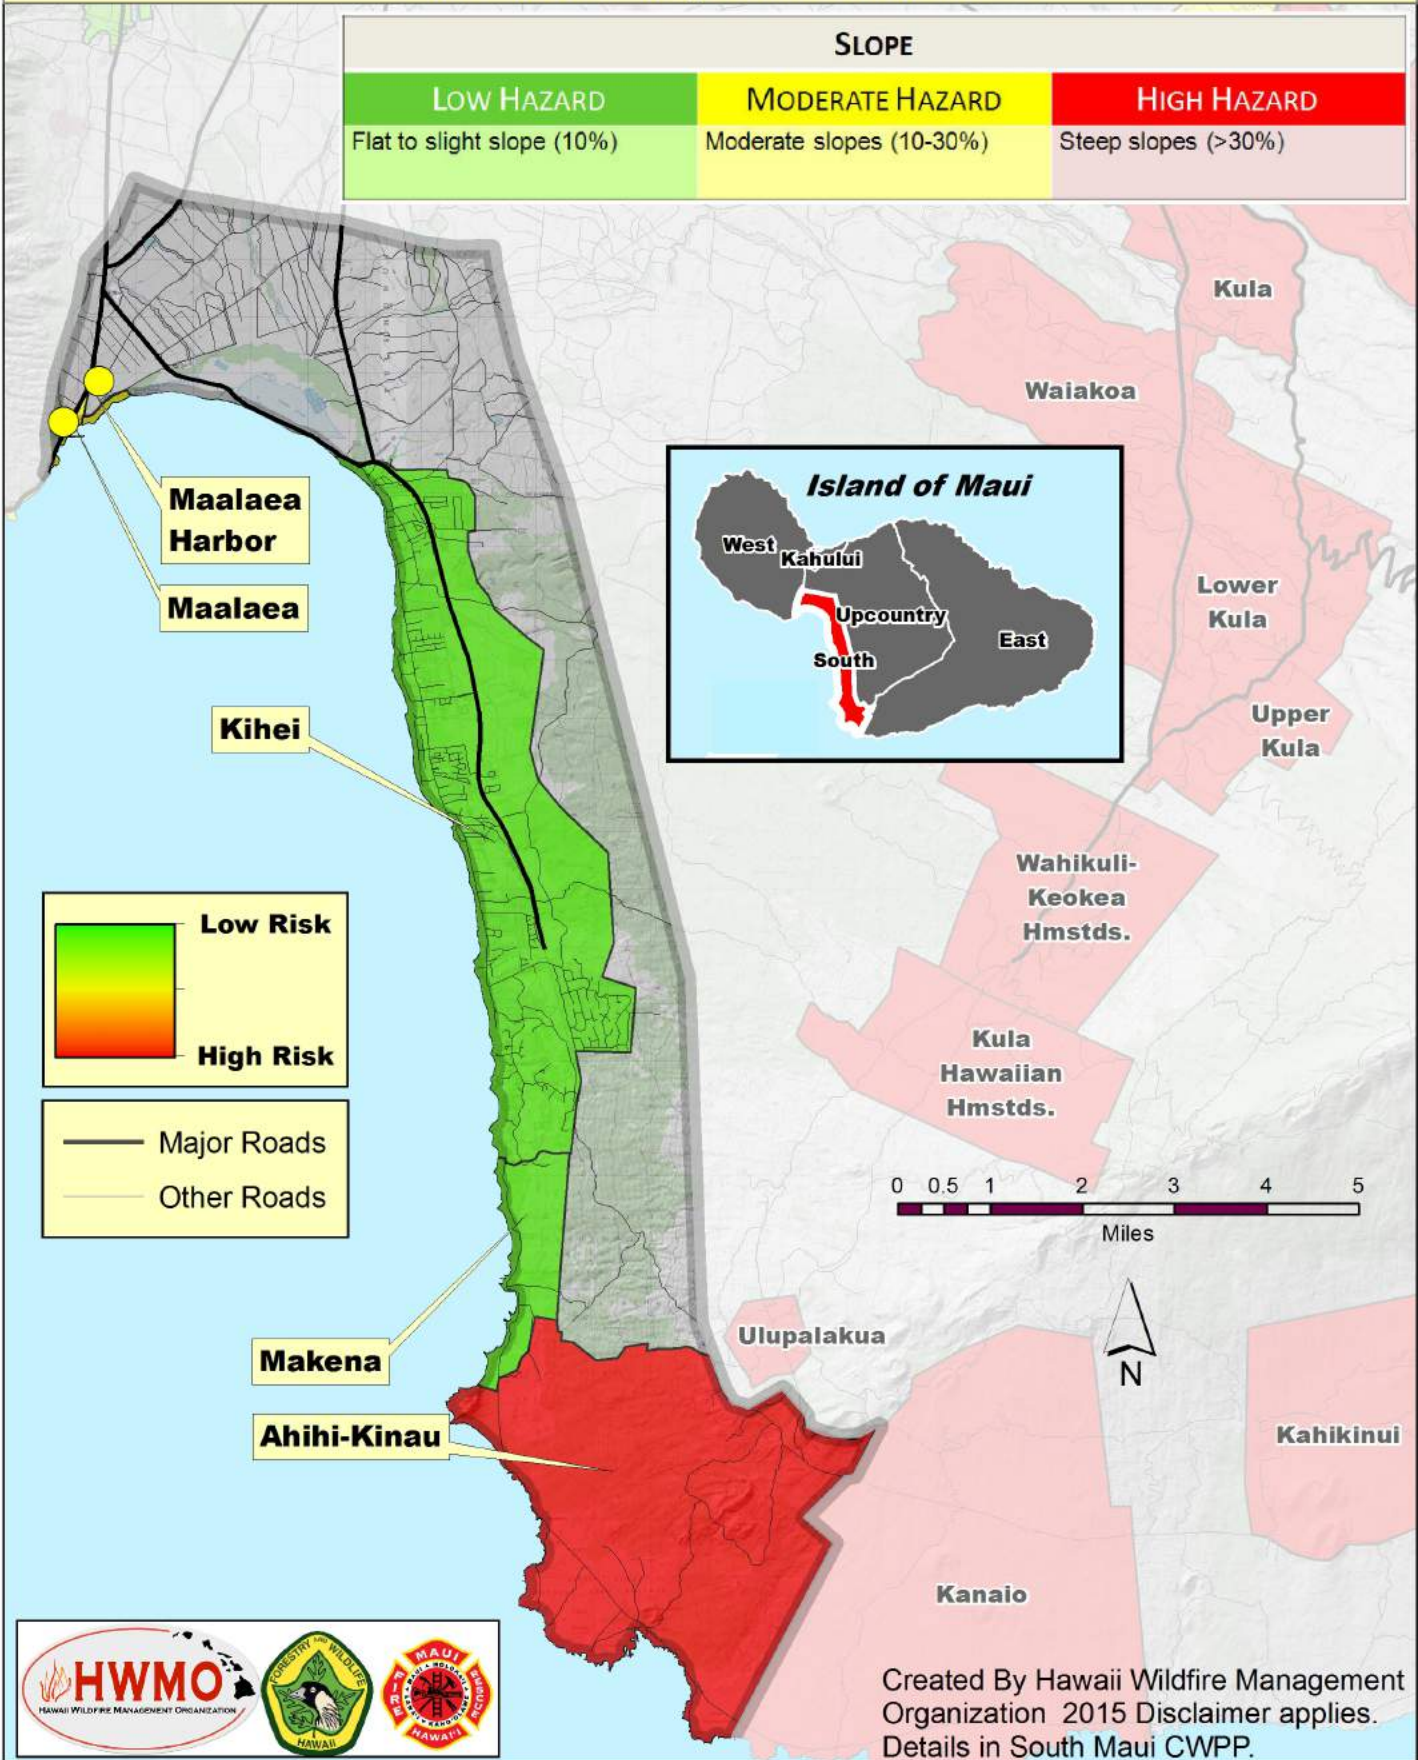

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Slope Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

SLOPE		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Flat to slight slope (10%)	Moderate slopes (10-30%)	Steep slopes (>30%)

Low Risk

High Risk

Topographic Features That Adversely Effect Wildland Fire Behavior Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

