Navigating to Sustainability

Islands Journey

IUCN invites you to join us as we discuss what island leaders and their partners are doing to promote action for conservation of their precious natural resources, and to navigate toward achieving the Sustainable Development Goals in an island context.

Point of Contact : Carole Martinez

"We are all at a crossroad in the conservation and security of the Pacific. The Sustainable Development Goals are blue prints charting a course to a more sustainable planet. Like stars to a navigator, our island initiatives from the Micronesia Challenge, to the Palau National Marine Sanctuary beyond to our high seas, are bright spots that lead us through the rough seas. By working together, investing all our energy and resources, we can urgently meet our local and global aspirations towards a Future We Want!"

- H.E. Tommy E. Remengesau Jr., President of Palau

NAVIGATING TO SUSTAINABILITY- WORLD CONSERVATION CONGRESS 2016

IUCN continues to be strongly committed to its Island Initiative Programme, which focuses on the issues that islands share regardless of their size or political status. The characteristics of size, shape and degree of isolation make many of islands ecologically and culturally unique. However these same characteristics also make islands fragile and vulnerable ecosystems. The Islands Journey, which was initiated at the World Conservation Congress in 2008, seeks to celebrate islands' achievements; promote their actions, innovation and leadership and inspire, strengthen and mobilise new partnerships and initiatives.

We invite you to meet colleagues, both old and new, who are on a similar island journey to sustainability at the 2016 IUCN World Conservation Congress.

MOANA PASIFIKA VOYAGE

THE PACIFIC OCEAN SUMMIT

For the past millennia, the cultures of the Pacific have made their homes amongst islands only accessible through dedication and enduring courage to explore beyond the horizon across an open sea. In order to realize each journey into the distance, centuries of innovation and ingenuity were required, building a legacy of the greatest sailing vessels the world has ever witnessed. The Pacific Ocean served not only as a highway for the seafaring people of the Pacific, but a cradle for the emergence and growth of a diverse and distinct range of cultures and species, each protected and sheltered from all but the most daring voyagers for a thousand years.

The Moana Pasifika Voyage is a voyage for the Pacific Ocean, by our ohana in Hawai'i, who sail for action on Climate Change and a Sustainable Pacific Ocean. The voyage brings the voice of our communities and the lessons from our traditions to help chart our course to carry us into a safer future.

Please join us for the Vaka arrival as they sail into Kahanamoku beach at the Hilton Hawaiian Village with our Pacific Island Leaders and VIPs with a call for action on Climate Change and a Sustainable Pacific Ocean.

The Pacific Ocean Summit, at the start of the 2016 IUCN World Conservation Congress, provides an opportunity to convene the first 2030 Ocean Partnership meeting around the world's biggest ocean, bringing Pacific island leaders with their big ocean states together with leaders from the Pacific Ocean rim, from population centers and corporations, to make commitments for action on climate change, renewable energy and for a sustainable Pacific Ocean. The outcomes from the Pacific Ocean Summit can be reported into the global UN Ocean Summit in 2017 in Fiji as the Pacific Ocean's leaders contribution to SDG 14 with the first 2030 Ocean Partnership established around the world's biggest ocean.

Convening the first 2030 Ocean Partnership around the World's biggest Ocean

The Partnership begins a 'sustainable ocean movement' that continues to grow – adding countries, cities, provinces, communities and corporations to take action on climate change and oceans; to manage our oceans holistically to reduce pollution, increase protection, improve resilience, strengthen knowledge and increase capacity and support. Innovative partnerships are recognized as essential under the Samoa Pathway for delivery of the SDGs.

MALAMA HONUA WORLDWIDE VOYAGE

The Polynesian Voyaging Society is sailing Hōkūleʻa, a traditional Polynesian voyaging canoe, across the Earth's oceans to join and grow the global movement toward a more sustainable world. Hōkūleʻa is a double-hull sailing vessel that voyages without the use of modern instruments, using stars, winds and waves to navigate from destination to destination. The voyage seeks to engage with communities around the world about living sustainably while sharing Polynesian culture and creating global relationships. The environmental and cultural "stories of hope" the crew discovers around the world will add to the collective wisdom shaping global lessons for the future health of Island Earth. Launched in 2013, this historic Mālama Honua Worldwide Voyage will cover more than 60,000 nautical miles, 100 ports, and 27 nations when the canoe returns to Hawai'i in June 2017. Visit www.hokulea.com for more information.

ISLAND BRIGHT SPOTS - INVEST IN WHAT WORKS

Island success is built upon initiatives that work – ***bright spots***.

