Principal exterior materials of the property: Lava-stone and wood
frame_____

Narrative Description

(Describe the historic and current physical appearance and condition of the property. Describe contributing and noncontributing resources if applicable. Begin with a **summary paragraph** that briefly describes the general characteristics of the property, such as its location, type, style, method of construction, setting, size, and significant features. Indicate whether the property has historic integrity.)

Exterior

The house faces north-east, but for this narrative, the front of the house will be referred to the east elevation and thus all the other elevations will be defined accordingly.

The house at 2017 Lanihuli Drive is a one and one half story, lava-stone and wood-frame single family dwelling house in the Punahou/Manoa area of the Island of Oahu, Hawaii. The home was constructed in 1925.¹ The house is elevated off the ground on mass constructed lava-stone piers with wooden lattice infill between the bays. The house's style is a combination of Colonial Revival-Arts & Crafts that is common in this area of the island of Oahu. The home matches the style, materials and method of construction of many of its contemporaries in the area that were built in the early decades of the twentieth century.

The lava-stone piers are ~24" wide and are composed of both the pahoehoe and the a'a form of lava (basalt) stone in black. The stones vary in size between 8" to 20" in size. The stones are roughly shaped, but are not precisely cut to exacting shapes. The stones are bound together with a tinted Portland cement mortar. The joints are ~1/2"-3/4" wide.

¹ City and County of Honolulu Property Records

The House at 2017 Lanihuli Drive
Name of Property

Honolulu, HI
County and State

The mortar is dark grey-black (Munsel 432/419) in tone. The joints are raked in profile and somewhat unrefined. The square lattice between the piers is white and makes a strong statement on the front elevation.

The lava-tone piers, the white lattice foundation skirt, the Colonial-Tuscan columns, and the windows are character defining elements of the front elevation.

The roof of the house is sloped east-to-west (front to back) with a clipped gable profile on both side elevations. The roof is vented by a broad shed dormer that has divided lite (4 sets of 3-over-three) windows. Each window is approximately 18" high x 24" wide. This dormer is character defining as it contributes to the Arts & Crafts character of the house. The roof of the house is a clipped gable (jerkin-head) with 3' overhangs supported by decorative brackets indicative of the Arts & Crafts style in the 1920s. The soffits of the eaves are sheathed in bead-board. Currently the house has grey asphalt shingles on the roof.

The front elevation of the home is composed and framed by Tuscan-Colonial columns in antis that provide the definition of the bays of the house that are lighted and vented by wooden divided lite windows. The windows slide, side-to-side. The columns and the windows are definitive elements of the Colonial Revival style components of this house and contribute to its character. The southern corner of the home has an added small lanai off the front bedroom. The materials (nominal contemporary lumber) of the lanai suggest that it is a recent addition.

The house has a ~30' setback from the road. The set back is a green (grassy) lawn. Lanihuli Drive does not have sidewalks at the border of the lawn and the street. There are curbs. A large (~25' high) red Poinciana tree is on the front lawn on its north-east corner that appears to be at least 50 years old. This tree, the set back and the grassy lawn are contributing elements. The lot of this house is ~52' wide. The lot is equipped with a driveway on its south-east corner. The driveway leads to an original garage that has since been enclosed and converted to an apartment. A carport is covering the closest end of the driveway. It is a late addition (less than 15 years) and is not contributing.

The two sides of the home are not the same (i.e. the fenestration pattern), being slightly different on each side. The house's wood clapboarding is extant. The clapboarding has a 4" reveal. The house appears to have most of its original wooden sash, double hung windows. The tympanum of the house is vented by a wooden louvered opening to the attic. The louvered opening is framed with 6" boards with an apron. Four decorative brackets, on each side, support the eave.

The north side of the house has a double set of six-over-one windows with a single six-over-one and another double set of six-over-one, wooden windows (these are shorter than the others for the kitchen windows are above the sink). The main stairs of the house, leading to the front entrance, are made of lava-stone and concrete plinths, forming cheeks for the concrete stairs. The staircase appears to be original to the house. The front door that faces north appears to be a replacement, but is an appropriate raised panel door, mounted on butt hinges.

The House at 2017 Lanihuli Drive
Name of Property

Honolulu, HI
County and State

The north side of the house has a grassy lawn (~20' outward from the house to the edge of the lot, edged with a chain link fence) with a sidewalk leading to a gate at the back yard. The side foundation of the house is like the front with lava-stone piers and a foundation skirt of white lattice between the piers. The slope of the lot creates an angle that makes the foundation elements practically disappear at the rear.

The south elevation has a two, double set of symmetrically placed wooden, double hung windows, its original wooden clapboards, the brackets and the bead-board sheathed eaves like the other side of the house. The edge of the lot here is defined by a mock orange hedge, approximately 10' in height.

