

My name is Ami Tajudeen. I'm a Mt. View resident here on big island. I am for the building of the thirty meter telescope on Mauna Kea for several reasons.

The summit of Mauna Kea is the most ideal location in the world for this telescope due to it's altitude, air quality and low light pollution.

The astronomy program at UH could place students into local jobs on island.

We could be proud that our island home is more than a tourist destination but a premiere center for the study of astronomy.

Hoping to join via zoom next time. Thank you for taking the time to review my comments
