NATIVE BIRDS OF LANAI, HAWAII

LAWRENCE T. HIRAI, 1323-2 Kinau Street, Honolulu, Hawaii 96814

DARK-RUMPED PETREL, *Pterodroma phaeopygia sandwichensis*. This endangered Hawaiian race formerly nested on most of the main islands, but is now considered restricted to Maui and Hawaii (Berger 1972). The population on Lanai was believed extirpated by pigs and cats (Munro 1960), but night field work from June to October 1976 confirmed the presence of the Dark-rumped Petrel in the mountain forest (Hirai 1978). A possible colony, estimated from calls and sightings to be about 100 individuals, was located in June 1976 at an elevation of 850 m at Kumoa Gulch. Although I found no burrows, the petrels probably nest on the ridge slopes, which are covered by uluhe fern and ohia-leuha. From the available information, the breeding season of the Dark-rumped Petrel on Lanai seems to be similar to that of the population in Haleakala Crater, Maui, beginning in May and extending until November.

Western Birds 9:71-77, 1978

In summary, Lanai could be considered a microcosm of elements of the other Hawaiian islands in terms of mountain, valleys, forest, scrub, cliffs, and beaches; dominated by one crop, pineapple; with one company in sole ownership of its lands; and one town, the most sophisticated plantation settlement in the islands (Armstrong 1973).