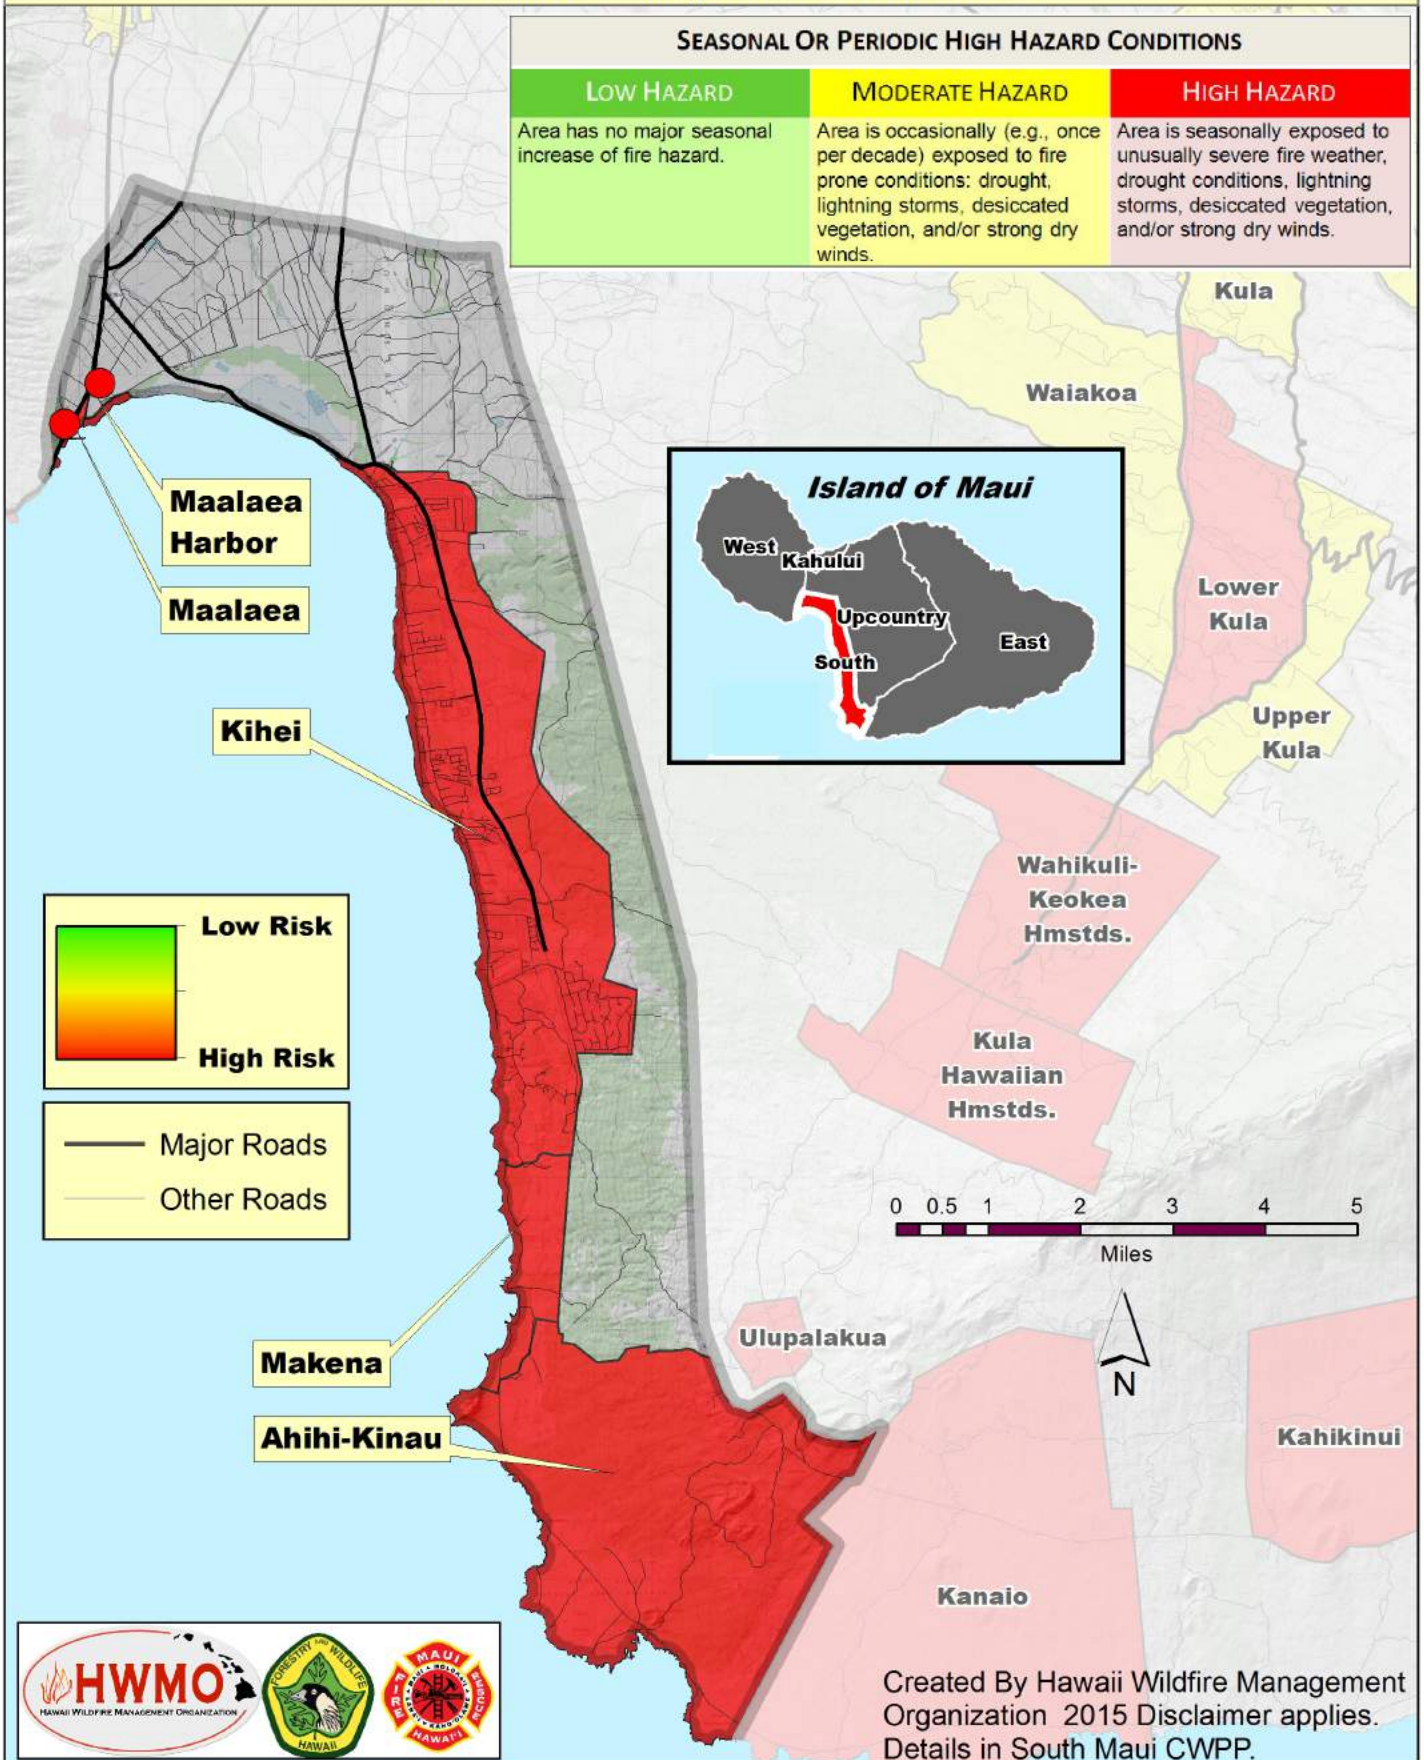

Seasonal Or Periodic High Risk Conditions Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

SEASONAL OR PERIODIC HIGH HAZARD CONDITIONS

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Area has no major seasonal increase of fire hazard.	Area is occasionally (e.g., once per decade) exposed to fire prone conditions: drought, lightning storms, desiccated vegetation, and/or strong dry winds.	Area is seasonally exposed to unusually severe fire weather, drought conditions, lightning storms, desiccated vegetation, and/or strong dry winds.

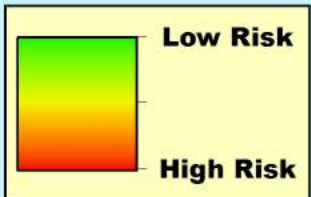

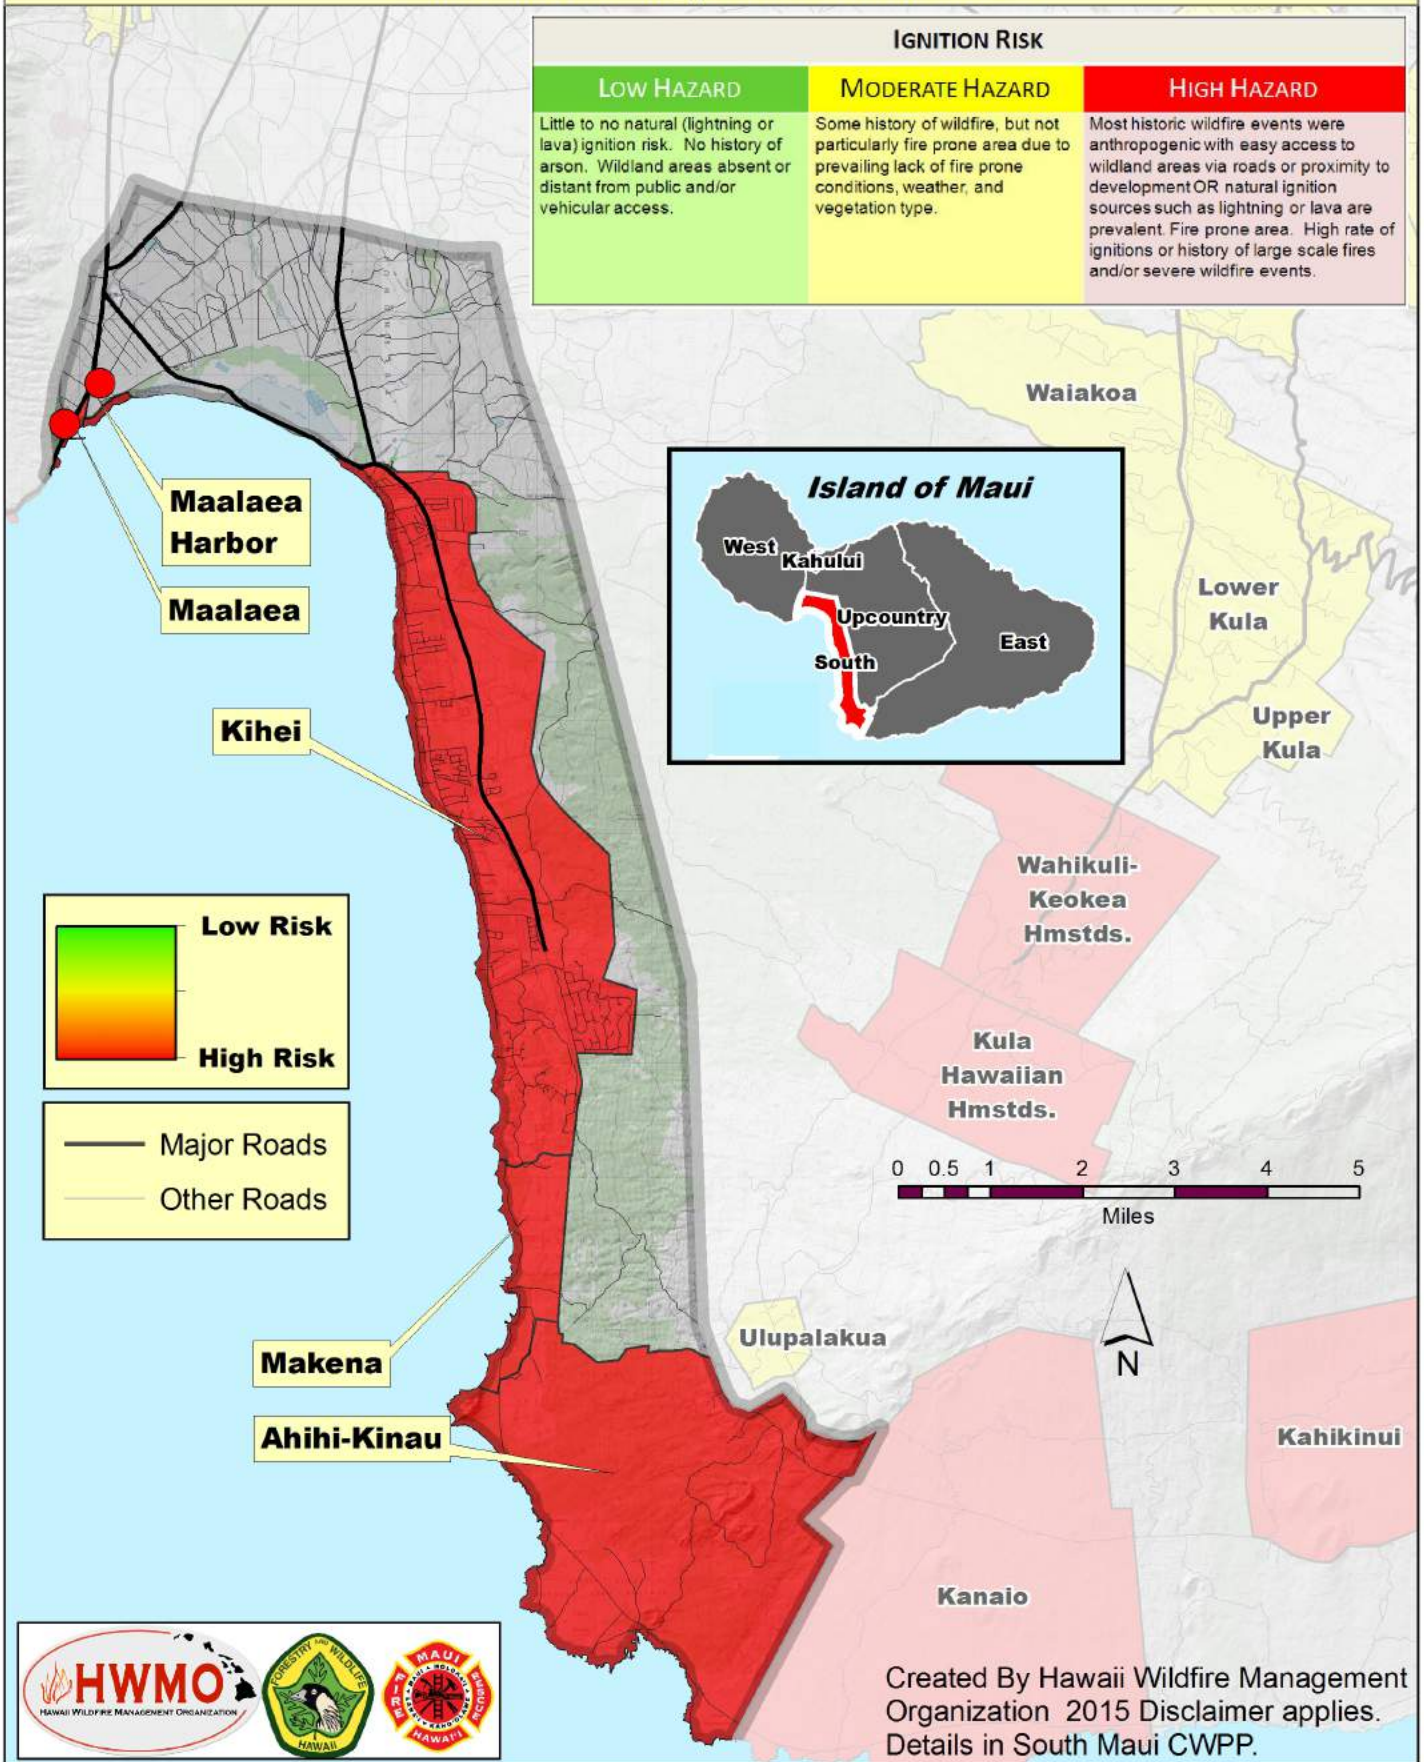

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Ignition Risk Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

