Narrative Description
(Describe the historic and current physical appearance and condition of the property. Describe
contributing and noncontributing resources if applicable. Begin with a summary paragraph that
briefly describes the general characteristics of the property, such as its location, type, style,
method of construction, setting, size, and significant features. Indicate whether the property has
historic integrity.)

Summary Paragraph

The Harold B. and Julia Giffard residence is located on a flat, 14,134 square foot lot on the
mauka side of Puiwa Road in Nuuanu valley in a quiet residential neighborhood. Across the
road from the house is Nuuanu Valley Park, which backs on Queen Emma’s Summer Palace.
While the Giffard residence remains in domestic use, a number of the neighboring two story
houses along Puiwa are now occupied by religious or non-profit organizations.

The two story, shingle walled, late Queen Anne style house has an asymmetric massing and
features a front facing gable roof, with a lower, similarly roofed, projecting front wing. The
composition shingled roofs have open overhanging eaves and exposed rafter tails. Decorative,
projecting, roof joists adorn the gable ends. The house sits on a post and pier foundation with
massive lava rock columns. A 1990, single story addition is off the left side of the house and
contains a two car garage as well as living space behind the garage. The garage addition is
compatible in design and materials to the main house and is connected to it by a breezeway. The
4,688 square foot house remains in excellent condition and very much retains its integrity of
design, materials, workmanship, location, setting, feelings and associations.
Narrative Description

The Harold B. and Julia Giffard residence is three bays wide, with a shed roofed, central entry porch. To the left of the porch is a shallow, projecting wing with a cantilevered second story, and to the right of the entry is an enclosed side lanai. The side lanai is a single story in height, capped originally by an open deck with a 30” high, shingled parapet and a flat roof with overhanging, closed eaves. In 1995 the rear portion of the deck was enclosed to form an office with its hip-gablet roof intersecting with the gable roof of the main body of the house. The second story of the main body of the house features pairs of double hung sash windows on its front and side. In the center bay a frieze runs above the window line and the gable projects out from the line of the wall. This gable contains three stacks of two, single pane awning windows, which ventilate the attic. The wing’s gable is adorned by a decorative, wood grille “ventilator”.

An approximately 14” high, lava rock retaining wall traverses the front of the property with a mock orange hedge immediately behind it. The wall is broken in two locations for a driveway and a walkway to the house. The driveway is to the left side of the property and the walk is approximately at its mid-point. A walkway with modern slate pavers leads from the street to a set of three steps surmounted by a modern metal gate. The gate is supported by a pair of 5’ high, 17” square concrete block posts which terminate with a four sided three step pyramid cap of 2” thick concrete blocks. Beyond the gate the slate paved sidewalk continues to the front of the house where seven wide steps covered with blue, three quarter inch square, glazed tiles lead up to the front porch, whose floor is similarly finished. The blue tiles pre-date 1974. To either side of the steps are rectangular, lava rock planter boxes, from which spring lava rock columns, approximately 46’ square which support the porch’s shed roof. The 5’ x 19’ front porch is protected by a composition shingled shed roof with overhanging eaves and exposed rafter tails. The porch ceiling is of 5” beaded tongue and groove. The front entry to the house is in the left wall of the porch, and a set of three, three-paned windows dominate the porch’s rear wall. The set of windows includes a middle fixed window with pocket windows to either side.

One tile covered step leads up to the fairly new six panel front door. The entry’s fluted door frame cants inward and a recessed ceiling light with a frosted glass cover provides evening illumination. The door opens on the living room. The living room runs the length of the main body of the house, with the Ewa-mauka corner separated from the room by a wall and containing the dog leg stair to the second floor. The living room floor is laminated, covering the original termite eaten floor. The room reflects a 1936 remodeling and has a 10’ high, masonite ceiling and masonite walls with floor to ceiling v-joints. There is a very modest molding at the juncture of the walls and the ceiling, and a diminutive, 3” high base board.