Setting

Lanihuli Drive maintains its residential character in 2019. The street is stocked with early 20th century era homes of similar style and scale, but with some infill of newer homes. The period extant homes include: #2057, #2056, #2116, #2121, #2126, #2125, #2134, and #2209. Some lots have newer homes that are of different size, style, materials and colors. Examples of the infill homes include: #2137, #2042, and #2039. The neighborhood is composed mainly of one and two story homes of medium density. The neighborhood could be compromised in the future if demolition and reconstruction of new homes on the lots continue. For now, the integrity of the setting of 2017 Lanihuli Drive is intact. The lot on which the house rests is also intact. The grounds (the set-back, grassy lawn, and the red Poinciana tree) of the house contribute to the character and historic integrity of the property.

Interior

The house is accessed at the front by a side entrance (north). The entrance allows access to an open hall plan into a living room 23' x 18.5' in dimension. The room has a wainscot of Colonial Revival recessed panels, encircling the entire room. The base of the panels provides the baseboard for the walls, 7" in height. The wooden panels vary in length to accommodate the walls. The wainscot terminates at the window sills, ~29" from the floor. The wainscot panels are accentuated by quirked ogee trim, 1" in width. The stiles and stretchers of the panels are 6" wide.

The living room's east facing elevation is composed of three bays of 12 divided lite (10, 1/4" x 10, 1/2" panes) windows in the Colonial Revival style. The 1" muntins are corbelled. The windows slide, side-to-side. The windows (and the bays) are 6'-3" in width. The Tuscan-Colonial columns in antis provide for a framing of the fenestration. The view of out through the windows is an impressive natural feature of Oahu (the Ko'olau Mountains). The columns are 6'-5" in height and ~24" in diameter. The columns are tapered, however, from 24" at the base to 22" at the neck. The windows and the columns, along with the wainscot, are character defining features of this space. The ceiling in the living room at the front-most end has a slope downward of ~15 degrees.

The House at 2017 Lanihuli Drive
Name of Property

Honolulu, HI
County and State

This along with the flat arch in the room may suggest a shallow porch once existed here. The paint build-up and construction details suggest that the current configuration has been in place for some time.

The walls above the wainscot are composed of smooth plaster. The walls terminate at a 3 1/4" crown molding in the ogee profile. The ceiling is smooth plaster and is 9' in height. This ceiling height is consistent throughout the house. The floors in this portion of the house are a replacement of vinyl wood plank floors that are complimentary to the home as a substitute for the original Douglas fir wooden floors. The current owners relay that they purchased the home in this condition and that the floors were replaced by the previous owners.

The northern wall is lighted and vented by a double set of six-over-six, double hung wooden windows. The windows are symmetrically placed in the center of the wall of the room. A center mullion separates the windows that are 6" in width. The casing trim is 4" wide. The interior trim and window sill are finished out with a 1 3/4" cyma reversa trim. The living room also functions as the dining area along the northern edge of the room, closest to the kitchen as there is an overhead hanging lamp to illuminate the dining table. The southern wall provides a small closet.

The western wall of the living room provides access to the kitchen and the hallway for the bedrooms. The kitchen is equipped with a breakfast nook that is 4'-6" x 5' in dimension. The breakfast nook is lighted and vented by with a single double hung window, milled like the other windows in the house.

The kitchen is 12'-6" x 9' in dimension. The kitchen provides a direct line access to the rear door of the house. The wooden cabinets (35" high) appear to be original. The counter-tops, however, are replacements. The tops may emulate the original sugar maple counter tops. The built in cutting board remains of that wood. The walls of the kitchen are sheathed in board-and-batten walls. The kitchen walls are finished and terminate with a 2 3/4" cyma recta ogee crown molding. The rear most 4' of the kitchen is semi-partitioned off with a bracketed flat arch that forms an entry from the rear of the house.

The bedroom hall has built in cabinets on the northern wall. These appear to be original to the house. The house has 3 bedrooms:

Bedroom 1---a 15 lite French door leads to the bedroom from the center hallway. It appears to be original to the house. The French door here may indicate that this room was used as a den instead of a bedroom. The adjoining doorway to the kitchen also bolsters that theory. The room is 10' x 14' in dimension. The rear wall is lighted and vented by a double set of six-over-one, double hung windows. The southern wall has a single window of the same type. The walls are plaster. The room has 2 3/4" ogee crown molding with 6" baseboards. A flush wooden door leads into the kitchen. The closet door with its glass knob appears to be original to the house.