IGNITION RISK		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
<p>Little to no natural (lightning or lava) ignition risk. No history of arson. Wildland areas absent or distant from public and/or vehicular access.</p>	<p>Some history of wildfire, but not particularly fire prone area due to prevailing lack of fire prone conditions, weather, and vegetation type.</p>	<p>Most historic wildfire events were anthropogenic with easy access to wildland areas via roads or proximity to development OR natural ignition sources such as lightning or lava are prevalent. Fire prone area. High rate of ignitions or history of large scale fires and/or severe wildfire events.</p>

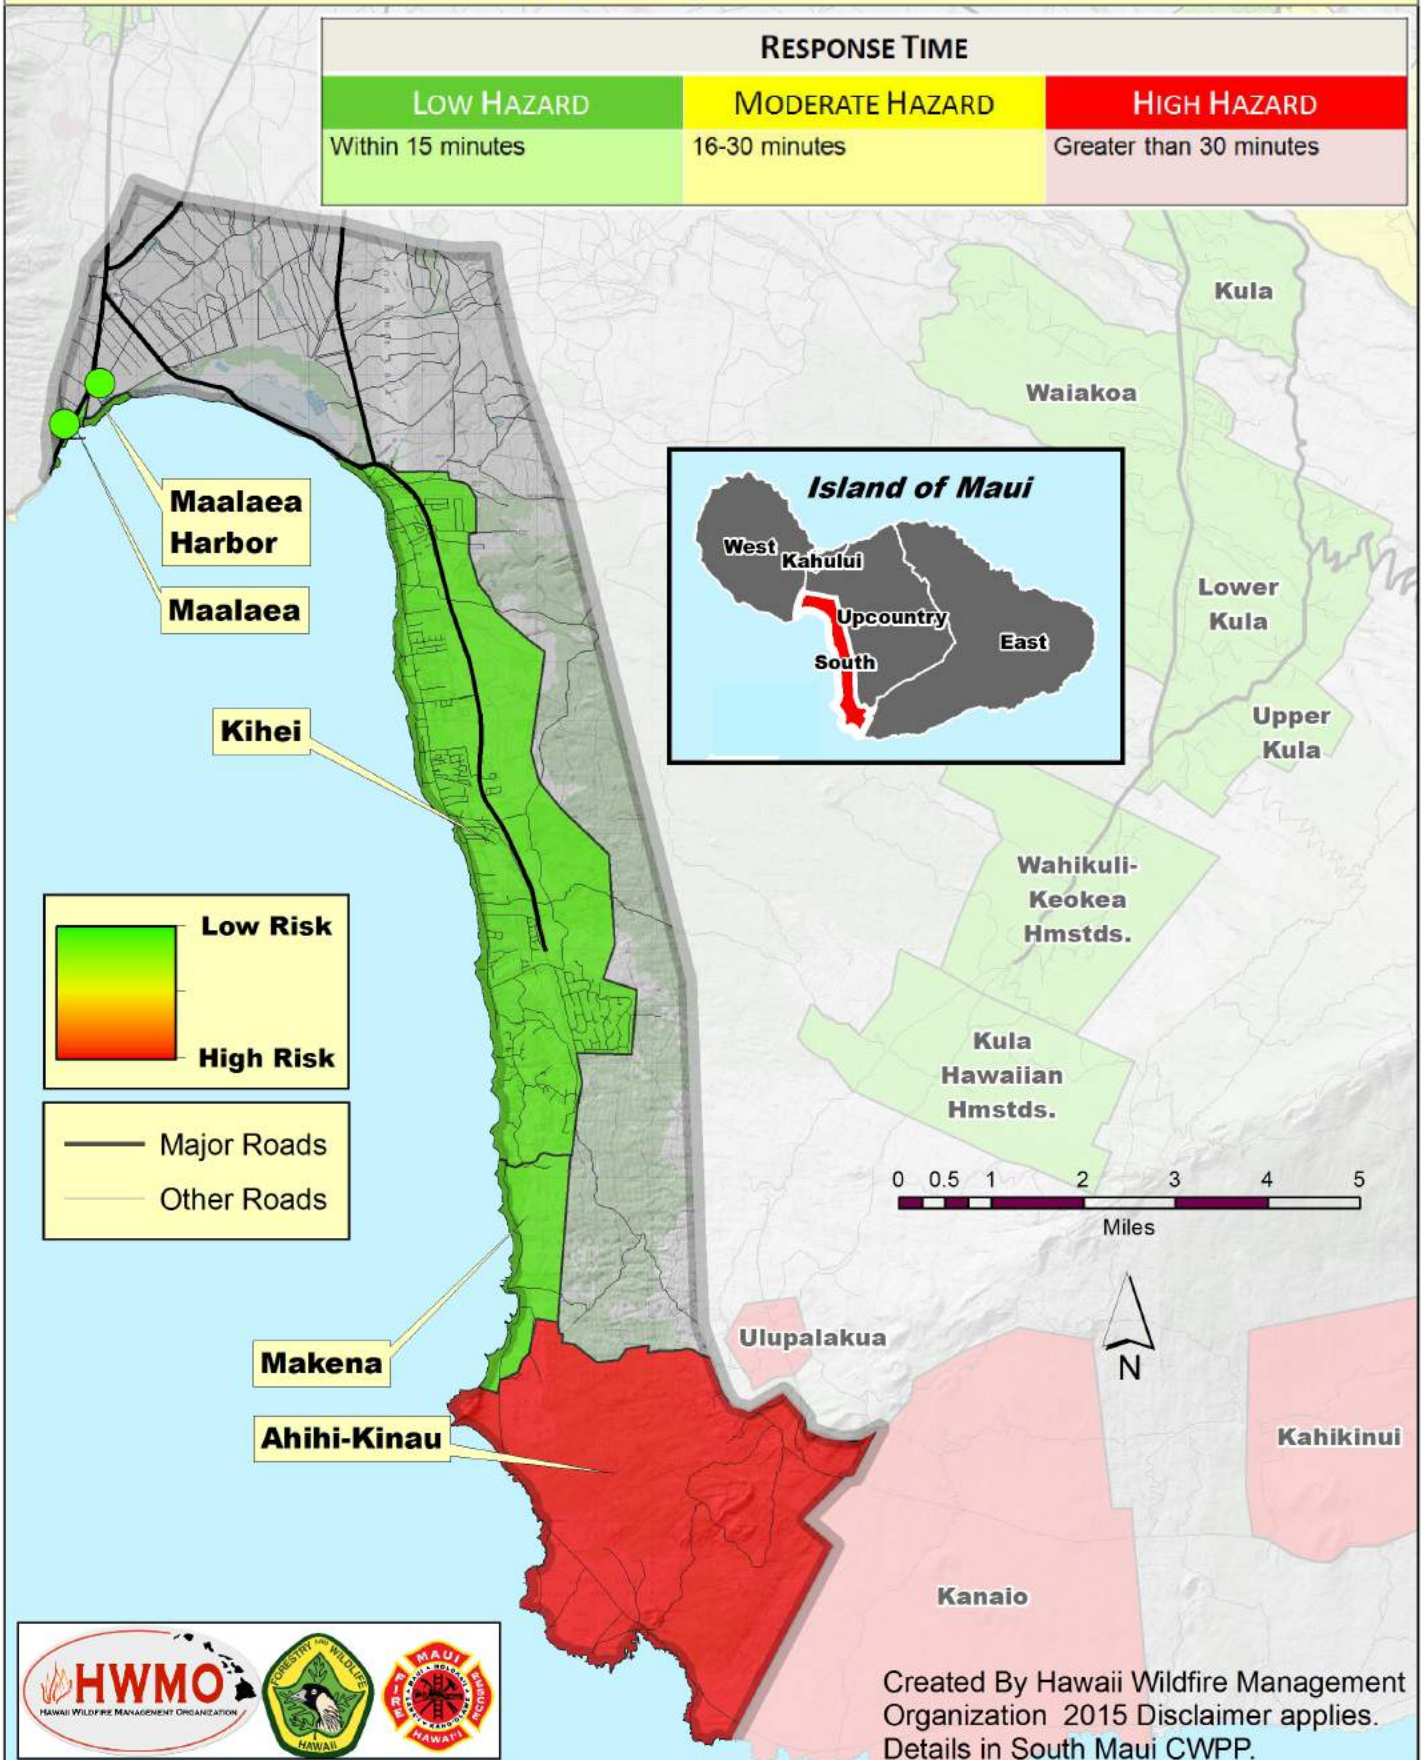

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

FIRE PROTECTION HAZARD FOR DEVELOPED AREAS

Response Time Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

RESPONSE TIME		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Within 15 minutes	16-30 minutes	Greater than 30 minutes