'UA'U – HAWAIIAN PETREL

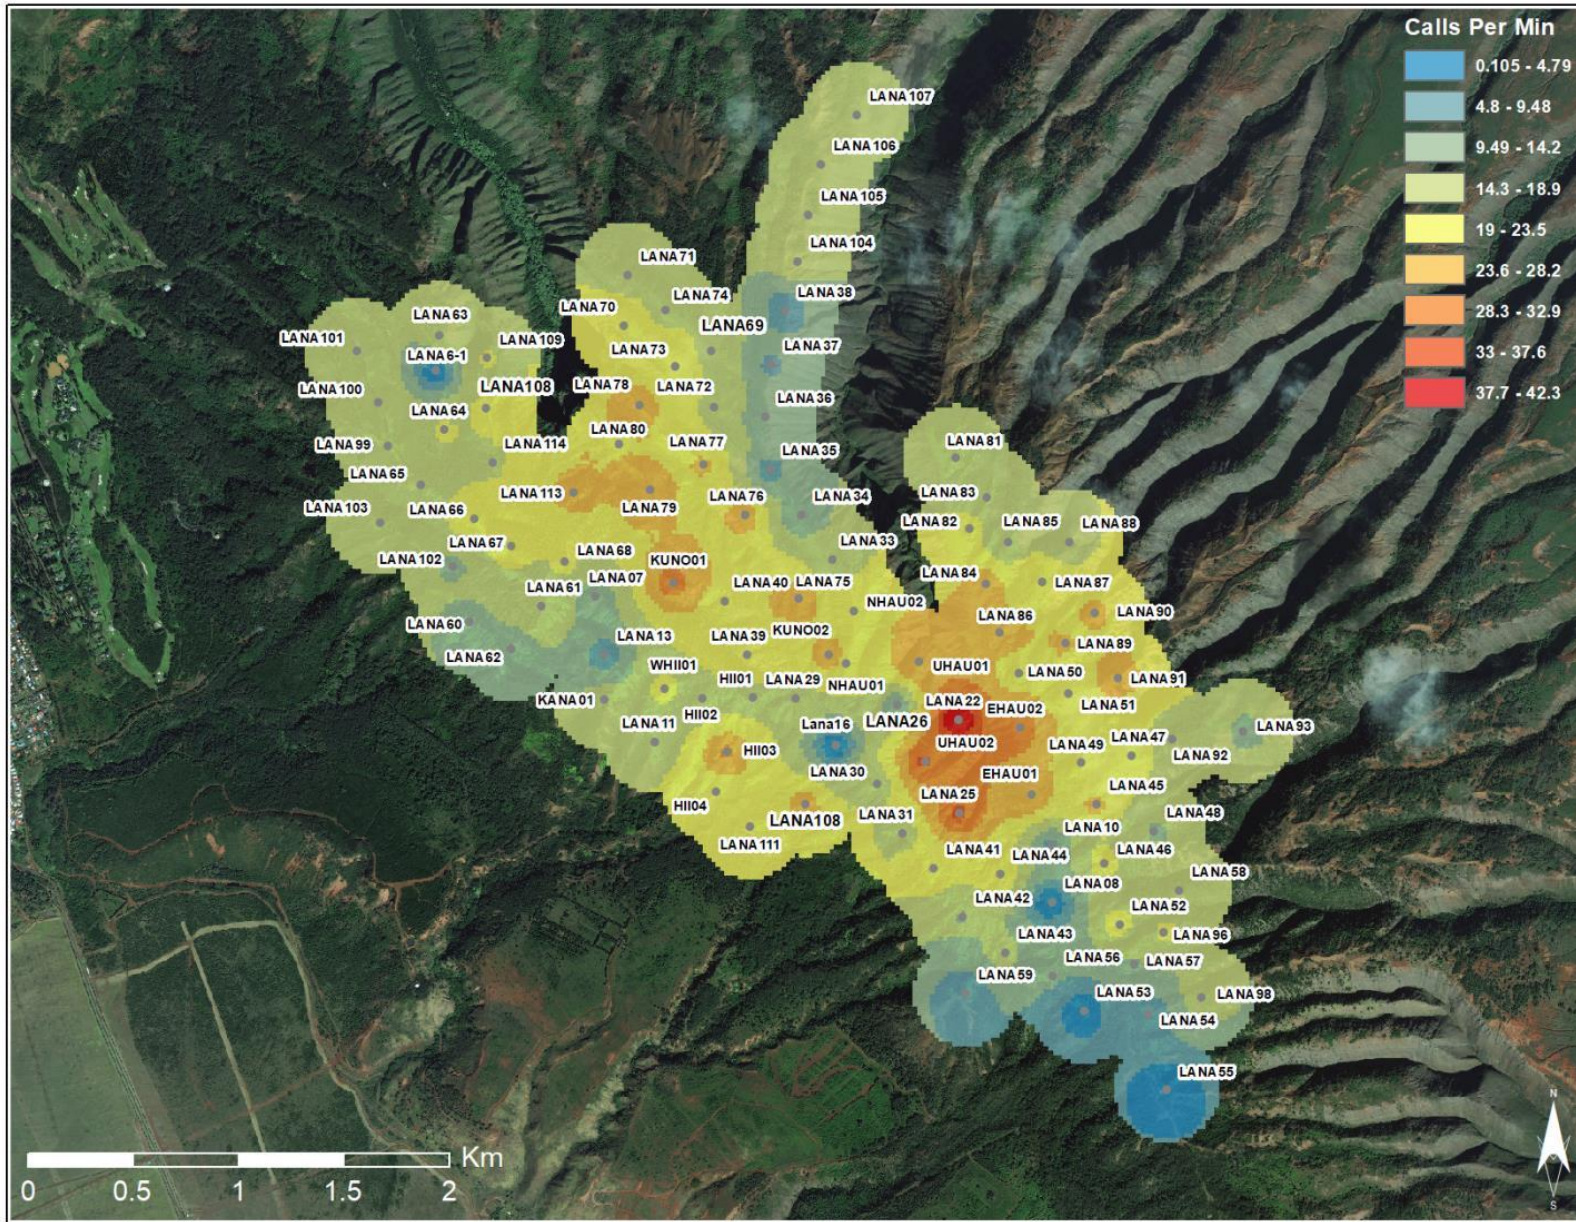

LĀNA'I 'UA'U COLONY

DISTRIBUTION MAPPING

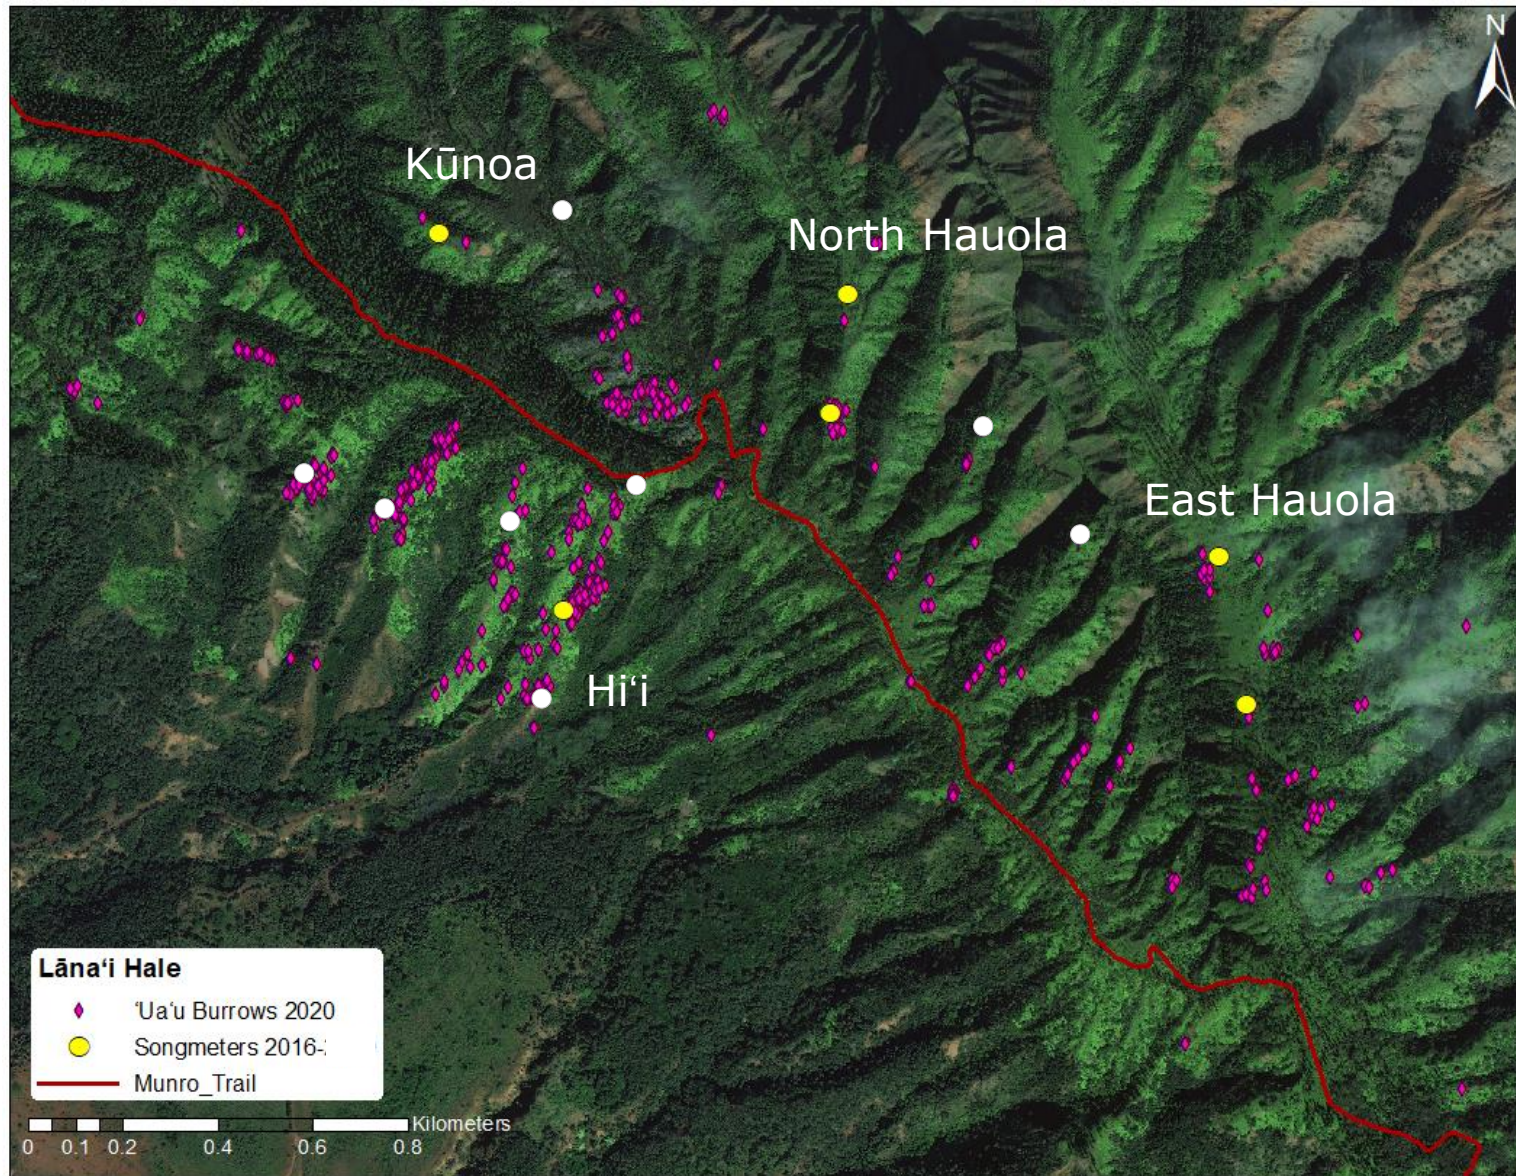

'UA'U ACTIVITY DISTRIBUTION

Surveyed ~800 ha
(~1,900 acres)