The House at 2017 Lanihuli Drive
Name of Property

Honolulu, HI
County and State

Bedroom 2---The front bedroom is 12'x 9' in dimension. The floor in this room is Douglas fir and is probably original to the house. The closet door in the room with its glass knob appears to be original. The front wall has a newer door (French door) and window made of aluminum that leads to a small covered lanai on the front elevation of the house. The door, window and lanai appear to be recent additions to the house. The walls and ceiling of this room are sheathed in Canec with beveled edges. The room is lighted and vented on the side elevation by a double set of wooden, divided lite sash windows. The upper sash of one window is a mis-match, but appears to be of considerable age with the house.

Bedroom 3----the smaller bedroom is accessed by a flush wooden door. The floors are carried over from the living room and hallway. The walls appear to be drywall. The walls are topped off with 5" cyma recta crown molding. The room has 7" baseboards. The room is partially partitioned off with an added ½ bathroom. The closet door (recessed panel) with its glass knob appears to be the original. The room is lighted by 2 sets of the wooden double hung windows.

Main Bathroom---The bathroom is 7'-4" x 6'-7" in dimension. The bathroom has a heavy cast iron enameled bath tub. The hardware on the tub appears to be original. The room retains its original 1" hexagonal white porcelain floor tiles.

Interior of house---The arrangement of the rooms in the house appears to be very close to original layout. The materials, windows, doors, cabinets and other millwork all together display a very high degree of historic integrity on the interior. Only minor substitutions of materials have occurred that are expected of a house that has been lived in for close to 95 years.

Roof Construction

The roof timbers are composed of old growth, true dimension, rough cut redwood. The pieces are circular sawn. A central ridge-board provides for the apex of the roof where the trusses terminate. The trusses span the house with the use of collar beams attached to the primary rafters. The bents are ~24" apart. The purlins are 1" x 3" placed at 4" intervals. The roof sheathing is redwood boards. The roof timbers are nailed together with wire nails. The house's interior walls are composed of horizontal redwood boards until the bottom of the gable. The wall sheathing beneath the gables is vertical Douglas fir boards. There is no evidence of any changes of materials (i.e. no new materials have been introduced) or method of construction in the roof which lends credence to a high degree of historic integrity (i.e. little to no changes in the house's footprint or form have occurred) for the house. The framing of the clipped gable is an impressive work of carpentry. The quality of wood, the carpentry and the use of roof boards is indicative of early 20th century materials and techniques. Wood of this quality is uncommon in 2019. The roof structure is significant to the house's character even if it is not routinely seen.

Summary Paragraph

The house at 2017 Lanihuli Drive, constructed in 1925, qualifies for inclusion on the State of Hawaii register and the National Register of Historic Places under Criteria A and C. The house represents an intact example of the College Hills and University of Hawaii at Manoa development which is a significant event in the Territorial Period of Hawaii's history. The home is in the Punahou/Manoa area which is significant in the era of transition (1898-1959) during which great changes occurred after annexation of Hawaii into the United States of America. This neighborhood was the area where many of the missionary families/business community lived at the time of the end of the Kingdom of Hawaii and during the early decades of the territorial period. The home is also significant in the development of Punahou School (Oahu College) and the University of Hawaii at Manoa in this area of the island. The house also represents an intact example of a house of the Colonial Revival/Arts & Crafts style from the 1920s on Oahu. The house displays a high degree of historic integrity of location, materials, form, fenestration, and interior arrangement of space. The site and setting appears intact as well.

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- ☒ A. Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ☐ B. Property is associated with the lives of persons significant in our past.
- ☒ C. Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ☐ D. Property has yielded, or is likely to yield, information important in prehistory or history.

Name of Property

Honolulu, HI
County and State

Criteria Considerations

(Mark "x" in all the boxes that apply.)

- ☐ A. Owned by a religious institution or used for religious purposes
- ☐ B. Removed from its original location
- ☐ C. A birthplace or grave
- ☐ D. A cemetery
- ☐ E. A reconstructed building, object, or structure
- ☐ F. A commemorative property
- ☐ G. Less than 50 years old or achieving significance within the past 50 years

Statement of Significance Summary Paragraph (Provide a summary paragraph that includes level of significance, applicable criteria, justification for the period of significance, and any applicable criteria considerations.)

The house at 2017 Lanihuli Drive, constructed in 1925, qualifies for inclusion on the State of Hawaii register and the National Register of Historic Places under Criteria A and C. The house represents an intact example of the College Hills and University of Hawaii at Manoa development which is a significant event in the Territorial Period of Hawaii's history. The home is significant for Oahu's history and the State of Hawaii's history. The home is in the Punahou/Manoa area which is significant in the era of transition (1898-1959) during which great changes occurred after annexation of Hawaii into the United States of America. This neighborhood was the area where many of the missionary families/business community lived at the time of the end of the Hawaiian Kingdom and during the early decades of the territorial period. Therefore, the house is significant on a local and state level.