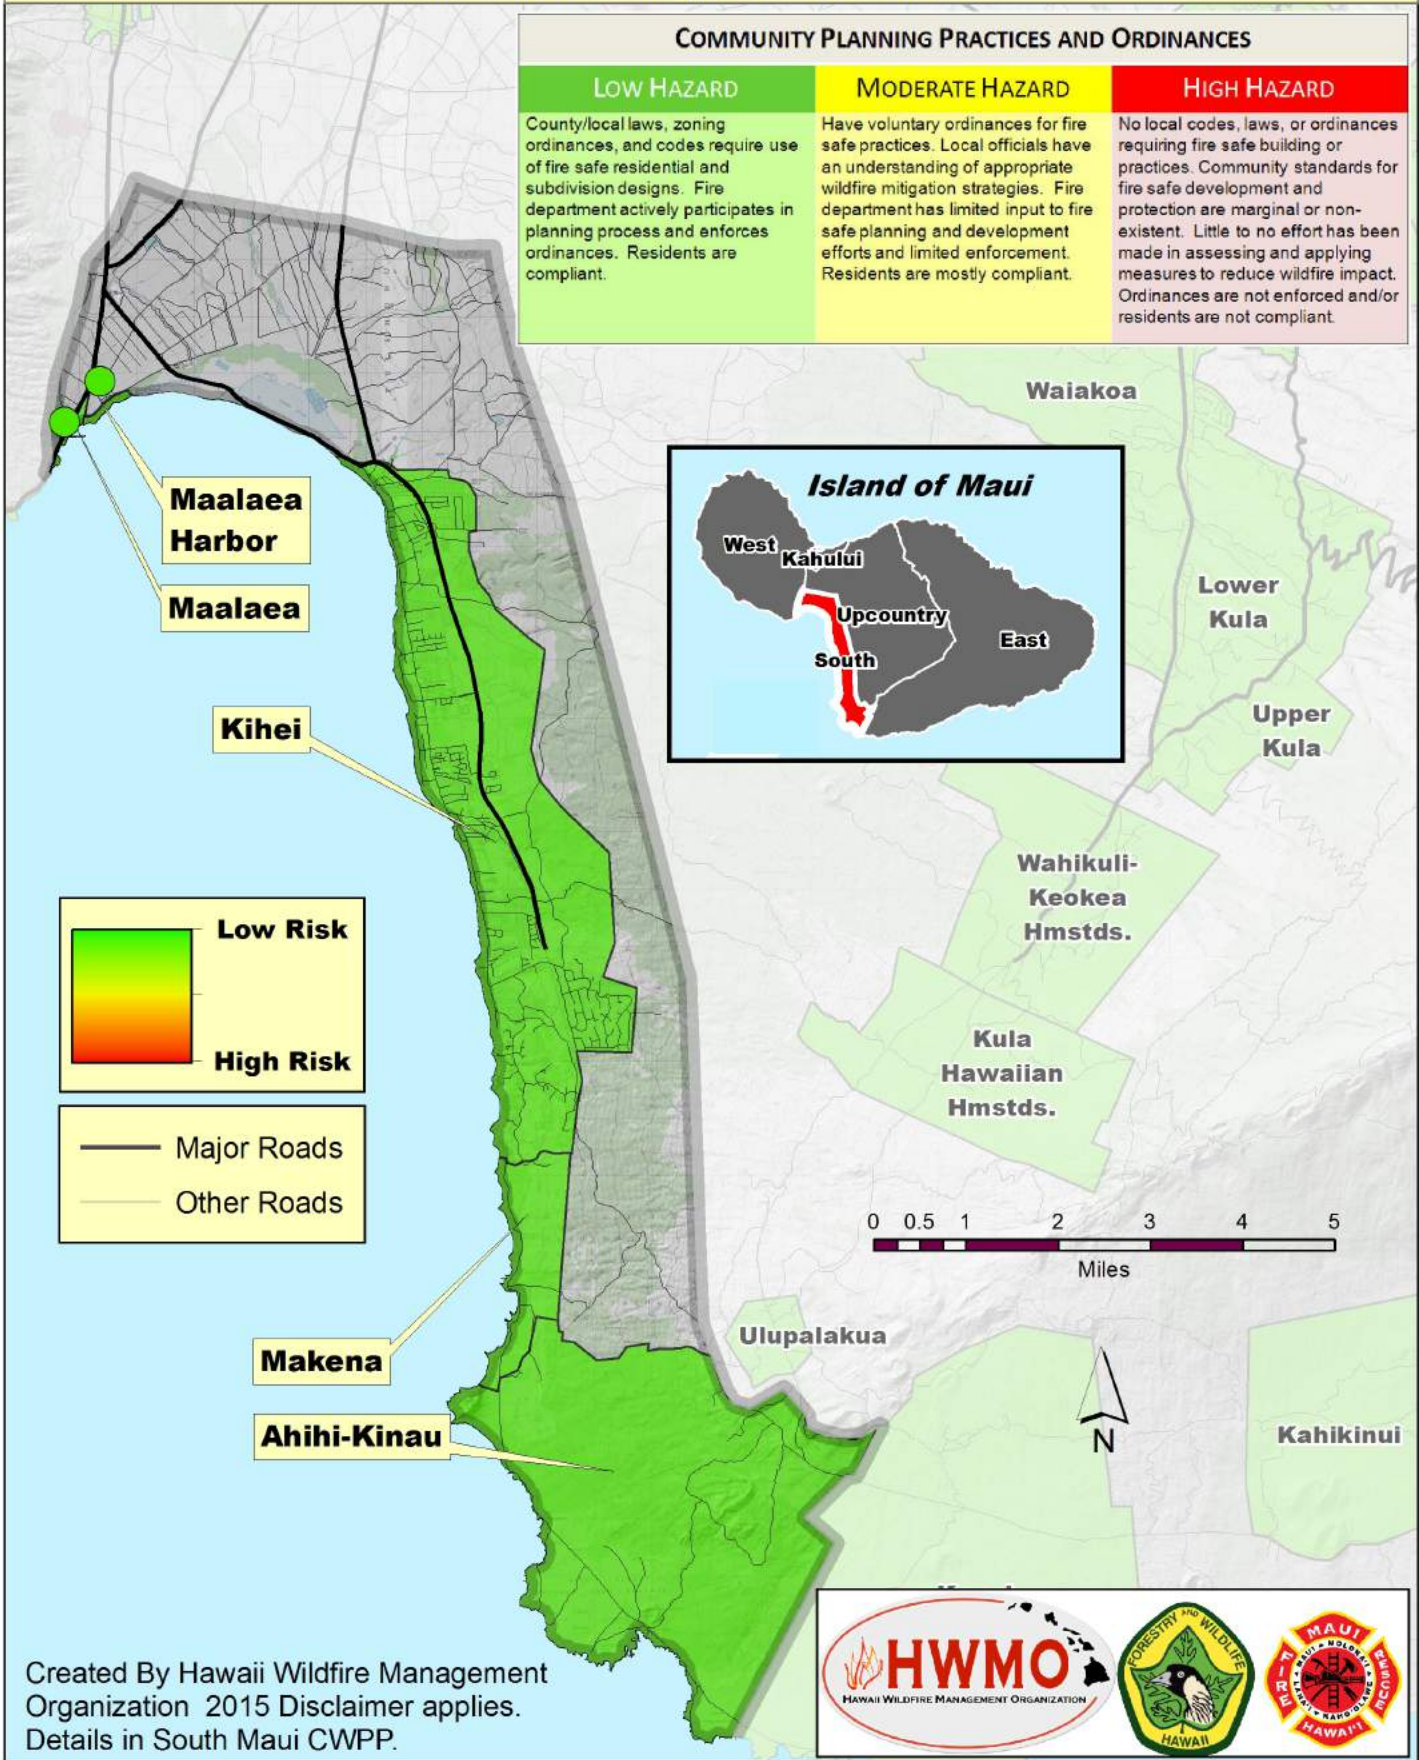

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Community Planning Practices and Ordinances Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

COMMUNITY PLANNING PRACTICES AND ORDINANCES

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
County/local laws, zoning ordinances, and codes require use of fire safe residential and subdivision designs. Fire department actively participates in planning process and enforces ordinances. Residents are compliant.	Have voluntary ordinances for fire safe practices. Local officials have an understanding of appropriate wildfire mitigation strategies. Fire department has limited input to fire safe planning and development efforts and limited enforcement. Residents are mostly compliant.	No local codes, laws, or ordinances requiring fire safe building or practices. Community standards for fire safe development and protection are marginal or non-existent. Little to no effort has been made in assessing and applying measures to reduce wildfire impact. Ordinances are not enforced and/or residents are not compliant.

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Community Fire-Safe Efforts & Programs Already In Place Hazard for Developed Areas
South Maui Community Wildfire Protection Plan

COMMUNITY FIRE SAFE EFFORTS AND PROGRAMS IN PLACE

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Organized and active groups provide educational materials and programs throughout the community.	Limited provision of or interest in educational efforts. Fire Department or local group does some limited prevention and public education.	No interest or participation in educational programs. No prevention education by local fire department.