LONG-TERM COLONY MONITORING

‘UA‘U ACTIVITY OVER TIME

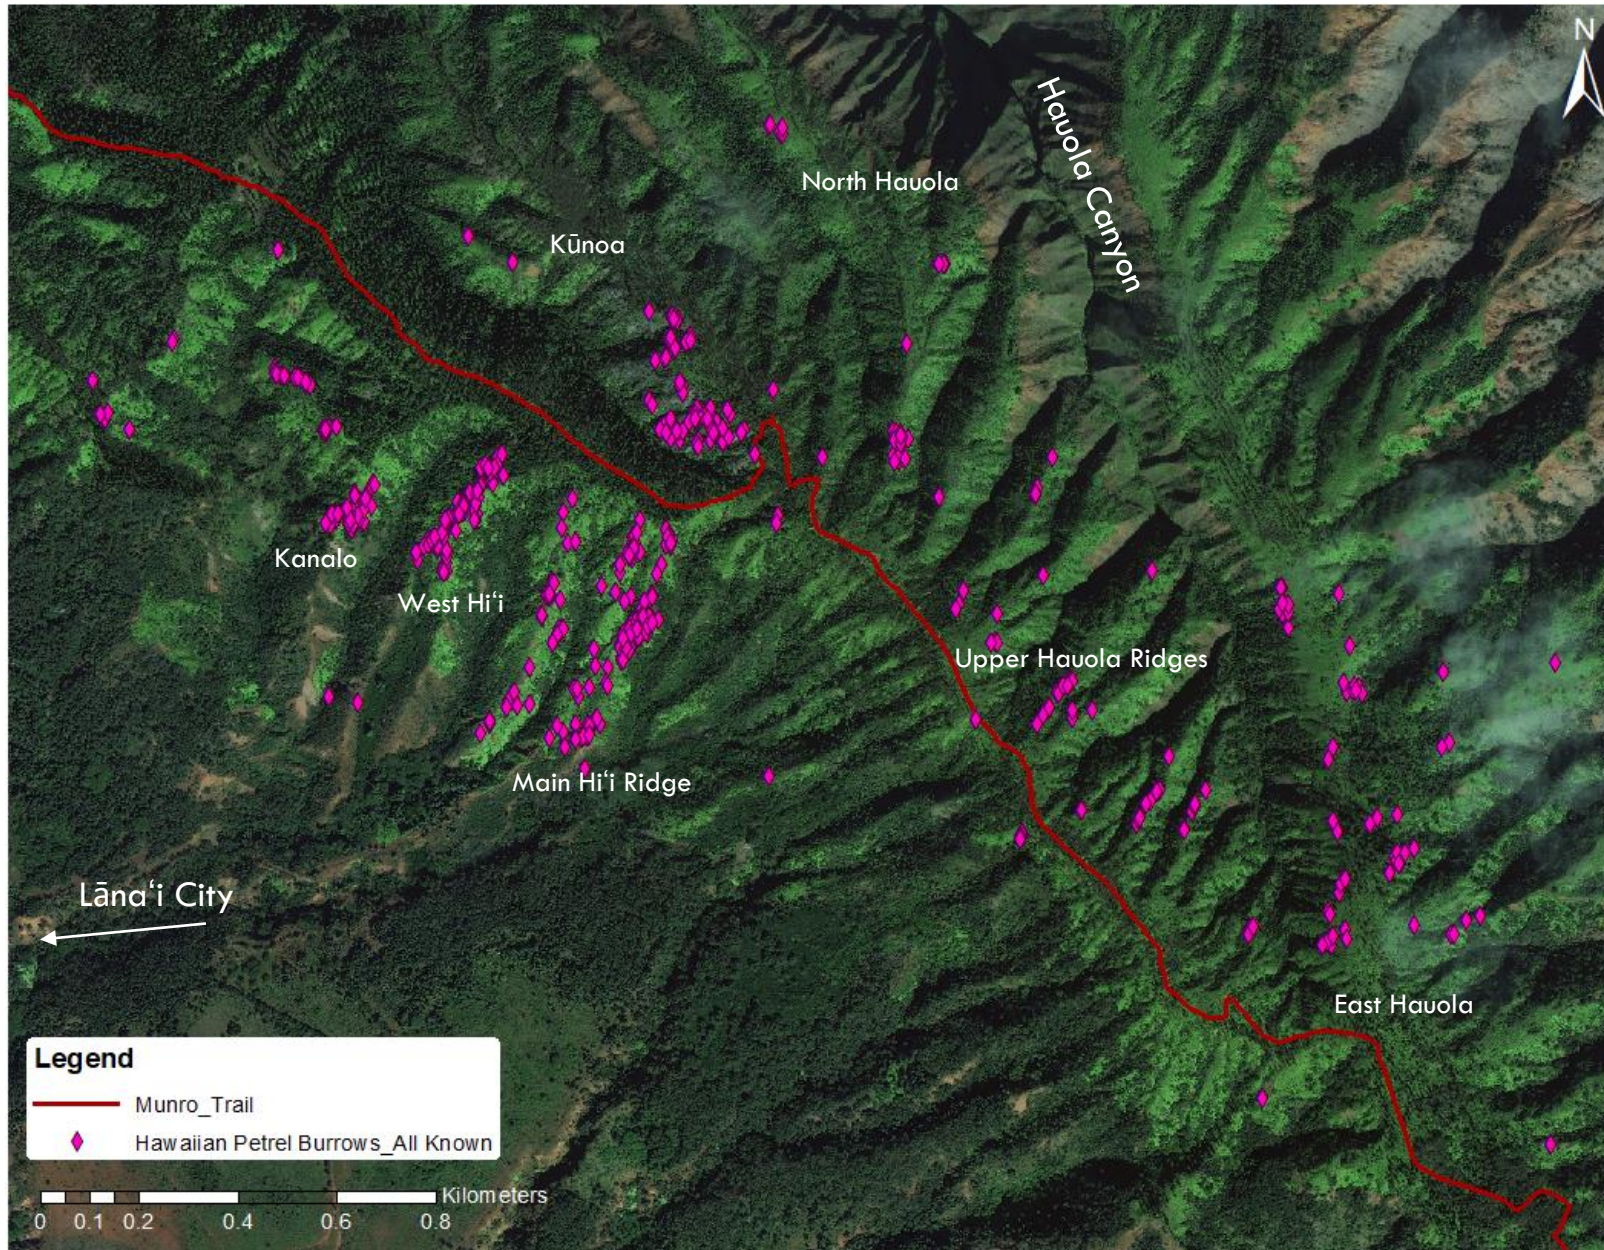

Bayesian trend analysis:

Non-zero increase from 2016-2020

Mean yearly increase 21.74%
(CI 7.71%-39.65%)

‘UA‘U KNOWN BURROWS

550+ known burrows

Perhaps found 10-15% of all burrows?

'UA'U MONITORING

'UA'U MONITORING PROGRAM

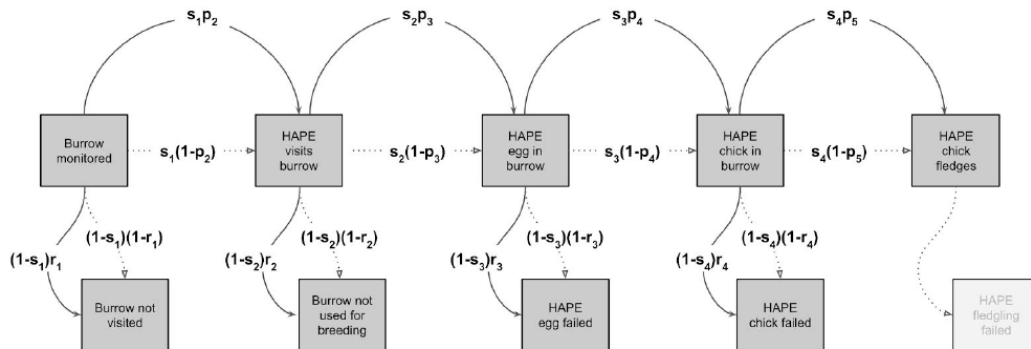

56 → 550+ known burrows from 2015-2021

Regression and power analysis to examine variation

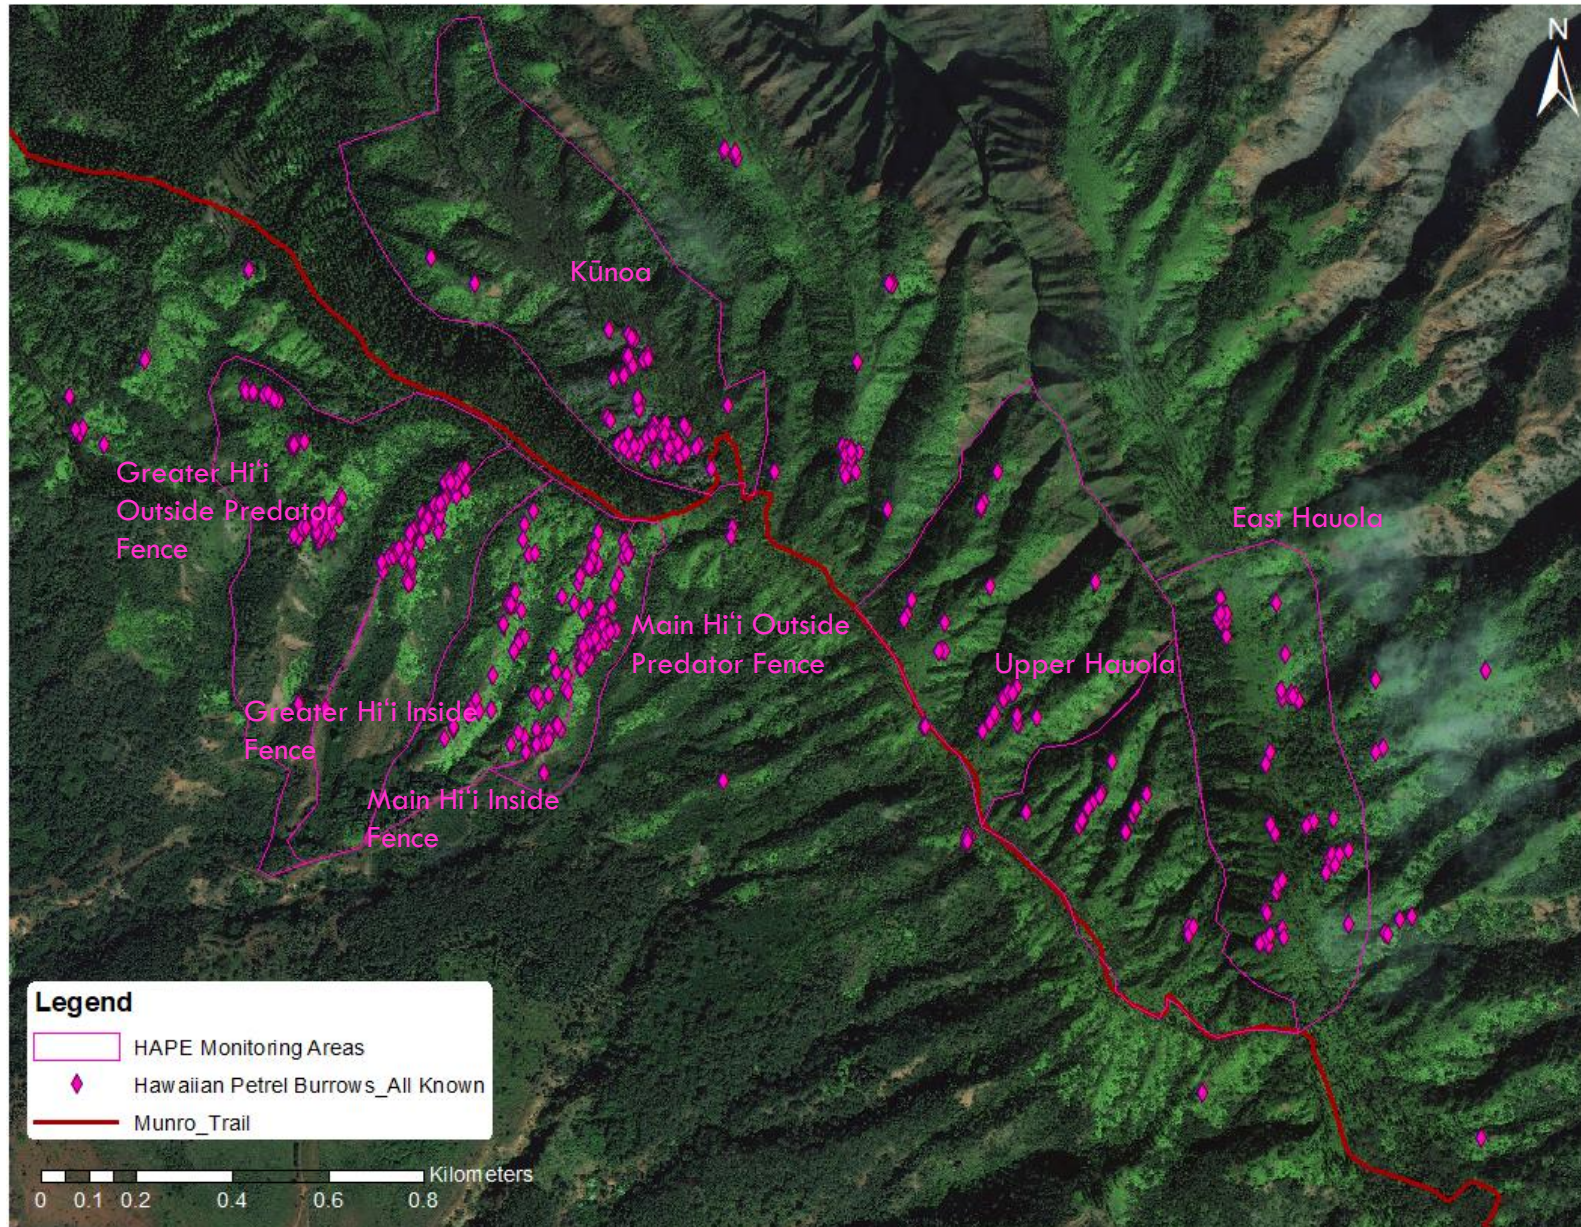

Optimize sample size to balance monitoring effort with confidence in results

All burrows monitored with cameras and burrow scopes =
↑ confidence in assigning burrow status and outcome

