## GRANTS & CONTRACTS AWARDED

### Active

National Institute on Minority Health and Health Disparities (NIMHD) 7/1/2012 - 6/30/2016 Loan Repayment  
NIH \$42,995.34

Major Goals: This study will identify and address the knowledge gap in processes and procedures in community-informed, ethical bio-specimens collection. This knowledge will be used to develop and test a curriculum that will assist communities and researchers to work in partnership to ensure ethical bio-specimen banking. Through this project we hope to advance genetic research by developing tools to facilitate mutually respectful and productive relations between Native Hawaiian communities and researchers. Once developed and tested, these processes and procedures can serve as models for other communities, especially indigenous communities that would participate in bio-specimen research if they could be assured of ethical, respectful, and fair involvement.

'Imi Hale CNPC

Role: Principal Investigator on Pilot Study

Major Goals: To reduce cancer health disparities experienced by Native Hawaiians by maintaining and expanding 'Imi Hale – Native Hawaiian Cancer Network, to support increase in knowledge of, access to, and use of beneficial biomedical procedures in the prevention and control of cancer and co-morbid conditions; develop evidence based intervention research, and to develop competitive researchers using CBPR methods to reduce cancer health disparities in Native Hawaiians.

Pilot Study: To address a knowledge gap about how some populations view biospecimens collection. Using quantitative and qualitative methodologies we will profile attitudes and cultural beliefs and practices of Native Hawaiians in Hawaii.

Role: Principal Investigator

The major goals of this project are to develop and operate an Urban Indian Health Institute (UIHI) for epidemiological, anthropologic, and science research to address programmatic and policy concerns for urban Indian populations.

Objectives of this project include: Increase the number of urban AIAN women receiving breast and cervical cancer screening by 5% annually in 3-5 states collaborating with an UIHO; Improve access and decrease time to appropriate and timely diagnosis and treatment services; Establish and strengthen culturally respectful partnerships among UIHO, state/local DOH, and other appropriate organizations in breast and cervical cancer early detection programs (BCCEDP) and comprehensive cancer control (CCC) coalitions; and provide a model for other state health programs to work with UIHO in a collaborative, culturally appropriate manner.

Follow-Up of Elevated PSA Tests Among AIAN Men in Urban Health Clinics. This pilot study is designed to examine the feasibility of: identifying men who have had an abnormal PSA test during a clinic visit; characterizing the patterns of care for those individuals; and identifying barriers to care for men who have not had adequate follow-up after an abnormal PSA test.