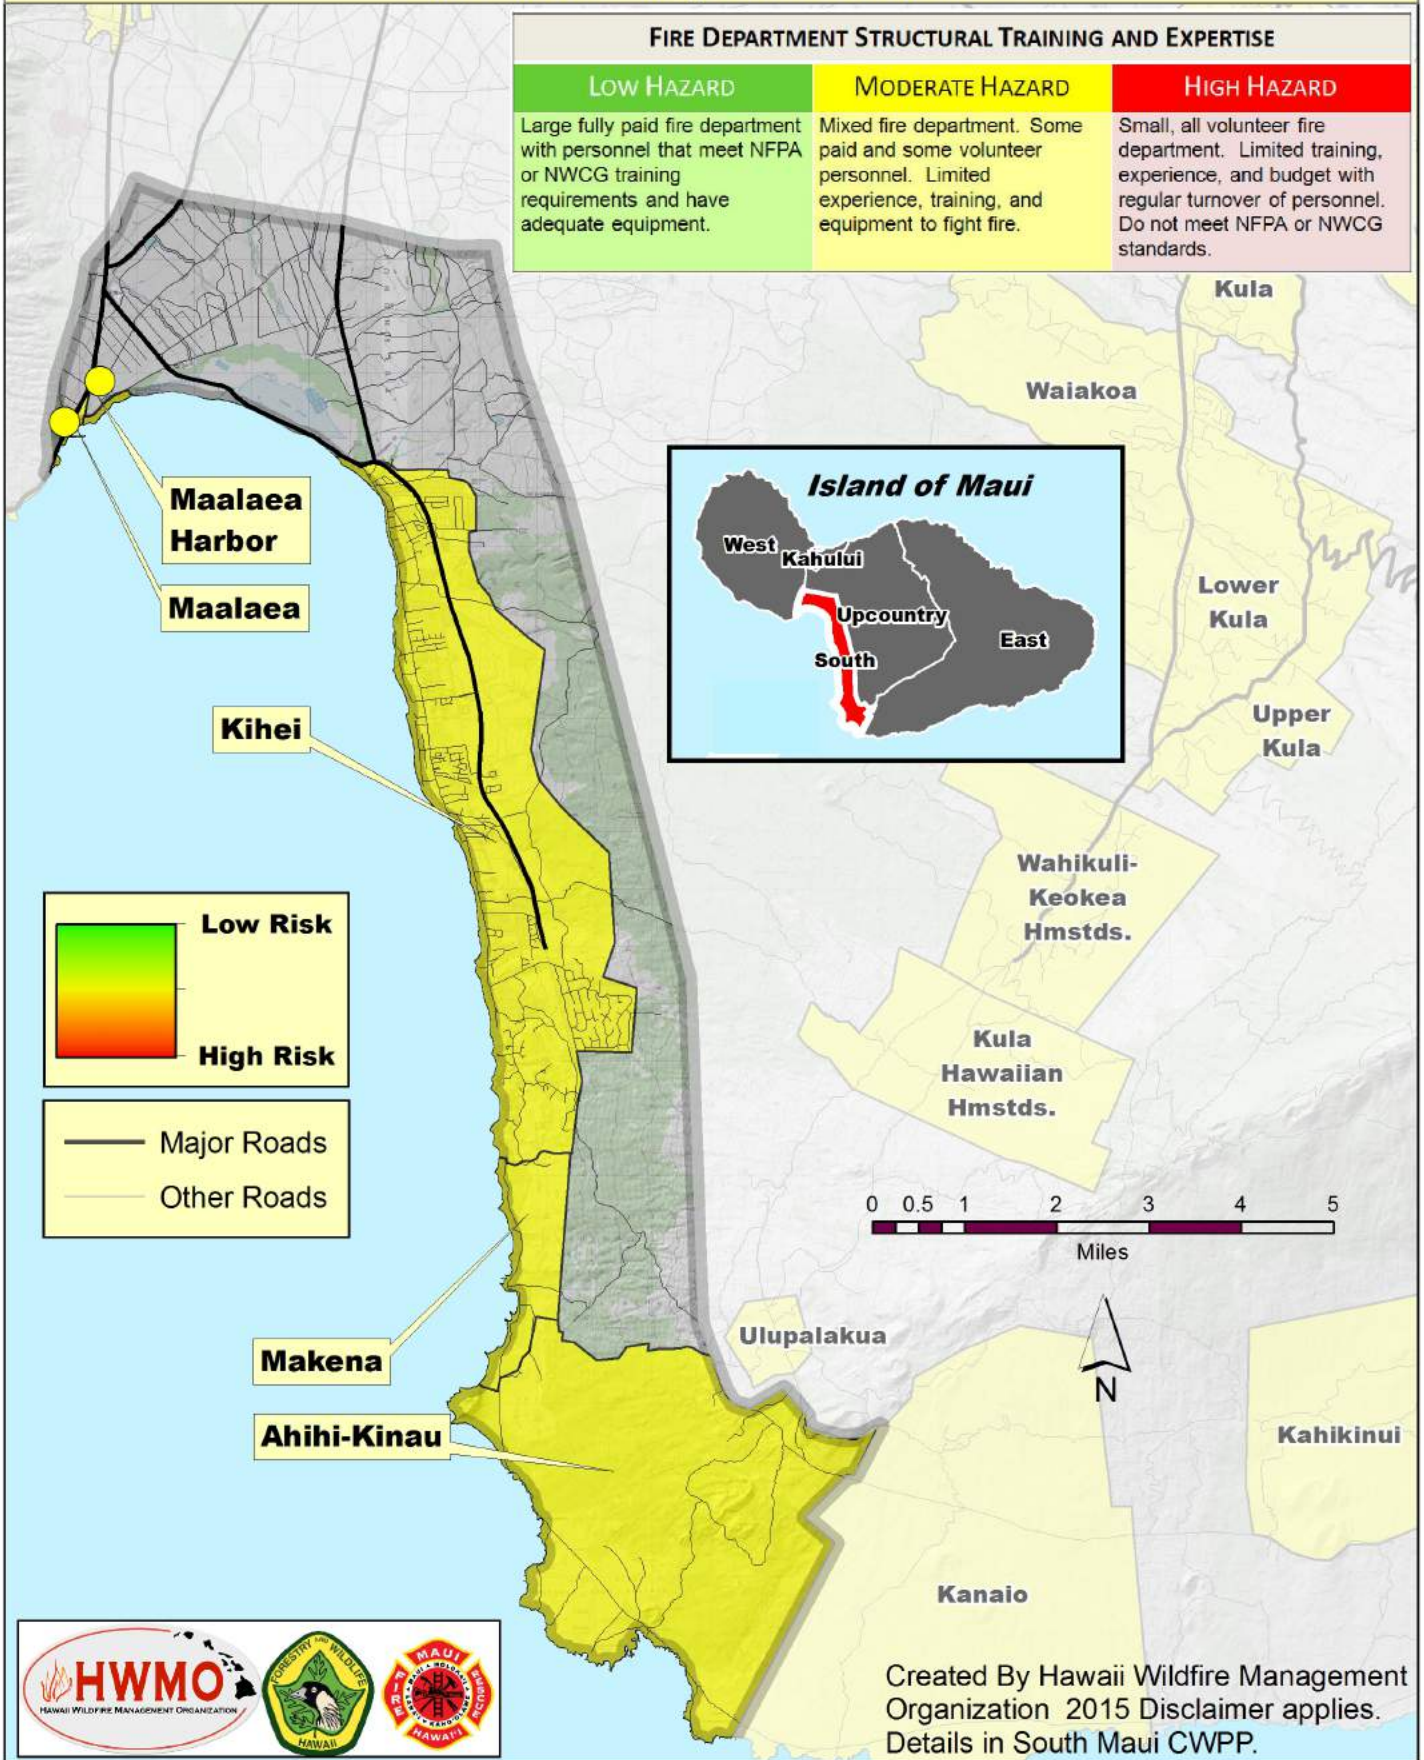

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Fire Department Structural Training Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

FIRE DEPARTMENT STRUCTURAL TRAINING AND EXPERTISE

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Large fully paid fire department with personnel that meet NFPA or NWCG training requirements and have adequate equipment.	Mixed fire department. Some paid and some volunteer personnel. Limited experience, training, and equipment to fight fire.	Small, all volunteer fire department. Limited training, experience, and budget with regular turnover of personnel. Do not meet NFPA or NWCG standards.

Local Emergency Operations Group Or Similar Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

CITIZEN OR LOCAL EMERGENCY OPERATIONS GROUP		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Active EOG or CERT. Evacuation plan in place.	Limited participation in EOG or similar. Have some form of evacuation process.	No effective activity or strategy in place.

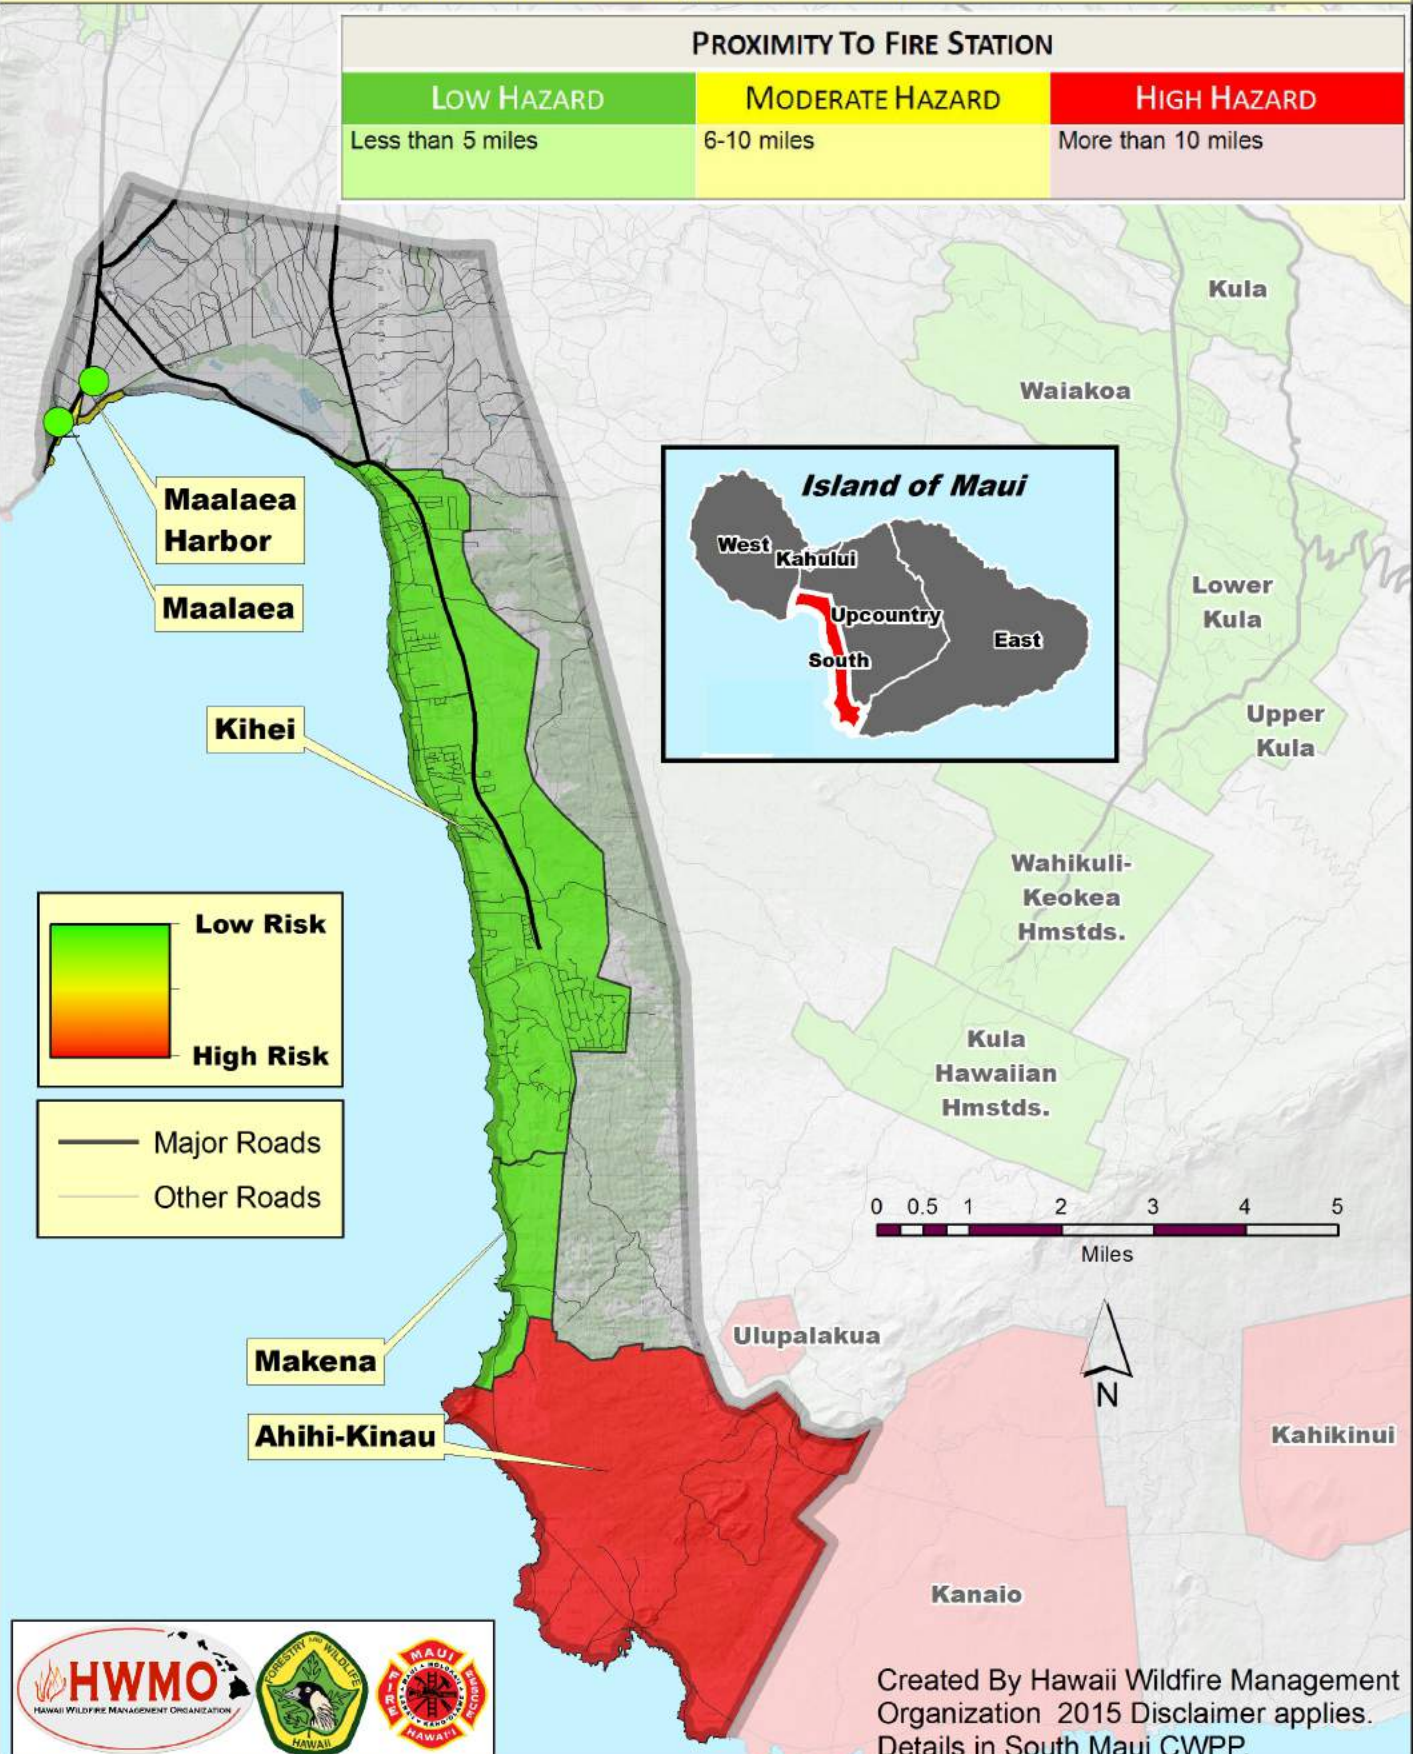

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Proximity To Fire Station Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