New sampling design implemented in 2020

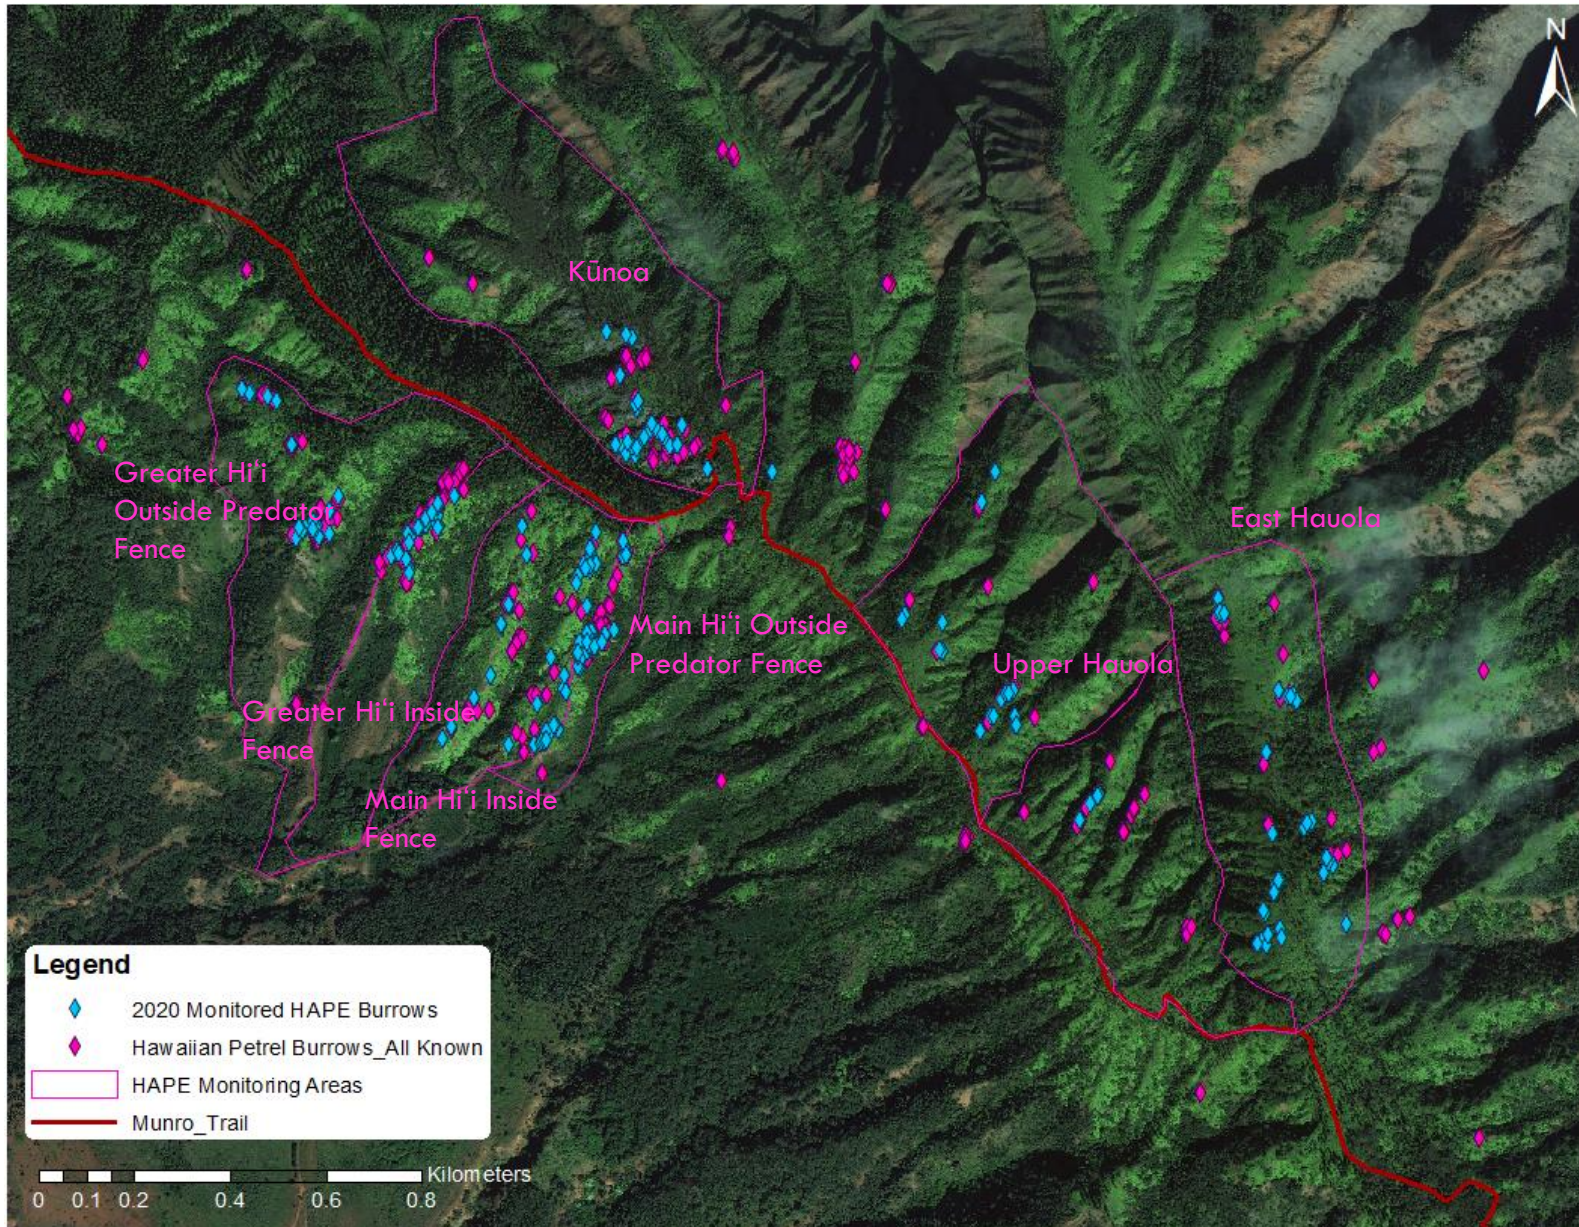

‘UA‘U MONITORING PROGRAM

In each monitoring area:

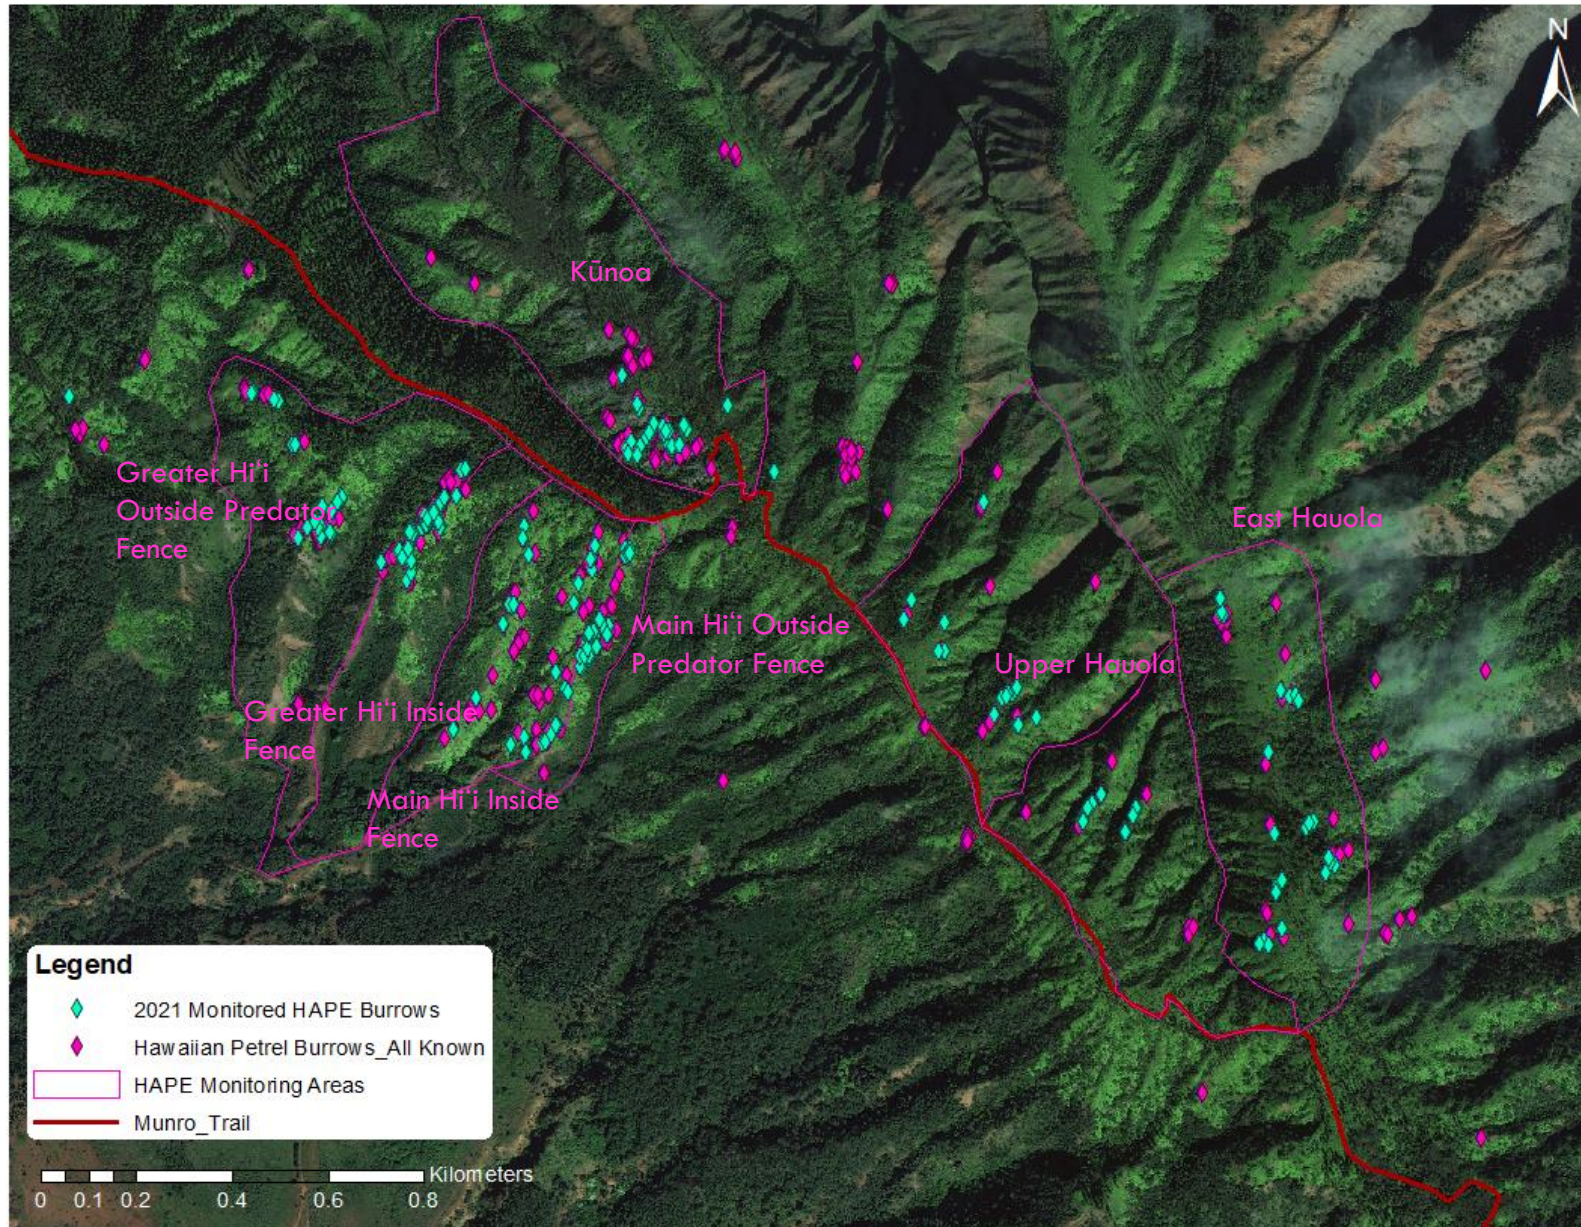

- 10 “fixed” burrows monitored each year
- 10+ additional burrows randomly selected for monitoring each year
- All burrows monitored with cameras for entire season, and in-burrow checks monthly w/scope