The Ewa wall of the living room contains a simple fireplace with a modest art deco frame and no mantle set in a nook. The fireplace has a clay tile hearth, and mirrored walls enframe its sides and top. The side walls of the nook are canted and contain built-in display cases, each with one glass shelf. The rear and side walls of the open cases are semi-circular, and a similarly shaped, recessed light with a frosted glass cover illuminates each of the cases from the top. The fireplace
Giffard Residence Honolulu Hawaii

Name of Property County and State

has a brick chimney which runs up the side wall of the house on the exterior. As a result of the wall separating the stairwell from the living room, this portion of the living room, occupying the slightly projecting, front wing forms a cozy sitting area. The front wall of this wing features a set of three sliding windows with each window containing three horizontal panes. The Diamond Head wall of this section of the living room contains the front door.

From the wing, the living room flows across the center section of the house, with a pair of solid pocket doors in its rear, mauka wall accessing the dining room. The makai wall contains the set of three windows looking out on the front porch. This set of windows is flanked by built-in book cases, each of which contain seven shelves. In all likelihood the original front door was supplanted by the bookcases and set of three windows as part of the 1936 remodeling of the house. At the Diamond Head end of the living room is a pair of pocket doors and their accompanying bifold screen doors, each of which has four, horizontal panes, which open on the enclosed lanai.

The 17’ x 36’ side lanai is two steps down from the floor of the main body of the house. The lanai has its original fir floor, as well as wood steps, and a beaded tongue and groove ceiling. The room is defined by corner lava rock columns which continue to the exterior of the house. There is also a centered lava rock column in the lanai’s Diamond Head wall. Between the columns are sliding windows, which make for a light and airy space. The mauka wall has a set of three, sixteen-pane sliding windows. While the Diamond Head side has a similar set of windows at its mauka end, and at its makai end has a set of four, twelve-pane sliding windows. The latter were added at some point in the house’s history, as outside these windows is a set of four concrete steps which run down to the side yard, indicating a former opening in the lanai’s wall. The makai wall contains a pair of 12 pane sliding windows and also a double door, with each door having four horizontal panes. A set of four concrete steps covered in blue tile leads down from this doorway to the front lawn. This side of the lanai was enclosed in the 1990s for security purposes, but is compatible with the existing windows.

In addition to the pocket doors accessing the lanai from the living room, a similar set of doors connects the lanai and the dining room. The dining room has a teak parquet floor, most likely dating from the 1960s, and its walls and 10’ high ceiling are finished in a manner similar to the living room. A set of double doors, each with four horizontal panes, leads to a rear, mauka side deck, which has been rebuilt in recent years. A set of three, stacked, single pane awning windows flank the doorway on either side. These have copper hardware and may date to the 1936 remodeling. A solid, swinging door in the Ewa wall of the dining room leads into the kitchen.

The kitchen has been remodeled and expanded outward on the rear, mauka side in 1980. However, it still retains its 1936, glass doored cabinets, and its original set of three 1 x 1 double hung sash windows over the sink. The kitchen’s original beaded tongue and groove walls are evident as the rear walls of the cabinets. The rear addition to the kitchen replicates the 1936 cabinetry in design, and features pairs of twelve pane sliding windows. In addition, a pair of sliding doors, each of four horizontal panes, access the rear deck. A Dutch door in the Ewa wall leads to the breezeway and garage addition. The 1990 garage addition replaced a 1948 garage.
A solid hinged door on the makai wall of the kitchen leads into the living room, next to the stairway to the second floor. The dogleg stairway has a turned balustrade and an 8” square newel post capped by a ball finial. Underneath the stairway and three wood steps down is a half bath. It has a corner sink and its door has its 1936 knob. It has two single pane awning windows, which open inward. On the exterior these windows are set in a niche formed by a pair of lava rock columns supporting a lava rock flat arch.