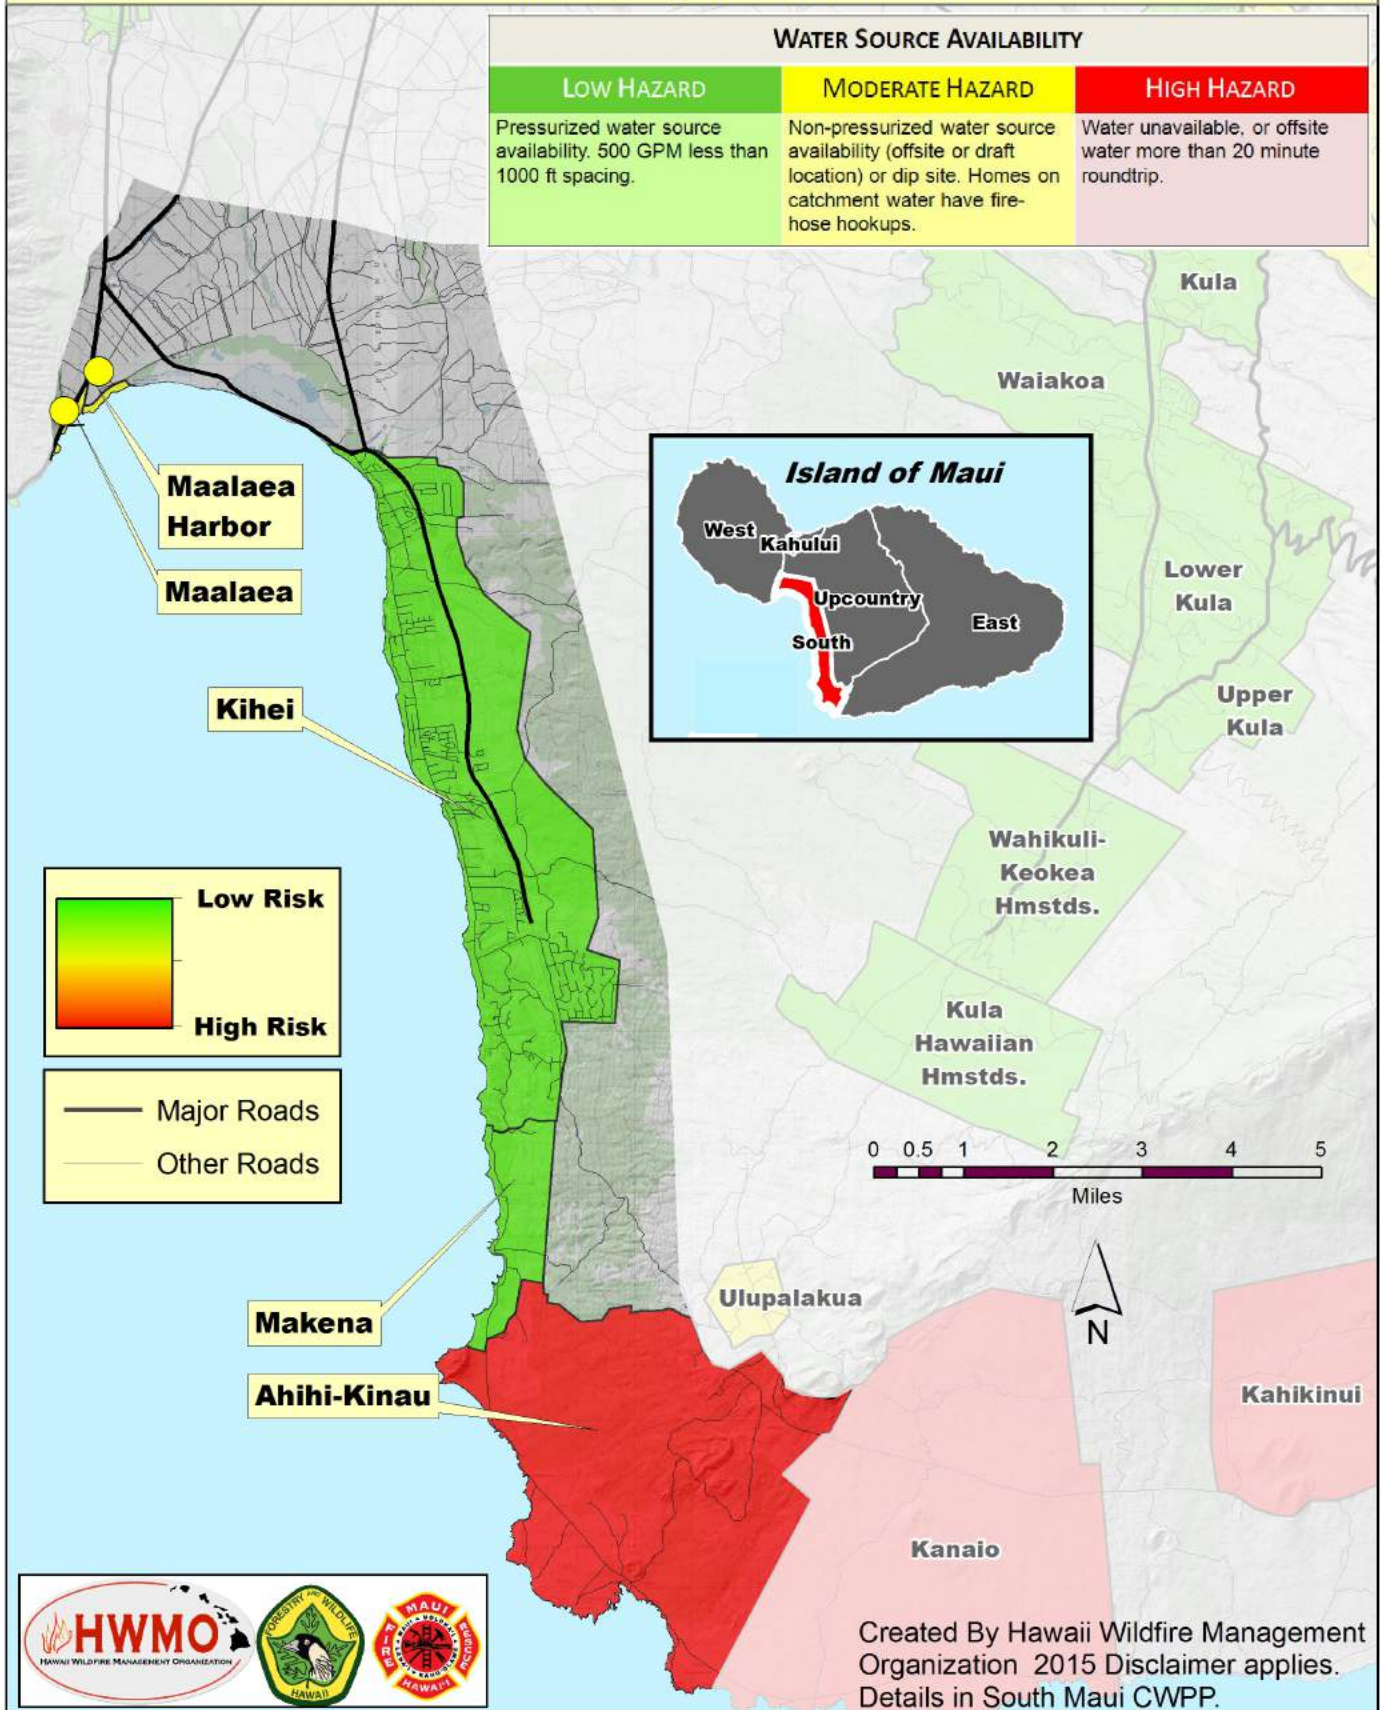

PROXIMITY TO FIRE STATION		
LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Less than 5 miles	6-10 miles	More than 10 miles

Created By Hawaii Wildfire Management Organization 2015 Disclaimer applies. Details in South Maui CWPP.

Water Source Availability Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

Wildland Firefighting Capacity Of Initial Response Agency Hazard for Developed Areas

South Maui Community Wildfire Protection Plan

WILDLAND FIREFIGHTING CAPACITY OF INITIAL RESPONSE AGENCY

LOW HAZARD	MODERATE HAZARD	HIGH HAZARD
Sufficient personnel, equipment, and wildland firefighting capability and experience. Good supply of structural and wildland fire apparatus and misc specialty equipment	Limited personnel, and or equipment but with some wildland firefighting expertise and training. Smaller supply of fire apparatus in fairly good repair with some specialty equipment.	Fire department non-existent or untrained/unequipped to fight wildland fire. Minimum amount of fire apparatus, which is old and in need of repair. None or little specialty equipment.

Vehicles that are assigned to stations that have fewer alarms will be evaluated by the Apparatus Committee at 10 years of age to determine if the replacement year can be extended out further. Final determination will be made by the Lead Mechanic who is the subject matter expert using the following criteria:

1. Overall condition and safety
2. Corrosion of critical components like the chassis, frame, plumbing, etc.
3. Future major repairs and costs
4. Annual PUC Inspection
5. Annual Pump test
6. Changes to NFPA 1901 Standard for Automotive Fire Apparatus

APPENDIX D:

**2024 LIST OF PRIORITY
PROJECTS AND ACTIONS
SOUTH MAUI**

2024 LIST OF PRIORITY PROJECTS AND ACTIONS

South Maui, State of Hawaii

Drafted by Hawaii Wildfire Management Organization, in cooperation with the Department of Land and Natural Resources - Division of Forestry and Wildlife, Maui Fire Department, and Maui Emergency Management Agency

Table of Contents

- I. Introduction..... D-1
- II. Table of Projects and Actions..... D-2

I. INTRODUCTION

Community Wildfire Protection Plans (CWPP) are a great community planning tool and have become a prerequisite for receiving federal funding for wildfire protection projects. A CWPP assists a community in identifying and prioritizing areas for hazardous fuel reduction treatments and supports communities in taking action. The plans assess values at risk, such as safety, natural resource protection, recreation, scenic values, and economic assets. Through a collaborative process involving input from community members, resource management and firefighting agencies, and various other interested parties, CWPPs help bring wildfire hazard information and planning and action opportunities to all parties. These plans are increasingly important in Hawaii, which faces unique wildfire threats that are becoming more challenging due to increasing ignitions, drought episodes, and land use changes.

In order to keep the CWPPs current and relevant, this Appendix to the CWPP serves as a repository for annual updates to the list of priority projects and actions. These project and action updates are designed to keep the CWPP actionable and aligned with the community's current needs and opportunities for wildfire mitigation. In this appendix, you will find a list of projects and actions that help at-risk communities to protect their citizens, homes, and resources from the destruction of catastrophic wildfires in the wildland-urban interface (WUI).

This approach was mutually agreed upon and affirmed through the signatures at the front of this document, ensuring collective commitment to maintaining the CWPP as a living and evolving tool. By focusing on shovel-ready priority projects, we enable more effective planning, resource allocation, and funding efforts. Each update reflects the collaborative efforts of stakeholders and represents the best available information for advancing wildfire risk reduction.

Readers are encouraged to refer to these updates in conjunction with the foundational elements of the CWPP. Together, they provide a comprehensive framework for understanding wildfire risks and implementing effective mitigation strategies.

II. TABLE OF PROJECTS AND ACTIONS

Project Name: Fire Adapted Maui	
Communities and Neighborhoods that will benefit from this project: Lahaina, Kula, Kihei, Kahikinui, Maunaloa	
Affiliation: Hawaii Wildfire Management Organization (HWMO)	Project Lead: HWMO Partners: DLNR-DOFAW, Maui Fire Department
CWPP Area: South Maui	Cost: \$1,395,296
<p>Project Description: The proposed project is for HWMO to lead the following four programs for Maui's CWPP-covered areas (Western Maui, Upcountry Maui, South Maui, and Leeward Haleakala).</p> <p>1- The Firewise Communities (FC) program, which leads resident education, aids communities through the Firewise hazard assessment and recognition process. It also supports defensible space and risk-reduction efforts for at-risk, underserved communities via vegetation removal/transport assistance; and</p> <p>2- The Wildfire Resilient Landscapes (WRL) program, which provides education and technical support for land managers, policymakers, emergency responders, and others. The WRL program provides education via in-person and virtual workshops, facilitates collaboration by facilitating ongoing working groups toward sustained multi-partner planning and cross-boundary mitigation, and provides area-specific and onsite technical mitigation and planning guidance.</p> <p>This work will be implemented by HWMO, in close communication and partnership with Hawaii Dept. of Land and Natural Resources, State Division of Forestry and Wildlife (DLNR-DOFAW), Maui Fire Department (MFD), and others.</p> <p>Hawaii's August 2023 fires were spread by heavy winds and through unmanaged lands heavily invaded by fire-prone grasses that entered the built environment, causing substantial damage to life and property. These wildfires were the most devastating and publicized fires in Hawaii's history in terms of the number of lives and structures lost. However, wildfire size and frequency has been growing over the past few decades with broad and long-lasting impacts, where infrastructure is not designed or built with wildfire safety in mind, and ecosystems are not adapted to fire.</p> <p>The project also supports the updated goals of the Cohesive Wildland Fire Management Strategy (CWFMS, 2023). By providing the opportunity for people to work together to reduce fire risk the project will support the goal of creating fire-adapted communities. By engaging practitioners to inform, learn and work toward climate-smart land and fire management, the project will support the goal of creating resilient landscapes by prioritizing management actions to safeguard and restore landscapes.</p>	

The project also supports the new wildland fire critical emphasis areas of:

(1) community resilience, and (2) diversity, equity, inclusion and environmental justice in creating fire-adapted communities. There is a strong emphasis in the project for prioritizing low income communities for assistance with vegetation removal projects in the Firewise Communities program.