The home is also significant in the development of Punahou School (once called 'Oahu College' as it was a college preparatory school) and the University of Hawaii at Manoa (situated there in 1912) in this area of the island. The house also represents an intact example of a house of the Colonial Revival/Arts & Crafts style from the 1920s on Oahu. The house displays a high degree of historic integrity of location, materials, form, fenestration, and interior arrangement of space. The site appears intact as well. The neighborhood (i.e. the setting) is also relatively intact.

The House at 2017 Lanihuli Drive
Name of Property

Honolulu, HI
County and State

Narrative Statement of Significance (Provide at least **one** paragraph for each area of significance.)

Criterion A

The house at 2017 Lanihuli Drive satisfies criterion A of the National Register in that it represents American style architecture in Hawaii during the early transformative years on Oahu during the Territorial Period. Hawaii was profoundly changing after annexation by the United States and the type of sub-division-suburban development was new to Hawaii and reflected the neighborhood and architecture design of those from America. The colonial aspect of the architecture also reflected the new residents of the island. This type of development and architecture was atypical in Hawaii prior to the arrival of Americans. The development of this area began in the 1910s. Maps of available lots in the College Hills/Manoa area were published in the Honolulu-Star Bulletin so that browsers could select their lots in Honolulu's premier neighborhood. The names of families who had purchased lots were printed alongside. Some of the names included were: H.M. Alexander, C.H. Atherton, C.H. Baldwin, C.M. Cooke, Grace Cooke and Frank Dillingham. This list was letting the potential buyers know who their neighbors would be.

The prices posted in the articles of the period varied from \$6,500 to \$10,000 (for the lot and the house). Some of the homes appear to have been constructed by Castle & Cooke Real Estate. The area has a distinct stock of Colonial Revival/Arts & Crafts style homes. Lanihuli Drive was laid out as early as 1910. It appears the area was developed over a course of 20 years.

This area of Oahu, the Punahou/Manoa neighborhood, was the primary area where the missionary families lived just prior to and after the annexation of Hawaii by the United States. The Punahou School (then called Oahu College) was the school for mostly missionary families and the business/political community associated with them. The names of some of the streets in the area reflect this as well (e.g. Dole Street, McKinley Street, Thurston Avenue, Wilder Avenue, etc.). The area was also once home to a Bible School and Jackson College, a religious based school.

Therefore, this neighborhood and the house at 2017 Lanuhuli Drive are significant in the events of the early Territorial Period of Hawaii and the transformative forces that were shaping the new American territory on Oahu from its date of construction up to statehood (i.e. 1925-1959).

The House at 2017 Lanihuli Drive
Name of Property

Honolulu, HI
County and State

Criterion C

The House at 2017 Lanihuli Drive is an intact example of a home from the 1920s of the Colonial Revival style. The home displays all the traits of the style, as called out in the building description, and also displays a high degree of historic integrity in its materials, finishes, footprint, as well as its site and setting. The home also retains its integrity of location (i.e. the home has not been moved from its original location). The style of the home is significant as it relates to its origins in the historic context of the Territorial Period.

Verbal Boundary Description (Describe the boundaries of the property.)

The house at 2017 Lanihuli Drive is bounded on its NE elevation by Lanuhui Drive. The lot is approximately ~52' wide and extends ~68' inwards from the road. The house's front elevation begins at ~34 feet into the NE boundary of the lot. The eligibility of the property includes the house and the grounds. See survey Report from 2018

The House at 2017 Lanihuli Drive
Name of Property

Honolulu, HI
County and State

Boundary Justification (Explain why the boundaries were selected.)

The property is considered a historic site, which allows for the house and the grounds to contribute to its historic character. The setting of the house is important as it relays the density and type of development that once existed in this area. This is important to interpret the Period of Significance of the property. The coordinates of longitude and latitude are the corners of the lot. The last coordinates are given for the house at its center.

Paperwork Reduction Act Statement: This information is being collected for nominations to the National Register of Historic Places to nominate properties for listing or determine eligibility for listing, to list properties, and to amend existing listings. Response to this request is required to obtain a benefit in accordance with the National Historic Preservation Act, as amended (16 U.S.C.460 et seq.). We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

Estimated Burden Statement: Public reporting burden for each response using this form is estimated to be between the Tier 1 and Tier 4 levels with the estimate of the time for each tier as follows:

Tier 1 – 60-100 hours
Tier 2 – 120 hours
Tier 3 – 230 hours
Tier 4 – 280 hours

The above estimates include time for reviewing instructions, gathering and maintaining data, and preparing and transmitting nominations. Send comments regarding these estimates or any other aspect of the requirement(s) to the Service Information Collection Clearance Officer, National Park Service, 1201 Oakridge Drive Fort Collins, CO 80525.