Eleven steps lead up to a landing and then another ten steps ascend to the second floor. The landing is illuminated by a pair of 1 x 1 double hung sash windows. The stairwell walls are appointed in a manner similar to the living and dining rooms. The second floor hall retains its original fir floors and its 1936 masonite walls and ceilings. Doors to two bedrooms and a linen closet line the hallway on its makai, front side. The bedroom doors are louvered with a panel below. The linen closet door is solid. All three of these doors retain their 1936 knobs and hardware. The two bedrooms retain their fir floors and 1930s masonite walls and ceilings. They both have a pair of 1 x 1 double hung sash windows, 4’ wide, in their front walls. Each bedroom has its own bathroom. The bedroom in the front wing has a pair of 1 x 1 double hung sash windows in its Diamond Head wall which are set in a niche with a built-in seat in front of it. Eight drawers, stacked two high, provide storage under the seat. Built-in bookcases occupy the niche’s side walls. Its bathroom has two two-pane casement windows in its Ewa wall and retains its original tub and tile work. The bedroom above the living room has a set of double doors and their screen doors, all three paned, in its Diamond Head wall which accesses the second story deck. Along the front of the house the L shaped deck is 59” wide. A five panel door with an original 1936 knob and hardware opens on this bedroom’s bath. This bathroom has canec walls and its original tub has a tile back splash to protect the walls.

The master bedroom is across the hall from the two front bedrooms, at the back of the house. It too retains its 1936 louvered door and hardware. The fir floor in this room has been covered with laminate flooring. A 4’ wide 1 x 1 double hung sash window penetrates its rear wall. On the Ewa side of the room is a bathroom, which has been completely remodeled. It is ventilated by an original 1 x 1 double hung sash window in its Ewa wall, as well as a Jalousie window in this wall. Another jalousie is in the rear, mauka wall. On the Diamond Head side of the master bedroom, a set of modern double doors leads into the office which was added in 1995. This addition has shingle walls and 1 x 1 double hung sash windows, as well as a set of single pane, bi-fold doors which access the deck on the Diamond Head side. The addition is compatible with the historic character of the house in its design, use of materials and massing.

At the Diamond Head end of the second floor hallway is a modern style stairway made of wood and metal. Three steps lead to a landing where the stair makes a quarter turn to the right with ten steep steps leading to the attic. The steps have no risers. The stairway predates 1974, and appears to be a product of the 1950s. The attic has been finished into a front bedroom, a rear storage area and a bathroom. Six awning windows provide light and air from the front wall and the rear wall has two pair of stacked awning windows. The canec ceiling follows the slope of the roof line and the walls are tongue and groove. A single panel pocket door closes off the two
The Giffard residence retains its historic integrity. The 1936 alterations to the house, including the reorienting of the front entry and the remodeling of the interior in an art deco manner, have attained historic significance in their own right, as has the finishing of the attic in the 1950s. More recent alterations to the house have been confined to the rear of the dwelling, which are not visible from the street. These include the expanded kitchen, the replacement of the rear deck with more modern decking material, and the addition of the second floor office. The new garage on the side of the house, replaced an earlier structure, and is in keeping with the design and scale of such a structure. It is set back and to the side of the main house and does not visually intrude upon the façade. The alterations to the house have all transpired in secondary spaces. They were undertaken in a sympathetic manner and do not detract from the historic character of the house.
8. Statement of Significance

Applicable National Register Criteria
(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

☐ A. Property is associated with events that have made a significant contribution to the broad patterns of our history.

☐ B. Property is associated with the lives of persons significant in our past.

☒ C. Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.

☐ D. Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations
(Mark “x” in all the boxes that apply.)

☐ A. Owned by a religious institution or used for religious purposes

☐ B. Removed from its original location

☐ C. A birthplace or grave

☐ D. A cemetery

☐ E. A reconstructed building, object, or structure

☐ F. A commemorative property

☐ G. Less than 50 years old or achieving significance within the past 50 years

 Statement of Significance Summary Paragraph
(Provide a summary paragraph that includes
level of significance, applicable criteria, justification for the period of significance, and any
applicable criteria considerations.)

The Giffard Residence is significant on the local level under criterion C, as a good
example of a late Queen Anne style house built in Honolulu over a century ago, which
was remodeled in a modest art deco style in the 1930s. The house includes a number
of distinctive features and is typical of its periods in its design, materials, workmanship
and methods of construction.