This need for community risk reduction education and fuels management is also highlighted in the Hawaii Forest Action Plan

(<https://dlnr.hawaii.gov/forestry/files/2013/09/Hawaii-Forest-Action-Plan-2016-FINAL.pdf>) as Issue # 3: Wildfires: Priority 1.a. Prevention education: Reduce the threat from wildfires to native ecosystems, forests, watersheds, and threatened and endangered species as well as communities within WUI areas through established fire prevention programs; and Priority 2.c Pre-suppression fuels management: Mitigate the impacts of wildfires on natural and built environments.

By bringing together a diverse group of agencies, organizations, and the public, the two proposed programs also support the State of Hawaii Forest Action Plan (FAP) by providing an opportunity to address wildfire issues in Hawaii by strengthening collaborative partnerships through the partner-heavy implementation of the FC program, and by facilitating collaborative learning and project planning across jurisdictional and land ownership boundaries through the WRL program.

The full set of programs will operate throughout Maui's CWPP covered areas, focusing on the communities with the highest fire threat, all of which are identified as Communities at Risk by the State Division of Forestry and Wildlife and Hawaii Wildfire Management Organization. Wildfire on Maui poses threats to many communities on the island, however many of our communities at highest risk of wildfire are also socioeconomically vulnerable, underserved, and/or low-income, particularly Hawaiian Homestead Lands, which are designated as underserved Tribal areas in the CWDPG tool.

Importance: Why this project is important: These two programs have been key to Hawaii's progress toward wildfire preparedness and risk reduction thus far, but support is needed to carry forward the programs at the county level for all CWPP-covered areas. The request for participation in these two programs has increased 1,500% since our recent devastating fires. People have become both scared and motivated. This proposal will meet those emotions and motivations with meaningful programming, sound information, and sustained technical support and risk reduction project assistance, carried out at the county level instead of at the existing, albeit limited, statewide level. Supporting implementation of the two programs will provide higher quality education and technical support for individuals and communities (via FC program) and for others who influence fire outcomes (land stewards, large landowners, policymakers, and more, via the WRL program) in this new era when capacity, not complacency, has become our biggest obstacle.

Project Name: Dedicated Risk-Reduction Support for Native Hawaiians	
Communities and Neighborhoods that will benefit from this project: All DHHL Homestead Communities	
Affiliation: Department of Hawaiian Home Lands (DHHL)	Project Lead: Richard Hoke
CWPP Area: South Maui	Cost: \$150,000 annually per firewise coordinator, plus annual mitigation funds
<p>Project Description: DHHL homesteaders are Native Hawaiians who receive land leases from DHHL to build homes and establish sustainable communities. Many face socioeconomic challenges, including lower income levels and limited access to essential resources. While DHHL will provide financial assistance for community mitigation efforts, grant funds will directly support the hiring of a dedicated Firewise Coordinator for these vulnerable communities, enabling unified efforts in wildfire preparedness and mitigation.</p> <p>As a central point of contact, the Coordinator will support three groups: those interested in wildfire preparedness (Firewise-interested sites), those needing assistance to meet Firewise requirements (emerging sites), and those already in the Firewise program seeking advanced guidance (existing sites).</p> <p>Firewise-interested sites will receive resources and participate in workshops aimed at increasing knowledge around wildfire risks and mitigation best practices. Emerging sites will benefit from social and technical support to meet Firewise criteria, including forming a team, completing a hazard assessment, developing an action plan, and executing a risk-reduction project. Emerging and existing sites will receive technical assistance for mitigation planning and implementation, as well as access to the broader community of Firewise sites across the state (HI-Firewise Network).</p> <p>Mitigation projects to be designated by this Firewise assessment process.</p>	
<p>Importance: We are committed to investing millions in fuel breaks & land management activities to enhance the health/safety of the lands & communities we steward. However, achieving this vision requires the cooperation & active participation of our beneficiaries/homesteaders. Our primary aim is to target the enabling factors that will empower them to take proactive risk-reduction actions, while DHHL simultaneously mitigates risks on surrounding lands. This initiative will assess the impact of coordination support for our homestead communities and the availability of funds for their risk-reduction projects. Targeting both residential areas and DHHL-owned lands fosters a cohesive approach to wildfire management. This strategy encourages collaboration among neighboring communities and with DHHL, effectively reducing overall risk across the landscape. Additionally, this initiative aligns with broader wildfire management strategies, contributing to a unified regional response. As communities implement their mitigation plans and achieve Firewise recognition, we will establish a network of prepared landscapes and neighborhoods. This collaborative effort will collectively reduce wildfire hazards and promote sustainable, long-term risk reduction strategies.</p>	

Project Name: Leeward Haleakala Resilient Landscapes	
Communities and Neighborhoods that will benefit from this project: Kula, Keokea, Kihei, Wailea, Makena	
Affiliation: Malama Haleakala Foundation	Project Lead: Malama Haleakala Foundation Partners: DLNR-DOFAW, Maui Fire Department, HWMO, and ranches
CWPP Area: South Maui	Cost: \$2,818,200
<p>Project Description: The Leeward Haleakala Resilient Landscapes Project will reduce wildfire risk in and around two Upcountry Maui and three South Maui communities including Kula, Keokea, Kihei, Wailea, and Makena, all of which are considered at-risk and have between a 95.2 and 98.4 percent higher Wildfire Hazard Potential when compared to all other communities in the nation. Malama Haleakala Foundation, in partnership with Kaonoulu, Haleakala, and Ulupalakua Ranches, will implement strategic fuel reduction and establishment of 92-acres of fire breaks to reduce hazardous fuels along 19 miles of shared boundaries with residential communities, access roads, and utility corridors spanning the 46,000-acre Project area. These communities have extremely limited ingress and egress routes, which are immediately threatened by wildfire in these areas.</p> <p>Fire break treatment intervals will be conducted biannually for a five year period. Fire break locations (based on road, neighborhood, and/or pasture names) and distances in feet are provided here: DePonte - 1,500 ft, Hapapa - 3,600 ft, Upper Kimo - 7,000 ft, Kula Kai/Lwr Kimo - 12,400 ft, Carter/Wong - 2,400 ft, Naalae - 5,900 ft, Small Puu, Kakae - 4,300 ft, Laakea/Pulehu Rd - 4,800 ft, Ah Mo/Jacintho - 9,800 ft, Morey - 2,200 ft, Kaimanu - 1,500 ft, Piilani Hwy - 5,800 ft, Waiohuli/Kula Highway - 27,150 ft, Maui Meadows - 12,000 ft.</p> <p>Nine 50,000-gallon cisterns will be installed at strategic locations throughout all three ranches in close proximity to the surrounding communities listed above. Establishment of these cisterns/dip tanks will serve to increase firefighting preparedness while simultaneously reducing the time it takes for helicopter firefighters to suppress wildfires. These tanks will also serve as a cached water supply in support of ground-based firefighting efforts.</p> <p>Maui's municipal firefighting agencies are limited in their ability to access and effectively control wildland fires, especially in situations where multiple fires simultaneously occur over large, remote and rugged areas. Essential fire suppression equipment is needed by key landowners, including Kaonoulu, Haleakala, and Ulupalakua Ranches. These landowners, who collectively and collaboratively manage 46,000-acres within the Project area have historically been the first personnel onsite</p>	

for fire suppression efforts. They know the roads, gates, terrain, etc. needed to rapidly respond and support fire suppression personnel when wildfires occur. This equipment will also be used to maintain fuel breaks and reduce fuel loads as needed over the five-year performance period of the grant. Equipment will include six (6) 200 gallon skid-mounted sprayers, six (6) 10 foot by 15 foot covered trailers, and six (6) sets of field tools including but not limited to chainsaws, pulaskis, shovels, flappers, backpack sprayers, etc.

Maps of the Project Boundary with fire break and cistern locations can be found at: <https://www.mauiwatershed.org/leewardhaleakalaresilientlandscapes>

Importance: The project will have numerous activities associated with establishing a resilient landscape on leeward Haleakala. These activities include implementing 100,350 linear feet of fire breaks at key locations in the WUI on 46,000-acres of land managed by Kaonoulu, Haleakala, and Ulupalakua Ranches.

Project Name: Maui Fire Department - Inspection Program

Communities and Neighborhoods that will benefit from this project:
Western Maui, Molokai, South Maui, Upcountry Maui and Leeward Haleakala

Affiliation: County of Maui, Department of Fire and Public Safety

Project Lead: County of Maui, Department of Fire and Public Safety
Partners: Maui Emergency Management, DLNR-DOFAW, and HWMO

CWPP Area: South Maui

Cost: \$4,495,197

Project Description: Maui Fire Department (MFD) is requesting \$4,495,197 over 5 years to provide a year-round workforce of 4 Inspectors to work toward code education, compliance, enforcement, and defensible space educational home assessments. A combined workforce of MFD inspectors who carry out inspections and enforcement, and community-based educators/ home assessors at the residential level coordinated by an existing community cooperator, will provide a solid foundation to build a holistic Defensible Space Inspection program to address the growing number of parcels in high fire risk areas of Maui County that are not in compliance with vegetation management laws, including 16.04D.230-250 of the Maui County Fire Code.

This project will complete property inspections and enforce applicable defensible space laws and falls under the Wildfire Prevention and Mitigation Education/Outreach project type in the NOFO as Property inspections and/or assessments and/or Adoption, implementation, enforcement, and training of [NFPA] or [ICC], or similar codes.

Lack of defensible space was likely a major factor in the loss of over 2,200 structures in Maui in August 2023, and has contributed to the major fires across Maui County for more than two decades. The combination of code inspection and enforcement capacity for those not in compliance, as well as community-based educational support to encourage voluntary compliance within high-risk neighborhoods will aid greatly in our ability to reduce the extreme risk posed to our communities from unmanaged vegetation.

The primary goal of this project is to implement a defensible space inspection and enforcement program for high fire risk areas (target area), that is capable of inspecting 100% of complaint driven inspection requests (upward of 200 annually, many of which currently take several months or longer to inspect due to capacity limitations), and 80% of the large landowners (those who own 1% of each island or more) whose unimproved parcels threaten improved parcels in the target area.

Follow-up enforcement activities will be completed on the 20 (est.) large land parcels each year that remain non-compliant after the inspectors make multiple attempts to work with the property owner. Inspections and enforcement will be performed at least twice in the 5-year period. Community-based educational home assessments to 750 residents over the 5-year period will also be conducted using the Firewise Home Assessment program collaboratively implemented by MFD and our nonprofit cooperator Hawaii Wildfire Management Organization (HWMO).

The 4 inspectors will conduct initial and follow-up property evaluations on both a proactive and complaint-driven basis. The community cooperator will engage residents during community events, one-on-one discussions, and other outreach opportunities, providing education regarding defensible space, fuel reduction, and techniques to harden properties. Some examples of community events include community and HOA meetings, hazard preparedness events and planning meetings, and local festivals. They will also coordinate the educational home assessments.

The Inspectors will engage owners of non-compliant parcels in a constructive, education-focused process to bring the parcel into compliance. For landowners who request assistance bringing the parcel into compliance, the inspectors will refer them to our community wildfire preparedness cooperator HWMO, who leads mitigation best practices educational programs, and can connect them to available programs and grant opportunities for risk reduction/mitigation. The inspectors will remain in contact with the parcel owner to guide them through the process of self-mitigation. Those parcels that remain non-compliant after multiple on-site assessments will be evaluated and referred through the legal enforcement process as governed by Maui County Fire Code and Hawaii revised Statutes Duties of the Fire Chief, which govern the enforcement process.