'UA'U MONITORING PROGRAM

2020 Monitored Burrows
N = 135

‘UA‘U MONITORING PROGRAM

‘UA‘U REPRODUCTIVE SUCCESS

Over 200 percent increase in reproductive success

PREDATOR CONTROL & MONITORING

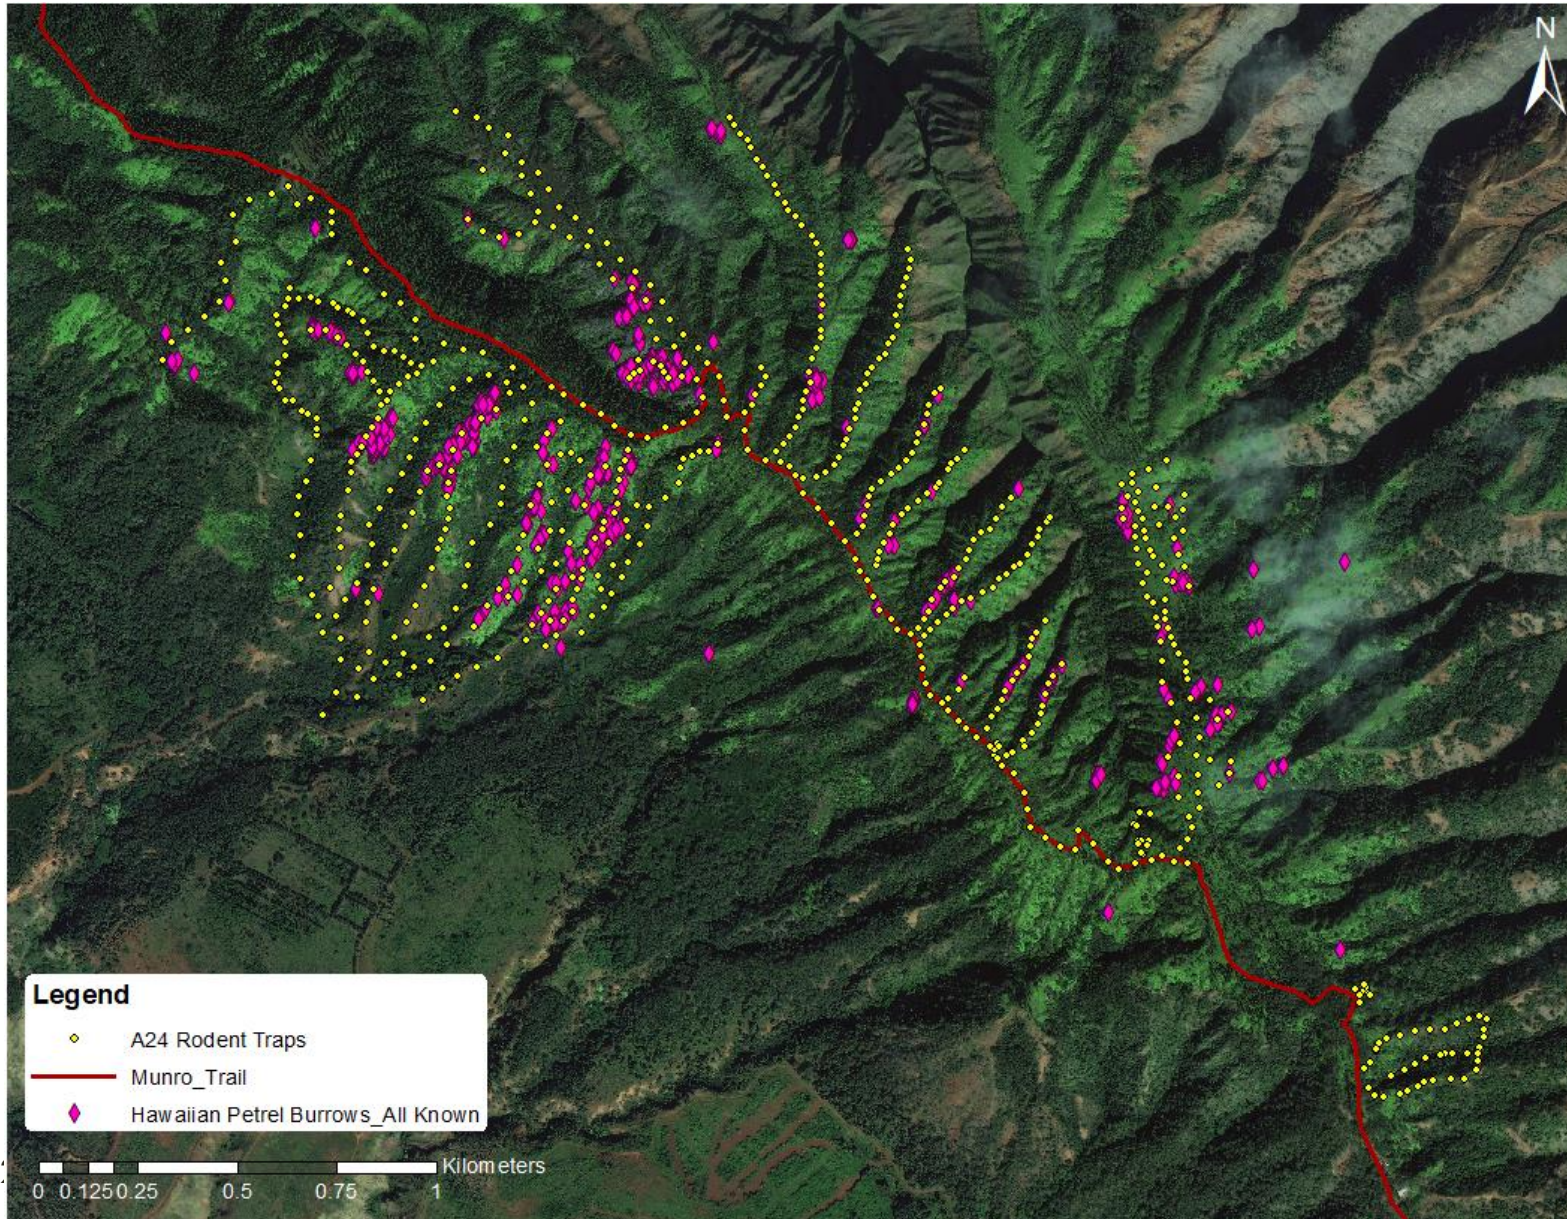

Note for Lānaʻi:
No pigs
No mongoose

Landscape control –
use best practices for
trap spacing from NZ
DoC

RODENT CONTROL

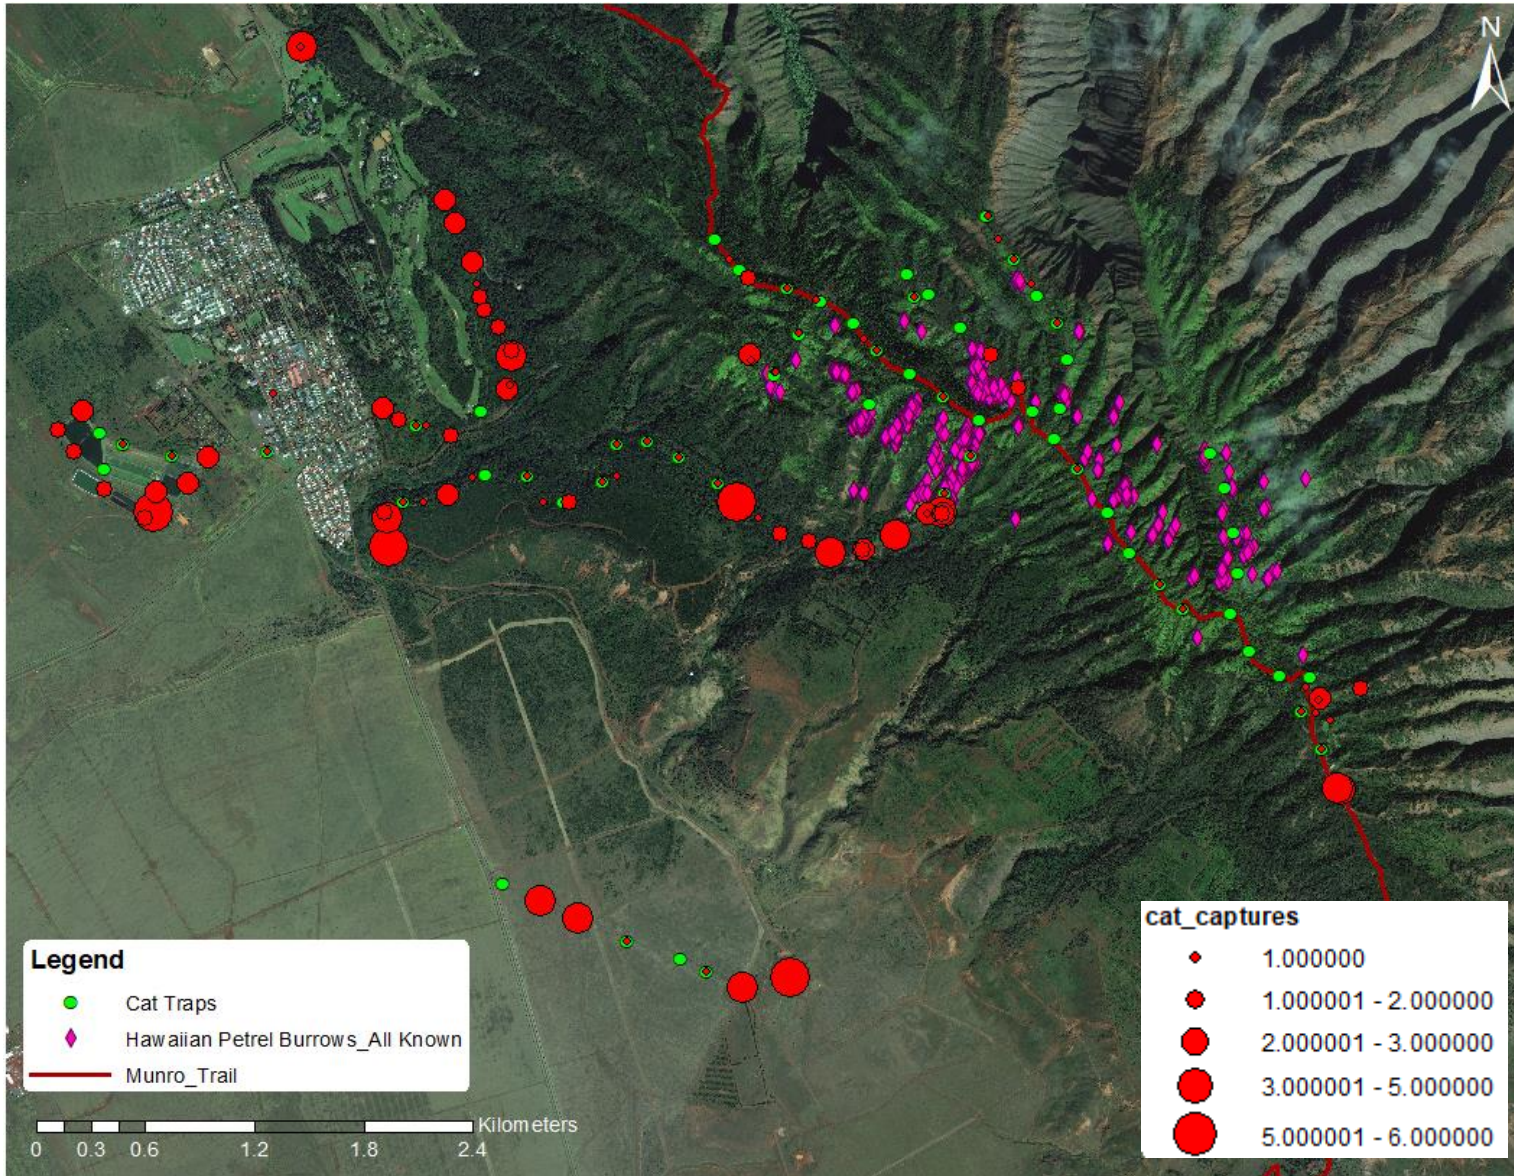

A24 Automatic Trap Grid:

- Traps ~25-50 m x transects ~ 100m apart
- 775 traps over ~450 acres

CAT CONTROL

Mesocarnivore trapping:

- Traps ~250 m x transects ~ 1 km apart
- 145 traps over ~10 miles of trails
- Landscape control
 - With large mesocarnivore home range, do not need to only trap in immediate proximity to resource
 - Space traps to cover landscape rather than cluster

CAT TRAP CAMERA MONITORING

Mesh-networked cellular cameras

Inbound Flight Paths

DOWNED WILDLIFE RESPONSE

'UA'U PROTECTION- HI'I PREDATOR-PROOF FENCE

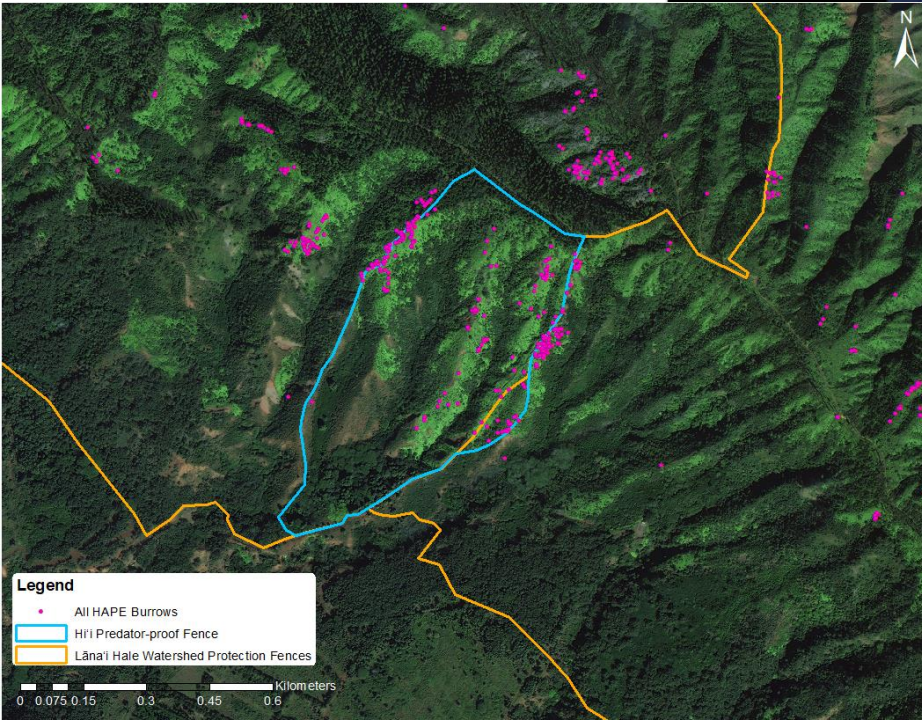

Details

- Predator-proof fence enclosing ~80 acres, fully private funding
- Completion expected spring 2022
- Will protect over 130 known burrows, likely more than 500 'ua'u burrows
- Will be focal area for habitat restoration (help endangered plants impacted by both rodents and ungulates)