The 1913 and 1936 periods of significance were chosen in accordance with the
instructions on how to complete a national register nomination form provided in National
Register Bulletin 16A: “For architecturally significant properties, the period of
significance is the date of construction and/or the dates of any significant alterations and
additions”

Section 8 page 10
The Queen Anne revival style of architecture originated in England, with Leyswood in Sussex (1868), designed by Richard Norman Shaw, usually credited as the seminal work. These dwellings had little to do with the architecture of Queen Anne’s reign, and were more closely related to late-medieval and/or Tudor forms. The style was introduced to the United States at the Philadelphia Centennial Exposition of 1876, where the British government built two houses for its Commissioner and his staff in that style. The style appealed to the romantic, picturesque sensibilities and became enormously popular in America, reaching its zenith during the 1880s and 1890s, but it continued to be utilized into the opening decades of the twentieth century, although usually in a less ebullient manner.

Distinctive features of the American Queen Anne revival style usually include an asymmetric facade; an irregularity of plan; frequently complex, steeply pitched roofs with overhanging eaves and dominant, front-facing gables, often cantilevered out beyond the plane of the wall below; occasional round, square, or polygonal tower(s); a porch running across part or all of the facade, including the primary entrance area; second-story porches or balconies; differing wall textures; elaborate ornamentation, often including pediments, dentils, classical columns; spindle work; oriel and bay windows; leaded glass windows; and monumental chimneys. Elaborate embellishments covered almost any flat surface.

The earliest known example of the Queen Anne revival style in Hawaii was the William Richards Castle residence (1880, no longer extant) which stood at the northeast corner of Victoria and Kinau streets. For its time the asymmetric, somewhat ornate house with its two and a half story tower was very up-to-date. However, it was not until the 1890s that the Queen Anne revival style appeared in Honolulu in all its glory. Such splendid examples of the style as the W. C. Peacock residence in Waikiki, Alexander Young residence at King and Victoria, William O. Smith residence at Nuuanu and Bates, and Thomas Wall residence at Richards and King, were all demolished in the years following World War II. Indeed, very few examples of the form can be found throughout the Hawaiian Islands, with the Hocking residence (1904) in Honolulu and the Shipman residence (1899) in Hilo, both of which are listed in the Hawaii and National Registers of Historic Places, being the only noteworthy examples to readily come to mind. The Berg residence (1911) in Manoa Valley, is the only example of the later manifestation of the style to be presently included in the Hawaii Register of Historic Places. Thus the Giffard residence stands as a restrained, but rare example of the late Queen Anne style in Hawaii.

The Giffard residence is significant as a good example of a late, restrained Queen Anne revival style house built in Hawaii during the early 1900s. Its irregular, asymmetric plan and massing with advancing and receding elements, shingle walls, and front facing
gable roofs all reflect the spirit of the Queen Anne revival style. In addition the cantilevering of such elements as the main gable and the wing’s second story are typical of the style, as is the inclusion of a second story porch. The absence of elaborate applied ornamentation reflects the lateness of the form and the movement away from such embellishment.

As a late example of the Queen Anne revival style, the house also begins to incorporate certain craftsman/bungalow elements into its design, most notably the use of lava rock columns and the decorative joists adorning the house’s front gables. Both of these utilize a larger than usual, more dramatic, scale, placing these craftsman elements into line with the Queen Anne spirit of the house.

The house is also architecturally significant for its architectural adaptations to Hawaii’s sub-tropical climate. Such features as the enclosed side lanai is a common design element in early twentieth century houses in Hawaii, and when coupled with the large, 4’ wide, double hung windows, as well as sliding windows, allowed heightened interaction with the outside. The open, flowing space of the living room, while common for the period in Hawaii, was less often found in mainland houses of the time. Also the proliferation of pocket doors, double doors, and louvered bedroom doors further allowed the trade winds to flow through the open interior plan.

In addition, the house is architecturally significant for its well-appointed, modern/art deco interior, the result of a 1936 remodeling which followed the design of Honolulu architect Harry Sims Bent. This remodeling included the relocation of the entry door, recessed lighting, the installation of sliding, and perhaps awning, windows, the resheathing of the interior walls, the replacement of doors and their knobs and hardware, the remodeling of the kitchen cabinets, and the development of a fireplace nook.