MFD will oversee the entire program, including the supervision and direction of the inspectors, handling public inquiries that cannot be adequately addressed by an inspector, ensuring documentation and records are completed properly, and

determining which parcels will be referred for legal follow up. The Community Cooperator, Hawaii Wildfire Management Organization, will oversee the public outreach, educational home assessments, training and coordinating community assessors to perform the walk-around assessments and review of the home ignition zones of residents in the target area.

Inspectors will file and follow through to completion any appropriate legal actions such as citation up to and including court-ordered forced abatement, voluntary compliance is, by far, the primary objective of this program. Ensuring we have capacity for consistent and firm, but fair enforcement of defensible space and hazard reduction requirements is a critical factor moving forward after the massive structure loss and loss of life experienced during our recent disasters.

4 inspectors total is the minimum that would be required to complete the number of inspections necessary over the course of the 5-year project life. This will enable MFD to educate the public regarding applicable vegetation management and defensible space laws as well as pursue enforcement action on those parcels that do not bring their parcels into compliance.

Performing this set of community education and voluntary defensible space compliance, coupled with code inspection and enforcement is a cohesive and strategic set of actions designed to meet CWPP priorities. In Hawaii, our CWPP priorities are organized and developed directly following the goals and tenets of the Cohesive Strategy (CS). The priority actions of Maui County CWPPs addressed by this project are:

Western Maui CWPP: top priority action (#1) for emergency response agencies to pursue outreach and education to homeowners, landowners, and communities regarding brush abatement; and several top priorities for fire adapted communities: fuels management and fuel reduction around and within communities; education and outreach regarding defensible space and hazardous fuels management, and code enforcement (# 1, 2, 3, 4, 5, 7, and 14).

Molokai CWPP: increasing/ensuring enforcement of wildfire codes, ordinances, brush abatement; increasing community awareness via outreach and education; increasing community capacity to address wildfire issues and take action; and assisting and supporting enforcement of fire safety and prevention laws. (# 2, 3, and 4, and legislation and enforcement sub-priority #2).

South Maui CWPP: top priorities for resilient landscapes are fuel reduction on the boundaries of large landholdings, and improved community participation of vegetation management within and around residential areas. All five resilient landscape actions are addressed with this project, as well as the hazardous fuels treatment recommendations for fallow agricultural lands and home lots and structures (Table 12).

Upcountry Maui CWPP: increasing education and fuels management, community awareness, enforcement, and capacity for MFD, through increases in personnel. This project meets those priorities using a strategic, integrated approach.

Leeward Haleakala: top priorities and actions for Fire Adapted Communities, including: Support residential/homeowner actions via outreach and education, and pursue outreach and education programs for residents and area managers to treat structural ignitability of homes and buildings (page 43).

Specific to the Cohesive Strategy itself, this project supports the creating fire-adapted communities factor, along with the guiding principle that Rigorous wildfire prevention programs are supported across all jurisdictions and the outcome goal of "Individuals and communities accept and act upon their responsibility to prepare their properties for wildfire".

This need for community risk reduction education and fuels management is also highlighted in the Hawaii Forest Action Plan as Issue # 3: Wildfires: Priority 1.a. Prevention education: Reduce the threat from wildfires to native ecosystems, forests, watersheds, and threatened and endangered species as well as communities within WUI areas through established fire prevention programs; and Priority 2.c Pre-suppression fuels management: Mitigate the impacts of wildfires on natural and built environments through fuel assessment, modeling, reduction, and management. The full defensible space program will operate throughout Maui County. The personnel proposed here will be focused on the communities with the highest fire threat, that are the most vulnerable and underserved WUI communities, all of which are identified as Communities at Risk by the State Division of Forestry and Wildlife and Hawaii Wildfire Management Organization, as shown on pg. 104 of the Forest Action Plan.

Importance: We have collectively identified priority areas with unmanaged fuels and inadequate defensible space, vulnerable high risk communities, and underserved areas for this DSI and connected partner projects. Collectively, our projects are supported by all of our CWPPs which identified these issues as priorities to address. We understand that it will take a multi-faceted approach to protect our at-risk communities and our sensitive landscapes, given jurisdictional boundaries and mandates across agencies, and the complicated combination of private land ownership and state lands on Maui (very little federal lands and no national forest).

Project Name: Updating the South Maui CWPP	
Communities and Neighborhoods that will benefit from this project: Maalaea, Kihei, Makena, and South Maui Hawaiian Home Land	
Affiliation: HWMO	Project Lead: HWMO Partners: DLNR-DOFAW, Maui Fire Department
CWPP Area: South Maui	Cost: \$132,509
<p>Project Description: Scope: The project will update the 2016 South Maui CWPP with a focus on identifying and prioritizing projects to implement in the Wildland Urban Interface (WUI) that will result in the greatest potential reduction in wildfire risk.</p> <p>The 27,444-acre South Maui planning area covers the central-southwestern coastal area of Maui commonly referred to as South Maui. The planning area spans the community and landscape areas from Maalaea to Ahihi-Kinau and includes federal, state, county, and privately owned lands. The South Maui CWPP plan area was chosen through stakeholder meetings and addresses one of Maui's most fire-prone regions. The CWPP comprehensively defines the entire South Maui planning area as a WUI at-risk area. The simultaneous WUI designation and CWPP planning area are delineated to ensure adequate protection of natural areas and human communities from the threat of wildfire.</p> <p>Background: The South Maui landscape is characterized by steep slopes, rough terrain, strong winds, and residential areas surrounded by highly ignitable fire-prone grasses on its upland side and the Pacific Ocean on its coastal boundary. This, coupled with warm weather, recurring drought conditions, changes in land management, and a history of human-caused fires put the area at increased risk of wildfire. The majority of wildfires in South Maui are caused by human error or arson, especially near developments, power lines right of way, and along roadsides. Fires destroy native watershed forests, increase fire-prone non-native species, and cause erosion that smothers coral reefs. Native ecosystems in Hawaii are not adapted to wildfire. Other than in volcanic areas, fire is not part of the natural life cycle of native Hawaiian ecosystems, and few native species are able to regenerate after a fire, especially in the presence of fast growing, fire adapted grasses. The proximity of development to high-hazard, fire-prone wildlands presents hazardous conditions that now threaten South Maui's communities. Overgrown vegetation close to homes, pockets of open space within subdivisions, and an increase of non-native high-fire-intensity plants around developed areas pose increasing threats to commercial, community, environmental, and residential resources. Together, these factors create the fire environment that puts South Maui at risk of wildfire.</p>	

The South Maui CWPP needs updating to reflect the current reality with respect to increasing drought and wildfire hazards, as well as more in-depth community and stakeholder action plans, especially toward resilient landscapes, fire-adapted communities, and safe and effective wildfire response. Hawaii Wildfire Management Organization (HWMO) worked with Hawaii Department of Land and Natural Resources- Division of Forestry and Wildlife (DLNR-DOFAW) and other agency partners to develop the island's first CWPP in 2016. This effort engaged diverse parties and helped to develop collaborative action plans for that time period. Additional efforts are now needed in order to reassess wildfire hazards and to review progress on risk-reducing actions so that next-step concerns and actions can be identified, prioritized, and used to guide future wildfire-risk-reducing actions.

Project Strategy: The participants involved in the original CWPP process will participate in the plan update, as well as additional interested individuals and entities. These include Maui Fire Department (MFD), DLNR-DOFAW, County of Maui Emergency Management Agency (formerly County of Maui Civil Defense), County of Maui, National Park Service (NPS), US Fish and Wildlife Service (USFWS), Maui County Council, Leeward-Haleakala Watershed Partnership, and private citizens. The newly formed South Maui Fire Task Force will also engage in the planning process. It is expected that a larger group of private sector businesses and citizens will participate in the plan revision because of increased interest in community protection from wildfire in the 7 years since the plan was signed, most notably following the fires of August 2023.

To ensure consistent forward movement on CWPP implementation in the future, the process for updating the CWPP will include the convening of a community-level, multi-stakeholder working group and providing members with opportunities for meaningful learning, sharing, planning, and connecting on a regular, bimonthly basis to ensure the action plan has detailed, achievable, and designated responsibilities. This process has previously been shown to bolster the ability of people to work together to reduce fire risk (fire-adapted communities) and to manage, safeguard, and restore our landscapes (resilient landscapes).

The South Maui CWPP update supports the updated goals of the Cohesive Wildland Fire Management Strategy (CWFMS, 2023). By providing the opportunity for people to work together to reduce fire risk the project will support the goal of creating fire-adapted communities. By engaging members of the community who can contribute their traditional ecological knowledge to inform climate-smart land and fire management, the project will support the goal of creating resilient landscapes by prioritizing management actions to safeguard and restore landscapes.

The South Maui CWPP project supports the updated goals of the Cohesive Wildland Fire Management Strategy (CWFMS, 2023). By providing the opportunity for people to work together to reduce fire risk the project will support the goal of creating fire-adapted communities. By engaging members of the community who can contribute their traditional ecological knowledge to inform climate-smart land and fire management, the project will support the goal of creating resilient landscapes by

prioritizing management actions to safeguard and restore landscapes.

The project also supports the new wildland fire critical emphasis areas of: (1) community resilience, and (2) diversity, equity, inclusion, and environmental justice in creating fire-adapted communities. The CWPP process and the CWPP document will incorporate the following new management options of the CWFMS to support community resilience: (1) prepare for and mitigate post-fire impacts, and focus on community mitigation, evacuation, and recovery planning by working inclusively with the whole community, in these historically underserved, low-income areas; (2) include fire-prevention programs to reduce accidental human-caused ignitions; (3) work with public health agencies, Hawaiian Homelands, and private partners, in addition to land and fire management stakeholders for community resiliency, and (4) a local working group will be created for communities to learn about share and complete work. The CWPP and planning process will incorporate the following management action to address: Diversity, equity, inclusion, and environmental justice in the underserved, low-income communities of South Maui: Engage the community in local solutions and decision-making. In addition, the CWPP update process addresses the need for more integrated community and natural resource program planning and implementation at the national, regional, state, and local levels to bring more expertise and resources together, as identified in the CWFMS update.

By bringing together a diverse group of agencies, organizations, and the public, the CWPP for South Maui will support the State of Hawaii Forest Action Plan (FAP) by providing an opportunity to address wildfire issues in Hawaii by strengthening collaborative partnerships across areas of expertise and jurisdictional boundaries. The CWPP will address the wildfire-related goals in the FAP of prevention and pre-suppression by developing a strategy to: reduce the threat from wildfires to native ecosystems, forests, watersheds, and threatened and endangered species as well as communities within WUI areas through established fire prevention programs, and; mitigate the impacts of wildfires on natural and built environments through fuel assessment, modeling, reduction, and management.

Funding will enable community members to engage in the CWPP process and receive training so that they can continue to play an active role in identifying and prioritizing actions to mitigate wildfire risk to their communities. Special attention will be given to traditionally underserved or marginalized communities and residents by sending out targeted requests for their participation during the community input meetings. Since our intention is to not limit the voices heard to individuals who have the means for showing up (time, energy, resources), small nominal stipends will also be provided to residents or community leaders who participate in the meetings as residential volunteers.

Importance: CWPP collaborative process: The leadership team (HWMO, MFD, and DLNR-DOFAW) will generate an invite list of all who participated in the initial CWPP planning process and all stakeholder groups and their representatives to be included in the agency and community input meetings. This list will include fire and forestry agencies, natural resource managers, large landowners/managers, elected officials,

community groups, resident leaders of emerging Firewise USA communities, and other groups with a stake in (or who can influence) wildfire outcomes. HWMO will reach out to representatives from each of these groups to continue building the contact list of relevant stakeholders. In addition, survey responses from HWMOs outreach to identify parties interested in creating fire-resilient communities following the August 2023 fires will provide additional contacts.

This survey has provided an ongoing opportunity to sign up in advance to participate in CWPP development, revision, and action planning throughout the Hawaiian Islands.