OTHER SEABIRD SPECIES SURVEYS

All songmeter units in 2016-2019 also analyzed for:

‘A‘o, Newell’s Shearwater

‘Ake‘ake, Band-rumped Storm-Petrel

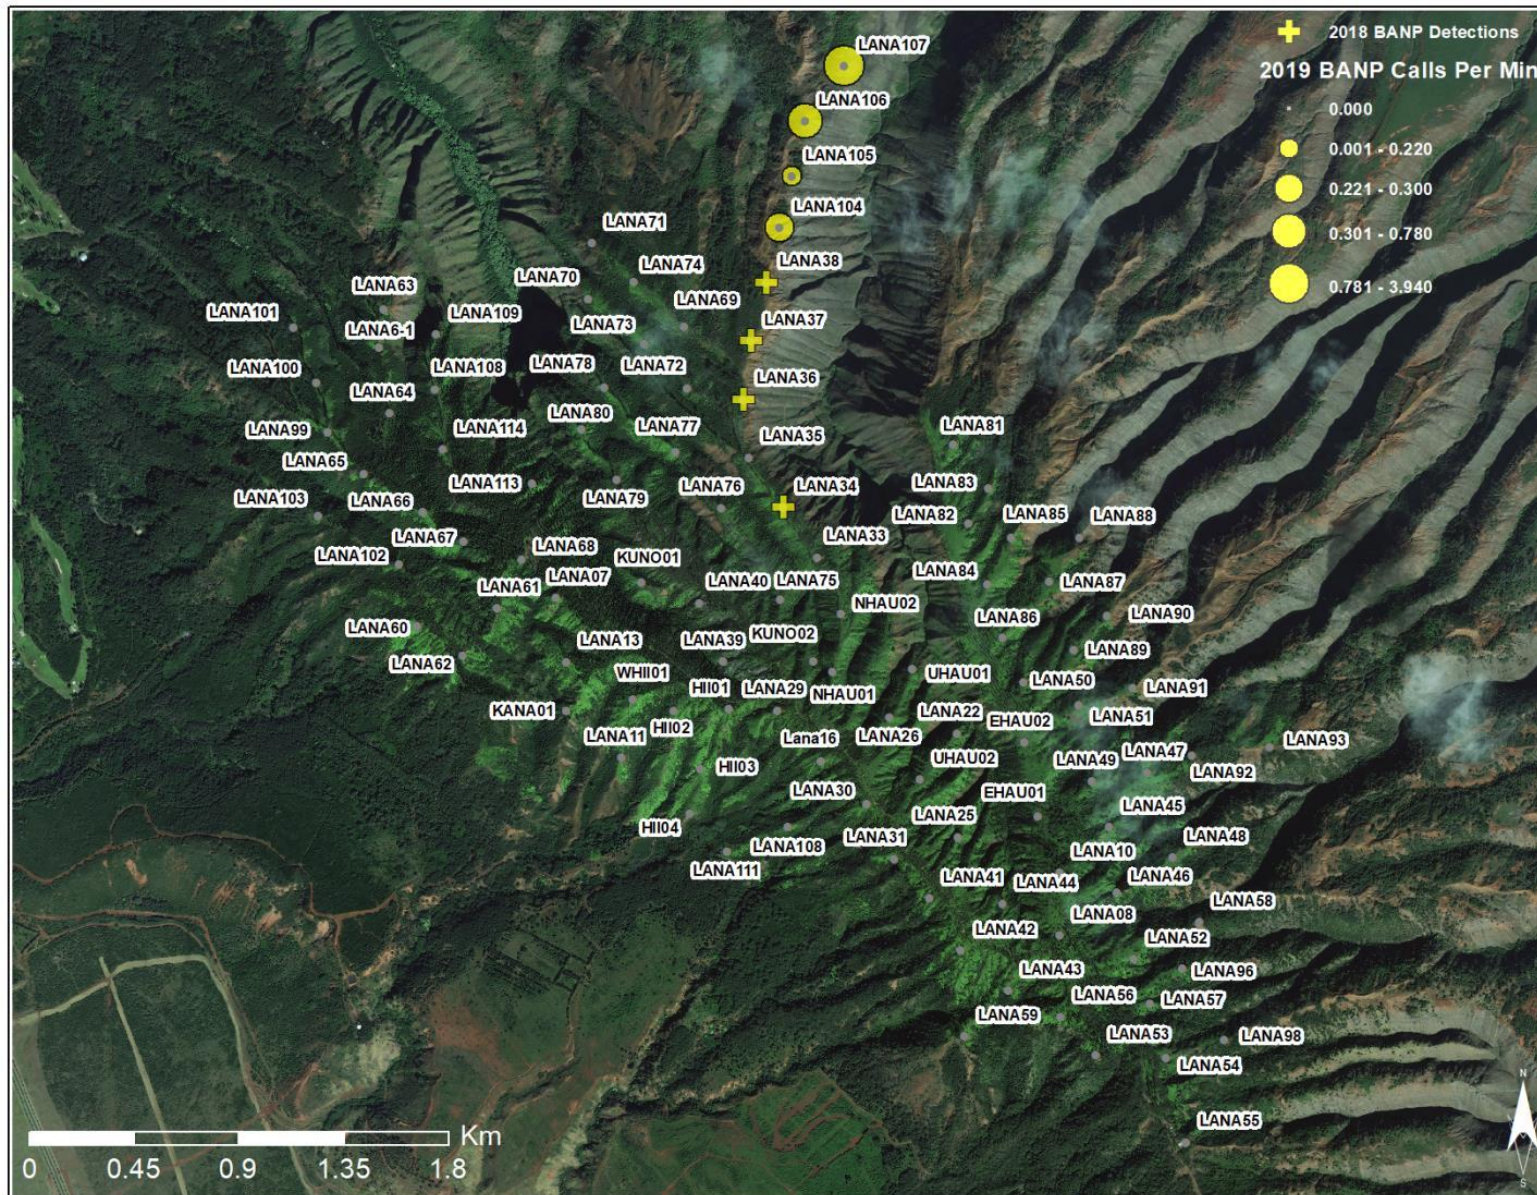

'A'O DETECTIONS

Single calls over 4 years of acoustic monitoring

Potential for social attraction or translocation into Hi'i predator-proof fence?

'AKE'AKE ON LĀNA'I

Detected 'ake'ake (band-rumped storm-petrel):

2018 – six calls detected at 4 locations

2019 – moved songmeters down-canyon, found repeated calling at 4 new locations

'AKE'AKE ON LĀNA'I

Call rates calculated for nightly peak activity period from 60 to 120 minutes after sunset