Islands are taking action to effectively conserve biodiversity and promote sustainable livelihoods. Despite significant vulnerabilities facing islands, leaders of island countries and countries with islands have made visionary commitments at local, national, regional and global levels. Notably, governments are working together in innovative partnerships with public and private partners to achieve the commitment targets. Inspired island solutions in action are “bright spots” that exemplify how together we can build on what is working to conserve and sustainably utilize our invaluable natural resources, and achieve the Aichi Biodiversity Targets.

HAWAII GREEN GROWTH

HGG Pinewheel © Blue Plant Foundation

Hawai'i Green growth (HGG) is an innovative public-private partnership that coordinates across government, the private sector, and civil society to achieve Hawai'i's 2030 statewide sustainability goals and serve as a model for integrated green growth. Hawai'i Green Growth convenes diverse partners to identify areas for joint actions, including shared measures, policy priorities, innovative finance mechanisms, and concrete projects to drive implementation on Hawai'i's 2030 goals.

ALOHA+ CHALLENGE

Aloha+ Challenge © HGGc

Launched in 2014, the **Aloha+ Challenge** is a statewide sustainability commitment for the State of Hawai'i by the Governor, four County Mayors, Office of Hawaiian Affairs, State Legislature, and over 100 public-private partners across the state.

The Aloha+ Challenge builds on Hawaii's history of systems-thinking, indigenous knowledge, culture and values to identify six sustainability goals for 2030 in clean energy, local food, natural resource management, solid waste, smart sustainable communities and green education and workforce. Hawai'i's elected officials launched an online open data dashboard to track progress on and provide accountability on the Aloha+ Challenge, and Hawai'i Green Growth serves as the backbone organization to coordinate shared measures and priorities on Hawai'i's statewide framework.

The Aloha+ Challenge has been recognized regionally and globally as a scaleable model to implement the United Nations 2030 Sustainable Development Agenda at a local level. Hawai'i Green Growth and the Aloha+ Challenge are examples of local sustainable development in WCC's host country, and will be featured in several events at the Congress.

MICRONESIA CHALLENGE

Federated States of Micronesia, Woman and girl weaving
Areca palm leaves © Stuart Chape

Marovo Lagoon 5, Child Paddling Canoe
© Stuart Chape

Celebrating ten years of action in 2016, ***the Micronesia Challenge*** is a commitment by the leaders of the Republic of Palau, Federated States of Micronesia, Republic of the Marshall Islands, U.S. Territory of Guam and the U.S. Commonwealth of the Northern Mariana Islands (CNMI) to effectively conserve at least 30% of the near-shore marine resources and 20% of the terrestrial resources by 2020. It has since inspired similar regional initiatives in the Caribbean, Western Indian Ocean and Hawai'i through the Global Island Partnership. The Micronesia Challenge spans 2.5 million square miles of ocean that supports the livelihoods of 650,000 people and protects 66 threatened species on the IUCN Red List. The Micronesia Challenge is a long term example of island leadership in conservation and resilience.

THE EUROPEAN BEST INITIATIVE

The European BEST Initiative - a voluntary scheme for Biodiversity and Ecosystem Services in Territories of European overseas - supports the conservation of biodiversity and sustainable use of ecosystem services, including ecosystem-based approaches to climate change adaptation and mitigation in the EU Outermost Regions (ORs) and Overseas Countries and Territories (OCTs). Click [here](#) to take a tour of the regions and EU overseas entities.

EU Overseas biodiversity is exceptionally rich and is recognized as being of international importance. These islands are part of **biodiversity hotspots** and are key actors for the implementation of international and regional conservation targets. They foster regional cooperation in crucial areas of the world. Located in 7 key regions they are critical allies for the implementation of the biodiversity and sustainable development international targets and goals.

Acknowledging this importance, the European parliament set up the BEST Initiative managed by the European Commission. Acknowledged by the CBD COP XII/157, BEST has supported actions on the ground with 36 projects to date in the regions of the Pacific, Indian Ocean, Caribbean, French Guiana, Greenland, Antarctic, South Atlantic and Macaronesia, addressing issues such as designation and management of terrestrial and marine protected areas; combating invasive alien species, synergies using ecosystem services for climate change adaptation and mitigation; valuation of ecosystem services; increasing knowledge; networking, education, capacity building and outreach activities. BEST actively involves organisations in the Outermost Regions, Overseas Countries and Territories, and Member States, as well as NGOs, regional and international organisations. More projects are to come!
