KSHCP Section  
6.6.1.2d6.6.1.2.e.v, ITP  
Section M.v.5 (N.v.5), ITL  
Section II.I.5.e.

Limited searcher efficiency trials in 2021 and 2022 indicated that Sheraton's recovery of decoys was less than the 50% efficiency estimated in their PIP. Sheraton implemented several changes to their search protocols / methods during the 2022 seabird fledging season in response to the results of the 2021 searcher efficiency trials. Sheraton Kauai Resort's 2022 Seabird Search effort was conducted by the Security Department. Daily searches consisted of 4-5 dedicated searchers on built upon portion of the property, starting approximately 3 hours after sunset and 2 hours before sunrise. In 2022, SKR management introduced a \$250 Incentive Program to reward qualifying associates, contractors, and guests who located a downed seabird or bird decoy. This incentive resulted in random searches by associates and guests in addition to the dedicated search by Security personnel.

Searchers used flashlights to search a mapped route of property to include vegetation, under covered areas, and open areas. Sheraton associates, contractors, and guests located 8 NESH and 8 WTSH in 2022, a marked improvement from the 2021 search which yielded 2 NESH. Searchers also recovered 13 decoys used by the State's searcher efficacy trials on property. Predator surveys were recorded in daily Security logs.

Artificial lighting was previously modified in compliance with KSHCP guidelines. Pre-Season assessment was conducted by Security Department in search of areas for improvement and reduction of light attraction. SKR began switching out tree lights along the Ocean and Beach front areas with full cut off solar-powered Bluetooth motion-sensor lights. Bluetooth lights enabled Security to dim lights to 30% output or complete On/Off with motion-activation during Seabird Fall out and Turtle nesting season.

Worker Seabird Awareness and Response Training (WSART) presented to 186 SKR associates to identify covered species and establish procedures. 10 Security officers participated in Dedicated Searcher/Field Training for Seabird and Turtle Searches with the assistance of DOFAW and Kauai Endangered Seabird Recovery Project's Project Manager. Dedicated Searcher training placed emphasis on search intensity, search method, and reporting. Security staff also provided with sunrise/sunset schedule and moon phase calendar at the beginning of each month during fall out season. finding downed seabirds. Brochures with a detailed description of NESH, HAPE, and BRSP were placed in guest rooms and available at Front Desk. Seabird coloring books were also available for guests and visitors. Security attended monthly department meetings of various hotel departments to remind associates of Seabird Search efforts and Predator Control.

SKR associates, contractors, and guests qualified for the \$250 reward if the following criteria were met:

- The first associate(s)/guests to locate a downed bird or decoy must contact Security and remain with the bird until Security could recover the bird and place in SOS Aid Station or report a decoy to Project Technician.
- If multiple associates/guests found a bird at the same time, they could split the reward.
- Associates are required to be on-duty during search.
- Qualifying species included, NESH, HAPE, BRSP, WTSH, and decoys.

In total, 25 hotel associates, 1 contractor, and 1 hotel guest qualified for reward after locating covered species, WTSH, and Search Efficacy Study Decoys.