The art deco style originated in post-World War I France and quickly flourished internationally during the 1920s and 1930s, and even into the 1950s. The style embraced technology and was characterized by rich colors, geometric forms and often lavish ornamentation. It emphasized symmetry and the rectilinear over the curvilinear. During the peak of its popularity it represented luxury, glamour, and faith in social and technological progress.

The 1936 remodel of the Giffard residence well reflects the art deco style in an obvious, albeit restrained, manner. The canted front door frame, and similarly the canted side walls of the fire place nook, the recessed lights with frosted glass covers above the front entry and in the rounded display shelves by the fire place, the v-joints in the masonite walls with their linear rhythm, the mirror wall surrounding the fire place, and the door knobs, all display the influence of the art deco spirit. The interior walls are finished with Masonite, which was developed by the Mason Fiber Company (later named the Masonite Corporation) of Chicago, Illinois in 1926. During the 1930s masonite came to be widely used as an interior finishing material. Its inclusion in the Giffard residence’s
interior remodeling further contributed to the house’s very contemporary and modern feeling.

The house was initially designed by architect John H. Craig (1864-1923). Craig was born and educated in Toronto, Canada, migrating to Los Angeles in 1886. In 1889 he and his family came to Hawaii. He worked as a building contractor, and from 1916 until his death advertised himself as an architect and builder. At the time of his death, the *Honolulu Advertiser* noted, “Mr Craig was one of Honolulu's best known architects, contractors and builders and had constructed many of the city’s large blocks as well as many handsome homes in the residence sections. He was known as a builder who put the best that was in him and the best materials into his structures, and carefully supervised all the work.” [*Honolulu Advertiser*, May 3, 1923, page 3] In addition to the Giffard residence, he designed a number of residences in the city, including the majestic, albeit no longer extant, George Beckley residence in Waikiki (1913). The best known extant building that he designed is Gartley Hall at the University of Hawaii (1922), which is listed in the Hawaii and National Registers of Historic Places.

The architect responsible for the 1936 remodel of the house, Harry Sims Bent (d. 1959), was also a prominent Honolulu architect, who practiced in Hawaii from 1928 until the start of World War II. He came to Honolulu to supervise the construction of the C. Brewer Building on Fort Street. Upon the completion of that project, he decided to stay. A strong proponent for an appropriate regional architecture, he designed the Pineapple Research Institute at the University of Hawaii (1931), Hanahauoli School (1929) at 1922 Makiki Street, several art deco parks and playgrounds, including Ala Moana Park, and a number of immaculately detailed houses, prior to departing Hawaii with the coming of World War II. The art deco parks and playgrounds, as well as the Pineapple Research Institute are listed in either the Hawaii or National Registers of Historic Places. The Purvis residence, for which Bent designed an addition, is also listed in the Hawaii Register of Historic Places.

The original owner of the house, Harold Brickwood Giffard (1884-1944) was born in Honolulu and was educated at Punahou School as well as Tamalpais Academy in California. He first worked for the Waterhouse Trust Company, and at the time the Puiwa residence was built had gone into partnership with W. P. Roth as a stock broker. Upon the retirement of Mr. Roth the firm became Giffard & Macfarlane.

In 1908 Giffard married Julia Damon (1886-1957), the daughter of Edward Chenery and Cornelia Beckwith Damon. The couple resided in the Puiwa residence until their divorce in 1928. At that time Mr. Giffard moved to Kula Maui with his new wife, Mary, and Mrs. Julia Giffard’s sister, Ethel M. Damon, purchased the Puiwa house. The two sisters continued to live here until 1935, when Polly Baldwin Damon, the widow of Bernard H. Damon, purchased the property. She commissioned Harry Sims Bent to remodel the house in 1936, and in 1938 sold the house to Bertha Brown. Following the Brown’s ownership, the house had four owners between 1944 and 1974, at which time the current owners purchased the property.