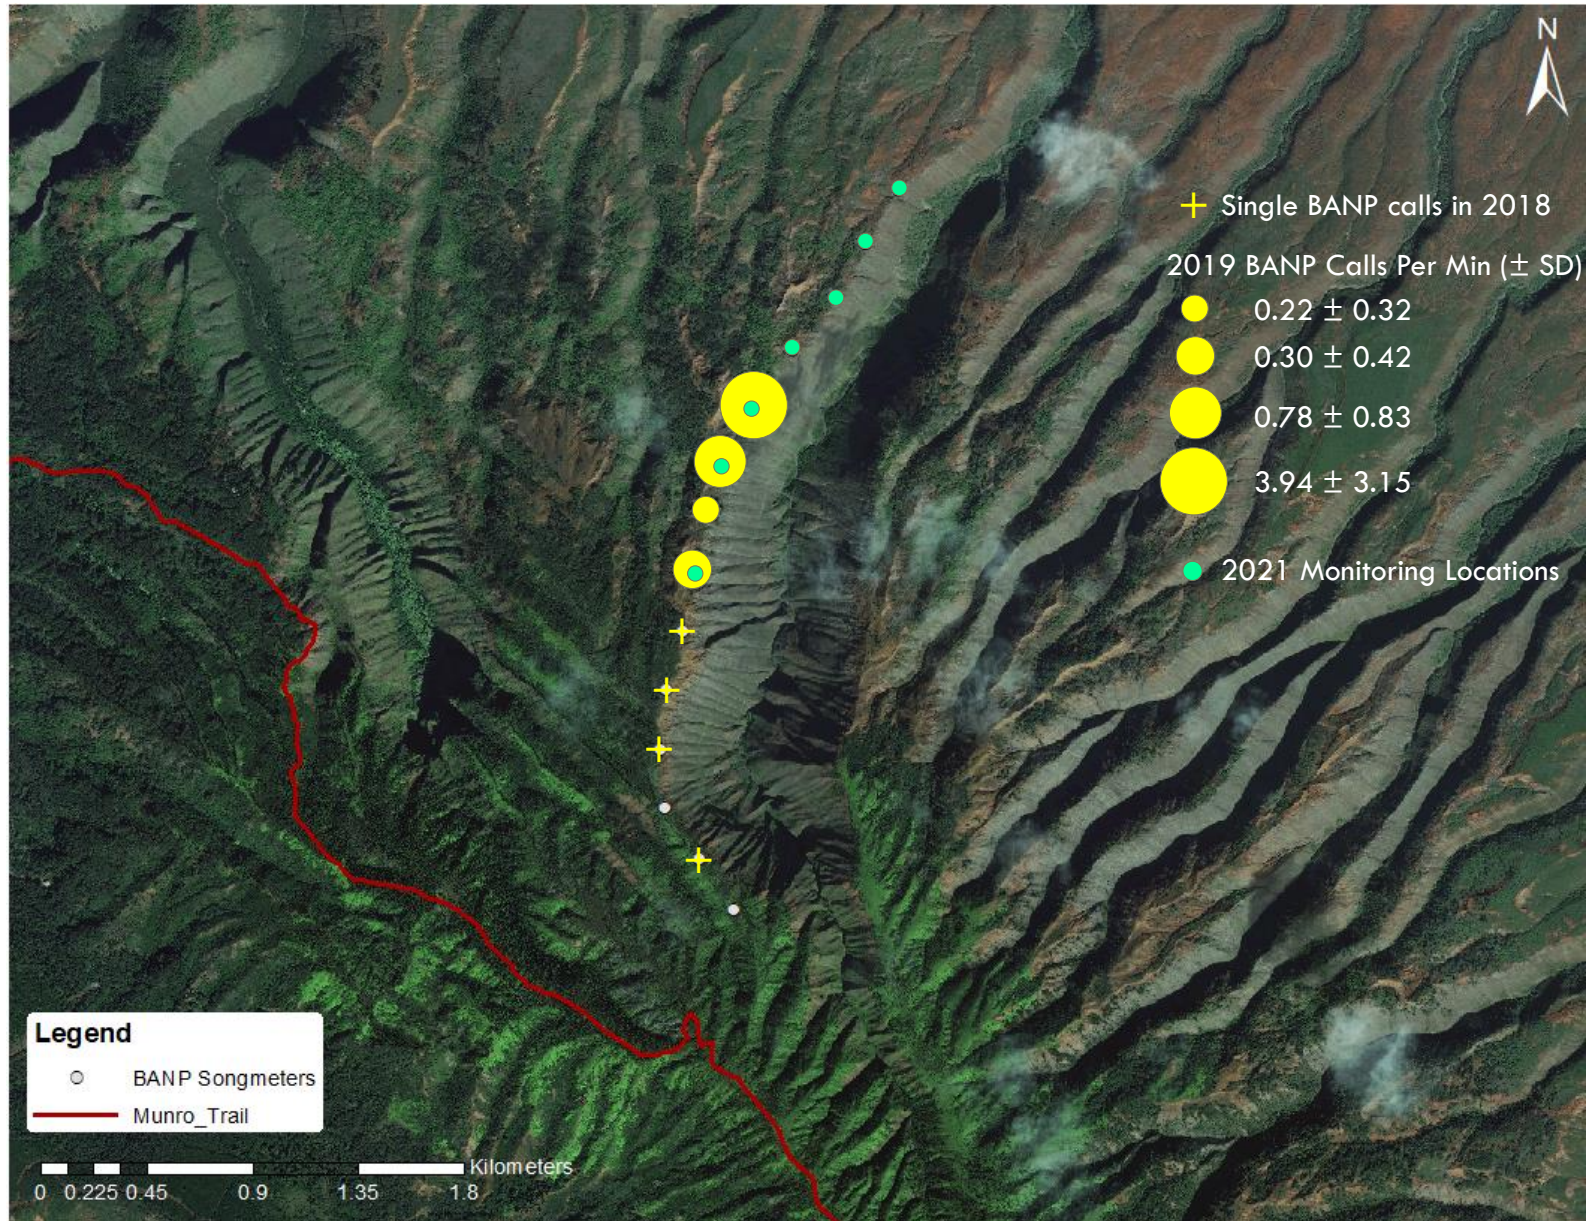

‘AKE‘AKE ON LĀNA‘I

2020 – in-person auditory surveys at peak activity areas

2021- acoustic monitoring further down-canyon

'AKE'AKE ON LĀNA'I

‘AKE‘AKE ON LĀNA‘I

'AKE'AKE ON LĀNA'I

Potential for predator-proof social attraction site on the canyon rim

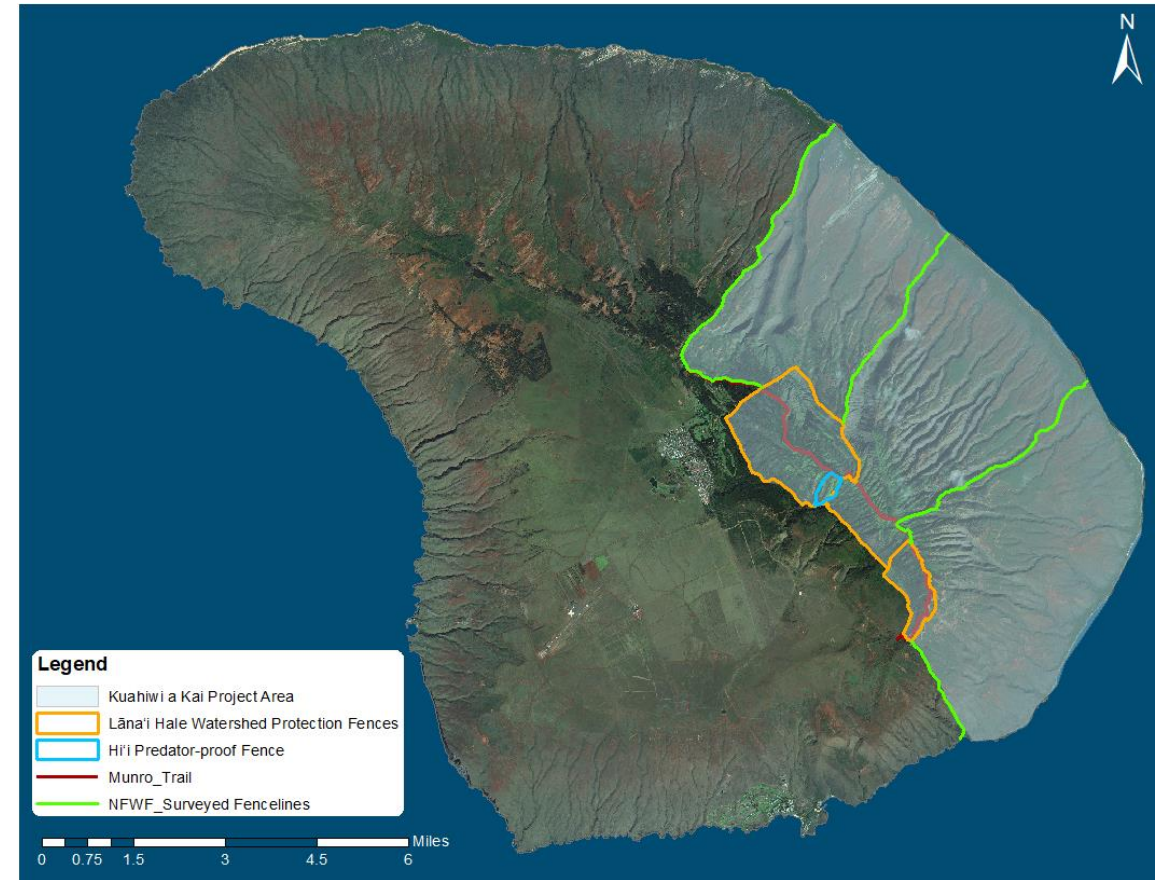

LANDSCAPE

Kuahiwī a Kai: Lanai Watershed Conservation

KUAHIWI A KAI: Lānaʻi Watershed Conservation Program

- Nearsighted agricultural practices and ungulate overgrazing → landscape damage and erosion destroyed ~97% of Lānaʻi's original native mesic forest.
- Threatens Lānaʻi's watershed, native plants and habitat, and continued existence of nearshore reef and fishery.
- Partnership with National Fish & Wildlife Foundation (NFWF).
- 20,000+ acre landscape level initiative to restore windward Lānaʻi; focal resources: **native seabirds** and nearshore reefs.
- Start of long-term commitment to conservation on Lānaʻi's windward side – first grants awarded in 2020.

KUAHIWI A KAI

2020-2021 – Mapping & baseline assessment

- Field survey and LiDAR-based erosion maps (*USGS*)
- Vegetation classification, change over time, and prioritization (*USGS*)
- Water quality monitoring (*UH*)
- Nearshore reef health & coral mapping (*The Nature Conservancy, NASA*)
- Fenceline planning (*Pono Pacific*)
- Seabird monitoring plan development (*San Diego Zoo*)
- Hi'i predator-proof fence (*Pono Pacific*)

2021+ – Implementation

- Begin ungulate fence construction (*Pono Pacific*)
- Community stewardship and deer removal (*Lānaʻi Culture and Heritage Center*)
- Outreach, documentation, and community storytelling (*Kekulamamo/Anthony Pacheco*)
